Mr. MUSKIE. Mr. President, I ask unanimous consent that the Committee on Banking and Currency may be discharged from the further consideration of Senate bill 915, to encourage planning and the programing, on a coordinated basis, of land-use projects in the development of metropolitan areas, and to require, after a reasonable preparatory period, the approval by the Housing and Home Finance Administrator of workable programs as a condition to the granting of Federal assistance in the financing of certain projects, and that it be referred to the Committee on Government Operations.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. And, Mr. President, I ask unanimous consent that a statement explaining the reasons for the request be printed at this point in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

The senior Senator from New Jersey, who introduced S. 915, and the chairman of the Banking and Currency Committee have agreed to this move. Transferral is requested because of the broadly similar objectives of S. 915 and S. 855, which was referred to the Committee on Government Operations and subsequently to the Subcommittee on Intergovernmental Relations. S. 915 seeks to encourage planning and programing of land-use projects in the development of metropolitan areas, and to require the Housing and Home Finance Administrator's approval of workable programs as a condition to the granting of Federal financial assistance. S. 855 seeks to provide for more effective utilization of certain Federal grants by encouraging better coordinated local review of State and local grant applications. Both measures, then, deal with the general topic of metropolitan planning problems. Wisdom would seem to indicate that they should be analyzed in conjunction with one another.

CHANGE OF REFERENCE

Mr. BYRD of Virginia. Mr. President, I move that the Committee on Finance be discharged from further consideration of the bill (H.R. 200) to repeal chapter 43 of title 38, United States Code, and that the bill be referred to the appropriate committee. This relates to the "mustering-out payments" section of the veterans laws which is under the jurisdiction of the Committee on Labor and Public Welfare.

The PRESIDING OFFICER. Without objection, the bill will be referred to the Committee on Labor and Public Welfare.

REPORT ON SENATE COMMITTEE STAFFING

Mr. DIRKSEN. Mr. President, last year the majority leader and I, after an understanding, caused a study to be made by the Library of Congress with respect to the staffing of the Senate. I believe a similar study was made by the House of Representatives. Only a few copies have been made available, but I think the study should be made available to all Members of the Senate. I have discussed this proposal with the distinguished majority leader. I ask unanimous consent that the letter addressed to the majority leader and to me, together with the report from the Library of Congress, be printed at this point in the RECORD.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D.C., February 19, 1963.

The Honorable EVERETT MCKINLEY DIRKSEN,
U.S. Senate, Washington, D.C.

DEAR SENATOR DIRKSEN: Enclosed herewith is a report on committee staffing in the Senate, prepared by the Legislative Reference Service in response to the joint request of Senator MANSFIELD and yourself.

The report is based on information obtained in interviews with committee and subcommittee chairmen and ranking minority members, and with staff directors and a number of minority staff members. The interviews of necessity were of varying duration, were informal in nature, and were conducted with the understanding that neither individuals nor committees would be identified by name.

Members of the Service staff participating in the interviewing included Gustav Peck, James P. Radigan, and John Kerr Rose, senior specialists; and Mary Louise Ramsey, legislative attorney. Lester S. Jayson, Deputy Director, was closely associated with the study at all stages. He and Mr. Radigan were chiefly involved in the drafting of the report, with assistance from the others named. Dr. George B. Galloway, with whom Senator MANSFIELD and you had some discussions preliminary to our undertaking the study, was unable to participate in its preparation because of his commitments during recent months as executive secretary to the U.S. delegation to the Conference of the Interparliamentary Union.

We are forwarding also a compilation entitled "Statistics on Senate Committee Staffs, 1947–59," prepared in our American Law Division by Margaret Fennell. This is a bulky document, but it may be useful for reference purposes. Differences of opinion have frequently arisen over the extent to which the size of committee staffs has increased since the Legislative Reorganization Act of 1946. Comparisons based on the total number of persons employed within a given period, or on the payroll on a given date, may, of course, be misleading. The accompanying compilation, drawn from committee reports which were required to be published in the CONGRESSIONAL RECORD from 1947 through 1959, shows not only how many persons were employed by each committee in each reporting period, but also the nature of their positions and just how long they were employed. The compilation could not be extended beyond 1959 because of a change in the reporting procedure in January 1960.

May I take this opportunity to express, on behalf of the members of our Service who participated in this study, our appreciation for the cooperation and time which so many Senators and committee staff members gave us.

Sincerely yours,
HUGH L. ELSBREE,
Director.

SENATE COMMITTEE STAFFING

(A study prepared at the request of the Honorable MICHAEL J. MANSFIELD and the Honorable EVERETT MCKINLEY DIRKSEN by the Legislative Reference Service, February 19, 1963)

This survey of Senate committee staffing was undertaken in response to the request of Senator MANSFIELD and Senator DIRKSEN and with the cooperation of the committees themselves.

Through informal interviews by members of the Legislative Reference Service staff with committee and subcommittee chairmen, ranking minority members, staff directors, and minority staff members, information was sought on the development of staffing by the different committees, the policy and practice with reference to minority staffing, and suggestions from the members as to how staffing might be improved.

Interviews were held with 15 of the 18 chairmen and 12 of the 14 ranking minority members of the 18 standing and select committees; and with 13 of the 16 chairmen and 9 of the 12 ranking minority members of 20 subcommittees having separate staffs.[1] Many of the chairmen and ranking minority members of subcommittees that do not have separate staffs were also interviewed. In all, interviews were held with 53 Senators, 27 majority and 26 minority.

Interviews were held also with 18 staff directors of the standing and select committees, and with 19 staff directors of subcommittees having separate staffs. Eight minority staff members were interviewed on committees and subcommittees where there was a definite separation of staff between majority and minority. In all, 45 interviews were held with staff members.

DEVELOPMENT OF COMMITTEE STAFFING

The pertinent statutory provisions applicable to committee staffing are contained in section 202 of the Legislative Reorganization Act of 1946 (2 U.S.C. 72a, Senate Manual, secs. 275.1, 275.3):

"(a) Each standing committee of the Senate * * * (other than the Appropriations Committee) is authorized to appoint by a majority vote of the committee not more than four professional staff members * * * on a permanent basis without regard to political affiliations and solely on the basis of fitness to perform the duties of the office; and said staff members shall be assigned to the chairman and ranking minority member of such committee as the committee may deem advisable. Each such committee is further authorized to terminate the services by a majority vote of the committee of any such professional staff member as it may see fit. Professional staff members shall not engage in any work other than committee business and no other duties may be assigned them.

* * * * *

"(c) The clerical staff of each standing committee, which shall be appointed by a majority vote of the committee, shall consist of not more than six clerks, to be attached to the office of the chairman, to the ranking minority member, and to the professional staff, as the committee may deem advisable; * * *. The clerical staff shall handle committee correspondence and stenographic work, both for the committee staff and for the chairman and ranking minority member on matters related to committee work."

Information obtained in the interviews and summarized herein shows that as a result of established practice and the adoption of special resolutions, present staffing organization and procedures differ in a number of respects from those outlined in the act.

Size of committee staffs

Excluding the Appropriations Committee, the Legislative Reorganization Act authorizes a maximum of 170 employees (68 professional and 102 clerical) for the 17 standing and select committees. At the time of the interviews, there were 255 employees (116 professional and 139 clerical) on the committee staffs, not including employees of subcommittees having separate staffs.[2] This is 85 employees (48 professional and 37 clerical) over the number authorized by the Legislative Reorganization Act. The additional employees are accounted for as follows: Two committees, Foreign Relations and Judiciary, have had a total of 6 additional positions (3 professional and 3 clerical) authorized on a permanent basis; 90 employees (50 professional and 40 clerical) were authorized by special resolutions. As against these additions, staff directors of 5 committees reported having altogether 11 positions less than the full number authorized by the Legislative Reorganization Act.

A breakdown of the relative size of committee staffs as reported is as follows:

Number of committees:	*Total number of employees*
6	10 or less
1	11
2	12
2	14
1	15
1	19
1	20
1	27
2	31

The number of employees classified by staff directors as professional and clerical on these committees is as follows:

Professional employees

Number of committees:	*Total number of employees*
6	4 or less
3	5
1	6
1	7
3	8
1	13
1	15
1	18

---

[1] The number of interviews sought was less than the total number of positions because in several instances one Senator occupied more than one position. In a few instances a Senator designated one of his staff to represent him in the interview with the member of the Legislative Reference Service.

[2] The interviews covered a period of over 3 months. There have been variations in the total number of employees during this period, and since that time. The staffs of the joint committees are not included in this study.

Clerical employees

Number of committees:	Total number of employees
7	6 or less
4	7
3	9
1	13
1	14
1	16

Subcommittee staffing is not circumscribed by any statute or Senate rule. Many subcommittees are staffed with staff members of the full committee. Twenty subcommittees, however, have separate staffs, authorized by special resolutions. According to figures furnished during the interviews, there are a total of 196 employees (116 professional and 80 clerical) on these subcommittees. A breakdown of the relative size of subcommittee staffs and of the number of employees classified as professional and clerical on these subcommittees is as follows:

Total subcommittee staffs

Number of subcommittees:	Total number of employees
14	10 or less
1	11
1	14
1	15
1	27
1	28
1	35

Professional employees

Number of subcommittees:	Number of employees
12	4 or less
2	6
2	7
1	8
1	17
1	18
1	21

Clerical employees

Number of subcommittees:	Number of employees
16	6 or less
1	8
2	10
1	14

Staffing of the Committee on Appropriations is treated separately here because it is separately provided for in the Legislative Reorganization Act of 1946. Under that act, 2 U.S.C. 72a (b), the number of professional and clerical employees is determined by a majority vote of the committee. At the time of the interview the staff comprised 33 employees (24 professional and 9 clerical).

The total number of Senate committee and subcommittee employees, according to the information submitted during the interviews and summarized above, is indicated to be 484, of whom 256 are classified professional and 228 clerical.

It is evident from the interviews that practice is not uniform in classifying employees as professional or as clerical. Since the act does not provide definitions nor establish classification standards, it is natural that there should be varying interpretations. There seems to be no difference of opinion as to the classification of economists, engineers, lawyers, political scientists, etc., as professional, and as to the classification of stenographers, typists, or minor clerks as clerical. Different practices do obtain, however, in the classification of chief clerks, assistant chief clerks, administrators, and investigators.

Differing opinions were expressed in the interviews concerning the extent to which staff had grown since enactment of the Reorganization Act. Because the facts in this regard have frequently been in issue over the years, it seemed desirable to gather as precise information as was available. The accompanying report, "Statistics on Senate Committee Staffs, 1947–1949," shows the development in the size of each committee and subcommittee staff for the period covered.[3]

Opinions expressed in the interviews by Senators and staff members differed as to the adequacy of the size of present committee staffs. (Minority staffing will be discussed separately, below.) A frequent comment was that the Reorganization Act's limitation of 10 staff members for each committee was unrealistic in view of the wide difference in committee workloads. Several Senators expressed the opinion that the use of special resolutions to provide for employees in excess of the 10 authorized in the act gives better control over the size of staffs than would be likely to result from amendment of the act.

Some of those interviewed thought that committee staffing was still inadequate in spite of enlargement by special resolutions. Views were expressed that paucity of staffing had led to the proliferation of special investigations and subcommittees; to a shift in the initiative in policymaking from the Congress to the Executive; to legislating in the dark; to legislating without a basis of real research; to placing much of the burden of committee work on the members' office staffs; to foreclosing the possibility of any real help for the minority; and to precluding any but the senior members of some committees from obtaining significant staff assistance. Some spoke of the need for separate or larger subcommittee staffs.

While each of the above views was expressed by more than one or two Senators, it should be emphasized that the Senators generally, although not always, were referring to committees with smaller staffs, and also that a substantial number of Senators regarded existing staffs as generally satisfactory as far as size is concerned. Many placed greater importance on the need for competency of staffs than on their enlargement.

Appointment and tenure

The Legislative Reorganization Act provides that the professional and clerical employees of the committees shall be appointed upon a vote of the majority of the committee. This provision does not apply to employees appointed under authority of special resolutions, a category which includes some standing and select committee employees and all employees of subcommittees having independent staffs.

It appears from information obtained in the interviews that staff appointments generally are made by committee chairmen rather than by vote of the majority of the committee. Minority employees are usually appointed by the chairmen after consultation with, or on the recommendations of, the ranking minority members. A number of Senators expressed the view that the selection of staff employees was too dependent on the chairmen, or ranking minority members in the case of minority staff.

No attempt was made to examine in detail the tenure of committee staffs. Of the staff members of the 18 standing and select committees, approximately 62 percent occupy so-called permanent positions authorized by the Reorganization Act and approximately 38 percent occupy positions authorized by special resolutions enacted on an annual basis. Information supplied in the interviews indicated that in general staff members of both types have had tenure in the sense of continued employment over many sessions and Congresses. This has apparently been the case also with respect to subcommittee staffs. There was little comment pertaining to tenure made in the interviews.[4]

Types of staffing

Section 202 of the Reorganization Act provides that the professional members of committee staffs are to be appointed "without regard to political affiliations and solely on the basis of fitness to perform the duties of the office; and said staff members shall be assigned to the chairman and ranking minority member of such committee as the committee may deem advisable. * * * Professional staff members shall not engage in any work other than committee business and no other duties may be assigned to them." With respect to clerical staff, the act provides that they shall "be attached to the office of the chairman, to the ranking minority member, and to the professional staff, as the committee may deem advisable." The act states further that the clerical staff "shall handle committee correspondence and stenographic work, both for the committee staff and for the chairman and ranking minority member on matters related to committee work."

Information obtained in the interviews disclosed that committee staffs differed widely in respect to the above matters. At least three different types of staff are now to be found: (1) staffs commonly referred to as nonpartisan, the members of which are selected solely on the basis of merit and without regard to political affiliation, and none of whom are designated either formally or informally as "majority" or "minority" staff members; (2) staffs whose members are sponsored by majority or minority but who work together as a team serving members of both parties, in varying degrees; (3) staffs whose members are divided, in varying ratios, between majority and minority not only as to sponsorship but as to working relationships as well.

While these three general types of staffing may be observed, it is also apparent that each committee staff differs in some respects from others even in the same group. Most of the staff directors interviewed tended to place their staff within the second type.

There were among the Senators and staff members interviewed strong supporters for each of the above types of committee staffs. Most of those who supported a particular type of staffing qualified their support by stating that this type would not necessarily be the best type for all committees. There was a reluctance to prescribe any across-the-board principle or formula in this regard.

STAFFING FOR THE MINORITY

Interviews with Senators and staff directors revealed a highly complex situation as to the facts, considerable disagreement as to which members of the committee staffs should be counted as minority employees in any enumeration of such employees, and a variety of views as to what ought to be done on the subject of staffing for the minority.

To begin with, there is no uniform understanding as to the meaning of the term "minority employee." On some committee staffs there are positions specifically labeled

---

[3] The data were compiled from the personnel reports which every Senate committee was required to make semiannually to the Secretary of the Senate under the Legislative Reorganization Act as implemented by S. Res. 123, 80th Cong., 1st sess. (1947), and which had to be published in the CONGRESSIONAL RECORD. This form of reporting procedure was terminated in January 1960 when S. Res. 123 was repealed by S. Res. 213, 86th Cong., 2d sess. (1960), because it was believed to be substantially duplicative of other types of reports filed by the committees. Since the latter reports do not provide some of the detailed data which are the basis for the accompanying statistical breakdown, the tabulation could not be extended beyond 1959.

[4] The permanency of tenure of the staff of the Committee on Appropriations bears mention. Of 24 professional staffers, all except 1 have service ranging from 6 to 50 years. All except 4 have over 10 years service and of these 4, 3 have 8 years and 1 has 6 years.

"minority," for example, "minority clerk," or "minority counsel." There was substantial agreement that the number of minority employees would be understated if only those so labeled were included. Some thought that staff members known to have been sponsored by minority Senators ought to be included, along with those specifically designated minority employees. Others would include both of the above plus staff members known to be affiliated with the minority party. Members of the minority generally were of the opinion that the latter two definitions were too broad. They stated that many staff members, although originally minority sponsored or affiliated, could not, after years under the control of the majority, be considered minority employees.

Another possible basis would be to classify employees in accordance with the manner actually employed, designating each one "majority," "minority," or "nonpartisan" depending upon where his time was primarily devoted. While the manner in which staff members were actually employed was obviously given some weight by those interviewed, no precise or comprehensive data of this nature existed or could have been developed without elaborate investigation.

In light of these difficulties and divergences in terminology, it was not practicable to lay down an arbitrary definition. Each staff director did, however, report the number of professional and clerical employees on the staff of his committee or subcommittee who, in his best judgment, should be classified as "majority," "minority," and "nonpartisan." It should be emphasized that the figures below are drawn from the data furnished by the staff directors. It is obvious that other figures could be produced, depending upon the concepts of the compiler and the intimacy of his knowledge of the background of staff members and their appointments and the nature of their actual employment.

Full committee staffs

Of the 116 professional employees on the 17 standing and select committees (the Committee on Appropriations being excluded), 33 were reported to be nonpartisan or of unknown political affiliation, 59 as majority, and 24 as minority. Of the 139 clerical employees on these committees, 78 were reported as nonpartisan or of unknown political affiliation, 46 as majority, and 15 as minority.[5]

(a) Professional employees: The 59 professional employees reported as being majority employees were distributed among 13 of the 17 standing and select committees as follows:

	Professional employees reported as majority	Total
Number of committees:		
2	1	2
3	2	6
1	3	3
3	4	12
1	5	5
1	9	9
1	10	10
1	12	12
Total (13)		59

The 24 professional employees reported as being minority employees were distributed among 12 of the 17 standing and select committees as follows:

	Professional employees reported as minority	Total
Number of committees:		
7	1	7
3	2	6
1	5	5
1	6	6
Total (12)		24

The 33 professional employees reported as being nonpartisan were distributed among 8 of the 17 standing and select committees as follows: a total of 24 of them were reported to be with 4 committees all of whose staff members were reported as nonpartisan; the remaining 9 were distributed among 4 committees, 3 committees having 2 each, and 1 committee having 3.

The ratios of professional employees reported as being majority to those reported as being minority on the 13 standing and select committees which reported one or more employees as being majority or minority (the 4 nonpartisan committees being excluded) were as follows:[6]

Ratio of majority to minority professional employees

Number of committees:	
3	1: 1
1	2: 0
3	2: 1
2	3: 2
2	4: 1
1	5: 1
1	12: 1

(b) Clerical employees: The 46 clerical employees reported as being majority employees were distributed among 9 of the 17 standing and select committees as follows:

	Clerical employees reported as majority	Total
Number of committees:		
1	2	2
3	3	9
2	4	8
1	5	5
1	7	7
1	15	15
Total (9)		46

The 15 clerical employees reported as being minority employees were distributed among 11 of the 17 standing and select committees as follows:

	Clerical employees reported as minority	Total
Number of committees:		
7	1	7
4	2	8
Total (11)		15

The 78 clerical employees reported as being nonpartisan or of unknown political affiliation were distributed among 10 committees as follows: a total of 58 of them were reported to be with 6 committees all of whose clerical staff members were reported as nonpartisan; the remaining 20 were distributed among 4 committees, 1 committee having 2, 1 having 3, 1 having 6, and 1 having 9.

The ratios of clerical employees reported as being majority to those reported as being minority on the 11 standing and select committees which were said to have both majority and minority clerical employees (the 6 committees whose entire clerical staff were reported as nonpartisan being excluded) were as follows:[7]

Ratio of majority to minority clerical employees

Number of committees:	
1	1: 1
1	2: 1
2	3: 1
1	3: 2
1	4: 1
1	5: 2
1	7: 2
1	15: 1
2	0: 1

Subcommittee staffs

Of the 116 professional employees on the 20 subcommittees with separate staffs covered by interviews, 9 were reported as nonpartisan or of unknown political affiliation, 76 as majority, and 31 as minority. Of the 80 clerical employees on these subcommittees, 35 were reported as nonpartisan or of unknown political affiliation, 32 as majority, and 13 as minority.

(a) Professional employees: The 76 professional employees reported as being majority employees were distributed among 19 of the 20 separately staffed subcommittees as follows:

	Professional employees reported as majority	Total
Number of subcommittees:		
7	1	7
4	2	8
1	3	3
2	5	10
2	6	12
1	7	7
1	11	11
1	18	18
Total (19)		76

The 31 professional employees reported as being minority employees were distributed among 16 of the 19 separately staffed subcommittees as follows:

	Professional employees reported as minority	Total
Number of subcommittees:		
13	1	13
1	3	3
1	6	6
1	9	9
Total (16)		31

The 9 professional employees reported as being nonpartisan or of unknown political affiliation were distributed among 2 of the 20 separately staffed subcommittees, 7 such employees being with 1 subcommittee and 2 with another.

The ratios of professional employees reported as being majority to those reported as being minority on the 20 separately staffed subcommittees were as follows:[8]

---

[5] The Committee on Appropriations with a staff of 33 employees (24 professional and 9 clerical) were reported to have 20 majority and 4 minority employees on the professional staff, and 8 majority and 1 minority on the clerical staff. It is generally recognized, however, that this committee staff functions on a nonpartisan rather than a partisan basis.

[6] In some instances committees reporting majority and minority employees also reported employees as nonpartisan or of unknown political affiliation.

[7] See footnote 6.

Ratio of majority to minority professional employees

1	0:1
4	1:0
3	1:1
4	2:1
1	3:1
2	5:1
3	6:1
1	7:9
1	11:6

(b) Clerical employees: The 32 clerical employees reported as being majority employees were distributed among 11 of the 20 separately staffed subcommittees as follows:

	Clerical employees reported as majority	Total
Number of subcommittees:		
5	1	5
1	2	2
2	3	6
1	4	4
1	7	7
1	8	8
Total (11)	----	32

The 13 clerical employees reported as being minority employees were distributed among 8 of the 20 separately staffed subcommittees as follows:

	Clerical employees reported as minority	Total
Number of subcommittees:		
6	1	6
1	2	2
1	5	5
Total (8)	----	13

The 35 clerical employees reported as being nonpartisan or of unknown political affiliation were distributed among 9 of the 20 separately staffed subcommittees as follows:

	Clerical employees reported as nonpartisan	Total
Number of subcommittees:		
2	1	2
1	2	2
1	3	3
2	4	8
1	5	5
1	6	6
1	9	9
Total (9)	----	35

The ratios of clerical employees reported as being majority to those reported as being minority on the 12 separately staffed subcommittees (those subcommittees whose entire clerical staffs were reported to be nonpartisan or of unknown political affiliation being excluded) were as follows:[9]

Ratio of majority to minority clerical employees

Number of subcommittees:	
1	0:1
1	1:5
2	1:0
2	1:1
1	2:0
2	3:1
1	4:0
1	4:1
1	7:1

Summary

The foregoing information indicates that at the time of the interviews there were a total of 484 committee and subcommittee employees comprising 256 professionals, of whom 155 were reported as majority, 59 as minority, and 42 as nonpartisan or of unknown political affiliation; and 228 clericals, of whom 86 were reported as majority, 29 as minority, and 113 as nonpartisan or of unknown political affiliation.

A breakdown of the composition of each of the committee and subcommittee staffs covered by the interviews, in terms of reported majority, minority, and nonpartisan or unknown political affiliation, follows:

Committee staffs

	Professional	Clerical	Professional				Clerical			
			Majority	Minority	Nonpartisan or unknown	Total	Majority	Minority	Nonpartisan	Total
Total staff:										
33	24	9	20	4	----	24	8	1	----	9
31	15	16	9	6	----	15	15	1	----	16
31	18	13	10	5	3	18	2	2	9	13

[8] See footnote 6.

[9] See footnote 6.

While the statistics concerning minority staffing present in themselves a complicated issue, the interviews with the Senators made it clear that much more far-reaching issues than that of numbers are involved. The overwhelming number of minority Senators interviewed expressed in various ways the opinion that in a two-party legislature, each party should have staff assistance possessing that party's political philosophy and available to help minority members present the party's views on issues before the committees. To these Senators, the staffing needs of the minority are not met merely by virtue of the fact that committee staff assistance is available to majority and minority alike for development of background information, research, and general assistance of other kinds. Nor is it, according to them, met by the presence on the committee staff of employees originally sponsored by members of the present minority party but who are now under the control and influence of chairmen of the present majority party. What most of these minority Senators contended for was an extension of the principle of minority staff representation, recognized to some extent in the provision contained in nearly all special resolutions since 1957 to the effect that the minority shall be authorized to select one person out of those paid under authority of the resolutions.

While a few of these Senators suggested that there should be a fixed ratio across the board for committee staffs, such as 60 to 40, others thought that greater flexibility was desirable, on the grounds that the need for partisan staff assistance probably varied from committee to committee.

A substantial number of the minority Senators also expressed the view that the need for minority staffing was not met by the practice of having a member of the staff assigned to the ranking minority member, or to some other minority member. The powers of appointment, control, and dismissal of minority employees, most of these Senators believed, should be vested in the minority, in contrast to the practice of having "the ranking minority member's man" or "Senator X's man." A number of minority members noted that where only one professional staff position is assigned to the minority, the ranking minority member or other Senator who sponsors the minority staffer may demand all or most of his time, leaving the other minority members with little or no help. Ranking minority members interviewed rarely expressed dissatisfaction with the staff assistance they received, but at the same time the majority of them thought that assistance available to the rank and file of the minority might be inadequate.

Many minority Senators indicated that they receive satisfactory service on certain committees which have professional staff and on which there is no sharp difference of opinion along party lines. It was also said that on some committees having separate majority and minority staffs minority members do request and receive highly satisfactory service from the majority staff. On such committees majority members sometimes seek and receive help from the minority staff. This may be done because of the special competence of a staff member on a particular subject, or because he happens to be available at the time. On rare occasions, it reflects a preference for the service of a staff member assigned to the opposite party.

However, it appears from the interviews that many minority members ordinarily do not call on majority staff for anything more than routine information. Some minority members indicated that even when a majority staff member would be available to undertake their work, they are not convinced that a staff member controlled by the majority could give them the service they need on controversial matters without jeopardizing his tenure.

Of the majority Senators interviewed, a substantial number opposed separate majority and minority staffing, and, on the whole, seemed to be satisfied with the existing makeup of the staffs of their respective committees. Some expressed the view that the function of the staff is to prepare background and factual material and to analyze problems thoroughly to bring out the facts upon which the committee must act, and that partisanship could not serve this purpose. These Senators personally favored nonpartisan staffing but noted that the principle had not been consistently practiced on most committees; there were comments that while nonpartisan staffing is ideal in principle, it is not easy to apply. A number of majority Senators thought there were some committees which, because of the controversial nature of the issues within their jurisdiction, probably could work better with separate majority and minority staffs.

A smaller number of the majority Senators interviewed favored partisan staffing, on the same grounds put forward by the minority Senators.

The majority Senators interviewed, whether proponents of nonpartisan or partisan staffing, felt that staffing assistance should be available to the minority, and, while very few expressed any definite opinion as to the adequacy of staff available to the minority at the present time, most chairmen, and staff directors interviewed stated that the service of the entire committee staff is available to minority members, even on committees, and subcommittees which have a separate minority staff.

Some Senators commented that the real minority on some committees or subcommittees is the conservative or liberal group, as the case may be, rather than the minority party group. These Senators felt that such committees should have experts representing different shades of opinion in their respective fields.

LIST OF SENATORIAL COMMENTS AND SUGGESTIONS

The comments and suggestions set forth below are not isolated statements by individual Senators, but rather a paraphrasing of views expressed by at least several Senators and considered of real importance by them. Most of these comments and suggestions have been referred to in the earlier parts of this report, in the discussion of the particular matters to which they relate. It may be useful, however, as emphasizing the large number and wide variety of views expressed, to bring them together in summary form.

Paucity of staffing of committees has led to shifting the initiative in policy making from the Congress to the Executive.

Paucity of staffing of standing committees has led to a proliferation of special investigations and subcommittees.

Lack of staff specialists in a field often leads to legislating in the dark.

Some committee staffs are so small they cannot do any real research.

Adequate technical staffing for both the majority and minority is necessary for good government.

Competence of staff is more important than numbers.

Legislative Reorganization Act of 1946 gives a better control over size of staffs than would increasing staffs generally on the basis of projected workloads.

Subcommittees generally are not as well staffed as standing committees.

Some committees or subcommittees are overloaded with patronage appointees.

Some subcommittees are used to obtain extra help for senatorial offices.

The small size of many committee staffs, regardless of the good intentions of the majority, forecloses any real help for the minority.

Worthwhile committee staff assistance on both the majority and minority side is available only to senior members.

The selection of personnel and the operation of committee staffs at the present time are too dependent upon personalities of the chairman and the ranking minority member.

A central roster of qualified persons should be maintained from which staff members might be drawn.

The present practice of having: "the chairman's man;" "the ranking minority member's man;" or "Senator X's man" should be abolished.

A nonpartisan staff is the proper setup for a committee as the function of a staff is to supply factual information on issues.

There is no such thing as a neutral nonpartisan staff.

A nonpartisan staff is too often nothing more than a funnel for the views of the departments over which the committee exercises oversight.

In a two-party legislature each party should have staff assistants who possess the same political philosophy.

Minority staff members should be allowed more participation in the setting-up and conduct of hearings and in questioning witnesses.

Committee staff members should work for the committee.

The appointment and dismissal of minority employees of a committee should be under the control of the minority of the committee.

Minority staff should work for the minority primarily but should work as part of the whole staff.

The smaller the minority the greater the need for staff.

Many longtime employees appointed or sponsored by Republicans have, over the years, adopted nonpartisan or Democratic viewpoints.

Representation of minority on staffs should be on some formal basis, possibly 40 percent.

There should be no fixed rule as to committee setups; flexibility in meeting the needs of each individual committee should be permitted.

The minority on a committee is not necessarily Republican, it may be conservative or liberal.

In staffing, recognition should be given, when it exists, to different points of view in the same party.

Competent staff to serve all shades of political opinion would be ideal.

Committees should have experts of different points of view available in their respective fields.

Mr. MORSE. Mr. President, will the Senator from Illinois yield?

Mr. DIRKSEN. I yield.

Mr. MORSE. Will not it be desirable also to have it published as a Senate document, so it will be more easily accessible for distribution?

Mr. DIRKSEN. Mr. President, I adopt the suggestion of the Senator from Oregon; and I ask that, in addition, the staff report be printed as a Senate document.

The PRESIDING OFFICER. Without objection, it is so ordered.

FALSE ADVERTISING—ADDITIONAL COSPONSOR OF BILL

Mr. HARTKE. Mr. President, I ask unanimous consent that the name of the junior Senator from Pennsylvania [Mr. SCOTT] be added as a cosponsor of Senate bill 1249, which I introduced on April 1, 1963, to protect consumers and others against misbranding, false invoicing, and false advertising of decorative wood and simulated wood products.

The PRESIDING OFFICER. Without objection, it is so ordered.

AREA REDEVELOPMENT ACT—ADDITIONAL COSPONSOR OF BILL

Mr. SCOTT. Mr. President, at its next printing, I ask unanimous consent that the name of the Senator from Indiana [Mr. Hartke] be added as a cosponsor of Senate bill 1274, the Area Redevelopment Act, introduced by me on April 4, 1963.

The PRESIDING OFFICER. Without objection, it is so ordered.

"OPEN ARMS" CAMPAIGN IN SOUTH VIETNAM

Mr. MANSFIELD. Mr. President, the proclamation, last week, by President Ngo Dinh Diem, of an "open arms" campaign is a commendable and significant political contribution to the effort to bring about peace and stability in South Vietnam. It has been under consideration for some time; and now that it has been announced, it is to be hoped that it will be pursued down the line with faithfulness and dedication, for they constitute the key to its potential effectiveness.

Similar efforts, ably pursued, went a long way in helping bring about internal peace in Malaya and in the Philippines, under President Magsaysay.

A campaign of positive amnesty to all except the hard-core Communists—and that is what the "open arms" announcement adds up to—could have similar results in Vietnam. President Ngo Dinh Diem has shown the way; and it is certainly in the interest of all concerned—Vietnamese and Americans—that the statesmanlike campaign he has announced should succeed.

RECLAMATION PAYS 5 TO 1 IN 61 YEARS

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed at this point in the Record an article entitled "Reclamation Pays 5 to 1 in 61 Years." The article was published on April 21 in the New York Herald Tribune.

There being no objection, the article was ordered to be printed in the Record, as follows:

Reclamation Pays 5 to 1 in 61 Years

Denver.—In the 61 years since President Theodore Roosevelt signed the Reclamation Act, the U.S. Bureau of Reclamation has spent about $4.5 billion, less than 10 percent of what the Defense Department spent last year. And it got its money back.

This comparatively modest figure for Government spending has accomplished what man has dreamed of for centuries. It has transformed wastelands into rich, useful areas and made the desert bloom.

Since President Roosevelt put his signature to the Reclamation Act on June 17, 1902, more than 8.2 billion unwatered acres have been reclaimed and put to use. More than 400 billion kilowatts of electricity have been generated by dams that store and release water and millions of dollars have been saved by flood preventive measures connected with reclamation projects.

HUGE WATER PROJECTS

The largest of these is the 10-State Missouri River Basin project. Running a close second is the vast Colorado River storage project, scheduled for completion in 1969, and covering 110,000 square miles in Wyoming, Utah, Colorado, Arizona, and New Mexico.

Reclamation officials hasten to point out that the $4.5 billion investment since 1905 has brought back $21.2 billion in repayment of construction costs, value, and Federal tax payments. Water and power sales pay 92.6 percent of project costs, and the bureau does not begin construction of a project without signed contracts for water sales.

The Bureau, headed by Commissioner Floyd Dominy, is eyeing future projects, mainly in Idaho and Oregon.

KEYED TO PROGRESS

"Since water is the only physical ceiling on future progress in the West, the productive past considered only as a prologue to future resource development under the urgent pressures of lowering water tables and present and imminent water shortages," he said.

If reclamation plans for the future are far reaching, then so are the accomplishments. Reclamation Bureau facilities now of reclamation projects must be in operation include 216 multipurpose dams and reservoirs, 131 diversion dams, 27,810 miles of canals and lateral water ways, 9,767 miles of drains, 48 powerplants capable of producing 6,396,085 kilowatts of electricity, and 11,087 miles of transmission lines.

CHOOSING OUR ALLIES

Mr. LAUSCHE. Mr. President, the plight in which our country finds itself denies us the luxury of choosing our allies to fight the ever-growing menace of communism. We direly need the friendship and association of people and governments unwilling to live side-by-side with the Communist regime of Moscow.

Too often there has been repetition of the statement that the purpose of the Communist bloc is to destroy our Nation and participate in its burial. I, of course, have a disbelief in dictatorships; however, if a foreign people are to have a dictatorship, I would want it friendly to the West, not allied to the Communist bloc.

As for Cuba, we should not be laboring with the idea that Castro, our enemy, should be removed, not by a friendly right-wing dictatorship, but only by a democratic form of government favorable to our cause. The latter situation, of course, would be the preferable one; but if that is not attainable, it will be to our advantage to have a government, whatever its form, that is hostile to the Communist bloc and friendly to the West.

We have helped to knock out Diefenbaker, weaken Macmillan, jar De Gaulle, and to be indifferent to Adenauer. Ultra leftwingers of our country want Franco of Spain and Salazar of Portugal eliminated, even though they are friendly to the cause of the West. We helped in the eradication of Batista and the establishment of Castro. As between Batista, who was friendly to the West, and Castro, who is hostile to it, it would have been far better for the Western Hemisphere and the people of the world to have continued Batista in power.

Finally, if we are to continue destroying our friends, our problems will grow more dangerous as time goes on. This we cannot endure. Manifestly, if we are to serve the best interest of our country, we must quit insulting and quit weakening the nations which wish to be friendly to our cause.

THE ADVOCATES OF FISCAL INTEGRITY

Mr. DOMINICK. Mr. President, recently many of us who have been discussing the need for fiscal integrity in this country and for reducing the unnecessary spending at the present level have been accused of having old-fashioned Puritan ethics and outmoded concepts of government. We have been told that the only way to move the country forward is to spend more of the people's money that we do not have and will not have for many, many years to come.

Recently, Mr. President, I came on a very thoughtful and entertaining article, published in the Wall Street Journal, which comments on this subject. I ask unanimous consent that the article be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Wall Street Journal, Mar. 13, 1963]

How To Pick a Pocket or Two

To a smalltown fellow come to the big city it was bound to happen sooner or later, and finally it did. On the way to Wall Street, that den of iniquity, our pocket was picked in the subway, that haunt of the huddled masses.

Along with a couple of credit cards, an unfilled prescription for the drug store, and a shopping list from the lady of the house, this skillful disciple of Fagin made off with $100, which for years we've kept secreted in the back of our wallet against such grave emergencies as running out of expense-account money in San Antonio or St. Paul.

Now being imbued with a Puritan ethic, we do not approve of pickpockets, especially those who pick our own. But in all honesty we must confess that purely from the standpoint of the Nation's economic balance sheet there was no net loss to the country. Indeed, if some of the economic theories bruited about today are correct, it could be argued that the Nation's economy had been helped thereby.

For our loss of $100 was somebody else's gain of $100, the one canceling out the other insofar as economic statistics are concerned. Furthermore, since there was a transfer of funds from one party to another there was a gain in the gross national product as well as the national income. The fact that we paid an exorbitant price for the service received; namely, a lesson in personal finance management—is no concern in abstract economics.

Finally, we suspect the unknown artist of the subway is less well endowed with worldly goods than we are, less likely to keep the money out of circulation as idle savings for a rainy day. So this transfer of our funds to his pocket probably resulted in an increase in the Nation's consumer spending.

Whatever our personal feelings, then, the result represents a consummation devoutly to be wished by the influential thinkers of the day. The whole object of current economic policy is to increase the transfer of funds, raising the statistics of national income and the gross national product, and especially such transfers of funds as may increase consumer spending. The sociological objective is called the "redistribution of income."

Hence the great emphasis on Government spending, which has gotten to be a large part of the gross national product. There's no surer and more efficient way to transfer huge sums than to take taxes from citizens of, say, New York and spend them in New Mexico or Mississippi. According to this thinking, it's a further help if the dollars can be transferred from corporations and rich folk, who might have a proclivity toward savings, to the hands of those who will inject it more quickly into the spending stream.

We are told that the good effects of all this are enhanced if the Government, unlike our friend on the subway, can spend more than it takes or at least seem to. Big deficits, especially those arising from tax cuts, allow more dollars to be put in some people's pockets without appearing to take quite so much out of other people's pockets.

True, this is illusory; what the Government spends it must take away from somebody in some form. Nonetheless, there's no denying it's less painful to steal a bit from everybody's dollars by inflation than to take the money away from them in immediate taxes.

On the subway we had a blissful ignorance of being plucked until, much later in the day, we found ourselves less well off than we thought. And even now we think there must be many a helpful pickpocket who wishes that policemen understood the ethics of the new economics.

LIBERAL FORMULA FOR HAPPINESS

Mr. DOMINICK. Mr. President, over a period of years we have been told by many persons that the liberals have the only true concept of government and are the only ones who understand what government is all about, and that somehow or other all conservatives are but a few centuries ahead of Louis XIV, and that is about all.

I hold in my hand an entertaining article, published on April 22 in the Washington Star, which goes quite clearly into the concept of liberals in government and what they are trying to avow, insofar as the concept of government is concerned. It seems to me the article is both timely and extremely pertinent to many of the debates in the Senate. Therefore, I ask unanimous consent that the article be printed at this point in the Record, in connection with my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

Liberal Formula for Happiness—Some Accused of Championing Liberty While Favoring Creeping Coercion

(By Jenkin Lloyd Jones)

Self-styled liberals are generally nicer people than sour-puss reactionaries.

It would be better to be cast away on a desert island with an outgoing and outgiving liberal than with a guy who's against everything including the construction of a raft. But this doesn't mean that liberal government is a good recipe for equity or human happiness. Many liberals suffer from smug assumptions about human behavior and political theory that simply don't jibe with reality.

They are capable of a great degree of dogma, while imagining themselves to be the foes of dogma. They honestly believe themselves to be champions of liberty while they favor creeping coercion as long as they can be the authors of the coercion. They are so sure their theories are good for you that they think they are only doing you a favor when they tie you to a post, pry open our jaws, and pour their nostrums down your throat.

Willie Howard, the late great Jewish comedian, had a skit in which he impersonated a Communist holding forth in Union Square.

"Comes da revolution," shouted Willie, "you'll eat strawberries and cream."

"But," protested someone in his stage audience, "I don't like strawberries and cream."

Willie assumed a contemptuous sneer, "Comes da revolution and you'll eat strawberries and cream."

This is not a bad description of the liberal formula for human happiness.

One of the chief characteristics of the professional liberal in America is his naive belief in the corrective power of law. Every time he sees social maladjustment or a personal tragedy he wants to pass a law to correct it. Gradually and with the best intentions he weaves a net of verbotens and must-do's that paralyzes the individual.

If you keep on passing laws to obviate every possible injustice, eventually you arrive at the ultimate injustice, the police state.

Although the liberal often professes a contempt for money, he has almost a childlike faith in its power. What he can't cure with a law he thinks he can cure with an appropriation. When mulish taxpayers balk at such expenditures at the local level, he demands that the Federal Government take over, on the sound theory that the farther the taxing agency is removed from the individual the more chance there is that the individual will be complacent about the tax. The argument: "If Oklahoma doesn't take the money, Maine will" is a potent one.

Therefore, the liberal arrives quite logically at his advocacy of centralized power. Centralized power is the device by which the normal caution of the taxpayer is overwhelmed by his greed. Federal aid to schools will provide more teachers without raising school district taxes. Ninety percent Federal highway money means that he won't have to pay for a bond issue. Increased Federal relief means that local responsibility can be shirked. And so supergovernment grows and the liberal is delighted.

He is delighted because he questions whether local government will ever have adequate social vision. But he will see to it that the supergovernment has. There will be plans, bold plans of new frontiers entered into with vigor.

The liberal also seems to hold a double standard in the matter of human behavior. He is irate about the greed of corporations and the evils of stock options. But the mugger in the park who stabs for $20 is a deprived person who wouldn't have gone wrong if there had been enough social legislation.

The liberal can't believe that removing the penalties for misbehavior or lack of performance could increase human cussedness and sloth. Instead, according to his theory, what we need are more social workers, more public housing, more youth clubs. And with them we keep getting more chiselers, more illegitimate children, more delinquency and crime.

One problem with the liberal is that he's getting way behind the times. He can't adjust his dogmas to new forces. He looks at labor-management problems as though the Pinkertons were still shooting the strikers at Homestead. The significance of Jimmy Hoffa eludes him. He is furious at the price-raising attempt by United States Steel, but unable to comprehend the cost-fixing capabilities of the United Steel Workers. He is still chasing Commodore Vanderbilt and the beef trust.

The liberal thus deludes himself with the comfortable assurance that he is far-seeing, a progressive, a man of the future. In his effort to cure injustice by piling on more government he forgets that all the great struggles for freedom have been directed against the overblown force of government.

He has, with minor interruptions, been in power in America for 30 years. He is getting gray, and even a little quaint. He won't admit error or consider pragmatic results. He has concocted his medicine, and as our colic increases he merely calls for bigger doses.

The liberal is a nice guy. He is loving us to death.

CUBA FAILURE

Mr. DOMINICK. Mr. President, many of us have been reporting, from all over the country, to our colleagues and to members of the administration, the complete confusion on the part of the American public as to what we are doing or what we are not doing in terms of trying to regain for the Cuban people, themselves, the control of their own government.

I have been among those who have felt that the policy of indecision has been so extreme that we have been left in a position of failure insofar as concerns the protection of other countries in Central and South America. The prestige of the United States has gone down sharply. We must develop a policy which will afford some assurance of success over the next few years. Such policy should include a process of giving to the Cubans themselves the right to control their own government.

In the New York Post for April 11, a columnist, Mr. William V. Shannon, who is rather noted for his support of the present administration, wrote an analysis of the Cuban situation under the title of "Cuban Failure." I ask unanimous consent that it be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

Cuba Failure

(By William V. Shannon)

Washington.—The Kennedy administration's rupture with Jose Miro Cardona, coming on the second anniversary of the mismanaged Bay of Pigs invasion, brings to a close a cycle of defeat, political ignorance, and moral confusion in America's relations with the Cuban revolution. Everything has now been surrendered, including honor, and we have no policy nor recourse save to wait for whatever good or bad tidings the future may bring. Events have passed out of our hands.

It is instructive to recall the state of affairs when Mr. Kennedy took office. Castro, having been in power for 2 years, had already alined himself with the Communists, broken with the liberal elements in the revolutionary coalition, and was far advanced in transforming an indigenous radical uprising into a self-shackled Communist dependency.

A brave and active underground movement against the dictator was spreading. Exiles in Florida were alive with hope for his early overthrow. The United States which had encouraged Batista to depart and which had originally extended a sympathetic tolerance to the Castro government, was in a strong position to influence the course of events, both in its own national interest and in the interest of the freedom of the Cuban people. There were then no Soviet troops and no short-range Soviet missiles in Cuba.

The Kennedy administration took office seemingly committed to a clear and sound policy that this country would not permit a Communist Cuba. Since the Monroe Doctrine of 1823, the United States had taken the consistent position that we would not allow foreign countries to establish new colonies or export alien systems of government to this hemisphere. Since Castro had turned out to be only a stalking horse for the Communists, we had no alternatives except to force his departure or compromise our historic position.

There were only two ways to get rid of Castro. One was to organize a mixed invasion of Cubans and Americans under the aegis of a government-in-exile which we would recognize. The other was to organize sabotage, political subversion and economic pressure. This program could only have succeeded if the administration had been willing to make bold political decisions. In a revolutionary situation, the most effective alternative is usually a group only a shade less radical than the faction one is trying to overthrow. What was wanted was a political leadership for the Cuban underground-and-exile movement that shared most of Castro's original radical social and economic program but disavowed his terrorism and his links to Moscow. We shall never know if a left-of-center alternative, properly supported by the United States, could have brought Castro down. The President and his brother, Robert and their CIA and State Department advisers lacked the political sophistication and imagination to attempt it.

President Kennedy chose the more direct alternative of an invasion. Since the Cuban exiles ranged from radicals to reactionaries, a temporary coalition was pasted together under the presidency of Miro Cardona, an honorable man of centrist sympathies. But this coalition was not recognized as a government in exile. The administration also held back from providing the U.S. troops and planes necessary to bolster the exile force. Moreover, the CIA, with extraordinary political obtuseness, placed most of its reliance on the sons of the wealthy and on the supporters of the fallen Batista. In short, the White House policymakers avoided the political choices and the CIA made the wrong ones.

There was nothing wrong, in my judgment, with a mixed Cuban-and-American military intervention to throw out Castro except that once embarked upon, it could not be allowed to fail. President Kennedy did allow it to fail.

But there was no reason, after that single defeat, for panic or despair. The political alternative could still be attempted, although now under less favorable circumstances, or a second successful invasion could be properly planned and carried out. Instead, the administration did nothing. The 18 wasted months from April 1961 to October 1962, are in my opinion, a worse offense on the administration's record than the defeat of the Bay of Pigs invasion. What had appeared to be a firm resolve to get rid of Castro proved, after only one setback, to be made of jelly.

The only conclusion drawn from the events of April 1961, was that clandestine operations are impossible in a democracy. The exiles and the underground were simply written off as too divided and unmanageable. Micawberism—"Maybe something will turn up"—reigned.

What turned up were the Russian missiles. Khrushchev had not wasted those 18 months. Mr. Kennedy was able to force the Russians to withdraw the missiles by going to the edge of nuclear war. We are all grateful to him that his resolute firmness in October succeeded, but he is scarcely entitled to any credit for handling Cuban affairs in such a way that they produced a nuclear crisis. The introduction of the Soviet missiles completely exposed the shallowness of those, in the administration and in the general public, who thought we could happily coexist with a Communist Cuba. Because we permitted Castro to stay in power, Khrushchev very nearly outflanked us on our defenseless southern border.

The long-range missiles are presumably gone, but Cuba is far stronger militarily than it was 2 years ago. We cannot get rid of Castro because his safety has now become linked with Khrushchev's prestige. Cuba has become like Berlin, a hostage in the cold war. The suppression of the Cuban raiders and the dropping of poor Miro Cardona constitute the final admission that we have met total defeat on the Cuban front. The Cuban people have been left to the mercies of their bearded tyrant.

DEATH OF DR. A. WHITNEY GRISWOLD, PRESIDENT OF YALE UNIVERSITY

Mr. COOPER. Mr. President, Dr. A. Whitney Griswold, president of Yale University, died on Friday, April 19, at New Haven, Conn. I knew him, served under him as a member of the Yale Council, respected him and held him in deep affection. But there are thousands of Yale students and graduates, members of the faculty, associates in the profession of teaching, and people in every walk of life who came in association with him, who were moved by his teachings and writings, and who felt his influence. His influence in thought and action moved far beyond the confines of Yale University, and had its bearing upon our Nation.

He has been described as an eloquent defender of academic freedom—and that description is correct. He was a strong believer in the fundamental soundness of our system of government and our political philosophy, and therefore he was not fearful of academic freedom, and freedom of inquiry throughout our Nation. He defended freedom, and advocated it, courageously and joyfully.

There is so much that he said to choose from, but I would like to quote the following:

> The only loyalty upon which true reliance can be placed is the kind evoked by the inherent virtue of the cause or institution or individual toward which the loyalty is felt. In creating this kind of loyalty, oaths are of little value compared to the devotion of a man who has been free to examine and evaluate the evidence and, on the strength of that experience, in Cromwell's words, "knows what he fights for and loves what he knows."

It is sad that his great abilities, his courage, his joyful spirit are lost to the Nation at the early age of 56 years. Our thoughts go out to his wife and family.

I ask unanimous consent to have printed at this point in the RECORD a number of editorials and articles relating to Dr. Griswold.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the New York (N.Y.) Herald Tribune, Apr. 21, 1963]

YALE'S GRISWOLD—A LEADER OF MEN

NEW HAVEN, CONN.—A. Whitney Griswold, Yale's sixth president and a leading spokesman for higher education and academic freedom, died of cancer yesterday in his home on the Yale campus.

The 56-year-old educator had been seriously ill for many weeks. The cancer had been first detected on January 19, 1961, when Dr. Griswold underwent an abdominal operation.

Dr. Griswold was the embodiment (although, if taxed, he would have denied it) of the "educated man" in whose behalf he devoted the greater part of his life. His wide-ranging interests encompassed music, student rows with the New Haven police, American policy in the Far East.

Alfred Whitney Griswold could say:

"The strength of higher learning derives more directly from the liberal arts than from any other source. Take it away and you have the ruination of higher education."

He could, and did, after his first tussle with the university budget, write:

> "Some insolvent evening,
> "We will find an oil well
> "Right under Woodbridge Hall * * *"

Dr. Griswold was scholar and wit, administrator and author, stone-faced adherent to principle and gay social companion. He was one of Yale's youngest full professors and one of its youngest presidents. He became one of the world's most respected educators.

His selection to succeed Dr. Charles Seymour in the presidency was just as much a surprise to him as it was to a great part of the academic world. He and his wife, Mary, were in New York that February day and lunched with Dr. Roswell Ham, then president of Mount Holyoke College. Dr. Ham expanded on the worries and frustrations of such a post.

"Thank God," Dr. Griswold is reported to have said after their friend had left, "that we're not in that racket."

Moments later, he got a phone call informing him of his appointment by the Yale Corp. He returned to New Haven next day and accepted one of the most difficult posts in the world of education.

A colleague once called him "a very sudden man."

The then Secretary of State Dean Acheson (Yale 1915) and the late Senator Robert Taft (Yale 1910) were fellows of the corporation at that time and joined in the unanimous selection of the almost unknown history professor. Said Mr. Acheson: "Pull up your socks, boy, and get on with it."

Whether or not Dr. Griswold needed this admonition, the record shows that he did "get on with it." When he assumed the presidency of Yale, the endowment fund was just above $121 million. By now it is more than $375 million.

Under Dr. Griswold's leadership the faculty pay scale was more than doubled. As a result, there was assembled at Yale one of the finest university faculties in the English-speaking world.

His success in putting through salary increases was one of the accomplishments which gratified Dr. Griswold highly. He had campaigned for a higher scale long before he became president. While still an assistant professor, he had a rubber stamp with which he marked all the menu cards at Mory's. It read: "Raise faculty salaries."

THE M'CARTHY ERA

That, plus a thousand lesser problems, was the administrative side of the job, but this Yale president was much more than administrator and fundraiser. In 1952, when the McCarthy investigations had thrown many Americans into near hysteria over the supposed threat to civil liberties, Dr. Griswold remained the calm history scholar.

"Books won't stay banned," he said. "They won't burn. Ideas won't go to jail. In the long run of history, the censor and the inquisitor have always lost. The only sure weapon against bad ideas is better ideas."

On the other hand, in 1953, Dr. Griswold took a dim view of teachers who invoked the fifth amendment when questioned by congressional committees. He signed a report, by the Association of American Universities, which said that faculty members have a duty to cooperate in official investigations even when the "powers of legislative inquiry are abused."

"Above all, a scholar must have integrity and independence," the report said. "This renders impossible adherence to such a regime as that of Russia and its satellites * * * such membership extinguishes the right to a university position."

Six years later, and still very much concerned with Yale's finances, he withdrew the university from a part of a Federal program making money available for loans to needy students. Among the requirements was one that students seeking such loans should not only swear allegiance to the United States but also file an affidavit disclaiming membership in or support of any organization advocating the overthrow of the Government by violence.

ROOTS IN CONNECTICUT

"The negative affidavit," said Dr. Griswold, "partakes of the nature of the oppressive religious and political test oaths of history which were used as a means of exercising control over the educational process by church or state. The universities of the free world * * * have taken the lead in resisting and doing away with such oaths."

Like Yale itself, his roots were in Connecticut, although he was born on October 27, 1906, in Morristown, N.J. One ancestor was a colonial Governor of Connecticut. He was a direct descendant of two Governors of Connecticut, after it became a State, and a collateral descendant of two others. He was also a collateral descendant of Eli Whitney, inventor of the cotton gin.

He was graduated from Yale in 1929, dubbed by his classmates the "wittiest" and "most original" member. His first job, which lasted until the stock market crash, was with a Wall Street brokerage house. He commented later that "ours was probably the last class in history to leave New Haven on a magic carpet. Every one since 1929 has taken a day coach."

After the crash, he returned to Yale to teach freshman English and, except for studies abroad, never left that campus.

In 1930, he married Mary Morgan Brooks, of Scranton, Pa., a marriage that was to span 33 years and produce three daughters and a son, who survive him.

He had aspired early to be a writer but changed his major line of study from English to history and received his doctorate in that field in 1933. He began as an instructor and became a full professor 14 years later, at the age of 40.

During World War II, he directed two Army training schools at Yale. One was that which taught Americans how to handle civil government in occupied territories. The other was the foreign area and language study known as the Army specialized training program.

Dr. Griswold was a prolific writer. His articles on a wide variety of subjects appeared in periodicals as diverse as the New York Times magazine and Sports Illustrated. His books included "The Far Eastern Policy of the United States," "Farming and Democracy," "Essays on Education," "In the University Tradition," and "Liberal Education and the Democratic Ideal."

He received honorary degrees from Trinity College, Princeton, Harvard, Jewish Theological Seminary, Columbia, Brown, University of Pennsylvania, Wesleyan, and Johns Hopkins.

Dr. Griswold was an officer of the French Legion of Honor.

[From the New York (N.Y.) Herald Tribune, Apr. 20, 1963]

THE MEASURE OF A WARM AND MANY-FACETED MAN

(By Terry Ferrer)

There are those who say that Whit Griswold was the greatest college president in the East. There are those who say he was, above all, the finest history professor they ever had. There are those who insist he was the best essayist and writer in the academic world.

There are also those who know that Whit Griswold was a warm, witty, and generous man who every day did his utmost to raise the quality of whatever crossed his path, be it an academic program at Yale or a fresh defense of the academic freedom which he cherished so deeply.

Whit Griswold liked to open the door himself when a visitor came to the imposing president's house at 22 Hillhouse Road on the Yale campus. He would smile and crack a joke with his welcome. But always, he would thank you for bothering to come to see the president of Yale University.

A reporter recalls a day a few years ago when Dr. Griswold sent a car halfway across Connecticut to pick her up at the end of a meeting and bring her to New Haven. He wanted to make sure that a point in a forthcoming story was clear.

The point was minor, except that to Dr. Griswold nothing was minor. Every detail of a story, a fundraising drive, a speech, a decision, was vital, and he gave it his undivided attention and his driving energy.

We sat over tea in his living room as darkness fell. Thin and frail as he always was, he was not sitting in one of the deep armchairs, but was perched on a straight chair, the legs tilted back. Rocking precariously back and forth, his eyes burning with concentration, he talked of plans for Yale, to make it better, to make it more useful to society, to devise ways that the university could better prepare excellent teachers, could offer its undergraduates a true liberal arts education.

I asked him if he still had time for his music. When we had first met in 1951, the year after he became president, he had spent most of one evening at the piano, singing songs and parodies of his own making, singing songs usually heard at Mory's (where women are barred).

Quite typically, he answered that he was then taking flute lessons for relaxation.

Also quite typically, when he learned a few weeks ago that his cancer was inoperable, he left the hospital to go home—to do some work.

During his 13 years as Yale's president, Dr. Griswold changed the physical face of the campus as well as bolstering its academic climate. In 1960, he boldly embarked on Yale's first capital-funds campaign in 34 years. The goal: to raise the equivalent of $69.5 million in new capital in 2 years. The money was in before the 2 years was over, and with $5 million to spare.

Two new residential colleges, designed by the late Eeero Saarinen, were built and opened, bringing the university's residential colleges to 12. Their soaring towers have added new beauty to the whole city of New Haven.

Last May, Dr. Griswold broke ground for a $10 million science center. On that occasion, he said: "I am sick and tired of the use of the disparaging, not to say pejorative, term 'brick and mortar' as if these things were beneath the dignity of universities."

"Is it not remarkable," he continued, "that man throughout the ages has used brick and mortar to express his highest ideals, his purest and noblest aspirations and that these structures are treasured by archeologists and historians of art as among the most accurate measures of the progress and dignity of the human race?"

Dr. Griswold always reserved the right to give the baccalaureate address at Yale's commencement exercises. Each year he spoke movingly of God and man, his broad face solemn, his thinning sandy hair brushed straight back, his lanky frame straight and still. If he was not very tall, he seemed tall when he gave these sermons.

He was a man who did not scare easily. When the first Russian Sputnik went up in 1957, he refused to be drawn into the general panic and rush toward more science and mathematics. He insisted that a well-rounded, liberal arts education was the key to man's survival on this planet. Education, he maintained clearly and publicly, must aim for a triple competence, in the sciences, in the political and social fields, and in the arts.

When a "disclaimer" affidavit was required of students who wanted to participate in the student-loan program of the National Defense Education Act of 1953, Dr. Griswold was one of the first college presidents to declare that Yale would not participate in the program.

The negative affidavit required that, in addition to a loyalty oath, students sign an affidavit declaring that they did not believe in and were not members of an organization seeking the overthrow of the U.S. Government. Dr. Griswold likened the affidavit to "test oaths" through the centuries which had persecuted Catholics, Protestants, Quakers, and Puritans.

He lived to see the affidavit repealed and Yale in the Federal program.

Undergraduate, graduate student, instructor, professor and president—Whit Griswold was all of these at Yale, spanning 38 of his 56 years of life.

He once wrote: "Loyalty cannot be coerced or compelled. If men are born loyal, the only kind of loyalty that survives infancy in any thinking person is the kind that survives curiosity and withstands criticism and even doubt."

This was the kind of loyalty Whit Griswold, gave to his university, the academic community and the society of all men.

[From the New York (N.Y.) Herald-Tribune, Apr. 21, 1963]

GRISWOLD WIT AND WISDOM

A. Whitney Griswold had a way with words, sometimes winning, sometimes withering, always to the point. He wrote and spoke with good humor, wit, and wisdom. Here are some selections from the Griswold record:

Intercollegiate football: "Undue deference to spectators has led the colleges to default to a certain extent on their professional competence * * *. This was tantamount to a surrender of academic freedom on the athletic field while (academic freedom) was being defended in the classroom." Athletic scholarships were "one of the greatest educational swindles ever perpetrated on American youth."

Society: "Conversation in this country has fallen upon evil days * * *. It is drowned out in singing commercials by the world's most productive economy that has so little to say for itself it has to hum it. It is hushed and shushed in dimly lighted parlors by television audiences who used to read, argue, and even play bridge, an old-fashioned card game requiring speech."

Cold war: "We are the world's greatest salesmen, but can't even talk intelligently about our greatest product—democracy."

Rule of law: "I think that law in the United States has suffered some retrogression of recent date (1950's) * * *. I do not think that the full meaning and value of law are communicated to society through the law's own formal processes * * *. To be effective, the rule of law must be comprehended by society, not as an esoteric concept, but as a working principle comparable to regular elections and the secret ballot; and the plain fact is that it is not so comprehended. This, I think, is an educational deficiency."

Old-fashioned alumni: "We must take a hammer" to the popular image that pictures the American college alumnus as "the irascible member of the old guard who neither dies nor surrenders, fuming with rage (and perhaps a little bourbon) at his football tickets, or the coach, and dashing off sulfurous letters to his university beginning, 'I was shocked to discover that' and ending 'unless something is done about this at once I shall no longer contribute or remain, sincerely.' "

Race issue: "Among our many faults we have in particular a race problem; until we pluck that beam from our own eye we shall have a hard time getting rid of the mote in anybody else's."

Teacher training: "The whole teacher training curriculum has been frozen into law in many States. There are certification requirements, and if you will examine them you will find that many are the icicles of the old system of pedagogy."

Loyalty oaths: "The affidavit cannot create loyalty. Loyalty cannot be coerced or compelled. If men are born loyal, the only kind of loyalty that survives infancy in any thinking person is the kind that survives curiosity and withstands criticism and even doubt. Such loyalty may and usually does have an instinctive base; but if the opportunity to satisfy curiosity and answer criticism is limited, or qualified, or made conditional upon the acceptance of restraints, the instinctive base of loyalty is undermined.

"The only loyalty upon which true reliance can be placed is the kind evoked by the inherent virtue of the cause or institution or individual toward which the loyalty is felt. In creating this kind of loyalty, oaths are of little value compared to the devotion of a man who has been free to examine and evaluate the evidence and, on the strength of that experience, in Cromwell's words, 'knows what he fights for and loves what he knows.' "

U.S. world role: "All the Russian earth satellites, all the Yankee-go-home legends chalked on walls of foreign cities, all the rocks thrown at our Vice President, have not disproved the fundamental soundness of our system of government and our political philosophy."

U.S. trivialities: "We have become too much a nation of lookers and listeners, a nation of spectators. Amidst the easy artificiality of our life, the plethora of substitutes for learning and thinking, the innumerable devices for avoiding or delegating personal responsibility for our opinions, even for having any opinions, the fine edge of our faith has been dulled, our creative powers atrophied."

Creativity: "Could 'Hamlet' have been written by a committee, or the 'Mona Lisa' painted by a club? Could the New Testament have been composed as a conference report? Creative ideas do not spring from groups. They spring from individuals. The devine spark leaps from the finger of God to the finger of Adam, whether it takes ultimate shape in a law of physics or a law of the land, a poem or a policy, a sonata, or a mechanical computer."

Congressional investigations: "Congressmen and Senators are not magistrates with roving commissions to go about the length and breadth of the land hailing people before them to respond to what they will. Congressmen and Senators are legislators, entitled to make inquiries and examine facts in support of their work as legislators. They can readily get all the information they need about any topic without asking any person about his own past thoughts, beliefs or associations."

Destiny: "We would all like to know more perfectly our mortal destiny in order that we might steer more perfectly our mortal course. It would do us all good to understand more clearly the world of science as it would the world of humanities, for both are essential to an understanding of the true nature of the world in which man lives. We do not gain this unity of knowledge and understanding by delegating it to others. We shall not gain it from statistical measurements of our own inadequacies, or by inoculating one another with expedient doses of science and humanism."

[From New York (N.Y.) Times, Apr. 21, 1963]

A. Whitney Griswold

The cause of freedom had no more devoted champion than Dr. Alfred Whitney Griswold. He brought to the presidency of Yale University a view of academic responsibility that ranged far beyond the broadening of the curriculum, the strengthening of the faculty or the augmentation of endowments. His concern was the advancement of man and the repelling of every assault on human liberty and dignity. Wit and good humor were part of his arsenal in that task, but so was a courage that scorned the cautions of more timorous colleagues.

He condemned loyalty oaths and all other efforts to legislate conformity. "Books won't stay banned," he once said. "They won't burn. Ideas won't go to jail. In the long run of history, the censor and the inquisitor have always lost." The vigor and articulateness he marshalled against the suppressors of freedom contributed much to building a stronger America. His death of cancer at the age of 56 is a loss to the Nation, even more than it is a loss to Yale.

[From the Washington (D.C.) Post, Apr. 22, 1963]

A. Whitney Griswold

The motto of Yale University—"Lux et Veritas"—was upheld with honor by A. Whitney Griswold, president since 1950 of New Haven's great seat of learning. Early in his tenure, he resisted pressures intended to protect Yale undergraduates from the dangerous world of ideas. He felt that man and God could endure at Yale without limitations on the spirit of free inquiry—a conviction that was reflected in an influential statement on academic freedom prepared in 1953 by a committee of university presidents that Dr. Griswold headed.

A teacher and historian of international relations, Dr. Griswold proved a vigorous administrator as president. The endowment and physical plant grew at Yale—and, notably, so did faculty salary scales. Dr. Griswold had the belief, considered eccentric by some, that teachers should be generously paid as one measure of the country's esteem for learning. Now dead at a premature 56, Dr. Griswold's legacy is a flourishing university providing more light than ever before in the quest for truth.

[From the Washington (D.C.) Evening Star, Apr. 22, 1963]

Griswold of Yale

In the all-too-brief span allotted him, Dr. A. Whitney Griswold left an imprint neither time nor change will erode. His eloquent voice carried the message of freedom far beyond the elms of Yale University, whose presidency he filled for 13 years.

Judged as an administrator alone, Dr. Griswold made a remarkable record. His relentless work on behalf of faculty members nearly doubled their pay in a decade. Unsuspected of money-raising skills, he nearly tripled the endowment fund. But he also more than tripled the budget for sciences, and in so doing, attracted such gifts as the $10 million grant of C. Mahlon Kline for a new science center.

He championed free academic expression at Yale and elsewhere. He believed that no one who cares should be denied a liberal arts education as a means "to expand to the limit the individual's capacity, and desire, for self-education, for seeking and finding meaning, truth, and enjoyment in everything he does."

Most notably, through example and precept, Dr. Griswold elevated individual effort above "sterile and stultifying" committee action. He taught that neither Hamlet, nor the Mona Lisa, nor the New Testament could have been wrought by committee. Rather, he said, "the divine spark leaps from the finger of God to the finger of Adam."

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. JAVITS. I wish to associate myself with the distinguished Senator from Kentucky in memorializing, as he has, the life of the president of Yale University. Dr. Griswold was one of our most gifted educators. I knew him personally. He made significant contributions toward American public and educational life. I join the distinguished Senator from Kentucky and all other Senators in an expression of sadness on hearing that he has been cut off at the most fruitful point in his life by the dread disease of cancer. If we needed anything to stir us to Herculean efforts to deal with the terrible scourge of cancer, we see in Dr. Griswold's passing an impressive example of what the disease has cost our world.

Mr. COOPER. I thank the distinguished Senator from New York.

RESEARCH GRANTS AND SALARIES

Mr. JAVITS. Mr. President, the administration of federally sponsored research grants and contracts, including salary charging practices of academic institutions is receiving increased attention and study. To obtain factual background information on this situation, the Committee on Sponsored Research of the American Council on Education conducted a survey of 60 universities which are most heavily involved in Government research projects. On the basis of the information thus obtained, the committee has made a number of recommendations which it believes should be very helpful to colleges and universities in improving their relationships with the Federal Government. Members of the committee are Fred R. Cagle, vice president, Tulane University; Lowell T. Coggeshall, vice president, University of Chicago; Lee A. DuBridge, president, California Institute of Technology, chairman; Milton S. Eisenhower, president, the Johns Hopkins University; Clifford C. Furnas, president, State University of New York at Buffalo; T. Keith Glennan, president, Case Institute of Technology; Virgil M. Hancher, president, State University of Iowa; Laurence R. Lunden, vice president, business administration, University of Minnesota; and Logan Wilson, president, American Council on Education, ex officio.

I ask unanimous consent to have printed in the RECORD the summary entitled "Recommendations on Faculty Salaries Charged to Government Contracts," issued by the Committee on Sponsored Research, American Council on Education, April 1963.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

RECOMMENDATIONS ON FACULTY SALARIES CHARGED TO GOVERNMENT CONTRACTS

The Committee on Sponsored Research of the American Council on Education has been aware for some time of the growing concern in certain universities, and in a number of Government agencies, about the lack of uniformity in policies relating to the billing of the Government for a portion of the salaries paid to regular faculty members for their work on sponsored research grants and contracts.

The committee believes that it is sound policy to regard the prorated portion of the salaries of faculty members working on such grants or contracts as a proper direct cost of research, and we believe that the Government should pay the full costs of the research work it sponsors in colleges and universities.

Nevertheless, such a wide variety of procedures and practices has developed among universities and various Government agencies that misunderstandings have arisen—and some abuses may have arisen—causing certain Government representatives to propose more uniform and rigid regulations covering salary reimbursement. Such rigid or uniform regulations would not recognize the differing situations present in various institutions, and would partially destroy the flexibility essential for good relations between the universities and the Government.

On the other hand, the universities themselves must recognize that there must be one overall guiding principle that is rigidly adhered to—namely, the Government should not be billed for more than that share of the total annual salary of a faculty member that is represented by the effort actually expended on the sponsored research project or projects. Careful adherence to this principle will avoid abuses and misunderstandings, as well as unreasonable intrauniversity salary competition for support by Government funds.

Specifically, the committee proposes the following recommendations:

1. It would be ideal if the salaries of all faculty members carrying on scholarly work throughout the calendar year were on a 12-month basis, including 1 month paid vacation. Such a salary basis simplifies the identification of the percent of effort charged to extramural sponsors. Thus, if a faculty member devotes 50 percent of his effort during the 12-month period to a project, the university should be reimbursed for 50 percent of his total 12-month base salary. Thus, no portion of a faculty member's salary is contingent on Government support of his research.

2. Wherever it is not feasible for the salaries of faculty members to be converted to a 12-month basis, the percent of effort devoted to sponsored projects should be determined for the academic year and the university should request reimbursement for the corresponding portion of each salary.

3. The additional amount requested by the university for summer salary should be determined by the percent of effort and period the faculty member devotes to a project. Thus, if a faculty member devotes 100 percent of effort to research during certain summer months, the university should claim the appropriate one-ninth, two-ninths, or three-ninths of the base salary, depending on whether the faculty member works 1, 2, or 3 months. Other ratios may also be justified, but a claim of 3 months' salary for less than 3 months' 100 percent effort must be avoided, as should arrangements which charge the sponsor for more than a properly prorated share of the vacation allowance. Faculty work schedules allowing for no vacation should not be regularly permitted.

4. If the sponsors of projects require periodic reports on percent of effort, they should be called for only at the end of each academic period (for example, quarter, semester, trimester).

5. In consonance with the principles expressed in the foregoing paragraphs, universities should avoid extra compensation (compensation above the full-time base salary) for work on special projects during the academic year. The base university salary should include compensation for all university duties (for example, teaching, research, administration, intrauniversity consulting). Exceptions to this rule should be made only for very compelling reasons and in unusual cases.

A SOUTHERN CAMPAIGN MANAGER SPELLS OUT THE PROPER PROCEDURES FOR WINNING BY REPUBLICAN CANDIDATES FOR CONGRESS

Mr. MUNDT. Mr. President, there has recently come to my attention a remarkable letter written by a southern campaign manager to his Republican candidate for the U.S. Congress. I consider this to be one of the most interesting, impressive, and informative documents in many years of political evolution and development. It is for that reason that I ask unanimous consent to place it in the body of the CONGRESSIONAL RECORD for the review and consideration by historians as well as for the possible guidance and inspiration of other current political leaders desirous of establishing effective two-party government in every State and section of America.

The fact that this significantly different letter was written by a former colleague of ours—former Senator Harry Cain of Washington—not only adds to its interest and effectiveness but guarantees to its readers that it is written by one of the most proficient practitioners and most careful students of American political activity.

This letter was deemed of such significance that several weeks after the campaign was over, both of the great Sunday newspapers of Miami, Fla., asked and received permission to print the letter in full even though the Cain-managed candidate had been defeated and the election was long since over. Senator Cain's candidate, while losing, gathered up about 45 percent of the vote in the fall election in a campaign where earlier polls and estimates indicated he would receive less than 20 percent of the vote since he was running not only against an able and experienced candidate for Congress—former Senator CLAUDE PEPPER—but in an area which previously had given scant if any encouragement to Republican candidates for Congress.

All of these developments lend real and realistic encouragement to candidates and citizens of the so-called one-party areas of the Deep South who may have come to realize that only by developing an effective Republican organization and honorable and effective Republican candidates and procedures of campaigning can the Southland once again come to be considered sufficiently independent or unpredictable in its election behavior so that it will once more be able to play an important part in shaping our national policies and in selecting and electing our national leaders. Until the fine and cultured citizens of Dixie develop this necessary unpredictability in our national campaigns for President and for Congress, I greatly fear they will continue to be considered "in the bag" by the Democrats and "out of reach" by the Republicans. Until and unless these great Southern States with their vast resources of sound judgment and high purpose develop a political mechanism which will indicate alike to the Republican and Democratic national campaign committees that they are indeed not really the "kept voters" of Democratic politicians but that they, too, have both the desire and the means at hand to "reward their friends and punish their enemies" at the polling places each election year in November, I fear that for many years into the future the traditional South will be as ineffective and unheeded in national campaigns as it has been, increasingly, ever since the abrogation of the two-thirds voting rule in the 1936 Democratic National Convention.

I urge all who cherish the preservation of our great American ideals to read carefully and to file for future reference this remarkable letter of a distinguished campaign manager to his capable and high-minded candidate for Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Miami Herald, Nov. 25, 1962]

THE LETTER, ITS BACKGROUND, AIMS

The following letter was written by Harry P. Cain, for 7 years the State of Washington's Republican Senator and for many, many more a student of American politics.

It was sent to his candidate, Robert A. Peterson, who battled unsuccessfully against former Senator CLAUDE PEPPER for the congressional seat in Greater Miami's new Third District.

This is a memorandum prepared by Cain and delivered to Peterson 2 days after he agreed, at the urging of mutual friends, to take on the task of directing an admittedly hopeless campaign.

Cain is proud of the results. So is Peterson and so, Cain says, are those "upon whose toes I stepped hard during the 5 weeks we worked so hard to give the party and the moderates in the district a foundation on which they could build future victories."

When the campaign was over, and Peterson's skimpy 2,800 votes in the May primary had been parlayed into almost 43,000 in November's election, Cain agreed to release his memo or "declaration of war against a campaign that was going full speed backwards."

Cain, a Miami resident since 1957 and a vice president of First Federal Savings and Loan Association, sent a copy to the Herald's publisher, John S. Knight, "because I wanted him to know how rough and rugged the job really was."

"My desire to help Peterson had two sides," Cain said. "First to build the foundation I spoke of, and second because I was afraid that CLAUDE PEPPER would win by such a landslide that no man would run against him for the next several campaigns."

Pepper polled approximately 58 percent of the vote and Peterson 42 percent.

As for Cain's goal that all his candidate's campaign bills be paid by election night: "We beat our deadline by 24 hours."

"We took in a bit more than $19,300," Cain said, "and almost all of it after October 15 as the campaign gained steam. We ended up with a balance of $98.15."

[From the Miami News, Nov. 25, 1962]

Intimate View of Florida Politics

(By Morris McLemore)

We have here a rare document.

It is an unique revelation of the inner works of American politics—the relationship between a candidate for public office and a friend who dedicates himself to his cause.

The candidate, Robert Peterson, was the Republican opponent of Claude Pepper, Democrat, in the November 6 voting that resulted in Mr. Pepper's election to Congress from the new, Third District, in North Dade County.

It was a bitter contest. Claude Pepper claims he was the object of smear tactics and the Federal Bureau of Investigation reportedly is looking into the matter.

The letter herewith was written well before the balloting but apparently at a date considered late in the campaign of Mr. Peterson.

Its author, Harry P. Cain, is a veteran of political campaigns at many levels. He was for 7 years a Republican U.S. Senator from the State of Washington and for 3 years a member of the Subversive Activities Control Board, appointed by President Eisenhower. He also lectured on political matters at Yale University.

Since 1957, he has lived in Miami, and is a vice president of the First Federal Savings & Loan Association.

An excellent speaker, as we discover in the letter, Senator Cain also is a facile writer. More important, he also is a man who believes in knowing his place in a political campaign—and making certain in advance that others know it and their places, too.

Senator Cain made the letter available to me in an effort to clarify his own attitude and that of Mr. Peterson toward the latter's candidacy and the possibility that militantly anti-Pepper elements would attempt to inject their influence into the Republican effort.

"This declaration was, to the best of my knowledge, observed by Robert Peterson and those men and women who constituted his official family," says Senator Cain.

Thus, he makes clear his posture toward all who might attack the patriotism of the Democratic opponent of Mr. Peterson.

More than this, the letter etches for us the relationship of candidate and manager, of the image and the man who draws the image, of the fighter and his handler.

It is an intensely interesting and meaningful document.

[From the Miami News, Nov. 25, 1962]

September 29, 1962.

Memo to: Robert A. Peterson.
From: Harry P. Cain.
Subject: Terms and conditions of agreement with candidate.

Since meeting with you and your executive committee on Wednesday, September 27, I have agreed to assume responsibility for your political affairs, beginning with Monday, October 1, until the election is concluded on Tuesday, November 6.

You and your executive committee have accepted my terms, which are listed next below, for the services I shall earnestly seek to render:

1. Such decisions as I may find it necessary to make will be accepted by the Peterson campaign organization without argument or debate. When convenient, I will gladly explain the reasons for a given decision.

You would not tolerate nor would I insist on this condition except that you have become aware that your campaign which has been going nowhere for several months is presently moving backward. We agree that only the most drastic actions can result in a respectable showing for your splendid candidacy.

2. No person, including your good self, will be permitted to commit your campaign for any goods or services without my oral or written approval.

Since June, your campaign has received just over $4,900 in contributions. The information I have is that your bills payable presently amount to just about $3,500. As of this morning the balance in your operating account was $360.16.

It does not bother me that a sizable portion of your income has been wasted or thrown away. What does bother me is that your credit standing has been impaired; some of your bills payable are more than 60 days overdue.

Until further notice, I will use $0.50 from each new dollar of income to apply on past due obligations. As soon as your income posture permits, all of your bills payable will be satisfied.

From now on no commitment for goods or services will be made unless there is money actually in hand to satisfy it. My ambition for you is that every bill that is owed by your campaign will be paid by the evening of election day, November 6.

If money enables your campaign to present you in the next 5 weeks to the public by means of newspaper, radio, and television, this will be done. Unless the money is available, none of this will be done.

You will understand, please, that you will make no further money contribution of your own to the campaign unless I permit it and I very much doubt if I will. It is quite enough that you have offered yourself as a first-rate candidate.

(3) If any person violates a decision of mine or disregards it in any meaningful manner, I shall summarily separate that person from your campaign organization or I will feel free to separate myself from your service without notice to you or anyone else.

(4) Neither you nor the executive committee will think of or refer to me as being Peterson's campaign manager. I will be known as your friend who willingly undertakes to accomplish what you ask.

For planning purposes my day in support of your campaign will begin at 4 o'clock or later each afternoon. Campaign workers and leaders will soon learn to accommodate themselves to this schedule. It will rapidly teach them to know what they want to talk about when they show up.

YOUR CAMPAIGN

You have no campaign at this time. What has posed as a campaign has had neither purpose, direction, workers, nor money.

The several so-called professional political staff members are doing you and your camgain more harm than good. This is as much your fault and that of the others who hired them as it has been their fault. They have been employed improperly and in consequence you and the executive committee have been working for them rather than the other way around.

These several individuals will be retained for as long as it takes to determine what they know. This will not take long. They will be gone in several days' time.

THE CAMPAIGN TO BE EXPECTED

Your campaign for the Congress from the newly established Third District of Florida will begin during the Cramer fundraising dinner that is scheduled to take place in the Carillon Hotel on the evening of Saturday, October 6. Between Monday and Saturday of next week, what has been done to this date will be undone and then we shall be prepared to go to work. This means that your campaign for the Congress will cover a period of 30 short but extremely precious days.

THE CRAMER DINNER

The only changes in present plans for the Cramer dinner are these:

(a) The head table will consist of three places to be occupied by Mr. Cramer, you, and myself. The purpose is to direct the focus of attention on you. Other important officials, functionaries, and distinguished guests will be seated at a longer table on a lower level.

(b) I will act as the master of ceremonies and not because I am anxious to speak in public. The purpose is to control the evening and to make those in attendance more aware of the seriousness of the campaign which will then be launched.

In addition, I anticipate that Congressman Cramer, a fine fellow, will make a speech as though he were a candidate for some statewide office. This is a laudable ambition but it could lead to difficulties and misunderstandings we shall want to avoid. As the toastmaster, I can precede then follow him with such remarks as may then be needed.

The dinner will mark your first public appearance of any importance. I suggest that you prepare yourself carefully to speak between 5 and 10 minutes. I would urge you to refrain from any attack on your opponent. Your need is to convince others that you are sincere, attractive, reasonable, and that you are possessed of convictions which you want to share with others should you be elected on November 6.

YOUR ROLE AS OUR CANDIDATE

As a mature person, you will speak as you think proper on any occasion. When in doubt about issues, developments, or trends, you will confide in me.

If you are to make a good showing by the time the course is run, it will be because individuals, in every section of your district, have grown to know, admire, and believe in you. If we were adequately financed, as we are not, this could be achieved in large part through the public media. It will be necessary for you to largely do for yourself what money could do for you in a different manner. You will not regret this advice and you will enjoy meeting many different kinds of people whom you have had no previous knowledge about.

MY RELATIONSHIP WITH YOU

I shall be at your service day and night but you will see remarkably little of me.

Within a week's time, I shall have relieved you of every possible detail. In return, you will feel completely free to refer every detail that your friends bring to you to me.

Following the Cramer dinner, you will not be expected to attend any meeting of campaign leaders or workers. You will be welcome whenever you care to appear but it will be my job to convince others that they must work for you in your understandable absence. I strongly urge that you restrict your conversations with people in your organization to a minimum. Unless you are careful, these conversations will disturb you, for they deal with many things you know nothing about, and they will consume your energies that ought to be exercised in other ways.

My main obligation is to do for you what you could do but haven't the time for.

YOUR FRIENDS AND YOUR ENEMIES

The most difficult lesson to learn in politics, and it is generally learned the hard way, is that your friends will often cause you much more trouble than your enemies. The latter is openly out to do you in and this enables you to prepare your defenses and to launch your counterattacks against his assaults. A friend, however, does not always know what he is doing and you may naturally assume that he is working and contributing when he is doing nothing at all.

Your friends, not your enemies permitted or persuaded you, as an example, to establish an executive committee which is weak and lopsided on its face. Conspicuously absent from it are Jewish, Negro, and labor elements. I will call for a meeting of the committee. If 80 percent of the members show up, the membership will be promptly enlarged. If fewer members appear, the committee will not be formally disbanded but will not be relied on again.

Beware of friends who address you as Mr. Congressman or tell you that you are certain to win. Successful politicians are those who gather together men and women who share the same goals and points of view. When a friend has these political qualifications, his friendship becomes a real asset. But any friend who is lacking in this area will probably become either a troublemaker or an obstacle.

CAMPAIGN THEMES

There are only two primary issues to be developed and exploited in the campaign. They are—

(a) The contrast and differences between you and your opponent: This must largely be developed by having the public become aware of you as a person. We will work together on this goal from this time forward.

(b) Moderation versus extremism: Here the differences are clearcut and obvious. Our intention will be to make your position of moderation appealing to both Democrats and Republicans.

The first thing to understand and the last thing to forget in this campaign is that it will be fatal and futile for you to appeal for support on the grounds that you are a Republican who insists on waging war against the Democrats. I will have a set of figures in a few days' time that will justify this premise.

It is apparent that you are a Republican and proud of being one. Beyond that, the issue stated above is much more important than any party affiliation.

DECLARATION OF INTENT

(a) On Monday, I shall write to Senator Pepper to advise him of my decision to support you as best I know how. In having served with him, I would expect him to do as much for me were the shoe on the other foot.

(b) By Wednesday of next week, I will write and forward an "estimate of the situation" to Mr. Thomas Brown, the Republican State chairman in Tampa, with copies to prominent Republican officials and some Democrats in Washington, D.C. This letter will include a request for assistance in several ways, including financial. We must determine immediately what, if anything, we may expect from outside sources. We shall not again ask any assistance in the area stated above. By October 10 we ought to know what we will have available from the above sources to work with.

RELATIONSHIP WITH REPUBLICANS IN THE THIRD DISTRICT

You must avoid letting them formulate or dictate any policy. This is not being disrespectful. It will take the Republicans, particularly in official positions, a little while to appreciate that it will remain for moderate Democrats and independents to elect Robert Peterson. In the beginning this is not likely to occur to them and they will feel something of a shock when they first are confronted by the declaration. In our part of Florida, Republicans know too little about campaigning. You must become their teacher. When the campaign is over, most of the Republicans will applaud your wisdom.

RELATIONSHIP WITH RIGHTWING ELEMENTS AND BIRCHITES

These interesting groups of people will either remain at home on election day or they will vote for you, however reluctantly. They will be treated with every consideration but no concessions will be made to them at any stage in the campaign. Some of your refreshing moderation will rub off on them and they are likely to feel better for having voted for you. On occasions, some among them will become furious and walk out. They will be made welcome should they care to return but we shall not change the course of your campaign in any effort to get them back.

SMEAR TACTICS AGAINST YOUR OPPONENT

These can be expected from a variety of unknown quarters. Your position is and will continue to be that you will not tolerate any of these activities from or by anyone who has any known connection with your campaign. I will make this clear, in your name, to your workers at the first opportunity. As for myself, I consider Mr. Pepper's loyalty to our country to be as positive and certain as is my own.

ENDORSEMENTS BY THE MIAMI HERALD AND THE MIAMI NEWS

Don't worry about them and don't seek them. In my judgment the Herald may be inclined to endorse you if they grow to believe, in several weeks' time, that your candidacy is deserving of their interest. I would guess that the News will endorse your opponent even though they endorsed his opponents in his two previous unsuccessful attempts to return to the U.S. Senate. In any case, there is nothing you can do or should do about endorsements. I will make known your ready availability should the board of editors in either or both papers wish to exchange views with you.

YOUR RELATIONSHIP WITH THE WEEKLIES AND THE METROPOLITAN PRESS

(a) If you have not done so, I encourage you to personally visit and meet the editor or publisher in each of the weekly papers within the Third District. It is important that they know you as a person. After the initial visit, your agents can speak for you effectively.

(b) You may see one or both of the political editors of the Herald and the News at the fund raising dinner on October 6 but otherwise it will be surprising if you see them within the Third District at any time during the campaign. They are talented, knowledgeable writers but, for a variety of reasons, they are not inclined to follow political campaigns in person.

Were I you, I would rely on them to write as they like without any suggestions or requests from you. They will not, in my opinion, be unfriendly but they are not likely to be very helpful. It is well for you to remember that these gentlemen are products of their environment. They have long taken Democratic victories for granted and I would not have you seek to persuade them that a new day is dawning. This is an appreciation they will come to realize but I think they should figure this out without any attempted guidance from you or me.

FROM ME TO YOU

At no time during the campaign will I discuss with you the chances of your being elected. I commit myself to you not because I think you can win, for at this time I do not, but because I think it possible for you to make a good showing and this will be of real benefit to what I believe the needs of our time require. We will plow forward each day on the conviction that we are doing better than we did yesterday.

I shall make some people very mad and step on many toes but there will be a sound reason for all of this. I will not be made unhappy by those who, perhaps and I hope temporarily, dislike me intensely, providing they love and admire "My Tiger." I will give you the best I have because in return I possess a strong feeling that you will give to the people many reasons why they should have confidence in your aspirations and hopes for the future.

For the next month I shall be your second self. Let this second fellow be the guy who takes on your worries, frustrations and alarms. This will free you to be your own man, unafraid and challenging. On election night, you will derive the greatest satisfaction from your travels and meeting life head on in the previous 30 days.

HARRY P. CAIN.

A. WHITNEY GRISWOLD

Mr. RIBICOFF. Mr. President, Yale University, Connecticut, and the Nation have lost a distinguished leader, A. Whitney Griswold, the 16th president of Yale University. Distinguished scholar, able administrator, profound philosopher, Dr. Griswold was a stouthearted defender of the rights of freemen and an advocate of learning in the broadest sense. He will be sorely missed. There have been many editorials about A. Whitney Griswold in recent days.

Mr. President, I ask unanimous consent that several of the most outstanding be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New Haven Register, Apr. 21, 1963]

A. WHITNEY GRISWOLD, 16TH PRESIDENT OF YALE

A. Whitney Griswold, the 16th president of Yale University, was relatively young in years when he assumed that distinguished office and his tenure was short in terms of his alma mater's illustrious age. But in the 13 years of his presidency the impact of his leadership, his enterprise, and his service was impressive.

His death at 56 of cancer, following periods of failing health but unflagging devotion to the interests and welfare of the university, is being mourned by all Yale men, faculty and administration associates, students and alumni; by the New Haven community of which he was so conscientiously a member; and throughout the educational world which recognized his work and contributions so well and so widely.

A graduate of Yale in 1929, and a member of the university's faculty in 1933, Griswold was a professor of history when named president in 1950, succeeding Charles Seymour. His academic attainments and his championing of the liberal arts speak for themselves, as did his efforts toward improvements of education at Yale. On the business side, the university experienced under him one of its greatest building periods, supported by successful fundraising impetus.

The world is apt to think that great institutions like Yale University live and move, and even prosper, of themselves. And so they do, perhaps, in a certain sense; for other forces and personalities are at work beside those of Whitney Griswold to make the university what it is today. But no one who knows the delicacy of such an operation, the forethought and sincerity of purpose, and the intellectual stimulus that are required will be tempted to underrate the value of Mr. Griswold's contribution.

Cheerful and courageous to the end in the face of an incurable disease, his life personified the striving for excellence tempered with the humanity of a man who had the remarkable ability to wear his education lightly. To the Yale community and to his family we offer our deep sympathy, secure in the knowledge that his mark upon the university will provide an enduring inspiration to all.

[From the Hartford Courant, Apr. 21, 1963]

Alfred Whitney Griswold

A distinguished leader has been lost to a great university and to the academic world spreading far beyond its campus. The tragedy will seem the more because A. Whitney Griswold has died in the full flush of life. As he became one of Yale's youngest presidents at the age of 43 in 1950, so he has been taken at the age of 56 which is woefully early compared to the venerability of many university heads.

Venerability however is a word that probably never would have fitted President Griswold. His nature was far from any such mossy implications. He practically vibrated with drive, his mind was surcharged with ideas and the energy to force them to fulfillment. And he had a salt wit and pungency of speech that made it impossible he should ever become a university Polonius.

Some heads of great institutions of learning have achieved distinction as administrators, others as scholars, others as philosophers of academic purpose. President Griswold, with characteristic force, bundled all three attributes in his single nature. He had the management of a Yale community numbering some 11,000 persons in one way or another. He provided for them well, with bulging endowments, a thriving alumni fund, worthy faculty salaries and ample new buildings. And as a historian, he was a ranking scholar in his own right.

After three decades from undergraduate to president, Dr. Griswold was as rooted in Yale as the elms and the ivy. But his concern was for all the academic world and the university ideal. In the uneasy days when witchhunting was beginning to invade institutions of learning, President Griswold was a champion of academic freedom and the courage and right to speak out. In more recent days, when a new threat—the domination of a scientific age—has been narrowing men's outlook, President Griswold fought parity for the liberal arts, so that a whole and steady philosophy should keep universities from ever becoming the birthplace of new Frankensteins.

It remained a touch of lifelong disappointment in him that he was not able to write as much as he had hoped in earlier years. Yet what he has written in achievements for Yale, and the world of immeasurable value to which it belongs as a university, can only be a rich legacy to present and future.

[From the New York Times, Apr. 21, 1963]

A. Whitney Griswold

The cause of freedom had no more devoted champion than Dr. Alfred Whitney Griswold. He brought to the presidency of Yale University a view of academic responsibility that ranged far beyond the broadening of the curriculum, the strengthening of the faculty or the augmentation of endowments. His concern was the advancement of man and the repelling of every assault on human liberty and dignity. Wit and good humor were part of his arsenal in that task, but so was a courage that scorned the cautions of more timorous colleagues.

He condemned loyalty oaths and all other efforts to legislate conformity. "Books won't stay banned," he once said. "They won't burn. Ideas won't go to jail. In the long run of history, the censor and the inquisitor have always lost." The vigor and articulateness he marshaled against the suppressors of freedom contributed much to building a stronger America. His death of cancer at the age of 56 is a loss to the Nation, even more than it is a loss to Yale.

[From the Washington Post, Apr. 22, 1963]

A. Whitney Griswold

The motto of Yale University—"Lux et Veritas"—was upheld with honor by A. Whitney Griswold, president since 1950 of New Haven's great seat of learning. Early in his tenure, he resisted pressures intended to protect Yale undergraduates from the dangerous world of ideas. He felt that man and God could endure at Yale without limitations on the spirit of free inquiry—a conviction that was reflected in an influential statement on academic freedom prepared in 1953 by a committee of university presidents that Dr. Griswold headed.

A teacher and historian of international relations, Dr. Griswold proved a vigorous administrator as president. The endowment and physical plant grew at Yale—and, notably, so did faculty salary scales. Dr. Griswold had the belief, considered eccentric by some, that teachers should be generously paid as one measure of the country's esteem for learning. Now dead at a premature 56, Dr. Griswold's legacy is a flourishing university providing more light than ever before in the quest for truth.

[From the New York Herald Tribune, Apr. 21, 1963]

A Great Loss for Education

Fortunately, Dr. A. Whitney Griswold came to the presidency of Yale relatively young; tragically, he died at an age when, in the normal course, he might have been expected to contribute many more years to American education. Cut short as it was, however, his tenure at Yale marked an era at the university and made a significant mark upon American higher learning.

Dr. Griswold faced and conquered the great dilemma of all university heads: to administer a vast enterprise while infusing it with the challenge and excitement of geniune scholarship. His practical work at Yale, and his example, were immensely valuable for a nation which is wrestling with the complexities of democratic education in a world of suddenly expanding horizons; he upheld the great tradition of liberal learning, of the humanities, at a time when there are mounting pressures toward narrow specialization and mechanistic philosophies.

For Dr. Griswold had always a deep sense of the value of the individual. He acted on the conviction that, as he told the Herald Tribune Forum in 1951, in his first public address as president of Yale, "for 9,000 years society has depended upon its members as individuals for those creative achievements of mind and spirit that have guided it along the road of civilization."

Dr. Griswold took his responsibilities seriously, but wore his talents lightly. His manner cloaked, but did not conceal, moral courage of a high order, and his last years called for physical courage to match it. Yale, and the whole academic community, will remember him with affection, pride, and grief.

THE GOLDEN ANNIVERSARY OF THE SLOVAK SISTERS OF THIRD ORDER OF ST. FRANCIS IN AMERICA

Mr. SCOTT. Mr. President, training their children to be good citizens is one of the greatest responsibilities of the citizens of this Nation. Fortunately there are many educational and fraternal organizations which can ably assist parents in this vital task.

In my State of Pennsylvania and neighboring States, the Slovak Sisters of Third Order of St. Francis in America have performed this important function for the past half-century. Not only has the order educated thousands of good citizens, but it has also provided teacher-training so that there would always be individuals with the ability to teach the art of citizenship. It did the job without any form of Government assistance. It relied for aid only on its loyal supporters, who gave generously even during the trying years of the great depression.

The Slovak Sisters are observing their golden anniversary during 1963. I commend the Slovak Sisters for the excellent job they have done. They have my warm encouragement for the future years.

In connection with the anniversary, I ask unanimous consent that there be printed in the CONGRESSIONAL RECORD an article by Mr. John C. Sciranka, a noted American-Slovak journalist, a native Pennsylvanian, and a former student of the Slovak Sisters.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The Golden Anniversary of the Slovak Sisters of Third Order of St. Francis in America

(By John C. Sciranka)

This year, in which the Slovaks and the Slavs are observing the 11th centennial of the arrival of SS. Cyril and Methodius to the country of their ancestry—Slovakia—is also a Golden Anniversary of the Slovak Sisters of the Third Order of St. Francis, who have two large motherhouses in Pennsylvania, one at Mt. Assisi Academy, Bellevue, the suburb of Pittsburgh and the other at Monacacy Manor, Bethlehem, Pa.

As one of their first pupils in the newly established Slovak Parochial School of St. Gabriel, North Side Pittsburgh, Pa., I recall most vividly the arrival of these first Sisters to our parish a half century ago. Our pastor, the late Reverend Ferdinand Prikazky, greeted them in the church filled to capacity. For many of us it was the first time that we came so close to the nuns and were curious about them and their life.

However, before their establishment of the first parochial school in Pittsburgh, there was a great more to their arrival in this country, about which we learned later.

The writer has been in constant touch with them for the half century and besides myself, my two brothers and two sisters were also taught by them in the old home town of Pittsburgh.

A half century ago there was a great need for the Slovak priests in this country and even a greater need for Sisters to teach in parochial schools. Two orders were already established and especially the Vincentian Sisters came here in 1902 and settled in Braddock, Pa. About that time the late Father Matthew Jankola was seeking permission in Rome for the establishment of the Congregation of the Sisters of SS. Cyril and Methodius which was founded 54 years ago and celebrated its golden anniversary at Danville, Pa., in September 1959, where Bishop Andrew G. Grutka pontificated by celebrating a Mass in Old Slavonic Rite.

Prior to these three orders, Sisters of other non-Slovak congregations taught in Slovak parochial schools and encouraged their girl pupils to join their orders, thus enriching the much needed teaching staffs.

FIRST SLOVAK PAROCHIAL SCHOOL

In order to appreciate the endeavors of our pioneers in this educational field, we must go back to the first Slovak Parochial Catholic School in the Western Hemisphere, which was established in 1889 in Streator, Ill., at St. Stephen Slovak Catholic Parish by Rev. Erwin Gellhof, pioneer Slovak priest and fraternalist who was born on October 26, 1859, in Spis County, Slovakia, ordained to the priesthood in September 1883 and came to Streator, Ill., where he assumed his pastoral duties on September 22, 1887.

Father Gellhof engaged the Sisters of St. Francis from Joliet, Ill., to teach in his first school. The first teachers were Sister M. Mary of Irish descent and Sister M. Magdalena of Czech (Bohemian) descent. The Slovak language was taught by Father Gellhof and Edward Schwartz-Markovic, editor of the Nová Vlast (New Country), second Slovak newspaper in America and first published in the literary language.

These St. Francis Sisters of Joliet, Ill., also trained the first American Slovak nun of their order, Miss Mary Simko, who chose a monastical name of Sister M. Erwina in honor of Father Erwin Gellhof, who is known as one of the first American Slovak Fraternalists. From Illinois he moved to the bituminous coal and coke region of New Haven and Connellsville, Pa., where he established several Slovak parishes in the Pittsburgh diocese.

These St. Francis Sisters also established the first parochial Slovak school of St. Stephen Parish in Johnstown, Pa., at the invitation of the late Rev. John Martvon, who died at the age of 96. One of their former pupils came to Johnstown school as Sister Superior.

However, these were not Sisters of a Slovak order, although they did gigantic service and are still carrying on with a new generation of teachers.

BISHOP JOSEPH M. KOUDELKA

A half century ago a need for Slovak Sisters as teachers was so great, that priests of various parishes, namely, Rev. Ferdinand Prikazky whom I served as altar boy for close to 10 years, sought aid from all over. In 1912 the late Bishop Joseph M. Koudelka, who was an American of Czech origin but mastered the Slovak language and gave many missions to the Slovaks, suggested to Father Julius Vrana of McKees Rocks, Pa., that he introduce the visiting Sisters in 1912 from Bohemia, who taught in schools in Slovakia, to Father Prikazky, which bore rich fruit. Bishop Koudelka was the successor as Czech bishop in America, the Venerable Joseph Nepomuk Neumann, fourth bishop of Philadelphia, whose beatification will be held in Rome in June 1963. He was elevated to the dignity of bishop by the late Pope, now St. Pius X in 1907 and became auxiliary bishop of Cleveland, later auxiliary bishop of Milwaukee, which was followed by being an ordinary of the diocese of Superior, Wis., where he built with the help of American Slovaks, especially the late Rev. Andrew E. Komara of Bridgeport, Conn., a beautiful orphanage.

Rev. Mother M. Hyacintha, who made the original plans, died here in March 1912. Her associate, Sister M. Georgia, whom the writer knew personally as an altar boy, remained to complete the plans and in September 1913, the first parochial school was opened at St. Gabriel's in Pittsburgh, also St. Clement's, Tarentum, Pa., where Rev. Edmund Kitz was pastor and St. John's, Barnesboro, Pa., where Rev. Victor Frankovsky was pastor.

The Sisters established their temporary convent and motherhouse at St. Gabriel's and soon received candidates for their order to be trained as Sisters and teachers.

In a period of two decades they had established parochial schools in the following cities: St. Mark's, McKees Rocks, 1917; Holy Family, Erie, Pa., 1920; Holy Redeemer, Ambridge, Pa., 1920; St. Anna, Farrell, Pa., 1929; St. Michael, New Castle, Pa., 1929; SS. Cyril and Methodius, Clifton, N.J., 1929; St. Mary's Assumption, Jersey City, N.J., 1931; Holy Rosary, Clarksburg, W. Va., 1931; SS. Peter and Paul, Phillipsburg, N.J., 1935; SS. Cyril and Methodius, Charleroi, Pa., 1935, and later at SS. Cyril and Methodius, Boonton, N.J. and other cities.

In 1938 when they observed their Silver Jubilee the Sisters, whose official name is the Sisters of the Third Order of St. Francis, had over 125 teachers and some 4,000 pupils in these parochial schools.

GIRLS ACADEMY

On May 30, 1930, the late Bishop Hugh C. Boyle of Pittsburgh dedicated their new motherhouse at Bellevue, Pa., where on September 17, 1928, they opened a high school for girls under the name of Mount Assisi Academy, which was granted all privileges and faculties as a school of higher education by the Commonwealth of Pennsylvania on February 8, 1932. This Academy turned out several hundred of most capable young women, who are an asset to our American way of life.

After the death of Rev. Ferdinand Prikazky on November 10, 1927, who was their great benefactor with other Slovak priests and laity, his successors, the late Reverend George Malinack, great promoter of war bonds during World War II and present pastor of St. Gabriel's, Rev. Joseph Straka aided the Sisters in their great work for the education of youth.

In 1947 with the approval of General Superior in Rome, the Sisters established a new motherhouse at Monacacy Manor, Bethlehem, Pa., known also as the Retreat Home of St. Francis for Women. They also teach in the parochial schools of Allentown diocese, where they staffed schools at St. Mary's, Northampton, Pa., St. Theresa's, Hellertown, Pa., and later SS. Cyril and Methodius, Bethlehem, Pa.; St. Ann's, Emmaus, Pa., and St. Stephen's, Shenandoah, Pa.

On October 12, 1947, the late Dennis Cardinal Dougherty of Philadelphia dedicated the new motherhouse and expressed his happiness that the Sisters are working in his archdiocese. After his death, his successor, the late Cardinal O'Hara also was pleased with their work. In the Pittsburgh diocese all the bishops, starting from the late Archbishop J. Regis Canevin, who granted them permission of stay and his successors, Bishop Boyle, Bishop Dearden, now archbishop of Detroit, Mich., and the present bishop and a great friend of the Slovaks, Most Rev. John J. Wright are happy with their work and commend them on various occasions.

Similar praises were offered from other bishops and especially Bishop McShea of Allentown and Bishop McNulty of Paterson, N.J.

The writer is very happy that one of his teachers, Rev. Mother M. Methodia, former Superior, living now in retirement at Monacacy Manor, often remembers him with a note about some of his articles which have special interest to her. My sister Betty Kuziel named her only daughter Constance in honor of her former Sister. At our family reunions we all recall the first Superior, Rev. Mother M. Louisa, who was an excellent organist and a choir director. Also, Rev. Mother M. Aloysia, who lives in retirement at Shenandoah, Pa., and Rev. Mother M. Clotilda. The present Rev. Mother M. Mildred is a daughter of the late Charles Zaremba, one of the leading members of Holy Rosary Society, who led the prayers in our church of St. Gabriel for over a half century. We often mention Sister M. Boleslava of Ambridge, who observed her golden jubilee last year.

The Slovak Sisters of Third Order of St. Francis, on this their golden jubilee, can look back with great pride at the progress they made for God and Nation. Thousands of their pupils, friends and admirers, will commend them on the half century of progress with a proverbial: Ad multos annos.

TRIBUTE TO REPRESENTATIVE CARL ALBERT OF OKLAHOMA

Mr. EDMONDSON. Mr. President, we in Oklahoma are proud of Congressman Carl Albert.

Born the son of a coal miner in eastern Oklahoma, he has built a great career on his way to his present position as majority leader of the House of Representatives.

Debating champion, Rhodes scholar, and soldier are but a few of the roles Carl Albert has played, and always with the profound honesty and sincerity that earns the respect of all who know him.

Recently, the people of Oklahoma had an opportunity to learn more about Carl Albert's work as House majority leader through a series of articles in the Tulsa Tribune. Written by Jenk Jones, Jr., the Tribune's Washington correspondent, the articles not only give insight into the majority leader's job but also present a good description of the legislative process.

Mr. President, I ask unanimous consent that these articles be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Tulsa (Okla.) Tribune, Mar. 20, 1963]

Congressman Albert's No. 1 Duty Is Representing People in His District

(By Jenk Jones, Jr.)

Washington.—If Representative Carl Albert, of McAlester, ever decides to quit his post as House majority leader, he can take up a more relaxing line of work—like taming tigers.

The job that Albert holds is one of crushing responsibility, especially as his Democratic Party holds the presidency as well as the edge in both Houses of Congress.

Much of the success of his party is dependent on whether Albert and his aides can get the Democratic program, or at least those parts of it which seem valuable and proper, through Congress.

Yet a majority leader cannot exist just to do the bidding of his President and his party. He has an even more important job—to represent the people in the district which sent him to Congress.

These different roles can often conflict.

Albert wears several hats. His "top hat" is that of representing his own district.

He said his second most important function is to represent his party "constituency" in Congress, the Democratic Members of the House who elected him majority leader.

Third, he must represent his national party, headed by the President in times when a Democrat occupies the White House.

Although this loyalty comes third, Albert said "it is to the interest of the majority leader's party that the President is successful."

The views and desires of the three different groups that he represents can clash. That is why the "priority list" is so important to Albert.

The majority leader is chosen from among the members of his party, just as the minority leader is done on the other side of the aisle.

The majority leader is not an official of Congress. Nor is he his party's leader in the House. The Speaker of the House, Representative John McCormack of Massachusetts has that role.

But because the Speaker cannot both run the House and his party business, the latter is turned over to the majority leader.

Albert's tasks are manifold.

He must program legislation, trying to decide which bills shall be taken up at what time and what must be done to speed the House business along.

He must contact committee chairmen to see what measures they have ready to report to the House as a whole.

He must urge members of his party to support the party's views on key issues.

He must be responsible for the maintaining of decorum on the House floor.

It is a job of constant responsibility—even when he is not on the floor—and often little reward.

"If a committee gets a bill through easily, the chairman gets credit," ALBERT said wryly. "If it gets 'mussed up' the leadership gets the blame."

The hours are tough—10½ to 11 hours 5 days a week, 6 hours on Saturday and 2 or 3 hours or more on Sunday. ALBERT last year went many months without missing a day at the office.

Daily meetings are held before the House session starts at noon. And there are usually more sessions after the day's work on the floor is done.

The tangible rewards? A Cadillac and a chauffeur, more telephone, telegraph and office expense allowances than normal and the traditional large office with a good view sum up the total benefits. There is no pay increase.

These—and the chance that the 54-year-old ALBERT may someday succeed the 70-year-old McCORMACK as Speaker. Only once in this century has the majority leader failed to advance to Speaker, ALBERT said.

A man has to seek the majority leader's job—it does not seek him. He must run, often against strong opposition, for the post.

And when he gets it, he is saddled with many pressures.

None of this deters ALBERT.

"I like it personally," he said. "Sometimes I'm frustrated, but I wouldn't swap it for any job I know of."

He explained that although the majority leader takes more "heat" he has more to do with the formation of issues and their ultimate success or failure than do the vast majority of Members of Congress.

ALBERT had his eye on a House leadership post from his first day in Congress in 1947.

He said, "I spend as much time on the floor as any Member." Not only did he concentrate on learning how the House work was done, but he learned the name and face of every Member of both Houses.

ALBERT stepped up to the post of House whip, directly under the majority leader, in 1954. And on the death of Speaker Sam Rayburn in 1961, both he and McCORMACK moved up a notch last year, although ALBERT had an election opponent.

ALBERT's job runs into many a rough path. But he's not despairing.

A native of Oklahoma is used to standing lots of heat.

[From the Tulsa Tribune, Mar. 21, 1963]

TIMING IS KEY TO HANDLING OF LEGISLATIVE BILLS

(By Jenk Jones, Jr.)

WASHINGTON.—The timing in the passage of a bill can be as critical as that in a trapeze act—just the tiniest error can drop you right on your head.

One of House Majority Leader CARL ALBERT's tasks is to see that key bills come up at just the right time to get the maximum chance of passage.

The McAlester Democrat used the following example:

Three bills are ready of top priority for the majority party. The second is one which could stir extreme controversy. The third is one which needs bipartisan help to be passed.

Which one would come first? The latter, before a fight over the controversial bill or minority coolness toward the priority bill could stir tempers.

Last week Representative CARL VINSON, Democrat, of Georgia, told ALBERT that he was ready to report the military pay raise bill out of his Armed Services Committee.

But another of VINSON's bills, one providing funds for the RS-70 bomber, had just passed Congress over the Kennedy administration's objections. It had caused a lot of ill will and the legislative sea was troubled.

So ALBERT told VINSON to hold the pay raise bill off for a couple of weeks so things could quiet down.

The majority leader, by virtue of his position, generally is in favor of administration measures when his party holds the Presidency. So he is careful about bringing them to a vote.

"I never program a bill unless I know I have an excellent chance of passing it—unless the national interest demands that the matter be disposed of," ALBERT said.

But he doesn't have to rely on "guesstimates" of a bill's chances. "Ninety-nine times out of a hundred I know if a bill will pass," he said.

The reason for this is the House whip and his assistants, who work under ALBERT. The whips take polls of the membership.

In a close race the leadership then will try to persuade those on the fence or even those leaning away from the measure to go with them.

On many bipartisan measures, both the majority and minority leaders will poll their members, then get together to decide what they must do to obtain passage.

Often compromises are worked out that will make it easier for members of both parties to support a bill.

But even so, some members aren't always swayed. "We've got some who are really team members and some who are strongly independent," ALBERT said.

Also, in an issue that is not razor close a Member may be given the green light to vote against the administration's measure if to vote for it would hurt him in his district, ALBERT said.

That permission is given more readily if the member has voted with the administration on other tough votes.

But even in the case of mavericks who frequently buck the party leadership, ALBERT said, "We never take punitive action."

He said a Member is elected to represent the beliefs of his home district, not those of his party as a whole.

ALBERT prefers the gentle touch with party members if it can be used profitably.

"My view is that you get further with people if you work in a cooperative manner and get them to go along willingly rather than by putting on the heat."

[From the Tulsa Tribune, Mar. 22, 1963]

CONGRESS' SENIORITY PLAN A BRAKE

(By Jenk Jones, Jr.)

WASHINGTON.—It may seem odd that the man charged with the responsibility of getting new legislation through Congress should revere the system which often makes his job more difficult.

But House Majority Leader CARL ALBERT of McAlester lauds the seniority system which gives the heads of committees extraordinary power in Congress.

For despite the fact his job is to effect many changes, ALBERT favors the evolution rather than the revolution of our laws.

"It was never intended that our Government should change drastically" after each election, he said.

There has long been criticism, especially from liberal circles, that present system thwarts attempts to pass legislation for new programs.

ALBERT, however, sees the committee system, based as it is on seniority, as an effective brake against runaway legislation.

He said the committee chairmen, who are generally Southerners or members of big city machine politics, usually have a traditional view of matters.

On the other hand, the "demands of the last election" are expressed in the choice of the President and the congressional leadership and in the new Member of Congress.

The merging of these opposites frequently results in progress without reckless speed, ALBERT contends.

"The response (of Congress) should be to the deliberative will of the people and not to snap judgments."

Even when the President advocates a major change, the interactions of Congress work in an atmosphere that slows down the proposal and "demands major justification" for its acceptance, ALBERT added.

He listed two major benefits derived from the existing system:

1. "It brings stability to the House, and makes the direction it takes more important than the speed."

2. "Men become experienced in legislative areas. The system enables legislators to become professionals in their fields."

ALBERT acknowledged there has been a strong trend in recent years toward a larger Federal Government and a more powerful executive department.

The former is inevitable, he said, because of "the shift from an agrarian to an industrial population."

There is now more interdependence of people on one another, ALBERT added. This has necessitated the Government playing an increasingly important role in citizens' lives.

WEST VIRGINIANS PARTICIPATE IN 33D NATIONAL 4-H CONFERENCE IN WASHINGTON, D.C.—NEARLY 2,286,000 YOUTH BELONG TO 94,707 CLUBS IN THE UNITED STATES

Mr. RANDOLPH. Mr. President, the worthwhile activities of 4-H Clubs are part of the national educational system of cooperative extension work in agriculture and homemaking in which the U.S. Department of Agriculture, the State land-grant colleges, and counties participate.

More than 2,285,592 young Americans, chiefly in rural areas, between the ages of 10 and 21 years, belong to the more than 94,707 local 4-H Clubs located in every agricultural county in the United States and Puerto Rico. Additionally, there are approximately 307,745 adult leaders and 114,959 junior leaders lending guidance to these useful activities. And, the 4-H Club idea is now worldwide, the plan having been adapted to fit widely varying conditions in some 70 different countries.

The 33d National 4-H Conference is being held here in the Nation's Capital from April 20 to 26, and attended by delegates from each of the 50 States, Puerto Rico, and Canada.

During a week of inspiration, learning, and fellowship the young people will have an opportunity to attain an insight into the individual and group responsibilities of the American citizen. They will achieve a deeper and keener appreciation of our rich heritage. They will meet national leaders who are responsible for determining major policy, and discuss with them areas of particular interest. Throughout, the delegates will be encouraged to express their own ideas and to ask questions, thereby bringing to the conference the benefit of their own background of experience in 4-H work and community service.

This morning it was my privilege to attend the breakfast with Congress' portion of the conference, attended by many Senators and Representatives. We enjoyed a meal in a congenial and informal atmosphere designed to provide the young citizens an opportunity to meet the legislators from their own State.

On this occasion, Vice President Lyndon Johnson expressed greetings, and the Secretary of Agriculture, the Honorable Orville L. Freeman, brought a helpful message.

Hon. Harley O. Staggers and Hon. Ken Hechler were at our table with the 4-H Club delegates from West Virginia, as well as adult leaders from the Mountain State who are attending the conference. Present were delegates Jorene Butcher, Glenville, W. Va.; Rose Lee Matthews, Monongah, W. Va.; Richard Steven Hannah, Mount Clare, W. Va.; and Edwin Hill, Chesapeake, W. Va. During the conference Miss Butcher serves as a member of the speakers committee, Miss Matthews is on the hospitality committee, Mr. Hannah on the recreation committee, and Mr. Hill is a representative on the vesper committee.

Also representing West Virginia were Miss Mildred Fizer, State extension 4-H programs leader, and C. P. Dorsey, State extension 4-H Club leader. These devoted citizens commented on the success of the 4-H movement in West Virginia, pointing out that there is representation in each of our 55 counties, and that membership now exceeds 35,000 and is growing rapidly. They also paid deserved tribute to the efforts of the late T. P. Kendrick, the first State extension 4-H leader for West Virginia. I, too, was privileged to know and work with this good and great 4-H organizer.

Two other responsible and civic-minded Americans were with the West Virginians during the breakfast program: Miss Gertrude Warren, an energetic pioneer at the national level in 4-H work; and Miss Bonnie Rollins, representing the Farm Journal magazine. It was valuable to our youth to share the thinking of these two ladies, and to discuss with them the impacts of 4-H programs.

Mr. President, the 4-H Clubs are making a significant contribution to the mental, physical, and moral growth of young people the world over. The members of this purposeful organization, and their dedicated adult leaders, are deserving of our highest praise for their devotion to principle and patriotism.

FIRE IN STATEN ISLAND, N.Y.

Mr. KEATING. Mr. President, a tragic fire, swept by high winds, has devastated hundreds of homes in Staten Island, N.Y. Almost 300,000 acres of land have been blackened in a fire which involved more than half of New York City's fire department who fought this fire with great courage and diligence.

Staten Island is a community of homeowners and small businesses populated by hard working, prudent citizens. Our sympathy is extended to them over the severe and heart-rending losses they have suffered.

In an effort to be of assistance to these people, I have communicated with John Horne, the administrator of the Small Business Administration, asking that this county be declared a disaster area for purposes of receiving emergency Federal aid. I have also contacted Borough President Maniscalco, expressing my extreme concern for the people of this community and offering to do everything possible to help them through this crisis.

I take this opportunity to express my support for the efforts of the people of Staten Island to rebuild their homes and businesses after this tragedy, and I assure them that the Federal Government—as is true, I am sure, of all their Representatives in Congress—is working to obtain help for them.

Mr. JAVITS. Mr. President, I join with my colleague from New York in the sympathy extended to the people of Staten Island, whose homes have been devastated by fire. This also is true of the people in the parts of New Jersey similarly affected.

I join also in paying tribute to the heroism and high sense of duty of the New York City fire department. As a member of the Select Committee on Small Business, I join with my colleague in the request that this be declared a disaster area.

I assure the people of Staten Island of the indefatigable efforts I know we shall make—and which I know the whole New York delegation will make—to see to it that the resources of the Federal Government give to them such aid in this disaster as is practicable and possible.

It is not often, Mr. President, that we think of New York City in terms of a disaster. It is a great, populous city. Nonetheless, there are some rather open areas in Staten Island, the county of Richmond.

This is one time when New York needs the Nation. I am confident that the Nation will respond, as it does to disaster wherever it occurs.

I appreciate the privilege of joining with my colleague, so that we may do all we can to alleviate the impact of this misfortune.

Mr. KEATING subsequently said: Mr. President, earlier today my colleague, Mr. Javits, and I referred to a communication we had addressed to the Administrator of the Small Business Administration, in which we called attention to the tragic fire on Staten Island, and requested that that county be declared a disaster area.

I am very happy to state at this time that I have just received a telephone call from the Small Business Administration in which I was informed that Staten Island has been declared a disaster area. That means that Federal loan programs will be extended to homes, businesses, churches, and charitable institutions there which have been so badly ravaged by the fire, and that the New York office of the Small Business Administration will begin promptly to handle loan applications.

I wish to express publicly to the Administrator of the Small Business Administration my appreciation for the prompt action taken to alleviate the great distress suffered by this important area of my State. I am deeply grateful.

SOVIET STRENGTH IN CUBA—ANALYZED BY HANSON W. BALDWIN

Mr. KEATING. Mr. President, the distinguished military affairs analyst of the New York Times, Hanson W. Baldwin, offers some very perceptive comments on the Soviet forces in Cuba. Mr. Baldwin reports in his column that:

> There appears to be a consensus that no major reduction in Soviet strength has taken place and that the Russians are rotating troops, rather than withdrawing them.

Mr. Baldwin's views are backed by years of experience and proven accuracy. I know that his analysis will be of interest to many Senators and, therefore, ask unanimous consent that his article be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Soviet Strength in Cuba Put High—Some Experts Believe Count May Be 30,000 to 40,000

(By Hanson W. Baldwin)

A recent reassessment of Soviet forces in Cuba has convinced some intelligence experts that there may be 30,000 to 40,000 Russian military personnel on the island.

Many experts believe the number has not actually changed greatly since last fall; the upward revision of past figures stems from a close study of all available intelligence facts. The experts believe, too, that the Russians are rotating troops to Cuba, not withdrawing them.

These interpretations provide the background for the recent assertion by Senator Kenneth B. Keating, New York Republican, that Russian strength in Cuba, despite withdrawals announced by the President, was still about 17,000 men.

At a news conference April 3, the President estimated that a 4,000 Soviet troops had been withdrawn in recent weeks. He did not estimate the number that remained, but left the impression that about 13,000 were still there.

CAPITAL'S OPINIONS VARY

There is no consensus in Washington about how many Soviet troops are in Cuba. In fact, some of the highest Government officials and many intelligence officers admit that they do not know how many are on the island.

It is far easier to estimate tonnages of equipment and numbers of guns than numbers of personnel. Last fall, emphasis in the intelligence community was fixed on the Soviet medium-range missiles in Cuba and there was a tendency, until after the crisis had passed, to neglect the details of the ground forces and of conventional equipment.

Moreover, it has been possible to estimate approximately the numbers of Soviet troops withdrawn from the island in recent weeks, but not how many have been brought in.

Many officials are convinced that the total number has not changed greatly and that the Russians are replacing the troops they have withdrawn in a rotation plan similar to those the United States uses for its oversea units.

SOVIET UNITS LISTED

Details are lacking on what some Pentagon officials now call the "Soviet expeditionary force" in Cuba. But some experts believe the Russians are maintaining the equivalent of a heavily reinforced motorized rifle division. Such a division normally numbers about 13,000 men.

The four principal tactical ground units, identified in the past as battalion size units, are still on the island and have made no attempt to conceal their identity.

Other units of field artillery, antiaircraft, infantry, and so on, are said to be somewhat harder to pinpoint, and a large number of the Russian forces are crews for the antiaircraft and coast defense missiles and provide communications, maintenance, and specialist services for their own and Cuban forces. An unknown number wear civilian clothes and blend into the population.

Though many intelligence experts and some Government officials say they do not know how many Russian troops are in Cuba, one said he would bet a year's pay that the number was closer to 30,000 than to 17,000, and a month's pay that it was closer to 40,000 than to 17,000.

There appears to be a consensus that no major reduction in Soviet strength has taken place and that the Russians are rotating troops, rather than withdrawing them.

The purposes of the continued presence of so large a Soviet force in Cuba could be multiple.

VARIOUS FUNCTIONS SERVED

It was undoubtedly intended originally to provide protection for the long-range missiles that Premier Khrushchev attempted to install there last fall, which have now—in the opinion of most intelligence experts—been withdrawn. Since the withdrawal of all or part of these missiles, the troops appear to have a number of functions:

To help protect the island against any invasion by the United States or by exile forces aided by the United States.

To perpetuate Premier Fidel Castro's rule and to secure the Communist government there against internal revolt.

To train Cuban forces and other Communist Latin American cadres.

To provide small infiltration and subversion units capable of exporting armed communism to other areas of the Western Hemisphere.

To maintain a base of Soviet Communist military power in the Western Hemisphere for psychological and political purposes and as a bargaining gambit in the world conflict.

Some experts believe the President may not have known of the revised estimates of some intelligence experts when he implied a few weeks ago that Soviet troop strength in Cuba had been reduced to 13,000.

Some observers have been concerned that official intelligence estimates that have reached some of the highest officials during and since the Cuban crisis may have been shaped—perhaps unconsciously—to conform with policy rather than evaluating the Russian capabilities baldly.

NAVAL COURT OF INQUIRY AND THE SUBMARINE "THRESHER"

Mr. McINTYRE. Mr. President, I deplore the exaggerations and emotional distortions surrounding the naval court of inquiry into the disastrous loss of the submarine *Thresher*.

The purpose of the naval court of inquiry into the loss of the nuclear attack submarine *Thresher* is to draw from the disaster all possible knowledge of future benefit to the nuclear submarine program. Our naval shipyard workers have consistently demonstrated their mastery of the painstaking and intricate techniques required for the development of modern weapons systems.

The modern submarine reactor plant is a marvel of safety and power. Our Navy command and combat personnel have consistently shown skill and enterprise in the operation of these vessels. I am confident that the record of the court of inquiry will establish beyond doubt the overall quality of shipyard work and skill of Navy submarine personnel.

I deplore the misleading sensationalism of some reports of isolated details of testimony before the court of inquiry. It is worth pointing out that its purpose is neither recrimination nor the reckless fixing of blame. I have the utmost confidence in the court and its staff, to produce not only fair, but permanently useful findings.

No one should ignore the constructive aspects of the inquiry and its positive disclosures of meticulous inspection and competent naval management and command.

The public has a right to know about the inquiry proceedings. The doors of the hearing room should not be closed to the press, yet the importance of this inquiry imposes a responsibility upon all news media to review the whole record instead of sensational details. In that way we will meet our obligation to the men who went down with the *Thresher* in learning the truth and making of it an instrument for improving the submarine service.

THE PRESIDENT'S TAX PROGRAM

Mr. BREWSTER. Mr. President, I am increasingly disturbed over the reception which the President's tax program has been receiving. While I am not necessarily in agreement with all the specific reform proposals contained in the original message, I am convinced of the importance of reducing our present level of unemployment, stimulating industrial investment, and raising our rate of economic growth.

While I am pleased with the recent report of the Department of Labor which indicates a significant drop in the unemployment figure from a high of 6.1 percent of the labor force in February, this is only a beginning. Much more must be done in this area and in the area of industrial expansion referred to above. In this latter connection, I ask unanimous consent that the editorial appearing in the Baltimore Sun on March 11, indicating the importance of personal and corporate tax cuts, be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO KINDS OF SPENDING

One of the arguments in the tax debate is that the main thing we need to promote economic growth is expanded consumers' demand. People who talk this way would concentrate projected tax reductions in the lower brackets. The extra spending made available to a maximum number of householders would stimulate all the heavy investment the economy needs, according to this view. Upper-bracket and corporate tax reductions are criticized as smacking of old-fashioned theories about prosperity trickling down from the top.

One way to test these arguments is to see what the actual figures of spending and investment have been since the most recent business peak, which was in 1957. Total personal consumption expenditures in 1957 were $285.2 billion. They totaled $356.7 billion in 1962. To be sure, population had also grown—from 171,278,000 in 1957 to 186,591,000 in 1962. However, personal income growth kept well ahead of population gains. Per capita disposable personal income in 1957 was $1,803 and in 1962, $2,052.

Over this same stretch key trends in industrial investment were quite different. Expenditures for new manufacturing plant and equipment were $15.96 billion in 1957. They were $14.80 billion in 1962 and in the first quarter of 1963 had risen to a rate of only $14.95 billion. The term economic growth has many meanings, but one of the main ones is certainly expansion in manufacturing plant and equipment.

What the figures suggest then, is that a gain of $71.5 billion in annual personal consumption expenditures from 1957 to 1962 was accompanied by a drop of just over a billion dollars in annual plant and equipment expenditures in the same period. The figures are crude, of course, and the comparisons are subject to many qualifications. They do suggest that there is something less than a direct booster effect between consumers' spending and plant growth. That, undoubtedly is why the administration tax plan provides for high-bracket and business tax cuts as well as for low-bracket reductions.

FEDERAL CAREER SERVICE AWARDS OF 1963

Mr. BREWSTER. Mr. President, on March 26 the National Civil Service League honored 10 outstanding Federal career employees for their major contributions to the Nation through Government service. The recipients of the league's 1963 Career Service Awards were cited "in recognition of a distinguished career in the U.S. Government which has exemplified in an outstanding manner the highest characteristics of public service."

On this occasion, the President of the United States recognized the achievements of these individuals with the following message:

> To the 10 winners of the Career Service Award of the National Civil Service League, I send warm expressions of gratitude. The Nation has good reason to be proud of the exceptional abilities you have applied in your productive years of service and your vital roles in shaping and moving our Government programs. All citizens should be reassured to know that the demanding problems that confront our Government are being met with knowledge, imagination, and leadership. The wide range of your achievements exemplifies the great variety of opportunities for a challenging career in the Federal service.
>
> The National Civil Service League has again, by its selection and acclaim of outstanding award winners, made a valuable contribution to better public understanding of our career service. My best wishes for continued success in their endeavors go to Graeme C. Bannerman, Capt. Hewlett R. Bishop, August C. Hahn, Dr. G. K. Hartmann, Arthur C. Lundahl, Nicholas J. Oganovic, Dr. Hildrus A. Poindexter, James J. Rowley, Frank A. Taylor, and William H. Weathersby.
>
> JOHN F. KENNEDY.

On meeting with the award winners the following day, President Kennedy said:

> I want to commend the league for its long history of spotlighting the dedicated public service of our civil servants. I think it made an unusually appropriate selection this year. I think it reminds us as citizens how much we owe some people who work quite anonymously for the people of the United States. So, I want to congratulate the league and the winners this year.

I think it very commendable of the National Civil Service League, an organization of private citizens dedicated to improving the Federal career service, to stimulate this recognition of excellence in Government service. I invite the attention of my colleagues to these outstanding individuals and the achievements for which they were honored. The award winners are—

Graeme C. Bannerman, Deputy Assistant Secretary of Defense, oversees procurement activities of the Department of Defense involving approximately $25 billion annually—some 30 percent of the total Federal budget. In carrying out his duties, he has achieved national stature as a recognized authority on Defense procurement policy, systems, and practices. Through Mr. Bannerman's leadership, the procurement elements of the armed services have been drawn into a cooperative and cohesive group thus paving the way for significant improvements in purchasing policy and techniques and the consequent saving of millions of dollars in Defense appropriations.

Capt. Hewlett R. Bishop, of the Department of Commerce, is responsible for the effective management of all Maritime Administration programs and operations in the large and complex Atlantic coast district. During World War II he conceived and developed several extremely effective and widely adopted cargo-loading innovations that permitted maximum utilization of our shipping resources. He has made important contributions to the safety of ships at sea and in port. He was instrumental in providing the efficient and rapid reactivation of ships from the Reserve Fleet when vitally needed during the Korean emergency. Captain Bishop has also provided strong leadership in organizations dedicated to achieving cooperation and coordination of Government and industrial efforts toward a stronger public service.

August C. Hahn, Deputy Assistant Postmaster General, in carrying out his responsibility for functional direction of post office operations and activities—including the collection, distribution, and delivery of mail—has demonstrated distinguished leadership and expert technical knowledge in improving postal management and administration. He has played a key role in the Department's modernization and decentralization program. He has provided gifted direction to the implementation of the accelerated business collection and delivery program, and to the strengthening of local management skills in post offices throughout the Nation. Mr. Hahn's imaginative leadership has been instrumental in the development of postal innovations which have permitted budgetary savings of $20 million in 1 year alone.

Dr. Gregory K. Hartmann, Technical Director, U.S. Naval Ordnance Laboratory, has provided leadership, both as a scientist and as an administrator, in accomplishing scientific work of the most advanced nature and vital significance for the Army, Navy, Air Force, Atomic Energy Commission, and other Government agencies. He pioneered in the study of nuclear-weapon effects and has been responsible for the work of scientific groups at several nuclear test operations. His brilliant work and tireless efforts have led to immeasurable contributions in the field of underwater-explosives research. As the first chairman of the Undersea Warfare Research and Development Planning Council, Dr. Hartmann played an important role in the successful development of our vital Polaris weapons system.

Arthur C. Lundahl, Assistant Director for Photographic Intelligence, CIA, serves as the Government's highest photographic-intelligence officer and has, consequently, been intimately involved in the most important problems affecting national security. Over the course of the last 10 years, he has organized and developed our photographic intelligence system thus bringing about a significant advance in America's intelligence resources. Through his extensive experience and his appreciation of national strategic problems, Mr. Lundahl has developed means to insure the efficient exploitation of new and unique types of photography of the greatest importance and the highest priority.

Nicholas J. Oganovic, Deputy Executive Director, U.S. Civil Service Commission, has made an outstanding contribution to better public service through his forceful and imaginative administration of Civil Service Commission activities, particularly in its field operations. Primarily through his efforts, major reorganizations have been accomplished creating new, more effective patterns of service and having significant impact on Federal personnel management. Especially notable is his concept of on-the-spot service through assignment of Civil Service representatives to more than 50 metropolitan centers outside the Commission's regional office cities. Mr. Oganovic was responsible for the administrative measures establishing the Federal Executive Boards to improve the efficiency and economy of Government field operations and has been prominently identified with the Government's quest for quality in recruiting. He has also won recognition for the new vitality he brought to the program for selective placement of the handicapped in Government service.

Dr. Hildrus A. Poindexter, Chief Public Health Adviser, Agency for International Development, scholar, teacher, healer, administrator, in 31 years of Government service, has made outstanding contributions to medical research and public health both in the United States and abroad. His foreign-duty assignments have taken him to Liberia, Vietnam, Laos, Surinam, Iraq, Libya, and he is currently serving in Sierra Leone. His efforts have provided and encouraged training for doctors, dentists, pharmacists, and nurses in this country and for laboratory technicians and nurses now holding positions of major responsibility in Liberia, Vietnam, and Laos. Dr. Poindexter directed the public-health measures associated with the evacuation of over 600,000 Vietnamese from North Vietnam when the Communists overran the country. His leadership has been instrumental in the adoption of public-health legislation by many of the countries in which he has served.

James J. Rowley, Chief of the U.S. Secret Service was for 15 years special agent in charge of the White House detail and was personally responsible for establishing, developing, and maintaining security techniques and procedures necessary to assure the protection of the first families of the Nation. During the period of his responsibility several serious attempts were made to harm the first family; yet none was successful. Since becoming Chief he has assumed still greater responsibilities in instituting protective planning and research, developing new methods for the investigation and detection of counterfeiting activities, and dealing with other important Secret Service assignments.

Frank A. Taylor, Director of the U.S. National Museum, Smithsonian Institution, currently bears what may well be the heaviest responsibility of any museum official in the world. Among his achievements are the planning, organization, and administration of a highly successful program of exhibit modernization throughout the Smithsonian and the initiation of a vital new program of research and scholarly publication within the Museum of History and Technology. In addition to this work, he is responsible for the general administration of a museum that has important departments of anthropology, zoology, botany, geology, the history of science and technology, the cultural history of the United States, and Armed Forces history. Possibly his greatest contribution has been in his leadership in the planning and development of the new $36 million Museum of History and Technology of the Smithsonian Institution.

William H. Weathersby, Country Public Affairs Officer for India, USIA, currently directs a critically important and USIA's largest operation abroad. He serves in a dual role as public-affairs adviser to the Ambassador and the Embassy and as operational chief of a large information and cultural program throughout India. In addition to the major contribution he has made to the attainment of American informational objectives in the Near and Middle East, his abilities have made a strong impact on the management and operation of the Agency itself. As personnel director, Mr. Weathersby has developed a Foreign Service career system, revised the Agency's examination system, improved and accelerated the recruiting process, and instituted a number of other significant improvements in personnel management and policy.

DISCRIMINATION BY CERTAIN EUROPEAN NATIONS AGAINST AMERICAN FRESH FRUITS

Mr. MORSE. Mr. President, the discriminatory practices levied by certain European nations against imports or our American fresh fruits are continuing in substantial degree.

I am convinced that the European countries who practice this discrimination, particularly France, will cooperate only if retalitory measures are taken against them. I have communicated with the Honorable Christian H. Herter, special representative for trade negotiations, advising him of my view on this subject and requesting appropriate action by him. I ask unanimous consent that there be inserted in the RECORD, at this point of my remarks, a copy of my letter of April 22 to Mr. Herter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 22, 1963.

Hon. CHRISTIAN A. HERTER,
Special Representative for Trade Negotiations, Executive Office Building, Washington, D.C.

DEAR MR. HERTER: During a recent visit to the State of Oregon, I had the opportunity to discuss with leading growers and shippers of Oregon pears and apples the very difficult situation with which they are confronted due to nontariff trade barriers imposed against American apples and pears by France and other European nations. The situation that prevails with respect to France is particularly acute and is becoming increasingly difficult for Oregon growers and shippers as the months go by.

In a letter addressed to me, under date of December 19, Under Secretary of State Ball wrote to me as follows:

"I agree with you that the progress we have made thus far in opening the French market for our apples and pears has been negligible. I am concerned at this lack of success.

"It was this combination of factors—our concern and our lack of progress—that led us to bring our formal complaint against France under article XXIII of the General Agreement on Tariffs and Trade. The contracting parties to the GATT at the 20th session recently completed in Geneva agreed that the French restrictions were inconsistent with the GATT, that benefits to which we were entitled were being nullified or impaired, and that the United States was entitled to exercise its right to suspend equivalent concessions which France enjoys in the American market.

"The contracting parties also recommended that the U.S. Government refrain from exercising its right of retaliation 'for a reasonable period' in the hope that further bilateral discussions between the United States and France might lead to the expansion, rather than the retaliatory contraction, of trade. It would not be appropriate or beneficial to us for the United States to retaliate immediately and ignore this international recommendation.

"If the French fail within a reasonable time to take significant steps to reduce unjustifiable restrictions against our trade, we are prepared to resort to our rights under GATT for compensatory action."

It is my opinion and the opinion of many other Senators that a reasonable time for the French to reduce unjustifiable restrictions against our trade has long since passed. In this connection, Mr. Ray Reter, of the Reter Fruit Co., of Medford, Oreg., one of Oregon's leading pear growers and shippers, stated in a recent letter:

"It may well be we will never gain access to the French market for our fruit and fruit products, but I am convinced we will get no consideration unless we take prompt action and go through with retaliatory procedures under article XXIII. We were originally told by Under Secretary Ball that action would start in late January if the French did not correct the situation. The French did not take corrective action and after De Gaulle wrecked the United Kingdom's entry into the Common Market and made clear his complete protectionist agricultural policy, we are again to defer action because it might be construed as a retaliation against De Gaulle.

"Mr. Herter should indicate clearly why action has not been instituted against France and should also tell us when the Government definitely expects to take action against France. Also, what does the Government plan to do to secure access for 1963 on pears and apples?

"If we do not promptly proceed against France in this matter, there is little hope that any country or the Common Market will pay any attention to us in the future."

The somewhat pointed language that I have just quoted is typical of the comments I receive from fruitgrowers throughout the State of Oregon. These growers ask me when our Government plans to end the discriminatory action that is practiced against our American fresh fruit exports—especially by France—and I simply do not have the answer.

To give you a further idea of the comments I am receiving on this general subject, I enclose the following:

1. The report of Mr. Frank Elliott of the U.S. Fruit Export Council, dated March 27, 1963.
2. A letter, dated April 6, addressed to Mr. Ray Reter by Mr. Roger Capgras, the representative in France of certain fruitgrowers.
3. The minutes of the meeting of the National Fruit Export Council, February 8, 1963.

Because of the seriousness of this problem, I would appreciate it very much if you would advise me as to whether the Government intends to proceed against France and against other European nations that have imposed nontariff restrictions against American fresh fruit imports, under article XXIII of GATT. In addition, I would appreciate information as to what can be done under existing laws and treaties to effectively bring to an end these discriminatory barriers against our American fresh fruits, particularly apples and pears.

Your assistance in this matter at an early date would be appreciated.

Sincerely,

WAYNE MORSE.

TRIBUTE TO HEROES OF THE WARSAW GHETTO

Mr. CASE. Mr. President, 20 years ago, from April 19 to May 8, 1943, the Jews of the Warsaw ghetto carried on a heroic and hopeless fight against the overwhelming power of the Nazi troops bent on their extermination.

While each of us would probably rather forget that humanity is capable of acts of extermination such as those carried out by the Nazis, I think it is well for us to look back on this tragic event, perhaps the most tragic event in recent history. For a new generation has grown up since 1943 which might otherwise never fully realize that acts such as this took place during their childhood.

Reflection on the Warsaw uprising will remind us, too, of the valor of the human spirit, as well as the need to prevent any recurrence of the depravity of which man is also capable. With a little sharper awareness of the danger of mass murder, our country might long since have ratified the Genocide Convention, signed by our Government at the United Nations in 1948.

In 1943, Wolf Zyto, now a dental technician living in London, was a young man in his early twenties who had escaped from the Warsaw ghetto and who was living outside it, with some members of his family still confined within the ghetto. He is one of the few escapees from the ghetto who witnessed the valiant Warsaw uprising and who lived to record his memories of it.

Mr. President, on Sunday, April 21, the Washington Post republished some memories by Wolf Zyto of this period, written in diary form and sent to the London Observer. I ask unanimous consent to have published in the CONGRESSIONAL RECORD part of the Washington Post's introduction to these published memories and part of Mr. Zyto's entry for Tuesday, April 20, 1943, the day after the Nazi troops began their campaign of annihilation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TUESDAY, APRIL 20, 1943

(This is the diary of a Jew who watched his family and his people dying in the ghetto. Wolf Zyto was one of the Polish Jews who survived with the help of their Christian neighbors. In April 1943, he was living in Warsaw under an assumed name, working in a factory and sheltered by a friendly Polish family. Earlier, Zyto had lived in the ghetto itself. He acted as one of the couriers who smuggled in food. Some of his family managed, like him, to escape from the ghetto. But his mother and a brother were still there when the Germans launched their attack. At the time, Zyto was 21. He now lives in London and is a dental technician. He recently wrote down his memories in diary form, to exorcise the past, and sent them to the London Observer on the off-chance that it might publish them.)

I haven't slept all night, but have met by arrangement my elder brother, and we go to a friend's family at Okopowa Street opposite the Feifer leather works. From their second-floor window, looking through the curtains, I can see German soldiers. They have an anti-tank gun in position behind the leather works and are firing away at dead and apparently empty houses, setting them on fire.

Then the figure of a man appears at one of the top windows of a six-story house that is burning, and after a moment's hesitation he jumps.

Henry and Janina S. and their father, Stanislav S., all are in tears and have been praying silently. My brother takes me in his arms and tries to stop my sobbing, but he cannot keep back his own tears.

What a courageous man Stanislav S. is. One of the lights that shine in this dark age. He is about 60 years old and until today worked in Przytulski leather works, which are in the ghetto. He had a special permit, but instead of entering the ghetto through the gate in Dzika Street, as was marked on his card, he would pretend he had made a mistake and walk through the gate at Gesia Street, so that he passed the house where we lived—and where my mother and little brother are still hiding because old people and children are no longer allowed. Stanislav S. would pass on a loaf of bread, already specially thickly buttered, and sometimes even a bottle of milk.

This was supposed to be his own lunch, and he would then go hungry all day because the Germans checked everything they carried in their pockets. If he had been caught he would have been shot on the spot. We hoped that one day we might find a place for my mother and little brother, and ways of getting them out, but now all hope is gone.

The spring sun is still shining, but thick clouds of smoke hang over the rooftops. From time to time there is machine-gun fire, and single explosions of cannon shells and grenades.

What can I do? The wall is surrounded in such a way that a mouse could not get through.

I go out into the street and into a church. Unbelievable quiet. I can't think, but I look at a figure of Christ, and I ask inside me, "How many times have You been crucified? * * *"

Mr. MANSFIELD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ESTABLISHMENT OF WATER RESOURCES RESEARCH CENTERS

The Senate resumed the consideration of the bill (S. 2) to establish water resources research centers at land-grant colleges, and State universities to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research.

The PRESIDING OFFICER. The morning business having been concluded, the unanimous agreement entered into yesterday with respect to the bill (S. 2) to establish water resources research centers at land-grant colleges, and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research, controlling time, becomes effective.

The bill is open to amendment.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may be permitted to intrude a quorum call for not to exceed 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, notwithstanding the previous unanimous-consent agreement, I now ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS obtained the floor.

Mr. JAVITS. Mr. President, I ask unanimous consent that I may proceed for 15 minutes without the time being charged to the bill, and that in addition I may proceed for as long as it is necessary to yield to my friend and colleague the Senator from Virginia [Mr. ROBERTSON].

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. JAVITS. Mr. President, I yield to the Senator from Virginia.

Mr. ROBERTSON. I thank the distinguished Senator from New York for yielding to me.

REPEAL OF THE SILVER PURCHASE ACTS

Mr. ROBERTSON. Mr. President, the administration has proposed to repeal the silver purchase acts and the silver transactions tax and to authorize the Federal Reserve Board to issue $1 and $2 Federal Reserve notes. Questions have been raised as to whether this proposal would be inflationary or would be a step in the direction of devaluation of the dollar. This question will loom large in the minds of the Committee on Banking and Currency next Monday when it hears testimony on H.R. 5389, the House-passed administration bill.

I am particularly concerned because of my interest in a sound economy and a sound Federal financial position. I have expressed many times my concern over current inflationary trends, including particularly those relating to Federal tax and spending policies and our national balance of payments.

Consequently, if I thought the purpose or effect of H.R. 5389 was inflationary, or if I thought that its purpose or effect was to devalue the dollar, I should oppose it vigorously.

However, from everything I have heard about this bill so far, including the strong support given to this administration proposal by Secretary of the Treasury Dillon and Federal Reserve Board Chairman Martin, the bill does not seem to me to be inflationary, nor does it seem to be a step in the direction of devaluation of the dollar. On the contrary, it seems to me that the threat of inflation and devaluation of the dollar comes from other sources.

As I see it, the principal danger of inflation—aside from imprudent price and wage policies, which injure our balance of payments as much as they injure our domestic situation—comes from constantly unbalanced Federal budgets, which would cause immediate and uncontrolled inflation, if the Federal Reserve Board were not extremely cautious in exercising its existing monetary authority.

At the present time, demand deposits in commercial banks—by all odds the largest and most important form of money in the country—amount to about $115 billion. This amount is limited and controlled in large part by the Federal Reserve Board's power over reserve requirements. The Federal Reserve Board now requires reserves on demand deposits of 16½ percent for Reserve city banks and 12 percent for country banks. The Board has power, under existing law, to reduce these requirements to 10 percent and 7 percent, respectively. This action would immediately release about $6.25 billion in reserves, which might be expected to generate up to $50 billion in demand deposits. In other words, the Federal Reserve Board today could, if it chose, increase demand deposits by about $50 billion, or almost 50 percent.

At the present time, we have some $3 billion in free gold. The Federal Reserve Board could use this $3 billion to support new bank reserves through Federal Reserve purchases of Government securities. This would increase bank reserves by about $12 billion, and, even at present reserve requirement levels, could generate up to $80 billion in demand deposits. In other words, the Federal Reserve Board could today, if it chose, increase demand deposits in this fashion by up to $80 billion, or about two-thirds.

If the Board should at the same time reduce reserve requirements, demand deposits could rise as high as $300 billion, about 2½ times the present figure.

Or the $3 billion in free gold could also be used to increase by $12 billion the supply of Federal Reserve notes outstanding, now almost $30 billion, an increase of more than one-third.

The existence of these authorities in the Federal Reserve Board at the present time means, of course, that we now have a managed currency. We accomplish nothing if we deny this or try to conceal it. We would do better to recognize it frankly and to rely on managing it well and responsibly, as I believe the Federal Reserve Board is now doing.

I believe it is equally important for the executive branch and the legislative branch to act responsibly with respect to Government revenues and expenditures. Permitting the Government budget to be unbalanced on the upside of a business cycle is not, in my judgment, acting wisely or responsibly. And a deficit of the nature which would result if taxes are cut $10 billion, without a corresponding reduction in expenditures, would not, I am convinced, be consistent with sound fiscal management and responsible monetary policy.

The proposed change from silver certificates to Federal Reserve notes would, however, not have any bearing whatever on our financial stability. A comparison of the quantity of $1 and $2 silver certificates—the only certificates affected by the bill—makes clear the relative unimportance of these certificates, of which only $1.5 billion were outstanding on March 31, 1963. At the same date, $2.4 billion in subsidiary silver and minor coins were in circulation; almost $30 billion in Federal Reserve notes were in circulation; and demand deposits amounted to $115 billion.

Fluctuations in the price of silver mean that the value of the security behind a silver certificate varies greatly from time to time. A $1 silver certificate is backed by 371.25 grains of pure silver, or just over three-fourths of an ounce. In 1932, the price of silver sank as low as 25 cents and ounce. At that rate the silver in a silver dollar was worth something less than 20 cents.

For virtually all of the period covered by the silver purchase acts, the price of silver has been 91 cents an ounce or less. At that price the silver in a silver dollar was worth no more than 70 cents.

For 10 years—from 1935 to 1945—the price of silver was below 50 cents. At that price the silver dollar contained less than 40 cents worth of silver.

The $1 and $2 Federal Reserve notes which would be authorized under the bill would be backed up, like all other Federal Reserve notes, by 25 percent gold and 75 percent in Government bonds and other eligible paper.

Federal Reserve notes and silver certificates, and U.S. notes too, are legal tender for all debts, public and private. All of these notes and certificates are completely interchangeable, and they are, as we all know, equally acceptable to the public.

The Government stopped selling silver in November 1961. At that time the market price was approximately 91 cents, the Government's selling price. This was an artificially low price kept down by the Government's sales from the amounts it had previously been required to buy under the silver purchase acts. Over the 15 years preceding the Government's decision to stop selling silver, consumption in the United States for industrial uses and coinage had risen from the 1947–49 average of 119 million ounces to 161 million ounces in 1961, while the aggregate of net imports and American production had sunk from a 1947–49 average of 77 million ounces to 68 million ounces in 1961. The deficit was made up by Treasury sales, which began to be substantial in 1959 and rose to 62 million ounces in 1961, not counting 55 million ounces used for coinage.

As soon as the Treasury stopped selling silver, the price rose sharply. It now is at about $1.27½ an ounce. With silver at this price, a $1 silver certificate is backed up by about 98 cents in silver.

The break-even point comes when the price of silver is $1.29-plus an ounce. At that price, each silver certificate will be backed up by exactly $1 of silver.

If the price of silver should rise substantially above $1.29 an ounce, it would be worth while for holders of silver certificates to present them at the Treasury and to demand silver dollars or silver bullion. The resulting reduction in $1 bills would have serious effects on business and trade, but it would not be inflationary.

The mint, of course, will have to continue to obtain silver for subsidiary coins. It could buy silver on the open market, either from domestic production or from foreign sources, with the resulting effects on the price of silver and on the balance of payments, or silver could be made available by withdrawing Treasury-held $1 silver certificates from circulation, which would decrease further the number of $1 silver certificates.

The new $1 and $2 Federal Reserve notes which would be authorized under the proposed bill would, of course, impose an additional burden on our gold reserves because they, like other Federal Reserve notes, would have to be covered by 25 percent in gold certificates. The Treasury and the Federal Reserve Board state that they intend to make these transfers gradually, at a rate which, allowing for increases in the number of $1 bills needed, would require only about $35 million of gold certificates a year. This would not have any appreciable impact on our gold reserves.

In any event, of course, the balance of payments situation must be squarely faced and must be solved on its own merits. Whether the administration proposal with respect to $1 Federal Reserve notes is adopted or is not adopted, we will still have a serious balance of payments problem, and we must solve it.

H.R. 5389, in my judgment, has no connection with devaluation of the dollar. Repealing the silver purchase acts and issuing $1 Federal Reserve notes would not help to devalue the dollar, and it is not a necessary step in the devaluation of the dollar. This can only be accomplished by changing the price of gold from $35 an ounce to some higher figure.

Secretary Dillon and Chairman Martin have assured us that the administration does not intend to undertake devaluation. And it seems appropriate to point out in this connection that section 5 of the Bretton Woods Agreements Act provides as follows:

> Unless Congress by law authorizes such action, neither the President nor any person or agency shall on behalf of the United States * * * (b) propose or agree to any change in the par value of the United States dollar under article IV, section 5, or article XX, section 4, of the articles of agreement of the fund, or approve any general change in par values under article IV, section 7—

Sound and responsible fiscal policies and responsible and competitive price and wage policies are vitally important to the Nation and to our position of world leadership. We must concentrate our efforts in support of such policies.

Mr. President, again I thank the distinguished Senator from New York for yielding to me.

ATLANTIC COMMUNITY DEVELOPMENT GROUP FOR LATIN AMERICA

Mr. JAVITS. Mr. President, I am taking this time today to report to the Senate on what I consider to be something critically important—what I hope will prove to be a major help in respect of the development of Latin America and, incidentally, of the solving of the problems with respect to Cuba, because everybody agrees that inherent in our problems with respect to Cuba is the need for satisfactory economic and social development of Latin America. If this development can be accelerated, if the Alliance for Progress can be buttressed and supported in order to do the job which we had planned it should do, then—for both critics of or supporters of the administration policy—this will represent a major contribution in respect to dealing with the grave danger that Cuba poses. The danger, of course, is that this example may permeate others of the American States. Therefore, Mr. President, I make this report within that frame of reference.

I am today announcing the organization of the Atlantic Community Development Group for Latin America, an organization privately financed by grants from foundations, including a substantial grant from the Ford Foundation, and by United States, Western European, and Latin American businessmen.

The purpose of this organization is to encourage Western European investment in Latin America in coordination with indigenous and U.S. private capital, and to recommend a permanent mechanism which will serve as a medium for continued private investment in Latin America.

Mr. President, I emphasize it is proposed that the governments shall back private enterprise, and that this is where the governments will come in; but that the fundamental purpose of this plan is to induce tripartite private investment under congenial conditions in individual Latin-American countries which are willing and able to create those conditions.

Three executive directors to carry on the activities of the group are being appointed for the United States, West Europe, and Latin America and will be formally announced soon. They have actually been chosen and named.

Over the past 9 months a new intent and willingness has become apparent on the part of Western Europe to look beyond the confines of its own present economic growth. There is a growing revival of Western European interest in Latin America. This healthy trend has cut through the discouraging and divisive forces unleashed by the failure of the United Kingdom's application for Common Market membership. It has become increasingly clear that the resources available to the United States and to Latin America do not reach far enough to achieve the vast goal of Latin American economic progress in freedom—and, I emphasize, in time, since I believe the time is one of our greatest problems in respect of Latin America. The human and capital resources available to members of the whole Atlantic Community clearly must be marshaled in order to achieve success soon enough and effectively enough.

The genesis of this effort, Mr. President, was in November 1962 when the NATO Parliamentarians Conference in Paris adopted a resolution pursuant to a recommendation of its economic committee, of which I have the honor to be the chairman. The resolution urged that "the private and public sectors of the member nations of the Organization for Economic Cooperation and Development OECD—be enlisted in an accelerated development program with Latin America in coordination with the Alliance for Progress."

It will be remembered that the Organization for Economic Cooperation and Development consists of 18 western European countries and the United States and Canada; and it is designed for the economic coordination of the Atlantic Community. Within its context is also the Development Assistance Committee, consisting of the nine principal countries giving foreign aid in the world, and including as an additional member, Japan.

Between April 5 and 7 of this year in Paris, I participated in what I believe to be a highly important and concrete development in Western Europe's newfound identification with the problems of Latin America—meetings toward the establishment of the Atlantic Community Development Group for Latin America.

This group, Mr. President—I hasten to add—is based upon the efforts of a working party of the NATO Parliamentarians Conference consisting of the Parliamentarian representatives of delegations of seven NATO countries; and I have the honor to be chairman of that working group.

The Atlantic Community Development Group for Latin America is an action committee with the purpose of pulling together over the next 6 to 12 months immediate-impact, private-investment projects on a tripartite basis—utilizing Western European, United States, and indigenous Latin American capital and managerial and technical know-how. In addition this group, headed by a tripartite directorate from Latin America, Western Europe, and the United States, will formulate recommendations for a permanent mechanism to bring together United States, Western European, and indigenous Latin American capital for specific development projects.

It is believed that arrangements for suitable indigenous governmental acceptibility of such an effort will greatly help private enterprise participate in Latin American development all along the line.

The basic concept behind the establishment of this group develops from the fact that in Latin America, the United States needs Europe now and that Europe should come forward to help in the same spirit as did the United States in 1947, 1948, and 1949 under the Marshall plan.

By September of this year we believed that sufficient progress will have been made to submit an action plan to the Parliamentary Working Party of the interested Atlantic Community nations; that is, the working party I described of which I am the chairman. Within 2 months from now—or in June or July—it is expected that a high level conference of public and private officials from Western Europe, the United States and Latin America will convene to make policy recommendations with respect to this work, first to the Working Party of the NATO Parliamentarians Conference, and then to a broad international conference which is contemplated by the NATO Parliamentarians Conference resolution.

The ultimate aim of our work is to have it taken over and actually put into effect by existing organizations such as the OECD, the Inter-American Development Bank, and the Organization of American States, cooperating with the International Bank for Reconstruction and Development, and other international agencies.

At this very moment our distinguished colleague from Minnesota [Mr. HUMPHREY] is participating in the meeting of the Inter-American Development Bank at Caracas, Venezuela, where he is furthering and explaining the purposes of the Atlantic Community Development Group for Latin America, in the creation of which he has, at my invitation, taken an active part with me, and as to which I am honored to state he is my full associate.

Next week I hope that we shall have here in the Senate a report from the Senator from Minnesota [Mr. HUMPHREY] as to what took place in Caracas. In the meantime, however, I should like to discuss the significance and some of the details of what has taken place in Western Europe and in the United States with respect to this Atlantic Community effort.

Two events occurred in November of 1962, both following some months of preparation, one of which took place in Paris and the other of which took place in Brussels.

In Brussels, about a week after the NATO Parliamentarians Conference of November 1962, the International Association of Christian Employers held a forum to discuss and make recommendations on the role of Europe in Latin American economic development.

Out of this forum has grown the European Committee for Cooperation with Latin America. Both of these actions, that is, that of the parliamentarians and that of the International Association of Christian Employers, are beginning to bear fruit this spring.

I have described the establishment of the Atlantic Community Development Group for Latin America. This group is now working in close liaison with the UNIAPAC secretary, who is undertaking preparatory work for the first full meeting of CECAL expected to take place late this month.

At the same time, there have been increasing indications that the European Economic Community—EEC—and individual member nations of the EEC are taking hold of their responsibilities to freedom and economic progress in Latin America. The EEC has made a start by agreeing to finance, in cooperation with the Inter-American Development Bank, certain projects under the Alliance for Progress.

Although exact terms of this assistance have not been formulated and there are indications that much more must be done to make the necessary credits available on terms and at rates consistent with Latin American needs, a definite start has been made.

One further development: The Government of France has recently entered into a long-term, $150 million agreement to back its private investors in Mexico. This is an important step.

Thus, by a remarkable consensus, the why, what, and where of Western Europe's participation in Latin American development have been settled. This consensus has come at a critical point in history and has emanated from divergent sources.

It is not unique in historical terms for responsible men and nations to recognize and act upon the necessities of history when the time is ripe. Obviously the time for the Atlantic Community to act in Latin America is ripe. The resources to meet responsibilities now exist in a vital Europe—a Europe which can act in partnership with the United States at the very moment—with time so short, and I emphasize this again—when there is grave danger in Latin America of severe losses to freedom.

The question remaining is, How?

We have answered the why, what, and where. The remaining question is, How? That is the question to which this group will give the answer. The support for this group has been so widespread that I am confident we shall have an answer, and that very likely, it will be the right one.

I may say we have really worked very hard and have enlisted the total resources of the three areas involved, the United States, Europe, and Latin America, in an effort to find the right plan.

Last September 1962, and again in February 1963, the Senator from Minnesota [Mr. HUMPHREY] and I were cohosts for groups of leading Latin American and U.S. businessmen interested in Latin America. They were leaders in their respective fields. We received from them the strongest confirmation of the need for the kind of work that has been undertaken by the Atlantic Community Development Group for Latin America.

I traveled to Europe three times and to Latin America twice during the past half year for the specific purpose of gathering opinion, information, and advice on the "how" of Atlantic Community assistance for Latin American development. Individually and collectively leaders in Europe and Latin America have expressed support for a tripartite effort in ventures which bring the imagination, know-how, resources and incentives of private capital together with the basic public investments in economic development.

Especially important, it was, and is now felt, is the partnership of all Atlantic Community nations and their private and public sectors together with the private and public areas of those Latin American nations willing to undertake the commitments needed to assure sound economic growth.

I think it is only fair and proper to say I have received indispensable encouragement and valuable assistance from our State Department and other levels of the U.S. Government.

Finally, upon my return to the United States from the Paris meetings early this month, the newly established group met with me and with heads of those international organizations most profoundly concerned with Latin American development: The Inter-American Development Bank, the Organization of American States, and the International Bank for Reconstruction and Development. These meetings have produced far-reaching results in terms of cooperation and coordination.

Over the next months I believe that we can look for concrete achievement in Atlantic community partnership in an area of the world second to none in importance for the survival and expansion of human freedom and dignity.

This is a matter of the greatest magnitude, one we are thinking of now on the order of $1 billion in investment with respect to the project I have described.

A start has been made—perhaps it has been long overdue—and the impetus of this beginning augurs very well for the future.

In closing I pay my tribute to the President of the United States, to the State Department, to our colleague, the Senator from Minnesota [Mr. HUMPHREY], to our colleague, the Senator from Arkansas [Mr. FULBRIGHT], who is chairman of our delegation to the NATO Parliamentarian Conference, to Representative HAYS in the other body, who is a leading figure in, and our representative on the steering committee of the NATO Parliamentarian Conference, and to all those who have helped bring this situation to its present pass.

It is financed, it is staffed, it is an excellent idea to sponsor—the bringing of Europe into the developmtnt of Latin America. It has every augury for success.

As I reported when I returned here from Paris in April, I am convinced it can be done. It remains for us to do it. If we can do it, and I believe we can in association with the leaders of America, European, and Latin American business, labor, and government, then it can prove to be the difference between magnificent success and perhaps an inadequate success or even a failure in the development of Latin America, which is so crucial not only to the freedom of this hemisphere, but to the freedom of the world.

I thank the Senator for yielding me time.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. KUCHEL. I have been attending a meeting of the Committee on Appropriations, and I have come into the Chamber just now. I understand the Senator is speaking about the recommendations which he made to the North Atlantic Parliamentarians' Conference. Is that correct?

The PRESIDING OFFICER. The additional time of the Senator from New York has expired.

Mr. JAVITS. I ask that I be granted 2 additional minutes.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the time of the Senator from New York be extended for 2 additional minutes, without it being charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. In response to the question of the Senator from California I would say that we have actually organized the Atlantic Community Development Group for Latin America. It has been financed. It is enthusiastically backed by all elements of the economy in Western Europe, the United States, and Latin America. We are at work on drafting a plan under which this kind of investment from Europe, in association with the United States and Latin America, may be forthcoming. We have a target of a billion dollars a year. As I said a moment ago, I know it can be done. The only question is whether we can do it. I know it can be done.

Mr. KUCHEL. Mr. President, I rise to pay a deserved tribute to the Senator from New York. The Alliance for Progress is of importance to the people of the United States, because a part of our destiny is historically and naturally intertwined with our neighbors in Latin America. It is also of supreme importance to members of the Atlantic Community. I well remember, because I was a delegate to that conference with the Senator from New York, the enthusiasm with which his original recommendations were received by our parliamentary colleagues representing the nations of NATO.

What he has said means that the NATO nations will share our own interest in keeping the South American countries free and share the burdens which the U.S. Government have undertaken.

I salute the Senator from New York for his excellent statesmanship in the fruition of the recommendations which he made last fall in Paris.

Mr. JAVITS. I express my gratitude to the Senator from California and also my thanks for his indispensable help in Paris and here in the continuing development of this project.

I also wish to add my appreciation to the Senator from Oregon [Mr. MORSE], who is Chairman of the Subcommittee on Latin American Affairs of the Committee on Foreign Relations. I have kept him informed on what we were doing. He was most generous in helping me with respect to this subject.

I am indeed grateful to the Senator from California [Mr. KUCHEL] for his fine support and for the splendid endorsement which he has given to this work.

ESTABLISHMENT OF WATER RESOURCES RESEARCH CENTERS

The Senate resumed the consideration of the bill (S. 2) to establish water resources research centers at land-grant colleges and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research.

Mr. ANDERSON. Mr. President, I ask unanimous consent that, notwithstanding the previous unanimous-consent agreement entered into, the senior Senator from Oregon may be permitted to proceed for 25 minutes and that at the conclusion of his statement the junior Senator from New York, [Mr. KEATING], may proceed for about 3 minutes, without any of this time being charged to either side on the pending bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

MR. NIXON AND FOREIGN POLICY

Mr. MORSE. Mr. President, last Saturday night the American Society of Newspaper Editors and the American public were treated to a replay of the old Nixon theme song. It made use of all the same old techniques of forensic deceit that have come to be so closely associated with Mr. Nixon. "If only I were the 'partisan type'," he began, "what a field day I could have." One cannot help wondering whether Mr. Nixon meant the chuckles to come at his characterization of himself or at his characterization of the administration's record. Certainly Mr. Nixon holds some kind of unofficial title in this country as a champion partisan infighter, and it is unbelievable that he meant the description of himself to be taken seriously.

But just in case anyone might have any question of this man's ability to deceive himself with words, even when his audience remains undeceived, we are then treated to the shopworn and transparent tactic of making a charge by denying that the charge is being made. "Nor do I charge that this administration is trying to appease Mr. Khrushchev," says Nixon. "Nor do I charge that because of the failure of the economy to grow as fast as was predicted when the administration came into office we are in deadly peril of being outproduced by the Soviet Union and the Communist bloc."

How often we have heard in years past that old verbal technique. It carried Richard Nixon a little further than it carried Joe McCarthy, but not much further. I would have more respect for the man if he made these charges honestly and straight out, instead of disguising them with pious semantics.

But the old refrain from this speech of Saturday that really strikes a chord of memory is the Nixon prescription of how to deal with Cuba. Nixon on Cuba in 1963 is nothing more nor less than the 1952 Republican prescription for dealing with China. "The more things change, the more they are the same," according to the French proverb. Richard Nixon is the living proof of the truth and applicability of that axiom to the policies of the modern Republican Party.

The Nixon prescription for Cuba, like the 1952 Republican prescription for China, consists largely in big talk and easy promises of liberating both these victims of communism. The "activist" quality in both cases is remarkably similar. Eleven years ago, we heard about how China would be freed by "unleashing" Chiang Kai-shek; Saturday night, we heard that Cuba is to be freed by "unleashing" the Cuban exiles.

During the 8 years of the Eisenhower administration, it must be presumed that Chiang Kai-shek was indeed "unleashed." One cannot be sure because not much of anything happened, except that after a few years, all expectation that Chiang's forces would actually invade the mainland of China disappeared.

Those expectations disappeared when it became evident that the forces to be unleashed were not to be the real forces which would have to carry the brunt of the battle. It finally became perfectly clear even to the most gullible that putting Chiang's forces into battle against the Chinese Communists would require vast American air and sea support, and that unless those Nationalist forces were to be abandoned to their fate, a full-scale American invasion in support of them would be necessary.

The question that Mr. Nixon raises in my mind is whether this is not what he really has in mind in Cuba. The principal element of his Cuban policy is that the Cuban exiles in this country not be "leashed." Instead, he calls for open support of what he calls, but fails to define, "forces of freedom." It is his recommendation that we openly support forces organized to overthrow a Communist-controlled government in the Western Hemisphere.

On the face of it, Mr. Nixon is calling for official violation by the U.S. Government of its laws against participation by residents in this country, either citizens or noncitizens, in attacks, raids, or invasions of any kind aimed at nations with which we are not at war. Perhaps Mr. Nixon had it in mind that he believes those laws should be changed and just did not spell it out.

But even so, what he is really advocating is a program of aid to the Cuban exiles that would bring the military power of the United States into play sooner or later on their behalf. It would be either that, or repetitions of the Bay of Pigs, because financing, organizing, and training the Cuban exiles was not enough even in 1961.

The Cuban exiles were unleashed for some 3 years. The results were nothing more than nuisance raids that were followed by attacks on U.S. shipping. The following is a résumé of the raids by the Cuban exiles and their results:

August 24, 1962, First raid, Revolutionary Student Directorate Group shelled hotel on Havana waterfront causing minor damage.

September 10, 1962: Five-man crew from Alpha-66 group fired on a United Kingdom vessel and a Cuban vessel near Cayo-Frances causing slight damage to both vessels.

October 8, 1962: Estimated 10-man party representing Alpha-66 staged raid on harbor installation at Isabela de Sagua causing undetermined number of casualties.

October 12, 1962: A six-man party under the direction of Manolo Quiza machinegunned a Cuban vessel in the sea area off the port of Cardenas. The vessel was reportedly sunk and two of the four crew members were injured.

December 4, 1962: Several dozen raiders, representing the second front of the Escambray, in two small craft fired on installations in the port of Caibarien.

March 17, 1963: Vessel carrying small number of raiders representing Alpha-66 and the second Escambray front raid the harbor at Isabela de Segua causing minor damage to the Soviet freighter *L' Gov*. There may have been casualties.

March 26, 1963: An estimated six raiders representing the L-66 group attacked the Soviet vessel *Baku* in the harbor of Caibarien. Substantial damage was caused to the Soviet vessel.

SUMMARY

Cuban exiles have carried out seven hit-and-run pinprick raids against Cuba beginning with the attack on a Havana waterfront hotel in late August 1962. These attacks in the main were improvised and with the exception of the last attack on a Soviet vessel caused virtually no damage.

Mr. JOHNSTON. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I will yield when I finish my speech; then I shall be glad to answer questions.

Mr. President, is this Mr. Nixon's idea of how Cuba is to be liberated? Surely he knows it would require not merely U.S. sea and air support, but the presence of large numbers of U.S. troops to make any invasion of Cuba a success.

Mr. Nixon thinks he has shrewdly avoided making that bald assertion to the American people. His speech to the editors is carefully worded to give the promise of freeing Cuba without giving the price in American blood that would have to be paid for it under his policy. "Unleash the Cuban exiles," cries Nixon. But there is an unspoken corollary that is fully known and appreciated by Mr. Nixon, even if it was not uttered by him. It is that a continuation of the exile raids and eventual landings of exiles in Cuba would require massive American participation to make them successful.

The American Nation has registered its rejection of these intellectual dishonesties of Richard Nixon. I suspect that the disillusionment with the unleashing of the Chinese Nationalists will put this newest "unleashing" shell game into its proper perspective. For the plain truth is that in either case, the unleashing would be nothing more than a vanguard to full-scale U.S. invasion. I think the American people know that. They did not want any part of that kind of policy toward China, and I do not believe they are any more interested in such a policy toward Cuba.

"UNLEASHED" POLICY HAS ALREADY FAILED

They might be, were it not for the very fact which Nixon brings up in support of his own case. It is that the Cuban exiles cannot be expected to carry alone the brunt of opposition to the Soviet power which has been planted in Cuba.

Mr. Nixon says this is why we should openly support the exiles. But it also means that only the U.S. military power can successfully challenge the Communist power in Cuba. The exiles have already had the benefit of U.S. open support extending to financial aid, training, weapons, and transport. The Bay of Pigs was the result. Even if Soviet troops were not still present in Cuba, the Cuban exiles could not do any better now than in 1961 without American troops to help them. In my judgment, they could not do it nearly so well. If Nixon is advocating a U.S. invasion, why does he not say so to the American people with intellectual honesty? The policy he outlined must eventually bring about American military involvement in Cuba. He knows that. Why does Nixon persist in believing that all the American people can be fooled all of the time?

I have said many times from the Senate floor that I do not rule out the possibility of American military involvement in Cuba. We saw it occur last October, when there was a direct threat to American national security. We may again have to protect the security of the Western Hemisphere from the Cuban threat with the use of our military power.

I repeat again, as I have said several times from this desk and many times from the platforms of America, that the American people have every reason to place complete confidence in the purpose of the President of the United States to proceed immediately, at any critical moment, to protect the security of this Republic whenever its security is challenged or endangered by either Castro or Khrushchev or both acting jointly.

The President has also made it clear that he intends to keep this Republic within the framework of international law. However, the speech by Richard Nixon the other night was a warmongering speech which would have taken us outside the framework of international law had we carried out Nixon's proposal.

I thank my God that sitting in the White House is a man who recognizes the sacred, solemn responsibilities of being President of the United States, and the duty to keep this Republic within the framework of international law. This President recognizes that an aggressor course of action or a violation of American-signed treaties or a violation of our responsibilities to international law cannot be justified in maintaining our efforts in the realm of freedom around the world.

If we sought to implement the aggressor course of action, which was the very essence of the Nixon proposal the other day, we would lose one ally after another in the United Nations, because we have a duty in this era of civilization to see to it that we do not follow a course of action of international outlawry. In essence, the proposals of Nixon the other night were proposals that this country should become a party to international outlawry. If he was aware of the treaties the United States has signed, he ignored them in the preparation of the speech he delivered the other day when he spoke to the newspaper editors.

Mr. President, I am not in favor of allowing the United States to be drawn into military involvement on behalf of or because of the Cuban exiles. Neither am I in favor of a U.S. policy which uses the Cuban exiles as a front, and as an excuse for American involvement. Let not the Cuban exiles forget that possibility, either. The refugees here in the United States account for only some 4 percent of the people of Cuba. Ninety-six percent of the Cuban people are still in Cuba.

I am not in favor of keeping this relatively small percentage of its people on a string to use as a convenient pretext for an American invasion of Cuba. After Cuba, what? British Guiana? Brazil? There are voices in America right now who will swear that the Government of Brazil and the Government of Venezuela are both Communist-dominated.

The extreme right in this country should leave no room for doubt on the part of the thinking people of the country that they want war. They represent the war party of America. I believe that the challenge of statesmanship these days is to try, first, to win the fight against communism on the basis of bloodless combat. We will shed our blood if it ever becomes necessary to do so to protect the security of this Republic. But I am one Senator who does not intend to sweep under the rug attacks such as the one from Nixon the other night. I believe the people must be warned at all times against the dangerous propaganda of the warmongerers, such as Nixon, who seek to poison the thinking of the American people by waving the American flag into tatters. As a patriotic American, I do not believe we pay due respect to the American flag by waving it into tatters.

I do not want to see any return to the unilateral American policy of deciding when a government of Latin America is to be overthrown in furtherance of U.S. interests. That is what Mr. Nixon is calling for. It would be a return to the 19th century diplomacy which made the United States a hated nation in the hemisphere and did damage which has required half a century to repair.

U.S. ALREADY AIDING NON-COMMUNIST GOVERNMENTS

A part of Mr. Nixon's prescription for Latin America is for open U.S. support of those same "forces of freedom" in nations threatened by Communist activity. But we have such a policy in full force and effect right now. The Punta del Este conference of a year and a half ago, to which I had the honor to be one of the two Senate delegates, the other being the distinguished Senator from Iowa [Mr. HICKENLOOPER], spelled out some of the steps to be taken by all our governments to curb Communist activities and influences in the nations of the hemisphere. A large part of that policy includes the careful and effective patrolling of the waters of the Caribbean by American forces to prevent the smuggling of arms, propaganda, and trained personnel from Cuba into other Latin American countries.

We send them large amounts of military aid to maintain internal security. Another large part of this policy is the Alliance for Progress itself.

In short, I simply do not know what Mr. Nixon is talking about when he says we should openly support the forces of freedom in countries where internal communism is threatening. We are doing it now. Let me say, parenthetically, that Brazil is one of the most important of these; yet Mr. Nixon derided our aid to Brazil. It is hard to see just what kind of "open support" he would have us extend to Brazil, to keep communism from advancing in that country, if he considers our present massive aid to be a mistake.

There is one more point in Mr. Nixon's Cuba policy which I should like to mention. It is that when asked for specifics of what action the United States should take to oust communism from that country, he declined to name any that are not already being undertaken. He thus left the exiles as the "front" for his American involvement, when he could have spelled out the desirability of supporting their invasion of Cuba with American forces—which in my judgment is the proposal that is concealed and imbedded in his program. But he was not intellectually honest enough to tell the American people what he really meant. The specific actions mentioned by Nixon are now being taken by the Kennedy administration, to remove the Soviet presence in Cuba, and eventually the Communist presence—political methods, political pressures, and economic pressures.

We should, said Mr. Nixon, begin with the minimum steps, and see what result they bring, before stepping up what we do. It is too bad that Nixon is not willing to find out what results these methods bring. It will surely take many more months before we know whether they are effective or not. But he wants to unleash the exiles, too, with all that implies.

Mr. President, as chairman of the Latin-American Affairs Subcommittee of the Senate Committee on Foreign Relations, and as one who for years has been steeped in the problems of the United States vis-a-vis Latin America, let me say, that in my judgment the proposals made the other night by Mr. Nixon would cause catastrophe throughout Latin America and would end in war. As I have said before, in my judgment, statesmanship calls for us with honor to do everything we can to win a bloodless victory over communism in Latin America, although ready at all times to shed our blood in whatever amounts may be necessary in order to protect the security of our country in case Castro and Khrushchev follow an aggressive course of action against the Western Hemisphere. We must not forget the the Act of Punta del Este pledges all the free nations of the Western Hemisphere, including the United States and our Latin American neighbors, to support each other whenever there is a violation of international law by an aggressive course of action on the part of Cuba and its master, Khrushchev.

It is always hard to tell whether Mr. Nixon advocates a move of this kind because it sounds like a good, cheap way of gaining something all Americans desire without ever having to put it to the test, or whether he advocates this particular policy with the full knowledge that effectuating it would bring about tremendous consequences for the American people, consequences he deliberately fails to mention or discuss.

Fortunately, the American people have decided that they do not want to find out what he has in mind. They made that clear in November 1960.

EUROPEAN POLICY COSTLY, DANGEROUS

In some ways, Mr. Nixon's outline of a policy toward our NATO allies was much more far-reaching and ominous than his Cuban policy, and deserved more attention in the press, than what he said about Cuba. Mr. Nixon would, in Western Europe, have us fall back on the Republican theory of diplomacy which calls for arming every nation to the teeth as a means of avoiding war. That was the Dulles policy, and Nixon is apparently ready to carry it to a fatal extreme.

As a member of the Foreign Relations Committee of the Senate, I opposed the Dulles program during the last 3 or 4 years of his leadership in the State Department. In my judgment, we are still suffering terrible consequences because of the misconceptions inherent in the Dulles program.

The way to repair the Atlantic alliance, says Mr. Nixon, is to give our NATO partners nuclear weapons. He calls for a change in the Atomic Energy Act that would permit "the transfer of a limited number of nuclear warheads for the appropriate use of our European allies."

Is General De Gaulle unhappy because France does not have its own national nuclear forces? Then give him some, says Mr. Nixon. What interest of the United States this conceivably could serve, Nixon does not say. From the context of his remarks it appears that he simply wants to give our allies in Europe anything they want, to keep them happy and quiet. I do not see where Nixon even expects Europe to pay for those nuclear warheads, since he calls for their "transfer," not their sale.

I find it especially surprising that Nixon should offer such a proposal when he also calls for a move toward greater political unity within NATO. He urges, in fact, a "confederation" to permit unified political control of the NATO organization. Giving France, Britain, and Germany—to start with—nuclear weapons of their own is exactly the opposite of leading them toward greater political unity.

Mr. President, here is one Senator who never will vote a dime to a NATO country for the development of a national atomic, nuclear-weapons program. Here is one Senator who will insist that, for the preservation of civilization itself, we continue to maintain control of nuclear power, under international agreements with our allies. Here is one Senator who repeats his statement made from this desk on January 16—namely, that he does not intend to see the United States help or aid De Gaulle in any way in his program to make France an independent nuclear power.

We cannot run the risk of encouraging individual nations to develop individual national nuclear weapons programs, if we are still to have any hope of preserving the peace in our time. Certainly we have great moral obligations to the next generation and to future generations of Americans.

If Mr. Nixon were genuinely interested in a closer political unity and control over the NATO military forces, I cannot imagine that he would also propose to destroy that unity by setting up each member as an independent nuclear power. The kindest thing I can think of Nixon's proposal is that he is resorting to the practice of trying to "buy off" unwilling or recalcitrant partners.

The PRESIDING OFFICER (Mr. BURDICK in the chair). The time available to the Senator from Oregon has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Oregon may proceed for 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. Mr. President, I am flatly opposed to any amendment of the Atomic Energy Act which would permit the transfer, the sale, or any other placing of nuclear warheads in the hands of other nations, for their own use. If Mr.

Nixon is sincere in seeking a closer political relationship with our European allies, let him begin talking about changes in the Atomic Energy Act that would release to a purely NATO organization some degree of American control.

There is plenty of room for negotiation and maneuvering over how to bring about better relations within NATO. But, by and large, I believe that among nations which are basically friendly, basically democratic, and have the same basic objectives, a reasonably straight line is the best one to follow in trying to reach agreement. There may be some complex rationale behind his idea that the way to move toward unity is to fractionalize. If so, Mr. Nixon has a lot more explaining to do.

Mr. President, I close by saying, as a member of the Senate Foreign Relations Committee, that in my judgment the balance between war and peace in the world today is a very delicate one; and, in my judgment, there will not be any little wars. If we start a war in Cuba, we shall very likely start a world war. I think the leaders of all nations should recognize that.

Therefore, whenever the warmongers seek to spread their poisonous propaganda of war—as Mr. Nixon did the other day, before the newspaper editors—irrespective of the political consequences, I will take to this floor in defense of trying to reach an honorable peace and in defense of the great foreign policy program of a great President, President Kennedy.

The time has come to make perfectly clear to the warmongers that the American people are entitled to the facts. They are entitled to intellectual honesty. They are entitled to be protected from the kind of deceit in which Mr. Nixon engaged in his shocking speech to the newspaper editors.

I say to the newspaper editors, You, too, have a patriotic obligation to keep faith with the first amendment of the Constitution, and, in the exercise of your precious guarantee of free speech, to present to the American people the facts about foreign policy, and not permit warmongers to give to the American people the big dose of intellectual poison and war propaganda that Mr. Nixon gave to your conference when he spoke the other day.

In conclusion, Mr. President, I ask unanimous consent to have printed at this point the fine analysis of the Cuban policy by Mr. Walter Lippmann, which appeared in this morning's Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE KENNEDY-KEATING CUBAN POLICY

(By Walter Lippmann)

Cuba got a good airing last week before the American Society of Newspaper Editors, and the significant fact about the speeches of the President, Secretary Rusk, and Senator KEATING was that there is substantial agreement about what the United States should and should not do. It is hard to say what Mr. Nixon's Cuban policy would be. He sounded like a man who was ready to go to war. But all he actually said was that he wanted the Cuban exiles to make hit-and-run raids.

Senator KEATING, who is the most conspicuous of the critical opposition, began by saying that it is foolish to pretend that there are easy answers to the Cuban problem. He did not pretend. Then in the course of his speech he admitted that he agrees with the main theses of our present Cuban policy. He is opposed to an invasion. He is opposed to a blockade. He is opposed to hit-and-run raids mounted from American soil. He is in favor of greater stress on nonmilitary measures, and he wants to exert increasing economic pressure so that the Soviets will be driven to the conclusion that the price of maintaining a base in Cuba is too high.

This is the same story which the administration is telling. Senator KEATING's differences are not in the substance of the text but in the editing, the typography, the layout, and the captions. The Senator, like the President, excludes in present circumstances the resort to war—invasion, blockade, and raiding; like the President, he, too, would deal with Cuba by surveillance, containment, isolation, economic pressures, and propaganda.

There is no doubt that at least for some time to come the Kennedy-Keating policy will leave the Soviet troops 90 miles from Florida. This is an affront to our pride. Not since Napoleon III put French troops into Mexico to enthrone and support the Emperor Maximillian has anything like this happened so close to us. In the end the French troops went away. But, because there was no prudent alternative, Lincoln put up with the Bonapartist troops for several years.

How long must we put up with the Russian troops? The honest answer is that we must put up with them until they can be gotten rid of by measures short of nuclear war. Here is the sticking point in the argument with Governor Rockefeller and Mr. Nixon. They sound, they intend to sound, as if they know a way to get rid of the Russian troops promptly without waging nuclear war.

What is this prompter way to make the Russians go away from Cuba? They do not tell us, but the most reasonable interpretation of what they say is that the prompter way is not to make war but to threaten war. Both Governor Rockefeller and Mr. Nixon have avoided saying plainly what they do mean. But if what they sound like has genuine meaning it is that they believe the United States can deliver an ultimatum which the Soviet Union will bow to.

If this is not what they mean, what in the name of common sense do they mean with all their big words? If they are prepared to be so bold with the Russians, they ought to be bold enough to talk plainly to their fellow Americans.

The Rockefeller-Nixon position appears then to be that Cuba can be liberated by ordering the Soviet Union to withdraw from this hemisphere, and to stand by passively while we blockade Castro and arrange for a replacement of Castro's government. If this is what they have in mind, they are making an enormous guess. For nobody can possibly know that the Soviet Union would surrender its whole position in Cuba as it surrendered its offensive weapons last October. It is the supreme folly in the nuclear age to drive a nuclear power into a corner. And if the Soviet Union refused to bow to the ultimatum, all this would do for us would be to make us look like fools.

The President of the United States cannot play with an ultimatum to a government like that of the Soviet Union. He cannot use an ultimatum unless he is prepared to go through with it and begin a war. If he is not prepared to go to war, an ultimatum is a bluff and everyone will soon see that it is.

While the present policy does not promise a quick withdrawal of the Russians or the fall of Castro, it is surely not true to say that it is complacent do-nothingism. To a degree which is just short of war Cuba is being photographed, patrolled, embargoed and squeezed, and isolated. If Cuba were a great power, we would be at war with her for what we are already doing. I doubt whether there is any precedent where we have exerted such strong measures short of war on any other country.

However much we are impatient and frustrated we have to grasp the fact that Cuba is no military threat to the United States and is not very much of a threat to Latin America. The worst of Castro is his example and a long way after that such agents as he is able to train and infiltrate into the Latin American countries. He is an affront to our pride, he is a nuisance, he is a mischiefmaker. But he is not a mortal threat to the vital interests of the United States, and therefore, in this age of thermonuclear war, we must deal with him by measures that are short of war.

Mr. KUCHEL. Mr. President, I ask unanimous consent that I may speak for 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. KUCHEL. Mr. President, the American people are a peace-loving people. The Government of the United States joined the United Nations because we believe in peace. We continue to seek peace with justice and with honor in this world.

I believe the American people understand the ugly and dread hazard to the free way of life which is posed by international communism. For that reason again this year the representatives of the American people will vote to spend, in round numbers, approximately $100 billion to perfect our Defense Establishment and further to sophisticate the defensive weapons of obliteration which modern science and technology have brought not only to the free nations, but also to the nations under the yoke of international communism.

The American people are bitter. They object to the transformation of Cuba into a Communist satellite. Their own feelings were reflected only a year ago on the floor of the Senate when it adopted the following resolution:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States is determined—

(a) to prevent by whatever means may be necessary, including the use of arms, the Marxist-Leninist regime in Cuba from extending, by force or the threat of force, its aggressive or subversive activities to any part of this hemisphere;

(b) to prevent in Cuba the creation or use of an externally supported military capability endangering the security of the United States; and

'c) to work with the Organization of American States and with freedom-loving Cubans to support the aspirations of the Cuban people for self-determination.

That resolution was approved by the Congress and likewise by the President of the United States. I think it fair to say that it represents basic American policy. Our country will never permit Cuba to become a nuclear or an offensive launching pad; and, to the everlasting credit of the President of the United States, the action which he took last October indicated that our Cuban policy was to be vindicated on that occasion.

But the American people continue to be bitter. They continue to urge the American Government to take any action that can be taken to isolate and, under the very terms of the resolution, to extirpate from the Western Hemisphere communism in any form.

I receive letters from people in California upon occasion demanding action. I have written replies to those letters in which I have said, "What do you mean when you say 'action'? If you are demanding that I use my vote and my voice upon this occasion now, immediately, to demand a military invasion of Cuba, you are wrong, because I will not do that."

Neither will the American people. The President of the United States has said, "We have fought wars before." And now we face, God forbid, a continuing hazard of an obliterating nuclear war. Nevertheless the American people intend that they and their Government proceed with honor and courage and vigor, and firmness with respect to communism in this hemisphere and in any other clime around this globe. "Deeds not words," was the Eisenhower phrase. It still goes.

Mr. President, I did not read the text of the comments of former Vice President Nixon, and therefore I cannot comment very well upon the points which my able friend from Oregon has raised.

There is no more vigorous advocate in the Senate than my colleague the distinguished Senator from Oregon [Mr. Morse]. When I propose a measure which is controversial, I am always happy when my friend the Senator from Oregon [Mr. Morse] is on my side and agrees with me.

I take the floor of the Senate on this occasion to say that from the newspaper accounts of former Vice President Nixon's speech, I do not consider it a "shocking" speech. In my judgment his speech reflected the uneasiness of the American people with respect to the continuing presence in Cuba, 90 miles off our shore, of a Communist ideology. They hope and pray—I go further than that when I say they demand—that our Government do everything that can be done to isolate and eventually to eliminate that hazard from our way of life.

Former Vice President Nixon is an American. He did not attack President Kennedy as an appeaser. He simply presented his views with vigor to an audience of newspaper editors which extended an invitation to him to speak on the occasion of their convention.

I say very frankly to my friend from Oregon that, when the President of the United States the other day approved a loan to Brazil I did not denounce that loan. But I say to him most sincerely that I desire more facts with respect to the reasonableness of that loan before I place my own personal stamp of approval upon it. We must remember that a few weeks ago the State Department publicly said that Communists were working their will in the government of Brazil.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. KUCHEL. Mr. President, I ask unanimous consent that I may have an additional 3 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. KUCHEL. A couple of days later the State Department said that Communists did not dominate Brazil. As an American citizen I say that if Brazil went down the Communist drain, it would be another body blow to the cause of freedom. We do not want our hemisphere to go Communist. For that reason, I shall continue to support the Alliance for Progress. I desire that our ties with our Latin American neighbors be strong. I wish to see us go forward in helping those countries eliminate many of the causes for communism—ill health, poverty, illiteracy, poor housing, lack of widespread individual landownership, sickness, and disease. But I do not consider the comments of the former Vice President last week to be susceptible of the interpretation which my able friend has placed upon them, as he has a perfect right to do. I merely believe that he reflected the feeling of the American people that we desire peace with justice and honor. We seek it. For that reason, we wish to continue to negotiate with the Soviet Union for a dependable and realistic test ban. That is why we hope and pray that the Atlantic Alliance may continue strong.

I generally share my colleague's views with respect to the problem of the nuclear deterrent. Quite aside from that, the American people want our country and our Government, as I say, to be united, to continue a policy of firmness toward our unyielding, unalterable American goal—to protect our own security, to eliminate communism from this hemisphere, and eventually to give to the people on this earth an opportunity themselves to determine how their own society shall conduct their own business.

ESTABLISHMENT OF WATER RESOURCES RESEARCH CENTERS

The Senate resumed the consideration of the bill (S. 2) to establish water resources research centers at land-grant colleges and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research.

Mr. METCALF. Mr. President, what is the pending question?

The PRESIDING OFFICER. The water resources bill, known as S. 2, is before the Senate. The bill is open to amendment.

Mr. METCALF. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, and that the time for calling the role not be charged to either side.

The PRESIDING OFFICER. Is there objection to the request by the Senator from Montana? The Chair hears none, and it is so ordered.

Mr. METCALF. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, I call up my amendment No. 54.

The PRESIDING OFFICER. The amendment offered by the Senator from Colorado will be stated.

The Legislative Clerk. It is proposed, on page 3, line 9, after the word: "advisable", to add the following: "by the institute or center,".

The PRESIDING OFFICER. How much time does the Senator yield to himself?

Mr. ALLOTT. I yield myself 5 minutes.

Mr. President, I think the purpose of this particular amendment is clear. It is an exceedingly simple amendment. It is a perfecting amendment. The purpose of it is to keep the control of the research in the hands of the institute or center. It is an amendment to certain language in section 100(a) of the bill, which provides for research at the land-grant colleges and institutes.

The bill now reads: "as may in each case be deemed advisable, having due regard to the varying conditions and needs of the respective States and Puerto Rico."

In my opinion, that language makes the bill uncertain. I do not know what is meant by "as may in each case be deemed advisable." I do not know who determines what is advisable. So the purpose of my amendment is to be certain that the institution in the particular State where the problems are being studied is the judge of what the problems are and what is advisable, and in what case it is advisable.

I felt certain that this was merely a perfecting amendment and that the author of the bill would be willing to accept it. I am sure it would not be his idea that, for example, in the State of New Mexico the decision as to what was to be deemed advisable would be made here in Washington. I know that for the State of Colorado I would have no desire to see the Secretary of the Interior have control of money or a project where he has the say as to what is advisable. Because of the many ramifications of this subject, I think it is for the States to say which ones are advisable and which ones are not.

I may ask the distinguished Senator from New Mexico as to whether he has objection to this amendment.

Mr. ANDERSON. I may say to the able Senator from Colorado that I do have opposition. It is not the objection which the Senator probably thinks I have, but I will discuss it shortly.

Mr. ALLOTT. That being the case, and having stated my reasons for the amendment, I will reserve the remainder of my time.

Mr. ANDERSON. Mr. President, I wish to yield some time to the Senator from Michigan [Mr. Hart].

Mr. HART. Mr. President, it was necessary for me to be in Michigan yesterday, and I was thus unable to join in the opening discussion of the pending bill (S. 2) and in the compliments paid its chief sponsor, the Senator from New Mexico [Mr. ANDERSON]. But as a cosponsor of this bill, and also as one of the "minority of four" who had urged a more forceful report from the Senate Select Committee on National Water Resources, I am delighted and gratified that the Senator from New Mexico is forcefully pursuing the recommendations of our committee. He is not letting them die on the shelf. He is proceeding promptly, thoughtfully, and thoroughly to see that they are implemented. It is clear that he intends to see that we take all possible actions to meet the Nation's water needs of the future as envisioned by our committee.

This particular bill has been most warmly received in Michigan. Dr. John A. Hannah, president of Michigan State University, was given a draft of the bill last summer. He endorsed the concept, and said:

> "The draft bill takes cognizance of the fact that the use of water constitutes one of the most complex and pressing problems confronting almost every State in the country.

We in Michigan will put this program to good use. I commend the Senator for his initiative in the drafting of the legislation and for his leadership in bringing it to the floor of the Senate. I hope it will be supported overwhelmingly.

I support the Senator in his opposition to the pending amendment.

Mr. ANDERSON. Mr. President, the Senator from Alaska wanted to speak on the bill. I thought this would be the best time for him to do so, and I yield him some time.

Mr. GRUENING. Mr. President, we are witnessing a historical change in our national thinking, as we find citizens becoming increasingly aware of the value—indeed of the preciousness—of our water resources. The bill we are considering, S. 2, provides that, in addition to the land-grant colleges and State universities, other universities and research institutions may also be aided in water resources research.

Our water resources are not by any means inexhaustible. Nor are they at present well tended. The cosponsors of S. 2 heard testimony outlining the severity of the water shortage which our country faces. Some States have already experienced the fears and frustrations arising from inadequate water reserves. I am pleased to cosponsor this legislation which should help solve some of our water resource problems.

President Kennedy's task force on water resources reported that water is being used at an alarming rate. The issue, of course, is how do we best utilize our water? How can waste be eliminated? How can reuse methods for water be found? How can the waters of the sea be desalinized at the least cost? How can water pollution be ended? How can we assure adequate water supply for the future?

As I have had occasion to say before, water conservation cannot be the goal and responsibility of the States alone. The language of S. 2 makes available to our great State universities and colleges funds with which to establish within each State a water resources research institute, center, or equivalent agency.

In my State of Alaska a water pollution research laboratory is being located at the University of Alaska at College, near Fairbanks. It will be seek to establish how the waters of the far north can be best put to work. The environmental studies planned within our State will have far-reaching effects in this country and in other lands.

Strange as it may seem to men and women unfamiliar with Alaska and its vast regions, our usable water supply is limited. I remember when U.S. Public Health Service employees examined our water supply and found, in amazement, that many of the streams within the State were polluted with glacial flour. This type of pollution could and does impede the usability of other Alaskan streams.

I doubt if the extent of Alaska's ground water resources will be known in even the near future. Possibly the State will depend upon its surface waters for most of its water requirements, but certainly these questions cannot be answered until the proper research has determined some of the answers.

In years ahead Alaska will have the industry it seeks today. It will have the investment capital so needed today. It will have increased population. And it will have all the problems these improvements bring.

Dr. William R. Wood, president of the University of Alaska, has examined S. 2 as have members of his faculty. They strongly support this proposed legislation. They believe, as do I, that the program envisaged will complement the work of the U.S. Public Health Service in the Arctic research program which is being developed in the 49th State.

Mr. President, many groups have testified in support of S. 2. I will not attempt to relate their findings in detail, but I do want to mention the statement of Mrs. Haskell Rosenblum, director of the League of Women Voters of the United States, who said:

> Efficient utilization and protection of our water supply is so important to national well-being that we think the Federal Government has a responsibility to encourage research in this field, research the need for which has been supported by many eminent scientists and politicians.

The League of Women Voters is nonpolitical. The league does a good job in presenting the pros and cons of important issues to its membership, and it does a responsible job. I applaud the work of the league in the important area of water conservation, and I urge the favorable enactment of this legislation.

Mr. ANDERSON. Mr. President, this amendment directly poses the question of whether the paramount authority is in the Federal Government or the local institutions or centers. It happens that Dr. Jerome B. Wiesner, Director of the Office of Science and Technology, and the Bureau of the Budget, supported an exactly opposite position to that being proposed by the Senator from Colorado. They sought greater Federal authority.

The Hatch Act and this bill both contain sections providing that nothing within the act shall change the relationship between colleges or universities and their States. This act carries that language. The States are jealous of their prerogatives. They should not be overridden. But there must be some Federal participation in decisions.

A good many years ago, perhaps in 1945 and 1946 and 1947, the senior Senator from New Mexico worked on an agricultural research bill, which was adopted in 1947. We found at that time, by using a punchcard system, that literally millions of dollars was being spent on projects by States who had no idea that their neighboring States were spending money on similar projects.

We had the problem of dye affecting cotton, not only in the rain belt, but also in other places. Research laboratories were working on the problem of how dye worked on cotton grown in desert areas. My State was one of those States. They included New Mexico, Arizona, and California. We were dealing with irrigation cotton, and found that this problem existed there.

These various agencies were not working together, but independently.

As a result of the passage of the Agricultural Research Act of 1947 we were able better to program the money appropriated. We did not interfere with the State programs. We called their attention to what was going on in other areas to solve this problem, and in the solution of which they could participate.

The Hatch Act has been on the books for a long time. By using the language of the Hatch Act in S. 2, we attempt to carry over to the water field the same mutually satisfactory relationship which exists in the agricultural field, which involves a sharing in the decisions as to "advisability" of projects and policies rather than a sharp granting of ultimate authority to one side or the other.

I know that some feel it is advisable to grant this final authority to the States. I believe it would be preferable to have the States and Nation work together, as they have done under the Hatch Act. Furthermore, I do not know of any objection being made to our proposal by any land-grant colleges.

We have not stopped any land-grant college by the exercise of blind authority here in Washington.

There are many examples of how this has worked. The language in the bill is a compromise between two extremes. We have, as Dr. Edwin West Allen has said, set forth a "unique example of national administration in which influence, rather than coercion, is the policy."

That is what should exist. That is why I find myself unable to accept the amendment.

We have had a long history in this field.

This matter has been under the administration of many Secretaries of Agriculture. So far as I know, no land-grant college has ever objected to it, and no land-grant college has suggested that this proposed change should be made. We worked up this bill with the people from land-grant colleges to be sure they were satisfied. As I have said, no land-grant college has suggested that this change should be made. They are satisfied with the way the Hatch Act has worked. They are satisfied with our language in the water resources bill.

Mr. ALLOTT. Mr. President, I had considerable difficulty in hearing the Senator from New Mexico because of the noise in the Chamber. However, I should like to say that his arguments in behalf of his position are not persuasive, to me, at least. They add up to one thing, that we are drafting a bill which is purposely vague, and we are being vague because we do not want to be tied down.

Congress has taken similar action many times, and far too many times in the past few years. Citing the Hatch Act is somewhat analogous, but not completely, because we are dealing here with completely different areas, the areas of water. I believe we have a different type of problem to deal with.

All I want is to be sure of what we are doing when we write this particular sentence:

> It shall be the duty of each such institute or center to plan and conduct—

This refers to colleges—

> as may in each case be deemed advisable—

And so forth. All I wish is to have language set out in the bill so that we know, from reading the act, who is going to decide whether the action is advisable or not.

If the author of the bill wants the Secretary of the Interior to be the judge of that, let us say so in the bill. I do not want him to be the judge of that. Neither do I want to leave it so vague that the Secretary of the Interior may, by a temporary or permanent withholding of funds, put enough pressure on one or another of the land-grant colleges, so as to dictate the kind of research in water that is going on at a land-grant college.

I spoke at some length yesterday about the importance of the kind of research provided for. It is important. It is particularly important to our States in the West at this particular time. As we progress along in this century, it will be important to every State in the country, except perhaps Alaska, which is not going to be hard pressed on its water problems for some time, and every State will be under the necessity of taking action.

My argument boils down to this: Let us put in the bill what we mean. If we mean that we want the Secretary of the Interior to make the decision, let us put that language in the bill. If we mean that we believe, as I believe, that our land-grant colleges can do a better job of determining the direction of our water research than can the Secretary of the Interior, then let us follow that plan, as I have suggested, that it be left to the decision of the institute or center which has done the job.

Mr. President, I ask unanimous consent that we may have a quorum call without the time being charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ALLOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, I cannot help agreeing in theory with many of the statements made by the Senator from Colorado. I merely point out that I base my objection to the amendment on the actual operation of the Hatch Act, which is the principal act under which agricultural land-grant colleges have cooperated with the Department of Agriculture. I have never known an instance when the Department of Agriculture and the land-grant colleges have found themselves in really serious opposition on this question. I should like to continue the same basically friendly, cooperative arrangement with the land-grant colleges, and I believe the proposal will work out in that way. I know that the Secretaries of Agriculture, without exception, have cooperated with the land-grant colleges. I hope that the Secretary of the Interior, whoever he may be, will have the same good sense to do so. Therefore, I oppose the amendment.

Mr. President, I yield back the remainder of my time.

Mr. ALLOTT. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. ANDERSON. Mr. President, my attention has been called to a typographical error on page 4, line 23. The first word in line 23 should be "been" instead of "them." The error was made in the printing of the final document. I ask unanimous consent that the first word in line 23, page 4, be changed from "them" to "been."

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The bill is open to further amendment.

Mr. ALLOTT. Mr. President, I call up my amendment numbered 49 and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 10, beginning at line 7, it is proposed to strike out all through line 20.

Mr. ALLOTT. Mr. President, the purpose of the amendment is to clear away any fuzziness or haziness with respect to the language of the bill. On page 10, line 7, the bill provides:

> Sec. 302. The Secretary of the Interior is authorized to establish in the Department of the Interior a Water Resources Service for the purpose of administering programs authorized in this Act.

The subsequent section, section 303, provides, in part:

> The Secretary of the Interior is authorized to employ a director of the Water Resources Service at civil service grade 18 and, if necessary to obtain personnel competent to administer a program involving scientific knowledge and highly trained staffs, he may employ not to exceed five employees above civil service grade 15 in addition to the number otherwise authorized by law.

The purpose of the amendment is to strike out section 302, which provides for the establishment of a new agency within the Department of the Interior. It also would strike the proviso for the personnel which would staff the proposed agency.

Rarely do I have the support for an amendment which I have for this particular amendment; but I do have good support for it. I refer Senators to page 23 of the report, which was written by the Senator from New Mexico [Mr. Anderson]. I shall read in part from a letter written by Philip S. Hughes, Assistant Director for Legislative Reference, Bureau of the Budget, to the then chairman of the Committee on Interior and Insular Affairs, the Senator from New Mexico [Mr. Anderson]:

> Finally, we believe that provisions of title III with respect to establishment of a Water Resources Service within the Department of the Interior are unnecessary and undesirable. The Secretary of the Interior now has adequate reorganization authority to take future action if and when he so decides. Furthermore, in view of the general authorization provided in the Postal Service and Federal Employees Salary Act of 1962, special personnel provisions should not be required to staff new constituents of the Department.

That is the position taken by the Bureau of the Budget in its letter to the former chairman of the committee. I believe that in this day and age it is undesirable to continue to add agencies and bureaus to the Department of the Interior. If the Department, with its thousands and thousands of employees, cannot administer a program such as that envisaged by the bill without adding a new agency within the Department, then it had better take a good look at its own organization and do some needed reorganizing. I believe that the Department of the Interior can perform this function with personnel which is either available or can be made available for this work.

I hope the amendment will be accepted, although I have had no indication from the Senator from New Mexico concerning his intentions.

Mr. President, I reserve the remainder of my time.

Mr. ANDERSON. Mr. President, I yield myself 5 minutes.

The Bureau of the Budget, in its reports on S. 3579 and S. 2, recommended the deletion of what are now sections 302 and 303 of S. 2, authorizing a Water Resources Service in the Department of the Interior and five extra-grade jobs for the administration of the water resources research program. This is what amendment 49 would do.

The Bureau of the Budget assures that the Secretary of the Interior has adequate authority to establish such a service, and states that there is sufficient authorization of super-grade jobs in the Postal Service and Federal Employees Salary Act of 1962 so the special provision is not required to provide adequate competent staff.

It is important that we have a single, broadly based, independent office in the

Department of the Interior to direct this new program.

The Select Committee on National Water Resources pointed out that many sciences, or disciplines, are involved in the solution of our water problems and urged a broadly based approach to them. The Water Resources Committee of the National Academy of Sciences called for a multidisciplinary approach to water research, and the training of hydroscientists with a broad understanding of the many sciences involved. This was also emphasized in the report of the Council for Science and Technology.

There will be both internal and external pressures to assign this new program to one, or several, existing agencies. Each has a limited mission in the water field. They would quite naturally incline any program they can capture toward their own mission. I am not critical of the existing agencies, for if they are worth their salt, they miss no opportunities.

The external pressure to segment the program among several mission-oriented agencies is exemplified in the chamber of commerce recommendation that:

> Existing bureaus or services within the Department of the Interior should be assigned the responsibility of administering the program that would be authorized by this legislation.

Such fragmentation would, of course, be a serious mistake. Colleges, universities, and other research agencies would have to shop among the limited-objective agencies with research projects. The multidisciplinary approach we seek would not be attained.

It is equally important that the new agency have a highly competent staff. There is no activity where results from an investment is more directly related to the competence of the men who run the program than in research.

I am reluctant to insist upon statutory provision for a particular service, or office, in the executive branch. The Hoover Commission on Organization of the Executive Branch recommended that organizational structure of the various departments be left to the Secretaries. Congress has gone along with that recommendation.

In view of this precedent, and the assurance that has been given that there will be a competently staffed independent office under existing authorities—I will accept the amendment of the Senator from Colorado.

I will yield back the remainder of my time if the Senator from Colorado will yield back the remainder of his time.

Mr. ALLOTT. Mr. President, I express my appreciation to the distinguished Senator from New Mexico for his willingness to accept the amendment. I believe the amendment is in the best interests of all concerned.

I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

Mr. ALLOTT. Mr. President, I offer the amendment which I send to the desk and ask to have read. The amendment has not been printed.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 7, line 7, after "ascertain," it is proposed to insert "whether the requirements of section 101 have been met."

Mr. ALLOTT. Mr. President, the language of this paragraph has bothered me considerably. I have not been quite certain as to how to attack this particular question. On page 7, commencing with line 5, the bill reads:

> On or before the 1st day of July in each year after the passage of this Act, the Secretary of the Interior shall ascertain as to each State whether it is entitled to receive its share of the annual appropriations for water resources research under section 100(a) of this Act and the amount which thereupon each is entitled, respectively, to receive.

What bothers me is that the Secretary of the Interior is required to determine two things: First, he must determine whether any State is entitled to receive its share; and second, the amount.

The language of my amendment would really place in the hands of the Secretary of the Interior the power to decide whether a land-grant college will receive money; and second, the amount it will receive.

Particularly in view of the fact that in connection with the amendment I offered a few minutes ago—that in regard to who would determine the type of research to be carried on—the Senate purposely decided, I say, to leave this matter vague, therefore I believe it wise that we try to pin down, on page 7, whether we are going to leave in the hands of the Secretary of the Interior, without adequate safeguards, the power to determine whether the colleges will get these funds and the amounts they will get.

My amendment simply inserts in line 7, after the word "ascertain," the following: "whether the requirements of section 101 have been met."

That will subject the Secretary of the Interior to the use of definite criteria for the determination of whether the money shall be given to the colleges, and in what amounts it shall be given. In my opinion, the amendment will greatly strengthen the bill. It will protect the land-grant colleges, and will assure them that there will be definite guidelines—those set out in section 101—which must be followed before the Secretary can determine whether they are entitled to receive the money, and in what amounts.

Mr. President, I reserve the remainder of the time available to me.

Mr. ANDERSON. Mr. President, let me say to the able Senator from Colorado that the amendment takes me a little by surprise, for I did not have a chance to study its language.

I state frankly that I do not know what position I would take in conference, after having a chance to study the amendment. However, on first glance, the language appears to be satisfactory.

So I am inclined to accept the amendment; but I hope the Senator from Colorado will not hold me to insisting on the amendment after we get into conference and confer about the amendment with the other conferees.

Mr. President, I am prepared to yield back the remainder of the time available to me.

Mr. ALLOTT. Mr. President, I thank the Senator from New Mexico. As he knows, I have been worrying about this provision; but until now I have not been able to draw up the necessary language. I think he recognizes, as I do, that a problem does exist.

Mr. ANDERSON. Mr. President, before I yield back the remainder of the time available to me, let me say that I had some language drawn up, as follows:

> When it shall appear to the Secretary of the Interior from the annual statement of receipts and expenditures that any portion of the preceding annual appropriation allotted to a State institute or center under this act remained unexpended at the end of the fiscal year, such amount shall be deducted from the next subsequent annual allotment made to the State concerned.

I am told that such a provision is unnecessary, because the Appropriations Committee will do that very thing. I thought that was what the Senator from Colorado was aiming at.

However, I believe the amendment he proposes is satisfactory; and I will accept it, and hope it will be adopted.

Mr. President, I yield back the remainder of the time available to me.

Mr. ALLOTT. Mr. President, I yield back the remainder of the time available to me.

The PRESIDING OFFICER (Mr. Ribicoff in the chair). All remaining time on the amendment is yielded back.

The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

Mr. ALLOTT. Mr. President, I call up my amendment No. 53, and ask that it be stated.

The PRESIDING OFFICER. The amendment of the Senator from Colorado will be stated.

The Legislative Clerk. On page 11 beginning at line 3, it is proposed to strike all through line 13, and to insert in lieu thereof:

> Sec. 305. Within two years following enactment of this Act, and annually thereafter, the Secretary of the Interior shall prepare and submit to the President for transmittal to the Senate and House of Representatives a comprehensive report on progress and accomplishments under the Act, together with his recommendations on revisions of the Act, and with the independent recommendations of the governing authorities of the State colleges and universities on desirable revisions.

Mr. ALLOTT. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 5 minutes.

Mr. ALLOTT. Mr. President, we may be able to accomplish a little here. The amendment is a very simple one. It provides that section 305 be amended so that within 2 years after the enactment of this act the Secretary of the Interior shall prepare, and shall submit to the President, for transmittal to Congress, "a comprehensive report on progress and accomplishments under the act."

The original bill provides that shall be done within 6 years. I think that is too long a time for us to wait to find out what progress is being made under this open end authorization. So it is my purpose to provide that the Secretary of the Interior shall make the report within 2 years.

I am told that the objection to the amendment is that the program will not proceed that rapidly. I realize that it will not proceed overnight. However, although we may be able to wait 1 year to see how the program is going, I certainly think that by the end of the second year it should be possible for the Secretary of the Interior to report to us in regard to how the program is going, what progress is being made, what amounts are being spent, what research is being done, and where the research is being done, so that Congress will have a comprehensive picture in regard to all such matters.

Mr. President, I reserve the remainder of the time available to me on this amendment.

Mr. ANDERSON. Mr. President, I do not particularly like the amendment, because many of the State legislatures will not meet for 2 years; and, therefore, the only report the Secretary could make would be that nothing had happened. On the other hand, there would be States as to which he could report what was happening.

I am not opposed to having the reports made. The Secretary of the Interior will have to report. If the Senator from Colorado insists on his amendment, I shall accept it. I say frankly that 2 years is a very short period of time for the land-grant colleges to get tooled up and be able to report. My colleague from New Mexico [Mr. MECHEM] is well acquainted with our State's land-grant college and its president. He and I frequently visit it. It is a fine institution; it has a fine president; and it has a fine faculty and a fine program. But it cannot get tooled up on this program within 2 years. Therefore, a report would be that in less than 2 years nothing significant had been done.

I want the reports made regularly and I want Congress to know all about the work being done and all about the program; and I find that I cannot maintain my desire to have the reports made and still oppose this amendment. Therefore, if the Senator from Colorado insists upon the amendment, I shall accept it.

Mr. ALLOTT. I thank the Senator from New Mexico.

Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER (Mr. McINTYRE in the chair). The Senator from Colorado is recognized for 3 minutes on the amendment.

Mr. ALLOTT. Mr. President, I assure the Senator from New Mexico that I did not offer the amendment facetiously.

Mr. ANDERSON. I realize that.

Mr. ALLOTT. As the Senator from New Mexico has said, I realize that some of the State legislatures will not meet for 2 years. On the other hand, many of the State legislatures are now considering this matter, and many of the legislatures meet each year. Certainly by the end of 2 years the report should be made.

So I am happy to have the Senator from New Mexico accept the amendment; and I yield back the remainder of the time available to me.

Mr. ANDERSON. Mr. President, I yield back the remainder of the time available to me.

The PRESIDING OFFICER. All remaining time has been yielded back.

The question is on agreeing to amendment No. 53 of the Senator from Colorado.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. ALLOTT. Mr. President, I call up my amendment No. 50.

The PRESIDING OFFICER. The amendment of the Senator from Colorado will be stated.

The LEGISLATIVE CLERK. On page 8, beginning at line 9, it is proposed to strike all through line 19, and to insert in lieu thereof:

> SEC. 200. There is authorized to be appropriated to the Secretary of the Interior $5,000,000 in fiscal year 1964, and in each of four fiscal years thereafter, from which he may make grants, contracts, matching, or other arrangements with recipients such as educational institutions, private foundations, or other institutions; with private firms and individuals; and with local, State, or Federal Government agencies, to undertake research into any aspects of water problems indigenous to the area where such recipient is located and not otherwise being studied.

Mr. ALLOTT. Mr. President, on the amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. ALLOTT. Mr. President, I can discuss the amendment in the same context as I would two other amendments that I have offered. One relates to section 100(a) and the other relates to section 100(b).

Section 200, to which the amendment relates, should be in the RECORD at this point, so I shall read it:

> SEC. 200. There is authorized to be appropriated to the Secretary of the Interior $5,000,000 in fiscal year 1964, increasing $1,000,000, annually for five years, and continuing at $10,000,000 annually thereafter from which he may make grants, contracts, matching, or other arrangements with educational institutions, private foundations, or other institutions; with private firms and individuals; and with local, State, or Federal Government agencies, to undertake research into any aspects of water problems related to the mission of the Department of the Interior, which may be deemed desirable and are not otherwise being studied.

My amendment provides as follows:

> SEC. 200. There is authorized to be appropriated to the Secretary of the Interior $5,000,000 in fiscal year 1964, and in each of four fiscal years thereafter—

Otherwise, the limitations of the section remain the same.

What is the basic difference between the amendment and the bill? There are two simple, basic differences. First, we would give the Secretary of the Interior, not $10 million at this time, but $5 million. We would give him $5 million for undertaking research, grants, and matching research grants with private funds and individuals and, in fact, with anyone with whom the Secretary might wish to make a contract.

This sort of thing has gone pretty far. We are now at the place at which any activity which has the word "research" tacked onto it can receive almost any amount of money that is needed. I have seen all sorts of activities entitled "research" which required no more ability or energy than a man with an adding machine and a pair of eyes with which to read.

The issues are as follows:

First, we would reduce the amount authorized from $10 to $15 milllion.

Second, as written, the bill would be an open end authorization. We would start at $5 million, adding $1 million a year until we reached $10 million, and then we would authorize the appropriation of $10 million, not for 1 year, not for 5 years, and not for 10 years, but forever.

Research into water problems is a sensitive area. It is extremely important to some of us. But as a principle of legislation I do not believe that there should be an open end authorization in this type of activity.

I said yesterday, and I repeat today, that I believe the best results from any provision of the bill will come not from the Department of the Interior or any contract that it might make, but from the work which is done by those in our land-grant colleges who are skilled in water research matters. The bill would provide an open end authorization, until Congress should decide to act otherwise, authorizing the sum of $10 million, starting with the sum of $5 million for the first year, and increasing by $1 million each year for 4 years thereafter to $10 million, and from then on the authorization would be $10 million a year.

We shall receive reports. I believe that the best way to approach the question of research is to limit the time that we would appropriate the money. At the end of 5 years, if the program is paying off in real research and accomplishments, we shall have no trouble in Congress in passing another authorization bill, not for $10 million, but for $20 million, if that amount is needed. If the population explosion continues, and pressure is exerted against the people who require water, it will have to be obtained, no matter what the cost. So let us take a look at the program.

This is an argument of sound reasoning. Let us authorize an appropriation of $5 million to the Secretary of the Interior for 5 years, and at the end of 5 years let us examine the situation and decide what we want to do. I am sure that if the money is used wisely and if the research program pays off, there will be no difficulty in passing a new authorization bill.

Mr. President, I reserve the remainder of my time.

Mr. ANDERSON. Mr. President, I yield myself 10 minutes.

As the Senator from Colorado has pointed out, the amendment would do three major things:

First, it would reduce the title II program to a straight $5 million a year;

second, it would terminate the program in 5 years; and third, it would change the limitation on research projects from water problems "related to the mission of the Department of the Interior" to problems "indigenous to the area where such recipient is located."

I cannot accept the amendment because of the damage it would do to the bill. All three of the changes would have extremely undesirable results.

First, water resource problems are so pressing and urgent, and the need for training hydrosciences so great, that no one has previously questioned the sums provided in S. 2. This includes the Chamber of Commerce of the United States, which has stated in a letter to committee members:

> Additional research, investigations and experiments in the field of water and related resources are needed to help meet the water demands of future generations. The training of additional scientists to conduct such activity is vital. The stimulation of more effective research at industrial, State and local levels and the training of additional scientists by the State and other agencies are the most satisfactory methods of achieving greater knowledge about water because they would minimize unwarranted Federal research activity * * *.

The chamber did recommend amendments—but a reduction in the sums proposed in S. 2 was not suggested.

It is anticipated that a large portion of S. 2 funds will be matched. The appropriations authorized in S. 2 were set at a modest original level, moving upward for 4 or 5 years to keep pace with available matching funds. The appropriation of a flat sum for 5 years will deter and put a lid on the potential flow of matching funds. In agricultural research, matching funds very considerably exceed Federal appropriations.

Therefore, I must oppose the amendment on that basis.

Second, the inclusion of a termination provision in the bill would kill its most important value.

As evidence in support of that point, I shall read a portion of a letter which I received from Colorado State University, Fort Collins, Colo., dated April 18, 1963. It is a letter from the president of the college, commenting on chamber of commerce suggestions, in which he said:

> The proposal to put a termination date on section 100 programs would defeat the very purpose of the bill. Sections 104 and 305 insure periodic review of the programs. Surely these requirements plus the continuing concern of the Congress as it considers appropriations annually will provide ample safeguard against deterioration of value of the research undertaken by section 100 funds.
>
> Further, colleges and universities cannot afford to build and equip laboratories and rearrange curricula to accommodate a short-term program. Top scientists in disciplines related to water resources—physics, engineering, geology, botany, silviculture, meteorology, economics and many others—are not easily persuaded to specialize in water problems if there is the threat of early termination of the principal program in the field. They look for specialties in which they may find a lifetime career. Neither can students be persuaded to spend many years in graduate training for work which may be stopped before they complete their training. The assurance of continuity which S. 2 provides is one of the basic strengths of the bill. Provision is made at section 305 for a comprehensive review at the end of 5 years. Congress can itself review the results of the program whenever it deems it appropriate. The adoption of this suggestion would, in our judgment, be especially injurious to the bill.

Dr. Morgan is as right as he can be in his appraisal of the proposal. I think it would completely kill the bill.

Colleges and universities cannot tool-up—they cannot afford to build and equip laboratories, for a short-term program. Faculty members looking for a field in which to specialize are not looking for an odd-job business, but something in which they will find a lifetime career, worth years of study and preparation. Students would not spend years in training for work that may be terminated before they graduate. Congress may review and reenact the program.

The bill provides for a 5-year review, and we have amended that to 2 years. But schools and scientists are not going to commit their assets and their lives to a program authorized on a short-term basis.

S. 2 originally handled the situation by providing at section 305 that within 1 year after the 5th year of operation, the Secretary of the Interior shall make a review report and submit it to the President and Congress, together with the independent views of college and university heads. Those are to start in 2 years now.

Reviews will be made. Everyone is under notice that results are expected. But there is no threat of termination in S. 2 and there should not be. Water problems will be with us for a long time to come and we must have a water research program just as long as water is necessary to human existence on the planet.

Therefore, because of this second provision I must oppose the amendment.

The limitation of research projects to "mission of the Department of Interior" was to keep, and to reassure other Federal departments that the Department of Interior would be kept, in its own water fields. That is needed and should not be stricken from the bill.

The substitute limiting phrase, "indigenous to the area where such recipient is located" would have a very serious effect.

The phrase has a definite implication that the local agencies are to work on the practical problems in their locality. Perhaps some will involve basic research, but the whole pressure of the phrase will be away from fundamentals toward practical research.

This tendency became a serious problem at one period in the development of the agricultural research program and led to the enactment of the Adams Act of 1904, broadening the language of the original act and providing an extra $15,000 annually of funds. Federal Director A. C. True of the Office of Experiment Stations wrote, in 1902:

> Under present conditions it is useless to expect that * * * our stations will discover many of the new principles on which permanent improvement of our agriculture must rest. But unless the way is opened for them to seriously attack these fundamental problems their future work will necessarily be comparatively fragmentary and inconclusive. They may, as in the past obtain many results which can usefully be applied in practice, but they will not be able to furnish solid foundations for the enlargement of our agricultural industries.

Harvard University is doing a tremendously big job of setting up a computer system to analyze multiple-purpose river basin plans, and thereby speed the adoption of plans that maximize benefits. Once perfected, the computer system could be used over and over at Harvard for the many river basins of the Nation—but not if Harvard were limited to work indigenous to its area.

The Corps of Army Engineers has a big experimental laboratory at Vicksburg which builds scale models of dams, spillways, and even rivers to test engineering plans and dam designs. They have a model of the Mississippi River, of New York Harbor, and dams to be built all over the Nation. They could not concentrate in this one station—at great savings—this sort of research and experimental work if limited to problems "indigenous to the area."

The scientists now tell us that Texas droughts are the result of the fact that storms which develop in the Aleutians and Bay of Alaska and sweep south to cross the United States from east to west, remain too far north for an extended period to cause rainfall in the Lone Star State. They are studying ways to coax these storms, or major weathermakers, to go over areas where water is needed. The problem becomes how Texas—and New Mexico—can do research on weather problems of utmost importance to the Southern States up in Alaska, or Montana.

These examples are not necessarily in the fields with which Interior Department could or should concern itself, but they illustrate the danger of the "indigenous problems" limitation proposed by the amendment.

I hope that the amendment will be defeated.

Mr. ALLOTT. Mr. President, I yield 3 minutes to the distinguished Senator from Nebraska [Mr. HRUSKA].

Mr. HRUSKA. Mr. President, I rise in support of the amendment offered by the Senator from Colorado, which has been under discussion.

By way of preface I wish to say that I am a cosponsor of the measure. I spoke at length upon it here on the Senate floor and I testified before the committee in favor of the bill.

I again congratulate and commend the chairman of the committee, the Senator from New Mexico [Mr. ANDERSON] for the splendid job which has been done on the bill. It is a constructive piece of legislation. It follows a proven procedure and will prove to be easily workable.

I do endorse the legislative principle involved here, which is to have as important a piece of legislation as this returned to the Congress periodically, not for affirmative action, but for review and reconsideration, so that we may make such changes as may be indicated after 4 or 5 years of experience.

I think that would have a salutary effect upon those who are granted funds to administer this bill. It would make them a little more alert. It would cause them to be more vigilant and more determined to develop proper programs, and more responsive in their efforts to get from their programs the maximum benefit.

It is just good legislative procedure, it seems to me, to provide for congressional review.

The point has been raised that it is necessary to have a permanent program. Otherwise, it is contended, technicians and faculty would not agree to commit themselves to something that is not assured to last forever and a day. It seems to me there is nothing in the provision for a 5-year review which would militate against the permanence of this kind of work for teachers, professors, or technicians. While they may not be pursuing their work under the particular auspices set up by this bill, there is in this country, and there will continue to be, wide demand for that type of development and achievement.

I wish to say again that the legislation is good. It is sound, and it should be approved. But I think it would be improved if we added an amendment, providing for review by the Congress, which would follow if the Allott amendment were adopted. I hope it will be.

Mr. ALLOTT. Mr. President, I yield myself 5 minutes.

I want to express my appreciation to the distinguished Senator from Nebraska for his support of the amendment. I am sure everyone in this body is aware of the great sincerity with which he approaches this type of problem. His own State is as aware of water problems as my own.

I can see that there are persons who want to see the present provision for the money kept in the legislation and see it go on and on, but it seems to me that as legislators the only sensible thing we can do is place this legislation in a position where we know Congress is going to have a review.

It is estimated that there will be 250 million people in this country before 1970. The pressures for an adequate supply of water are going to get greater and greater all the time. The problem is not going to be solved overnight. Of all the problems we have, the problem of water is probably going to be the greatest and the one which is going to be with us the longest. It may get worse. There may come a time when people may have to move to other places, and perhaps outside the bounds of this country, in order to find water. I do not know. Nobody can foresee. But one thing is sure, and that is that the pressures for water use are going to increase, and we are going to have to make better use of that commodity.

With such a situation facing us, nobody under heaven could keep the research program from being continued 5 years from now, if the research people made good use of the money appropriated, if the money was used correctly, if real research was being performed, and not merely a bunch of boondoggling contracts. If research was being done, there is no question that the law would be reenacted. Let us provide legislation so that Congress can reevaluate it at the end of 5 years, instead of starting off on a program that will go on and on, and, by reason of the fact that it will go on and on, Congress would have to repeal the law in order to do anything about it. We should limit the law now, rather than later.

I do not know whether the distinguished Senator from New Mexico proposes to speak further at this time.

I yield to the Senator from Hawaii [Mr. FONG] 3 minutes.

Mr. FONG. Mr. President, I am in hearty accord with the amendment proposed by the distinguished Senator from Colorado. It is a worthwhile amendment. I am sure if the money is spent wisely, under the amendment before the Senate, Congress will continue the program and reenact this legislation.

As a cosponsor of S. 2, I am pleased and privileged to give wholehearted endorsement to this important proposal. It is a measure that has been carefully studied and drafted to cope significantly with a national problem.

S. 2 is designed to establish water resources research centers at land-grant colleges, universities, and centers of competence, and to promote a more adequate national program of water research. The bill authorizes funds starting at $75,000, and increasing to $100,000 annually, to a land-grant institution of each State for a water research center. In addition, other appropriations would be authorized to match State funds and to provide the Secretary of the Interior with money for expanded water research.

Exhaustive studies have amply confirmed the acuteness of water supply needs. We are facing, not a theoretical problem, but a real and growing crisis across the Nation. Projections of available water resources and anticipated needs in the coming decades underscore the already developing seriousness of water shortages in many areas today. They foretell a far grimmer picture for the future.

So we are not discussing now the reasons for this legislation. The need for it is plain for all to see; the record is clear on this score. We are, or should be, concerned more with the means and methods for achieving the broad purpose of S. 2: to assure an abundance of water, both in quantity and quality. The question is, to help achieve this end, How can we best stimulate research, investigations, and experimentation in the field and also encourage the training of needed scientists through assistance to colleges and universities?

S. 2 is soundly patterned after the very successful agricultural experiment station program, the Hatch Act of 1887. The outstanding results of this time-tested program enhance the desirability of having land-grant institutions administer water resources research, as provided in S. 2. Through this Federal-State approach, needed Federal support can be made available for water research by land-grant institutions, and other designated research institutions—research that would be responsive to both local and national needs.

Speaking for the State of Hawaii, I can state emphatically that we place great importance upon water research. Like the Nation as a whole, Hawaii has experienced an increase in demand for water from the greater per capita demand as well as the greater number of people. We are intensifying our efforts to expand and diversify our island economy. Both urban and suburban development, and the agricultural potential of Hawaii, will depend heavily upon our ability to increase and conserve our water resources.

Dr. Thomas Hamilton, president of the University of Hawaii, has described our water research needs as pressing and requiring local research. We have been limited by lack of funds rather than by lack of interest or lack of problems to work on, according to Dr. W. J. Holmes, dean of the University of Hawaii, College of Engineering. Dean Holmes points in Hawaii's problem when he states:

> If anything serious happens to our basal water supply, the population that Hawaii can support will be most seriously reduced.

There are other facets of a total water research program beyond that encompassed by S. 2, but this bill goes far toward coming to grips with a national problem.

Time is on our side if we move aggressively toward the objective set forth in S. 2. I urge my colleagues to act promptly and decisively to approve this important measure.

Mr. ANDERSON. Mr. President, I yield 5 minutes to the able senior Senator from California [Mr. KUCHEL].

Mr. KUCHEL. Mr. President, I find it somewhat difficult to oppose the pending amendment, for I think, as a general rule, the Congress of the United States ought, by the type of legislation it writes, provide for periodic scrutiny of the intent for which legislation is passed and the manner in which the administrative or executive branch in the Government has performed its duty.

In this instance, however, I make an exception. I come from a State which I think deserves the applause of the people of the country for what it has done to try to set its own house in order with respect to an adequate water supply. California does not have within its borders sufficient water to meet its growing needs. The people of my State at the local level and at the State level have sought to remedy this deficit. Two years ago, the people of California bonded themselves in a statewide election for the first phase of the State water plan for an extraordinary amount of money, some $1,750 million.

There has hardly been a year when I have not come before the Senate asking for additional assistance in an effort to help the people of my State, now and hereafter, to have a continuing water supply. True, the money is repayable into the U.S. Treasury by the water users.

The outlook for an adequate supply of water is somewhat bleak. Here we not only have an opportunity to enlist the aid of educational institutions in all 50 States, but, as was said by one of our State's leading educational and research administrators who testified before our committee on behalf of the University of California, it is quite possible that breakthroughs with respect to the problems of an adequate supply of water could take place in your State, Mr. President, or in one of the Eastern States, where the problem of an adequate water supply is not so acute.

I believe, therefore, in this instance, if I make a mistake, I wish to make a mistake on the side of giving the educational institutions of America a greater opportunity to study and to conduct research and to try to find ways and means by which potable water in this country can cope with the population explosion which we face in the days to come.

Therefore, having placed my name on the bill as a coauthor, and having been very glad to accept some of the amendments that have been offered by my very able colleague in the Senate from Colorado, in this instance I feel that by remaining silent I would not discharge my duty if I did not say to the Members of the Senate that I believe the continuing policy of the Government of the United States as enunciated in the proposed legislation is in the public interest. For that reason I must oppose the amendment.

Mr. ANDERSON. Mr. President, I wish to call attention to the fact that under the terms of the bill the Secretary of the Interior will have to return to Congress every year for an evaluation. The Senator from Nebraska said that he should return to Congress for an authorization. He will have to do so, in effect, at every appropriation hearing.

We know what would have happened if Congress, when it passed the Hatch Act of 1877, had written in a provision for the filing of a report every 5 years. Does anyone undertake to say how long it would have been before someone would have come in with an antidiscrimination rider and destroyed that act, as they have destroyed housing?

The Hatch Act was originally drawn to permit schools to do experimental work as long as they were doing useful work.

Reference was made to boondoggling contracts. I have examined hundreds of contracts in person—perhaps thousands of them—submitted by land-grant colleges, and I have never seen one boondoggle contract of a land-grant college.

The Senator from Colorado has referred to Chancellor Aldrich, of the University of California, who testified before our committee in favor of the very things that we propose. I should like to read from a letter which has been sent to me by the president of the University of Florida, Dr. J. Wayne Reitz. He wrote to me on April 15, 1963. He says, in connection with amendments to be proposed by the chamber of commerce, including the very amendments offered by the Senator from Colorado:

> 3. It is suggested by the chamber of commerce that title I should provide a definite termination date of the program of annual grants of funds to the States. Here again the basic assumption is made in S. 2 that water research is going to be a continuing and increasingly important area of investigation if we are to meet the needs of our ever-growing population for personal as well as agricultural and industrial consumption. To establish a definite termination date would mitigate against a State developing sound and farsighted programs of research in this important field. Had termination dates been provided for agricultural research we would never have made the progress that has been made.

I agree with him a thousand percent.

Then, at the end of the letter he says:

> I fear that the chamber of commerce in attempting to amend the bill is in effect trying to kill it, notwithstanding its announced support. Certainly if the bill were amended as suggested by the chamber it would be so far from the mark that it might as well be killed.

I appeal to the Senate not to destroy a longstanding piece of work, of negotiations between land-grant colleges, and departments of Government and Congress, because it may well result in killing a good bill that would work. I believe it would be a workable act. These people would have to come back regularly for appropriations. There would be provision for review, just as there is now provision for review under the Hatch Act, which has stood since 1877.

I hope that the amendment will be defeated.

Mr. ALLOTT. Mr. President, I yield myself 5 minutes. I thank the distinguished Senator from Hawaii for his remarks. Both he and the distinguished Senator from Nebraska realize the importance of the bill, and are cosponsors of it. Therefore, their support of the principles of the bill and the principles of my amendment are indeed encouraging.

I particularly wish to thank the distinguished Senator from Hawaii, because we are prone to think of the State of Hawaii as one of those lush paradises in which water is never a problem. Yet of my own personal knowledge I know that that distinguished Senator from Hawaii carried through in the Committee on Interior and Insular Affairs, and also through the Senate, and through the Congress, a reclamation project which will add greatly to the total agricultural wealth of Hawaii, and enable it to stabilize its agricultural economy.

Few people could see the necessity of this in a place like Hawaii, because their ideas are entirely different. However, as the result of his foresight and his thinking, the agricultural economy of one area of his State is going to be stabilized by more advantageous use of water.

I should like to say to my distinguished friend from New Mexico, first, that he has taken two things out of context in my remarks; at least there is the implication that they are out of context. I wish to get the record straight about that first. He quoted from a letter from Dr. Morgan, who is the very capable and distinguished head of our Colorado State University. In that letter, Dr. Morgan referred to the program under section 100.

The amendment I am proposing has nothing whatever to do with section 100. It has nothing to do with grants to land-grant colleges. Let us make that clear. That problem does not exist.

The Senator from New Mexico also said that we should never consent to a land grant college boondoggling on its research grants. No one on this floor has said that they did. Since I am the only one that I know of who has used the word "boondoggle" on the floor in the last hour or two, I must separate the word "boondoggle" from anything having to do with land-grant colleges.

However, I am not afraid to say on the floor of the Senate that we have department after department in the Government of the United States who are boondoggling with so-called research contracts.

I documented that on the floor of the Senate last year. I documented one instance in which the National Science Foundation had done just such a thing, and had made a hopeless shambles out of what should have been one of the great primary basic research projects of this age.

I shall document it again within the next week on the floor of the Senate, to show exactly what is happening. It is no secret any longer that the National Institutes of Health have so far outgrown so-called research programs, that many of them would be strained to have them called research programs.

A man with a pencil or an adding machine could do most of the research involved, so far as most of it being carried on in this country is concerned. When I see research being carried on by research teams, under the National Institutes of Health with respect to small indigenous tribes, I wonder what we are spending our money for, especially when we are chalked up with a $12 billion deficit this year. I want to keep the record straight.

I am sure the Senator from New Mexico did not mean to imply that I thought colleges were boondoggling. However, I wish to make it perfectly clear that in my references I meant to say that I do not have the confidence in the Secretary of the Interior that I have in our colleges and universities throughout the country so far as conducting research in water is concerned.

Perhaps the Senators are ready to give the Secretary of the Interior $5 or $10 million forever in the hope that he will conduct a meaningful research program. I am not willing to do so. I do not have that much confidence in the present Secretary of the Interior, and I doubt whether I would have that much confidence in any Secretary of the Interior.

The statement has been made in the Senate that Congress would review the program when appropriations for it were under consideration. But the review should not be made by the Committee on Appropriations; it should be made by those who, day after day, year after year, work in the areas of water resources, land utilization, reclamation and conservation, in the legislative committee, which is the Committee on Interior and Insular Affairs. That is the committee in which policy should be made as to whether this program shall be continued forever and ever, ad infinitum, or whether it should be limited. If that is not a reasonable suggestion, then I know of no suggestion that could be reasonable.

Congress should place a limitation on the amount of money which the Secretary of the Interior can contract with land-grant colleges for research, or so-called research. Therefore, I have suggested that the amount be limited to $5 million, and the duration of the act be limited to 5 years. I believe that is a wholly reasonable suggestion.

Mr. President, I ask unanimous consent that there may be a quorum call, the time for the quorum call not to be charged to either side.

The **PRESIDING OFFICER.** Is there objection to the request of the Senator from Colorado? The Chair hears none, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ALLOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The **PRESIDING OFFICER.** Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, if the Senator from New Mexico is prepared to yield back the remainder of the time available to him on the amendment, I am prepared to yield back the remainder of the time available to me, inasmuch as I have not received requests for further time.

Mr. ANDERSON. Mr. President, I yield back the remainder of the time available to me.

Mr. ALLOTT. Mr. President, I do likewise.

The **PRESIDING OFFICER.** All remaining time on the amendment has been yielded back.

The question is on agreeing to the amendment of the Senator from Colorado. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. SMATHERS. I announce that the Senator from Nevada [Mr. BIBLE], the Senator from Connecticut [Mr. DODD], the Senator from Minnesota [Mr. HUMPHREY], the Senator from North Carolina [Mr. JORDAN], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Washington [Mr. MAGNUSON], and the Senator from Arkansas [Mr. MCCLELLAN] are absent on official business.

I further announce that, if present and voting, the Senator from Nevada [Mr. BIBLE], the Senator from Connecticut [Mr. DODD], the Senator from North Carolina [Mr. JORDAN], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Washington [Mr. MAGNUSON] would each vote "nay."

On this vote, the Senator from Minnesota [Mr. HUMPHREY] is paired with the Senator from Maryland [Mr. BEALL]. If present and voting, the Senator from Minnesota would vote "nay," and the Senator from Maryland would vote "yea."

Mr. KUCHEL. I announce that the Senator from Kentucky [Mr. MORTON] is necessarily absent.

The Senator from Maryland [Mr. BEALL] is detained on official business.

On this vote, the Senator from Maryland [Mr. BEALL] is paired with the Senator from Minnesota [Mr. HUMPHREY]. If present and voting, the Senator from Maryland would vote "yea," and the Senator from Minnesota would vote "nay."

The result was announced—yeas 30, nays 61, as follows:

[No. 60 Leg.]

YEAS—30

NOT VOTING—9

Beall
Bible
Dodd
Humphrey
Jordan, N.C.
Kefauver
Magnuson
McClellan
Morton

So the amendment was rejected.

Mr. ANDERSON. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. SPARKMAN. Mr. President, I move to lay that motion on the table.

The **PRESIDING OFFICER.** The question is on the motion of the Senator from Alabama.

The motion to lay on the table was agreed to.

Mr. COTTON. Mr. President, I offer the amendments which I send to the desk, and ask to have stated.

The **PRESIDING OFFICER.** The amendments of the Senator from New Hampshire will be stated.

The LEGISLATIVE CLERK. On page 3, line 19, it is proposed to strike out "$1,000,000" each time it appears and insert in each case "$800,000".

On page 3, line 20, it is proposed to strike out "$5,000,000" and insert "$4,000,000".

On page 8, line 10, it is proposed to strike out "$5,000,000" and insert "$4,000,000".

On page 8, line 11, it is proposed to strike out "$1,000,000" and insert "$800,000".

On page 8, line 12, it is proposed to strike out "$10,000,000" and insert "$8,000,000".

Mr. COTTON. Mr. President, in view of the fact that the amendments would merely reduce the authorizations, with the exception of the authorization for land-grant colleges, by 20 percent, I ask unanimous consent that the amendments be considered en bloc.

The **PRESIDING OFFICER.** Is there objection to the request of the Senator from New Hampshire? The Chair hears none, and it is so ordered.

How much time does the Senator from New Hampshire yield to himself?

Mr. COTTON. I yield myself 5 minutes.

Mr. President, I ask for the yeas and nays on the amendments.

The yeas and nays were ordered.

Mr. COTTON. Mr. President, the amendments considered en bloc would merely reduce by 20 percent—by one-fifth—the authorization in the bill, with the exception of the authorization for research in the case of land-grant colleges. They would not in any other respect affect the planning, the term, or the bill.

On a long-term basis S. 2 would authorize a $20-million-a-year program of water research activities under the supervision of the Department of the Interior. The amendments would reduce the total scope of the program to $17 million a year on the long-term basis, and make corresponding reductions in the earlier phases of the program.

There are several reasons for the amendment:

First, this is a new program. The extent of State participation, the ability of the States to finance additional water research, and the availability of research personnel are all relatively unknown factors at this time. A modest reduction such as this proposal will not thwart the program, nor will it hamper it in any way.

I ask the attention of Senators especially to the following point:

Second, the Federal Government is already spending sizable sums on water research. The Federal Council for Science and Technology has calculated that eight major agencies of the Federal Government are already engaged in this research. They are: Agriculture, Commerce, Defense—chiefly Corps of Engineers—HEW, Interior, AEC, National Science Foundation, and TVA. In fiscal 1963, these Federal water research programs will involve expenditures of more than $66 million, and the budget requests for fiscal 1964 exceed $74 million. Thus a modest cut in the amounts in S. 2 will not reduce the Government's efforts in this field, but only slow down the rate of increase by a small amount. Its chief effect would be simply to channel the research efforts into the most important and most productive fields.

Mr. President, this is a good bill. The purpose of the bill is good. It has long been the position of the Senator from New Hampshire that our water resources and our water supplies represent the unfinished business of our generation.

Simply because we in my section of the country are not faced with quite the same emergency faced by other sections does not lessen my enthusiasm for this program, which is a thoroughly legitimate Federal activity.

But, Mr. President, the general fiscal and budget picture of the Government urgently demands at this time the utmost economy.

The **PRESIDING OFFICER.** The time the Senator yielded has expired.

Mr. COTTON. Mr. President, I yield myself 3 additional minutes.

The PRESIDING OFFICER. The Senator from New Hampshire may proceed for 3 additional minutes.

Mr. COTTON. Mr. President, the committee in its report indicated it did not attempt to coordinate the activities; that that was to be left to the executive branch of the Government—and no doubt properly so.

We are conducting all these activities simultaneously. The bill would add a new one. I think the people of this country—who are watching with care the efforts of the Congress to show its disposition to hold down, so far as can be done without serious damage to vital programs, the authorizations for expenditures in the coming years—would look with favor upon this modest reduction.

Mr. ALLOTT. Mr. President, will the Senator yield for a question?

Mr. COTTON. I yield with pleasure to my friend from Colorado.

Mr. ALLOTT. Since the amendment offered by the Senator is not printed, do I correctly understand the effect of the amendment would be not to cut the amounts to be available to land-grant colleges under section 100(a), but only to cut those amounts in subsection 100 (b) and section 200 which would go to the Secretary of the Interior?

Mr. COTTON. The Senator from Colorado is completely correct in his analysis of the amendment. I repeat that the amendment would leave untouched the authorization of amounts available for research for land-grant colleges. It would cut all along the line by 20 percent the other authorizations in the bill available to the Secretary of the Interior, and to be expended in accordance with the terms of the bill.

Mr. ALLOTT. With that answer I wish to tell the Senator I shall be much pleased to join him in his amendment, particularly since the Senate did not adopt the amendment offered a few minutes ago to limit the authorization to 5 years.

Mr. COTTON. I thank the Senator for his support of my amendment. I am disappointed that the Senator's amendment was not agreed to; but this would be a more modest reduction, and I hope the Senate will act favorably upon it.

Mr. President, I reserve the remainder of my time.

Mr. ANDERSON. Mr. President, I have no wish to detain the Senate on this amendment. It is a question of seeking to reduce a carefully worked out bill, a carefully worked out proposal, passed upon by educators all across the country. I hope the amendment will be defeated.

Mr. President, I yield back the remainder of my time.

Mr. COTTON. Mr. President, I yield back my remaining time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment offered by the Senator from New Hampshire [Mr. Cotton]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN (when his name was called). On this vote I have a pair with the distinguished assistant majority leader [Mr. Humphrey]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

The rollcall was concluded.

Mr. SMATHERS. I announce that the Senator from Nevada [Mr. Bible], the Senator from Connecticut [Mr. Dodd], the Senator from Minnesota [Mr. Humphrey], the Senator from North Carolina [Mr. Jordan], the Senator from Tennessee [Mr. Kefauver], the Senator from Washington [Mr. Magnuson], and the Senator from Arkansas [Mr. McClellan] are absent on official business.

I further announce that, if present and voting, the Senator from Nevada [Mr. Bible], the Senator from North Carolina [Mr. Jordan], the Senator from Tennessee [Mr. Kefauver], and the Senator from Washington [Mr. Magnuson] would each vote "nay."

On this vote, the Senator from Connecticut [Mr. Dodd] is paired with the Senator from Colorado [Mr. Dominick]. If present and voting, the Senator from Connecticut would vote "nay," and the Senator from Colorado would vote "yea."

Mr. DIRKSEN. I announce that the Senator from Colorado [Mr. Dominick] and the Senator from Kentucky [Mr. Morton] are necessarily absent.

The Senator from Maryland [Mr. Beall], the Senator from Nebraska [Mr. Curtis], and the Senator from California [Mr. Kuchel] are detained on official business.

If present and voting, the Senator from Nebraska [Mr. Curtis] would vote "yea."

On this vote, the Senator from Maryland [Mr. Beall] is paired with the Senator from California [Mr. Kuchel]. If present and voting, the Senator from Maryland would vote "yea," and the Senator from California would vote "nay."

On this vote, the Senator from Colorado [Mr. Dominick] is paired with the Senator from Connecticut [Mr. Dodd]. If present and voting, the Senator from Colorado would vote "yea," and the Senator from Connecticut would vote "nay."

The result was announced—yeas 29, nays 58, as follows:

So Mr. Cotton's amendment was rejected.

Mr. MILLER. Mr. President, I send an amendment to the desk and ask to have it stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Iowa will be stated.

The Legislative Clerk. It is proposed, on page 2, line 23, to change the period to a colon and add the following:

> *Provided*, That a State may designate both a college (or university) established in accordance with said Act approved July 2, 1862 (12 Stat. 503) and one or more other institutions of higher education for this purpose.

Mr. MILLER. Mr. President, this amendment is designed to make absolutely clear what the proponents of the bill intend. The way the bill reads now, it seems it could possibly be interpreted that a land-grant college could receive the program, or, if a land-grant college was not designated by a State, then one or more institutions of higher learning within the State could be determined upon by the State.

It seems to me we ought to leave it up to the State legislature whether it wanted to have both a land-grant college and one or more universities or institutions of higher learning in the State so designated. This amendment provides that a State will have that power.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. ANDERSON. Will the Senator specify an instance of what he is referring to? Is there an institution in his State involved?

Mr. MILLER. This matter came to my attention as a result of information from one of the presidents of one of the institutions of higher learning in Iowa. In Iowa we happen to have a land-grant college which is no longer a college. It is now designated a State university. We also have the State University of Iowa. I would like to have the bill provide that discretion is given the State of Iowa as to whether it may wish to have this program carried on both at Iowa State at Ames and at the State University of Iowa at Iowa City.

I can see where other States might have a similar problem.

As I interpret the bill as it is now written, if it should be determined by the State that it should be Iowa State at Ames that will handle the program, then it cannot go into another institution of higher learning within the State.

The amendment will give the State that choice. I am quite sure the Senator from New Mexico would like a State to have that choice.

Mr. ANDERSON. We think the language of the bill is abundantly clear. But we want the Senator from Iowa to be satisfied. I know of the situation in

Iowa, having been a neighbor to that State for many years. I do not believe the amendment changes the intent of the bill.

Therefore, I am prepared to accept the amendment, and do so.

I yield back the remainder of my time.

Mr. MILLER. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time for debate has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. JOHNSTON. Mr. President, I call up amendment No. 55 which is offered by the distinguished Senator from Texas [Mr. Yarborough] and myself.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. Beginning on page 5, strike all of section 103 and substitute in lieu thereof:

> Sec. 103. (a) Paragraph (1) of section 4152(a) of title 39, United States Code, is amended by striking the word "and" at the end of subparagraph (E) and by adding the following at the end of subparagraph (F): "and
>
> "(G) Any institute or center engaged in activities authorized by the Water Resources Research Act consisting of bulletins, reports, periodicals, reprints of articles, and other publications necessary for the dissemination or results of researches and experiments within the scope of the Act, as determined by the Secretary of the Interior, mailed from the principal place of business of the institute or center, or from an established subunit of the same."

(b) Section 4156 of title 39, United States Code, is amended by adding a new subsection (d) as follows:

> "(d) The Department of Interior shall transfer to the Post Office Department as postal revenue out of any appropriation made to it for that purpose the equivalent amount of postage, as determined by the Postmaster General, for penalty mailings under section 4152(a)(1)(G) of this title."

Mr. JOHNSTON. The only purpose of the amendment is to provide that the Postmaster General shall determine the amount of postage for penalty mail used under the terms of the bill, in the same way in which he now determines such postage. The bill provides a new item, and there is a possibility that the refund to the Post Office Department for penalty mail will not be included under the language of the bill as it now reads.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. JOHNSTON. I yield.

Mr. ANDERSON. I understand that this involves merely a bookkeeping transaction, in reality. Is that correct?

Mr. JOHNSTON. A bookkeeping matter between the two Departments. Penalty mail is involved already, but we feel that under the language of the bill the new penalty mail might not be considered in determining the total amount of penalty mail.

Mr. ANDERSON. For the sake of legislative history I ask the distinguished chairman of the Committee on Post Office and Civil Service if it is true that this does not involve the operation of the colleges themselves, or where the money is to go, or anything of that nature.

Mr. JOHNSTON. The Senator is correct.

Mr. ANDERSON. It involves only penalty mail. Is that correct?

Mr. JOHNSTON. It involves only the penalty mail that would be included in the grand total. The Postmaster General would make up the estimates.

Mr. ANDERSON. I have no objection to the amendment. I accept it. I yield back the remainder of my time.

Mr. JOHNSTON. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. LONG of Louisiana. Mr. President, I call up my amendment identified as No. 56.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 11, between lines 2 and 3, insert the following new section:

> Sec. 305. No part of any appropriated funds may be expended pursuant to authorization given by this Act for any scientific or technological research or development activity unless such expenditure is conditioned upon provisions determined by the Secretary of the Interior, with the approval of the Attorney General, to be effective to insure that all information, uses, products, processes, patents, and other developments resulting from that activity will (with such exceptions and limitations as the Secretary may determine after consultation with the Secretary of Defense to be necessary in the interest of the national defense) be made freely and fully available to the general public. Nothing contained in this subsection shall deprive the owner of any background patent relating to any such activity of any right which that owner may have under that patent.

On page 11, line 3, strike out "Sec. 305", and insert in lieu thereof "Sec. 306".

On page 11, line 14, strike out "Sec. 306", and insert in lieu thereof "Sec. 307".

Mr. LONG of Louisiana. The amendment seeks to assure that the result of the research done under the program authorized in the pending bill would be made available in general to industry, States, cities, and other communities throughout the entire country, by assuring that the Government would retain patent rights to the inventions that would result from research performed with Government money.

The present policy in the Department of the Interior, we are assured, is to that effect. We have been told that the same result would come under the present policy of the Department as would be assured by the adoption of the amendment. However, we do not know what could happen under a future Secretary of the Interior, or whether at some future time pressure would not be brought to bear upon the administration to permit private patents to exist from developments in this field.

The amendment provides that the Department could not yield to such pressures.

The amendment is identical to the amendment which was added to the saline water research bill, which was introduced by the Senator from New Mexico, the distinguished chairman of the Committee on Interior and Insular Affairs. That amendment carried out the same purposes with respect to saline water research. We do not want a private contractor to obtain a patent as a result of research being done with Government money, and thus deny cities, States, and other communities of something that has been developed with such Government money.

I know that the chairman of the committee is sympathetic to this amendment, having added such an amendment to the saline water research bill. He also had something to do with the Helium Gas Act, now the law, and which also contains such a provision. He also approved of it when it was made a part of the Coal Research Development Act.

The amendment I am offering seeks to carry out the policy that was approved by Congress on several occasions. We want to make sure that the public gets the benefit from any inventions that might result, and that no private patents will be obtained as a result of Government research.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MORSE. As a cosponsor of the bill, I agree with everything the Senator from Louisiana has said. I hope the chairman will see fit to take the amendment to conference.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. ANDERSON. I know what the Senator from Louisiana has been trying to do for a long time in this field. I see absolutely nothing wrong with the amendment. As the Senator from Oregon has suggested, I will take the amendment to conference. I accept the amendment. I yield back the remainder of my time.

Mr. LONG of Louisiana. I merely wish to point out that on page 19 of the committee report the Secretary of the Interior states that he feels the amendment would be appropriate on the bill. I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

The PRESIDING OFFICER. If there be no further amendment to be offered, the question is on the engrossment and third reading of the bill.

Mr. ALLOTT. Mr. President——

Mr. ANDERSON. I know that the Senator from Colorado has another amendment to offer. We have discussed it.

Mr. ALLOTT. There is so much noise in the Chamber I cannot hear what is being said. I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 10, line 22, it is proposed to insert after the word "Act" the words "with an educational institution or nonprofit organization." On page 11, line 1, it is proposed to strike out the words "such payments" and to insert in lieu thereof the words "advance payments of initial expense."

Mr. **ALLOTT**. Mr. President, this is a very simple amendment. The purpose of the amendment is to enable initial payments to be made to educational institutions and nonprofit organizations when they are unable to do so.

The real reason for the proposed change is that the language in the bill is not satisfactory. The amendment will make it conform to the principles which we worked out under S. 20 since the first of the year. I have discussed the amendment with the author of the bill. I believe it is entirely satisfactory to him.

Mr. **ANDERSON**. Mr. President, will the Senator yield?

Mr. **ALLOTT**. I yield.

Mr. **ANDERSON**. I wish to say that the Senator from Colorado did help us materially with S. 20. This is an attempt to follow the same principle in the pending bill. I commend him for his efforts. As far as I am concerned, I will accept the amendment.

Mr. **ALLOTT**. I should like to add that this is not the exact language, but it follows the same principle.

Mr. **ANDERSON**. Yes. I subscribe to what the Senator has said. It is not the exact language. I did not mean to say it was. The Senator from Colorado was helpful in connection with S. 20 in working out the language. The language he suggests now will accomplish the same purpose under the same principle. I am glad to accept the amendment.

I yield back the remainder of my time.

Mr. **ALLOTT**. I yield back the remainder of my time.

The **PRESIDING OFFICER**. All remaining time has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. **ALLOTT**. Mr. President, I yield 2 minutes to the senior Senator from South Dakota.

Mr. **MUNDT**. Mr. President, the Water Resources Research Act at maturity would make available $100,000 each year to every State for water research; would make an additional $5 million available each year to these research centers on a matching basis, dollar for dollar, for money supplied by the States or by other non-Federal sources; and would make another $10 million available annually to be directed by the Secretary of Interior through arrangement with the States or other qualified organizations for needed water research not otherwise being studied.

The Great Plains and the West have been aware since settlement of the significance of water. Development there has been guided by and has been limited to the availability of water.

These limitations on development potential become more discernible every year, and further development is feasible largely to the extent that water is available and to the extent that available water is more prudently used.

And now in recent years responsible studies are giving notice that the eastern half of the country will be facing the same problems before the expiration of the 20th century. Until recently the East has considered itself secure against problems of water scarcity.

So obviously it is time for a national implementation of a purposeful, expansive, coordinated, and determined continentwide scientific pursuit for better methods of water acquisition and utilization. The Water Resources Research Act would begin such a pursuit. I support it enthusiastically.

The program adopts the same kind of decentralized and diversified effort that the United States has used for 75 years in striving toward better and more productive agricultural methods. And this approach is very likely the most promising one we could take toward reducing the water problem.

One essential reason for the success of agricultural research and for the success in our having its findings adopted in translating good research into better farming practices has been its widely decentralized attack. Federally encouraged agricultural research has been done by each State, each one directing its own efforts at problems peculiar to its own area, which has resulted in a solid betterment of agricultural practices in every segment of agriculture.

The effort to utilize this same system for water research is well grounded. There is no one single problem in water research. Nor is there merely a half-dozen or so problems that could be farmed out to a half dozen high prestige university research centers for investigation.

We are here approaching a many-faceted problem far more fundamentally in establishing a procedure whereby the States are free to adapt the water research program however it best fits their needs.

And in their doing this, each State will be able to develop a substantial number of cooperating water experts whose availability to the States will continue. The States will not be dependent on a body of expert knowledge developed at Federal expense but available to the States only at high cost from a center of learning perhaps half a continent away.

Passage of this bill will position us from the beginning to meet a continental water shortage squarely, looking for solutions to as many facets of the problem as there are facets which demand attention.

I think it is appropriate, too, in discussing this most promising piece of legislation, to recall the work of my late colleague from South Dakota, Francis Case, during his 25 years in Congress.

Water was his basic campaign concern in 1934, when he was defeated, and again in 1936, when he was first elected to Congress, and from then until his death. He worked continuously on water legislation during his generation in Congress. Much of the existing water legislation has the imprint of his work, right up to the recent saline water programs and the futuristic interest in weather modification.

Throughout those more than two decades of effort on the problems of water conservation and utilization it was my privilege and purpose to work closely with former Senator Case in promoting and developing these programs. In the House, when we served together there he was on the Appropriations Committee and I was on a legislative committee enabling us to operate a "one-two punch" in support of constructive water projects. We worked together for example on the first effective water pollution control bill to pass the House in the form of a measure which I authored. We advanced so-called Wheeler-Case water projects. We cooperated on other water development programs including the Pick-Sloan plan and many Missouri River development projects including both those on the main stem and dozens of water-conservation area and local projects. In the Senate, in turn, I served on the Appropriations Committee and Francis Case served on a legislative committee again enabling us to work jointly in authorizing programs and projects and in securing the needed money to implement them.

With the death of Francis Case last year I picked up where he left off promoting unfinished projects which he had started and initiating and supporting others in this wide area of constructive activity. I shall continue to concentrate my time and effort in this important area of public service.

As much as with the work of any person, enactment of this bill will be the logical outgrowth and natural extension of Francis Case's efforts for adequate water.

Mr. **ANDERSON**. Mr. President, I yield 2 minutes to the senior Senator from Alaska.

WATER RESOURCE DEVELOPMENT VITAL TO ALASKA'S FUTURE

Mr. **BARTLETT**. Mr. President, I am pleased that the Senate is today taking final action on S. 2, a bill to establish water resource research centers in the several States in cooperation with State and educational authorities.

This bill is a beginning step in the development of a more adequate national program for water research and water resource conservation.

As such, it is badly needed.

The bill before us today is a modest measure designed to meet what will become one of the major problems to face our Nation in this century. Our rapidly growing population and our vast industrial complex are making heavier and ever heavier demands on our Nation's water supply. It has been estimated that by 1980 the south Pacific, the Colorado River Basin, the Great Basin, the Upper Rio Grande-Pecos, and the Upper Missouri River Basins will be unable to fulfill the water demands placed upon them. Our Nation needs new sources of water and comprehensive plans on how to use them.

This bill, S. 2, is not intended in itself to offer solutions to our water shortage problems. It is intended to provide the skilled scientific personnel and the laboratory facilities and techniques which will be needed if the solution is to be found.

My own State of Alaska has great need for such research facilities as are envisioned by S. 2. Alaska's water problems are not of scarcity, they are of utilization. We have in our State vast resources of water which are unused and wasted. Millions of kilowatts of power run unused into the sea. As, in the coming years, Alaska's economy expands and develops the State will have need of this power and of this precious resource.

This bill will assist the State to plan the development of a research center in conjunction with the State university. Such a center will be able, in a coherent and ordered manner, to map the development of Alaska's water resources.

I am pleased, Mr. President, to be a cosponsor of this measure. I urge its early and wholehearted adoption by the Senate.

I ask unanimous consent that a letter which I addressed to the chairman of the Senate Interior Committee and enclosures will be made a part of the RECORD at this point.

There being no objection, the letter and enclosures were ordered to be printed in the RECORD, as follows:

FEBRUARY 20, 1963.

Hon. CLINTON P. ANDERSON,
Chairman, Senate Interior and Insular Affairs Committee.

DEAR MR. CHAIRMAN: I am pleased to be a cosponsor of S. 2, a bill to assist the establishment of water resource research centers at State universities; to promote a more adequate national program of water research; and to provide for the training of research personnel.

This bill is important to my State of Alaska and to all the States. I congratulate you and your committee, Mr. Chairman, for giving this measure the priority consideration it so clearly deserves.

The bill before the committee is a modest proposal concerning a major problem. The problem, of course, is how efficiently to utilize our water resources and how best to provide for their proper conservation. The proposal is not a solution to this problem—nor is it intended to be. When solutions are found, however, they will be found by personnel trained under the provision of S. 2, utilizing techniques and equipment developed in S. 2 laboratories.

The research centers which this bill provides for are modeled after the wholly successful program of State agriculture extension services. Funds—not more than $100,000 per year—would be provided to the several States for use in the establishment of a State water center. This bill also provides for specific grants in aid for particular research projects. It is the hope of the sponsors of this legislation that it will encourage and develop the training of scientists and personnel equipped to work in the area of water research.

I am hopeful, Mr. Chairman, that the committee will make very clear that S. 2 will not conflict with—but will rather complement—research programs already undertaken by the Federal Government in water use and conservation. It should also be made clear that it does not interfere with studies now underway, with Federal, State and local participation, into the economic needs and development of river basins.

For example, under the terms of the Federal Water Pollution Control Act, seven water pollution laboratories are to be constructed at sites across the country. Alaska is fortunate to have been selected as one of the sites and the fiscal 1964 budget now before the Congress includes funds for the construction of this laboratory. It is clear, I believe, that should the University of Alaska undertake to set up a water resource research center using S. 2 funds there would be ample opportunity for coordination and cooperation between the two facilities.

The Alaska congressional delegation has been working closely with the executive branch in an effort to establish a joint Federal-State Planning Commission to attempt a coherent projection of the economic development of Alaskan resources. Such a study would, of course, include water use and would have ample reason to work closely with, and to profit from, a State water research center.

The University of Alaska is greatly interested in S. 2. Enclosed you will find expression of this interest, a letter from the president of the university, William R. Wood, I would appreciate your making it a part of the committee record on the bill.

Sincerely yours,

E. L. BARTLETT.

FEBRUARY 12, 1963.

Hon. E. L. BARTLETT,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BARTLETT: I have read with much interest the copy of S. 2, "a bill to establish water resources research centers at land-grant colleges and State universities," which as a cosponsor you sent to my office. The bill has been reviewed in detail by a number of our faculty, including Dr. Kenneth Rae, director of the Institute of Marine Science, Dean Earl Beistline, of the College of Earth Science and Mineral Industry, and Dr. C. T. Elvey, vice president for research and advanced study. All of us are keenly interested in the intent of S. 2 and are in strong support of its several provisions. We believe that a program such as the one proposed would compliment the work that is in prospect in water pollution studies by the U.S. Public Health Service, and could become an important part of the total Arctic research program which we are attempting to develop.

I am enclosing a copy of a letter from Dr. Elvey to Senator ANDERSON concerning the interest of the University of Alaska in water resources research. These, I am certain, you will find of interest.

Sincerely yours,

WILLIAM R. WOOD,
President.

JULY 5, 1962.

Hon. CLIFTON P. ANDERSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR ANDERSON: With reference to your letter of May 31, 1962, requesting information on water research, we have only a few projects supported by various governmental agencies which have a bearing on the subject.

One project entitled "Glaciological Investigations in Central Alaska" is partially supported by a grant from the National Science Foundation. As you know, a glacier is an index of climatic conditions: hence, understanding of the glaciers gives us a long history of climatic conditions. Another line of attack on past precipitation is furnished by studies of the snow and ice fields at the heads of glaciers. We have one project supported by the Cold Regions Research and Engineering Laboratory of the U.S. Army to study the snow field at the top of Mt. Wrangell, an approximate 14,000-foot elevation. Studies of the stratified layers in the snow fields give important data on the amount of precipitation.

In certain regions of Alaska water precipitation is small and mostly in the form of snow. It is very difficult to measure the amount owing to the shifting of the snow by the winds. Studies of snow fields will provide the only method of measuring the amount of precipitation on the north coastal slope of Alaska as well as certain areas in the interior. In connection with this work, we have a grant supported by the National Science Foundation entitled "A Reconnaissance Snow Survey on the Arctic Coast of Alaska." A similar project surveying the snow of the Yukon Valley will be supported by the Cold Regions Research and Engineering Laboratory of the U.S. Army.

The projects we have underway, as listed above, are only scratching the surface as far as research pertaining to water resources in Alaska.

The problem of water resources in Alaska varies greatly across the State. On the Arctic slope north of the Brooks Range there is permafrost which extends to a depth of 1,000 feet. This produces a serious limitation on the supply of water and upon the disposition of sewage and other waste products. In the interior of Alaska the permafrost is intermittent and often the underground water is associated with boggy areas, therefore of poor quality. The winter frosts reach to a depth of 7 feet, consequently upsetting water supplies during the winter months. In the southern parts of the State where the annual precipitation is high we have extensive glaciers. Streams which originate with glaciers are "milky" with finely ground rock.

I hope this gives you a feel for the problems in connection with water research in Alaska. If I can be of any further service to you please call upon me.

Sincerely yours,

C. T. ELVEY,
Vice President for Research and Advanced Study.

Mr. ANDERSON. Mr. President, I yield 2 minutes to the junior Senator from South Dakota.

LET'S TAKE ACTION TO PREVENT WATER SHORTAGE

Mr. McGOVERN. Mr. President, I believe that Senate bill 2, the Water Resources Research Act, of which I am a cosponsor, is one of the most important measures before the 88th Congress. All human activity is affected by the availability of pure water. We must know more about the conservation, development, and utilization of water resources. We have a great deal to learn, and S. 2 will enable us to speed up the acquisition of knowledge by complementing and coordinating Federal, State, and private research now in progress.

Under title I of the bill, funds would be authorized for distribution by the Secretary of the Interior to land-grant or other State-designated institutions for the purpose of establishing water resources research institutes. Additional funds would also be authorized which the Secretary could use to match funds made available to the institutes by the States or by other sources.

Title II of the bill would authorize additional appropriations to the Secretary from which he could make grants, contracts, or other arrangements with Government or private agencies and institutions.

Title III contains certain miscellaneous provisions related to the administration of programs under the bill, including authority for the Secretary to establish in the Department a Water Resources Research Service.

According to the study made by the President's Special Task Force on Water Research, vast areas of the Nation face serious and even critical water shortages. In the Southwest underground water is being mined at an alarming rate, and new sources must soon be found to supply even the present population. In several humid areas the amount of water needed to dilute sewage approaches, and in some places already exceeds, the amount of water in the rivers during times of low flow." By the year 2000 the use of water probably will exceed supplies in the Upper Missouri, Rio Grande-Pecos, Colorado, Great Basin and southern California regions and may exceed supplies in the western gulf areas.

According to the report, the increasing demand for water can be met by increasing the efficiency of water use. The report goes on to point out that in many parts of the Nation new and undeveloped sources of surface water are extremely limited. Some areas may have to reduce their rates of industrial and population growth or shift to crops demanding less water if something is not done. Much research needs to be undertaken in the conversion to human use of presently unusable water supplies, including salt water. The report also urged that every effort be made to use and conserve the existing local water supplies.

In South Dakota we are well aware of the need for research in water resources. Water has long been the economic lifeblood of our State. The northern plains have traditionally been a water-shortage area, limiting the economic growth of the region and the opportunities for young people. All of our State is within the area designated by the President's Committee as facing a serious water shortage by the year 2000.

In a recent letter Dean Orville G. Bentley of the Division of Agriculture of South Dakota State College made an incisive analysis of the reasons why South Dakotans are interested in this legislation. He wrote:

> Our problems are characteristic of those indigenous to the Great Plains area and include the variability of rainfall as it threatens the economic stability of the region's major industry—agriculture. Besides an inadequate supply of water, the quality of water available to municipalities is poor and frequently hampers urban and industrial growth. Fluctuating water supplies interfere with the State's future development of recreational areas and profitability of converting land from agriculture to other uses such as recreation. We look at water resource development as one of the tools for increasing the employment opportunities for young people within the State. For these reasons South Dakota State College has committed resources to research, teaching, and extension programs that are related to water resource development. We are limited in funds and personnel but, given additional support, we could expand our research into such areas as evaporation reduction, desalinization of water, the development of small-scale water treatment facilities, and expanding studies on the improved utilization of water in agriculture.

Mr. President, the bill before us today calls for a comparatively modest expenditure, but it can make a very large contribution to the life and progress of our Nation. Currently, we are using more than 300 billion gallons of water daily and this amount will double in the next 20 years. Scarcely any measure in the 88th Congress will have a bearing on so many facets of the lives of our citizens as S. 2. Continued progress in industry, agriculture, recreation, and public health, to mention only a few areas of our national life, is dependent on a continuous and expanding supply of good water.

The passage of this bill, like the TVA 30 years ago, will be, in the words of George Norris, "emblematic of the dawn of that day when every rippling stream that flows down the mountainside and winds its way through meadows to the sea, should be harnessed and used and made to work for the welfare and comfort of man."

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be offered, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. Do Senators wish to yield any of their time, or do they desire to yield back the remainder of their time on the bill.

Mr. ANDERSON. I yield back the remainder of my time on the bill.

Mr. ALLOTT. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time has been yielded back. The question now is, Shall the bill pass?

The bill (S. 2) was passed.

Mr. LAUSCHE subsequently said: Mr. President, a short time ago the Senate took a voice vote on the question of the passage of the water resources bill. I disapprove of the bill. For years, Ohio has been doing the work which is contemplated in connection with the bill. I cannot believe that the States are financially incapable of doing the job envisioned by those who support the provisions of the bill which the Senate passed this afternoon. Moreover, I believe this bill is but the forerunner of huge expenditures by which the Federal Government will, after the studies are made, finance projects which should be financed at home.

Hence, Mr. President, I desire to state that if a yea-and-nay vote had been taken on the question of the passage of the bill, I would have voted against it.

DEATH OF IZHAK BEN-ZVI, PRESIDENT OF ISRAEL

Mr. JAVITS. Mr. President, I wish to call the attention of the Senate to the death of the President of Israel, Izhak Ben-Zvi, at the age of 78. Mr. Ben-Zvi had been President of Israel since 1952. He was a great friend of the United States.

I had the privilege to know him and, together with my wife and children, to visit with him in his official residence.

Mr. Ben-Zvi was a great hero in the establishment of the State of Israel. He helped to organize the Jewish Legion, and returned to Palestine with the conquering army of British General Allenby. He was a great force, even at that time, in laying the basis for an independent state.

Mr. Ben-Zvi was a distinguished scholar and writer. He was the closest friend of Prime Minister Ben-Gurion, throughout his active days in the work for the establishment of Israel and took part, in the formation of the country's leading institutions, the Histadrut, the country's labor federation; and the Hashomer, the forerunner of the Haganah defense organization, which ultimately brought about Israel's independence.

Mr. Ben-Zvi was in the great tradition of Dr. Chaim Weizmann, the first President of Israel. He had numerous friends among members of this body and of the other body, many of whom visited with him personally. I know that we all mourn with Israel the loss of this eminent statesman and scholar. I feel certain that the next President of Israel will be worthy of the example set by this distinguished man.

Mr. KEATING. Mr. President, I wish to express my deep regret over the loss suffered by our Nation and by the entire world in the death of President Izhak Ben-Zvi, of Israel. His career as the head of this friendly and courageous nation—Israel—has been a great asset to the free world, as well as to Israel; and I join with the people of Israel in mourning his death.

President Ben-Zvi will long be remembered for his leadership in behalf of his people. Renowned for his scholarship and writing, he took a leading role in the formation of the Histadrut, Israel's labor federation, and the Hashomer, the forerunner of the Haganah defense organization which battled for Israel's independence.

A distinguished successor to Dr. Chaim Weizmann, Israel's first President, President Ben-Zvi will long be remembered—along with his close friend and ally in forging freedom for the people of Israel, Prime Minister David Ben Gurion—as one of the principal architects in creating the Jewish State.

As a great admirer and friend of the people of Israel in their struggle for national recognition, I join in the great sorrow the whole world feels in being deprived of the services of this great humanitarian and distinguished statesman.

UNITY IN THE TRANSPORTATION INDUSTRIES

Mr. SMATHERS. Mr. President, one of the outstanding personalities in the field of transportation in the United States is Morris Forgash, a distinguished citizen of New York. Mr. Forgash is president of the U.S. Freight Co.

Yesterday the New York World Telegram and Sun published an article about Mr. Forgash entitled "U.S. Freight Head Champions Unity," written by Mary C. Stokes. I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram and Sun, Apr. 22, 1963.]

U.S. FREIGHT HEAD CHAMPIONS UNITY

(By Mary C. Stokes)

One trouble with many leaders in the transportation industries—railroads, truckers, airlines, and steamship lines—is they are not to familiar with that old saying of Benjamin Franklin:

"If we don't all hang together, we'll all hang separately."

This is particularly true of the railroads and truckers, which have been fighting a bitter battle.

Meanwhile a huge proportion of the freight of both has been carried off by unregulated carriers known as "gypsy" or private truckers.

While the two modes of transportation have been slugging it out and not combining to cut costs, many corporations have decided it's cheaper to buy their own truck fleets to carry their own products.

A VOICE FOR UNITY

On the illegal side, farmers and private owners who truck their own goods to market have been renting out their vehicles for the return trip at prices below those allowed by the Interstate Commerce Commission and charged by truckers and railroads regulated under it.

One of the strongest voices raised in favor of coordinated action to take advantage of the economies of all types of transportation and give the buyer the cheapest service is that of Morris Forgash, president of U.S. Freight Co.

He heads a freight-forwarding firm, which does just that. It puts together carloads of freight from different shippers and routes them the cheapest way, he says:

"A shipper does not buy the mode of carriage. He only buys time in transit and price. He couldn't care less if you put the freight in a wheelbarrow or rolled it with your nose on the highway."

WANTS CONGRESS TO ACT

One of Forgash's key recommendations for relieving the transportation dilemma is getting Congress to pass a new definition of "private carriage" so action against private truckers who lease out their vehicles would be easier and more cut and dried.

He has plugged for this to congressional leaders.

He also looks for great things for piggybacking, carrying truck trailers on flatcars as well as behind truck tractors to speed deliveries and cut cost.

U.S. Freight's use of piggybacking has grown from 10 percent in 1958 to 34 percent in 1962 and it continues upward.

Another of his themes is "standardization" of transport equipment. With others, he has worked for universal containers which could be used on land, sea, or in the air.

Dimensions of 5, 10, 20, and 40 feet long and 8 by 8 feet in width and height have been adopted by the National Defense Transportation Association, but implementation is slow.

FAST WRITEOFF

To step up the process Forgash recommends fast tax writeoffs for piggyback equipment and universal containers.

"We must also provide for interchangeability," he points out. "We must get the manufacturers together to agree on uniform clasps and tiedown equipment."

In his own company he has acted to help solve the problem of "imbalance of traffic" and advocates more action along these lines.

The problem stems from the fact many perishables, fruits, and vegetables are shipped east from California in refrigerator cars. Solid freight of the nonperishable sort is more apt to move West.

This means a lot of empty refrigerator cars are going one way and boxcars the other.

U.S. Freight was one of the first to start using convertible cars which are refrigerated one way and not the other.

It is this kind of thinking which makes Forgash the transportation man of the year.

CONSTANT PURCHASING POWER BOND LEGISLATION

Mr. HART. Mr. President, I noted with pleasure that my colleague, the distinguished senior Senator from Michigan [Mr. McNamara], reintroduced on April 18 his constant purchasing power bond bill.

Under Senator McNamara's able leadership the Special Committee on Aging has done extensive research on the problem of finding fiscally sound solutions for the retirement needs of this Nation. We all know from the mail that we received and talking to our constituency the disappointment of those who have invested in Government bonds for their retirement and found the value eroded by the rising cost of living.

This bill will provide the means for investing in safe Government bonds without fear that the investment will be diminished by inflationary pressures. It would not only give our citizenry an opportunity to plan for a secure retirement, but will also serve as an impetus for investment in U.S. Government bonds. I, therefore, congratulate my distinguished senior colleague and heartily endorse the bill.

TWENTY-SEVENTH ANNUAL NATIONAL TROUT FESTIVAL, KALKASKA, MICH.

Mr. HART. Mr. President, we who have angled a fly into a gentle stream and watched a trout flop over a rock for a sharp moment before disappearing into a dark pool know that to capture the fish is not all of the fishing.

There are many sides to fishing, and a truly outstanding one can be found this week in Kalkaska, Mich. It is the 27th annual National Trout Festival, being held April 26 through 28.

The hosts—the Kalkaska County Chamber of Commerce—are well schooled in the ways of the trout from Michigan's endless miles of fishing streams. And they know how to plan an outdoor event for fishermen.

Many Senators will join me, I know, in wishing we could be in Kalkaska this week to swap a story or two with fishermen from throughout the country. In fact, I have been asked to extend an invitation to any Senator who would like to wet a line in our Michigan trout streams. I am sure the Kalkaska Chamber of Commerce would be delighted to show them all the good spots, and I am delighted to extend this invitation.

PRIORITY TO ELECTRIC CONSUMERS IN PACIFIC NORTHWEST TO ENERGY GENERATED AT HYDROELECTRIC PLANTS

Mr. JACKSON. Mr. President, I move that the Senate resume the consideration of S. 1007.

The PRESIDING OFFICER. The bill will be stated by title.

The Legislative Clerk. A bill (S. 1007) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington.

The motion was agreed to; and the Senate resumed the consideration of the bill.

Mr. JACKSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ONE HUNDRED AND FIFTIETH ANNIVERSARY OF BIRTH OF STEPHEN A. DOUGLAS

Mr. DIRKSEN. Mr. President, today marks the 150th anniversary of the birth of Stephen A. Douglas, one of the most famous and outstanding political figures in the history of the United States.

While Stephen Douglas belonged by birth and ancestry to New England, as he was born in Brandon, Vt., April 23, 1813, he belonged to the Mississippi Valley and the State of Illinois by the circumstances of his adult life wherein he served the great State of Illinois in many capacities as a young lawyer, judge, U.S. Representative, and then U.S. Senator, until his death on June 3, 1861.

Douglas' fame in history probably is marked by the Lincoln-Douglas debates, which preceded the senatorial campaign for the U.S. Senate in Illinois in 1859 and in which election Douglas defeated Lincoln; and these same debates projected Abraham Lincoln into the national spotlight culminating in his election as President of the United States in 1860.

The Senate of the 73d General Assembly of the State of Illinois adopted a resolution on April 8, 1963, paying homage to the memory of Illinois "Little Giant" Stephen A. Douglas, upon the 150th anniversary of his birth.

Mr. President, I ask unanimous consent that the resolution adopted by the State senate be made a part of my remarks.

There being no objection, the resolution was ordered to be printed in the Record, as follows:

Senate Resolution 44

Whereas, on April 23, 1963, the people of the State of Illinois will be celebrating the 150th anniversary of the birth of one of the State of Illinois most illustrious former residents, Stephen A. Douglas, the "Little Giant"; and

Whereas Stephen A. Douglas was one of the most famous and outstanding political figures in the history of the United States; and

Whereas Stephen A. Douglas showed marvelous energy, adroitness and resourcefulness, and a genius for leadership as both an Illinois and Federal legislator; and

Whereas the "Little Giant" had few equals in American history and his generosity in defeat, his courage and capacity for inspiring warm personal friendships, were among his most attractive qualities; and

Whereas Stephen A. Douglas is particularly remembered for the famous debates he participated in with Abraham Lincoln and for his victory over President Lincoln for the Senate; and

Whereas Stephen A. Douglas displayed during his eventful lifetime a continuing example of selfless service to his country, and his memory will live on with all Americans as being one of the heroes of a great nation: Therefore be it

Resolved by the Senate of the 73d General Assembly of the State of Illinois, That we join the citizens of this State and Nation in paying homage to the memory of Illinois "Little Giant," Stephen A. Douglas, upon the 150th anniversary of his birth.

Adopted by the senate April 8, 1963.

Samuel H. Shapiro,
President of the Senate.
Edward E. Fernandes,
Secretary of the Senate.

THE STEEL PRICE POLICY

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Record, as a part of my remarks, an editorial entitled "The Steel Price Policy," which was published on April 16 in the Peoria Journal Star.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

The Steel Price Policy

President Kennedy's continued interest in the price of steel is a case of treating a cut on the finger by brain surgery—using Ben Casey as the surgeon instead of a real doctor, to boot.

The present national policy on steel emerged from a couple of hours conference between a busy President of the United States and his economic advisers.

So now all Government experts in the broad field of world economics, political budgets, and new theories about the collection of taxes are discussing the pros and cons of pricing certain items of steel by certain companies. So are, of course, politicians and commentators.

Everybody seems to be in the operating room except the doctors—the steel men themselves, the only people who have worked with the problems involved day in and day out and proven their proficiency over the years.

And, the debate is half-political as well as half-economic—and all generalizations.

That's the way, of course, when you get away from the guys who really know their subject and who have to make it work by an intimacy with all of its complicated details.

This is the trouble we get into once we take the road of Government intervention, no matter how fetching the particular circumstance was that justified the original breakthrough.

In the long run you wind up taking decisions out of the hands of those most experienced and most competent to make them, and turn them over to first-rate theorists and eventually to fourth-rate bureaucrats.

But what is developing in our steel industry is not really much different than if we had turned our Armed Forces in World War II over to a Harvard professor with a special interest in military history, or turned the AFL-CIO over to some top theorist in the college ranks on the grant principles of labor-management relations.

There is a lot more to running large, effective working organizations than broad general principles, lovely theories, and high level paperwork.

It looks to us like we are more and more tossing the doctors out of the case of steel, calling in the quacks, and, as we said, beginning to operate on the very brain of the whole mechanism as a means of curing a cut finger—and somebody else's finger at that.

Then, too, immobilizing this patient, as we seem determined to do, is likely to have a devastating effect on his family.

PRIORITY TO ELECTRIC CONSUMERS IN PACIFIC NORTHWEST TO ENERGY GENERATED AT HYDROELECTRIC PLANTS

The Senate resumed the consideration of the bill (S. 1007) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

Mr. MORSE. Mr. President, at this time let me state, in regard to Senate bill 1007, in support of which I testified on April 1 of this year before the Committee on Interior and Insular Affairs, that this afternoon I find myself in a position in which I can support the bill; and I wish to congratulate the Senator from Washington [Mr. Jackson] on his leadership in connection with the bill.

I ask unanimous consent to have printed at this point in the Record the statement in support of Senate bill 1007 which I made on April 1, 1963, before the Interior and Insular Affairs Committee.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement by Senator Morse Before Senate Interior Committee on S. 1007, April 1, 1963

Mr. Chairman and members of the committee, I appreciate the opportunity to submit this statement in support of S. 1007, a bill to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority. The following factors are of great importance and I trust they will receive serious consideration by the committee:

1. The Pacific Northwest's economic growth—past, present, and potential, is inseparably linked with the development of Federal hydroelectric power. In his statement to this committee last year, Bonneville Power Administrator Luce most adequately delineated the importance of Federal power in our region. He stated:

"For years industries in the Pacific Northwest have been important customers of the Federal system. Their purchases have varied from more than 60 percent of the energy sold by Bonneville Power Administration in 1945 to an average of approximately 36 percent during the past 4 years. Their original plant investment is more than $350 million. Their plant replacement cost would be double that figure. They employ 15,000 Pacific Northwest citizens directly and another 30,000 indirectly. The utility of those plants and the thousands of jobs which they have made possible are directly dependent upon the maintenance of a low-cost power supply. If Pacific Northwest Federal power—and that area has no low-cost alternative—is diverted to other regions, many of these industries would have to stop production. The Nation would not gain by shutting down these plants in order to export the power from the Pacific Northwest, and the impact on that region would be catastrophic."

2. Prime income-producing activities in the Pacific Northwest are lumber, agriculture, and tourism. All three are subject to the whims of weather. All three exhibit severe seasonal fluctuations and are highly sensitive to business cycles. Lumber and agriculture are presently confronted by serious problems and are subject to drastic fluctuation due to demand in elasticity and international marketing problems. Electroprocess industries provide stable payrolls. Low-cost power compensates for our long distances from major markets and supplies industrial incentive for creation of new jobs.

3. Water is the source of our electricity. We have no proven reserves of gas or oil, and known coal resources are limited. Approximately 96 percent of our firm energy capability is hydro and about 62 percent of this hydro is owned and operated by the Federal Government. No other area in the country is so dependent on hydropower and, only the Tennessee Valley exceeds this region in percentage of federally owned generation.

4. The people of the Pacific Northwest are paying off the Federal Government's power investment there—with interest. To date they have returned to the Treasury over three-fourths of a billion dollars.

5. An electrical interconnection between the Pacific Northwest and California was outlined as early as 1935 by the Pacific Northwest Regional Planning Commission, which included a representative of the State of Oregon. With the knowledge that such transmission link is technically and economically feasible, the Department of the Interior has this year requested $24 million to begin construction of this extra-high-voltage line.

6. A common-carrier, high-capacity interconnection linking the electrical systems of the two regions will provide enormous benefits to both areas. With public and private electric systems participating and with optimum facilities, it is currently estimated benefits would exceed costs by a ratio of more than 3 to 1. The economic benefits which would accrue to BPA would restore Bonneville's surplus repayment picture, open a market for nonfirm, dump power, and provide a means by which the Pacific Northwest could obtain additional firm power when needed in the future.

7. The Senate Committee on Interior and Insular Affairs has long recognized the need for proper protection of the interests of power consumers in any energy or capacity interchange involving Federal power. In a resolution of June 21, 1960, the committee requested that no contract be made for transfer of BPA power to California pending completion of further studies and consideration of legislation to preserve the position of BPA customers in the Northwest. I joined with other Northwest Senators in asking the then Secretary of the Interior Fred A. Seaton to act in accordance with that resolution.

8. Interconnection of the Northwest and Southwest by major transmission facilities will soon be a reality. Already the Bonneville Power Administration has received six offers to build all or part of the extra-high-voltage line. A Federal request for an appropriation of $24 million to begin construction of a Federal intertie is now before Congress. New technology has made it possible to use such lines to transmit power from northern Washington to southern California.

A solution to the problem pointed up by hearings held by your committee in 1959 and 1960 should insure two things: It must (a) protect against raiding the resources of one region to make rich another and (b) provide for an orderly and equitable share of benefits between regions. I believe that maximum mutual advantage can be achieved without Balkanization and without doing violence to traditional power marketing policies.

Integrated operation can produce benefits for individual electric systems which are impossible with isolated operation. Power pooling in the Northwest provides a practical demonstration of this fact. Coordination has produced benefits impossible of achievement by power producers operating singly, and this has been accomplished without infringement upon the basic rights and responsibilities of particular utilities. Technology has increased the opportunities for mutually advantageous cooperation. Organization and operational patterns must keep pace.

In 1962 similar legislation was considered by this committee and passed by the Senate. At that time, Mr. Luce informed the committee of the exhaustive review which preceded the submission of this proposal by the Department of the Interior. The bill has wide support, including the general backing of private and public utilities throughout the Northwest, and has received bipartisan support in Congress. The committee in its study of this legislation gave full consideration to the comments of residents of the Northwest last year when S. 3153 was acted upon favorably. I know that the committee will reiterate its positive position of last year, and act favorably on S. 1007 in recognition of the vital stake of the people of the Northwest in the ultimate decision of Congress on this matter.

The good of the Northwest, Southwest, and in fact the whole Nation will be served by establishing ground rules which will permit cooperation and coordination in use of our surplus electrical energy resources for the maximum benefit of all.

Mr. ALLOTT. Mr. President, I wish to say a few words in opposition to Senate bill 1007, ordinarily referred to as the Pacific Northwest power bill. I say that, instead, it is a Pacific Northwest power steal, and should be designated as such.

Last year I spoke at considerable length about this matter; so I do not intend to say a great deal about it today.

In connection with this matter, we find that we are in a situation in which the people of the Northwest are putting around the electricity generated in that area an unjustified fence, by means of completely new criteria and new standards for the distribution of electricity in the United States.

I do not know whether a yea-and-nay vote will be taken on the question of the passage of the bill. I do not intend to request a yea-and-nay vote on that question; but I desire to make clear my own position, which is that regardless of whether a yea-and-nay vote is taken on the question of the passage of the bill, I wish to be recorded as being opposed to the bill; and I shall never vote for the bill or for any conference report based on such a measure.

Mr. President, the facts are that, because of two factors, the people of the Northwest are receiving electricity which to a great extent is being subsidized by the people of the United States. Many years ago Congress established what is known as the preference system, so that in the public hydroelectric power projects built by the Federal Government on rivers, the people who were members of the municipalities and of the cooperatives would receive what is known as a preference right. So our communities which had publicly owned systems, and all the people who had cooperative systems, were able to purchase electricity under what is known as a preference right. This principle has been established for many, many years, and it is accepted by everyone I know. I do not know of one member of an REA in the United States who is not completely wedded and devoted to the principle of preference rights. I, myself, have supported them ever since I first had to do with questions involving power.

But the net effect of Senate bill 1007—which, I am sorry to say, was passed last year by the Senate—is to upset completely all preference rights in the United States.

Last year the distinguished junior Senator from Arizona [Mr. GOLDWATER] offered an amendment to extend the same rights to the Upper Colorado River. Actually, Mr. President, I do not think it makes any difference to us whether that is done or is not done; but, certainly, what is sauce for the goose should also be sauce for the gander, and it is just as logical to apply the principles of the bill to the Upper Colorado as it is to apply them to the Pacific Northwest.

Some of my friends in the Senate are very happy about the bill. My friends from Montana ought to be reasonably happy with it because they are in the geographical area of the country referred to in the bill. Idaho has been taken into the geographical area of the bill. But now a fence has been placed around the Northwest.

The power of the Northwest is cheap for two reasons:

First, there is the unusual geographical situation of the rivers, mountains, and gorges, which permit the development of large amounts of hydroelectric power.

Second, the Federal Government has put about $3 billion into the development of electricity for the people of the Northwest.

Consequently, in the Northwest electricity is not only being produced, but the Bonneville Administration is selling it even to private customers at less than 2 mills. If I remember correctly the testimony of Mr. Luce, electricity is being sold in that area to private customers for 2 mills or less per kilowatt. In the short time we have had available since the bill was called up for consideration I have not been able to locate the testimony, but I believe I have stated the correct amount. In almost every other part of the country it is almost impossible to produce electricity for much less than 5 or 6 mills. So with that extremely favorable situation, which has been financed by the Federal Government, what is proposed? If the bill ever becomes law, first, it would permit sales of electricity to preference users in the Northwest.

Then comes the catch. A letter fence is placed around the northwestern corner of the United States, and the rest of us who have helped to finance the development for them will not be able to participate in the development. We are told, "If our preference customers cannot use all the electricity, then it must be sold to private customers in the Northwest. If there is anything then left over, we shall allow it to go outside to the preference customers outside of our fenced-in area, and then if there is anything left after that, it may go to the private customers outside of our fenced-in area."

There can be no question that that would be the net effect of the bill. There can be no question that what I have stated would result. There can be no question that it would upset the concept of preference rights as they have been established in this country, for I believe, almost 50 years.

So in S. 1007 we have an upset of a long-established principle of preference rights.

I do not know whether or not the measure would be the first foot in the door to completely upset preference rights. If they can be upset in the Northwest, I can see no reason they cannot be upset in other places. So the proposal looks to me like a foot in the door for upsets in other places, which would be a very unsatisfactory situation in view of the development of power in our country, and would be a situation with which I personally could not agree.

I do not intend to discuss all the ramifications or the technical aspects of the bill. They were developed at the hearings last year and the present year. But in order that my own position may be clear, I merely wish to say that I feel about it as I felt last year. I am opposed to the bill. I hope that it will not pass. It should never become law. The measure would do an injustice to thousands of electrical cooperatives in our country and would upset completely the system of preference law in the United States.

Whether the bill is voted on by voice vote or by a yea-and-nay vote, I wish my position to be clear. I shall vote against the bill.

Mr. COTTON. Mr. President, last year when the bill S. 3153, which is essentially the same bill that we now have before us in S. 1007, was before the Senate for consideration, I outlined in some detail the reasons for my opposition to that measure. In order to save the time of the Senate, I shall not reiterate at length my views stated at that time. However, since I desire to have my views again in the RECORD, I ask unanimous consent that the remarks which I made last year, which are found in the CONGRESSIONAL RECORD, volume 108, part 12, page 15795, be printed at this point in my remarks.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. COTTON. Madam President, the proposed legislation, the so-called regional preference bill, S. 3153, is deeply disturbing to me. It has major implications for the entire Nation which cannot be overlooked.

Initially, I was inclined to regard this bill as a kind of back-fence argument on the west coast between the Pacific Northwest, where tremendous quantities of electric power are generated cheaply at federally built dams, and southern California, which must rely on the more expensive steam generation of electricity. But much more, in fact, is involved, and I want to address my comments to the effects that the principle of this legislation would have on the rest of the country.

Behind this bill lies recent technological advances which now make it possible to transmit large blocks of electric power economically over very long distances. The Bonneville Power Administrator, Mr. Charles Luce, indicated that the economic transmission distance may extend for 2,000 miles. Under these circumstances, low-cost hydropower could be made available over a substantial region of the country, giving citizens some direct benefit from the billions which they have paid for the Federal power developments in the Northwest and elsewhere. We ought to be free to do this, provided that these benefits can be made available to all with sufficient safeguards to make sure that we do not exclude isolated islands in distant or sparsely settled areas that will thereby be forced to pay even higher electric rates or to compete against even greater odds than now.

The bill turns its back on this possibility. It is not designed to spread the benefits of low-cost power, but instead to confine them.

As I understand the bill, it draws a line around and in some cases through portions of half a dozen States, reaching as far east as Montana and Wyoming, and defines that area as the Pacific Northwest. Then it provides that all present and future Federal power produced in that region shall belong to that region exclusively, that it shall be used for present and future private industry as well as for public purposes, and that no power can be exported across the region's border, even for public purposes, unless the Northwest permits it, and then only on a severely restricted basis.

On that point, let me declare it bewildering from any national point of view, and certainly from a New Englander's view, that Federal power which has been developed and paid for by all the people, could thus be reserved for only a privileged few and denied to all others. In my State of New Hampshire, in fact in all of New England, there are no Federal powerplants. Many other States share with us this "have not" status. Under the precedent which this legislation would set, no "have not" States or regions could ever get any firm Federal power from any of the Federal plants located in the "have" regions, even though their tax dollars helped build them.

According to data in the hearings, half of all the hydroelectric power developed by the Federal Government is in the Northwest. The bill would restrict all that power to an area comprising less than six States. That power would be locked up tight in a Northwest power preserve.

To date, the Nation's taxpayers have invested $1.7 billion in Federal power facilities in the Northwest. The Bonneville Power Administration, which runs the Federal system there, is operating in the red and is losing millions of dollars each year. Thus, the power is being sold to privileged northwesterners at below-cost rates. No wonder they want to keep it to themselves—all of it.

The determination as to what power is available for export, when it may be available, who can have it, where the exact borderlines of the preserve shall be located, and many other powers, would be left to the discretion of the Secretary of the Interior. The bill would give the Secretary virtually dictatorial power over half of the Federal hydroelectric power in the Nation, and would usurp much of the control over the Federal power policy which now properly resides in Congress.

This is what Senate bill 3153 proposes.

It is important to point out that the Bonneville Power Administration, which markets the Federal power in the Pacific Northwest, is not the sole source of power in the region. More than 150 non-Federal generating plants also serve the area, and provide about 40 percent of the region's total power suply. This is more than a statistic. It means that the Bonneville Power Administration does not have a utility responsibility for the area. It is under no legal or moral obligation to provide 100 percent of the region's needs for electric power now and into the future. It operates solely as a wholesale supplier of large blocks of power.

The role of Bonneville is thus in sharp contrast to the role of the Tennessee Valley Authority, which has a complete utility responsibility for its area, and is the sole source of electric power for its service area. In the case of TVA, Congress has limited its service area by statute in much the same way as most public utilities have limited and defined service areas under their franchises. As an original proponent of an area limit for TVA, I can state that its purpose was to define the area in which it was to be the sole supplier of power so that TVA could plan, budget, and build efficiently to meet the growing demands for power within its area.

The TVA area limitation—16 U.S.C. 831n–4—clearly and expressly permits the sale and transmission of blocks of power to other utilities outside the service area. It thus permits TVA to do what the bill would bar in the Pacific Northwest, and the TVA area limitation is, in fact, a sound precedent for the defeat of the bill.

I should like to call upon my colleagues in the Senate to search their souls as they contemplate what such a proposal as this could do to the Nation. In full conscience, we must consider how such a bill would affect all of the United States. We must rise above local interests; we must look beyond the administration's nose as it tries to satisfy conflicting demands among Federal power supporters; we must regard the proposed legislation from the viewpoint of all the people of all our 50 States, and we must look to the future welfare of the Nation.

With these obligations in mind, the bill poses many questions which call for answers based on equality, justice, and the general welfare. The conflicting and contradictory nature of some of these questions reflects the confusion and contradictions in the bill itself.

First. Why should the United States set aside tax-subsidized power that belongs to all the people and reserve it exclusively for just a few people?

Second. When it is economically feasible to transmit electric energy 2,000 miles, why should not the power from all Federal generating installations in all sections of the country be made available to all the people within reach?

Third. Why should Congress lock up all present and future Federal power in the Northwest, permitting the Northwest to lure more industry and payrolls from other areas with its below-cost electric power?

Fourth. Why should the Senate fall prey to the contention that somehow and for some reason the situation in the Northwest is unique and therefore deserves a special handout? We must bear in mind that the bill not only reserves present Federal power for present Northwest customers but also applies to all future Federal power and all future Northwest customers. Nor are the provisions limited to Federal hydroplants. Coal-fired steamplants and maybe even Federal nuclear plants also would be reserved in the privileged sanctuary of the Northwest.

Fifth. Why should the Senate Interior Committee have to adopt an amendment to the bill with regard to power from Hungry Horse Dam on the basis that "existing rights, established by prior legislation should not be infringed upon" when this very bill itself infringes upon the existing rights of customers outside the fences which would be erected by this bill?

Sixth. Why should Congress permit a Chinese wall to be erected around one region in the Northwest and not permit similar Chinese walls around every other region in which a Federal electric plant is located?

Seventh. Why should Congress give any Secretary of the Interior the discretionary power of a czar over half the Federal hydroelectric power in the Nation?

Eighth. Why should Congress create economic or marketing regions which would ignore State borders, and could form super States under the control of an executive department of the Government?

Ninth. Could the Senate allow the Northwest to have its way, and then reject the similar demands for regional protection, or for exclusive regional rights? These demands are now before us in amendments. They come from the State of Montana, from the State of Arizona, from the Missouri River Basin, from the northern California region of the Central Valley project, and unquestionably will come from many other regions of origin of Federal power.

Tenth. Why should the law of preference be abrogated in just one region, for the purpose of satisfying purely local special interests?

Eleventh. Why should the Congress consider any bill that penalizes the great majority of the people, to give more special privileges to an already privileged few?

I submit that in reaching responsible answers to these questions, we can make no finding with respect to this bill except that it is highly dangerous to the national welfare.

The principle of the bill is vicious.

The use of Federal money and Federal power would be confined to certain States and regions. States and regions, like my own, that do not have and are not blessed with the potentiality for power development, would find themselves completely starved by the creation of special privilege facilities whose benefits would be confined to more fortunate sections of the country, despite the fact that they are paid for by our people. Such a situation would be so monstrous that it would compel only one solution: Complete Federal power over the entire Nation. Make no mistake about it, that is what this bill aims at. That is why it must be defeated.

Mr. MUNDT. Mr. President, I want the RECORD to show in 1963 as it does in August of 1962, that I am still unalterably opposed to the concepts of S. 1007 just as I was to the concepts of S. 3153 a year ago which granted a superpreference to electrical consumers who happen to be fortunate enough to reside in the Pacific Northwest.

May I point out once again that I consider that by enacting this type of legislation granting preference to one section of the country on the sale of electricity generated by Federal installations, Congress is going back on its word to cooperatives, municipalities and other designated preference customers that generation capacity built with taxpayers' funds shall be available to preference customers to meet their needs before making it available to other potential consumers.

This is unfair legislation and it is wrong in principle. There are pertinent basic reasons why this legislation should not be acted upon by the Senate or the Congress. The concept of regional preference is incompatible with the best use of the Nation's power resources, and this incompatibility will continue to grow as we increase our technological ability to transmit energy for greater distance. Further, if we enact this type of legislation then Congress will have a precedent to enact similar legislation granting a similar priority for other areas of the Nation. The principle of this type of legislation is wrong in that it would reserve all present and future Federal power for all present and future consumers in the region of origin to the detriment of those outside the region.

As I pointed out in the debate on S. 3153 as it appears in the Congressional Record, volume 108, part 12, page 15699 through page 15945, this type of legislation tends to "Balkanize" the power grids of this country for the first time. It proposes to start in the Northwest by establishing around the Northwest a Chinese wall. It provides that none of the power which is generated from the dams in which Federal funds have been employed—and I think that even includes private generating plants in this instance—shall be transmitted beyond the boundaries of the areas into other areas not located in the area in which the power is generated. I believe it is undesirable to start "Balkanizing" the great power systems of this country which are brought about by the expenditure of public funds or by money borrowed from the Public Treasury.

Further, I am fearful of the effect which this concept of regional preference rather than user preference will have on REA people living outside of the preferred area. The prevailing preference criteria concept has done much to develop, build, perpetuate, and expand REA. I have always supported the user-preference concept and I am disturbed by the thought that enactment of this type of legislation could well sound the death knell to the preference customer criteria and regulations in America.

Mr. President, in the act of 1937 authorizing the Bonneville project there is a section designed to protect the taxpayers. Let me read it to you so that it will be a part of the Record:

> In order to encourage the widest possible use of all electric energy that can be generated and marketed and to provide reasonable outlets therefor, and to prevent the monopolization—

Note the word "monopolization"—

> thereof by limited groups, the Administrator is authorized and directed to provide, construct, operate, maintain, and improve such electric transmission lines and substations, and facilities and structures appurtenant thereto as he finds necessary, desirable, or appropriate for the purpose of transmitting electric energy, available for sale, from the Bonneville project to existing and potential markets, and, for the purpose of interchange of electric energy, to interconnect the Bonneville project with other Federal projects and publicly owned power systems now or hereafter constructed.

In another section of the act it states:

> In order to insure that the facilities for generation of electric energy at the Bonneville project shall be operated for the benefit of the general public, and particularly of domestic and rural consumers, the Administrator shall at all times, in disposing of electric energy generated at said project, give preference and priority to public bodies and cooperatives.

Thus, Mr. President, it is clear that when the Congress enacted the authorizing legislation it rightfully protected the claim of preference customers to the power generated under the auspices of this project. Therefore, I cannot understand the reasoning behind the Department of Interior when in its release of March 29, 1963, it states:

> A preference applicant or customer outside the Pacific Northwest will not have a priority over a nonpreference applicant or customer in the Pacific Northwest.

This is a recitation of a new category of preference customers. It is creating an elite within preference groups. It substitutes geographical location for user designation as the basic reason for establishing preference customers.

In South Dakota, Mr. President, we as you know, have Federal installations generating power which we are sharing with our neighboring States. In fact, we are sharing so broadly that preference customers in the area served are only receiving about 80 percent of their needs from the Federal hydroelectric facilities on the Missouri River. The farmers and cooperatives of the Plain States are banding together in cooperatives and borrowing money from the Rural Electric Administration to build thermal plants to meet their power needs.

Mr. President, with transmission techniques developed as they are today, I am firmly convinced it is wrong to abrogate commitments to preference customers regardless of their locality. Throughout America today we see many Federal projects generating power. Let us make absolutely sure that before we legislate permission to sell this power to nonpreference customers that all our REA users demands are satisfied. Let us maintain Federally generated power for preference customers and induce private utilities to expand to meet the needs of nonpreference customers. Let us not through a "gimmick" such as S. 1007 find a way for the Government to circumvent its long-standing commitment to the preference customer. I therefore hope that before the Congress finally places a stamp of approval on this type of legislation that the millions of preference customers throughout America will have their day in court and that in the final analysis the Congress and the Department of Interior will wisely decide to continue to honor its long-standing commitment to preference customers everywhere.

The PRESIDING OFFICER. The bill is open to amendment.

If there be no amendment to be proposed, the question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading and to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The bill (S. 1007) was passed.

Mr. MANSFIELD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. JACKSON. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington.

The motion to lay on the table was agreed to.

Mr. MANSFIELD. Mr. President, I wish to extend my congratulations to the Committee on Interior and Insular Affairs and particularly to the chairman of that committee, the distinguished junior Senator from Washington [Mr. Jackson], for the expeditious way in which he has handled the bill, and for the amount of work which has come out of that committee.

Of all the committees in the Senate, the Committee on Interior and Insular Affairs has been the most diligent up to this time. If the Senate has any kind of record, much of the credit must go to that committee.

I also wish to pay my tribute once again to the distinguished senior Senator from New Mexico [Mr. Anderson] for what he, along with the chairman of the committee, the distinguished Senator from Washington [Mr. Jackson], has been able to do this year.

The committee has reported and has obtained the passage of the following major bills: S. 20, the outdoor recreation bill which will give a statutory basis for the Bureau of Outdoor Recreation; S. 4, the wilderness bill; S. 2, the water resources research bill; and now S. 1007, a bill to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

My distinguished colleague from Montana [Mr. Metcalf] and I have a very special interest in the bill just passed by the Senate because of the part that the Hungry Horse project will play in it. It is a project which means a great deal to our State. We are delighted that, once again, as it did last year, the Senate has passed the measure.

So for the Record I merely wish to extend my thanks to the distinguished chairman of the committee, my old friend and colleague, the Senator from Washington [Mr. Jackson], and also to the former chairman of that committee, who is now chairman of the Committee on Aeronautical and Space Sciences, the distinguished senior Senator from New Mexico [Mr. Anderson]. They have both served their area and the Nation well.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. JACKSON. I merely wish to observe that we have been able to move quite rapidly in the Senate Committee on Interior and Insular Affairs because of the fine support from all members of that committee and particularly the assistance of the ranking member on the Democratic side, the former chairman, the Senator from New Mexico [Mr. Anderson].

We have also received the full cooperation of the majority leader. He has been invaluable in expediting the proposed legislation that has been brought into the Senate. I know I speak for all members of the committee in expressing our appreciation to the distinguished majority leader for his help.

Mr. MANSFIELD. Mr. President, I also wish to extend my thanks to the distinguished senior Senator from Colorado [Mr. ALLOTT], who indicated that he thought the last two bills considered should be amended in certain ways. The Senator from Colorado has fought cleanly and with vigor. I know personally that he has been subject to great pressure, but he has shown a tolerance and understanding for which I am deeply grateful.

LEGISLATIVE PROGRAM AND ORDER FOR ADJOURNMENT

Mr. MANSFIELD. Mr. President, for the information of the Senate, it is the intention to have the Senate consider tomorrow the nominations of the persons to be incorporators of the Communications Satellite Corp.

Mr. President, I ask unanimous consent that when the Senate concludes its deliberations today it stand in adjournment until 12 o'clock noon tomorrow.

The **PRESIDING OFFICER** (Mr. McGOVERN in the chair). Without objection, it is so ordered.

ADJOURNMENT

Mr. MANSFIELD. Mr. President, if there is no further business to come before the Senate, I move, according to the previous order, that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 4 o'clock and 20 minutes p.m.) the Senate adjourned, under the previous order, until tomorrow, Wednesday, April 24, 1963, at 12 o'clock meridian.

NOMINATIONS

Executive nominations which were received by the Senate and omitted in the CONGRESSIONAL RECORD on April 22, 1963:

DEPARTMENT OF THE AIR FORCE

Brockway McMillan, of New Jersey, to be Under Secretary of the Air Force, vice Joseph V. Charyk resigned.

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) or section 3066, in grade as follows:

Lt. Gen. Andrew Pick O'Meara, O18062, Army of the United States (major general, U.S. Army), in the grade of General.

IN THE REGULAR AIR FORCE

The following-named officers for promotion in the Regular Air Force, under the appropriate provisions of chapter 835, title 10, United States Code, as amended. All officers are subject to physical examination required by law.

MAJOR TO LIEUTENANT COLONEL

Line of the Air Force

Bruce D. Alitt
George R. Allen
John W. Almond, Jr.
David M. Anderson
Richard G. Anderson
Ross K. Anderson, Jr.
William G. Anderson
William P. Anderson
Richard L. Arvedlund
John W. Asher III
Lawrence I. Astor
Larry R. Atkinson
John P. Aucella
Richard M. Augur
Richard G. Bachmann
Harold E. Bahr, Jr.
David A. Baker
Gary A. Baldwin
Harry F. Ball, Jr.
Lionel A. W. Banda
Wayne C. Barlow
William C. Barney
Bart H. Bartlett, Jr.
Creighton E. Barton
Thomas J. Batzel
Stephen W. Baumgart
William J. Baumhofer
George R. Baxter
Travis N. Beard
Robert F. Beckham
Denis J. W. Bell
Henry L. Bell, Jr.
John C. Bender
Franklin L. Bennett
Robert L. Bennett
Russell E. Berry, Jr.
David A. Bingemann
Michael R. Biro
Cecil L. Blackwell, Jr.
Carl M. Bohley
John R. Boley
C. Ward Bond, Jr.
Michael R. Bonsignore
Robert A. Borlet
William E. Bowen
Thomas E. Bowman III
Ronald A. Boyd
Michael B. Bracy
William E. Bradford
Thomas K. Brandt
Harold A. Breard, Jr.
Alfred L. Breen, Jr.
Robert J. Bridgeman
William S. Brinkley
Richard W. Brown
Peter A. Browne
Vernon G. Browne
Richard B. Bryant
Earl F. Buck
Duane W. Buckingham
Thomas D. Buckley
Kenneth R. Buell
Richard W. Buelow

John J. Dougherty
George F. Holland III
Joseph G. Tkac, Jr.

Executive nomination received by the Senate April 23, 1963:

U.S. Attorney

William A. Meadows, Jr. of Florida to be U.S. attorney for the southern district of Florida for the term of 4 years, vice Edward F. Boardman, transferred.

◆

HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Proverbs 29: 18: *Where there is no vision, the people cast off restraint.*

Most merciful and gracious God, may our President, our Speaker, and all who hold positions of leadership and trust lay hold of their many difficult tasks with confidence.

May they continue to possess that soul of adventure and that strength of vision and faith which are often darkened by doubt but never eclipsed; delayed and disappointed by adversity, but never defeated.

Grant that the whole world may come to see that our Nation is rooted in spiritual realities and ruled by a passionate devotion to the ideals of liberty and justice, friendship and fraternity.

Hear us in Christ's name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

HOUSE BILL ENROLLED

Mr. BURLESON, from the Committee on House Administration, announced that that committee had on April 22, 1963, examined and found truly enrolled a bill of the House of the following title:

H.R. 4715. An act to incorporate the Eleanor Roosevelt Memorial Foundation.

ENROLLED BILL SIGNED BY THE SPEAKER

The SPEAKER. The Chair desires to announce that pursuant to the authority granted him on Monday, April 22, 1963, he did on that day sign the following enrolled bill of the House:

H.R. 4715. An act to incorporate the Eleanor Roosevelt Memorial Foundation.

THE LATE DR. MEYER JACOBSTEIN

Mr. HORTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a memorial service, conducted by Rabbi Philip S. Bernstein of Temple B'rith Kodesh.)

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. HORTON. Mr. Speaker, it is a sad duty that causes me to rise on this occasion, for I must report to my colleagues the death of a former Member of Congress.

Last Thursday—April 18—in my home community of Rochester, N.Y., death took Dr. Meyer Jacobstein. Dr. Jacobstein was 83 years old.

Dr. Jacobstein was the elected Representative of the 38th Congressional District—now the 36th Congressional District—of New York State for three terms. He served successively in the 68th, 69th, and 70th Congresses.

Today, only five men are in the House who served alongside Dr. Jacobstein.

As a Congressman, teacher, labor mediator, banker, publisher, and scholar, he impressed his vital personality on the scene of Rochester, N.Y., for more than half a century. His life was always one of service and concern for the public good and much of his effort was a community contribution.

During his 6 years of service in the House of Representatives from 1923 to 1929, Dr. Jacobstein became widely known and respected for the knowledge and understanding he brought to the many matters which were before the Congress. He represented his constituents with dedication and ability.

Dr. Jacobstein was a constant inspiration to those who knew him and came under the influence of his intellect.

Our condolences on this personal loss go to his widow and two daughters, Mrs. Harold Berlove, of Webster, N.Y., and Mrs. Joseph Thaler, of Spokane, Wash.

This past Sunday evening in Rochester, N.Y., a memorial service was held for Dr. Jacobstein. His longtime friend and spiritual leader, Rabbi Philip S. Bernstein, of Temple B'rith Kodesh, delivered a moving eulogy.

Memorial Service for Dr. Meyer Jacobstein

Meyer Jacobstein was one of the stars, one of the luminaries, that swam into my horizon when I was a youth in Rochester. I thought of him then as a warm, colorful, extraordinary personality, and I have never had any reason to change that opinion. He was even at that time a poor Jewish boy who had made good. He was a professor of economics at the University of Rochester where Jews in those days were not very numerous. He lectured brilliantly in the community and was highly popular.

Then when I returned to Rochester as rabbi of this temple in 1926, a relationship developed which continued through the years and which meant much to me in my own life. On my part it was a feeling of affection, friendship, of respect, and I think he returned this feeling. Out of that relationship I speak of him today.

First let me talk about his accomplishments, the externals of his life. Here was the son of a poor immigrant family, one of nine children. He had to earn his way peddling newspapers. And out of this difficult background came his remarkable achievements. He was one of the boys in whom Dr. Gannett of the Unitarian Church took an interest, and which led to the founding of the Boys' Evening Home which meant so much in the lives of men like Meyer, and Ben Goldstein, Sol Appelbaum, and others. This broadened his horizon and led him on to new fields.

He became a brilliant economist and, after having taught for awhile in the Midwest, returned to Rochester where his students liked him very much for they found him progressive, intelligent, stimulating. He was interested in labor relationships and this was a comparatively early period in those relationships in the clothing industry. In due course he found himself a labor mediator and arbitrator, and handling labor relationships for clothing firms. He never ceased to be an economist. In fact he became a better economist as through involvement in public life as Congressman, banker, publisher, and the head of a business institute, he learned more intimately, more realistically, what makes the wheels go round. My brother Irving, among many others, is greatly indebted to Meyer for direction, counsel, stimulation, and information, which he received when Meyer was a member of the faculty of that great Brookings Institution in Washington. Subsequently Meyer became of invaluable help to his former colleagues when he served on the staff of the Library of Congress and gave help, guidance, information, counsel, to the Members of Congress as they sought to think through the economic problems that confronted our National Legislature.

Because personally Meyer was eager and ambitious and also civic minded with a strong sense of public responsibility, he decided to run for Congress. Everything was against him. He was a Democrat, and in Rochester Democrats then were very much in the minority. He was a Jew. He was a liberal and in those days a liberal might be regarded as a radical. A powerful political machine was lined up against him. Nevertheless, in spite of all these handicaps, by the sheer power of his personality, his good sense, his obvious usefulness, his hard work, he was elected to the Congress of the United States. There he remained for 6 years, and could have stayed on indefinitely if he had chosen. He was one of the best Congressmen this area has ever had with a very strong sense of responsibility not only to his own constituency but also to the country, and to its welfare. In those days I would talk with other Members of Congress who told me how highly regarded he was by his colleagues, which was understandable, because he knew more than most of them about the problems that were confronting the Nation. In that period it became clear that Meyer was loved by the common man, and respected by the uncommon one. The poor, the immigrant, the Negro found in him an understanding friend. The cultivated person saw something of extraordinary worth in Meyer's warm, multifaceted personality.

After a time he found the wear and tear of congressional responsibilities too much for him and his family. He also was concerned with building up his economic position for the future. So he returned to Rochester and before long this man who had been a left-of-center liberal, an economics professor, a labor authority, a Democratic Member of Congress, became the president of a bank. During the depression, Meyer's bank was absorbed by a larger one (we had no bank failures in Rochester) and not long thereafter he became the publisher of the Journal American. My impression was that he thoroughly enjoyed this activity. It enabled him to express himself, to be in the thick of community and national life. It was challenging and stimulating to him, but then in due course the newspaper found it wise to discontinue its operations in Rochester, and so did Meyer. He and Lena loved Washington and they returned to it where he began the last phase of his active life. Working first with Brookings and later with the Library of Congress he put to use his vast knowledge, his extraordinary experience, his intellectual facility, his capacity for improvisation, and became of great value to students, to researchers, and to Members of Congress. This proved to be a happy period in Meyer's and Lena's life. Their children were grown up and married and on their own. The Jacobsteins loved Washington. They had many interests and many fine friends, but this too had to come to an end and Meyer returned to Rochester.

Those who knew Meyer only in this latter period of his life when he was back home and didn't know quite what to do with himself, hardly knew the Meyer whom most of us here knew and loved. Although he did direct an employment survey for Governor Harriman, something seemed to have gone out of him when he left Washington for good. I urged him to write his life experience which was really extraordinary but apparently this wasn't his talent or his interest. He could speak with remarkable charm, facility, delight, and humor about his experiences on every level from the common man up to Presidents of the United States. But somehow he couldn't get around to write about it.

We turn now from Meyer's external achievements which tell us what he did but not what he was, to the personality of the man. We draw the curtain over these last few years of decline and disability to the man we knew for threescore years and ten and more, for the personality that was warm and vital, colorful, charming. We think of the man who found everything interesting and was interested in everybody and who thereby became himself a very interesting personality. We see his eyes light up as a new idea strikes fire. His mind was facile. It leaped from one thing to another quickly and brilliantly. He had the capacity to think through and around a question, seeing its various sides. We remember Meyer's humor, his ready laughter, his charm. There was indeed something warm and light-giving in his personality. His very name—Meyer—which could be translated as light-giver—somehow expressed the light, the warmth, that Meyer brought into the life of others. He looked for the good in others. As Shelley said in another connection, "Life like a dome of many-colored glass stains the white radiance of eternity."

I see in Meyer not only his achievements but the capacity to achieve. He symbolized the best of the children of Jewish immigrants to this land; out of humble origins doing so much with their own lives and doing so much for America. He loved this country. It was an inspiration to him. He felt that he was only paying back, when he served it, a fraction of what it had done for him and for his family. Perhaps because of the influence of the Boys' Evening Home and Dr. Gannett and his associates at the Unitarian Church his Jewishness was broad. He was a profoundly loyal and devoted Jew but he also had strong universal feelings. He would like to go to religious services other than Jewish. He read the writings of religious thinkers whose views were very different from those of the official representatives of the synagogue. He and Lena were particularly fond of the writings of Robert and Elizabeth Barrett Browning. In some way Robert Browning's poem "Rabbi Ben Ezra" captures much of Meyer's spirit and outlook.

"Grow old along with me!
The best is yet to be,
The last of life, for which the first was made;
Our times are in His hand
Who saith, 'A whole I planned,
Youth shows but half; trust God; see all, nor be afraid.'
So, take and use Thy work;
Amend what flaws may lurk,
What strain o' the stuff, what warpings paid the aim!
My times be in Thy hand!
Perfect the cup as planned!
Let age approve of youth, and death complete the same."

How can I begin to do justice to what Meyer meant to his family. He was a source of pride to them. He was helpful to them in every way that was needed. He was a loyal and devoted brother. His nephews and nieces loved him.

The marriage of Meyer and Lena was so good, so wonderful, so mutually satisfying that one almost hesitates to speak of it. They were such a perfect combination. Lena with her keen, Lipsky mind, level headed, wise and practical. Meyer, colorful, volatile, constantly challenged and stimulated with new ideas. And both blessed with a sense of humor which enabled them to laugh at each other, but more often with each other.

How he loved his children, and how they loved him. And how he loved his grandchildren, and how they loved him. This was not the feeling toward a father or grandfather based on a sense of duty, but he was so much fun to be with that they just loved being with him.

As we think of Meyer in decline, as we saw how the frail body could not begin to keep up with the spirit, we can't wish him back. But we can remember him with affection and with profound gratitude. He gave us something as individuals and as a community which was unique and for which we will be eternally thankful. Remembering his feeling of responsibility we, who knew him and cared for him, should carry on where he left off. Because of you.

We lift our hearts in prayer to the God, God of Israel, God of all mankind, the God of the universe, in whom Meyer deeply believed. O God our Father and Friend, we thank Thee for this good man. We thank Thee for the richness and the warmth of his personality, for his usefulness and his helpfulness to his fellow men, for the inspiration that he gave to youth, for the heritage of good works that he has left behind him as an enduring monument. We thank Thee for the love that he gave and for the love that he received. We thank Thee for the nearly threescore years of good companionship with his beloved wife. We thank Thee for his children and theirs who gladdened his life. Help us to the faith that death is not the end. That such goodness, usefulness, love, do not die but live on in other lives better because of them, live on somehow eternally with Thee. Help us with the faith to carry on in his spirit and to continue good works to which he devoted his life. Strengthen us now with the faith of his fathers which sustained him throughout his life and which should strengthen and comfort us now as we contemplate his death.

Mr. CELLER. Mr. Speaker, my friend, Meyer Jacobstein, is dead. That my personal loss is great is understandable, for our friendship endured many, many years, both in and out of Congress. I sought freely and he gave freely to me, of his counsel, of his affection, of his wisdom.

There are those who knew him only and measured him only by the standards of his attainments—as Congressman, as editor and journalist, as educator, as banker, and as economist. He had been elected to the 68th, 69th, and 70th Congresses from March 4, 1923, through March 3, 1929, but did not seek renomination.

Formidable as these achievements may be, they are as nothing when compared to Meyer Jacobstein's depth of heart. Meyer Jacobstein is known as a newsboy Congressman. As a mere lad, who sold newspapers on the corners of the street, he never lost the common touch. He had experienced hardship first-hand and had retained the memory of those days so that to him the qualities of kindness and of mercy bespoke the noblest ideals of man. And these qualities were reflected in everything he said and did—in his political life, in his affiliation with the Government, in his friendships, and as husband and father.

After a day of tension, it was good to be with Meyer. He put things into perspective. His smile was gentle, his voice was gentle, and his soul was gentle. I am poorer and the world is poorer for his passing. I talk of my own sorrow so much because Meyer Jacobstein was a part of my life, a very precious part.

When he left Washington, after his retirement as economic counsel in the Legislative Reference Service of the Library of Congress, I thought then that life had become a little grayer because Meyer was not there to break bread with and to talk with, but we wrote to each other and that was a measure of consolation. Now that he is gone from us, that vacuum is complete.

It is not fashionable these days, I know, to speak of one as "a good man," but I say that Meyer Jacobstein was a good man, possessed of that rare combination of mind and heart. The world has need of men like Meyer. It is my hope that there will be many who will study the story of this man's life and follow the ideals he set for himself and fulfilled. His wife, Lena, his family, and his colleagues, know that story. I hope one day it will be written.

Mr. STRATTON. Mr. Speaker, I was deeply saddened the other day to read of the passing of a distinguished former Member of the House from my State of New York, Dr. Meyer Jacobstein, of Rochester.

Mr. Speaker, for many years Rochester was my home. I can remember very clearly when I was a boy in school that Dr. Jacobstein was one of the distinguished leaders of our community, and was a popular and much-beloved Congressman from our city of Rochester. I can recall very clearly, in fact, as a lad of 10, coming to Washington at Easter time, 1927, for my first visit. My parents and I called on Congressman Jacobstein at that time, since he was a friend of my father, and he arranged for the three of us to visit the White House and to shake hands with President Coolidge. How the demands on the President of the United States have changed since that day.

Many years later, Mr. Speaker, after World War II, I had the great pleasure to become much better acquainted with Congressman Jacobstein, when he was serving as a major consultant with the Legislative Reference Service of the Library of Congress. I found him then, as the distinguished gentleman from New York [Mr. Horton] has already remarked, a most charming, vital, exciting, and stimulating person.

Mr. Speaker, Meyer Jacobstein was one of the men whose personality and intelligence, and sheer capacity for hard work, helped to develop the great city of Rochester into the industrial and cultural center it is today. We who lived in that city will always owe him a deep debt of gratitude. And we are, I believe, wiser and better people today for having had the opportunity to know him. He will long be missed and mourned both here and in New York State.

GENERAL LEAVE TO EXTEND REMARKS

Mr. HORTON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the Record on the passing of Dr. Meyer Jacobstein.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

ACTION NOW ON CUBA

Mr. ROGERS of Florida. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. ROGERS of Florida. Mr. Speaker, the release of 21 Americans from Castro's jails now provides the United States with a clear path for new action to free Cuba. No longer must U.S. policies be based on fear of jeopardizing the safety of Castro's American hostages.

And no longer can the U.S. Government underestimate the growing consensus in America that coexistence with a Cuba dominated by a hostile foreign power will not be tolerated.

The Communist world even now attempts to shift America's attention from Cuba by fomenting anxiety in southeast Asia. For America to fall prey to this tactic would only give Khrushchev another cold war hot spot to turn off and on at will.

As one who has long recommended that this Nation lead the OAS into firm sanctions against Cuba, it is gratifying to me to see support for this approach echoing from responsible places in our Government. It is gratifying and my hope that the release of these American prisoners will now signal an intensified, hard-driving, and comprehensive U.S. program to topple Communist Cuba.

THE DEATH OF THE PRESIDENT OF ISRAEL

Mr. REID of New York. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. REID of New York. Mr. Speaker, I rise to inform the House this morning of a sad event, the death of the President of Israel, Itzhak Ben-Zvi. The President of Israel made, in my opinion, significant contributions to the forging of abiding ties of friendship between Israel and many new and older nations of the free world. He had many friends in this country. He believed strongly in close ties between the United States and Israel. His loss will be much felt in this country and throughout the free world.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. REID of New York. I am happy to yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, I appreciate the fact that the distinguished gentlemen from New York has taken this time for this purpose. I had the honor of visiting the State of Israel while the gentleman was serving as ambassador with great distinction and devotion. No one is better able than he to speak of the life and service of president Itzhak Ben-Zvi. I know we all join with him in an expression of sorrow over the loss of one of the great men of the world. I know I speak for Members on this side as well as the other side of the aisle when I say this. I extend my personal condolences to the family of the late president and to the people of Israel.

Mr. REID of New York. I thank the distinguished majority leader. I should like merely to add that I believe it to be the sense of the Congress that all of us here would like to express our condolences to the people of Israel, to Mrs. Ben-Zvi and to the family on the passing of this statesman and scholar who contributed much to the future of the world.

CALL OF THE HOUSE

Mr. HALL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 21]

Ashley
Betts
Brock
Buckley
Chenoweth
Dent
Fisher
Forrester
Frelinghuysen
Gubser
Hardy
Healey
Hébert
Henderson
King, Calif.
Lennon
Lesinski
Lloyd
Martin, Mass.
Pepper
Pillion
Powell
Purcell
Rivers, S.C.
Roosevelt
Schadeberg
Shelley
Sheppard
Skubitz
Steed
Talcott
Tollefson
Vinson
Walter
Whitten
Widnall
Williams
Wydler

The SPEAKER. On this rollcall, 392 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

HEALTH PROFESSIONS EDUCATIONAL ASSISTANCE ACT OF 1963

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 305, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

> *Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12) to increase the opportunities for training of physicians, dentists, and professional public health personnel, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed three hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Missouri [Mr. Bolling] is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield one-half of that hour to the gentleman from Ohio [Mr. Brown], and pending that, Mr. Speaker, all I will say is that the reading of the resolution makes clear that this is an open rule providing for 3 hours of general debate.

Mr. Speaker, I reserve the balance of my time.

Mr. BROWN of Ohio. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker and Members of the House, as the gentleman from Missouri [Mr. Bolling], a member of the Rules Committee, has explained, this resolution makes in order, under 3 hours of general debate and an open rule, to be followed by the 5-minute rule for consideration of amendments, H.R. 12.

Mr. Speaker, the bill is designed to increase the opportunities for the training of physicians, dentists, and professional public health personnel, and for other purposes, which comes to us from the House Committee on Interstate and Foreign Commerce which, as the Members know, has legislative jurisdiction over all legislative problems and matters dealing with the Public Health Service.

The bill, as I read it and understand it, really consists of two main sections or divisions. One would provide Federal grants to different types of schools in the Public Health Service field for brick and mortar construction either of new buildings or for the reconstruction or expansion and modernization of existing buildings.

This particular provision of the bill would be designed for the purpose of furnishing training based on this consideration, the population and the availability of trained technicians or physicians, pharmacists, optometrists, podiatrists, nurses, dentists, or professional public health personnel in various sections of the country. It provides some $175 million in Federal funds to be granted over a 3-year period for construction purposes. Some of the funds could be furnished on a matching basis of as much as 75 percent to be paid by the Federal Government and 25 percent by the schools or other agencies. In some instances the Federal Government would give 66⅔ percent of the cost of this brick and mortar construction work and in other instances the contribution of the Federal Government by way of grants for construction of these schools and other facilities would be 50 percent, for a total cost, as I said, for the 3-year period, according to the report, of about $175 million.

The other portions of the bill are devoted to establishing, creating or setting up a loan program to furnish loans and financial aid to students who might attend these schools to study medicine, dentistry, pharmacy, and the other related professions in the Public Health Service field; and those loans would cost on the first 3-year basis, according to the report on page 5, something like $30,700,000 or $30,800,000. In addition to that there would be administrative expense over the 3-year period, 1964, 1965, and 1966, of some $1,150,000.

So there are really two questions before the House in connection with this legislation. One is whether or not the House of Representatives and the Congress itself feels that the Government should furnish financial aid for brick and mortar work in the construction of buildings and facilities for medical, dental and pharmaceutical schools as outlined in this bill for a 3-year period. I believe all Members will agree with me, there are very few Members of the House who are naive enough to believe otherwise, that once this legislation is enacted into law 3 years will not see the end of it, but instead at the end of 3 years undoubtedly legislation will be brought before this House to extend the grant of aid for the construction of medical and dental school facilities. That has been the history of all Federal aid programs in the past. That was learned very well I think in connection with the so-called Hill-Burton Act a number of years ago.

A number of years ago at the end of World War II many communities were forced to suspend the construction of hospitals because of a shortage of material and manpower. Bonds had been issued for the construction of these hospitals. Funds had been raised. When the war ended there were not sufficient funds available to finish the hospitals, and a bill was brought in from this same committee. I happened to be a member of it at that time and supported the legislation. It was a bill to give Federal aid on a matching basis to complete the construction of these hospitals which had been interrupted during World War II, $60 million a year, if I remember correctly, for a 3-year program. That was to solve the dilemma of that day, just to finish the construction of the hospitals which had been under construction and underway when the war interfered with their completion. Yet that program still lives, it still is carried on under the Hill-Burton Act, Federal aid or Federal programs for construction of hospitals throughout the land. I am not sure as to the cost this year but it is better than $200 million, if my information is correct, instead of the $60 million a year that we started with; and the end is not in sight.

So I think in considering this legislation as to the need, and seemingly all the testimony indicates that there is a great need for the expansion of the physical facilities of these medical, dental, and other schools of that nature, then the question arises as to whether or not the Congress thinks it is wise to embark upon this new program.

Then the other question revolves around the necessity and the wisdom of keeping in this legislation those sections that deal with the making of loans to students. I would like to remind you, if I may, of several facts.

No. 1. The Congress of the United States in its wisdom through the passage of the Defense Education Act has provided for the granting of Federal loans to college and university students, not quite as much as is provided in this bill but still providing for the Federal Government to contribute 90 percent up to a total of $5,000, I believe, to assist worthy students through the college or university training courses. Those funds are available now under present law.

This bill would increase the amount of loans that could be made to students, and I will agree that the expenses of those that take graduate studies in medical, dental, and pharmaceutical schools could run more than those in other colleges.

But there are other sources. I have here a letter from the officials of the American Medical Association stating the fact that that association does have a program and a loan fund from which it will make loans to any needy student in any of these fields of education that are covered in this bill, to any of them and all of them. The testimony shows, according to the statements of the American Medical Association, that not a single student in any of these schools has dropped out because of the lack of funds or the inability to get the aid they need to complete their education.

It goes further than that. There are other arrangements made for loans to be made to worthy students available at all times. I am rather proud of the fact that the State from which I hail, the State of Ohio, through the enactment of legislation some time ago set up what is called the Ohio Higher Education Assistance Commission, under which the State of Ohio through this commission, legally constituted and properly authorized, will insure and will guarantee loans to students to complete their higher education, not only in schools where medicine, dentistry, pharmacy, or public health service is taught, but in all types of schools.

These are schools for engineering and schools for education and science and where every type of education may be available—not only in the colleges and universities in Ohio but there are provisions for any student if he is a citizen of the State of Ohio to obtain a loan guaranteed by the State of Ohio. That student may attend any accredited college or university or any type of school—medical schools?—yes. Dental schools?—yes. Schools of pharmacy?—yes and others. This applies anywhere in the United States so long as that person is a citizen of Ohio who can meet the rather easy requirements of the laws of our State so that the commission and the State of Ohio itself will put behind that loan to that young man or that young woman the full faith and credit of the State of Ohio. It is the opinion of those who have studied this problem and who must live with it and who must meet it, there is no reason in the world why by the enactment of this bill, and as it is now written and as it is now being considered by the House, that we should set up another and a different loan program for those who may wish to attend these professional schools. Because all their needs and all their requirements can and will be met by other methods that are already established, already available and are just waiting for the students to apply for these loans.

Let me go further if I may. It just does not appeal to me that it makes commonsense to make loans to students to attend schools if you do not have any room for them in the schools. If the Congress is to enact legislation of this type, I think the first responsibility of the Congress is to do the brick and mortar job of furnishing the buildings and the laboratories in which you may give opportunity, to students who desire to do so, to study medicine and dentistry and pharmacy and all these other related professions.

I think it is the first responsibility of the Congress to do that before you begin to make loans. Because, as I said a moment ago, according to the statements that have been furnished to many of us, there has not been a single student now going to any of these institutions of higher learning in these particular fields who has been compelled to stop his or her educational endeavors because of lack of finance. There is plenty of money available in other ways without enacting into law this particular part of the bill to make loans with all the related provisions for forgiveness, and so forth and so on, that are contained in this measure which is rather complicated and rather difficult to administer, put into effect and carry through.

If this bill becomes law and later on, after you construct these new buildings, and after you increase the capacity of our medical, dental, and other professional schools to accommodate and educate more men and women, then if you find that you need these loans, they can be taken care of at that time, instead of doing it in advance of the time when you have room to put the students into college or into training.

It just does not make commonsense to do this particular thing, because it will be here for a long time to come. If this bill becomes law, if it is enacted, it will be with us for a long, long time.

I have made this statement on the floor of the House because I understand there will be amendments offered to strike out the loan provisions of this bill so that the measure may be considered only upon that section. If the loan provisions are stricken it will leave those which deal with the construction of facilities for the use of our medical, chemical, pharmaceutical, or public health training schools, and that is provided for in this bill. Without the loan provision the bill does give a great deal of authority, does provide for the spending of some $175 million in the next 3 fiscal years and, of course, as I said in the beginning it would probably be just the start of a long-range program of Federal aid to this particular phase of our school system.

Mr. Speaker, I reserve the balance of my time.

Mr. BOLLING. Mr. Speaker, I yield such time as he may desire to the gentleman from Oklahoma [Mr. ALBERT].

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may sit during general debate on Thursday next.

Mr. KILBURN. Mr. Speaker, reserving the right to object, I understand there may be some objection to that. Will not the gentleman withdraw his request?

Mr. ALBERT. Mr. Speaker, I withdraw the request.

Mr. BOLLING. Mr. Speaker, I yield 10 minutes to the gentleman from Virginia [Mr. SMITH].

Mr. SMITH of Virginia. Mr. Speaker, I think you have a pretty good idea now what this bill contains. Historically I might say that there was a larger bill of the same type before the Rules Committee last year and it was favorably reported to the House but not called up. The committee this year I think has very wisely circumscribed the program by reducing it to a 3-year program and reducing the amount. If there is any good reason for Federal aid to education I believe medicine would be the prime field in which it might be used, and I expect to support the bill so far as the construction provisions are concerned.

I have grave doubts about part 3 of the bill which provides for student loans. I do not think it is necessary. I say that for several reasons. In the first place, I wonder if anybody here knows the medical school situation in the United States? There is not a medical school that does not have more applicants able to pay for their education than they have facilities in which to teach them. That situation prevails all over the Nation. There is an ample number of students who by one reason or another are willing, ready, and financially able to take the medical course. I do not think anyone is denied because of lack of funds; they are denied taking the medical course because of lack of facilities in the medical colleges.

What I want to talk about a little is in connection with this whole subject of Federal aid to higher education and, particularly, I want to talk about the muddle in which it now is.

I wonder if there is any Member of this House, unless it is a member of the Committee on Education and Labor, who can tell you now, within a hundred million dollars, what we are spending in the Federal Government for aid to higher education.

I am going to tell you out of the horse's mouth, because the Committee on Education and Labor itself has for a long time been disturbed about the wild scattering of the functions of Federal aid to education throughout every agency of the Government of the United States.

In the pursuit of their efforts to solve that problem and bring some order out of this chaos, in which the whole educational program now exists, it made a study last year. So it is not up to date. It is in the form of a committee print, and it is called A Directory of Federally Financed Student Loans. It discloses that in 1959, which was the last available appropriations data, the Congress had appropriated—you people here—and the agencies of the Government had spent for aid—not to build colleges, not to build schools, not to furnish facilities and laboratories, but had spent for Federal aid to higher education, in the form of student aid—the sum of $2,413,186,000. Three years ago you were spending that amount for aid to education.

Where were you spending it? Through the Department of Education? Were you spending it under the supervision of any particular agency? No. That $2,413,186,000 in 1959 was spent by 20 different agencies of the Federal Government. Twenty different agencies of the Federal Government had their fingers in the pie. Some had all their fingers in the pie and some only a little finger in.

The Department of Health, Education, and Welfare alone spent on higher education in that year $737 million, which was the largest amount.

Then it goes on down and includes the 20 agencies I have referred to.

Why pour more money into what I think has become a rathole by reason of the divergency and the other chaos in which this whole problem is now? No Member of Congress can find out where a boy can get an education, because there are 20 agencies of the Government through which it is scattered. There are agencies of the Government even now that are dealing in the medical education field. The Navy Department, for instance, has a Bureau of Medicine and Surgery. That department in that year educated or started on their way 679 students at an expense of $2,850,000.

Take the Veterans' Administration. They have got a Department of Medicine and Surgery, and that department had 18,300 students. Now, that is a whole lot more than this whole program would amount to, 18,300, and they spent $17,277,000.

Now, you go all the way through the list of these 20 agencies and you will find somewhere in them that they are doing something in the nature of Federal aid to higher education. And, I am not talking about anything but the pupils. Here is $2,413,000,000 that went to higher education in the form of student aid.

Now, when are you going to get some common sense into this thing? The very committee that has jurisdiction over it, that this Congress gave jurisdiction to, the Committee on Education and Labor, has become so thoroughly confused that they have made this study. They issued this report last year. They have just recently issued another one four times as big on the same subject that I have not had the opportunity to examine. So, I would say that any Federal aid to higher student education might well be deferred until we take some means or some measures to lead ourselves out of this morass in which we are now immersed with practically every agency of the Federal Government dealing with the subject of higher education and put it all under one head, where it belongs, so that we will know what we are doing about it. For that reason I think we could well dispense with aid to medical students and devote our efforts to building up the college facilities that are needed to accommodate the medical students already knocking at the door.

The SPEAKER pro tempore. The time of the gentleman from Virginia has expired.

Mr. BOLLING. Mr. Speaker, I yield such time as he may consume to the gentleman from New Jersey [Mr. THOMPSON].

Mr. THOMPSON of New Jersey. Mr. Speaker, my attention has been called to an excellent editorial entitled "Root of Opposition," by John McCormally, executive editor of the Hutchinson News, Hutchinson, Kans., which first appeared in that paper in September 1962. I have learned that this editorial has subsequently been made available in pamphlet form by the Federal relations division of the National Education Association. This pamphlet has been the subject of a series of attacks by Fulton Lewis, Jr., and other extreme rightwing spokesmen.

Mr. McCormally's thesis is that the schools have been caught in the age-old economic battle between the few who control great wealth and those who seek better educational opportunities for the children of this Nation. As Mr. McCormally says:

> It is not popular, or even polite, to describe (the battle) in these terms—

But the fact remains that there is, with notable exceptions, a great deal of truth to his contentions.

Those who testify for Federal aid to education year after year are those who represent the blue and white collar workers, the family farmers, the great majority of the average or low income members of our society. AFL–CIO, National Farmers Union, civic and social welfare organizations such as the National Council of Jewish Women, the National Congress of Parents and Teachers, join with the great educational organizations in urging the Congress to provide assistance to the States and local communities to improve educational opportunities. Conversely, the chamber of commerce, the National Association of Manufacturers, the Farm

Bureau, and other representatives of corporate industry and agriculture oppose—and thus far successfully—the proper Federal sharing of the cost of educating the Nation's citizens. The battle is indeed one between those representing wealth and those representing the rank and file citizens.

The fact that other issues of religion, race and States rights have more emotional appeal has been cleverly exploited by those who do not believe in the American dream of availability of quality education for every individual, limited only by his capacity to learn. The forces opposing Federal aid are all too often the same forces who oppose local school taxes, and who oppose increased State taxes for the support of education. The cynicism of those who preach piously against Federal aid on the phoney appeal to fear of Federal control is appalling. The practice of casting the Federal Government in the role of an evil monster attempting to destroy the freedom of its citizens is a travesty in light of our constitutional heritage. Ever since the failure of the Confederation and the adoption of our Constitution we have sought to develop and advance as one Nation, indivisible, with liberty and justice for all. It is ironic that some self appointed patriots mouth the inspiring phrases of our Pledge of Allegiance as an opening exercise preceding an attack on our Federal system—and those who are dedicated to its preservation.

I urge my colleagues to read Mr. McCormally's editorial for themselves. He has used blunt, strong, and in some instances bitter words to describe an impolite truth—that money is at the root of opposition to Federal aid to education. The editorial follows:

The Root of Opposition

Young America will go back to school this month against a background of loud and bitter bickering over the future of its schools.

The fight over Federal aid to education is, on the surface, a political fight, with spicy dashes of racial prejudice and religious bitterness thrown in.

But under the surface, in reality, it is an economic battle—one of the oldest and hardest fought in this country. It falls in the classic pattern of historic battles between the haves and have-nots, between those who control the wealth of the land and those who make up its masses.

It is not popular—or even polite—to describe it in these terms. We are all brainwashed from childhood to pretend that the United States has no classes or masses, no sharp and fundamental disagreement between its have minority and have-not majority.

We are all supposed to be of a mold—good, pert, freshly scrubbed Americans, believing that capitalism and free enterprise came down to us on stone tablets from the mountain and that democracy was devised by angels.

But the truth of the matter is that the minority, who are the elite financially and culturally, do not trust democracy very far. They tremble—and with good reason—at what would happen to their wealth and position if the masses ever really could bring the vote of the majority into full play. And they have spent the better part of 200 years devising little ploys (such as the House Rules Committee) to thwart the will of the majority, all the while paying lip service to the word "democracy."

And on the other hand, the majority, while it admits to something patriotic in the word "capitalism," particularly since it has become an antonym of "communism," nevertheless exerts most of its political energy—and has been doing so since the last century—controlling, curtailing, and transforming capitalism into some forms and stages of socialism.

The first and greatest of these social programs—of channeling the wealth of the Nation to the benefit of the masses—is the public school system.

But free public education (radical as the idea was and still is to some untainted patriots), was for a long time no great economic threat. As long as it remained local, it could be controlled. The masses might fill the schools with their children; but the community leaders—its business and professional men—those concerned with preserving the community's wealth, controlled the schools. And they kept them inexpensive.

This meant keeping them, in most cases, inadequate and crowded, with vastly underpaid and sadly undereducated and uninspired teachers. But it was cheap.

But education feeds upon itself. Two generations ago, when utterly uneducated parents sent their children to school they were amazed, overjoyed, and endlessly grateful for the one-room building and $30 teachers which the local landowners in their magnanimity had provided them.

A generation ago more parents had been through high school and some had been to college and they began to insist, for their children, on fireproof buildings and teachers with degrees and public high schools big enough for everyone.

Now this generation, with vastly improved tastes, wants, in addition, pastel walls and multipurpose rooms, and foreign language and exceptional child programs, and teachers with two degrees, and public colleges big enough for everyone. And this is anything but cheap. So the fight has developed and grown * * * a fight between the people with the wealth and the people with the kids. And each time wealth won—each time it dug in its heels and threw up a line against more spending, the parents (ably commanded by professional educators) simply went around the end and started the fight all over again, in a larger arena.

When district funds no longer sufficed because some districts were so poor in property and rich in children, the fight was made for county funds—for funneling wealth from the rich districts into the poor ones. And the next move was for the State funds—for funneling the wealth from the rich counties into the poor ones. And now the battle is for Federal funds—for funneling the wealth from the rich States into the poor ones.

But the change is more than geographic, more than just a move to larger taxing bases. The method of taxation changed too. The school district is limited to taxing real estate, no longer necessarily a true measure of wealth. But State and Nation, with their sales and income taxes, are in a much better position to stick the rich.

* * * * *

Familiar cries of combat warn of the dangers of Federal control; although numbers increase who refuse to be terrified of their own Government.

The real battle involves no such principles. It is simply, unglamorously, a matter of money.

The great mass of American people, whose children fill the schools, want more money spent on education—on teachers and facilities and subject matter which they believe, rightly or wrongly, will mean better, richer futures.

Once public education has been made as much a Federal responsibility as national defense or national highways, more money than was ever dreamed of will be spent on it. More than ever of the Nation's wealth will be taken from those who possess it and spent on the education of the Nation's children.

That harsh, impolite economic truth is at the root of the opposition to Federal aid to schools.

Mr. BOLLING. Mr. Speaker, I yield 8 minutes to the gentleman from Indiana [Mr. Madden].

Mr. MADDEN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. MADDEN. Mr. Speaker, the gentleman from Ohio, [Mr. Brown] and the gentleman from Virginia [Mr. Smith], covered different aspects of the bill which I will not take the time of the Members in discussing, but I was more or less interested in the statement that we should build the hospitals and postpone this critical situation that exists in regard to providing doctors and teachers and surgeons and internes and nurses and that we will get them in some mysterious way after the hospitals are constructed.

The pending bill, H.R. 12, will help greatly toward relieving the critical shortage of physicians, dentists, nurses, and professional health personnel which has been existing in our Nation for a number of years. As each year passes, the number of doctors, dentists, and nurses decreases in percentage to the health demands of an exploding population.

This bill authorizes an appropriation for 3 fiscal years beginning June 30, 1963, of $237 million for medical school building construction and also loans for the education of qualified medical students, nurses, and so forth. A substantial amount will be authorized for the training of physicians, pharmacists, dentists, nurses, and other professional health personnel. It also provides $35 million for the replacement and rehabilitation of existing teaching facilities for the medical and dental professions.

This legislation provides much needed financial assistance to qualified students who are unable to finance the long years necessary to procure a complete and practical medical education. Evidence was presented before the Committee on Interstate and Foreign Commerce that the period of time after graduation from high school requires a student to take 4 years of college, 4 years of medical school, 1 year of internship and 2 or 3 years of residency, involving a total cost for a medical education which is in excess of $20 thousand. In the past 10 years, there has been a sharp increase in the number of college graduates, but a sharp decrease of applicants to medical and dental schools. One of the main facts contributing to the scarcity of medical and dental graduates has been the long and increasing cost of training and the fact that highly qualified college graduates can step into more remunerative careers in scientific, business, and other fields. This legislation provides a reliable loan program to qualified and acceptable students to enter the medical and dental fields. This money can be paid back on a reasonable basis beginning 3 years after they have qualified as doctors, dentists, and in other medical fields.

Several weeks ago, the U.S. News & World Report had a three-page article calling the Nation's attention to the shortage of doctors throughout the Nation and sounding the alarm that something drastic must be done to meet the challenge of the present and the future. Dr. Luther L. Terry, U.S. Surgeon General, told a congressional committee in February, "over the past 10 years the output of our medical schools has lagged behind the population growth." Dr. Terry noted that adequate medical care takes about 1 physician for every 1,000 persons. Yet in 1960, more than two-thirds of the 3,101 counties in the United States had only 1 physician for every 2,000 or more.

One sign of the shortage is the large scale use of graduates from foreign medical schools as "house doctors," residents and interns, in U.S. hospitals. Out of the 38,000 such posts occupied, about 9,000 are filled by men trained outside the United States. To put it another way, more than 1 out of 4 resident doctors and almost 1 out of 6 interns in American hospitals is a graduate of a foreign medical school. And even so, there are thousands of internships and residencies unfilled.

Russell A. Nelson, M.D., president of Johns Hopkins Hospital in Baltimore, recently told a congressional committee hearing:

> On the whole, it is my opinion that foreign educated physicians are not as good practitioners as the American school graduates, and I personally would like to see more American young men and women practicing medicine in this country.

The Federal Government has concluded that U.S. medical schools must turn out at least 11,000 new physicians a year by 1973 to keep pace with the expected population growth. That would require, according to Government figures, a 50-percent increase in medical student graduating classes for the next 10 years. The equivalent of some 35 new medical schools would have to be built, staffed, equipped and put into operation within a period of 72 months to achieve this goal.

In the industrial Calumet region of Indiana which comprises the First Indiana Congressional District, there exists a critical shortage of doctors engaged in the general practice of medicine. Doctors of recognized standing in the medical profession are able to administer to but a small percentage of the patients requesting their services. This industrial area has increased in population from 340,000 in 1942 to almost 600,000 in 1962. The increase of doctors does not come close to the population expansion.

Immediately after World War II, my office was bombarded with letters from students and returning veterans complaining that their applications for admission to medical colleges were rejected because of lack of medical educational facilities. Upon investigation, I found that the medical school at Indiana University in 1947 could only accept about 150 medical students out of almost 3,000 applicants. Today the American public is paying the penalty for the failure of our Government during the last 20 years to do something about the physician, nurse, and hospital shortage.

During these years, I supported legislation in Congress which, if enacted into law, would have helped to solve the doctor and hospital crisis with which we are confronted today. This necessary legislation was defeated by the powerful highly financed lobby of the leaders of the American Medical Association. In the 1952 congressional campaign, the brass hats of this well-disciplined medical union marshaled their money and propaganda in an unsuccessful effort to bring about my defeat. These high-powered medical politicians of the AMA discovered that the majority of doctors in my congressional district were not misled and realized that something must be done to keep pace with the medical and hospital demands of our rapidly growing population. The vast majority of doctors in my district are rejecting the AMA leaders and are favorable to legislation that will solve the doctor and hospital shortage. They realize that each passing year, medical services are rapidly receding behind the population growth.

Every session of Congress, powerful lobbies are in Washington, pressing for legislation to help the farmer, big and small business, oil, mineral interests, et cetra, but the millions of people who need ample medical care cannot afford the powerful lobby representation.

We have thousands of working families in the Calumet region of Indiana who need proper medical care, but suffer on account of the scarcity of general practitioners in the medical profession.

The thousands of qualified students without finances to become doctors have no lobbies in Washington to aid them in securing financial loans to establish themselves in the medical profession and contribute toward relieving this crisis in doctors and hospitals.

A letter arrived in my office yesterday from F. J. L. Blasingame, M.D., executive vice president of the American Medical Association, stating that the association endorses the provision in H.R. 12—the pending bill—which provides for money to aid in hospital construction, expansion, and so forth, but is opposed to the provision providing for the loan program to aid students in securing a medical education. No doubt that decision was made by a small committee of AMA leaders without consulting the rank and file doctor, nurse, and intern throughout the Nation.

One of the great difficulties with hospitals in my area and throughout the Nation is to secure proper medical personnel and qualified help to man the hospitals. That is the reason why such a great percentage of foreign doctors of questionable talents and professional ability are today taking over hospital duties in this country, for which service most of them are unqualified. Our Immigration and Naturalization Service is bombarded with requests from foreign doctors and interns who come to this country as students, to remain and help relieve the doctor and intern shortage in our hospitals.

The few leaders of the AMA who make these decisions should consult some of the doctors and hospital personnel who are struggling with this burden of medical scarcity.

Mr. Speaker, I wish to include with my remarks, a letter which I received from Dr. Myron E. Wegman, dean of the University of Michigan School of Public Health, endorsing this legislation and also a letter from Dr. Gerald D. Timmons, president of the American Dental Association, who endorsed this legislation in testifying before the Committee on Interstate and Foreign Commerce.

I do hope that H.R. 12 will pass this House without changes by an overwhelming vote.

The University of Michigan,
School of Public Health,
Ann Arbor, Mich., April 17, 1963.

Hon. Ray J. Madden,
House Office Building,
Washington, D.C.

Dear Congressman Madden: As president of the Association of Schools of Public Health, I have been asked by our association to express to the membership of the Rules Committee of the House of Representatives our warm appreciation of their action in clearing the Health Professions Act, H.R. 12, for consideration by the House. Our association is mindful of the fact that each of the 12 schools of public health in the country must in fact be a national school preparing trained personnel for increasingly complex public health programs. The Federal Government has generously recognized this fact in its support of general and specific teaching programs in schools of public health and, if H.R. 12 is passed, will be in position to assist in providing vitally needed physical facilities to care for the growing student load.

Schools of public health are not, of course, affected by the student loan provisions of H.R. 12 but it is precisely our own very favorable experience with a Federal aid program for professional students in public health that makes us endorse wholeheartedly Federal assistance to medical students. Our constant concern for provision of adequate medical care to the population convinces us that the sections on student aid in H.R. 12 are sound and urgently needed.

In thanking you for your action in sending this bill to the floor of the House, may I respectfully bespeak your support of the bill in the House debate and vote.

Very sincerely yours,
Myron E. Wegman, M.D.,
Dean.

American Dental Association,
Washington, D.C., April 22, 1963.

Members, U.S. House of Representatives,
Washington, D.C.

Dear Congressmen: In view of recent events, I wish to confirm to you the American Dental Association's support of H.R. 12, the Health Professions Educational Assistance Act of 1963, as reported by the Committee on Interstate and Foreign Commerce.

The position of this association has not changed in any way since February 6, 1963, when our president-elect, Dr. James P. Hollers, of San Antonio, Tex., appeared before the committee in support of H.R. 12.

As Dr. Hollers testified, we believe H.R. 12 is well conceived and critically needed health legislation.

In dentistry, there is a well-documented need for construction grants and for a student loan program if we are to have sufficient professional manpower to meet the dental care needs of the people of this country in the years to come.

We hope, therefore, that you will support all provisions of H.R. 12 as they relate to dentistry and that you will oppose any amendments that would eliminate dental students from any part of the program contained in H.R. 12.

The American Dental Association appreciates your interest in sound programs to improve health care in this country.

Sincerely yours,

GERALD D. TIMMONS, D.D.S.,

President.

Mr. BOLLING. Mr. Speaker, I yield such time as he may desire to the gentleman from Florida [Mr. BENNETT].

Mr. BENNETT of Florida. Mr. Speaker, the committee, I believe, has done excellent work in pointing up the urgent need for increased numbers of doctors and health personnel in this country, so I will not add to the many statistics that have already demonstrated this ever-growing problem. I would, however, like to add that, in my work on the Armed Services Committee, it has been apparent for some time that this national problem also affects our military mission in that procurement of adequate doctors for the services has become very difficult. It was to alleviate this difficulty that I introduced H.R. 67 in the 84th Congress to provide for Armed Forces medical scholarships. However, if the capacity of medical schools is not increased, benefits from a scholarship program are very limited. The very security of our country therefore requires that we tackle the whole problem as soon as possible.

The approach of H.R. 12, the chairman's bill, H.R. 180, my own bill, and other identical proposals is doubly helpful, I believe, in that the smaller, less affluent, medical schools can greatly increase their capacity. These schools in many cases may be persuaded to concentrate on preparing graduates for practice in rural and semirural areas where the need is most critical. However, it takes time to bring about an increase in doctors, even if we act quickly to provide Federal assistance. The Association of American Medical Colleges points out that it takes 6 to 10 years to develop a medical school and 5 to 9 years after college to complete a medical education. In spite of this they warn that 3,500 additional physicians will be needed each year by 1975.

I want to commend the committee on their early attention to this urgent problem in this Congress. I am in hopes that our other colleagues will join also in securing this Federal assistance that should no longer be delayed.

Mr. BROWN of Ohio. Mr. Speaker, I yield 3 minutes to the gentleman from Nebraska [Mr. CUNNINGHAM].

Mr. CUNNINGHAM. Mr. Speaker, the gentleman from Indiana referred to an article in U.S. News & World Report, which I have before me. I wish he had pointed out the conclusion that has been reached by the authors as stated in the article, to the effect that research is luring too many medical men from the goal of everyday practice.

The reason we have this bill before us today is that people feel we need more doctors, but the facts are that of all the doctors that are graduated only 21 percent go into general practice, as contained in this summary in U.S. News & World Report. The rest of them go into specialties, in psychiatry and surgery and into research. The more we put into research the more the doctors are going into research. That is the reason we do not have practicing physicians in the various communities throughout the country.

Mr. MADDEN. Mr. Speaker, will the gentleman yield?

Mr. CUNNINGHAM. I yield to the gentleman from Indiana.

Mr. MADDEN. The gentleman failed to mention that the percentage to which he called attention does not include surgeons and does not include specialists, who are necessary, too.

Mr. CUNNINGHAM. I just mentioned, if the gentleman was listening, that I did include psychiatrists and the specialties but this does not meet the real problem in getting the family-type doctors, and only 21 percent of the graduates are going into that field. This legislation will not solve that problem.

Mr. BOLLING. Mr. Speaker, I yield such time as he may desire to the gentleman from Arizona [Mr. UDALL].

Mr. UDALL. Mr. Speaker, this is a good bill, important to the Nation and especially important to Arizona. The rule should be adopted and the bill should pass.

Our State, in the fastest growing part of the Nation, doubled its population between 1950 and 1960. Rapid growth will continue in the foreseeable future. Yet Arizona has no medical school.

Studies have shown a substantial inmigration of physicians. But the number has been insufficient to maintain the State's physician-to-population ratio. Arizona already compares unfavorably with the national average.

We have an interstate compact program for helping train Arizonians—in institutions located in other States—in the fields of medicine, dentistry and veterinary. The program has worked well as far as it goes. But Arizona is ready to do more to encourage young people to enter medicine and thus to help this Nation maintain its high medical standard.

Some years ago Arizona asked a panel of the Nation's leading medical educators to make a study and determine whether the State needed a medical school and where that school should be established. After a thorough study the committee advised that a medical school should be established at the University of Arizona in Tucson.

There followed an unfortunate intrastate controversy over the school's location. Fortunately, that controversy has been resolved, thanks largely to the statesmanship of certain State legislators and the wise and tempering counsel of the Arizona Republic, of Phoenix, the State's largest newspaper.

The problem facing Arizona today is not whether or where a medical school should be established—those decisions have been made—but how to meet this heavy financial burden. I am sure my State is not unique. What is true in Arizona is true in other rapidly growing States of the West. It is likewise true, I am sure, in the populous States of the East. State property taxpayers are carrying burdens which cannot be substantially increased. The passage of H.R. 12 will not solve all of these problems, either in Arizona or other States, but it will be a big help at a time of maximum need. It may well help my State to establish a medical school earlier than would otherwise be possible.

I think H.R. 12 is one of the important and significant pieces of new legislation to come before the 88th Congress, and I urge its passage.

Mr. BOLLING. Mr. Speaker, I yield the balance of the time on this side to the gentleman from California [Mr. SISK].

Mr. SISK. Mr. Speaker, first let me say that I am in support of this bill. I am supporting the bill as it was brought out of the committee by the very fine Committee on Interstate and Foreign Commerce.

I should like to direct my brief remarks to the situation which was brought to our attention a little while ago by my good friend and colleague from Ohio [Mr. BROWN], regarding the sudden change of position, apparently, of the American Medical Association. Upon examination of the testimony before the Committee on Interstate and Foreign Commerce, which I am sure will be touched on later, it will be noted that at no time did they take the position that today, all of a sudden, they are taking. Because of this feeling, Mr. Speaker, I feel so deeply the disservice sought to be worked on the American people that I cannot refrain at this time from expressing my abhorrence of this new attack by the hierarchy of the American Medical Association upon the efforts of Congress to provide better medical care in the United States.

The "high priesthood of medicine," which I know does not speak for the hardworking, dedicated doctors of my district or yours, finally has shown its true purpose, a design not only to completely control the practice of medicine, but even to keep its iron grip upon admission to medical practice, to so tighten the purse strings on medical education as to make it impossible for the student without large family finances to attend medical school unless he can obtain a loan from the American Medical Association. Thus, this ruling hierarchy not only would control admission to practice of medicine, but would be in a position to retain financial control of the doctors through long periods of loan repayment, and, judging by the ruthless tactics exhibited in the past, would not hesitate to keep these men in line through the years by threat of financial squeeze added to its present weapon of professional ostracism.

I think it is time we recognize our duty to free our doctors from the shackles of this power-hungry little group of medical politicians and offer an opportunity to them to rescue their professional society and restore it to democratic control. I think your doctor and mine and the future doctors in the United States do not and will not approve a reversion to the Dark Ages of healing and an effort to block medical education advances just as the witch doctors and high priests sought by fear, religious mystery, and threats to block the first advances toward modern medicine.

We must not today permit this tightly controlled, rule-or-ruin clique to gain complete mastery of our deserving, qualified, but poor medical student.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. BROWN of Ohio. The gentleman mentioned my name. The gentleman does not question that the statement I made as to what the American Medical Association said is correct; does he?

Mr. SISK. The gentleman from Ohio is exactly right. I have a copy of the identical letter myself. I am not questioning the gentleman but I am questioning the American Medical Association's activities and statements that are distortions of facts.

Mr. BROWN of Ohio. The gentleman from California may question them but do not question me.

Mr. SISK. I want to assure the gentleman, I am not questioning him.

Now I realize, Mr. Speaker, that these charges against the hierarchy of the American Medical Association may sound grave, but the facts are, this very small group of men is attempting to rule and to dominate the medical profession throughout this country.

I would like to call your attention to some experiences I had as a member of another committee a few years ago regarding the tactics of the American Medical Association, when they distributed, somewhat surreptitiously, to key doctors in districts throughout the United States a questionnaire, a questionnaire for which under questioning by me before a committee, they denied responsibility at the time. However, 5 days later they changed their position and admitted they issued this questionnaire. I might say I received this questionnaire from a doctor in the State of Nebraska, but it was distributed throughout all the congressional districts of the United States. Let me read you some of the questions that they were asking:

> 1. Who is the person or persons in each ward or county in the congressional district who is most influential with the Congressman? List names, addresses, and business or profession of each.
>
> 2. Who is the physician who knows and can work with each of the above?
>
> 3. Who are the four or five men in the Congressman's district who really influence him? List their names, addresses, and business or profession.
>
> 4. Who are the principal contributors to his campaign?

Mind you, these are questions which the American Medical hierarchy here in the Nation's Capital were directing to certain key doctors throughout the country to provide them with information to bring pressure on individual Members of the Congress. I charged the American Medical Association with this and I received a letter 4 or 5 days later which finally admitted they were sending out this type of communication.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. SISK. I am glad to yield to the distinguished majority leader.

Mr. ALBERT. The gentleman earlier referred to a letter from the American Medical Association and has made reference to a loan program which they describe in the letter. Does the gentleman know who controls this loan program and who determines how much goes to the various colleges and who passes on the individual loans? Can the gentleman enlighten the House with reference to these questions?

Mr. SISK. It is my understanding that this loan program is completely under the control of the American Medical Association; and, further, that it actually is an underwriting procedure in which these students will pay somewhere from 6 to 8 percent interest on these loans. In addition, I might say that the testimony before the committee by certain representatives of the American Medical Association, as I understand it, indicates that every time a student makes application anywhere in the United States for admission to a medical school they know within a matter of hours; a copy of that admission request is filed with the association.

What right has the little clique of medical politicians to control rigidly, as they are doing today, through devious methods, the admission of young men and women across this country to the practice of medicine?

It is evident they are opposing the loan program in this bill and blandly seeking to substitute a loan scheme they can rigidly control in a power grab without precedent, even in their own sorry history. They are seeking even more power than they now possess—not for the hardworking, dedicated grassroots doctors across the country, but for the group that already dominates them. They are seeking a professional closed shop, literally from the high school to the grave, manipulated by medical politicians who dominate from the top.

Let me continue with some of these questions they are using to bring pressure upon Members of Congress:

> 5. What contacts does the medical profession have with officers or leaders of such organizations as Blue Cross-Blue Shield, dentists, hospital boards of directors, chambers of commerce, Farm Bureau and Grange? Who are the doctors who can talk to these leaders?
>
> 6. Who is the Congressman's personal physician? At home? In Washington?
>
> 7. What contacts does the medical profession have or who knows the Congressman's top secretariat on his Washington staff?
>
> 8. What are the Congressman's hobbies? Favorite charity? Boards, organizations, church?
>
> 9. What newspapers in the district supported him in his last campaign? What is their present attitude toward him?
>
> 10. What contacts does the medical profession have with any or all of these newspapers? Either directly with the editors or through other influential citizens or advertisers?
>
> 11. How big a factor is labor in the district?
>
> 12. Do any of the local labor organizations deviate from the national labor organizations and for what reasons?
>
> 13. How big a factor are old folks in the district?
>
> 14. What contacts has organized medicine or individual physicians made with the Congressman?
>
> 15. What was his general attitude?

To verify that the American Medical Association put this questionnaire out after they originally denied it, somewhat red-facedly, they came back with a letter to me in which the doctor who at that time was the chairman of their legislative committee made the following statement:

> In my testimony before the Veterans' Affairs Committee on July 24, you requested further information relative to a questionnaire concerning Congressmen. I am advised that this questionnaire was used in connection with the association's efforts to defeat H.R. 9467, 85th Congress. This bill as you know is a proposed amendment to title II of the Social Security Act to provide health benefits to eligible recipients. The American Medical Association, together with several other organizations, is deeply disturbed about the impact of this bill, if enacted, on the public and the profession. We have therefore made every proper effort to prevent the adoption of what we consider to be dangerous and ill-conceived legislation.
>
> It has been the objective of the association to inform Congressmen and those individuals on whom they may depend for advice and guidance of the serious nature of this bill. It is vital in our opinion that the public and the Congress be aware of the extremely unfavorable potentialities of the bill. The questionnaire was designed to ascertain the most constructive means and effective avenues by which our position on this legislation and the reasons for this position could be made known to Members of Congress.

I want to again emphasize that my remarks are not directed against the medical profession as such, nor against the many individual doctors I know will secretly agree with these remarks. I am talking about the activities of a little, dominating group, who were responsible for probing into your private life in the questionnaire just quoted in full in an effort to tighten their clutch on the Nation's medical services and, in truth, to intervene in and destroy the very doctor-patient relationship they pretend to protect.

It is to my mind a very happy fact that this medical hierarchy has not succeeded in stilling the voices of some members of the profession, and notable among them are medical educators who are strongly backing this bill and its loan provisions.

Listen to what Dr. Clayton G. Loosli, dean of the School of Medicine of the University of Southern California writes:

> I strongly urge you to support this legislation as a means of securing and improving the health of our citizens.

And Dr. R. W. McNulty, dean of the School of Dentistry of the same university writes:

> We are losing well-qualified applicants because of their lack of funds and we feel that the loan aspect of the bill is also important.

Dr. Robert Ward of the Childrens Hospital of Los Angeles writes:

> As I see it, the provision of funds for teaching, library, research, and hospital facilities, as well as long term, low interest loans to medical students, is vitally important to medical education in this country, and as such would directly influence the health of the Nation.

The American Dental Association has this view:

> We hope, therefore, that you will support all provisions of H.R. 12 as they relate to dentistry and that you will oppose any amendments that would eliminate dental students from any part of the program contained in H.R. 12.

I have taken the floor today to speak out, perhaps with some political peril to myself, against what I consider to be a most disturbing and dangerous threat to the American medical system, a constantly enlarging effort of the few to dominate the many, a rule or ruin policy seeking to make complete captives of all doctors, from the inception of their medical education to the end of their professional lives. It is time we gave doctors a chance to recapture their own society, their freedom of professional action, and the dignity they richly deserve.

I hope you will adopt the rule, and, in light of the facts and background as I see them and as I have outlined them, I hope you will vote this bill out without amendment.

The SPEAKER. The time of the gentleman from California has expired.

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. HARRIS. Mr. Speaker, first I would like to ask unanimous consent that I may extend the remarks I intend to make in the Committee of the Whole and that I may include therein letters and other extraneous matter that will be referred to.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12) to increase the opportunities for training of physicians, dentists, and professional public health personnel, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 12 with Mr. KEOGH in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. HARRIS. Mr. Chairman, I yield myself 30 minutes.

Mr. Chairman, it is my very great pleasure today, at the direction of the Committee on Interstate and Foreign Commerce to bring to the floor of the House a bill which I consider to be the most important health bill which the membership of this House will have had an opportunity to consider in many years.

I hope you will let me explain to you why I feel this way. If the membership of the House will only let the facts speak for themselves, Mr. Chairman, I am certain that an overwhelming majority will agree with me and will support this legislation.

First, let me ask you to keep in mind that this is a health bill. It has already been stated on the floor of the House that this bill should be considered as a Federal aid to education bill. If you will keep in mind the distinction between health and education in connection with this legislation, I believe it will help to clarify some of our thinking.

This is a health bill. It is just as much a health bill as hospital bills are. It is just as much a health bill as research programs are, as the quarantine programs that started in 1798 and other health bills through the years. This is the very important problem that I urge you to keep in mind, because the major difference would be that education bills go to the Commissioner of Education for administration. This is a health bill and it should go to the Surgeon General since those people are experienced and knowledgeable in the field of health. I ask you to keep that distinction in mind. If you will, we will not have nearly the trouble that some have indicated we might have with this legislation.

In the 79th Congress, 1945–46, the Congress began to take a very active interest in programs aimed at providing improved health services for the American people, both quantitatively and qualitatively.

In 1946 Congress completed and passed the Hill-Burton hospital construction program and the Mental Health Act, two of the most important programs to safeguard the health of the people.

Then there followed in quick succession in 1948 the National Heart Act and the National Dental Research Act. Who among us has ever questioned either the need for these two programs? Then, in 1950, we saw important health legislation relating to research on arthritis, rheumatism, multiple sclerosis, cerebral palsy, epilepsy, polio, blindness, leprosy, and other major diseases. These enactments laid a broad foundation for subsequent legislation in the public health field. But, broad as these laws were, note one thing, they have failed up until now to provide the additional facilities for the training of personnel, doctors, dentists, and professional public health personnel. Now, I do not have to remind you how our population has increased in recent years, but I do remind you that we have not provided the personnel to keep up with it. Thus, from 1946 to the present time the Congress has provided programs for hospitals, research, research facilities, research training, vaccination programs, community health services, community health facilities, but we have not taken account of the fact that our evergrowing population on the one hand and our increased medical knowledge and enlarged medical facilities on the other have greatly outdistanced the available supply of professional health personnel, that is, medical doctors, dentists, and so forth.

Research alone, Mr. Chairman, cannot cure people. Hospitals and other health facilities alone cannot cure sick people. Robot machines and computers designed to supply health services are not in existence as yet. And, I doubt seriously that they ever will be. For the time being and for the foreseeable future, therefore, we shall have to rely on professional health personnel to render professional health services.

Now, how does one go about increasing the supply of professional health personnel? Have you thought about that? Have you ever stopped to think about that at all? Where is the bottleneck that keeps us from increasing the supply of doctors, dentists, and so forth? There was no dispute in regard to this program at all in the course of the hearings that we held. The bottleneck is to be found in the inadequacy of present facilities in which our doctors and dentists are trained. I refer you to the hearings conducted in the 87th Congress and again in the 88th Congress which are available and which are replete with information substantiating the facts. These two hearing records support the claim as to the need for this program.

Mr. Chairman, our committee wrote this legislation to meet the need that we think exists at this time and we reported this bill out of the committee by a vote of 21 to 1. This is no partisan program at all. Our committee does not work on that basis. Some people who studied the problem have proposed in all seriousness the establishment of Federal medical and dental schools. Those who raise questions and are fearful of socialized medicine had better keep this in mind. These people thought the need for additional professional health personnel just as urgent as our need for professionally trained soldiers, sailors, and aviators. More moderate counsel prevailed and it was thought preferable to rely on a Federal grant program to hasten the expansion of facilities of the existing system of State and private medical schools, and that is what we do here. This bill is based on sound American principles. Let me emphasize at this point—because I think it is important that we keep this in mind—our committee was concerned with finding the most appropriate way by which we might increase the supply of professional health services. We were not concerned primarily with education in this program. I repeat that statement because I want you to keep it in mind. We were not and we are not primarily concerned with the increase of knowledge or learning for its own sake.

We are concerned here with the principal purpose of increasing the supply of health manpower and thereby of health services. That is the purpose of H.R. 12. I repeat again, with emphasis, its basic purpose is improved health for the American people.

Mr. Chairman, after these brief preliminary observations permit me to discuss with the Members of the Committee the highlights of the bill which our committee reported, after extended hearings, as I have referred to. It is designed to expand the Nation's capacity to train scarce health personnel. The committee amendment here provides, first, for a 3-year program of matching grants for the construction of teaching facilities for medical, dental, osteopathic, and professional public health personnel as well as for collegiate nurses; and second, a 3-year program of loans for students of medicine, dentistry and osteopathy. That is what the bill does in very simple terms.

Matching grants for the construction of teaching facilities are authorized conditionally for the training of pharmacists, optometrists, podiatrists, because the committee report spells out in detail that grants for the construction of these facilities depend upon a showing in future years of a manpower shortage in these fields. They were not included when the bill was sent up by the administration and introduced, but the committee included them. It was not shown in the hearings of the committee that there is need for such facilities as those at this time, but these professions contend that there may come a time when there will be such a need. For that reason the committee, by a majority vote, included conditionally in the $15 million in the first fiscal year and in $45 million in each of the next two fiscal years, grants for the construction of new teaching facilities for the training of optometrists, podiatrists, and pharmacists.

The sum of $5 million in the first fiscal year and $15 million in each of the following 2 years are authorized for grants for construction of new teaching facilities for the training of dentists. Finally, $5 million in the first year and $15 million in each of the 2 succeeding years are authorized for replacement and rehabilitation of existing teaching facilities for all of the foregoing categories.

Let me say here—and keep this in mind—we authorize for the first year only funds that are already budgeted for. So we are not in this program authorizing or providing something beyond the budget. This is a program that is already included in the budget for this next fiscal year.

Matching grants for construction of new schools and for major expansion of existing schools may be made up to two-thirds of the cost of construction. Major expansion means an increase of at least 15 to 20 percent of the first-year enrollment or at least 15 additional places, whichever is the largest. This was included by an amendment offered by the gentleman from Illinois [Mr. SPRINGER]. It was thought, and certainly it was justified, that if we are going to increase the facilities, we should be sure that they increased the turnout of personnel.

Other grants may not exceed 50 percent of the cost of construction. Grants for the expansion of an existing school may only be made where the school will expand its first-year class enrollment by at least 5 percent but not less than five students. We are assuring that we will get additional personnel. That is the purpose of it.

Grants to schools of public health may be made up to 75 percent of the cost of construction. That was made necessary because of the lag in these facilities and the difficulty over the years of providing for the need.

The 3-year loan program authorizes loans to students of medicine, dentistry, and osteopathy. The loan program is administered by the individual schools—not by the Federal Government but by the local institution itself. The institutions are required to put up 10 percent of the funds that are loaned. In other words, under this program the institutions must put up 10 percent of the total and furthermore they administer the whole program.

Loans are repayable within 10 years beginning 3 years after graduation. Up to 50 percent of such loans, at the rate of 10 percent per year, may be forgiven for practicing in a shortage area, for active duty in the uniformed services, and for employment in a public or nonprofit agency.

Part of this provision follows the National Defense Education Act which was approved by this Congress in 1958 at the request and recommendation of President Eisenhower. The policy, adopted in this bill, therefore, was established by the previous administration.

The provision for forgiveness for practicing in a shortage area was included by an amendment offered by Members of the minority. One Member wanted to expand it to forgive 100 percent; and I am sure he will tell you so during the course of this debate.

The maximum appropriation authorized for the 3-year program for construction of teaching facilities would be $175 million.

Let me emphasize here this program is for teaching facilities and nothing else. You have heard some rumors, which may be discussed during the debate, that these funds may be used for some other purpose, a religious purpose, as an example. But this bill says positively and explicitly that the funds are to be used for teaching facilities for health professions. So let us keep in mind actually what the program does and let us not be influenced by any biased comments or positions or statements. Let us keep in mind what the program does.

For the 3-year student loan program we provide $30,700,000. A substantial portion of this sum would be repayable by the borrowers. The total authorization for all aspects of the program during the first year, fiscal 1964, would be just a little over $30 million. As I have already emphasized, that is in consonance with the budget already submitted by the President. For the second and third years it is expected that the full amount of the appropriation authorized by the bill, $85.6 million and $98 million, respectively, will be asked for.

Let me advise you, when this program was sent up to us in the last Congress it was a 10-year program. The administration bill asked for scholarships. The committee, after careful hearings in the last Congress, reported a bill for a 10-year program, but we did not provide for scholarships as we were requested because I know the feeling of the House with reference to scholarships. But in an effort to provide for a need, a need that is not met by the provisions of the National Defense Education Act—and we will get to that discussion later—we developed a program that is suitable to get more doctors.

We thought that we would limit this program to 3 years, and then 3 years from now we could determine how successful this has been and the Congress could then decide in the interest of the American people if we need another 3 years or a different program or no program at all. If this is not a reasonable proposition then I have never come before this House with anything reasonable in my life.

I could talk to you about the shortage of doctors, about which there seems to be no controversy, because even those who have expressed themselves critically with regard to this program have indicated that insofar as the construction program is concerned it is needed. Let me remind you that the problem worsens year by year. By 1975 if we do not do something about it we are going to leave a heritage that will say to you and me, "Shame on you." Do you want to face that? I think not.

In 1950 we had 1 family doctor in this country to every 1,300 people. In 1960 the statistics show we had 1 family doctor to every 1,700 people. By 1970 it is going to be 1 family doctor to every 2,100 people. Who is going to get blamed for this?

Mr. BECKER. Mr. Chairman, will the gentleman yield for a question?

Mr. HARRIS. I yield to the gentleman.

Mr. BECKER. I certainly have been very appreciative of the distinguished chairman of this committee and after having listened to him speak on the floor of the House for many years, I know of his sincerity. You said a few minutes ago that this bill does exactly what it says—it is factual—and I would understand the gentleman to be correct in that. But, on page 13 of the bill, it states under "Recapture of payments"—and this is what I want to get at—if this bill is factual—under "Recapture of payments, section 723" it reads:

> If, within 10 years after completion of any construction for which funds have been paid under this part—

And then skipping to (b):

> (b) the facility shall cease to be used for the teaching purpose for which it was constructed (unless the Surgeon General determines, in accordance with regulations, that there is good cause for releasing the applicant or other owner from the obligation to do so).

Are not these regulations to be written by the Surgeon General and are not we, as a Congress, delegating our powers to give that construction away that the taxpayers have paid for under this section, if the Surgeon General so determines?

Mr. HARRIS. Yes, but the gentleman did not read the rest of it.

Mr. BECKER. I did.

Mr. HARRIS. If the gentleman will permit me to continue, let us not take this out of context here. The gentleman did not read the rest of it. It reads:

> The United States shall be entitled to recover from the applicant or other owner of the facility the amount bearing the same ratio to the then value (as determined by agreement * * *.

In other words, we make an agreement with them, and we expect them to carry those agreements out. However, the Surgeon General under the bill has some discretion in determining whether any changed use of any facility still meets the purposes of this legislation.

Mr. BECKER. If the gentleman will just bear with me, I am going along with him except that in these agreements the regulations under this section will be written by the Surgeon General and not by the Congress. This is what I am getting at and the agreement, any agreement made, will be under those regulations written by the Surgeon General; is that not correct?

Mr. HARRIS. Yes, but it would have to be in accordance with the provisions of the bill.

Mr. BECKER. I know that.

Mr. HARRIS. The Surgeon General cannot write agreements unless he is given the authority under this bill to do so.

Mr. BECKER. I may say to the gentleman, I agree with that except there are no provisions in the bill respecting the agreements that are to be reached under this particular section under the recovery part of this construction. I do not find it in here and that is the reason I am raising the question.

Mr. HARRIS. I would like to refer the gentleman to the report. We have a paragraph in the report covering that, and I think it will help the gentleman.

Mr. BECKER. I will look for it in the report.

Mr. HARRIS. Yes, I thank my colleague.

Mr. Chairman, I will not take much further time on this because others of our colleagues want to speak and should have the opportunity to do so. But, I want to say to you, I regret exceedingly the situation with reference to the position of the American Medical Association. I have great respect for the doctors of this country. I think we have to depend on them for our health and for our lives. I know how dedicated they are. I must say that their change in position caught me by surprise. Without compromising the original bill in any way in an effort to meet the health needs of the American people, our committee worked out a limited program. We think this program will help private institutions and State institutions with their medical and health programs. We believe we have done that in this bill.

Dr. Gerald D. Dorman, of the American Medical Association, testified on behalf of the AMA this year.

Mr. SILER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman.

Mr. SILER. Is it not true that this bill gives free public tax money to medical schools that are conducted by religious groups such as Baylor University Medical School in Texas, a Baptist school?

Mr. HARRIS. Baylor University Medical School, as all other private and State institutions, would be eligible—yes.

Mr. SILER. Is not that in direct conflict with the principle that we Baptists have against giving tax dollars to private or religious schools?

Mr. HARRIS. Let me say to the gentleman I am a Baptist myself.

Mr. SILER. I realize it.

Mr. HARRIS. I know pretty well about the philosophy and the attitudes of the Baptists, but it is somewhat amazing to me why—and I am talking about myself now and my own denomination—in most cases when there comes a time when you can get college housing or this educational facility or that research facility, they are always willing to accept it.

Mr. SILER. This would violate the principle of the Baptists, though.

Mr. HARRIS. I do not consider that it would, because I consider this a health program all the way through. The gentleman from Alabama is a Baptists. I yield to him.

Mr. ROBERTS of Alabama. As another Baptist, you might say that we as a religious denomination approved legislation for loans to hospitals and some of those Federal loans to hospitals went to Baptist institutions. Is not that correct?

Mr. HARRIS. That is true. We did that, I think, in the 85th or 86th Congress.

Let me go back to where I started a moment ago about the program. Dr. Dorman testified about the AMA program. He explained their own loan program and said:

> We recognized then that it would not do the full job; we never intended that it do the full job.

That is what Dr. Dorman said in behalf of the AMA before the committee. But what we are doing here is to help meet the needs that we know exist.

Furthermore, he said that the proposed student loan provisions in this bill on which they, the AMA, took no position—and those are his words—took no position at all—would not in any way conflict with their lending program. I submit to you that we had every right as a committee to believe that he was the spokesman for the American Medical Association, because he appeared as a witness for the association. I know other members of our committee had that in mind also when in executive session we worked out this program. Then, on the eve of this legislation they sent this letter to me and each member of the committee. I will say this, they did me the courtesy to come to my office and deliver the letter to me before they announced it. But even so, after we had gotten the rule, and after the record had been made, then to come to us and send this letter to every Member of Congress, I think, is unfortunate. Much as I respect and admire the organization I feel they are wrong.

I hope that the membership will not be swayed by the fact that we have been given this letter. Each one of us should keep in mind that this is a letter sent to us by the trustees of the American Medical Association, and not by the membership. It is not based on any action in convention or at their annual meeting. They have a right to do it; I grant them that.

The Committee on Interstate and Foreign Commerce received extensive expert testimony at hearings in February of this year, and at hearings on H.R. 4999 in the 87th Congress. The committee has also taken into account a large body of other information available on health manpower needs and resources.

Just to keep abreast of the growth in population, we must increase the number of young people who enter medicine and dentistry from the present 12,500 to 19,000 a year by 1970. This represents an increase during the next 10 years which is four times the rate of increase during the past 10 years.

Currently planned expansion of existing medical and dental schools cannot be expected to meet the need for additional training places. The best that the existing schools could do would be to contribute a part of the increase. They testify that they cannot do even this unless adequate financing is made available.

The committee was told that adequate financing cannot be provided from State, local, and private sources alone. Without a new source of construction funds, some medical and dental schools may even be forced to reduce the size of their present classes, because their facilities are so antiquated that they cannot continue to be used for teaching.

Testimony by the American Medical Association indicates some of the present planning efforts have ceased entirely, as in the case of the University of Maine, because funds are not available. The testimony in the hearings last year and this year is uncontradicted that new medical schools in sufficient number will come into existence only if Federal aid is made available.

Funds available for dental school construction are even more limited than funds for medical school construction. The American Association of Dental Schools estimates that 10 to 12 new schools would be started if given Federal financial support.

There is no serious reason to fear that the provision of Federal construction aid will "dry up" financial contributions from other sources. On the contrary, experience in existing grant programs indicates that the provision of Federal matching tends to increase the amount of State, local, and private money made available. Federal matching grants have stimulated very substantial programs for the construction of health research facilities, hospitals, and other health facilities. The committee has no doubt that Federal support will serve as a catalyst for financial effort in the crucial area of medical education just as it has in other areas of need.

Provision of Federal aid would recognize the fact that the Nation's 87 medical schools and 48 dental schools represent in many respects a national resource. To a greater or lesser degree, most States depend on other States to provide the very expensive education for the physicians and dentists who give them service. Nor can we rely on regional efforts alone to meet medical and dental manpower needs. Such organizations as the Southern Regional Education Board, the Western Interstate Commission for Higher Education, and the New England Board of Higher Education testified before the committee last year that Federal aid is urgently needed if the timetable for expanding medical and dental education is to be met.

Since the teaching hospital is an essential part of medical or osteopathic schools, it is appropriate that such hospitals, under certain circumstances be eligible for teaching facility construction grants. In the past a number of teaching hospitals have received some assistance through the provisions of the Hill-Burton program. But since the Hill-Burton program emphasizes the building of hospitals in areas without sufficient hospital beds, the amount of Hill-Burton funds going to teaching hospitals has been severely limited. H.R. 12 therefore makes specific provision for aid to necessary teaching hospitals and other clinical facilities which have been denied funds under the Hill-Burton program because of low priority or lack of funds in the State's Hill-Burton allotment.

PUBLIC HEALTH PERSONNEL

Although the needs for increased numbers of physicians and dentists are probably the most clearly defined at this time among the different categories of health personnel, there are several other health professions for which expanded training capacity is indicated. Outstanding among these are the public health professions which furnish the manpower for public health positions in Federal, State, and local governments, industry, and elsewhere. The bill, therefore, includes authority for construction grants for schools of public health.

OSTEOPATHY

Need for assistance for the training of osteopathic physicians will have to be considered side by side with the needs for medical schools. In some States, doctors of osteopathy provide a very substantial part of the total medical services available. In other States their contribution is smaller. These factors will have to be considered in dealing with applications from schools of osteopathy.

COLLEGIATE NURSES

The Secretary of Health, Education, and Welfare advised our committee that the Surgeon General of the Public Health Service with the assistance of an advisory group has submitted comprehensive recommendations for a general program of Federal aid to nurse education. Pending evaluation of these recommendations it is difficult to determine the scope of a general all-inclusive program for nurse education.

Nevertheless, the need for expansion of facilities to train nurse teachers and supervisors is sufficiently urgent that the committee has included collegiate schools of nursing among the institutions eligible for construction grants. This aspect of Federal aid would be a first step in the direction of a more general program of aid to nursing education.

NEED FOR FEDERAL LOANS FOR MEDICAL AND DENTAL STUDENTS

In proposing a 3-year program of loans to medical and dental students, the committee has acted on the conviction that existing programs must be supplemented in order to attract an adequate number of well-qualified students into medicine and dentistry. After hearing a substantial body of testimony, and on the basis of its best judgment of the facts presented, the committee concluded that student aid from other sources would not alone suffice to reverse the disquieting downward trend in medical and dental school applicants.

Representatives of the American Medical Association in testifying before the committee described a loan guarantee program for medical students, interns, and residents which has been instituted under the sponsorship of the Education and Research Foundation of the association. This loan guarantee program has clearly helped some medical students and is providing much-needed assistance to interns and residents. However, the AMA witnesses themselves testified that the AMA loan guarantee program is not adequate to meet all existing needs. The cost of loans under the program is high and the program offers no repayment relief to physicians who enter lower-paid positions in rural places or other areas of special need, and the program does not give help to dental and osteopathic students.

Medical and dental students are eligible for loans under the National Defense Education Act student loan program. This program, however, is not well suited to their needs. The national defense student loan program was designed primarily for undergraduate college students, particularly those planning to go into the teaching profession. The high cost of medical and dental education requires a substantially higher loan ceiling than is provided under the existing program. Because medical students have a long period of postgraduate hospital training, they need more than 1 year completion of education before they must begin to repay the loan.

In contrast, the Federal Government at present makes available more than 10,000 fellowships for graduate students in the natural and physical sciences. These fellowships entice qualified students away from medicine and dentistry.

In order to fill the gap, the loan program included in the proposed legislation makes low-interest loans available to students of medicine, dentistry, and osteopathy, and the terms of repayment are tailored to suit the special needs of these students.

The proposed loans would carry an interest rate of 3 percent or the going Federal rate, whichever is greater, and provide a forgiveness feature for service in geographical areas of need, active duty in the uniformed services, or service in positions of employment by Government agencies or nonprofit organizations where many positions have remained unfilled because compensation is usually at comparatively low levels. The loan program would be operated by the individual schools of medicine, dentistry, and osteopathy. It is to be a 3-year program and at the end of that period an evaluation of the program is to be made to determine whether it meets existing needs or whether program modifications are called for.

PREVENTING DUPLICATION OF PROGRAMS

In considering this legislation, the committee gave careful attention to the need for avoiding any duplication of Federal grant or loan programs. It might be noted that the Rules Committee also evidenced its concern with this important question during its consideration of the bill.

Under the provisions of H.R. 12 there will not be any duplication with any other program because any grant under another program would have to be deducted from any grant made under H.R. 12 for the same facility. Therefore, there cannot be greater benefits for a single facility under two programs than would be available under H.R. 12.

For example, under the program for the construction of health research facilities and the Hill-Burton program for the construction of hospitals, medical schools may qualify for some Federal grants for some facilities which are part of a medical school. However, any such grant would have to be deducted from a grant made under H.R. 12.

The same applies to student loans authorized by H.R. 12. Under the provisions of H.R. 12, any amount borrowed by a medical student under the National Defense Education Act program during any year while he is attending medical school will have to be deducted from the amount of any loan made to him for such year under H.R. 12. In actual practice, however, there is no reason why a medical student should apply for, and be granted, a loan under the National Defense Education Act program. The loan terms under H.R. 12 are more attractive to medical students because the maximum amounts which may be borrowed, the repayment terms, and the forgiveness features of H.R. 12 are especially tailored to meet the needs of medical students. The same applies, of course, to students of dentistry and osteopathy.

In summary, while other grant and loan programs by their own terms may in theory cover medical schools and medical students, any benefits derived under such programs would have to be deducted from benefits available under H.R. 12. In this way, there is avoided any piling up of Federal benefits on top of each other in a manner which would give medical schools or medical students benefits greater than are contemplated by H.R. 12.

The provisions of H.R. 12 aimed at avoiding duplications carry out the principles laid down by the Comptroller in decisions dealing with this subject. (32 Comptroller General 141; 32 Comptroller General 561; cf. 32 Comptroller General 184).

LOCAL RESPONSIBILITY

I want to emphasize that under the program which would be authorized by H.R. 12, the primary responsibility belongs to the sponsors who would apply for grants-in-aid. The sponsors will have to decide where a medical school is to be located—not the Federal Government.

Depending on who applies for grants, the sponsors may be a State, a community, or a private nonprofit organization. Again, the Federal Government does not decide the question as to who shall operate medical schools.

In other words, the responsibility under this program is primarily vested in the sponsors just as in the case of the Hill-Burton hospital construction program which has been so eminently successful in providing much-needed hospital facilities.

NONINTERFERENCE WITH ADMINISTRATION OF INSTITUTIONS

This describes briefly the programs authorized by H.R. 12 and the provisions which will prevent any duplication with other Federal programs.

Before closing, however, let me stress one other provision in the bill, and that is the provision which specifically prohibits any department or employee of the United States to exercise any control over, or impose any requirement with respect to, the personnel, curriculum, methods of instruction, or administration of any institution which receives assistance under this legislation.

This provision makes clear beyond any doubt the intent of the Congress that the authority granted to the Surgeon General under this legislation is strictly limited to do the specific things which he is authorized to do under this legislation and does not in any way authorize any action going beyond the authorized acts.

CONCLUSION

Over the past 10 years Congress has provided over $4 billion in support to medical research and to the building of hospitals and other medical care facilities. But acquisition of knowledge and construction of buildings will not of themselves meet the Nation's health needs. Today we are jeopardizing our investment in research and facilities by not training enough doctors and dentists to make full use of what we already know. H.R. 12, as amended, authorizes Federal programs to help assure a minimum adequate supply of professional health manpower—an essential factor to our strength and future progress as a nation. Therefore, I appeal to the membership of the House to give its overwhelming support to this legislation.

I say to you, Mr. Chairman, in my humble judgment, it is my firm conviction, we have a complete program here that will enable private and State colleges and universities to provide a need for the American people that is imperative.

I urge that you approve this bill in its entirety.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. SPRINGER].

Mr. SPRINGER. Mr. Chairman, this is not a new bill. I can remember when I was a member of the Health and Science Subcommittee, and I say that was about 7 or 8 years ago this coming August. The late Percy Priest was chairman of this committee, and was chairman of the Subcommittee on Health and Science. That was the first year we held hearings on this particular bill. In August, before we adjourned, we were almost ready to bring that bill out, but unfortunately the illness of the chairman, Percy Priest, at that time prevented us from doing anything with it.

We have had hearings on this bill off and on since 1955.

Here we are in 1963. I said in March 1962, when the Secretary of Health, Education, and Welfare, ABE RIBICOFF, came to our committee that I would not support this bill unless and until there was a provision put in the bill which would actually increase the number of doctors.

At that time, Mr. RIBICOFF was for the bill. He was for more money and more expansion, but there was nothing in the bill to increase doctors. I made a statement at that time, and I think I am pretty familiar with this subject, having traveled over most of the country with the subcommittee looking at medical schools, that the quality of our medical schools is the highest in the world. There is no system of medical schools any place in the world that is as high in quality as the medical schools in the United States, nor are there as many.

I said I was satisfied with the quality, not that it could not be improved upon, it was excellent, but I did not believe that Federal Government intervention was justified if all we were going to do was to pour out money trying to improve what I considered to be excellent medical education. I said that if provisions were put in this bill which would actually guarantee there would be an increase in the number of doctors graduated when this program got underway, I would support it.

Why? I think there are some good reasons for that. It is admitted, I think, when this program gets underway—4 or 5 years it will take—we ought to be putting out in the neighborhood, depending on how many new schools are created, and also what the enrollments in the freshman classes were during the last 5 years, that there ought to be an increase of somewhere between 400, 500, and 1,000 new students in the medical schools presently existing and the new ones that will be created, that will not be enrolled beginning in September 1962.

In other words, we will by this legislation gain between 400 and 1,000 or more graduates each year.

Now, you say under those circumstances will that increase the number of doctors. I am sorry to say to you it will not increase the number of doctors per thousand population by 1970. If we are able to increase by 400 to 1,000 the doctors each year beginning in 4 or 5 years from now, by 1970 we will still have only the same number of doctors per 1,000 population that we had in 1963. So, if this bill comes before you again 3 years from now, if you are asked how many more doctors per 1,000 are there in 1966 than there were in 1963, I can guarantee you that there will not be. This program, in my estimation, is not big enough to lower the number of doctors per 1,000 over what it was in 1963, but if we are able to pass this legislation, it will guarantee that there will not be fewer doctors in 1970 than there were in 1963 per 1,000. So, I think the House ought to understand that we are not going to get a substantial number of doctors per 1,000, because this legislation does not provide that. All we will be able to do in the next 8 years is stay even with what we are today.

Now, extensive hearings were conducted this Congress on H.R. 12 and last year on H.R. 4999, which has proven conclusively and beyond a doubt that there is a real need for more doctors and more dentists. Some areas, particularly rural areas, are real short of doctors per capita. Those of you from Missouri, listen to this: In 1960, one county in Missouri had just 1 doctor for a population of almost 12,500, while many counties throughout the United States, in at least 30 States, had as few as 10 to 12 doctors per 100,000 population.

In my own district of central Illinois, which is a fairly prosperous area, six of the nine counties in my congressional district, in black Illinois land, fell much below the standard for the number of doctors per capita average throughout the United States. The standard set forth—and I think it is the truth—in a survey prepared by the Department of Health, Education, and Welfare states: As a rule of thumb experience in large medical groups indicates that comprehensive medical care, including general and specialized services, requires on the average of 1 physician per 1,000 people.

Great strides have been made in the past few years with the support and the active help of the Congress in medical research and the building of hospitals and other medical care facilities. The Hill-Burton program is one example of that. But, without sufficient doctors to staff these hospitals and to put into use the great knowledge gained through research, they cannot possibly be utilized to the fullest extent. And, it is for lack of interest in the medical profession on the part of young people seeking to carve out careers for themselves that we are burdened today with this tremendous shortage of doctors. It is not that the medical profession has lost its appeal to these young people; it is simply because we lack sufficient training facilities for training them.

Let me give you this example, turning once more to my own district, which is the seat of the University of Illinois in Champaign-Urbana. I have been informed by the medical school at the University of Illinois that there were this year, in September 1962, 89 applicants for the school of orthodontia.

Out of those 89 applicants just 10 could be accepted. This means that the other 79 young persons desiring to study dentistry at the University of Illinois could not do so just because there was no place to put them. Whether they were able to gain admission to some other school of dentistry, I do not know. I rather doubt it; at least, I am almost sure that not all 79 were able to go somewhere else, because the same situation which exists at the University of Illinois exists elsewhere across this great country.

Mr. Chairman, the situation in regard to students seeking to enter the medical school at the university was not quite as critical as in the school of dentistry, but it was still critical. These critical conditions, unless something is done right now in 1963, will be worse in the years that lie just ahead, as I have pointed out to the members of the Committee already.

Mr. Chairman, H.R. 12 will not increase the number of doctors per capita, but it will insure that conditions do not get worse. It will insure that the number of doctors per capita will remain at about the same level as it is now

Mr. OLIVER P. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. SPRINGER. I yield to the gentleman from Ohio.

Mr. OLIVER P. BOLTON. In its consideration of this measure did the committee have any figures presented to it as to the number of private contributions that have been made to medical schools, along with the number of dollars which States had contributed to State university medical schools?

Mr. SPRINGER. You mean in comparison between private and otherwise?

Mr. OLIVER P. BOLTON. Just the number of dollars that have been put into the building of medical facilities and medical training facilities in the past year.

Mr. SPRINGER. I do not recall that we did.

Mr. OLIVER P. BOLTON. If the gentleman will yield further, I take it that—and I am referring to the report on page 4 where the committee very frankly states that this is a 3-year program as set up in the bill but will not be completed within this 3-year period. Is it the gentleman's feeling that this then means that the Federal Government in effect will take over the construction of our teaching facilities at medical schools from here on out?

Mr. SPRINGER. Does the gentleman mean by take over—I take it you mean continue this contribution to it?

Mr. OLIVER P. BOLTON. That is correct.

Mr. SPRINGER. I think the program, as I visualize it, would probably last 10 years.

Mr. OLIVER P. BOLTON. If the gentleman will yield further, at that time would the gentleman from Illinois contemplate that the same private contributions would be made to the medical schools that have been made in the past?

Mr. SPRINGER. That is assuming they would both continue at the same rate. I can say to the gentleman that I do not have the figures. We are assuming that the contributions will be at the same rate.

Mr. OLIVER P. BOLTON. Does the gentleman feel that this is a fair assumption?

Mr. SPRINGER. I believe it is. I do not think what we are doing here would make anyone feel that they ought to contribute less. To give the gentleman an example, let us take Dartmouth where at the present time they have a 2-year school and they are hoping to expand and to make it a 4-year school. I still think there would be substantial contributions to Dartmouth in spite of that fact even if they are able to get money to make this a 4-year program. That is an example. I think their contributions would continue to come to Dartmouth at approximately the same rate, because as I understand it a great majority of the money at Dartmouth is contributed by its own alumni.

Mr. OLIVER P. BOLTON. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BENNETT of Michigan. Mr. Chairman, I yield the gentleman 4 additional minutes.

Mr. SPRINGER. Mr. Chairman, this bill will accomplish what I am talking about through a 3-year program of matching grants for the construction of teaching facilities for mental, dental, osteopathic, and professional public health service personnel as well as pharmacists, optometrists, podiatrists, and nurses. May I say in connection with nursing that these involve only the nurses' buildings which are attached to university medical schools. These will not be grants for nursing schools not attached to universities.

Mr. Chairman, a total of $105 million for a 3-year period is authorized for grants for the construction of new teaching facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, or professional public health personnel. The sum of $35 million for a 3-year period is authorized for grants for the construction of new teaching facilities for the training of dentists and, finally, $35 million for a 3-year period is authorized for the replacement or rehabilitation of existing facilities for all of these categories.

Mr. Chairman, matching grants for the construction of new schools and for major expansion of existing schools may be made up to two-thirds of the cost of construction. Other grants may not exceed 50 percent of the cost of construction.

Mr. Chairman, grants for the expansion of an existing school can only be made where the school will expand its first-year class enrollment for the following 3 years by at least 5 percent over the highest first-year enrollment in any of the 5 years immediately preceding the passage of this legislation, but not less than 5 students and in some instances not less than 15 students if it is a major grant.

Grants to schools of public health may be made up to 75 percent of cost of construction. Let me point this out again; under the provisions of H.R. 12 there will not be any duplication of Federal grant or loan programs. There are in existence at the present time, and there may come into existence at a later date, Federal programs under which medical schools and other schools which come within the purview of H.R. 12 may qualify for Federal construction grants. For example, under the program for the construction of health research facilities and the Hill-Burton program for the construction of hospitals, medical schools may qualify for some Federal grants for some facilities which are part of a medical school or facility. Therefore, there cannot be benefits for a single facility under the two programs which would be available under H.R. 12.

In my opinion H.R. 12 is good legislation. The Congress must, on a matching-grant basis, provide the facilities for the training of an increased number of doctors necessary to maintain, to keep the health standards of our country as they are in 1963.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 10 minutes to the gentleman from Ohio [Mr. SCHENCK].

Mr. SCHENCK. Mr. Chairman, seldom do I seek and take the opportunity to speak from the well of the House, and do so now only because I feel this legislation is so very important in many ways.

Our chairman, the distinguished gentleman from Arkansas [Mr. HARRIS] is a very able chairman of our committee and it is both an honor and a privilege to serve as a member of this committee under his chairmanship. I want to pay a sincere tribute to our chairman and to all the members of our committee. Therefore I regret especially to find myself in opposition to the legislation under consideration here.

This has been a difficult decision for me to make and I have made it with extreme reluctance. Yet in all sincerity and honesty after fully considering this legislation and discussing it with many knowledgeable members in the profession I find that I must oppose the bill because I am convinced it is not in the best public interest.

If you will notice from the hearings on this bill, it originally started out as a 10-year program, and even then was referred to as being only a good start but to make it a little more palatable and perhaps a little easier to gain approval in the Congress it was reduced to a 3-year program. But let no one be fooled into the idea that 3 years will in any way complete the program. It will no doubt become a permanent program, as many of these temporary programs have a way of doing. And the cost will be tremendous.

May I also refer you to the hearings at which Secretary Celebrezze testified and at which time I asked him if he felt that the number of doctors being graduated from medical school would keep pace with the growing population, and whether or not it was keeping pace with the growing population. Secretary Celebrezze, although only recently made Secretary, and therefore drawing on his experience as the mayor of a great city in Ohio plus what had been told to him by the professional staff of HEW stated that there had been an average of 135 doctors per 100,000 population in this country but that in the last year or two that had grown to 137 per 100,000 of population.

However, he also stated that as the population continued to grow there would be fewer doctors per 100,000 population. The number of doctors per 100,000 population is not a particularly significant figure, because, as the Secretary pointed out, there are many areas in this Nation, rural areas and elsewhere, where the number of doctors per 100,000 population is much below the national average, and a number of areas where the number of doctors is greater than the national average per 100,000 of population. This is obviously true, because certainly most doctors would decide on a location where they would find an opportunity to practice their profession in the way they wanted to practice and where they felt they could best serve their fellow men.

Mr. BECKER. Mr. Chairman, will the gentleman yield?

Mr. SCHENCK. I yield to the gentleman from New York.

Mr. BECKER. On this point, can the gentleman tell me how they intend under this bill to regiment doctors to practice in rural areas where there is a shortage and get them out of the metropolitan areas he is talking about where there is an overabundance? How can they do this under this legislation?

Mr. SCHENCK. I am glad my distinguished colleague from New York brought that question up, though I was going to touch on it. It seems to me there is no way for the Federal Government, short of controls, and make no mistake there will be Federal controls regardless of any provisions or assurances to the contrary to determine where and in what part of the medical profession a graduate should practice. It has been said that this bill in order to make it palatable would increase the number of graduates per school, that sort of thing, but if we are then going to tell these doctors where they may practice or what they may practice and whether or not they can go into general practice or into one of the specialties, that is another thing and is but one more effort to obtain socialized medicine. Of course, the number of doctors who are going into research and into specialty fields of work naturally reduces the total number of doctors remaining in the field of general practice.

Mr. BECKER. I am inclined to agree with the gentleman—I have listened to the gentleman from Arkansas—that although we may be increasing the facilities for the educating of more doctors or providing more, how do we cure the problem of transference of doctors from the overabundance in the metropolitan areas to the rural areas where the shortage is? This does not seem to provide for that, unless you have something in here to regiment doctors.

Mr. SCHENCK. I would say to my friend that that is the trend toward regimentation and socialism and is one of the aspects which is of such serious concern to many of us.

What are some of the factors which discourage students from going into medical practice? In the first place, a student must have 8 years of college, 4 years of general courses and 4 years of medicine, following which he must serve an internship of at least 1 year. If he is going to do postgraduate work, he will have been in school and in the nonproductive part of his life for some 14 or 15 years before he becomes a doctor ready to begin his medical practice. That is one thing that is discouraging otherwise capable students from going into medicine. Certainly the danger of Federal controls, about which my distinguished colleague from New York and I were talking, is also a factor in determining whether or not a young man or a young woman wants to go into the practice of medicine.

If a doctor is to be controlled and told just what drugs he can prescribe, that he must prescribe these drugs by their generic name and must prescribe the drug from a particular list of approved drugs; if the doctor, as was the recent experience of one of my friends in the medical profession, is then subjected to a lot of inquiry and questions from some clerk in a State or Federal health department, saying, "You cannot prescribe this particular drug because it is not on the approved list," then the doctor cannot practice his medicine in the best way that he knows how and in the best interest of his patient. So the danger of Federal controls, the danger of being told where to practice and when to practice and how to practice, what drugs he can use or prescribe, and how to conduct his profession seems to me to be a very discouraging situation to any doctor.

Many of you, I am sure, are familiar with this particular magazine. This magazine is called the Medical World and News. It is published in New York by the Medical World Publishing Co. In this issue of March 1, 1963, which I hold in my hand, they have a discussion about medicine as it is practiced in Great Britain under the socialist system.

May I just call your attention to one picture here on page 77 of this particular March 1 issue. Here is a table full of forms which this doctor must work with and complete and keep tabs on in order to serve his people. So the time that he can spend in his interviews and the time that he can spend in discussing medical history and the time that he can spend making physical examinations is very, very limited. He has to complete innumerable forms and spend a great amount of his very valuable time doing desk work and clerical work. He has to have a whole office staff occupied in such an effort—or, shall we say, to electronicize this type of professional service. Are we going to have people going into a medical office and punching keys on a computer to say, "I have a pain here and I have a pain there, I have a little strange feeling here and I have a little different feeling there," and then punch these keys and out will come a card with a diagnosis; then he takes this diagnosis card to the doctor and the doctor punches a few more holes in it and the patient takes it to the pharmacist and gets the prescription? A computer is nothing more or less than a sponge anyhow. It only absorbs what you put into it. If you put the wrong information in, you get the wrong information out.

So we in this electronic age may be in for some real jim-dandy type of diagnosis of what might be serious complaints.

The Dayton, Ohio, Journal Herald includes a syndicated column in the April 15 issue where a doctor, Leslie J. Mason—a doctor of education, incidentally—discusses the problem in his column of why well qualified students are not going into medicine. Under unanimous consent, I include the article at this point in the RECORD:

MEDICAL SCHOOLS NEED STUDENTS

(By Leslie J. Nason)

A serious shortage of doctors is just around the corner.

The output of our medical schools is barely meeting demands now. Many medical school graduates are entering the fields of research and teaching, rather than going into private practice.

This is just at the time when, because of our expanding population, we need many more practicing doctors.

Building and staffing more medical schools will not in itself solve the problem. For the very staffing of these schools puts an additional drain on the available supply of trained doctors.

We must remove some of the blocks in the thinking of these young students which cause them to bypass medicine for other goals. The case of Hal well illustrates what I mean.

Hal came to me for advice 5 years ago. He was a high school senior and a good student; that is, he made high grades. His father, a successful surgeon, hoped Hal would follow in some branch of the medical profession.

But Hal said: "Perhaps I can do it, but I have to work hard to make good grades in high school. Premed and medical school would mean many years of excruciatingly hard work—with no fun.

"Even if I finished, in general practice I would be on call at all hours. My family life would not be normal. I would rather work 8 hours a day and be home evenings."

Hal went on to say that only an A average in premed would gain him entrance into a medical school. (Of course this is not true. Some 70 percent of students accepted in medical schools have B averages.)

These fears had to be reduced if Hal was to choose medicine as a career. He had the intelligence and physical energy to succeed, but he didn't know how to make the best use of his talents.

Hal and I set up a plan. During the summer after high school graduation and before college entrance, Hal was to get a running start on each of his courses.

We carefully considered the manner in which each course should be studied, and planned a preview to provide him with the vocabulary necessary for efficient listening to lectures.

Hal planned to take courses which would give him background for his medical school training. Each summer was to be used to relieve the pressure on the next year.

Once this plan was established, medical training lost its threat to Hal.

From time to time during the 5 years since I've seen Hal, he not only carries on his work happily and successfully, but finds time to enjoy the normal social life of the college student. He is well on his way to becoming a successful doctor.

So you see we have to begin solving the problem of the doctor shortage by changing the attitude of the high school student.

One boy said, "Perhaps I can do it, but I have to work"—this boy's father, incidentally, was a surgeon—"I have to work in order to make good grades in high school, and to go to medical school with many, many years of excruciatingly hard work and no fun. Even after I finish and enter general practice, I would be on call all hours and my family life would not be normal. I would rather work 8 hours a day and be home evenings."

So we are having boys go to law school, we are having boys go to engineering school, we are having boys going to various other kinds of schools so they can work 8 hours a day, and then are free from professional responsibilities when they go home in the evening, so that they can have their evenings and weekends with their families.

So it would seem to me that this particular bill which we are considering will not increase the number of doctors that are going to be available. It may in fact have an adverse effect, because every time we need to staff for more medical schools they must be staffed by available doctors and available trained personnel. So we will be draining off out of the doctors we now have additional doctors in order to teach in the expanded schools.

I would hope that this bill could be very carefully considered by all of us and each of us make up his own mind as to the merits of the bill. Personally, it seems to me to be a very real effort toward the further socialization of the practice of medicine and to the unnecessary expenditure of the taxpayers' money.

Mr. COLLIER. Mr. Chairman, will the gentleman yield?

Mr. SCHENCK. I yield to my distinguished colleague from Illinois.

Mr. COLLIER. Is it not true that every witness representing a medical school who testified on this bill a year ago when asked whether or not if this program were enacted they could accommodate an additional medical student in 1963, 1964, 1965, or even up to 1966, answered in each instance "No"?

Mr. SCHENCK. I think that is very true.

Mr. COLLIER. One additional question: As I understand the proposal this year, there would be no scholarship loan fund or loan fund of any nature available until the student was ready to enter medical school.

Mr. SCHENCK. Four years hence.

Mr. COLLIER. In other words, he would have to have his 4 years premedical. If he could not afford to attend college in the first place, how could he qualify for a loan or how could he participate in this program in order to go to medical school?

Mr. SCHENCK. I think the gentleman has answered his own question.

Mr. COLLIER. I thank the gentleman.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 10 minutes to the gentleman from Ohio [Mr. DEVINE].

Mr. DEVINE. Mr. Chairman, this legislation is not new to the Congress, although I believe it is new to the floor of the House. It was considered by our committee last year as H.R. 4999. But it has created some mighty strange bedfellows. This is the first time I have seen the AFL–CIO and American Medical Association in the same bed, although we must bear in mind that the American Medical Association kept one leg out from under the covers and firmly on the ground, for they have taken a position in opposition to the loan provisions of this bill.

What are we doing here? Let us not kid anyone. This is a straight out and out bill for Federal aid to education. You can dress it up with all kinds of fancy names, but it is still a bill for Federal aid to education. It is one of many bills that have been presented to Congress. We know a great deal about this overall subject. During the school year 1958–59, Federal support for educational programs amounted to $2,413,168,000 from a total of 20 different Government agencies. My source or my authority for making that statement is on page 3 of the April 1962 Directory of Federally Financed Student Loans, in the field of higher education in the United States, from the House Committee on Education and Labor.

Now, we hear that this legislation is designed to create more physicians in the United States because of the tremendous lack of doctors. It is designed to meet a need. When the Secretary of Health, Education, and Welfare, Mr. Celebrezze, testified before the committee, he had the original H.R. 12 bill, which was a 10-year program, and the cost was $813,050,000.

In talking about that bill covering a program involving over $813 million, what did he say?

He said it would give us an opportunity to really get started.

He is talking about the $800 million, 10-year program. He said:

> We could evaluate the program as we went along, but I think it would be an excellent start at this point.

What happened in committee? This bill was reduced to a 3-year program, and the cost, depending on construction, the loans, and so forth, is about $300 million, as I understand it. But we enlarged it. It was reduced from 10 to 3 years so that it would be more palatable to the Members of Congress. We cut it down from $800 million to around $300 million. But in addition to the original purpose of building teaching facilities for schools of medicine, and so forth, osteopathy and public health, it has been enlarged to include schools of nursing, schools of pharmacy, schools of podiatry and other schools. Someone mentioned that we have overlooked the morticians. But it has been expanded.

I have had considerable correspondence from chiropractors, who felt that they were discriminated against because they had not been included as among the health professions.

In my correspondence in this respect, I said that this bill was originally designed to meet a need, and was not a big pie to be cut up and distributed among all of the health professions. Apparently the persons in that profession had failed to establish a need before the committee.

Secretary Celebrezze said:

> There are two prime reasons for this type of legislation, two prime reasons for the need of this legislation; there is a shortage of doctors and dentists in this country, due (1) to lack of facilities, and (2) lack of financial means.

What is the ratio today? On page 43 of the committee hearings the Secretary of Health, Education, and Welfare stated:

> In 14 States there are fewer than 100 physicians per 100,000 population. In four States there are 160, or more, per 100,000; but the rate for the whole of the United States—and I think this is important—has stayed practically static since 1940.
>
> In 1940 we had 135 physicians for 100,000 population. Today, in 1962, we have 137 per 100,000, or 2 more.

Then he further stated that under our projection to 1970 it will be down to 126. I do not know on what particular set of facts he based this projection, but it is clear that in the last 22 years, the ratio rather than going down has increased in fact by two.

On the basis of need, on page 310 of the committee hearings, Dr. Wiggens, a member of the American Medical Association Council, in discussing the quality and quantity of applicants to medical schools stated:

> There has been a very significant difference between what existed in the 1950–1953 as opposed to what exists now.

However, he said our medical schools had far more applicants during that period because of the postwar situation. He continued:

> But, when looked at over a 30-year period, it is down a little bit, but I do not think if one figured it out statistically, that it would be a statistical difference for the average of some 30 to 50 years.

Well, what is the ratio here as compared with England? We know what the medical situation is now in England. These figures were provided to me by the American Medical Association: 1960 population-physician ratio for the United States as compared with England: Active physicians in our country: There were 237,700; in England and in Wales 47,700, which means this: Active physicians per 100,000 population in the United States were 130 as compared to 104 in England and in Wales. Persons per active physician in the United States, 769; in England and in Wales there were 962 persons per physician. This is not a complete statistic here, but persons per family physician in the United States were 1,700, but there were no figures available for England.

We have had an influx of foreign doctors: In 1955, 1,057; in 1956, 1,002; in

1958, 1,316; in 1959, 1,776; in 1960, 1,569; in 1961, 1,730.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. DEVINE. I will be glad to yield to my chairman.

Mr. HARRIS. The gentleman has mentioned a very important point, I think, with reference to doctors from foreign countries. I think it is rather significant that I was in New York recently meeting with a group of people, including some doctors. The doctors from a large hospital in New Jersey told me that they could not get interns in their hospital at all sufficient to meet their needs, and two-thirds of the interns of that hospital had to be drawn from foreign students. I think that is significant.

Mr. DEVINE. I thank the chairman.

Mr. CUNNINGHAM. Mr. Chairman, will the gentleman yield?

Mr. DEVINE. I yield to the gentleman from Nebraska.

Mr. CUNNINGHAM. On the matter of foreign doctors, I made inquiry during the hearings of Dr. Terry and the American Medical Association people, and they could give no conclusive answer as to why these people are coming here. They certainly could not prove that it was because of the shortage. I think it is evident that these people are coming here not because of the shortage but because of the advantages they have in this country that they do not have in their own country.

Mr. DEVINE. I agree with the gentleman.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. DEVINE. I yield to the gentleman from Iowa.

Mr. GROSS. Under the student loan provisions, would it be possible to loan money to foreign students for training in this country; that is, medical training in this country?

Mr. DEVINE. I am not prepared to answer that. But, I would like to get into the loan provision here.

One thing that I think we should point out very clearly is this: I would like to point out particularly to my colleagues that are interested in States rights that there are many programs on a voluntary private basis existing today by virtue of which students, medical students, proposed medical applicants, can obtain funds with which to attend college and universities. I have a list here broken down State by State and county by county of medical societies having scholarship programs which I will later seek permission to insert in the RECORD at this point:

COUNTY MEDICAL SOCIETIES HAVING SCHOLARSHIP PROGRAMS

ALABAMA

Baldwin County Medical Society: N. Van Wezel, M.D., secretary, Foley, Ala.

Blount County Medical Society: Thos. M. Towns, M.D., secretary, Oneonta, Ala.

Bullock County Medical Society: Sidney A. Cohn, M.D., secretary, Union Springs, Ala.

Coffee County Medical Society: J. F. Stanley, M.D., secretary, Enterprise, Ala.

Cullman County Medical Society: M. S. Whiteside, M.D., secretary, Cullman, Ala.

Dale County Medical Society: Robt. J. McLaughlin, M.D., secretary, Ozark, Ala.

DeKalb County Medical Society: G. I. Weatherly, M.D., secretary, Fort Payne, Ala.

Escambia County Medical Society: E. Scharnitzky, M.D., secretary, Brewton, Ala.

Franklin County Medical Society: Wayne Hyatt, M.D., secretary, Russellville, Ala.

Jefferson County Medical Socitey: Paul Burleson, M.D., secretary, Birmingham, Ala.

Lauderdale County Medical Society: O. L. Burton, M.D., secretary, Florence, Ala.

Lowndes County Medical Society: R. L. Staggers, M.D., secretary, Benton, Ala.

Marion County Medical Society: Robt. H. Mason, M.D., secretary, Hamilton, Ala.

Mobile County Medical Society: C. W. Winsor, M.D., secretary, Mobile, Ala.

Pike County Medical Society: W. H. Abernathy, M.D., secretary, Troy, Ala.

Shelby County Medical Society: Jean Clark, M.D., secretary, Vincent, Ala.

ARIZONA

Maricopa County Medical Society: Howard D. Lawrence, M.D., secretary, Phoenix, Ariz.

CALIFORNIA

Alameda-Contra Costa County Medical Societies: David Dugan, M.D., secretary, Cos Medical Society, Oakland, Calif.

Fresno County Medical Society: N. J. Wilde, M.D., secretary, Fresno, Calif.

Shasta-Trinity County Medical Society: R. R. Bfeeden, M.D., secretary, Weaverville, Calif.

Sonoma County Medical Society: Clayton B. Taylor, M.D., secretary, Santa Rosa, Calif.

COLORADO

Weld County Medical Society: Edward Kinzer, M.D., secretary, Johnstown, Colo.

FLORIDA

Dade County Medical Society: D. D. Daughtry, M.D., secretary, Miami, Fla.

Madison County Medical Society: W. J. Coggins, M.D., secretary, Madison, Fla.

GEORGIA

Cobb County Medical Society: R. Y. Clark, M.D., secretary, Marietta, Ga.

Spalding County Medical Society: J. W. Watkins, M.D., secretary, Griffin, Ga.

ILLINOIS

Jackson County Medical Society: Charles Young, M.D., secretary, Carbondale, Ill.

IOWA

Cerro Gordo County Medical Society: J. R. Utne, M.D., secretary, Mason City, Iowa.

Henry County Medical Society: R. S. Wettach, M.D., secretary, Mount Pleasant, Iowa.

Johnson County Medical Society, R. A. Wilcox, M.D., secretary, Iowa City, Iowa.

Pottawattamie County Medical Society: C. V. Caughlan, M.D., secretary, Council Bluffs, Iowa.

KENTUCKY

Barren County Medical Society: Lewis Dickinson, M.D., secretary, Glasgow, Ky.

Calloway County Medical Society: H. L. Houston, M.D., secretary, Murray, Ky.

(Knott County) Perry-Knott County Medical Society: W. F. Kelley, M.D., secretary, Hindman, Ky.

MARYLAND

Baltimore City Medical Society: J. N. Classen, M.D., secretary, Baltimore, Md.

Frederick County Medical Society: Thos. R. Reid, M.D., secretary, Frederick, Md.

MASSACHUSETTS

Charles River District Medical Society: K. B. Lawrence, M.D., secretary, Brookline, Mass.

MICHIGAN

Genesee County Medical Society: John B. Rowe, M.D., secretary, Flint, Mich.

Grand Traverse-Benzie-Lenawee Counties Medical Society: W. W. Cline, M.D., secretary, Traverse City, Mich.

Ingham County Medical Society: Wm. Cheney, M.D., secretary, Lansing, Mich.

Kent County Medical Society: G. A. Mulder, M.D., secretary, Grand Rapids, Mich.

Washtenaw County Medical Society: Gerhard Bauer, M.D., secretary, Ann Arbor, Mich.

MINNESOTA

Nicollet-Lesuear County Medical Society: A. H. Thompson, M.D., secretary, St. Peter, Minn.

Zumbro Valley Medical Society: E. W. Johnson, M.D., secretary, Rochester, Minn.

Stearns-Benton County Medical Society: Thomas G. Murn, M.D., secretary, St. Cloud, Minn.

MISSOURI

Greene County Medical Society: F. T. H'Doubler, Jr., M.D., secretary, Springfield, Mo.

Jackson County Medical Society: Edward G. Kettner, M.D., secretary, Kansas City, Mo.

NEW HAMPSHIRE

Centre District and Merrimack County Medical Society: T. G. Cogswell, M.D., secretary, Concord, N.H.

Stafford County Medical Society: Jesse M. Galt, M.D., secretary, Dover, N.H.

NEW JERSEY

Atlantic County Medical Society: John W. Holland, M.D., secretary, Atlantic City, N.J.

Bergen County Medical Society: Charles Campbell, M.D., secretary, Hackensack, N.J.

Monmouth County Medical Society: Wanamassa, N.J.

Union County Medical Society: E. H. Pogue, M.D., secretary, Elizabeth, N.J.

NEW MEXICO

Bernalilo County Medical Society: John Torrens, M.D., secretary, Albuquerque, N. Mex.

NEW YORK

Cattaraugus County Medical Society: C. L. Mather, M.D., secretary, Olean, N.Y.

Schenectady County Medical Society: J. B. Cortesi, M.D., secretary, Schenectady 13, N.Y.

NORTH DAKOTA

First District Medical Society: M. H. Poindexter, M.D., secretary, Fargo, N. Dak.

Sixth District Medical Society: C. R. Montz, M.D., secretary, Bismarck, N. Dak.

OHIO

Mahoning County Medical Society: C. E. Pichette, M.D., secretary, Youngstown 4, Ohio.

Montgomery County Medical Society: W. J. Lewis, M.D., secretary, Dayton 7, Ohio.

OKLAHOMA

East Central Oklahoma Medical Society: G. Berkenbile, M.D., secretary, Muskogee, Okla.

Pottawattomie County Medical Society: Clinton Gallaher, M.D., secretary, Shawnee, Okla.

OREGON

Multnomah County Medical Society: Quinten W. Cochran, M.D., secretary, Portland, Oreg.

PENNSYLVANIA

Delaware County Medical Society: William Y. Rial, M.D., secretary, Swarthmore, Pa.

Philadelphia County Medical Society: G. Mackmull, M.D., secretary, Philadelphia 44, Pa.

SOUTH CAROLINA

Columbia Richland County Medical Society: R. F. Haines, M.D., secretary, Columbia, S.C.

SOUTH DAKOTA

Wetstone County Medical Society: D. A. Gregory, M.D., secretary, Milbank, S. Dak.

TENNESSEE

Dickson County Medical Society: L. D. Jackson, M.D., secretary, Dickson, Tenn.

Roane County Medical Society: B. W. Sitterson, M.D., secretary, Oak Ridge, Tenn.

TEXAS

Andrews, Ector, Midland Counties Medical Society: J. R. Walton, M.D., secretary, Midland, Tex.

Dallas County Medical Society: W. C. Sellman, Jr., M.D., secretary, Dallas 1, Tex.

Kerr, Kendall, Gillespie Counties Medical Society: Julia S. Eley, M.D., secretary, Kerrville, Tex.

Lubbock, Crosby County Medical Society: James G. Morris, M.D., secretary, Lubbock, Tex.

Taylor County Medical Society: J. Williams, M.D., secretary, Abilene, Tex.

UTAH

Salt Lake County Medical Society: Donald Smith, M.D., secretary, Salt Lake City, Utah.

WASHINGTON

King County Medical Society: R. Robertson, M.D., secretary, Seattle, Wash.

Spokane County Medical Society: S. E. Shikany, M.D., secretary, Spokane, Wash.

WEST VIRGINIA

Cabell County Medical Society: W. L. Neal, M.D., secretary, Huntington, W. Va.

Central West Virginia County Medical Society: Jane Freeman, M.D., secretary, Buckhannon, W. Va.

Harrison County Medical Society: Andrew Weaver, M.D., secretary, Clarksburg, W. Va.

Kanawha County Medical Society: A. B. Curry Ellison, M.D., secretary, Charleston, W. Va.

Logan County Medical Society; R. M. Kessel, M.D., secretary, Logan, W. Va.

Preston County Medical Society: Charles Y. Moser, M.D., secretary, Kingwood, W. Va.

WISCONSIN

Racine County Medical Society: W. W. Williamson, M.D., secretary, Racine, Wis.

WYOMING

Natrona County Medical Society: D. J. Jacobson, M.D., secretary, Casper, Wyo.

North Eastern County Medical Society: R. M. Minket, M.D., secretary, Upton, Wyo.

PARTIAL LIST OF FINANCIAL AID PROGRAMS FOR MEDICAL STUDENTS

1. Arkansas medical student loans: Dean of students, University of Medicine Center, University of Arkansas, Little Rock, Ark., approximately 31 awards, $400 to $500.

2. Arkansas medical student loans (rural areas): Dean of students, University Medical Center, University of Arkansas, Little Rock, Ark., 17 awards, $400 to $1625.

3. Illinois Agricultural Association and the Illinois State Medical Society: Student loan fund to board, Chicago, Ill.

4. Boettcher Foundation: Boettcher Foundation medical scholarships; grants, 30 for 1 year; $500; not renewable, general expenses; Colorado residents, juniors and seniors in Colorado medical schools; no earlier than February 1.

5. Connecticut State Medical Society: New Haven, Conn., number varies, for 1 year, $500; Connecticut residents, must be in fourth year of medical school in United States or Canada.

6. Iowa State Medical Society: Des Moines, Iowa, educational loan fund, loan amount varies; residents or former residents of Iowa, preference to juniors and seniors in medical school, interns, and residents.

7. Kansas Medical Society medical student loan fund: Dean, University of Kansas Medical School, Lawrence, Kans.

8. Kentucky Heart Association: Louisville, Ky., student research scholarships; number varies; for 3 summer months; $600; not renewable junior and senior medical students attending Kentucky medical schools; no test; March 1; apply to the medical school.

9. Kentucky State Medical Association: Louisville, Ky.; rural Kentucky medical school fund; number varies; renewable for study of medicine, recipients must agree to return to practice in rural area of Kentucky for a time equal to the duration of aid received.

10. Massachusetts Higher Education Assistance Corp.: Boston, Mass.; bank loans; $500 per year (maximum total loan $1,500); renewable for a third year; students beyond the freshman year who are domiciled in Massachusetts. The corporation has for its purpose making bank credit available to college students on more favorable terms than have ever before been feasible. Apply to Dudley Harmon executive director, as above.

11. Massachusetts scholarships for dental, medical, and nursing students: Medical, dental, and nursing scholarship board, Boston, Mass.; fellowships; 276 awards; $150 to $500.

12. Mississippi State Medical Education Board: Mrs. Lucille M. Hardy, executive secretary, Jackson, Miss.; loan number varies; for 1 year; $1,250 (maximum total loan $5,000); renewable; Mississippi residents, for premedical education, must plan to do general practice and sign contract agreeing to practice for 5 years in towns of 5,000 or under. No tests.

13. Woman's auxiliary to the Missouri State Medical Association: Odessa, Mo.; medical student loan fund; loan number varies; for 1 year; stipend individually determined; renewable, Missouri residents, third or fourth year medical students at accredited schools.

14. North Carolina Medical Care Commission: Raleigh, N.C.; loan number varies; for 1 year; $140 to $800 per year (maximum total loan $700 to $3,200); renewable for a fourth year; residents of North Carolina for 8 years, for study of medicine, dentistry, nursing, or pharmacy, must agree to practice for 4 years in North Carolina town with population not over 2,500.

15. New York scholarships for medical and dental students: Bureau of examinations and testing, State education department, Albany, N.Y.; fellowships; 390 awards; $350 to $700; renewable; tuition and fees; U.S. citizen and a resident of New York State; regents scholarship examination.

16. South Carolina medical student scholarship loans (rural areas): Medical College of South Carolina, Charleston, S.C.; eight awards; $1,000.

17. South Dakota Medical School Endowment Association: Sioux Falls, S. Dak.; loan number varies, for 4 years; $600 per year (maximum total loan $2,400); must be South Dakota resident or in a South Dakota medical school for study of medicine; no deadline.

18. Vermont scholarships for medical students: University of Vermont, Burlington, Vt.; fellowships; 35; $200.

19. Virginia out-of-State scholarships for medical students (rural areas): Virginia State College, Petersburg, Va.; fellowships; 10 awards; $1,000.

20. Virginia scholarships for medical and dental students at Medical College of Virginia (rural areas): fellowships, 24 awards, $1,000.

21. Virginia scholarships for medical students at the University of Virginia (rural areas): dean of the School of Medicine, University of Virginia, Charlottesville, Va., fellowships, 12 awards, $1,000.

22. Virginia State Board of Health: Rural physician scholarships; fellowships for 1 year, $1,000; renewable, Virginia residents; must agree to practice medicine in rural Virginia community for period equal to duration of financial aid received. Apply to as above or to Department of Medicine, Medical College of Virginia, University of Virginia, or to Meharry Medical School.

23. Indiana United Student Aid Funds, Inc.: Predominately for undergraduates but they have loaned to more than 100 medical students at Indiana University.

24. National Medical Fellowships, Inc.: Chicago, Ill. For Negro students entering medical school and also those doing postdoctoral study.

25. American Medical Woman's Association, Inc.: General headquarters, 49 West 49th Street, New York, N.Y.: Loan, four to five for 1 year, $500; well-qualified female medical students; early January; apply to chairman, scholarship loan fund, as above.

26. Gold medal tuition loan plan of Chemical Bank, New York Trust Co.: For medical students; parent, relative, guardian, or sponsor must cosign; bank pays tuition; payment starts 1 month from date of loan on monthly installments.

Woman's auxiliary scholarship and loan figures (1961–62) (totals): Medical student scholarships, $9,295; medical student loans, $37,347.13.

MEDICAL SCHOLARSHIP AND LOAN FUND PROGRAMS

The American Medical Association presents this summary of scholarships and loan funds which are being provided by State and county medical societies and their woman's auxiliaries as an aid to student counselors, medical students, and undergraduate students who are contemplating careers in medicine.

This survey, however, does not summarize all the programs providing financial assistance to medical students. In addition to these medical society programs, a considerable number of States have funds administered by their legislatures, medical schools, and private and public foundations.

Students interested in scholarship or loan programs not included in this survey should contact their medical school deans or the executive secretaries of State medical associations for additional information. Further information may also be obtained from:

Association of American Medical Colleges, Evanston, Ill., and from Council on Medical Education and Hospitals or Council on Rural Health of the American Medical Association, 535 North Dearborn Street, Chicago, Ill.

States included in this summary which offer financial assistance programs administered by State and county medical associations or their Women's Auxiliaries are: Arizona, Arkansas, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Nevada, New Jersey, New Mexico, North Carolina, Ohio, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah, West Virginia, Wisconsin, and Wyoming.

ALABAMA

Jefferson County (1)

Program: Jefferson County medical tuition grant.

For: Medical College of Alabama students.

Qualifications: Good scholastic record, character reference, based on need, interviews, supporting letters from faculty.

Selection: By application.

Maximum amount per year: $400.

Total amount: $1,600.

School: Medical College of Alabama.

Gift or repayment: Gift.

Postgraduate requirements: Must practice in Jefferson County 1 year for each year of grant. (May be waived.)

Program begun: 1945.

Additional information: Board of Censors, Jefferson County Medical Society, 901 South 18th Street, Birmingham, Ala.

Jefferson County (2)

Program: Jefferson County Medical Society scholarship loan fund.

For: Medical College of Alabama students.

Qualifications: Good scholastic record, character reference, based on need, interviews, supporting letters from faculty.

Selection: By application.

Maximum amount per year: $800 to $1,000.

Total amount: $3,200 to $4,000.

School: Medical College of Alabama.

Gift or repayment: Mandatory repayment with 6 percent interest beginning 1 year after internship. May be repaid in three installments.

Postgraduate requirements: None.

Program begun: 1945.

Additional information: Board of Censors, Jefferson County Medical Society, 901 South 18th Street, Birmingham, Ala.

ARIZONA

Program: Benevolent and loan fund of the Arizona Medical Association.

For: Students or accepted applicants in United States or Canadian medical schools.

Qualifications: Arizona resident.

Selection: Based on financial need.

Maximum amount per year: $1,500.

Total amount: $6,000.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with 6 percent interest beginning at completion of first year of internship.

Postgraduate requirements: Recipient expected to practice in Arizona community.

Program begun: 1959.

Additional information: Benevolent and Loan Fund Committee, Suite 1021, Central Towers Building, 2727 North Central Avenue, Phoenix, Ariz.

ARKANSAS

Program: Ilse F. Oates medical student loan fund of the Woman's Auxiliary to the Arkansas Medical Society.

For: Third- and fourth-year medical students.

Qualifications: Based on need and scholastic standing.

Selection: By application to dean's office.

Maximum amount per year: $500.

Total amount: $1,000.

School: University of Arkansas School of Medicine.

Gift or repayment: Mandatory repayment with 3 percent interest beginning 1 year if possible after graduation.

Postgraduate requirements: None.

Program begun: 1926.

Additional information: President, Woman's Auxiliary in care of Arkansas Medical Society, Post Office Box 1345, Fort Smith, Ark.

CONNECTICUT

Program: Connecticut State Medical Society loan fund for interns and residents.

For: Interns and residents.

Qualifications: U.S. citizens serving in Connecticut hospitals approved for intern and resident training.

Selection: By application to intern committee of hospital.

Maximum amount per year: $500.

Total amount: Not specified.

School: See above.

Gift or repayment: Repayment with 2 percent interest expected to begin after 2 years and expected in full within 5 years.

Postgraduate requirements: None.

Program begun: 1955.

Additional information: General manager, Connecticut State Medical Society, 160 St. Ronan Street, New Haven, Conn.

FLORIDA

Program: Dade County Medical Association medical student loan fund.

For: Second, third, and fourth year students at University of Miami School of Medicine not necessarily residents of Florida; also Florida residents studying at other medical schools.

Qualifications: Based on need; recommendation by dean.

Selection: By Dade County Medical Association.

Maximum amount per year: Not stated.

Total amount: $500 per loan.

School: See above.

Gift or repayment: Mandatory repayment. Recipient also pledged to pay equivalent of 6 percent interest per annum beginning 12 months after graduation.

Postgraduate requirements: None.

Program begun: 1957.

Additional information: Dade County Medical Association medical student loan fund 2 S.E. 13th Street, Miami, Fla.

GEORGIA

Program: William R. Dancy student loan fund of the Woman's auxiliary to the Medical Association of Georgia.

For: Second-, third-, and fourth-year medical students.

Qualifications: Georgia residents; acceptable scholastic record; five references.

Selection: By student loan fund committee.

Maximum amount per year: Determined by deans of Georgia medical schools.

Total amount: No predetermined maximum.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment loan becomes interest-bearing 1 year after graduation.

Postgraduate requirements: Recipient is encouraged, but not required, to practice in Georgia.

Program begun: 1950.

Additional information: President Woman's Auxiliary c/o Medical Association of Georgia, 938 Peachtree Street, NE., Atlanta, Ga.

ILLINOIS

Program: Student loan fund, Illinois State Medical Society and Illinois Agricultural Association.

For: Medical students from Illinois rural areas.

Qualifications: Good scholastic record; good health; need; recommendation by county farm bureau and medical society.

Selection: By committee representing county farm bureau and medical society.

Maximum amount per year: $1,000.

Total amount: $5,000.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment within 5-year period.

Postgraduate requirements: General practice in Illinois small community for 5 years.

Program begun: 1948.

Additional information: I. E. Parett, secretary, loan fund board, Illinois Agricultural Association, Bloomingdale, Ill.

INDIANA

Program: Indiana State Medical Association student loan fund.

For: Indiana medical school students.

Qualifications: Indiana residents.

Selection: By student loan fund committee.

Maximum amount per year: $500.

Total amount: $1,500.

School: Indiana University.

Gift or repayment: Mandatory repayment with 2 percent interest to start at the beginning of active medical practice.

Postgraduate requirements: No restrictions.

Program begun: 1955.

Additional information: Indiana State Medical Association, 1021 Hume Mansur Building, Indianapolis, Ind.

IOWA

Program: Iowa State Medical Society Educational fund.

For: Third- and fourth-year medical students.

Qualifications: Iowa residents; financial need; good scholastic record; good character.

Selection: By educational fund committee.

Maximum amount per year: No maximum.

Total amount: No maximum.

School: Any United States or Canadian medical school; University of Iowa Medical College preferred.

Gift or repayment: Mandatory repayment beginning fourth year after graduation.

Postgraduate requirements: None.

Program begun: 1953.

Additional information: Dean, College of Medicine, University of Iowa, Iowa City, Iowa.

KANSAS

Program: Medical students loan fund.

For: Third- and fourth-year students at the University of Kansas School of Medicine.

Qualifications: Financial need.

Selection: By faculty committee.

Maximum amount per year: $500.

Total amount: $500.

School: University of Kansas School of Medicine.

Gift or repayment: Mandatory repayment with 2 percent interest 2 years after entering practice.

Postgraduate requirements: None.

Program begun: 1950.

Additional information: Dean, University of Kansas School of Medicine, 39th and Rainbow Boulevard, Kansas City, Kans.

KENTUCKY

Program: Rural Kentucky medical scholarship fund.

For: Medical students or accepted applicants.

Qualifications: Kentucky residents.

Selection: By board of trustees of scholarship fund; judged in interview on need and willingness to practice in rural area.

Maximum amount per year: $900.

Total amount: $3,600.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with 2 percent interest unless recipient practices in one of Kentucky's critical areas. Payable 7 years after date of loan.

Postgraduate requirements: Requested to practice 1 full year for each loan received.

Program begun: 1946.

Additional information: Kentucky State Medical Association, 1169 Eastern Parkway, Louisville, Ky.

MICHIGAN

Program: Michigan Foundation for Medical and Health Education, Inc.

For: Fourth year students, interns, and residents in Michigan medical schools.

Qualifications: None.

Selection: By medical school dean and by qualifications committee of the foundation.

Maximum amount per year: No maximum.

Total amount. No maximum.

School: Michigan medical schools.

Gift or repayment: Repayment mandatory beginning in first year of practice.

Postgraduate requirements: Required to practice in community with not more than 5,000 population for period of 3 years.

Program begun: 1951.

Additional information: Michigan Foundation for Medical and Health Education, Inc., Box 539, Lansing, Mich.

MINNESOTA

Program: Minnesota State Medical Association long term loan fund.

For: Second-, third-, fourth-year students and interns at University of Minnesota medical school.

Qualifications: Financial need.

Selection: By Minnesota State Medical Association Committee.

Maximum amount per year: $900.

Total amount: $3,600.

School: University of Minnesota.

Gift or repayment: Mandatory repayment with 2 percent interest beginning 1 year after internship and increasing 1 percent per year.

Postgraduate requirements: None.

Program begun: 1960.

Additional information: Minnesota State Medical Association, 496 Lowry Medical Arts Building, St. Paul, Minn.

MINNESOTA

Program: Herman Johnson Memorial loan fund.

For: University of Minnesota medical students.

Qualifications: University of Minnesota medical students.

Selection: By Minnesota Medical Foundation.

Maximum amount per year: $200 per student for 90 days.

Total amount: $200 per student for 90 days.

School: University of Minnesota.

Gift or repayment: Mandatory repayment with no interest within 90 days.

Postgraduate requirements: None.

Program begun: 1959.

Additional information: Minnesota Medical Foundation, Minnesota State Medical Association, 496 Lowry Medical Arts Building, St. Paul 2, Minn.

MISSOURI

Program: Missouri State Medical Association medical student loan fund.

For: Medical students.

Qualifications: Missouri residents; financial need; five recommendations; good scholastic standing.

Selection: By special committee.

Maximum amount per year: $1,000.

Total amount: No predetermined maximum.

School: Any U.S. medical school.

Gift or repayment: Mandatory repayment with 2 percent interest due 1 year after entering practice. Interest increases by 1 percent per year to a maximum of 6 percent.

Postgraduate requirements: None.

Program begun: 1960.

Additional information: Executive Secretary, Missouri State Medical Association, 623 Missouri Theater Building, 634 North Grand Avenue, St. Lous, Mo.

MISSOURI

Program: Medical student loan fund of the woman's auxiliary to the Missouri State Medical Association.

For: Third- and fourth-year medical students.

Qualifications: Missouri residents; acceptable scholastic record; three references and transcript.

Selection: By special committee.

Maximum amount per year: Depending on individual need.

Total amount: Depending on individual need.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with 2 percent yearly rate; becomes payable 3 years after date of graduation.

Postgraduate requirements: Must intend to practice in Missouri.

Program begun: 1958.

Additional information: Chairman, student loan fund, woman's auxiliary to the Missouri State Medical Association, 634 North Grand Avenue, St. Louis, Mo.

Program: Greene County Medical Society, foundation medical scholarship and loan fund.

For: All medical students.

Qualifications: None; preference to students in area.

Selection: By committee of medical scholarship and loan fund.

Maximum amount per year: $1,200.

Total amount: $2,000.

School: Any U.S. medical school.

Gift or repayment: Mandatory repayment with 2 percent interest to be completed within 5 years after entering practice. Six percent interest charged after 5-year period.

Postgraduate requirements: None.

Program begun: 1959.

Additional information: Greene County Medical Society, Medical Arts Building, Springfield, Mo.

NEBRASKA

Program: Student loan fund, Nebraska Medical Foundation, Inc.

For: Medical students beyond first 2 years.

Qualifications: Nebraska residents.

Selection: By committee of student loan fund.

Maximum amount per year: No maximum.

Total amount: No maximum.

School: Nebraska medical school.

Gift or repayment: Mandatory repayment; if recipient wishes to practice in Nebraska rural area, debt can be reduced.

Postgraduate requirements: Practice 1 year for each year of financial aid in rural community selected by executive board.

Program begun: 1948.

Additional information: Executive secretary, Nebraska State Medical Association, 1315 Sharp Building, Lincoln, Nebr.

NEVADA

Program: Peter Frandsen scholarships.

For: All medical students.

Qualifications: Nevada residents; financial need; plan to practice in Nevada.

Selection: By Nevada State Medical Association professional education committee.

Maximum amount per year: $500.

Total amount: $2,000.

School: Any United States or Canadian medical school.

Gift or repayment: Gift if recipient practices in Nevada; otherwise, a noninterest loan.

Postgraduate requirements: None.

Program begun: 1956.

Additional information: Executive secretary, Nevada State Medical Association, Post Office Box 2790, Reno, Nev.

NEW JERSEY

Program: Medical student loan fund of the Medical Society of New Jersey.

For: Third year students in United States or Canadian medical school; first and second year students may be considered.

Qualifications: Five-year residence in New Jersey; financial need; dean's reference and other recommendations; interviews.

Selection: By committee of medical student loan fund.

Maximum amount per year: $1,000.

Total amount: Not stipulated.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment beginning 2 years after entering practice; 3 percent interest to begin upon recipient's entrance into practice.

Postgraduate requirements: None.

Program begun: 1956.

Additional information: Committee on medical student loan fund, Medical Society of New Jersey, Post Office Box 904, Trenton, N.J.

NEW MEXICO

Program: New Mexico Medical Society, loan fund.

For: Medical students.

Qualifications: New Mexico residence; financial need.

Selection: By student loan fund committee.

Maximum amount per year: $750.

Total amount: Usually one-time loan to cover immediate need; may be extended if warranted.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with no interest within 3 years after graduation; 6 percent interest on unpaid balance thereafter.

Postgraduate requirements: None.

Program begun: 1958.

Additional information: Executive secretary, New Mexico Medical Society, 221 West Central Avenue, Albuquerque, N. Mex.

NORTH CAROLINA

Program: Student loan fund of the woman's auxiliary to the Medical Society of State of North Carolina.

For: Third- and fourth-year medical students.

Qualifications: Good scholastic standing; financial need.

Selection: Special committee.

Maximum amount per year: $500 for each of 2 years.

Total amount: $1,000.

School: University of North Carolina School of Medicine; Duke University School of Medicine; Bowman Gray School of Medicine.

Gift or repayment: Mandatory repayment with no interest for 3 years; 3 percent interest on unpaid balance at end of fourth year.

Postgraduate requirements: None.

Program begun: 1930.

Additional information: Chairman, medical auxiliary student loan fund, Medical Society of State of North Carolina, 203 Capital Club Building, Raleigh, N.C.

OHIO

Program: The Ohio State Medical Association rural medical scholarship.

For: Students accepted for medical study but not yet enrolled.

Qualifications: Ohio residence in nonmetropolitan area; scholastic ability; good character; interest in rural activities.

Selection: By scholarship subcommittee of committee on rural health.

Maximum amount per year: $500.

Total amount: $2,000.

School: Any United States or Canadian medical school.

Gift or repayment: Gift.

Postgraduate requirements: Encouraged to practice in nonmetropolitan area.

Program begun: 1949.

Additional information: Committee on Rural Health, Ohio State Medical Association, 79 East State Street, Columbus, Ohio.

OREGON

Program: Woman's auxiliary, Multnomah County Medical Society student loan fund.

For: Third- and fourth-year medical students and first-year graduates.

Qualifications: University of Oregon students.

Selection: By application.

Maximum amount per year: Not specified.

Total amount: Not specified.

School: University of Oregon Medical School.

Gift or repayment: Mandatory repayment with interest.

Postgraduate requirement: None.

Program begun: 1940.

Additional information: Woman's auxiliary student loan fund, Multnomah County Medical Society, 2164 SW. Park Place, Portland, Oreg.

PENNSYLVANIA

Program: Educational fund of the Pennsylvania Medical Society.

For: (1) medical students beyond first year, and (2) children of deceased or disabled physician members in high school, college and medical school.

Qualifications: Financial need; high scholastic record; several references; sponsorship by county medical society and recommendation by dean.

Selection: By committee on educational fund.

Maximum amount per year: Cost of tuition.

Total amount: Cost of tuition.

School: See above: (1) Any United States or Canadian medical school; (2) high school, college, or medical school.

Gift or repayment: Mandatory repayment. See above: (1) 2 percent or less interest beginning 3 years after graduation with full repayment within 10 years; (2) repayment expected when earning or within 3 years after graduation.

Postgraduate requirements: None.

Program begun: 1949.

Additional information: Secretary, Committee on Educational Fund, Inc., Pennsylvania Medical Society, 230 State Street, Harrisburg, Pa.

SOUTH DAKOTA

Program: South Dakota Medical School Endowment Association and South Dakota Medical Association auxiliary benevolent fund.

For: South Dakota medical students.

Qualifications: Medical student at State university or other schools; recommendation by dean.

Selection: By application.

Maximum amount per year: $400 to $660.

Total amount: $1,400.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment within 4 years at 3-percent interest.

Postgraduate requirements: None.

Program begun: 1948.

Additional information: Executive secretary, South Dakota State Medical Association, 711 North Lake Avenue, Sioux Falls, S. Dak.

TENNESSEE

Program: Nashville Academy Medical Foundation.

For: Davidson County third- and fourth-year medical students; consideration also given to underclassmen.

Qualifications: Good scholastic record; financial need.

Selection: By committee of the Nashville Adademy Foundation.

Maximum amount per year: $1,000.

Total amount: $1,000.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with no interest within 5 years after graduation.

Postgraduate requirements: None.

Program begun: 1958.

Additional information: Nashville Academy Medical Foundation, 112 Louise Avenue, Nashville, Tenn.

TEXAS

Program: Loan fund, woman's auxiliary to the Texas Medical Association.

For: Second- and third-year medical students, interns, and residents.

Qualifications: Texas residence; good scholastic record; three references (minister, personal friend, bank where family has had business transactions).

Selection: By student loan fund committee.

Maximum amount per year: See below.

Total amount: $200 to $1,000 (depending on need).

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with 2¼-percent interest.

Postgraduate requirements: None.

Program begun: Not stated.

Additional information: Woman's auxiliary to the Texas Medical Association, 1801 North Lamar Boulevard, Austin, Tex.

TEXAS [1]

Program: Dr. S. E. Thompson scholarship fund.

For: Medical students beyond first year of study at University of Texas; also first-year students with good records.

Qualifications: Texas residence; recommendation by dean; financial need.

Selection: By board of trustees, Texas Medical Association.

Maximum amount per year: $1,000.

Total amount: $3,000.

School: University of Texas Medical Branch.

Gift or repayment: Mandatory repayment with 4-percent interest per year beginning 4 years after graduation.

Postgraduate requirements: None.

Program begun: 1959.

Additional information: Dean, University of Texas Medical Branch, Galveston, or executive secretary, Texas Medical Association, 1801 North Lamar Boulevard, Austin, Tex.

UTAH

Program: Rural medical scholarship program, Utah State Medical Association.

For: Students at University of Utah School of Medicine.

Qualifications: Agreement to practice in rural community.

Selection: By committee of Utah State Medical Association.

Maximum amount per year: $1,000.

Total amount: $4,000.

School: University of Utah School of Medicine.

Gift or repayment: Mandatory repayment.

Postgraduate requirements: Practice in rural community equal to number of years funds were provided.

Program begun; Not stated.

Additional information: Utah State Medical Association, 42 South Fifth East Street, Salt Lake City, Utah.

WEST VIRGINIA

Program: West Virginia State Medical Association medical scholarship program.

For: Students at the University of West Virginia School of Medicine.

Qualifications: West Virginia residence.

Selection: By university's scholarship committee and the association's committee on medical education and scholarships.

Maximum amount per year: $1,000.

Total amount: $4,000.

School: University of West Virginia School of Medicine.

Gift or repayment: See below.

Postgraduate requirements: Recipient of 4-year loan must agree to practice in selected rural area for 4 years to receive grant as a gift. If recipient terminates practice in area in less than 2 years, he must repay full loan; in less than 3, one-half; if less than 4, one-quarter.

Program begun: 1957.

Additional information: West Virginia State Medical Association, medical scholarships program, 401 Atlas Building, Charleston, W. Va.

WISCONSIN

Program: Charitable, Educational, and Scientific Foundation, State Medical Society of Wisconsin.

For: Medical students, preferably at the University of Wisconsin or Marquette University.

Qualifications: Wisconsin residence.

Selection: By board of trustees of foundation.

Maximum amount per year: No predetermined maximum.

Total amount: No maximum.

School: Any approved medical school; University of Wisconsin or Marquette preferred.

Gift or repayment: Mandatory repayment with interest not to exceed 4 percent. Not applicable while in active military service.

Postgraduate requirements: None.

Program begun: 1951.

Additional information: Secretary, State Medical Society of Wisconsin, Box 1109, Madison, Wis.

WYOMING

Program: Wyoming State Medical Society scholarship loan fund.

For: Wyoming medical students.

Qualifications: Wyoming residence; financial need; approval by the Western Interstate Commission for Higher Education.

Selection: By special committee.

Maximum amount per year: $500.

Total amount: $2,000.

School: Any United States or Canadian medical school.

Gift or repayment: Mandatory repayment with 7 percent interest beginning 6 years after loan is made or when beginning medical practice.

Postgraduate requirements: Not stipulated.

Program begun: 1960.

Additional information: Wyoming State Medical Society, Box 15, Cheyenne, Wyo.

AMERICAN MEDICAL ASSOCIATION, EDUCATION AND RESEARCH FOUNDATION, MEDICAL EDUCATION LOAN GUARANTEE PROGRAM—PROGRESS REPORT THROUGH DECEMBER 31, 1962

THE FIRST 10 MONTHS

Nearly 1 of every 10 medical students in the country now has borrowed under AMA-ERF's loan guarantee program.

Through December 31, 1962, a total of 4,694 individuals (2,890 medical students, 672 interns and 1,132 residents) received 5,299 loans worth $6,111,400 in principal amount. Ten percent of the borrowers applied for and received more than one loan. The borrowers are in training in 83 medical schools and 462 hospitals in 46 States and possessions.

The vast majority of them—97 percent—are men—72 percent are married, 25 percent are single, and 3 percent are divorced, separated or widowed.

Established in March 1962 to provide medical students and physicians in training with a ready resource to meet essential living and education costs, the program allows a maximum of $1,500 a year, and $10,000 over 7 years, to be borrowed by an approved applicant, with no payment of either principal or interest required until 5 months after completion of training.

Applicants must be U.S. citizens in training and in good standing in an AMA-approved medical school or hospital. First year medical students must have completed their first quarter or semester to qualify. Each applicant must demonstrate, through a listing of present assets, debts, and estimated expenses and income, a clear need for loan funds.

Of the 5,823 loan applications received through the end of the year only 6.8 percent had been rejected by the Continental Illinois Bank & Trust Co. of Chicago, the institution currently making the loans under this program.

All approved loans are guaranteed by AMA-ERF. The bank has required the posting of $1 in a guarantee fund for every $12.50 it extends in credit.

CONTRIBUTIONS TO LOAN GUARANTEE FUND

Contributions and pledges from physicians, foundations, and private industry brought the total size of the guarantee fund to $975,165 as of December 31, 1962.

---

[1] The Nueces County Medical Society also grants four $1,000 scholarships annually. Contact Society at 2606 Hospital, Corpus Christi, Tex.

Contributions of $1,000 and over include:

America's physicians [1]	$460,490
Merck Sharp & Dohme [2]	200,000
Charles Pfizer & Co., Inc.—Pfizer Laboratories and J. B. Roerig Divisions	100,000
American Home Products Corp.—Wyeth and Ayerst Laboratories Divisions	30,000
Abbott Laboratories	25,000
G. D. Searle Co	25,000
Upjohn Co	25,000
E. R. Squibb & Sons	20,000
Hoffmann-La Roche, Inc	20,000
Continental Illinois National Bank & Trust Co. of Chicago	10,000
Smith Kline & French Foundation	10,000
Student American Medical Association	10,000
Woman's Auxiliary, AMA	10,000
Ciba Pharmaceutical Co. [3]	5,000
Mid-Columbia (Oreg.) Medical Society	4,000
George M. Fister, M.D	2,500
Norwich Pharmacal Co	2,500
Schering Foundation, Inc	2,500
Paul Revere Life Insurance Co	2,000
The American Society of Anesthesiologists, Inc	1,000
Leta N. Boswell, M.D	1,000
Burroughs Wellcome & Co	1,000
Macoupin County (Ill.) Medical Society	1,000
Mayo Association	1,000
Minnesota Mutual Life Insurance Co	1,000
North American Clinical Dermatologic Society	1,000
S. B. Penick Foundation	$1,000
W. Clement & Jessie V. Stone Foundation	1,000
Wallace Laboratories	1,000
Warner-Lambert Pharmaceutical	1,000

[1] Includes $189,257 for AMA.

[2] $100,000 of this amount is pledged for 1963.

[3] Pledged for 1963.

How the guarantee fund is committed

For $1,136,625 in estimated interim interest	$90,930
For $2,589,305 in estimated payout interest	207,144
Uncommitted	176,543
For $6,256,736 in principal (including loans in process)	500,538

As shown above, loans already made, together with estimated interim and payout interest, have committed more than 80 percent of the guarantee fund.

(During the interim period, before repayment begins, simple interest accrues at the rate of 5.5 percent. During the payback period, which extends up to a maximum of 10 years, 6.5 percent simple interest is charged, computed monthly on the amount still outstanding.)

The funds' uncommitted balance of $176,543 is sufficient to guarantee approximately 1,200 additional loans. If the present rate of borrowing continues, however, some 7,200 loans will be made in 1963. To make these loans possible, it will therefore be necessary to increase the guarantee fund by at least $1 million this year.

Borrowers and loans by type of borrower

Category	Number of borrowers	Percent of all borrowers	Number of loans	Loans per borrower	Mean loan	Mean per borrower
Medical student:						
1st year	291	6.3	321	1.11	$1,035	$1,145
2d year	832	17.9	934	1.12	1,100	1,240
3d year	829	17.8	946	1.14	1,130	1,290

I also have from the American Medical Association a list of programs relating to education and research foundations which I will ask later to be inserted at this point.

I would also like to say in connection with the scholarship programs of the American Medical Association that in addition to the AMA $16.5 million loan program, there are many others, foundations, State governments, and even medical schools that have loans, which would indicate that this is not an area that is being left to be financed just by the Federal Government.

The activity in these loan programs continues at a brisk rate today in 1963. And, again, the AMA reports that through March 31 an additional 1,313 loans were granted, bringing the total number to 6,612. Of the total loans 62 percent had been received by medical students and 15 percent by internes and 23 percent by residents. The average loan to medical students is $1,100. The internes loan is a little bit higher because they normally have some family responsibilities.

Mr. Chairman, I would like to point out the minority views that appear at page 69 of the report. This particular reference I shall read for the purposes of the RECORD:

> The witness representing the Department of Health, Education, and Welfare indicated that H.R. 12 is required because the loans available under the National Defense Education Act are not adequate. He pointed out that under the National Defense Education Act the maximum loan is $5,000 and $1,000 per year while H.R. 12 allows for $8,000 and $2,000 per year. The forgiveness feature is also cited as a major difference in the two loan schemes which justifies adding a new loan source to those already existing.
>
> While a large number of students availed themselves of National Defense Education Act loans in fiscal year 1962 (3,213 medical students, 1,881 dentistry students) the average loan was less than $700. These figures would tend to show that the increased amounts provided by H.R. 12 are unnecessary. It further tends to dispute the value of forgiveness as a determining factor in the graduate's decision to pursue his career in general practice. If the average loan were to remain at $700 for each of 4 years, it is unlikely that a new doctor will be influenced to enter general practice against his inclinations merely to avoid repaying such a sum over a period of 10 years.

I would like to point out that the testimony has been clear that applicants are beating on the doors of medical schools to get in; that they do not have the facilities to handle them and if we grant loans to additional applicants in order to get in schools that cannot handle them, what is going to happen? I think we will all admit it will take some time—3 to 7 years—to build facilities to handle these additional students and, therefore, in my opinion it would be at least 3, 4, 5, or 6 years before the loan provision would be of any benefit whatsoever.

Mr. Chairman, at the proper time I plan to offer an amendment to strike the loan provision from H.R. 12.

Mr. ALGER. Mr. Chairman, will the gentleman yield?

Mr. DEVINE. I yield to the gentleman from Texas.

Mr. ALGER. I have read the gentleman's views in the minority report with interest as well as have listened to what he has said here in the debate. I am particularly interested in the views expressed in the minority report. I appreciate the gentleman submitting those views to the members of the committee and pointing out that no need for the proposed legislation has been justified and that these proposed programs and grants would stifle the medical profession and its individual initiative.

The CHAIRMAN. The time of the gentleman from Ohio has again expired.

Mr. BENNETT of Michigan. Mr. Chairman, I yield the gentleman from Ohio 1 additional minute.

Mr. ALGER. Mr. Chairman, if the gentleman will yield, I looked at the testimony of the gentleman from the AMA when he says—this was Dr. Dorman:

> It can now be said, with assurance, that medical education in this country is superior to that found anywhere else in the world. It is not a coincidence that improved standards of medical care in the last half-century saw the elimination of substandard medical schools and "diploma mills" which had been turning out graduates in large numbers.

This improvement in medical education is the direct result of the vigorous efforts of this association, and other interested organizations.

There it is a clear recognition of what private efforts have accomplished. The best medical education in the world.

Then he goes on to say, in effect, therefore, we need Federal aid.

Does not the gentleman from Ohio see a very serious clash of logic in this view as expressed by Dr. Dorman, member of the board of trustees of the American Medical Association?

Mr. DEVINE. I certainly do. This very same Dr. Dorman is a very respected gentleman, and he testified on behalf of the AMA, pointing out that they were unable to raise funds from a local standpoint to do this very job in his State of New York. I pointed out to him that the people of New York are paying about $1.60 for every dollar they get back in Federal aid. It does not make sense that we are still dealing in that mythical area where there is something magic about Federal funds. It must first be extracted from the pockets of the taxpayers.

Mr. ALGER. If the gentleman will yield further, I compliment the gentleman and associate myself with his views.

Mr. Chairman, in my previous colloquy with the gentleman from Ohio I tried to point out the failure of logic and judgment evidenced by Dr. Dorman's testimony when he pointed out that "medical education in this county is superior to that found anywhere in the world." Then after reciting this accomplishment through private means the illogical assumption then followed that Federal aid and programs were needed.

How shortsighted can people be? The members of the medical profession from their medicare experiences should know the dangers of Federal encroachment. Doctors have united to proclaim that Federal control follows Federal aid; that a foot in the door is all that is necessary by the Government to then enter and dominate the field.

Have the doctors asked themselves these questions:

First. What happens to the private loan programs when the Federal Government enters the field?

Second. What happens to private construction when Federal funds enter the field?

Third. What happens to private contributions when Federal grants and loans replace private contributions?

Fourth. Where does Federal aid and control stop, once started?

The minority report wisely contains this statement:

> There is some reason to think that proposed programs which would gradually rob the medical profession of its tradition of personal independence and dedication are already beginning to create a reluctance on the part of possible medical students to commit themselves and their futures to the healing arts. No abundance of physical plants nor availability of liberal loans will overcome this seed of doubt about the future of the profession.

We face a choice here once again which many fail to see and as a result will lose by default. It is this: Either we provide financial support and regulation and control of medicine by private means or we take the Federal tax funds—money raised through force—with jail sentences for tax evasion—and control medicine by government. It is clear to me that we should choose private means. Yet many do not even see the choice or the danger of taking Federal money.

So it is that by tests of logic and how best to do the job of assuring best medical education I shall oppose Federal aid and control, placing my faith in our private means which has done so well that we are the medical wonder of the world.

I could have more simply objected today to these programs of Federal aid in grants and loans by declaring their unconstitutionality. This is not the role of Federal Government.

As for the cost, at a time of deficit financing what sense is there in embarking on new programs, that further endangers our entire fiscal solvency? How statesmanlike is this? Who is going to pay for it should be our concern, too.

Mr. HARRIS. Mr. Chairman, I yield 10 minutes to the distinguished gentleman from Alabama [Mr. Roberts], chairman of the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS of Alabama. I yield to the gentleman.

Mr. COHELAN. Mr. Chairman, I rise in support of this important and urgently required legislation.

We are faced today, as the hearings conducted by the committee make so abundantly clear, with a problem which is fast approaching critical proportions—the problem of insuring an adequate, well-trained supply of medical personnel.

Too few doctors, dentists and nurses would make it impossible for us to capitalize on the great gains we have made in the field of medical science—gains which today enable us to prevent or cure diseases that were the scourge of previous generations, and which today enable us, by the techniques of modern surgery, to save countless lives for which there previously was no hope. Too few, in brief, would prevent us, or seriously handicap us, from insuring the health of this Nation—a resource which Emerson has so correctly tabbed as the "first wealth."

Yet this is the problem, Mr. Chairman, toward which we are heading—the problem of fewer and fewer medical personnel in relation to our evergrowing population—and this is a problem which will only grow more acute unless prompt and effective action, such as is provided for in this bill, is taken.

My own State of California presents, I believe, a dramatic example of this problem. We now have a population of approximately 17½ million persons—a population which is swelled every day through out-of-State migrations by 2,000. From this daily influx of 2,000 comes 80 percent of the new physicians and 50 percent of the new dentists which California licenses every year. Yet, despite this sizeable number—a number which of course depletes the supply in other States—we are unable to maintain even the present ratio of physicians to population.

If California is to meet its needs, it must, in the next decade, double its number of medical and dental students. Last fall, California's medical schools, both private, and public, admitted 484 freshmen. By 1972, this figure must be in excess of 900 just to maintain the present ratio.

California is making a substantial and a determined effort on its own behalf to meet this requirement. The University of California is in the process of expanding its medical schools at San Francisco and Los Angeles, and it has acquired a site for a medical center in San Diego—a development alone which will require construction and equipment expenditures of $50 million. The private schools are struggling, against increasingly rising costs, to maintain their present student levels, and they have indicated their willingness to expand opportunities for admission if new funds can be found.

But these efforts by California alone will not be enough, particularly if we are to ease our present heavy drain on the health personnel of other States, and if the United States is to lessen its drain on the health manpower of other countries.

The Federal matching assistance provided in H.R. 12, would provide an urgently needed supplement to the demonstrated efforts of California. It would go far toward meeting our Nation's critical health manpower requirements and in promoting the welfare of this and future generations of Americans.

Mr. Chairman, I urge that this bill be passed without delay.

Mr. ROBERTS of Alabama. Mr. Chairman, in the more than 12 years that I have had the privilege of serving in this distinguished body and particularly the service that I have had under the leadership of the distinguished gentleman from Arkansas [Mr. Harris] and other chairmen, the gentleman from New Jersey, Mr. Wolverton, and the gentleman from Tennessee, Mr. Priest, I have had the privilege of hearing and working on a good many bills in the field of health.

I believe that in my experience there has not been a more significant piece of legislation to come before the House than H.R. 12. I might say that although this bill was sent up by the administration it is a committee bill. The committee very carefully worked on this bill. Hearings were held on this and similar bills in five Congresses, the 81st, the 84th, the 85th, the 87th, and the 88th. And, frankly, until I found out today that there has ben some change in mind and heart on this legislation, I believed that there would be very little controversy with reference to it. I do not mean to impugn the motives of anyone who may have changed his mind, nor do I say that a Member does not have that right.

Some have been opposed to the legislation throughout the hearings. I will say, however, that there was only one vote against the bill as reported when it came out of the full committee, which I think is significant.

I do not know that I disagree with those who say that you cannot take the figure of, perhaps 141 to 100,000 of population and absolutely prove that there is a shortage of physicians; or that when you say that there are perhaps 54 dentists to 100,000 people you can definitely prove that there is a shortage of dentists. But I can tell you as a Representative of a district that has some rural counties in it that if you want any definite proof of a shortage you just let a draft board tell one of the doctors to report for duty in the armed services, and I will guarantee you that your constituents will let you know that there is a shortage of physicians and dentists in that rural community. I have worked in one county for the past 8 to 9 years trying to get one doctor, just one, for this rural county, and I finally succeeded in getting one man released from the Air Force. We set him up in the cattle business, built him a clinic and paid for it with public funds. He stayed a year and was gone. If I knew where he was I would try to get him drafted again.

Let me say this, that we have had testimony from eminently qualified people who have studied this problem over the years and I have heard them say to us that we are bringing in about 1,700 or 1,800 foreign physicians a year. I do not think there is any testimony in the record that says we are bringing in any dentists, but we are bringing in foreign doctors. I have had experience with both kinds, the bad and the good; some of them are very good.

I do not think that as the leader of the free world we should go out to these countries which are already deficient in this type of highly skilled personnel and bring their doctors into this country by whatever means we do it. One of them may come in as a student and later become valuable as a medical man, and some Member of Congress introduces a private bill to let him stay. In the meantime he has married, and he has carved out a valuable place in the community. Many of them come in that way. But, as the most powerful nation in the world, we certainly should meet the challenge of providing enough skilled people in these important fields.

We know, if you want to go back to the figures, that the number of doctors is less per 100,000 today than it was a decade ago. With the explosion of population and with the greater demands for services, people are using doctors and dentists more than they ever have. You may say there may not be a shortage, but go down to any dentist's office and tell him you want to have some work done. In my opinion, in the metropolitan area of Washington, which is fairly well supplied compared with other areas of the country, you will get a waiting period of a week to 2 weeks before he can see you, unless it is an emergency. It is not quite that bad with physicians, but in some particular cases if you want to get a doctor to come to your home at night it is almost an impossibility. I say that without any reflection on the medical profession, because I think they are overworked, I think they have too much to do. I think the passage of this particular bill would go a great distance in alleviating these shortages.

I know of the tremendous need, and there is no point in my bringing this into the picture, because there is no argument about the construction need. Apparently there is no fight being made on that phase of the bill. The fight is being made on the student loan provision. Frankly, I do not know why I am so anxious to see it retained, because the idea came from the other side. I went along with them. I was not in favor of the grants, because I feel that once a medical or dental student is established he can easily pay back this money.

I think it is an understatement indeed to contend that this legislation has been long overdue. I believe it can be shown that if this legislation had been enacted a decade, or even 5 years ago, medical and dental services in this Nation might be more readily available than they are at present. Perhaps there might be even less pressure for the enactment of highly controversial Federal programs concerning the financing of medical care.

I was firmly convinced 5 years ago that legislation providing Federal aid for the construction of medical and dental school teaching facilities was an utter necessity.

During the 85th Congress I introduced a bill (H.R. 11913) to authorize grants for research and teaching facilities for existing and new medical, dental, and public health schools. At that time, the subcommittee of which the gentleman from Mississippi, Mr. Williams, was chairman, conducted hearings on my bill which was substantially similar to H.R. 12 reported by our committee this year. The testimony given to the subcommittee in support of a program of Federal matching grants for the construction of medical and dental school facilities so impressed the members of the subcommittee that they reported favorably to the full committee legislation which would have provided a measure of support not only for health research facilities but also for teaching facilities.

At that time, however—5 years ago—the organized medical profession had not as yet come to realize the great need for training more doctors to serve the health needs of the American people. While the AMA testimony supported Federal construction grants for medical schools, the emphasis was primarily on the high cost of high-quality medical education rather than the need for training additional doctors.

The bill reported by the subcommittee did not find sufficient support, and during the 85th Congress only legislation was enacted to extend for a period of 3 years the construction grant program for health research facilities.

Today, 5 years later, there is little dispute over the threat of an impending doctor shortage. As a matter of fact, there is a fairly clear realization on the part of many persons that such a shortage is already upon us. Persons who have had occasion in recent years to seek the services of their family physician will not doubt the truth of this statement.

H.R. 12, in my opinion, is an absolute necessity, if this Nation desires to avoid a dire catastrophe in future years. It has been estimated that unless something like this legislation is enacted, by 1975 a family physician will have to take care of 2,000 persons instead of 1,700 persons on an average in 1960.

Mr. Chairman, I wish to express my strong endorsement of the report on H.R. 12, the Health Professions Educational Assistance Act of 1963, and to recommend that the House of Representatives act favorably upon this bill.

The gentleman from Arkansas [Mr. HARRIS] has emphasized that the shortage of trained professional health personnel is a national problem. In these mobile times, when both the practitioners and the consumers of health services move from State to State and region to region, health manpower is necessarily a national resource. It must grow so as to keep pace not only with our swiftly expanding population but also with the growth of medical science. It would be tragic and ironic if the fruits of research fail to reach people who need them because too few men and women are trained to perform the new services.

I am keenly aware that this problem of national dimensions has special urgency for my own State of Alabama and the southern region. In recent years the South has expended a larger proportion of its resources to provide opportunities for medical education than has the Nation as a whole. As a result, the ratio of practicing physicians to the population in many of our Southern States has been rising while the national ratio has declined. In Alabama the ratio has gone up from 66 to 74 non-Federal physicians per 100,000 people since 1940. The national ratio during the same period has declined from 122 to 119 per 100,000.

But obviously there is still a tremendous gap to be overcome. The Southern Regional Education Board, which has performed excellent service in helping to make professional education available to young people in our region, estimates that the South will need 86,000 physicians by 1975, compared with 54,000 we now have, just to reach a level that the Nation as a whole has already attained.

It is clear to me that currently existing sources of support for education in the health professions cannot meet this challenge alone. The States and private institutions have carried an overwhelming load. They have done a herculean job, both separately and collectively. But they cannot supply the Nation with the physicians, dentists and other health professionals that the health of our people requires in the years ahead.

I am impressed by the strong support for H.R. 12 which has been expressed by leading authorities in medical and dental education, by the health professions, and by many others well qualified to judge the urgency of the need and the validity of the instrument. I was especially interested in the strong statement of the distinguished former dean of the University of Alabama Medical College, Dr. Robert C. Berson, outlining the problems faced by medical schools in recruiting outstanding young people to health careers.

I am convinced that the health of present and future generations of Americans will be in serious jeopardy unless we act swiftly and effectively to meet the shortage of professional health manpower. I am convinced that H.R. 12, providing Federal assistance in the expansion of existing schools, the construction of new schools, and the recruitment and retention of top-quality young people in these all-important disciplines, represents a logical and necessary advance in the support of education for the health professions. I wholeheartedly endorse it, and urge its rapid enactment.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS of Alabama. I yield to the gentleman from Iowa.

Mr. KYL. I would ask the gentleman from Alabama a question which was asked but not answered in the hearings. The National Defense Education Act was established ostensibly to increase the number of engineers in training. Has the number of engineers in training increased under the National Defense Education Act?

Mr. ROBERTS of Alabama. I am not much of an authority on the National Defense Education Act. I would say that one reason I think this loan provision should be retained is that there is a great deal of competition under the National Defense Education Act among those who are preparing to become scientists and teachers.

Mr. KYL. I am not proposing an argument to the gentleman; I seriously want to know the answers to these questions. We have a forgiveness provision in the teacher-training language under the National Defense Education Act. I would like to know if that provision has increased the number of teachers in training.

Mr. ROBERTS of Alabama. I would say to the gentleman, I think it has. I know certainly that the GI bill increased the number of teachers and the number of scientists and the number of engineers. I might yield to the distinguished gentleman from Kentucky who may be able to answer the gentleman's question.

Mr. PERKINS. I would say to the gentleman, under the National Defense Education Act program and under the forgiveness provision of the student loan program with regard to teachers, the true intent of the act has been very successful in that qualified public school teachers have been increased by at least 25 percent.

Mr. KYL. And have they been increased sufficiently so that the program is no longer necessary?

Mr. PERKINS. No, the program is necessary and it should be continued because there was a great deficit when we started out. But we are making progress. But for the student loan program, I would say we would be at least 25 percent behind where we are today.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 5 minutes to the gentleman from Massachusetts [Mr. KEITH].

Mr. KEITH. Mr. Chairman, as a member of this committee I became convinced of the merit of this legislation. But as we studied the provisions in detail, I became concerned, as I have explained in my additional views in the committee report, about the loan provisions of this proposal. This is probably the most generous loan program of any program in which the Federal Government has ventured. It has an extraordinarily low rate of interest. There is no interest paid during the period that the student is in school or while he is an intern. Further, in the event of the student's death, his indebtedness is canceled.

Certainly, in this proposal we are not encouraging an individual to assume all of the financial responsibility that those of us who went to college in years past would have assumed had we borrowed money from a friend or from an agency of our Government. As the bill now stands, the appropriate State health authority can certify certain areas as having a need for physicians or dentists. If the State authority so certifies, then if a doctor or a dentist practices in those areas, his indebtedness is further forgiven to the extent of 50 percent.

I ask my colleagues whether or not in their opinion the authorities within their States would discriminate between one town and another as to which one really needed the doctors the most. I believe in the long run we would find the State authorities concluding that the entire State is in need of doctors and thereby entitle the doctor or dentist practicing within that State to a forgiveness in the amount of half of the indebtedness.

It seems to me there should be a responsibility on the part of the State to assume half the cost of this forgiveness feature. The State should be required to participate by reimbursing the Federal Government for half the amount of the loan that has been advanced to the participating student. It would mean that the State would be truly discerning in its determination of what is a needy area.

Finally, it seems to me, the Federal funds would go further because there would be more students who could be aided with the same amount of money. I encourage the House to support my amendment, thereby improving the bill and at the same time improving its chances of passage.

For these reasons, Mr. Chairman, I plan to offer at the appropriate time an amendment that will require the States to furnish assurances satisfactory to the Secretary that it will pay to the United States one-half the portion of any loan, plus interest, which is canceled by reason of the certification of an area as a needy area.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 5 minutes to the gentleman from Connecticut [Mr. SIBAL].

Mr. SIBAL. Mr. Chairman, I requested this time to attempt to put into perspective the bill as it exists before the House today. When the committee received this proposed legislation in the form of an Executive request in the first instance, it was substantially different from the legislation we are called upon to vote upon today.

I would point out to my colleagues on the Republican side that as the bill came out of committee and is before you there is nothing in the bill which is in conflict in any way with our party platform of 1960. In its original form the scholarship provision was for grants. The committee eliminated the grants provision and changed it to a loan provision.

There was a 10-year authorization program under the originally suggested legislation. It has been reduced to a 3-year program.

Originally figures on requested financial authorization were beyond that which was listed in the submitted budget for the fiscal year 1964. As it now appears it is within that budget.

The need for additional medical facilities for the training of doctors has clearly been established. Some reference was made to an exchange between the previous speaker and one of the Members of the House concerning the superiority of American medical education, and this is certainly true. But I would point out to you that more and more we are turning to people who are trained outside of these shores, who are not always receiving the kind of training which we feel is important for physicians who are going to be treating us and future generations. This is the purpose of this legislation, to insure highly trained medical personnel in adequate numbers.

The suggestion that somehow or other this is a new approach which is at variance with that of the past I think is not supported by the facts. There is one aspect of the bill, however, which bothers me very much, and that is that once again we propose to act on legislation which does not in any way prohibit discriminatory practices by the universities and colleges which would benefit under this bill. For many, many years now we have heard about the legislative branch becoming the third ranking branch of Government in the public mind, that somehow or other we are being invaded by the executive; and the judiciary along with the executive has exercised its prerogatives in a much more aggressive way than the Congress has. Yet, whenever we have an opportunity to change that state of affairs by acting with courage in an affirmative way, we duck it because somehow or other we take the argument that these things can be spelled out by executive decree or judicial decision.

Very recently the President of the United States, when asked if he would withhold Federal funds from a great State of this Nation, indicated he did not have the authority. He indicated this was not proper, and I agreed with him.

But he also said:

> I do not think that we should extend Federal programs in a way which encourages or really permits discrimination.

That is very clear. He made this a direct challenge to the Congress of the United States to see to it that additional programs which we may enact do not permit discrimination. Among the needs in this country for additional physicians, the need is certainly greatest in the Negro population. I submit this is the way, not with bayonets, not with bloodshed, not with dramatic action, but responsibly to meet the civil rights question.

If we see to it, and in so doing, by no means dictate to the institutions that they must participate in this program, but give them the choice of participation in accordance with the guidelines we lay down, or no participation, this is the way intelligent, rational, peaceful men will bring about an end to the kind of thing which has been a blot on our national reputation.

At an appropriate time I shall introduce an amendment which would prohibit the use of Federal funds to institutions which practice discrimination. It is argued firmly that this is the way to defeat the legislation, but I assure you that is not my purpose nor the purpose of those who will support the amendment.

As a matter of fact, last year H.R. 8900, the college assistance bill was passed overwhelmingly by this House. It parallels this legislation in many respects. If every single Member of this House who might conceivably be influenced by the kind of amendment I shall submit, had I voted against that bill, it still would have passed by a substantial majority. I am confident that if we have the courage in the House of Representatives today to express ourselves by our vote in the way we talk so eloquently, this bill will pass, the amendment will be agreed to, and the American people will be reassured that the Congress has not in fact abandoned its prerogatives to the executive and to the judiciary.

Mr. HARRIS. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. MOSS].

Mr. MOSS. Mr. Chairman, I was somewhat surprised to receive, as I know each of you received, under date of April 18, a letter from the American Medical Association opposing the student loan provisions of H.R. 12. I was surprised because, from the very beginning of the consideration of this bill and of similar legislation, in the 87th Congress, the American Medical Association was accorded every courtesy by the chairman of the committee and by the members of the committee to appear and to give the committee the benefit of its experience, the benefit of knowledge which is uniquely the property of the American Medical Association. Yet, at no time, including their appearance just a little more than 2 months ago, did they ever acquaint the committee with the fact that they were opposed or were planning to oppose the loan provisions of this legislation.

Now, the letter of April 18—and I have read it carefully a number of times, because I would not want to incorrectly interpret the import of it—leaves me with the distinct feeling that the American Medical Association has found that their program provides the last measure of assistance necessary to meet the demands of students for medical education, yet in their appearance before our committee in February of this year, in response to questions by the distinguished gentleman from Illinois [Mr. SPRINGER], we find this colloquy between the gentleman from Illinois and Dr. Dorman of the American Medical Association and the man who was appearing as the spokesman of the American Medical Association:

> Mr. SPRINGER. Are you saying, though, in your statement on pages 4, 5, and 6, that the American Medical Association-Education and Research Foundation program is inadequate?
>
> Dr. DORMAN. No, sir. We say that it is filling a big need. We did not say that it was inadequate. It was never designed to take the entire load. It was designed to assist in this area. It does not carry the full load, and I do not believe it ever could.

Well, this matter of dividing the means of financing medical education appears to be one of the most significant problems confronting the medical schools and the medical students. I know of no witness appearing in lengthy hearings in the 87th Congress from medical schools or from the medical profession who did not make it clear that they regarded the heavy burden of financing medical education as one of the most pressing problems.

The Association of American Medical Schools in testimony in February of this year reemphasized the significance of the burden of financing medical education. The fact is that the AMA–ERF program was never envisioned as being adequate to meet all of the demands, and, as a matter of fact, there is grave doubt that it is going to be able to continue doing the job, the part of the job contemplated by the American Medical Association. Let me quote from the very authoritative American Medical Association News of February 18, 1963, the official publication of the American Medical Association. The headline is "Loan Fund Demand High; Dollars Needed":

> The student loan guarantee program of the American Medical Association-Education and Research Foundation is one of the most successful projects ever undertaken by the American Medical Association, George M. Fister, M.D., American Medical Association president, said.
>
> Demand for loans by medical students, interns and residents has been so heavy, he said, that the program faces curtailment unless the guarantee fund is enlarged by about $1 million in 1963.

The full article follows:

LOAN FUND DEMAND HIGH; DOLLARS NEEDED

> The student loan guarantee program of the American Medical Association-Education and Research Foundation is "one of the most successful projects ever undertaken" by the American Medical Association, George M. Fister, M.D., American Medical Association president, said.
>
> Demand for loans by medical students, interns and residents has been so heavy, he said, that the program faces curtailment unless the guarantee fund is enlarged by about $1 million in 1963.

PROGRAM'S STATUS

> Dr. Fister reported on the status of the program in the eighth annual Walter Bierring lecture delivered at the annual dinner of the Federation of State Medical Boards of the United States.
>
> On December 31, he said, the fund totaled just over $975,000, but almost $800,000 of this was committed. The uncommitted balance of $176,543, Dr. Fister continued, will guarantee approximately 1,200 additional loans totaling about $2 million, since American Medical Association-Education and Research Foundation can lend $12.50 for each dollar in the fund.
>
> The guarantee fund must be enlarged, Dr. Fister warned, because loan applications continue to arrive at a rate of about 150 a week, with no indication of a decline. At this rate, he said, about 7,200 loans would be made during 1963.
>
> However, he said, this will be impossible unless the guarantee fund is increased by at least $1 million this year.

YEAREND REPORT

> As of December 31, 1962, Dr. Fister said, this was the status of the American Medical Association-Education and Research Foundation program:
>
> Nearly 1 of every 10 medical students was benefiting from the program.
>
> A total of 4,694 individuals had received 5,299 loans amounting to nearly $10 million in principal and interest. This included 2,890 medical students, 672 interns, and 1,132 residents in training at 83 medical schools and 462 hospitals in 46 States and possessions.
>
> Less than 7 percent of 5,823 applications received had been rejected.
>
> Some 97 percent of the borrowers are men and 72 percent are married.

STATE PARTICIPATION

> The American Medical Association president urged all State medical societies to consider recommendations made by the American Medical Association house of delegates regarding American Medical Association-Education and Research Foundation fund raising.
>
> These include following national appeals with appeals at the State level; contacting industry and foundations for contributions; publicizing the program in State journals and through speeches and exhibits, and examination of the possibility of relating existing State loan funds with the American Medical Association-Education and Research Foundation guarantee fund to gain advantage of the 12½-times multiplier factor.
>
> This, he pointed out, "would in no way endanger the autonomy or independence of the State programs."

Now, this is a very current article. It goes on to stress the need for greater efforts on the part of the AMA to recruit these dollars and to prevent curtailment of the already limited activities of this student loan fund. This is a high-cost fund. It is based on the prime rate of money, and during the interim period of financing the medical education at this time the simple rate is 5½ percent. If a student converts it to a payout note it is going to become 6.5 percent. I point out that rates this high could have a serious impact upon the decision of a graduate of a medical school when he undertakes to make the decision as to the nature of the practice he would follow.

Mr. Chairman, we have all been interested in statistics which have been offered. The gentleman from Ohio [Mr. DEVINE] indicated that there had been a fair degree of stability following World War II in the ratio of physicians to population. But, that hardly tells all of the facts because we live in an age where medical practice is becoming a very complex matter. We are living in the age of specialization, where the ability of one doctor to handle a given number of patients is vastly restricted. So in interpreting the ratio of practitioners to population we have to take into account a great many factors in order to arrive at the actual availability of doctors. However, certainly, a very burdensome debt carried over after medical school and the necessary internship or residency could compel a doctor to seek the opportunity to practice in the area where the rewards would be the greatest. Yet one of the needs in this country is to bring about a better distribution of our physicians. Of course, in this whole matter of student loans we must not overlook other important areas of medical services or healing services. I think it is of great interest, and it should be to all of us, that the American Dental Association, under date of April 22 of this year, has addressed letters to the Members of the House of Representatives reaffirming their support of the student loan provisions, making it very clear that they do not find the rosy picture facing prospective students of dentistry which appears to the American Medical Association in regard to their students. I assume we could say the same thing of those who would undertake the practice of osteopathy.

The letter referred to follows:

AMERICAN DENTAL ASSOCIATION,
Washington, D.C., April 22, 1963.
Members, U.S. House of Representatives, Washington, D.C.

DEAR CONGRESSMEN: In view of recent events, I wish to confirm to you the American Dental Association's support of H.R. 12, the Health Professions Educational Assistance Act of 1963, as reported by the Committee on Interstate and Foreign Commerce.

The position of this association has not changed in any way since February 6, 1963, when our president-elect, Dr. James P. Hollers, of San Antonio, Tex., appeared before the committee in support of H.R. 12.

As Dr. Hollers testified, we believe H.R. 12 is well conceived and critically needed health legislation.

In dentistry there is a well-documented need for construction grants and for a student loan program if we are to have sufficient professional manpower to meet the dental care needs of the people of this country in the years to come.

We hope, therefore, that you will support all provisions of H.R. 12 as they relate to dentistry and that you will oppose any amendments that would eliminate dental students from any part of the program contained in H.R. 12.

The American Dental Association appreciates your interest in sound programs to improve health care in this country.

Sincerely yours,
GERALD D. TIMMONS, D.D.S.,
President.

Mr. Chairman, there is no evidence of any great availability of funds to meet the needs of the students in that particular discipline of practice.

Mr. Chairman, the total cost of a student loan program is so insignificant in relation to the needs of the Nation to have a continuation of the best medical services. I doubt if the total cost over a period beyond that contemplated in this legislation would reflect the amount we are going to be asked in this Congress to vote for limestone to carry on certain conservation practices in agriculture. Yet the contribution to the health of the American people is of far greater significance. To permit loan funds to be available to students who have the will and desire to put up with the extended periods of study, the sacrifices entailed in gaining a medical education, I think is an act of wise investment. If we forgive a portion of those loans in order to encourage practice in areas where the income prospect will be far less, such as in the public health field, or if we encourage a doctor to go to the rural areas of the country where there is a scarcity of adequate medical services, I think again it constitutes a very sound public investment.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 5 minutes to the gentleman from Nebraska [Mr. CUNNINGHAM].

Mr. CUNNINGHAM. Mr. Chairman and Members of the Committee, I have been here 7 years, and I do not suppose I have been down in the well of this House very often because when I come down here I hope that I have something to say. I think I might have something to say today which will be of interest. I do not kid myself. I am sure that 99.5 percent of the Members of the House have their minds made up, but I do have some significant remarks which I would like to mention to you.

Mr. Chairman, I will say, as the distinguished chairman of our committee mentioned earlier, this is a nonpartisan bill but in my opinion that does not mean that it is sound legislation. I do not think it is. I think it was poorly drawn. I think it includes all kinds of cats and dogs that do not belong in this bill.

Mr. Chairman, my views are contained in two sections of the committee report—the minority views, which I join with one of my colleagues, the gentleman from Ohio [Mr. DEVINE] and my additional views. I hope the Members of the House will recognize the fact that there are two sides to every question, and that they might be kind enough to read the views that are contained in the report of the minority views.

I listened to the hearings and I am as convinced as I have ever been in my life that there is no proven need for this legislation. This is a proposal that is attractive because it puts one in a position, if he is against it, of being against doctors and medicine. Certainly that is far from the truth. A main purpose of this legislation is to try and furnish doctors to the small communities instead of having them congregate in the major cities.

Mr. Chairman, this bill will not in any way, shape or form guarantee a doctor to any small or medium-sized community if that doctor does not want to go there and practice. I have seen instances out of my own family relationship, where a young doctor went to a small town, some 300 miles from Omaha, which district I represent. They furnished him a clinic, and they furnished him a home. They wanted a doctor out there. He stayed 6 or 7 years and moved to Omaha, which is a major medical center.

There is a provision in here for loans. If you go out to these communities you are supposed to have the loan forgiven. The doctors do very well in these communities. But they are not going to stay out there against their will, because they are going to be forgiven repayment over a 10-year period, and they can easily forgo that forgiveness and move to one of the major cities where they prefer to practice.

In case anyone is under the impression that this is going to furnish doctors to rural areas, let me say that it certainly is not.

Mr. Chairman, I see my distinguished friend from Rhode Island [Mr. FOGARTY] in the Chamber. He and I have had many things in common in the 7 years that I have been here. I have fought with him in the Well of this House on many occasions when attempts were made to slice funds from various programs in the Departments of Health, Education, and Welfare, and Labor. Actually the gentleman from Rhode Island [Mr. FOGARTY], I believe, is responsible for the problem of a shortage of doctors because he has done such a magnificent job of supplying funds for the building up of research at the National Institutes of Health and other places and that is where the doctors are going.

The gentleman from Indiana [Mr. MADDEN], when we were debating the rule, referred to U.S. News & World Report. He did not mention the conclusion that the article reached and that is that the majority of the doctors are going first into specialties—psychiatry, orthopedic surgery—and the next greatest number into research and teaching and only 21 percent of our doctors are going into general practice. There lies the problem.

This is the problem this bill is supposed to solve, yet only 21 percent are going into general practice, and that is because they prefer to be teaching doctors and to go into research. So this bill is not going to solve that problem.

Another thing that disturbs me is that the President, whom I respect greatly, has proposed a tax reform measure with a 5-percent floor on itemized charitable contributions. This if put into effect is going to dry up a tremendous number of dollars, in the millions and billions, that have been contributed to the colleges and universities, two of which I have in my district, two great universities of medicine. They are providing new buildings and new facilities, and particularly a Jesuit school which is entirely financed privately, and which is going out on a big program of expansion. These universities, particularly the private universities, are going to have their funds dried up and not forthcoming if this so-called tax reform with the 5-percent floor is enacted into law.

So then what do they have left to do? If these funds are not forthcoming from private people with no strings attached, then of course they are going to have to turn to the Federal Government under a program such as this with its Federal control and Federal direction. I do not like to see that trend, but I see it happening at this very session of Congress. You enact that reform program and you are going to drive colleges and universities both public and private to Federal aid with its resultant Federal control.

I have heard today that one doctor in 1950, if my memory serves me right, took care of a thousand patients, and one doctor in 1960 took care of an additional number; and that one doctor in 1970 is going to have to take care of a much larger number, because of an increase in population.

Mr. Chairman, we are not back in the horse-and-buggy days of 25 and 30 years ago. The respected and distinguished gentleman from Rhode Island has championed legislation which has brought new discoveries. It has brought the new miracle drugs. We have a solution to polio. A doctor does not have to treat as many patients now as he did. It is not as if we were back 25 years ago, when everybody had to go to a doctor for measles, polio, and all of these other things. These people no longer go, because they take advantage of these miracle drugs and that is the end of their visit to the doctor. So I do not think there is too much validity to that particular argument.

I should like to say this, and it is my considered view. This issue today is clear. If this body is determined to substitute Federal control for private effort, then this bill provides you a golden opportunity to do so.

Mr. ALGER. Mr. Chairman, will the gentleman yield?

Mr. CUNNINGHAM. I yield to the gentleman from Texas.

Mr. ALGER. I would like to compliment the gentleman for his part in the minority views and the statement he has here presented. It strikes me that at a time when we are endeavoring to economize, to advance new programs is fiscally unwise. Further, the gentleman's statement in which he pointed out that Federal control followed Federal aid is the lesson I thought the medical profession had learned because of their medicare experiences. If the medical profession does not wake up to what we are doing today, in the future it is going to have more trouble with medicare, because doctors cannot have it both ways. Either Federal control follows Federal aid or it does not. It now appears to be a case of whose ox is gored.

I should like to read this statement from page 70 of the report and ask the gentleman's views on it.

Mr. Chairman, this is the statement the gentleman made:

> There is some reason to think that proposed programs which would gradually rob the medical profession of its tradition of personal independence and dedication are already beginning to create a reluctance on the part of possible medical students to commit themselves and their futures to the healing arts. No abundance of physical plants nor availability of liberal loans will overcome this seed of doubt about the future of the profession.

Mr. Chairman, I wonder if the gentleman would comment on the danger there, as he sees it.

Mr. CUNNINGHAM. Of course, that is the trend and, of course, if the student should be given loans to go through college, of course, they are going to be indoctrinated by the trend toward centralized government and we may eventually lose our independence.

I would like to read my additional views as set forth in the report:

> First it must be assumed that enactment of H.R. 12 would be just the first step in a continuing new program of Federal aid. Last year H.R. 4999 provided for a 10-year program. H.R. 12 also provided for a 10-year program when introduced, but it was reduced in committee to 3 years.
>
> It would be foolish indeed to conclude that this Federal-aid program will not be extended for years into the future, especially since it was originally proposed as a minimum 10-year program.
>
> I do not think that this Congress, faced with a record peacetime budget deficit, should engage in questionable new spending programs. I do not think there is a proven need for another program in the medical field.
>
> It should be kept in mind that the Federal Government already has nearly 100 medical programs either administered or financed by 19 different agencies and departments. The total dollars involved exceed $10.5 billion annually. In addition, more billions of dollars are already spent in the education field.
>
> In the face of public protest over the spending practices in Washington, I do not see how this Congress can approve a vast new program with an estimated cost of $205.7 million in the first 3 years alone.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GROSS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and two Members are present, a quorum.

The Chair recognizes the gentleman from Arkansas [Mr. HARRIS].

Mr. HARRIS. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. MILLER].

Mr. MILLER of California. Mr. Chairman, I am happy to add to the endorsement of my esteemed colleagues my own support of the legislation now before us, H.R. 12, a bill to increase the appropriation for training professional health personnel and for other purposes, to meet the Nation's critical need for more physicians, dentists, and other health personnel.

As chairman of this body's Committee on Science and Astronautics, I am keenly aware of the barren areas in our scientific and technological sources. Just as technology translates scientific knowledge into goods and power, so medical research is constantly revealing many of the secrets underlying human health and well-being. But technology and medical research are, of themselves, meaningless unless there are the skilled minds and hands to convert the tremendous scientific findings of our age.

Last year and again in committee hearings earlier this year, Secretary Celebrezze, Surgeon General Terry, and others reviewed the compelling reasons why the Federal Government should provide assistance to remedy the shortage of health personnel. Most of us in the House of Representatives know only too well the solid truth in the Secretary's statement that hospitals, public health agencies, the armed services, research laboratories, and communities searching for private practitioners are all competing for the alarmingly short supply of health personnel. It is a sad commentary that large areas in our population are deprived of the benefit of much of the knowledge this great scientific age has developed.

The bill before us today has been most carefully drawn to increase opportunities for the provision of needed medically trained manpower. It proposes a 3-year program of construction grants to help build teaching facilities for schools of medicine, dentistry, osteopathy, and public health to make possible greater enrollments in these schools. It would establish a program of student loans to assure that lack of funds will not continue to be a deterrent to qualified individuals desiring training in the health professions.

Along with its humanitarian intent, it contains carefully built-in safeguards against abuse either by institutions or individuals and against any infringement on academic, scientific, and individual freedom.

Since my early days in the Congress, I have been conscious of the need to increase the supply of physicians, dentists, and other health personnel. The record is abundantly clear that we cannot wait longer to act. We know the need and we must not be afraid to take action to remedy it. The situation already is critical and unless we act now, will become even more critical in the immediate years ahead.

The president of the University of California has enthusiastically supported this bill. In a State as rapidly growing as California, we are conscious of the shortage of medical personnel. Unless we pass a bill such as this the future is not bright for the future supply of doctors of medicine.

This bill, H.R. 12, deserves the full support of the House so that its provisions may be quickly enacted into law, and I intend to vote for it.

Mr. BENNETT of Michigan. Mr. Chairman, I yield 10 minutes to the gentleman from Missouri [Mr. HALL].

Mr. HALL. Mr. Chairman, I would like to speak here in order to try to clarify the atmosphere. I am one of three physicians in this House of Representatives. I am opposed to this bill. My position—a carefully considered one—is contrary to an organization to which I belong that has been oft quoted on this floor today; and I would like to make it clear that I am opposed to the brick-and-mortar construction portion thereof, as well as the loan features of the bill. I feel that we cannot "have our cake while eating it too," as has been said here before.

I am a little concerned about trying to define this strictly as a health matter rather than an education matter when it contains brick and mortar for schools only for medical, dental, and allied professions, and where it says it is also for training and educating physicians, dentists, and adjuvant personnel.

Furthermore, big centralized Government cannot buy willingness to practice or serve. Perhaps it is a sign of a complete generation of regimentation and spoon feeding, that makes young graduate physicians wish to practice in association with and near great hospitals, medical teaching institutions, and at least laboratories, rather than in rural areas. At any rate, Federal legislation can only lead to further deterioration of our people's moral fiber.

It is easier, quicker, more logical and humane to travel 50 miles today to expert medical care via good roads and by car, than 40 years ago to hitch up the team and transport the ill or wounded 5 miles via rough roads to a small rural area where much less qualified aid would then be obtained.

In spite of wonderful efforts, most State university medical schools have not graduated and persuaded M.D.'s to practice within the State—or in rural areas—even with forgiveness plans, in greater than 60 percent. Great State universities with international reputations, have done less well, percentagewise.

In fact, the greater the university the greater the school of medicine, and more likely the students are to become international and seek their education here.

Of course, Mr. Chairman, that is exactly why we are cutting our pins out from under us as we come full-circle, and complain about the 10,000 or 12,000 foreign medical graduates who are coming to this school in order to participate in competitive, free enterprise type of education in advanced medicine.

At one time I was planning to go to Germany to study under a famous doctor over there. I would have if it had not been for Hitler. I think that is completely reversed now, and I think that this is a projected need we are discussing here today, very similar to the cry in 1956 about the need for additional classrooms, 700,000 by 1960. Of course private enterprise and local resources have built all but 40,000 of those, under their local boards of education.

I have seen enough here that indicates the technique to be "getting a foot in the door," or acting as "a starter," for a thing that will bring us about in this full circle to the place where we have a government of socialized medicine, in fact, or at least aiding and abetting it to the point where people will no longer beat their path to graduate medical education in the United States of America.

I have heard an awful lot today about hierarchies. I am not too impressed about that. I have been called worse and better things as a doctor. I do not believe in a hierarchy. I happen to think that the American Medical Association is well and democratically represented through its house of delegates and through its own component medical societies. But we will not discuss that. I insist there is no control of funds or applications to medical schools.

I served for a long time as a personnel director during the days of the 9–9–9 program and the accelerated program of education for the chief personnel in the Surgeon General of the Army office when we were really expediting things that have not yet been again drawn on, incidentally. This is the reason for not going all out for this type of further education bill, even though it comes from the Committee on Interstate and Foreign Commerce. I think there is no control by the AMA of admissions. I believe we should differentiate between AMPAC, which is a political action committee of the American Medical Association, and which is perfectly legal, and was quoted here rather extensively and surprisedly, and which they have founded in self-defense, copied after the AFL–CIO COPE. In fact, the questionnaire that was read here could have been one of Andy Biemiller's—and incidentally, I received a letter from him today, dated yesterday. This letter is written in the same language of Falk, Cohen, and Altmeyer, and many others, from the origin of this back in 1936, and repeated against the AMA, through the Wagner-Murray-Dingell bill of 1946–47, and now updated. They are no more expertise in medicine than doctors are in labor matters.

I submit to you, if you simply divide the 246,000 physicians of the United States into the 188 million people, you have 1 doctor for every 705 people. Actually it is 1 for every 705 people if you count the interns and residents in hospitals. This is a drop of 45 per 1,000 since 1949 when there were only about 1 to 750.

I do not think we should resort to trickery and distort the facts. I think we should know why the foreign medical graduate is coming here, and I think we should know this is not a student loan proposal, although there is a difference here between the brick-and-mortar concept of further educational facilities, and the loan program.

I would personally apologize to the chairman of the Interstate and Foreign Commerce Committee and anyone else, for any reversal of opinion in midstream, but if I read page 277 of the hearings correctly, the representative of the organization to which I belong, said that it had no position on the loans. This has not been changed. He says they do have a position on the loans for brick and mortar as a one-time shot in the arm only. I am still against it.

No one disputes the fact that it takes over $11,000 to complete medical school. That is why the AMA loan program sets a maximum of $1,500 a year and a total maximum of $10,000 on any loan. When I went to medical school I worked and paid my own way. I am proud of that. I think there are still many people who would like to do that.

I would like to say that I defy any Member who opposes this bill that is stronger for the portion that will grant forgiveness of loans or grants and actual scholarships; to name a single medical student anywhere in the country who was making passing grades, once admitted, who has had to leave and quit medical school because of inability to obtain a loan to continue to advance his medical education. I would be glad to have that given to me personally.

I want you to know that the bottleneck, Members of this House, is not the hierarchy; it is not the American Medical Association; it is not the ADA—and that stands for American Dental Association, in my language; the bottleneck to further graduates in the schools of medicine and dentistry and allied personnel is not all of the total cost today. The bottleneck I fear is the welfare state or controlled medicine, regardless of what you call it, or the advent of socialism in the United States of America, and I hope that that will not come.

It is inconceivable to me that the current administration proposes this legislation on the one hand, while suggesting tax reforms on the other which limits contributions, and thereby puts the Government in the position of supporting private institutions while taxing private giving.

All knowledgeable people admit to oversubscribed adequate Government and other funds for research. In fact, this is part of the problem, in that we are funding it until it is "choked," unless we have great breakthroughs in techniques and/or better pay for researchers; which paradoxically distracts private practitioners and others who would normally teach in medical schools. We would not have enough classroom teachers if the new school buildings were given to us.

Medicine, more than elsewhere, depends on teachers, educational background, internship, and bedside training. This cannot be legislated, even though it were the function of the Federal Government to redistribute the wealth.

One cannot justify this additional spending of the taxpayers' money at any priority level in view of our Nation's bankruptcy, to say nothing of the fiscal year 1964 budget imbalance, and our first and large planned deficit.

Mr. Chairman, I will have much more to say during the 5-minute rule on the amendments to be offered.

Mr. BECKER. Mr. Chairman, will the gentleman yield?

Mr. HALL. I yield to the gentleman from New York.

Mr. BECKER. I appreciate the gentleman yielding. I am associated with him on the Committee on Armed Services of this House, and I appreciate the statement he has made. If I take your remarks, and I certainly can take them, honestly and sincerely, this bill does not in any way end the shortage of doctors in the rural areas of the Nation. As I understand it, that is where the shortage is. And, we have an oversupply in the urban areas of the Nation. Now, how can we, under this bill, correct the shortage in the rural areas unless somewhere under this legislation there is some type of regimentation of the doctors now in existence?

Mr. HALL. I appreciate the gentleman's inquiry. The answer is that you cannot legislate this. This is exactly what we are trying to do here today, and therefore we are coming full circuit again. The only way this can be done, as has been done in the great State of Kansas, is to make the climate and the conditions for practice so ideal in the form of self-help or, as the Sears Foundation has done, provide facilities so that the doctor will be happy to practice there locally with modern facilities, office, and laboratories, plus possibly a few dispensary or holding beds.

Mr. BECKER. So that what we are doing is appropriating some $205 million for 3 years, but we do not correct that which we are attempting to do under this legislation?

Mr. HALL. I will say to the gentleman from New York that we do not only not correct it, but we are barking up the wrong tree, because we have a better ratio of doctors to patients in this country than we have ever had. The rate of graduates coming out of medical schools has increased from 4,600 to just under 8,000 per year since 1949. The number of medical schools has increased by 14, and they are all class A, whereas during World War II we had at least 4 substandard schools that I could mention.

Mr. BECKER. I compliment the gentleman for his very fine presentation.

Mr. HARRIS. Mr. Chairman, I yield 5 minutes to the gentleman from Kentucky [Mr. PERKINS].

Mr. PERKINS. Mr. Chairman, I support the student loan provision and the forgiveness provision that goes along with it, because I feel that it will permit thousands of bright youngsters to enter a profession they otherwise would not enter because the cost is prohibitive. The same arguments made today against the medical and dental student loan program were made against the National Defense Education Act bill in 1958, the year that it was enacted. Now, before the enactment of the National Defense Education Act bill student enrollment in the universities was 2.9 million. In 1959, the first year thereafter, the enrollment jumped up to 3.2 million. This school year the total university enrollment is 4.6 million.

Mr. Chairman, since the enactment of the National Defense Education Act, 480,000 have gone all the way through, and 50 percent of this 480,000 figure are public school teachers. Because of the forgiveness provision in the law, the program for public school teachers has been accelerated at least 25 percent. So, I cannot see where we can successfully argue today that the program which is being proposed will not be helpful in getting doctors and dentists in the rural areas where we have a great shortage.

I know that we have a shortage of doctors and dentists in eastern Kentucky. I know that there will be hundreds of youngsters who would like to enter dental and medical schools who cannot enter because the cost is prohibitive, unless we pass this legislation.

Mr. Chairman, I would like to refer to a letter that I have before me, signed by the dean of a new dental school at the University of Kentucky, Dean Alvin L. Morris, D.D., Ph. D. Here is what he states, and I think this answers an argument that has been made by the gentlemen opposed to this legislation. I will just read a paragraph of this letter:

> Now that our first class of students have begun their program it is apparent that difficulties of financing programs of health education are also felt acutely by the students. It should be pointed out that the magnitude of our present problem has been increased as the result of the attempts to produce solutions to a larger and more difficult problem; namely, that of bringing better oral health care to the many people of Kentucky who are presently virtually without care. Every effort must be made to seek ways to encourage our future graduates to take their talents and skills into those areas of the State where they are so badly needed. It has been a premise of our committee on admissions that students who come to us from rural Kentucky will be more inclined to return to rural Kentucky to practice. Admittedly, not all will return; however, it is extremely doubtful that any students from such metropolitan areas as Louisville and Lexington will choose to practice in eastern Kentucky. If we select only—

Now, I think this is pertinent—

> if we select only the financially able student, we will be eliminating the possibility of bringing to the profession the sons of parents of more modest means who reside in the rural part of the State. Therefore I wish to emphasize that the dental student loan aspects of H.R. 12 are of utmost importance.

Now, the director of research, Dr. Raymond C. Bard, of the University of Kentucky Medical Center College of Dentistry, has expressed his views, and here is what he states about the loan program:

> As one deeply interested in dental research, I find it somewhat difficult to comprehend why we are willing—via a variety of Government-supported scholarship and fellowship programs—to support graduate science research students amply, while we resist such support for dental students who, academically, at least, are equivalent to other graduate students.

I throw that question out to Members who are opposing this bill. Why should we discriminate against this particular group? This is not going to solve the problem but this is going to permit thousands of bright youngsters to enter medical school and dental school who would not otherwise enter, which the NDEA program conclusively proves; and if we knock out this forgiveness provision we are discriminating against a category of worthy students in a field where we have a great shortage.

I certainly hope that this Congress will not practice any such discrimination because this program is long overdue.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman.

Mr. KYL. The gentleman has related the NDEA forgiveness features to this program. The latest figures of the National Education Association indicate that the need for teachers has not altered a bit. Today we need nine elementary teachers for every six high school teachers and we are getting nine high school teachers for every six elementary school teachers. Nor has there been an iota of proof that this program has promoted the teacher going to the area where he is needed the most. I should like to ask the gentleman this question.

Mr. PERKINS. First, I disagree with the gentleman's premise.

Mr. KYL. If the gentleman will permit me to ask this question: Under this program, under the forgiveness feature, let us say a man is trained in the medical field as a radiologist. Where are we going to send this man to a rural area to practice, and with what?

Mr. PERKINS. If there is not a demand in the rural area certainly he will not go to the rural area. But where the need exists we need to get these trained specialists, doctors and dentists, into the rural areas. This will attract them.

Mr. KYL. But if the ratio of trainees in general practice is the same as it is now in comparison with specialists, with radiologists, with teachers, how are we going to fill this need?

Mr. PERKINS. In my area today, in Hazard, Ky., I was talking to one of the able local doctors last night. We have a hospital that belongs to the UMW welfare fund that is about to close. But if we had to operate that hospital, he tells me we would have to bring some specialists in from the outside. This points up the need for specialists, and giving these boys forgiveness at the rate of 10 percent a year for up to 5 years of service in the rural areas where they are not going to make so much money is just good government. We can afford this small portion of the cost of medical and dental services for our rural areas because it is a sound investment in our future.

Mr. YOUNGER. Mr. Chairman, I yield such time as he may consume to the distinguished minority leader [Mr. HALLECK].

Mr. HALLECK. Mr. Chairman, apropos of the last statement which was made in respect to the forgiveness feature of this bill, I would like to point out that the last expression of the House of Representatives was had last year after we had enacted here in the House a bill for assistance to higher education known as the bricks and mortar bill. That bill passed the House of Representatives by an overwhelming vote. It came back to the House of Representatives after a conference with certain provisions dealing with scholarships and what were then called nonreimbursable loans. Of course that is just the same thing as forgiveness. A motion to recommit was made in respect to that conference report and the motion to recommit carried by a very decisive vote. So my position simply is this, that on that occasion, and the last occasion on which the House of Representatives acted, we there very definitely said that such an item of forgiveness should not be included.

Mr. MEADER. If the gentleman will yield, it is shown in the CONGRESSIONAL RECORD, volume 108, part 15, page 20152, that the recommittal motion carried by a vote of 214 to 186.

Mr. HALLECK. I said it was a decisive vote and that did not require any recount. As I say, that was the last expression from the House of Representatives in respect to the very proposition that has been under discussion here.

Mr. HARRIS. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, our distinguished friend, the majority leader, has raised a question which is very important. I have tried to make it very clear throughout this whole debate that the major issue here is a matter of health. What the House passed on last year and what the gentleman from Indiana referred to was the general education program. This is not a general education program. It is a health program altogether, and it should be considered by this House and the American people as such, just like the hospital program, the research program, and the rest.

Mr. HALLECK. Will the gentleman agree with me that the bill that was enacted by the House of Representatives last year for increased aid for higher education, for public and private colleges, that passed here overwhelmingly, if it had finally become law could have made available funds for the construction of medical and dental schools as is contemplated by the bill now before us?

Mr. HARRIS. I understand that these schools would have been eligible for construction grants, just as medical and dental students have been eligible under the National Defense Education Act for loans. But anyone in the field of medical schools, health, and so forth, knows that these provisions are not suitable for health programs. They are designed for general education programs and they do not meet the needs of the medical requirements and the professional personnel of the country.

Mr. HALLECK. The gentleman knows of my high regard for him.

Mr. HARRIS. And mine for the gentleman.

Mr. HALLECK. If that bill that passed here in the House of Representatives last year had finally become law, and money by reason of that action had become available to build medical or dental schools, does the gentleman mean to say to me that would not have been available for the teaching of medicine or dentistry?

Mr. HARRIS. I say to the gentleman that the requirements and the restrictions under the bill would not have met the needs of the medical and dental institutions in meeting the health needs of the American people, just as the National Defense Education Act loan provisions do not meet the needs of medical students. They are two entirely different programs. Furthermore, under that program, it is known that the Commissioner of Education would administer it. I contend and I think we all contend—that the reason this Committee has jurisdiction is that this is a matter for administration by the Surgeon General, and that is the official who should administer it.

Mr. Chairman, I yield 10 minutes to the gentlewoman from Oregon [Mrs. GREEN].

Mrs. GREEN of Oregon. Mr. Chairman, I do not know how any single person could read the hearings of the Committee on Interstate and Foreign Commerce on this bill and not be aware of the urgent need for doctors, dentists, nurses, pharmacists, and others in these fields. I do not know how anybody in the United States could read the report of the President's Scientific Advisory Committee and not be keenly aware of the shortage of highly trained manpower—not only doctors and dentists, but scientists and engineers. Dr. Terman of the President's Scientific Advisory Committee's manpower panel said that the man on the moon project alone could use every single graduate we have in the field of engineering, mathematics, and the physical sciences. So I disagree very definitely with those who stand here today and say there is not a need for more doctors and dentists. I do not know of any education bill that has ever been before this House that I have not voted for. I have supported every one of such bills throughout the years—in the Eisenhower administration and now in the Kennedy administration. I supported them last year and I hope to be able to support this bill today. But, there are parts of this bill that concern me. I would like to ask either the chairman of the committee or the gentleman from Alabama [Mr. ROBERTS] a couple of questions, if I may.

If I understand this bill correctly, first of all, teaching hospitals may receive funds under this legislation?

Mr. HARRIS. That is true.

Mrs. GREEN of Oregon. Nursing schools may also receive funds under this legislation?

Mr. HARRIS. That is true—but only collegiate schools of nursing.

Mrs. GREEN of Oregon. Any school that offers courses leading to a degree in nursing?

Mr. HARRIS. Collegiate schools of nursing, yes.

Mrs. GREEN of Oregon. A degree in nursing or graduate nursing—if I read the bill correctly.

Mr. HARRIS. Yes, that is correct.

Mrs. GREEN of Oregon. This would provide for funds to go to both private and public colleges, church-related and non-church-related colleges; is that not correct?

Mr. HARRIS. The gentlewoman is correct.

Mrs. GREEN of Oregon. Then may I call the attention of the House to one defect in this bill which I think is very serious? In education bills before the House Education and Labor Committee—and this is an education bill, regardless of the semantics we employ—in every education bill, we have been very careful to write in an exclusion clause so that none of the Federal funds could be used for buildings or for rooms for sectarian instruction or religious worship or chapels. I would call the attention of the House to teaching hospitals that actually have chapels in them. A member of my staff went to a church-related college, a church-related teaching hospital, a nursing school in this city last evening—and there are chapels in both—I do not quarrel with this—in fact I strongly favor it. But I do not think Federal funds should be spent to build them. In this bill there is no exclusion feature, which says that none of the Federal funds can be used for such rooms which would be used for sectarian instruction or for religious worship. There was a colloquy on the floor earlier in the afternoon between the chairman of the committee and a gentleman on the other side of the aisle, and the gentleman from Alabama, and the question was raised about Baylor University in the State of Texas. If I understood them correctly, both gentlemen defended the bill as is. May I call the attention of the House to the fact that under this bill as presented today these funds can go to any church-related college and be used for chapels—or rooms for sectarian instructions. Let me give some own examples in my own State. The only school in the Northwest that is accredited for the teaching of optometry is a church-related college. In Oregon and across the Nation, there are many nursing schools that are church-related schools. I have supported consistently the use of Federal funds for private colleges because I believe they are making a great contribution to this country, and I supported last year the provisions in the higher education bill which said that Federal funds can be used for private and public colleges, church-related and non-church-related colleges, because the Government is asking them to contribute in an effort to meet our desperate needs; we are asking them to do medical research, we are asking them to train urgently needed manpower. So I do support Federal funds for private colleges as well as public—but I must say also to this House that unless an amendment is adopted that would specifically exclude Federal funds for chapels or for buildings where sectarian instruction is given or where religious worship is corried on, I cannot support this bill.

If I may direct one other question to the chairman of the committee, and this is in regard to loans under the second part of the bill: If I understand it correctly, the loans can be used for both graduate and undergraduate students; is that not correct?

Mr. HARRIS. That is true, yes.

Mrs. GREEN of Oregon. Is it not also true at the present time under the National Defense Education Act there have been several thousands of medical school students and dental students who have borrowed under the National Defense Education Act?

Mr. HARRIS. The gentlewoman is correct, but the average loan that has been received by medical students under that program is only in the amount of approximately $640.

Mrs. GREEN of Oregon. But they could borrow up to $1,000 but the average is just about $600 under the National Defense Education Act?

Mr. HARRIS. No, I believe not, because the NDEA provides that no institution may lawfully be granted more than $250,000 for the purpose of making loans to students, and because of that restriction, the size of loans to medical and dental students has obviously been reduced accordingly.

Mrs. GREEN of Oregon. If the gentleman will yield further, under NDEA, the ceiling for any one college or university is $250,000. But a student may borrow up to $1,000 in any 1 year. The Subcommittee on Education already has agreed to remove this $250,000 ceiling.

The loan limit for any individual student is $1,000 a year with a maximum of $5,000, and the subcommittee intends to increase this to $10,000 for graduate students.

I support an expanded loan program for students. I think it is desperately important to this country that we get more qualified students in our colleges and universities; but I would call the attention of my colleagues now to a couple of features in this particular bill that seem to me grossly unfair. In fact, it seems to me this section is a special privilege bill. If a student who is studying for medicine or dentistry under the H.R. 12 loan program borrows up to $10,000 and then practices medicine or dentistry in an area of need or in a public health agency he is forgiven up to 50 percent of the loan, which means $5,000. However, if the same student borrows under the National Defense Education Act he is not forgiven a single cent.

I also call the attention of the House that if an individual borrows up to $10,000——

Mr. PERKINS. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Kentucky.

Mr. PERKINS. I think I may have misunderstood the gentlewoman, but in the case of a public school teacher who goes back and teaches in an elementary or secondary school, that teacher is forgiven at the rate of 10 percent of that loan a year up to 5 years under the present law.

Mrs. GREEN of Oregon. I apparently did not make myself clear. I stated that if a student who is going into medicine or dentistry and borrows under H.R. 12 up to a maximum of $10,000, he is forgiven up to $5,000. If the same student who is studying for medicine or dentistry—not teaching—borrows the same amount under the National Defense Education Act he is not forgiven a single dime.

Now, let me turn to the question of teaching. The forgiveness provision for teachers was put in NDEA primarily because teachers are underpaid. There are literally thousands of teachers in this country who are receiving $5,000 a year. The Education Committee thought that this was far below what they should receive. On the other hand, do you know what the average salary of doctors is in this country? It is $19,000. Should we provide a $5,000 forgiveness feature for one of the highest paid professional groups in this country? Should we, in effect, give them up to a $5,000 scholarship—and other needy students not a dime in so-called forgiveness?

Let me point out a couple of other inadequacies or inequities.

Mr. PERKINS. Mr. Chairman, will the gentlewoman yield again?

Mrs. GREEN of Oregon. I yield.

Mr. PERKINS. The cost of going to medical school is not in proportion to the cost of going to a regular university or college, is it?

Mrs. GREEN of Oregon. If I may continue with a couple of other inequities that, it seems to me, are very apparent in this bill: If a nurse wants to go to graduate school, as the chairman indicated just a moment ago, she cannot borrow under this bill; she has to borrow under the NDEA. If the nurse goes into the Public Health Service or a Public Health Agency, or if she goes into a rural area, an area of need, she is not forgiven one single dime on her loan. I have yet to see a nurse who receives the same kind of salary a doctor receives. Are we going to say here that we will forgive the doctor up to $5,000 because he goes into an area of need and not provide any forgiveness for the nurse who goes into an area of need?

Then there is one other matter which I would like to call to your attention. And that is military service. I do not know whether the Armed Services Committee or the Veterans' Committee has considered this part of the bill, but if a doctor or dentist goes into the military service and he has borrowed up to $10,000 he receives a forgiveness of up to $5,000. What pay does he receive when he goes into the service? A doctor who goes into the service I am advised gets an initial salary of $415 a month, plus subsistence and plus quarters. So we say to the doctor, if you have borrowed up to $10,000 to go through college and you go into the military, we will forgive you half the loan, up to $5,000. But the buck private—the GI who borrowed under the NDEA to get a Ph. D. in history or to become a nuclear physicist or to specialize in some of the other sciences and goes into the military service, we do not forgive him one dime.

So the doctor, who becomes the commissioned officer and gets $415 a month is forgiven up to $5,000—but the GI who goes in at $84.50 a month is not forgiven one cent.

Is this justice? Is this fair? Or is this special privilege legislation?

To the nurse who has borrowed money—under National Defense Education Act—and goes into the military service—we also forgive not one red cent? Why the doctor and not the nurse?

May I ask the Members of this House: Is this the kind of legislation we want to pass; legislation that, it seems to me, could clearly be labeled as special privilege legislation; legislation that would give to one of the highest paid professions in the world what may amount to a $5,000 scholarship; and yet we would not forgive a dime to a nurse or we would not forgive a dime to a GI?

Let me say in conclusion, if amendments to take care of situations such as these can be adopted by the House, then I really would like to support this legislation. I know there is a crying need for doctors and for dentists, and all other trained personnel. We have today in our colleges about 4 million students. By 1970 we are going to have 7 million. We are going to have to find places for them. Instead of standing up on this floor and arguing about socialized medicine or about what the AMA stands for or what the AMA does not do or some of the other things that seem to me irrelevant, may I refer you to what Dr. David Henry, of the University of Illinois, said very succinctly:

> Debating Federal aid is dealing with a strawman—an irrelevant oversimplification. Instead, we should be asking the American people: "Do you want teachers in your classrooms, doctors at your bedside, lawyers in your courts, scientists in your laboratories? Are you in favor of having the Federal Government help in the war on cancer, and in the evolution and new ideas in the exploration of space?"

So I say to the chairman and the members of the committee I hope they will agree to some of these amendments. Otherwise, it will be difficult for some of us who would like to support the legislation to actually vote for it.

Mr. YOUNGER. Mr. Chairman, I yield 5 minutes to the gentleman from Minnesota [Mr. QUIE].

Mr. ALGER. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Texas.

Mr. ALGER. Mr. Chairman, I thank the gentleman for yielding. I want the RECORD to show that there are Members of this House who are acutely aware of that need without recognizing the Federal Government as the way to solve it. I think this shows once again failure of the liberal doctrine that we can bury everything with money. There are those of us who feel there are private means of doing that, as the gentleman from Missouri [Mr. HALL] pointed out on the floor when he said that this bill may ultimately destroy the very cure and hopes of those who would solve the problem of medical education. We say that the need can be met privately, without Federal aid.

I simply want the RECORD to show that I and many others do not believe we can solve it by throwing the Federal Government into this program.

Mr. QUIE. Mr. Chairman, the Committee on Education and Labor and the subcommittee chaired by the gentlewoman from Oregon [Mrs. GREEN] has made a detailed study of the needs of higher education. In general, we found that academic facilities construction aid is of the highest priority. In fact, we found it to be an urgent necessity.

Many of us also felt that the Federal Government has assisted higher education for over a century and that the assistance we proposed is consistent with a well-defined Federal role in education. The needs of higher education are beyond dispute.

What I am concerned about is that by passing legislation such as H.R. 12, providing special assistance for the medical profession, calling this a health bill rather than an education bill, we may be setting a precedent for the further fragmentation of education legislation. The subcommittee on which I served, the Green subcommittee, has made a study of higher education and other education assistance provided by the Federal Government, and we found it extremely difficult to discover all the ways in which the Federal Government is assisting. There are so many Federal programs, conducted by so many agencies, that it becomes extremely difficult to even identify and classify all of them.

In the area of student assistance, it seems that rather than engage in further fragmenting of Federal education assistance, we ought to look at the overall financial needs of the students and to legislate on that basis. The House last year very clearly indicated that it was opposed to granting scholarships no matter what you call them. The program that we had before us last year, which was sent back to the committee of conference by a vote of 214 to 186—and I supported that legislation—provided for so-called nonreimbursable loans to aid students who were in need to help them go to school. Now, what do we have here? We have a loan program designed not just to help students, but to empower the Federal Government to direct them where they should go: into rural areas and into public service. It tells them to go into those areas. I think this is unreasonable and even dangerous. Parenthetically, 8 percent of our physicians already work for the Federal Government. I think that rather than adopt so questionable an approach the House ought to turn student assistance aid over to the Committee on Education and Labor and let us report a bill that is good, which is beneficial, and which is soundly based upon the demonstrated will of the House. Last year we learned that this House is opposed to Federal scholarship grants, whether they are called loan forgiveness or nonreimbursable loans or scholarships. Our committee is ready to take effective, well-considered action in the field of student aid and I would think for that reason we ought to support the amendment to remove the loan provision. We have in H.R. 12 a provision also for grants for academic facilities in medical schools. Last year the House passed a bill providing aid for all higher education academic facilities construction which would have permitted the institutions to choose which academic facilities were most needed. That bill was stymied by what people thought was a church-state issue. It was not. Right now this House finds that it is perfectly acceptable to provide grants to medical schools and dental schools that are church affiliated. I have a list which I will submit for the Record in which they provide for 11 dental schools and 13 medical schools church affiliated.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Indiana.

Mr. HALLECK. In line with what the gentleman is talking about, if my memory serves me correctly—and I think it does—when we had that bill before the House last year to provide Federal assistance, what we might call brick and mortar for higher education, we included assistance for both public and private colleges and universities.

Mr. QUIE. That is correct.

Mr. HALLECK. And I also recall—and I am sure I am correct in this—that there was no discussion here, no dissension at all revolving around so-called private against public schools, because as I remember it the bill was so drafted as to avoid it. There was some discussion in the other body which was injected into the consideration that did raise that issue, but when the bill passed—will the gentleman remind me of the figures?

Mr. QUIE. When the measure passed the House, 319 to 79.

Mr. HALLECK. That was a very decisive vote and I, too, supported that bill. But, as I say, I think it is worthy of note when that measure was before the House of Representatives we did not have the difficulties that sometimes arise with respect to the treatment of public as against private insitutions.

Mr. QUIE. That is right. And I supported that legislation. I just want to point out—and I will list the schools in order that you might know—that we have not chosen to eliminate private institutions. Therefore, there need be no objection to a consideration of the urgent construction needs of the whole system of higher education in this Nation. It seems to me the wisest thing to do would be to substitute the bill we passed last year, H.R. 8900, in order to provide construction aid to any institution in the country for any medical or other academic facility that it badly needs to accommodate increases in its enrollment.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Kentucky.

Mr. PERKINS. I would like for the gentleman to tell the Committee the average cost for a youngster to go to medical school today.

Mr. QUIE. If the medical school students receive assistance under the National Defense Education Act they will get the same kind of assistance they would get here if we provided for increased loans of money.

Mr. PERKINS. The gentleman from Minnesota is an able scholar, and the gentleman knows the average cost of a medical student today. What is that cost? Tell the Committee.

Mr. QUIE. It depends upon the school they are going to attend, but I imagine something over $12,000 would be the cost of going to a medical school for 4 years.

Mr. PERKINS. If the gentleman will yield further, under this bill as I understand it we are trying to help the GI, the poor fellow, and if we close the doors to the youngster who is not able to go to school, then we will have defeated our purpose.

Mr. QUIE. This is a complete misconception of this bill. I will ask you who is one of the best paid men in any small community in your congressional district. Is it not the medical doctor? The medical doctor is likely to be the best paid man there. Look around over that community and ask who is best able to pay back his loan. The doctor is. Why should we be forgiving him a loan? How can we give 50-percent loan forgiveness to a doctor and not give it to everyone else? There is no reason whatsoever that we should do this.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Is it not true that the subcommittee that has under its jurisdiction the NDEA and 2 or 3 weeks ago was studying this loan provision that we had already agreed to recommend to the full committee, and to the House to remove the $250,000 ceiling first?

Mr. QUIE. That is correct.

Mrs. GREEN of Oregon. If the gentleman will yield further, is it not also true that we had already agreed to recommend to the House that we would increase the total amount in the loan from $90 million to $140 million or $144 million—I have forgotten which—the first year, and then it goes up to $175 million?

Mr. QUIE. That is right; to provide for the needs as we see them and which would be apparent.

Mrs. GREEN of Oregon. Is it not also true that we had also agreed that for a person who goes to graduate school, the same as under the NDEA, that he would either be able to borrow $1,500 or $2,000 and that this was the point in controversy when we postponed further meetings? But this was the only point, whether it should be $1,500 or $2,000, which would be the same provision as in this bill, except we did not specifically forgive the doctors and the dentists?

Mr. QUIE. That is true. That was the point that was about to be decided when the President brought it all to a halt and we got no further into the subject of vital legislation for higher education. In other words, under our proposal any graduate student could get the loan money. But here we are limited to medical and dental students and are saying that they should have special treatment and forgiveness. There is no reason whatsoever that this will not then be used as a precedent to give the grants to everyone else. There is no reason why this should ever be put into law.

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

Mr. HARRIS. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania [Mr. Moorhead].

Mr. MOORHEAD. Mr. Chairman, I rise in support of H.R. 12 and urge favorable action by the Congress in assisting medical education.

It is significant that there is universal support from such groups as American Medical Association and American Dental Association in recognizing the need for Federal assistance. Dr. Gerald Dorman, board member of AMA, in testifying before the Interstate and Foreign Commerce Committee stated, "there does not seem to be any substitute to the support that the Federal Government can give." This was in the area of school construction, where $25 million will be authorized for 1964 under this bill.

An example of need on the local level comes from Dr. Edward J. Forrest, dean of the School of Dentistry at the University of Pittsburgh. He has written me:

> The School of Dentistry of the University of Pittsburgh is just one example where dental facilities are well below standard. Our clinical facilities are completely inadequate and classes must be alternated throughout the week. Currently, we have paper plans for a new outpatient clinic facility and for which no financial support has been made available.

Such support can and must be furnished if this deplorable situation is to be changed.

The AMA representative, Dr. Dorman, also expressed preference in the field of research grants, saying, "this is another area where we feel that we need the Federal help." It is only in the area of student loans that any division of opinion appears. However, only 1 member of the Interstate and Foreign Commerce Committee opposed the entire bill as reported out of the committee, while 21 from both parties voted for it. I think the $5 million authorized for student loans is the minimum amount which can be of any use and that after the States have divided up this "pie" there will be very thin slices indeed for the 87 medical schools in the United States to dispense. I know this will be a welcome supplement to other loan and grant funds already in effect at the university of Pittsburgh Medical School, which has reached the limits of resources in helping its 375 students. Direct aid from the university has risen almost 10 times the amount disbursed 4 or 5 years ago and I note that the Student American Medical Association there has gone on record in recognizing the need for Federal assistance.

Mr. Chairman, of all areas of higher education, the study of medicine is the longest and most expensive. Pittsburgh is fortunate in having such a fine medical school, but I note that Allegheny County is below the national metropolitan county average of 145 physicians per 100,000 of population. This bill should help to provide the extra medical care Pittsburghers all deserve and expect. The health of our citizens is certainly our No. 1 asset.

Mr. HARRIS. Mr. Chairman, I yield such time as he may consume to the gentleman from New Jersey [Mr. Joelson].

Mr. JOELSON. Mr. Chairman, I intend to support H.R. 12 to increase the opportunities for training professional health personnel.

I take this position because I believe it to be a legitimate function of our Government to provide for the adequate medical and dental care of the American people.

It is my hope that if this measure is enacted, the young men and women who benefit from it and become the doctors and dentists of tomorrow will remember that their Federal Government has a responsibility in the area of the health of the American people. I hope that they will not raise the false cry of "socialism" in the future against congressional action to promote the health of the American people.

It seems to me that there is an unfortunate tendency on the part of many Americans to favor as wise and necessary those laws which help them, but to decry as "socialistic" those measures which help others.

Mr. HARRIS. Mr. Chairman, I yield myself the balance of the time remaining on this side.

Mr. Chairman, we are about to conclude the debate on this most important legislation. In view of what has been said in the last few minutes let me say to the Members of the House that our Committee on Interstate and Foreign Commerce had no intention whatsoever of becoming involved in a jurisdictional dispute with another committee. We do not have such intention now. This bill was sent up in the usual way, as provided for by the rules of the House, by the department in the last Congress, and it was reintroduced this year. It was again referred to our committee.

Mr. Chairman, since 1798 matters involving public health have been under the jurisdiction of the Committee on Interstate and Foreign Commerce. But the real question here, as has been said so well by the distinguished lady from Oregon [Mrs. Green] and so many others is how to meet the needs of the American people. That is the important thing.

The religious issue was raised heretofore, the question was never raised in the committee, I will say to the gentleman from Indiana. The question was never raised in the course of the hearings and in the several days when we considered the bill in executive session. There was no thought ever given to it; just as was the case with other health measures and just as it was with the hospital program which has been so successful throughout the years since 1946.

So far as the committee is concerned we felt that the language of the act meant what it said, that this was to assist in the construction of new teaching facilities for the training of physicians, pharmacists, and so forth; and insofar as dentists are concerned, the construction of new teaching facilities. It did not say for the construction of chapels and facilities for religious worship.

So when that question was raised by some who have some fear concerning this—and I do not—I directed the staff to prepare perfecting amendments which I propose to offer at the proper time in order to make it abundantly clear that there will be no such construction so far as this legislation is concerned.

Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The time of the gentleman from Arkansas [Mr. Harris] has expired. All time has expired. The Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Health Professions Educational Assistance Act of 1963".

Mr. QUIE. Mr. Chairman, I offer an amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. Quie: Strike out all after the enacting clause and insert the following: "That this Act may be cited as the 'College Academic and Health Professions Facilities Act'.

"FINDINGS AND DECLARATION OF POLICY

"Sec. 2. The Congress hereby finds that the security and welfare of the United States require that this and future generations of American youth be assured ample opportunity for the fullest development of their intellectual capacities, and that this opportunity will be jeopardized unless the Nation's colleges and universities are encouraged and assisted in their efforts to accommodate rapidly growing numbers of youth who aspire to a higher education. The Congress further finds and declares that these needs are so great and these steps so urgent that it is incumbent upon the Nation to take positive and immediate action to meet these needs through assistance to institutions of higher education in providing classrooms and other academic facilities."

Mr. QUIE (interrupting the reading of the amendment). Mr. Chairman, I ask unanimous consent that further reading of the substitute be dispensed with, that it be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

Mr. HARRIS. Mr. Chairman, reserving the right to object, I did not hear the gentleman's request.

The CHAIRMAN. The gentleman from Minnesota [Mr. Quie] asks unanimous consent that further reading of the substitute be dispensed with and that it be printed in the Record.

Mr. HARRIS. Mr. Chairman, I am not opposed to the request except that I should like to raise a point of order against the substitute.

The CHAIRMAN. The gentleman may do that after the request of the gentleman from Minnesota is acted upon.

Is there objection to the request of the gentleman from Minnesota?

Mr. HALLECK. Mr. Chairman, reserving the right to object—and I shall not object—I should like to take this opportunity to inquire of the chairman of the committee having this bill in charge and the majority leadership concerning their plans for further consideration of this bill this evening. I ask that question because a great many Members on my side have been asking me and I have been unable to tell them. As the gentleman from Arkansas [Mr. Harris] knows, I talked with him very informally a little bit ago. I might say to him my information is that there are numerous amendments that are to be offered before the bill can be finally brought to a conclusion. I understand likewise that there probably will be two rollcall votes. Under the circumstances, and I appreciate the dilemma of some of the people here, if we could have some information as to just how far we might expect to proceed this evening I think it would be very helpful. If this is not the propitious time to make that inquiry I shall withdraw it, but if we could be told, I think it would be very helpful.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I yield to the gentleman from Arkansas.

Mr. HARRIS. I should say if we could go along for another 30 or 40 minutes I think we could come to some definite conclusion. I have a feeling at this time that we will not be able to conclude today. I will say to the gentleman I would like to see how we get along with one or two major things within the next 30 minutes.

Mr. HALLECK. May I suggest to the gentleman that unless it is fairly certain that we could conclude this evening I cannot see how very much could be gained by going on further. We have the rest of this week, as I understand, to dispose of this measure and one other measure that is of some significance, and certainly we want to dispose of them this week if we can.

I withdraw my reservation of objection, Mr. Chairman.

Mr. KYL. Since this amendment is in the nature of a substitute, Mr. Chairman, I object.

The Clerk continued the reading of the substitute amendment.

Mr. HARRIS (during the reading of the substitute amendment). Mr. Chairman, I ask unanimous consent that the further reading of the substitute amendment be dispensed with and that it be printed in the RECORD at this point.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

Mr. GROSS. Mr. Chairman, reserving the right to object, what is proposed to be done after this happens?

Mr. HARRIS. I propose to raise a point of order against the substitute amendment.

Mr. GROSS. Does the gentleman propose to go on into the night with this bill now?

Mr. HARRIS. No. It is the intention after this matter is disposed of and after discussing the situation with the leadership on both sides, it is contemplated that the Committee rise.

Mr. GROSS. That is after the point of order is made and ruled upon, then the Committee rises; is that the story?

Mr. HARRIS. Yes; that is the intention.

Mr. GROSS. I thank the gentleman.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas [Mr. HARRIS]?

There was no objection.

The Clerk read as follows:

PART A—GRANTS FOR CONSTRUCTION OF ACADEMIC FACILITIES

Appropriations authorized

SEC. 101. (a) In order to enable the Commissioner of Education (hereafter in this Act referred to as the "Commissioner") to make grants to institutions of higher education for the construction of academic facilities in accordance with the provisions of this part A, there is hereby authorized to be appropriated the sum of $180,000,000 for the fiscal year ending June 30, 1964, and each of the two succeeding fiscal years. In addition to the sums authorized to be appropriated under the preceding sentence, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1965, and for the succeeding fiscal year, for making such grants the difference (if any) between the sums authorized to be appropriated under the preceding sentence for preceding fiscal years and the aggregate of the sums which were appropriated for such preceding years under such sentence.

(b) Sums appropriated pursuant to subsection (a) of this section shall remain available for reservation as provided in section 107 until the close of the fiscal year next succeeding the fiscal year for which they were appropriated.

Allotments to States

SEC. 102. (a) Of the funds appropriated pursuant to section 101 for any fiscal year (1) one-half shall be allotted by the Commissioner among the States so that the allotment to each State under this clause will be an amount which bears the same ratio to such one-half as the number of students enrolled in institutions of higher education in such State bears to the total number of students enrolled in such institutions in all the States; and (2) the remaining one-half shall be allotted by him among the States so that the allotment to each State under this clause will be an amount which bears the same ratio to such remainder as the number of students enrolled in grades nine to twelve (both inclusive) of schools in such State bears to the total number of students in such grades in schools in all the States. For the purposes of this subsection, (A) the number of students enrolled in institutions of higher education shall be deemed to be equal to the sum of (i) the number of full-time students and (ii) the full-time equivalent of the number of part-time students as determined by the Commissioner in accordance with regulations; and (B) determinations as to enrollment under either clause (1) or clause (2) of this subsection shall be made by the Commissioner on the basis of data for the most recent year for which satisfactory data with respect to such enrollment are available to him.

(b) The amount of each allotment to a State under this section shall be available, in accordance with the provisions of this part A, for payment of the Federal share (as determined under sections 106(b)(3) and 122(d)) of the development cost of approved projects for the construction of academic facilities within such State by institutions of higher education. Sums allotted to a State for the fiscal year ending June 30, 1964, shall remain available for reservation as provided in section 107 until the close of the next fiscal year, in addition to the sums allotted to such State for such next fiscal year.

(c) All amounts allotted under this section for the fiscal year ending June 30, 1965, and for the succeeding fiscal year, which are not reserved as provided in section 107 by the close of the fiscal year for which they are allotted, shall be reallotted by the Commissioner, on the basis of such factors as he determines to be equitable and reasonable, among the States which, as determined by the Commissioner, are able to use without delay any amounts so reallotted. Amounts reallotted under this subsection shall be available for reservation until the close of the fiscal year next succeeding the fiscal year for which they were originally allotted.

State commissions and plans

SEC. 103. (a) Any State desiring to participate in the grant program under this part A shall designate for that purpose an existing State agency which is broadly representative of the public and of institutions of higher education in the State, or, if no such State agency exists, shall establish such a State agency, and submit to the Commissioner through the agency so designated or established (hereafter in this part A referred to as the "State commission"), a State plan for such participation. The Commissioner shall approve any such plan which—

(1) provides that it shall be administered by the State commission;

(2) sets forth, consistently with basic criteria prescribed by regulation pursuant to section 105, objective standards and methods (A) for determining the relative priorities of eligible projects for the construction of academic facilities submitted by institutions of higher education within the State, and (B) for determining the Federal share of the development cost of each such project (unless such plan provides for a uniform Federal share for all such projects);

(3) provides (A) for assigning priorities solely on the basis of such criteria, standards, and methods to eligible projects submitted to the State commission and deemed by it to be otherwise approvable under the provisions of this part A; and (B) for approving and recommending to the Commissioner, in the order of such priority, applications covering such eligible projects, and for certifying to the Commissioner the Federal share, determined by the State commission under the State plan, of the development cost of the project involved;

(4) provides for affording to every applicant, which has submitted to the State commission a project, an opportunity for a fair hearing before the commission as to the priority assigned to such project or as to any other determination of the commission adversely affecting such applicant; and

(5) provides (A) for such fiscal control and fund accounting procedures as may be necessary to assure proper disbursement of and accounting for Federal funds paid to the State commission under this part A, and (B) for making of such reports, in such form and containing such information, as may be reasonably necessary to enable the Commissioner to perform his functions under this part A.

(b) The Commissioner is authorized to expend not exceeding $3,000,000 during each of the first two fiscal years of the program under this part A in such amounts as he may consider necessary for the proper and efficient administration of the State plans approved under this part A, including expenses which he determines were necessary for the preparation of such plans.

Eligibility for grants

SEC. 104. An institution of higher education shall be eligible for a grant for construction of an academic facility under this part A only if such construction will, either alone or together with other construction to be undertaken within a reasonable time, (1) result in an urgently needed substantial expansion of the institution's student enrollment capacity, or (2) in the case of a new institution of higher education, result in creating urgently needed enrollment capacity.

Basic criteria for determining priorities and Federal share

SEC. 105. (a) As soon as practicable after the enactment of this Act the Commissioner shall by regulation prescribe basic criteria to which the provisions of State plans setting forth standards and methods for determining relative priorities of eligible construction projects, and the application of such standards and methods to such projects under such plans, shall be subject. Such basic criteria (1) shall be such as will best tend to achieve the objectives of this part A while leaving opportunity and flexibility for the development of State plan standards and methods that will best accommodate the varied needs of institutions in the several States, and (2) shall give special consideration to expansion of undergraduate enrollment capacity. Subject to the foregoing requirements, such regulations may establish additional and appropriate basic criteria, including provision for considering the degree to which applicant institutions are effectively utilizing existing facilities, provision for allowing State plans to group or provide for grouping, in a reasonable manner, facilities or institutions according to functional or educational type for priority purposes, and, in view of the national objectives of this Act, provision for considering the degree to which the institution serves students from two or more States or from outside the United States; and in no event shall an institution's readiness to admit such out-of-State students be considered as a priority factor adverse to such institution.

(b) The Commissioner shall further prescribe by regulation the basic criteria for determining the Federal share of the development cost of any eligible project under this part A within a State, to which criteria the applicable standards and methods set forth in the State plan for such State shall conform in the absence of a uniform statewide Federal share specified in or pursuant to such plan. The Federal share shall in no event exceed 33⅓ per centum of the development cost of a project covered by an application approved under this part A.

Applications for grants and conditions for approval

SEC. 106. (a) Institutions of higher education which desire to obtain grants under this part A shall submit applications therefor at such time or times and in such manner as may be prescribed by the Commissioner, and such applications shall contain such information as may be required by or pursuant to regulation for the purpose of enabling the Commissioner to make the determinations required to be made by him under this part A.

(b) The Commissioner shall approve an application covering a project for construction of an academic facility and meeting the requirements prescribed pursuant to subsection (a) if—

(1) the project is an eligible project as determined under section 104;

(2) the project has been approved and recommended by the appropriate State commission;

(3) the State commission has certified to the Commissioner, in accordance with the State plan, the Federal share of the development cost of the project, and sufficient funds to pay such Federal share are available from the applicable allotment of the State (including any applicable reallotment to the State);

(4) the project has, pursuant to the State plan, been assigned a priority that is higher than that of all other projects within such State (chargeable to the same allotment) which meet all the requirements of this section (other than this clause) and for which Federal funds have not yet been reserved;

(5) the Commissioner determines that the construction will be undertaken in an economical manner and will not be of elaborate or extravagant design or materials; and

(6) the Commissioner determines that (in addition to the assurance required by section 121 and such assurance as to title to the site as he may deem necessary) the application contains or is supported by satisfactory assurances—

(A) that Federal funds received by the applicant will be used solely for defraying the development cost of the project covered by such application,

(B) that sufficient funds will be available to meet the non-Federal portion of such cost and to provide for the effective use of the academic facility upon completion, and

(C) that the facility will be used as an academic facility during at least the period of the Federal interest therein (as defined in section 108).

(c) Amendments of applications shall, except as the Commissioner may otherwise provide by or pursuant to regulation, be subject to approval in the same manner as original applications.

Amount of grant payment

SEC. 107. Upon his approval of any application for a grant under this part A, the Commissioner shall reserve from the applicable allotment (including any applicable reallotment) available therefor, the amount of such grant, which (subject to the limits of such allotment or reallotment) shall be equal to the Federal share (ascertained by him under section 106(b) (3)) of the development cost of the project covered by such application. The Commissioner shall pay such reserved amount, in advance or by way of reimbursement, and in such installments consistent with construction progress, as he may determine. The Commissioner's reservation of any amount under this section may be amended by him, either upon approval of an amendment of the application covering such project or upon revision of the estimated development cost of a project with respect to which such reservation was made, and in the event of an upward revision of such estimated cost approved by him he may reserve the Federal share of the added cost only from the applicable allotment (or reallotment) available at the time of such approval.

Recovery of payments

SEC. 108. (a) The Congress hereby finds and declares that, if a facility constructed with the aid of a grant or grants under this part A is used as an academic facility for twenty years following completion of such construction, the public benefit accruing to the United States from such use will equal or exceed in value the amount of such grant or grants. The period of twenty years after completion of such construction shall therefore be deemed to be the period of Federal interest in such facility for the purposes of this part A.

(b) If, within twenty years after completion of construction of an academic facility which has been constructed in part with a grant or grants under this part A—

(1) the applicant (or its successor in title or possession) ceases or fails to be a public or nonprofit institution, or

(2) the facility ceases to be used as an academic facility, or the facility is used as a facility excluded from the term "academic facility" by section 122(a) (2), unless the Commissioner determines in accordance with regulations that there is good cause for waiving the application of this paragraph to such facility or use,

the United States shall be entitled to recover from such applicant (or successor) an amount which bears to the then value of the facility (or so much thereof as constituted an approved project or projects) the same ratio as the amount of such Federal grant or grants bore to the development cost of the facility financed with the aid of such grant or grants: *Provided*, That the authority to waive the application of paragraph (2) of this subsection shall not apply to any case in which a facility (A) is used for sectarian instruction or as a place for religious worship or (B), although not used for a purpose described in clause (A), is used primarily for any part of a program of a school of divinity (as defined in section 122(a)(2)). Such value shall be determined by agreement of the parties or by action brought in the United States district court for the district in which such facility is situated.

Administration of State plans

SEC. 109. (a) The Commissioner shall not finally disapprove any State plan submitted under this part A, or any modification thereof, without first affording the State commission submitting the plan reasonable notice and opportunity for a hearing.

(b) Whenever the Commissioner, after reasonable notice and opportunity for hearing to the State commission administering a State plan approved under this part A, finds—

(1) that the State plan has been so changed that it no longer complies with the provisions of section 103(a), or

(2) that in the administration of the plan there is a failure to comply substantially with any such provision,

the Commissioner shall notify such State commission that the State will not be regarded as eligible to participate in the program under this part A until he is satisfied that there is no longer any such failure to comply.

Judicial review

SEC. 110. (a) If any State is dissatisfied with the Commissioner's final action with respect to the approval of its State plan submitted under this part A, or with respect to his final action under section 109(b), such State may, within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located, a petition for review of such action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Commissioner or any officer designated by him for that purpose. The Commissoner thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

(b) Upon the filing of the petition referred to in subsection (a) of this section, the court shall have jurisdiction to affirm the action of the Commissioner or to set it aside, in whole or in part, temporarily or permanently. The findings of the Commissioner as to the facts, if supported by substantial evidence, shall be conclusive, but the court, for good cause shown, may remand the case to the Commissioner to take further evidence, and the Commissioner may thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

(c) The judgment of the court affirming or setting aside, in whole or in part, any action of the Commissioner shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code. The commencement of proceedings under this section shall not, unless so specifically ordered by the court, operate as a stay of the Commissioner's action.

PART B—LOANS FOR CONSTRUCTION OF ACADEMIC FACILITIES

Lending authority

SEC. 111. The Commissioner may, in accordance with the provisions of this part B, make loans to institutions of higher education or to higher education building agencies for construction of academic facilities.

Loan limit for any State

SEC. 112. Not more than 12½ per centum of the funds provided for in this part B in the form of loans shall be used for loans to institutions of higher education or higher education building agencies within any one State.

Eligibility conditions, amounts, and terms of loans

SEC 113. (a) No loan pursuant to this part B shall be made unless the Commissioner finds (1) that not less than one-fourth of the development cost of the facility will be financed from non-Federal sources, (2) that the applicant is unable to secure the amount of such loan from other sources upon terms and conditions equally as favorable as the terms and conditions applicable to loans under this part B, and (3) that the construction will be undertaken in an economical manner and that it will not be of elaborate or extravagant design or materials.

(b) A loan pursuant to this part B shall be secured in such manner, and shall be repaid within such period not exceeding fifty years, as may be determined by the Commissioner; and shall bear interest at a rate determined by the Commissioner which shall not be more than the higher of (1) 2¾ per centum per annum, or (2) a per annum rate that is one quarter of 1 percentage point above the rate of interest paid by the Commissioner on funds obtained from the Secretary of the Treasury as provided in subsection (d) of this section.

(c) In order to enable the Commissioner of Education to make loans to institutions of higher education for the construction of academic facilities in accordance with the provisions of this part B, there is hereby authorized to be appropriated the sum of $120,000,000 for the fiscal year ending June 30, 1964, and each of the two succeeding fiscal years. In addition to the sums authorized to be appropriated under the preceding sentence, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1965, and for the succeeding fiscal year, for making such grants the difference (if any) between the sums authorized to be appropriated under the preceding sentence for preceding fiscal years and the aggregate of the same which were appropriated for such preceding years under such sentence.

General provisions for loan program

SEC. 114. (a) In the performance of, and with respect to, the functions, powers, and duties vested in him by this part B the Commissioner, not notwithstanding the provisions of any other law, shall—

(1) prepare annually and submit a budget program as provided for wholly owned Government corporations by the Government Corporation Control Act, as amended; and

(2) maintain an integral set of accounts which shall be audited annually by the General Accounting Office in accordance with the principles and procedures applicable to commercial transactions as provided by the Government Corporation Control Act, as amended, and no other audit shall be required: *Provided*, That such financial transactions of the Commissioner as the making of loans and vouchers approved by the Commissioner in connection with such financial transactions shall be final and conclusive upon all officers of the Government.

(b) (1) Funds made available to the Commissioner pursuant to the provisions of this part B shall be deposited in a checking account or accounts with the Treasurer of the United States. Receipts and assets obtained or held by the Commissioner in connection with the performance of his functions under this part B, and all funds available for carrying out the functions of the Commissioner under this part B (including appropriations therefor, which are hereby authorized), shall be available, in such amounts as may from year to year be authorized by the Congress, for the administrative expenses of the Commissioner in connection with the performance of such functions.

(2) The Commissioner is authorized (A) to prescribe a schedule of fees which, in his judgment, would be adequate in the aggregate to cover necessary expenses of making inspections (including audits) and providing representatives at the site of projects in connection with loans under this part B, and (B) to condition the making of such loans on agreement by the applicant to pay such fees; and, if such fees are prescribed, the Commissioner's expenses for such purposes shall be considered nonadministrative. For the purpose of providing such services, the Commissioner may, as authorized by section 123(b), utilize any agency, and such agency may accept reimbursement or payment for such services from such applicant or from the Commissioner, and shall, if a Federal agency, credit such amounts to the appropriation or fund against which expenditures by such agency for such services have been charged.

(c) In the performance of, and with respect to, the functions, powers, and duties vested in him by this part B, the Commissioner, notwithstanding the provisions of any other law, may—

(1) prescribe such rules and regulations as may be necessary to carry out the purposes of this part B;

(2) sue and be sued in any court of record of a State having general jurisdiction or in any district court of the United States, and such district courts shall have jurisdiction of civil actions arising under this part B without regard to the amount in controversy, and any action instituted under this subsection by or against the Commissioner shall survive notwithstanding any change in the person occupying the office of Commissioner or any vacancy in such office; but no attachment, injunction, garnishment, or other similar process, mesne or final, shall be issued against the Commissioner or property under his control, and nothing herein shall be construed to except litigation arising out of activities under this part B from the application of sections 507(b) and 2679 of title 28 of the United States Code and of section 367 of the Revised Statutes (5 U.S.C. 316);

(3) foreclose on any property or commence any action to protect or enforce any right conferred upon him by any law, contract, or other agreement, and bid for and purchase at any foreclosure or any other sale any property in connection with which he had made a loan pursuant to this part B; and, in the event of any such acquisition (and notwithstanding any other provisions of law relating to the acquisition, handling, or disposal of real property by the United States), complete, administer, remodel and convert, dispose of, lease, and otherwise deal with, such property: *Provided*, That any such acquisition of real property shall not deprive any State or political subdivision thereof of its civil or criminal jurisdiction in and over such property or impair the civil rights under the State or local laws of the inhabitants on such property;

(4) enter into agreements to pay annual sums in lieu of taxes to any State or local taxing authority with respect to any real property so acquired or owned;

(5) sell or exchange at public or private sale, or lease, real or personal property, and sell or exchange any securities or obligations, upon such terms as he may fix;

(6) obtain insurance against loss in connection with property and other assets held;

(7) subject to the specific limitations in this part B, consent to the modification, with respect to the rate of interest, time of payment of any installment of principal or interest, security, or any other term of any contract or agreement to which he is a party or which has been transferred to him pursuant to this section; and

(8) include in any contract or instrument made pursuant to this part B such other covenants, conditions, or provisions (including provisions designed to assure against use of the facility, constructed with the aid of a loan under this part B, for purposes described in section 122(a) (2) as he may deem necessary to assure that the purposes of this part B will be achieved.

PART C—GENERAL PROVISIONS FOR LOAN AND GRANT PROGRAMS

Labor standards

SEC. 121. (a) The Commissioner shall not approve any application for a grant or loan under this Act except upon adequate assurance that all laborers and mechanics employed by contractors or subcontractors in the performance of work on construction assisted by such grant or loan will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a—276a-5), and will receive compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in any workweek in excess of eight hours in any workday or forty hours in the workweek, as the case may be; but, in the case of any nonprofit educational institution, the Commissioner may waive the application of this subsection in cases or classes of cases where laborers or mechanics, not otherwise employed at any time in the construction of the project, voluntarily donate their services for the purpose of lowering the costs of construction and the Commissioner determines that any amounts saved thereby are fully credited to the educational institution undertaking the construction.

(b) The Secretary of Labor shall have, with respect to the labor standards specified in subsection (a) of this section, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267), and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276c).

Definitions

SEC. 122. As used in this Act—

(a) (1) Except as provided in subparagraph (2) of this paragraph, the term "academic facilities" means structures suitable for use as classrooms, laboratories, libraries, and related facilities necessary or appropriate for instruction of students, or for research, or for administration of the educational or research programs, of an institution of higher education, and maintenance, storage, or utility facilities essential to operation of the foregoing facilities.

(2) The term "academic facilities" shall not include (A) any facility intended primarily for events for which admission is to be charged to the general public, or any gymnasium or other facility specially designed for physical education or athletic or recreational activities, or (B) any facility used or to be used for sectarian instruction or as a place for religious worship, or (C) any facility which (although not a facility described in the preceding clause) is used or to be used primarily in connection with any part of the program of a school or department of divinity. For the purposes of this subparagraph, the term "school or department of divinity" means an institution, or a department or branch of an institution, whose program is specifically for the education of students to prepare them to become ministers of religion or to enter upon some other religious vocation or to prepare them to teach theological subjects.

(b) (1) The term "construction" means (A) erection of new or expansion of existing structures, and the acquisition and installation of initial equipment therefor; or (B) acquisition of existing structures not owned by the institution involved; or (C) rehabilitation, alteration, conversion, or improvement (including the acquisition and installation of initial equipment, or modernization or replacement of built-in equipment) of existing structures; or (D) a combination of any two or more of the foregoing.

(2) The term "equipment" includes, in addition to machinery, utilities, and built-in equipment and any necessary enclosures or structures to house them, all other items necessary for the functioning of a particular facility as an academic facility, including necessary furniture, except books and except items of current operating expense such as fuel, supplies, and the like; the term "initial equipment" means equipment acquired and installed in connection with construction as defined in paragraph (1) (A) or (B) of this subsection or, in cases referred to in paragraph (1) (C), equipment acquired and installed as part of the rehabilitation, alteration, conversion, or improvement of an existing structure which structure would otherwise not be adequate for use as an academic facility; and the terms "equipment", "initial equipment", and "built-in equipment" shall be more particularly defined by the Commissioner by regulation.

(c) The term "development cost", with respect to an academic facility, means the amount found by the Commissioner to be the cost, to the applicant for a grant or loan under this Act, of the construction involved and the cost of necessary acquisition of the land on which the facility is located and of necessary site improvements to permit its use for such facility, but excluding any cost incurred before, or under a contract entered into before, the enactment of this Act. There shall further be excluded from the development cost—

(1) in determining the amount of any grant under this Act, an amount equal to the sum of (A) any Federal grant which the institution has obtained, or is assured of obtaining, under any law other than this Act, with respect to the construction that is to be financed with the aid of a grant under this Act, and (B) the amount of any non-Federal funds required to be expended as a condition of such other Federal grant; and

(2) in determining the amount of any loan under this Act, an amount equal to the amount of any Federal financial assistance

which the institution has obtained, or is assured of obtaining, under any law other than this Act, with respect to the construction that is to be financed with the aid of a loan under this Act.

(d) The term "Federal share" means a percentage (as determined under the applicable State plan) not in excess of 33⅓ per centum of the development cost of a project covered by an application for a grant for the construction of an academic facility under part A of this Act.

(e) The term "higher education building agency" means (1) an agency, public authority, or other instrumentality of a State authorized to provide, or finance the construction of, academic facilities for institutions of higher education (whether or not also authorized to provide or finance other facilities for such or other educational institutions, or for their students or faculty), or (2) any corporation (no part of the net earnings of which inures or may lawfully inure to the benefit of any private shareholder or individual) (A) established by an institution of higher education for the purpose of providing academic facilities for the use of such institution, and (B) upon dissolution of which all title to any property purchased or built from the proceeds of any loan made under part B of this Act will pass to such institution.

(f) The term "institution of higher education" means a public or other nonprofit educational institution in any State which—

(1) admits as regular students only individuals having a certificate of graduation from a high school, or the recognized equivalent of such a certificate;

(2) is legally authorized within such State to provide a program of education beyond high school;

(3) provides an educational program for which it awards at least a bachelor's degree, or provides not less than a two-year program which is acceptable for full credit toward such a degree; and

(4) is accredited by a nationally organized accrediting agency or association listed by the Commissioner pursuant to this paragraph or, if not so accredited, is an institution whose credits are accepted, on transfer, by not less than three institutions which are so accredited, for credit on the same basis as if transferred from an institution so accredited: *Provided, however*, That the requirements of this paragraph (4) shall be deemed to be satisfied in the case of an institution applying for assistance under this Act, if the Commissioner determines that there is satisfactory assurance that upon completion of the project for which such assistance is requested, or upon completion of that project and others under construction or planned and to be commenced within a reasonable time, the institution will meet such requirements. For the purposes of this paragraph the Commissioner shall publish a list of nationally recognized accrediting agencies or associations which he determines to be reliable authority as to the quality of education or training offered.

(g) The term "high school" does not include any grade beyond grade 12.

(h) The term "nonprofit educational institution" means an educational institution owned and operated by one or more corporations or associations no part of the net earnings of which inures, or may lawfully inure, to the benefit of any private shareholder or individual.

(i) The term "public educational institution" does not include a school or institution of any agency of the United States.

(j) The term "State" includes, in addition to the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa.

Federal administration

SEC. 123. (a) The Commissioner may delegate any of his functions under this Act, except the making of regulations, to any officer or employee of the Office of Education.

(b) In administering the provisions of this Act for which he is responsible, the Commissioner is authorized to utilize the services and facilities of any agency of the Federal Government and of any other public or nonprofit agency or institution in accordance with appropriate agreements, and to pay for such services either in advance or by way of reimbursement, as may be agreed upon.

(c) The Commissioner with the approval of the Secretary of Health, Education, and Welfare, may appoint one or more advisory committees to advise and consult with the Commissioner with respect to the administration of any of his functions under this Act. Members of any such committee, while attending conferences or meetings of the committee, shall be entitled to receive compensation at a rate to be fixed by the Secretary of Health, Education, and Welfare but not to exceed $75 per diem, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. The provisions of section 1003 of the National Defense Education Act of 1958 shall apply to members of such committees.

Method of payment

SEC. 124. Payments under this Act to any individual or to any State or Federal agency, institution of higher education, or any other organization, pursuant to a grant or loan may be made in installments, and in advance or by way of reimbursement, and with necessary adjustments on account of overpayments or underpayments.

Administrative appropriations authorized

SEC. 125. There are hereby authorized to be appropriated for the fiscal year ending June 30, 1964, and for each fiscal year thereafter, such sums as may be necessary for the cost of administering the provisions of this Act, including the cost of payments for the administrative expenses of State commissions.

Prohibition against Federal control

SEC. 126. Nothing contained in this Act shall be construed as authorizing a department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over, or impose any requirements or condition with respect to, the personnel, curriculum, methods of instruction, or administration of any educational institution.

Mr. HARRIS. Mr. Chairman, I make a point of order against the substitute amendment offered by the gentleman from Minnesota [Mr. QUIE]. I reserve the point of order as I understand the gentleman from Minnesota would like to have 5 minutes.

The **CHAIRMAN.** The gentleman from Arkansas [Mr. HARRIS] reserves the point of order against the substitute amendment and the gentleman from Minnesota [Mr. QUIE] is recognized for 5 minutes.

Mr. QUIE. Mr. Chairman, I thank the gentleman from Arkansas.

Mr. Chairman, I offer this substitute for the purpose of bringing before the House the higher education academic facilities bill which the House passed last year. At that time it had the number, H.R. 8900. The House by a vote of 319 to 79 indicated its position that the Federal Government ought to make available $180 million a year in the form of grants and $120 million a year in the form of loans to assist in the construction of academic facilities in our colleges and universities in order that the rapidly increasing enrollment might be cared for. It is estimated today that 4.2 million students are enrolled in our colleges and universities. In 1970 this will grow to 7 million. By the fall of 1965, that is about a year and a half from now, one-fourth of this enormous increase will have occurred. Those estimates are conservative. They are based on the same percentage of high school graduates going on to higher education in these future years as presently do. The estimates that have been made in the past have always been low because every year a greater proportion of students go on to higher education. We have studied this in our subcommittee and in the committee and this was the basis for the historic vote in the House of Representatives last year. The House realizes that in education, considering all education legislation proposed to the Congress this year, the highest priority in terms of urgent national interest is for higher education academic facilities construction aid. Also looking at the question of Federal assistance to education, I share the views of those who are opposed to general Federal aid to elementary and secondary schools, because I feel this is the responsibility of State and local governments. They can accept this responsibility and handle it better than the Federal Government can. However, in higher education I feel that there is definitely a Federal responsibility, which began to be exercised with the Land-Grant College Act of 1862 and has continued since then. A principal reason for this distinction is that there is no political subdivision which has a basic responsibility for higher education, as there is for elementary and secondary schools.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Indiana.

Mr. HALLECK. Do I understand this substitute bill which the gentleman has offered is identical in terms with the bill that was passed by the House of Representatives last year?

Mr. QUIE. Yes. This is identical with the one that was passed last year as far as medical, dental, and other schools of medicine and health are concerned. They are included in this bill. There are a few technical changes, such as limiting the duration to 3 years to conform with H.R. 12 in that respect.

Mr. HALLECK. In other words, what the gentleman is attempting to do is to provide in this substitute the terms of the bill passed last year for the measure presently before us.

Mr. QUIE. That is correct, yes. We worked this out last year and determined the way they wanted it. In the matter of priority it lets the college and the State commission decide which is of the greatest priority, what is of the greatest need. We cannot say that the medical profession is in the greatest need and should be handled separately and apart from all other fields of higher education. The fact is that there are several disciplines in higher education that appear to need aid more than the medical profession.

To pass this bill in its present form would amount to a further fragmenting of assistance to all education, for we do not know now what the need may be in future years or what separate program will be offered in any particular area of education. If we are going to legislate responsibly this ought to be put in one place, under the Commissioner of Education. That is the way this type of legislation should be handled. I think this is the way we ought to operate.

I am sorry that the House procedure is such that the Chair might rule that this is not germane, because I feel that there is no area of government where we can adopt a new program which has as great priority as the substitute which I am offering today. I think we ought to exercise every effort we possibly can in order to enact it.

I was greatly disappointed when the subcommittee on which I am privileged to serve was about to report out a bill similar to this with the support of Democrats and Republicans on this subcommittee, but they did not do so because the administration apparently did not want it to go any further. The administration wants to lump the demonstrated and critical needs of higher education with all kinds of less urgent, less important—and even very dubious—proposals in an omnibus bill which they know cannot be enacted. If they are at all serious about having omnibus legislation it seem peculiar to me they support H.R. 12, a separate higher education bill. They want to take the rest of higher education and put it in with the elementary and secondary school bill and many other extraneous proposals. I will point out that we will have a separate rule on the National Science Foundation and other educational facilities. I think that the administration strategy—if one can call it that—is most unwise and damaging to the national interest.

The CHAIRMAN. Does the gentleman from Arkansas wish to be heard on the point of order?

Mr. HARRIS. Mr. Chairman, I insist on the point of order.

The CHAIRMAN. The gentleman will state it.

Mr. HARRIS. I raise a point of order against the substitute. It is not germane to the bill under consideration. The proposed substitute goes far beyond the purposes and intent of the matter we have before us. The bill we have before us would provide for training of physicians, dentists, and professional Public Health personnel. It would amend the Public Health Service Act.

The proposed substitute is much broader. It would broaden the administration. The Commissioner of Education would be authorized to carry out the program, whereas under the committee bill the Surgeon General is directed to carry it out.

I therefore submit that the amendment is not germane and that the point of order should lie.

The CHAIRMAN. Does the gentleman from Minnesota desire to be heard on the point of order?

Mr. QUIE. Mr. Chairman, I would like to speak on the point of order.

The substitute which I have offered is an education bill, but the bill which we have before us also is an education bill, because it also provides for the construction of academic facilities. Also the bill which we are considering, H.R. 12, refers to the National Defense Education Act and the loans that are provided by that act. I feel that is definitely education legislation. It is what we are considering in the Committee on Education and Labor, although just a part of it.

For that reason I feel that my substitute bill is germane because it is expanded to take in the area that is left out in H.R. 12.

The CHAIRMAN (Mr. KEOGH). The Chair is ready to rule.

The gentleman from Minnesota [Mr. QUIE] offers an amendment in the nature of a substitute for the pending bill. The pending bill, H.R. 12, is a bill which has for its objective the training of physicians, dentists, and professional public health personnel, subjects which are within the jurisdiction of the committee to which the pending bill was referred and from which it was reported.

The amendment in the nature of a substitute is on examination a bill that covers a much wider, broader school of academic training of all kinds. It, therefore, is a bill that more properly should have come from another equal and coordinate standing committee, the Committee on Education and Labor.

In view of the statements made by the gentleman from Arkansas, who supports his point of order, the Chair has come to the conclusion that the point of order is well taken and, therefore, sustains the point of order.

Mr. RYAN of New York. Mr. Chairman, I support H.R. 12 which provides for training facilities for schools of medicine, dentistry, optometry, pharmacy, nursing, and public health. We are long overdue in granting assistance to the health professions of our country.

It has been estimated by the Public Health Service that in order to maintain the present physician-population ratio, the expected 1975 population of 235 million will require a total of 330,000 doctors of medicine and osteopathy. This will necessitate an annual graduation of 11,000 students—an increase of approximately 3,600 over the present number graduating each year—"Physicians for a Growing America," report of the Surgeon General's Consultant group on Medical Education, U.S. Department of Health Education, and Welfare, October 1959, page 13. Furthermore, this 30-percent increase in medical graduates is only a minimum goal. In the years ahead the need for physicians will be stimulated by the increased use of medical services due to growth of urbanization and widespread participation in health insurance plan. Moreover, the percentage of our population over the age of 65 continues to grow; this group will also create additional demands for medical care. In short, we must greatly increase the number of medical graduates in order to maintain the present doctor-patient ratio; to meet the increased demands we can expect, we must think in terms not only of maintaining the ratio but of improving it.

According to the report of the Surgeon General's Consultant Group on Medical Education, if we are to meet even our minimum goal, the present medical school facilities must be increased substantially, and new schools must be established. This bill will help accomplish both of these objectives.

New York State is proud and fortunate to have nine fine medical schools—six of which are in New York City. All of these schools are excellent; they boast outstanding faculties and high quality teaching hospitals. They are presently graduating over 900 young doctors per year, more than any other State. We will have to do better than this, however, if we are to be able to meet our future demands for medical care. H.R. 12 will make it possible for medical schools to expand and rehabilitate existing facilities in order to be able to train additional students. Clearly, this legislation will be of tremendous value to the medical schools of my State, to the young men and women who will train there, and to the citizens of New York who will ultimately benefit from the increased supply of well-trained doctors.

Another area in which H.R. 12 will be of great assistance to New York is that of professional public health. Columbia University has one of this country's outstanding schools of public health, yet according to the executive director of the School of Public Health, Ray E. Trussell, in testimony presented to the Committee on Interstate and Foreign Commerce during hearings last year, its physical facilities are "severely limited." The dean's report continued as follows:

> The last full professor appointed to the faculty was placed in an office 7½ feet wide constructed by closing off the last corridor possible under the fire laws. The acquisition of additional facilities is absolutely necessary if we are to increase our enrollment. Our classrooms are so crowded now that at times the regular faculty member in charge of the class has to sit in the doorway if we have a visiting lecturer.

The work of our public health personnel is vitally important to all of us. Through their vigilance we are protected against contaminated food and water, against epidemics of dreaded diseases, industrial hazards, air pollution, and so forth. If we are to continue to enjoy this protection, we must greatly increase the number of public health personnel graduated each year. A conference committee called by the Secretary of Health, Education, and Welfare in 1958 reported that there were more than 2,500 vacancies which could not be filled because of lack of trained personnel. Moreover, at least 20,000 of our present public health officers are inadequately trained for their jobs. The committee estimated that 6,100 more public health workers would be needed to meet the demands of an increased population by 1963. We have not begun to approach the point of meeting these needs, let alone planning for the even greater number of public health personnel who will be needed as our country continues to grow in the next few decades. H.R. 12 will help to meet this urgent need.

Although it would be possible to go on at length citing statistics to show the needs of all the various health professions for the aid provided by this bill, I should like to call your attention to only two other figures. The first of these is in the field of dentistry. According to the American Council on Education's Commission for a Survey of Dentistry, the present ratio of dentists to population is sufficient to provide only one-third of the population with comprehensive dental care. Furthermore, the supply of new dentists is not keeping pace with the increase in population. The commission has recommended that new schools be constructed and existing facilities be expanded to provide for the increased number of dental students who must be recruited. In dentistry, as in medicine, government aid in meeting these construction costs is essential.

The State of New York has 3 of this country's 46 dental schools. We are proud of this fact, but we need still more. We also need to expand our present schools. H.R. 12 can be of great assistance to my State and to the Nation in helping to meet this critical shortage.

We are all aware of the serious shortage of trained nurses confronting this country. Especially serious is the shortage of nurses holding academic degrees who are thus qualified as teachers and administrators. At the present time only 7 percent of the employed professional nurses in this country have baccalaureate degrees and less than 2 percent hold master's degrees. If our future nurses are to be well trained and our hospitals efficiently operated, we must have a great many more professional nurses with college training. For this reason I am pleased that the bill before us defines "school of nursing" as a school, division, or administrative unit within a college or university which grants baccalaureate and graduate degrees in nursing.

While I have spoken at length of the desirability of the provisions of this bill for construction of facilities, I have not lost sight of the provisions for student loans, another excellent feature of the bill. These loans are an extremely important aspect of the proposed program to improve medical education. The cost of any type of medical education is extremely high, certainly higher than the average cost of other graduate and professional training. The Federal Government presently has no program of scholarship or loan aid to medical students that in any way compares with the assistance given to other graduate students through the National Science Foundation, Atomic Energy Commission, and others. It is little wonder that young men and women who must depend upon scholarships and loans to finance their educations often choose to take a graduate degree in chemistry or one of the other sciences where financial help is more easily obtainable rather than to embark upon a long and difficult preparation in the field of medicine or dentistry.

Another factor to be considered here is the possibility of drawing more young men and women from low-income families into the medical professions. Under existing conditions a medical education is an impossibility for many of these young people. One-fifth of the present medical students come from families with incomes of less than $5,000. There are undoubtedly many young men and women from such families who are capable of meeting the academic challenges of medical or dental school if we could make it financially possible for them to enter these schools. We would be doing a service not only to these students but to the Nation as well by helping to meet our overwhelming demands for more trained personnel in every one of the health professions.

Considerable thought and effort has been spent on the provisions of the student loan program, and I believe we now have before us a program that is well suited to the needs of our medical and dental students. I am referring to the fact that a 3-year period is established following the completion of academic training before repayment must begin. This is desirable because of the internship and residency period following medical school during which the new doctor receives very little compensation. Another feature which makes this loan program more satisfactory than the national defense student loan program from the standpoint of medical and dental students is that the limits are considerably higher. The $2,500 annual limit is much more in keeping with the financial needs of medical and dental students than is the $1,000 figure set under the National Defense Education Act program.

I believe that by passing this bill we would be acting in the best interest of our country. Let us work toward the goal of providing facilities and training for all of our capable young men and women so that they may serve society to the fullest.

Mr. ST GERMAIN. Mr. Chairman, the bill we have before us today is one of the most farsighted and constructive measures to maintain and improve the health of our Nation that has ever come before the Congress.

In brief, H.R. 12 provides a 3-year program of matching grants for the construction of teaching facilities for medical, dental, osteopathic, and professional public health personnel as well as for pharamcists, optometrists, podiatrists, and nurses. Also, the bill makes provision for a 3-year program of loans for students of medicine, dentistry, and osteopathy.

It is vitally important that the House enact this measure today. President Kennedy, in his health message of February 7, stressed the great need which exists for more highly trained professional health personnel. He also pointed out the necessity of upgrading the health efforts of our country in all aspects. The first recommendations he made in that message—those concerning the training of professional health personnel—are incorporated in the bill which we are considering this afternoon.

Ample figures are in evidence to support the contention that there is a serious shortage of doctors, dentists, nurses, and professional health workers. In a nation that has made such great strides in the conquest of disease and in the general improvement of health services, such a shortage is inexcusable. The passage of H.R. 12 by Congress would make possible more and better schools for the education of doctors, dentists, and other health personnel. It would also enable many more students to enter medicine, dentistry, and osteopathy by reason of the provision for student loans.

My State of Rhode Island would derive significant benefits from this bill. To give one example, the new school of research medicine at Brown University would be greatly aided in its development by the enactment of H.R. 12.

We cannot afford further delay in providing for the present and future health protection of our fellow citizens. The action we take today will determine how well these needs are met in the years to come.

Mr. FOGARTY. Mr. Chairman, occasionally, throughout the history of this legislative body, its Members are presented with opportunities to demonstrate to the American people that it is closely attuned to their best interests. I would like to speak for a few minutes about such an opportunity.

Today, a bill, conceived out of a concern for the health needs of our citizens, developed and remolded throughout the deliberations of two Congresses, and processed—with amputation of some of its parts—through two committees in the present Congress, now awaits delivery from legislative limbo.

I refer to H.R. 12, a proposal designed to alleviate our Nation's critical shortage of physicians, dentists and other professional health personnel by providing for a 3-year, $175 million program of matching grants for the construction of teaching facilities for medical, dental, and other health personnel, and for a 3-year, $30 million program of loans for students of medicine, dentistry, and osteopathy.

The provisions of this bill are carefully designed to avoid duplication with any other existing or future programs in which schools or individuals under the purview of H.R. 12 may qualify for other Federal funds.

Behind this bill stand hours of careful deliberation, weeks of consideration by various committees, and years of procrastination.

The factors that have created the need for this legislation have been enumerated time and time again by me, my colleagues, experts from many professional disciplines, and numerous health organizations.

We have nodded in agreement with reports that 5 full years ago urged immediate steps to increase the Nation's output of physicians and dentists. We have pointed to the need for more nurses, public health personnel, osteopaths, optometrists, pharmacists, and other health personnel. We have emphasized the special needs of rural communities, one-third of which have more than 2,000 people per physician, twice the number considered satisfactory according to our health standards. We have said that 14 States have no 4-year medical schools and 24 States have no dental schools. We have warned that we are seriously jeopardizing the great investments that we have made in medical research and health facilities by not training enough doctors and dentists to make full use of existing medical knowledge.

With regard to the financing of medical education, we have cited the almost prohibitive costs and financial problems that face aspiring young doctors and dentists—problems far more acute than those faced by aspirants to other professions. We have testified about these needs, and we have proposed many bills to alleviate these needs—but the only thing that we have passed is time.

Many of the bills that have been proposed have gone further than the present legislation to meet our health personnel problems. I myself have introduced before this assembly four separate bills. One proposed a program of Federal funds to assist in the construction of medical and dental schools; one proposed a system of scholarships for medical and dental students; and one proposed assistance to medical and dental schools in meeting their operating expenses. The fourth was an amendment to the National Defense Education Act whereby loans made to medical and dental students would be forgiven under certain conditions.

Even though I believe that we should go much further than the provisions of H.R. 12, pragmatic considerations dictate that we do what we can. Even though H.R. 12 has been reduced from a 10-year to a 3-year program, even though it offers loans instead of scholarships, even though the funds which are being authorized are considerably less than was originally proposed, it represents a beginning.

Having emerged into the realm of political possibility, this bill, I feel, should be regarded not from the standpoint of partisan politics, but from the standpoint of the health needs of our people.

Let us not add one more partisan hurdle to the long and rocky road over which this bill has traveled. Let us rather act as men and women entrusted with a decisionmaking power that can either shortsightedly weaken our Nation by endangering its health, or can wisely recognize and enact long-range solutions to one of the most serious problems besetting us today. Presented with an opportunity to act, let us act now.

Mr. VAN DEERLIN. Mr. Chairman, my home community of San Diego County will be well served by passage of the bill under consideration. Testimony before the committee disclosed that construction grants available under H.R. 12 might hasten by 2 years the completion of a medical school in conjunction with the University of California's San Diego campus. This, in turn, can mean an earlier start on the Veterans' Administration hospital sorely needed there.

By taking a purely parochial view, it would be possible for me to support this measure without its other main feature, the liberal student-loan program with which it is hoped to attract young people into medical training, and to encourage them to enter rural and other fields where the need is greatest.

But this legislation, on which I heard most of the testimony offered in committee, must accomplish both objectives—the construction of more medical and dental schools, and assistance to students from income levels which now make it so difficult to complete the long, expensive years required for medical or dental training.

Some Members apparently understand the need for "bricks and mortar," but cringe from the human side of this bill. We may respect their right to disagree, but I wish they would stop referring to what the House did with similar legislation last year. Some 67 of us were not Members of that earlier Congress, and do not wish to be saddled with its mistakes.

Mr. WATSON. Mr. Chairman, based on the record made here, it is clearly established that there is a need for construction of additional medical training facilities. Accordingly, I shall give my support to the construction phase of this bill.

On the other hand, the need for the Government loan program in the amount of $30 million has not only failed of proof, but I submit that it has been clearly demonstrated that such a program is not the answer.

Many of those in the medical profession with whom I have discussed this important bill advised me there is presently adequate money in the American Medical Association's loan program to meet the needs of deserving students. I understand, further, that this fund was established by private contributions from the doctors themselves as well as various pharmaceutical companies. This private effort should be applauded by each of us.

Mr. Chairman, let us provide the necessary facilities for training students in the various health professions, but we should not enter a field of making Government loans to medical students where the need for assistance is totally lacking in proof.

Not only is this an unnecessary expenditure of more than $30 million, but the medical students themselves, those who would presumably benefit from this new program, have stated through the Student American Medical Association that the need for loans has been met without additional Federal funds.

Actually, this is not a student loan program, but in reality is a grant program. That contention is supported by the fact that the Surgeon General of the United States is empowered within this measure to forgive the loans of up to $5,000 for those medical students practicing in particular areas. It is irreconcilable for us to have these so-called loans forgiven for medical students when such a feature is not available to other students who have made loans from the national defense education fund in the pursuit of their chosen vocation.

Then, too, Mr. Chairman, in my judgment, this new loan proposal is repugnant to one of my basic beliefs—namely, that the Government should not interfere in any field where private citizens are adequately meeting a need. Instead of competing with or disrupting such private endeavors the Government should encourage them, and I feel that to be our responsibility as representatives of the people.

I believe the construction phase of this health program is a logical and necessary sequel to the long established and well utilized Hill-Burton Act. With Hill-Burton funds we have both expanded and renovated hundreds of hospital facilities throughout our respective districts and the Nation, but facilities alone do not provide the answer to proper medical care.

Finally, Mr. Chairman, may I commend the American Medical Association and the American Dental Association for joining us in the support of the construction aspect of this bill to the end that the American citizens may receive adequate and competent medical attention. The serious shortage of doctors throughout our Nation and particularly in South Carolina is not attributable to a lack of available loans for students but is due to a lack of adequate medical teaching facilities.

Mr. BOLAND. Mr. Chairman, I rise in favor of H.R. 12, the Health Professions Educational Assistance Act of 1963, to increase the opportunities for training of physicians, dentists, nurses, and professional public health personnel. I am against any amendment to strike out the student loan provisions which would be of assistance to students of medicine, dentistry, and osteopathy.

This legislation proposes a 3-year program designed to alleviate critical shortages of professional health personnel which already have begun to affect the level and quality of health care in this Nation. These shortages threaten to become worse during the next decades unless immediate steps are taken to increase the supply of professional health personnel. In order to accomplish these objectives, the committee on Interstate and Foreign Commerce reporting this legislation recommends and provides for in this bill: first, a 3-year program of matching grants for the construction of teaching facilities for medical, dental, osteopathic, and professional public health personnel as well as for pharmacists, optometrists, podiatrists, and nurses; second, a 3-year program of loans for students of medicine, dentistry, and osteopathy.

URBANIZATION AND HEALTH PROBLEMS

Mr. Chairman, Disraeli once said:

> The health of the people is really the foundation upon which all their happiness and all their powers as a state depend.

We as a nation have long recognized this to be true and have therefore worked diligently to reduce infant mortality, to wipe out communicable diseases, to increase life expectancy, to rehabilitate the handicapped, and in every way possible to provide for a long, happy, healthy life for each one of us. We can well be proud of the progress we have made in this country; however, challenges still confront us—challenges that demand our best efforts during the next few years if we are even to maintain our present standards of medical care, let alone improve them.

As President Kennedy points out in his health message to the Congress:

> More people than ever before are in those vulnerable age groups—the very young and the very old—which need the greatest amount of health services.

The President also commented on the health problems attendant on increased urbanization. He said:

> More people are living in huge metropolitan and industrial complexes, where they face a host of new problems in achieving safety even in the common environmental elements of food, water, land, and air.

The need for more doctors, dentists, and nurses to care for our growing population, especially the very young and the aged, and the need for trained public health personnel to combat the problems of urbanization should be very clear.

The Surgeon General's Consultant Group on Medical Education has reported that our population is growing faster than our supply of physicians and that if we are to be able to meet the demands for medical care in the 1970's, we must increase our annual medical school graduation figure from 8,000 to 11,000. We cannot do this without enlarging and improving existing facilities and building new ones. According to the testimony of the American Medical Association before the Interstate and Foreign Commerce Committee on H.R. 12, an increase in the number of medical students and graduates without regard to the need for new and more adequate facilities will result in a lowering of the quality of medical care. H.R. 12 will help to provide these badly needed teaching facilities through its matching grants program.

LOAN PROVISION NECESSARY

H.R. 12 will help meet the needs for more doctors and dentists in another way—through its loan provisions. At the present time many bright students are discouraged from entering these professions because of the cost of training as compared to other scientific fields which are not only less expensive but which also offer considerable scholarship assistance from both Federal and non-Federal sources. The only loan program now available to the health professions is the National Defense Education Act which is unsuitable because of the $5,000 limit on the loan and the repayment provisions. H.R. 12 includes a loan program which is much better suited to the needs of medical students because of its higher limits and because it allows a 3-year period of grace rather than only 1 year—a factor that is quite important to a medical graduate who has a year of internship plus 2 or 3 years of residency ahead of him.

In his health message the President emphasized the need for a 25-percent increase in the supply of nursing personnel by 1970. This will require a major expansion of both collegiate and hospital programs of nursing education. The President believes that the schools themselves are unable to bear the tremendous financial burden an expansion of this size would impose. Therefore, Federal assistance is a necessity if our goal is to be met. H.R. 12 will aid in construction of these new teaching facilities and will also provide financial assistance to students to enable many young women who now cannot afford an education beyond high school to obtain a nursing degree.

An increased supply of well-trained health personnel means better medical care, expanded research efforts, and improved health services for all of us. If, as Disraeli said, the power of the Nation depends on the health of the people, the H.R. 12 offers great benefits to our country. Mr. Chairman, I urge the passage of this very important measure.

Mr. HANNA. Mr. Chairman, in assessing the merits of H.R. 12, which is the Health Professions Educational Act, for the State of California, one must review the position of this State in relation to medical education and the need for new members in the medical profession.

The intent of H.R. 12 is to provide in a 3-year program, money for both a loan and grant program for construction of facilities in colleges and universities, for teaching medicine and its like professions, and a program for loans and grants to students who will be attending such colleges and universities for medical training or training in the allied professions.

California has not only its own interest in this matter, but it must be recalled that our universities and colleges at the graduate level have been providing substantially all the readily available facilities for Arizona, Nevada, Wyoming, and Utah. The over commitment of our existing facilities and the under production for the needs of the growing West for adequate professional medical care is dramatically set forth in a recent letter sent to me by the president of the University of California, the text of which follows:

THE UNIVERSITY OF CALIFORNIA,
Berkeley, Calif., April 17, 1963.

Hon. RICHARD T. HANNA,
House Office Building,
Washington, D.C.

DEAR MR. HANNA: Last year when H.R. 4999, the medical aid bill, was under consideration by Congress I sent a communication to California's Representatives and Senators urging close consideration of the measure and support of its major provisions as a matter of great importance to the State. I would like to assure you that the comments I made then apply with equal force to the current proposal in this area, H.R. 12, the Health Professions Educational Assistance Act of 1963.

Any State which is obliged to import 80 percent of the physicians it needs and 50 percent of the dentists it needs to offer minimum standard services to its people is in a precarious position. That is the case in California at present. Furthermore, the best population forecasts we can get indicate that we must spend upward of $300 million in the next 10 years on medical and dental training facilities, public and private, to keep up with the growing demand and decrease this dependence on other States by as much as 15 percent.

As you know the University of California is in process of expanding its medical center facilities at San Francisco and Los Angeles, has acquired a site for a medical center in San Diego, and is surveying the needs elsewhere in the State. The San Diego development alone will involve construction and equipment expenditures of $50 million. The State of California is aware of the problem that confronts us and has done its best to find the necessary funds from current revenues and by issuing bonds. But when we consider other educational needs, and the multitudinous institutions and services which must serve the public welfare, it seems clear that we cannot carry this construction program in the high cost medical field without outside help. This is a national problem by its nature, and it happens to be one in which California is involved heavily, not through past neglect of needs, but in spite of all we have been able to do, because of unprecedented migration of people, and the birth rate.

I hope that you will be able to indicate your interest in H.R. 12 reaching the floor, and will do your best to have it passed.

Sincerely,

CLARK KERR,
President.

These arguments appear to make a good case for support of H.R. 12, debated on the floor of this House today.

Mr. HALPERN. Mr. Chairman, I rise in support of this legislation. My only regret is that it does not go far enough in meeting what I consider to be the urgent health needs of the American people in the field of health care through the training of more physicians, dentists, pharmacists, optometrists, podiatrists, nurses, and professional public health personnel for a sufficiently long period of time.

Although I strongly prefer the original provisions of H.R. 12, I sincerely feel the amended bill before us is a long step forward in this field, vital to the interest, yes, even to the survival of the United States. The only answer to this problem—which is unquestionably a national concern—is through a Federal program as provided through this type of legislation.

I have long sought legislation in this area, Mr. Chairman. As a stanch advocate of similar legislation ever since I came to this House, I introduced H.R. 11651 in the 86th Congress providing a broad program for medical and dental education. I introduced similar legislation in the 87th Congress, H.R. 4110. And in this, the 88th Congress, I introduced H.R. 5113 which is similar to the preferable original provisions of H.R. 12.

The chairman of the Committee on Interstate and Foreign Commerce, the gentleman from Arkansas [Mr. HARRIS] has brought forth a compromise bill. I wish to congratulate him on the work he has done and the dedication he has shown in this field.

The committee bill and H.R. 5113 have one basic disagreement. On the one hand, H.R. 12 would provide for a 3-year program for construction grants and student loans for 10 years.

Mr. Chairman, what are the reasons for the 3-year limitation in this bill? I should like to quote from the committee report—House Report No. 109—page 4, paragraph 7:

> The committee wishes to emphasize, however, that in substituting 3-year programs, it does not anticipate completion of these programs in their entirety within this period. On the contrary, it believes, that extensions of the initial 3-year programs will be necessary in order to achieve fully the objectives of this legislation.

> In the opinion of the committee, the programs contemplated by this legislation demand periodic review by the Congress if their administration and operations are to be satisfactorily adjusted to meet changing needs and conditions. Hence, the more limited duration of the programs is simply a manifestation of the committee's intention to maintain the necessary congressional control.

Mr. Chairman, I say most respectfully that the reasons stated by the committee for a reduction of this program from 10 to 3 years, are for me, disappointing. We are told that this reduction is "simply a manifestation" of the committee's desire to supervise the activities of this program. Surely, Congress would not lose any authority over the Health Professional Educational Assistance Act if we passed a bill containing more than the committee stipulation of 3 years operation time. The committee itself acknowledges that the program may well be extended.

In my opinion, the program should be outlined for the 10-year period. During that time Congress will have an annual opportunity of addressing itself to any necessary modifications in the act that might be thought worthwhile.

Wherein could Congress lose its authority? Unlike a great deal of legislation that passes this Congress, we have not further diminished legislative authority by this bill. The administrators of the bill, the Secretary of the Department of Health, Education, and Welfare, the U.S. Commissioner on Education, and the Surgeon General of the United States, all these officials file annual reports with the Congress, as required by law, describing in detail the operation of the programs under their supervision.

The rules of this House provide specifically for the jurisdiction of the committees of the House. The annual examination by committees of the agencies over whom they exercise legislative review is a most important aspect of committee work. Another check vested in the Congress is its appropriation power, through which mechanism an annual review is made of all agency activities.

So, I say good naturedly, that if the only holdback on the bill is a question of jurisdiction, as to legislative review, we should have no misgivings.

Mr. Chairman, aside from the 7-year reduction for the program, and the accompanying reduction on authorization for appropriations from $750 million to $175 million, there are few alterations in the committee bill.

The committee eliminated the section providing planning grants for health education programs.

Further modification was made with respect to the student loan program, the committee striking out the 3-percent per annum rate and stipulating a 3-percent per annum rate or the going Federal rate at the time the loan is made, whichever is greater.

The committee also struck section 712 from the bill, dealing with the construction of regional facilities for research.

Mr. Chairman, I am very much in favor of this program to assist in the construction of the necessary health education facilities for which such a need exists today. I am also concerned with the need for providing a loan fund for needy students in the health education field. Although I am not entirely pleased with the reductions made in this program by the committee, over the original H.R. 12 and my own bill H.R. 5113, I will give my full support to the legislation before us as a long step forward in filling a vital gap in America's health needs.

Mr. Chairman, I trust it will receive a resounding vote of approval.

Mr. SILER. Mr. Chairman, this current measure, H.R. 12, now before us in the House of Representatives and providing millions of dollars of free tax aid to medical and other professional schools, whether public or private, whether Baptist, Catholic, Protestant, or Jewish, constitutes, according to my viewpoint, an absolute infringement of the principle of separation of church and state, one of the foundation pillars upon which our country was establsihed.

In answer to my direct question on this subject, the distinguished chairman of the committee having charge of this measure indicated that the bill does provide free tax aid to such schools as the great medical school of Baylor University, an institution that is of Baptist affiliation and is supported by my own fellow Baptists of Texas and elsewhere.

We Baptists have, since the days of Roger Williams and the early beginning of his "free church in a free state" up there in Rhode Island, jealously guarded our sacred principle of "no tax money for any church or church institution." Yet today some of us are willing to forget our principle, our heritage and our tradition and vote for this measure that actually does give free tax money to church colleges, such as Baptist colleges and other similar schools. Why can we not be consistent and fearless and stanch in a matter of this kind? Now if the bill only provided aid for public institutions, then I could doubtless support it in view of the great need for more and better doctors. But whenever you give a single tax dollar to support any religious school whatever, then you are certainly treading on the very thin ice of an eventual state-owned and state-operated religion for all America. This will not come next year nor in the next 10 years. But it will come and you and your children can mark it down. Whenever the Great White Father gives you a single dollar, he always takes from you an equal dollar's worth of your freedom.

Thomas Jefferson once said he was willing to dedicate his whole life to freedom and he then indicated his undying enmity to tyranny in any field of endeavor. Well, some of us wish he were still around and present with us so he could speak out for our complete freedom and for the indelible demarcation line separating church institutions of all kinds from taxpayer assistance of all kinds.

I feel that no one wants to listen to me and yet I feel that this ought to be said: "Beware, my fellow Americans, for that Government wolf all dressed up in a nice sheepskin garment of free tax money for our churches and church institutions. Your religious integrity and freedom were bought with blood. Will you sell them out for a mess of tax aid pottage?"

GENERAL LEAVE TO EXTEND REMARKS

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all Members may be permitted to extend their remarks in the body of the RECORD at this point on the legislation pending.

The **CHAIRMAN.** Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. KEOGH, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12) to increase the opportunities for training of physicians, dentists, and professional public health personnel, and for other purposes, had come to no resolution thereon.

THE FIGHT AHEAD: ADVANCE MAGAZINE OUTLINES 10-POINT PROGRAM FOR REPUBLICANS IN PRESSING FOR MORE MINORITY STAFF MEMBERS ON CONGRESSIONAL COMMITTEES

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. SCHWENGEL] may extend his remarks at this point in the RECORD and include extraneous matter.

The **SPEAKER.** Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SCHWENGEL. Mr. Speaker, a recent edition of Advance magazine carried an article entitled "Staffing: A 10-Point Program—The Fight Ahead," in which the editors of this superb, thought-provoking magazine outlined a 10-point program to guide Republicans in Congress in their efforts to improve the terrific imbalance that exists between majority and minority staff members on congressional committees.

The complete text of the article follows:

STAFFING: A 10-POINT PROGRAM—THE FIGHT AHEAD

On January 8 the House Republican caucus unanimously endorsed three fair play amendments to the House rules, including a demand for a 60 to 40 division of committee staff between the majority Democrats and the minority Republicans.

Since agitation for better minority staffing began, over a year ago, the response of congressional Republicans has been promising. Representative FRED SCHWENGEL received the support of 130 of the 174 House Republicans for his minority staffing resolution last session. The initial indifference and skepticism of the Republican leadership has yielded to the overwhelming sentiment of the Members. In the Senate, CARL T. CURTIS, of Nebraska, and WINSTON L. PROUTY, of Vermont, have been mobilizing GOP opinion. Last October staffing advocates formed their own Special Committee to Improve Congressional Committee Staffs to lead the fight for fair staffing. Its members include: Senators CURTIS, Prouty; and Hugh Scott, of Pennsylvania (chairman); Representative Tom Curtis, of Missouri (vice chairman); Glen Lipscomb, of California; and Schwengel, of Iowa.

Where then do the Republicans go from the caucus? At the general strategic level the minority must realize that the main opponents to staffing reform are the Democrats and Democratic-affiliated pressure groups—the very groups that want to keep the Republican Party weak and ineffective, to consign it to permanent minority status.

In opposing reform, we can expect the Democratic Party interests to hide under the cloak of nonpartisanship, citing the principles of the Legislative Reorganization Act of 1946. It should be clear to all but the most politically naive that this is a mere rationalization of a status quo that disproportionately benefits the majority. It is not and should not be allowed to stand as an effective argument. We also can expect a strategy of delay and diversion aimed at discouraging Republicans from the long and difficult task ahead.

After surveying the situation, Advance urges the party to adopt the following tactical program over the current session of Congress:

The Special Committee to Improve Congressional Committee Staffs should continue in existence to coordinate the overall campaign for committee staffing. The Special Committee will need the full support of Republicans in Congress and across the country if it is to expand its activities.

The staff situation of each congressional committee should be examined. The minority is not yet fully aware of the abuses in the system or of the opportunities it is being denied.

The minority members of the House Administration and the Senate Rules and Administration Committees should enlist themselves actively in the staffing drive, since their committees are entrusted with approving all staff appointments.

Political scientists should be invited to do further research into the operation of committee staffs, perhaps through case studies of selected staffs. The GOP minority has nothing to fear and everything to gain from a full and impartial inquiry into the actual functioning of the committees.

The special committee should present its case with the fullest documentation possible to the majority leadership of both Houses. If the majority does not make concessions in cases of obvious abuse, the special committee should systematically use all parliamentary methods open to the minority to dramatize its case—the use of minority reports, objections on the floor, testimony before the committees themselves, etc.

Nationwide mailings of selected speeches and supporting documents sent to public, civic, and educational leaders will help the minority spread its case much further than the Halls of Congress.

The minority should present its case through scheduled addresses to friendly or neutral organizations such as the chamber of commerce or the American Farm Bureau Federation.

Efforts should be made to educate those interest groups which oppose minority staffing because they fear it would undercut their own lobbying function (such as the NAM). Their most effective role is in cooperation with a professionally trained, politically educated, minority staff.

A clearinghouse for locating and recruiting qualified minority staff might be organized. Actual hiring would be left at the committee or office level but the benefits of a centralized exchange of information on applicants and vacancies should be considerable.

The minority should urge Republican-oriented groups to loan or encourage talented young people in their organizations to serve apprenticeships with congressional committees. This practice already exists on the Democratic side, with unions and similar groups benefiting.

The effective timespan for these operations is short. The minority has a year, at best 16 months, to build its case for the 1964 congressional elections. The success of that campaign will depend in no small measure on the success or failure of this one.

The work ahead is marked out. Will the Republicans in Congress be equal to it?

IMBALANCE BETWEEN MAJORITY AND MINORITY STAFF MEMBERS

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. Schwengel] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SCHWENGEL. Mr. Speaker, over the past several weeks, the public and the press seem to have awakened to the fact that a terrific imbalance exists between the majority and minority staff members on congressional committees. The public is beginning to see that the result of this imbalance is poor or no legislation. Various Members of the House have received many letters from constituents inquiring about the minority staffing situation. Also, newspapers throughout the country have been printing more and more stories concerning minority staffing. Below follows the story carried in the Allentown, Pa., Chronicle, March 6; the Norman, Okla., Transcript, March 6; St. Petersburg, Fla., Times, March 6; Vineland, N.J., Times Journal, March 13; Wisconsin State Journal, Madison, Wis., March 5; San Bernardino, Calif., Sun, March 7; Lynchburg, Va., News, March 7; Walla Walla, Wash., Union-Bulletin, March 13; among others:

Committee Abuses, Staffing Come Under House Scrutiny

Washington.—The committees of the House are coming under sharply increased scrutiny with attention centered on skyrocketing budgets, junkets, duplicating investigations and the issue of committee staff for the minority party.

Reports of abuses in the Education and Labor Committee headed by New York Representative Adam Clayton Powell, Democrat, have been most widely publicized, but numerous other alleged abuses are being studied.

On the Republican side, Conference Chairman Gerald R. Ford, Jr., Republican, of Michigan, appointed a special subcommittee on minority staffing which was extremely active in January and February and reported it had obtained over 30 new slots for professional committee staff to aid the minority.

BUDGET CRACKDOWN

Concern was by no means limited to Republicans, however. Under Chairman Omar E. Burleson, Democrat, of Texas, the House Administration Committee, watchdog over House budgets and employment practices, began to subject committee chairmen to close questioning over their requested budgets.

During February, House Administration slashed five committee budgets in sums ranging from $15,000 to $150,000 for the year and the House approved all the reductions February 27. Further cuts were likely in the Education and Labor Committee budget—up from $328,000 for 1959–60 to a requested $697,000 for 1963–64—and the investigatory funds for Banking and Currency—up from $5,000 for 1961–62 to $530,000 in requests for 1963–64. Both groups' funds are due for consideration shortly.

In a switch of policy, House Administration this year began to approve committee budgets for 1 year only. Committee chairmen will have to return early in 1964 to justify their expenditures to date and ask for more. Controls over investigations were also tightened by a flat prohibition against duplicating probes by various House groups. All new investigations must be reported to the House Administration group.

"It's time to discipline ourselves—there has been too much expansion on the Hill," Burleson says in jurisdiction of his committee's tough new policy. Representative John H. Kyl, Republican, of Iowa, a member of the Burleson committee, told Congressional Quarterly that "empire building" in the committees was more widespread than the public imagined and that it was Congress' duty to clean its own house.

MINORITY STAFFING

The Republicans' minority staff task force under Representative Fred Schwengel, Republican, of Iowa, launched an intensive drive in February. The group argued that the GOP needed staff if it was to develop new legislative initiatives and oppose the majority constructively and effectively. They said the issue was nonpartisan because a healthy two party system requires an effective opposition party.

Representative Thomas B. Curtis, Republican, of Missouri, a member of the Schwengel group and early advocate of minority staffing, developed a strategy for pushing GOP staff demands in committee budget hearings before House Administration. The strategy, which met with at least partial success, was to persuade committee chairmen to make some concessions on minority staff rather than find their entire operations opened to hostile questioning.

Republicans were unsuccessful, however, when they tried to persuade House Administration to tack an amendment on committee budget authorizations giving the minority the right to hire up to 40 percent of the staff when a majority of a committee's minority members so request.

A chief problem of the Schwengel group was to persuade House Minority Leader Charles A. Halleck, Republican, of Indiana, who had publicly disparaged the minority staff drive in 1962, to work hard for their cause. Halleck himself faced a problem in convincing ranking Republican committee members, many of whom had their own long-standing private patronage agreements with the Democrats, to "rock the boat" and fight for increased and effective staff.

By late February, however, several of the ranking Republicans had joined the staffing drive. With a heavy majority of rank-and-file Republicans supporting the fight for more staff, Halleck took an increasingly active role in its favor. The major initiative, however, came from Ford and the young activist group that installed him in the conference chairmanship last January.

House Speaker John W. McCormack, Democrat, of Massachusetts, February 20 told reporters that he saw little need for the drive of Ford, Schwengel, and Curtis to develop independent Republican programs through increased staff. McCormack said the program of the Democratic Congress would be the President's program anyway.

MINORITY STAFFING

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. Schwengel] may extend his remarks at this point in the Record and include extraneous matter.

The **SPEAKER.** Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. **SCHWENGEL.** Mr. Speaker, there have been an increasing number of instances where Sunday newspapers, because of the more space allotted to news stories, have discussed in depth some of the issues facing the American people and organizations. Naturally the Congress, as a whole, is discussing minority staffing, meaning staff members responsible and reporting to the minority. A good example of this is the Newark Sunday News of March 31, 1963, which said in part:

> In addition to the recent controversy, in which Republicans charged they were not receiving a fair share of the available staff assistance on congressional committees, questions have arisen concerning the uses of staffs and the advisability of increasing staff allowances for both parties.
>
> Senator Hugh Scott, Republican, of Pennsylvania, recently summed up the argument for more staff for both majority and minority: "The most severe limitation to the effectiveness of a Representative or Senator is time." "Staff," Scott said, "was essential to increase the effectiveness of Congressmen by relieving them of a variety of chores and by keeping them informed."

This same newspaper in its edition of March 25, 1963, also said in part, explaining the need for adequate staffs:

> A sturdy defense of big congressional staffs comes from Dr. George B. Galloway, senior specialist in American Government for the Library of Congress and former staff director of the Senate-House committee that conducted hearings on the reorganization of Congress in 1946.
>
> "The increase in staff is one of the most favorable developments in Congress," Galloway said in an interview. "It is a third force that provides Congress with information and intelligence to counteract the interested opinions that come to Congress from interesting parties on the one hand and from the executive department on the other."
>
> In Galloway's view, the cause of most of the mushrooming is quite simple: "The problems of Congress today are far different and far more complex than the problems of Congress when Carl Vinson was a freshman."

The problem of obtaining adequate staff responsible to the minority continues to be a serious problem confronting the Members of Congress of both parties, and their respective leaderships.

In the April issue of Roll Call, the newspaper of Capitol Hill, an article appeared which indicates some of the problems being faced on one of the committees of the House. I was shocked recently to learn from several secretaries working on the Hill that a fine young lady working for the minority had recently been forced to take a very sizable cut in salary because of the reduction of staff funds available for clerical help for the minority. This one human drama is a problem which has appeared in other places and has not been discussed openly or been brought fully to light. However, the conscience of the Members of the House will have to solve some of these serious problems and handicaps facing the minority in the months ahead.

Below follows the full text of the article which appeared in Roll Call:

GOP Moves for Added Education and Labor Funds

> Hard-pressed Republicans on the House Education and Labor Committee are putting up another battle for staff funds.
>
> As the controversial group continued plowing through some of the administration's most vital proposed legislation, GOP members sponsored legislation to give themselves another $35,000 a year for minority purposes.
>
> Their request would go toward hiring staff help in addition to the two professionals and one clerk now allowed Education and Labor Republicans. At the start of the last Congress, they had one more employee.
>
> Representative Charles Goodell, Republican, of New York, a "young Turk" Education and Labor member, introduced the resolution for more minority funds. He is also on the House Administration Accounts Subcommittee which will first consider the proposal.
>
> The GOP has been grumbling about its treatment ever since the House scaled down Chairman Adam C. Powell's, Democrat, of New York, request to $200,000 a year. Chairmen of six subcommittees were given control of $25,000 each, leaving Powell with only $50,000.
>
> Some Republicans admit Powell treated them as favorably as could be reasonably expected, considering the amount of funds he had to work with. Representative Peter Frelinghuysen, Jr., Republican, of New Jersey, ranking Education and Labor minority member, has been trying to pry loose some funds from subunit heads but has received none.

REQUIRING FUTURE DISTRICT GOVERNMENT EMPLOYEES TO LIVE IN THE DISTRICT

Mr. **KUNKEL.** Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. Schwengel] may extend his remarks at this point in the Record.

The **SPEAKER.** Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. **SCHWENGEL.** Mr. Speaker, today I am introducing legislation that would require future District Government employees to live in the District. This is certainly not asking for special treatment for the District. Nearly every major city in the United States has a requirement that its employees reside in that particular city. Until the District of Columbia has home rule, and I hope this day is not far off, this legislation is certainly a minimum requirement if the citizens of the District are to have confidence in their own officials. And it would certainly aid these officials in their duties by giving them a better understanding of the community in which they would both reside and work.

The District of Columbia faces financial problems paralleled by few metropolitan areas in the United States. Over one-third of the 30,000 municipal employees of the District live outside the District. Their salaries total $60 million a year. It is grossly unfair for District taxpayers to export such a sum to the suburbs. Residential requirements for city employees would be one step in bringing funds into the District.

In the interests of fiscal equity, social harmony, and good government practice, we should pass this legislation. It should be noted, finally, that this legislation will only apply to the hiring of employees in the future. The current employees of the District will be unaffected by this amendment to the District Code.

"REMEMBER THE 'MAINE' "

Mr. **KUNKEL.** Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. Johansen] may extend his remarks at this point in the Record and include extraneous matter.

The **SPEAKER.** Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. **JOHANSEN.** Mr. Speaker, one swallow does not make a summer and one Washington Post editorial does not necessarily add up to a firm and consistent policy or program.

Nevertheless, the lead editorial in this morning's Washington Post entitled "Remember the *Maine*" seems to indicate a significant, albeit much belated, double discovery; namely, that the Kennedy administration has no meaningful Cuban policy and that the American people are becoming completely fed up with this bankruptcy of leadership.

The editorial states, for example:

> The broad proposition on which there is accumulating accord is simply this: that the existence of a Communist regime, linked to the Soviet Union, in this hemisphere, is a threat to the safety and survival of the United States and of all other free countries in this part of the globe. No administration that openly opposes this belief can long survive. Sooner or later an administration that denounced this maturing conviction would be followed by an alternative government committed to it.

These are strong words—although no stronger than the sorry record of this administration warrants.

To some of us this conclusion comes with no "Damascus Road" flash of revelation. What is startling is the acknowledgment of this truth by the Washington Post.

It seems obvious to me that this statement would not have been made and indeed would be entirely pointless if the Washington Post had not come to the conclusion, however reluctant, that the Kennedy administration is perilously close to acquiescence in a permanent Soviet occupation and Communist control of Cuba.

The Washington Post calls for a policy and program "of minimum risk," and for the public disclosure of its policy is, by implication at least, a fearful indictment of the gyrations and lack of clear and firm policy of which this administration is guilty.

There is no need at this point to document in detail the evidence of these gyrations. The latest example, I might say, is the pronouncement last Sunday by the Attorney General—whose office seems to have an uncommon prominent role in foreign affairs—that Cuban exiles in this country should perfect their unity of leadership and purpose. These are the same exiles, if memory serves me right, upon whom unprecedented restrictions were imposed by the President only 3 weeks earlier.

I cannot forbear calling attention to one striking coincidence in connection with today's Washington Post editorial. In the same issue—and in fact on the adjoining page—appears a typical contribution by the Nation's chief apostle and advocate of appeasement, Walter Lippmann. Once again Mr. Lippmann pontificates that "Cuba is no military threat to the United States and is not very much of a threat to Latin America." I am not prepared to assume on the basis of a single editorial that the Washington Post is at long last throwing off the deadly spell of Lippmann appeasement. Nevertheless, the juxtaposition of the Washington Post editorial and the Lippmann article underscores the agonizing reappraisal which the Kennedy administration is going to have to face vis-a-vis its Cuban policy. As the starting point of this reappraisal, the administration is going to have to decide whether it accepts the Washington Post conclusion that "this sense of jeopardy is beginning to pervade the whole body politic" or whether it is going to continue to ride along with the comforting Lippmann reassurances that neither Castro nor Soviet occupation of Cuba poses any real threat.

Under leave to extend and revise my remarks, I include the Washington Post editorial, the Lippmann article, and an address of the Cuban situation which I delivered on the Manion Forum April 7:

"Remember the 'Maine' "

Something like a consensus on Cuban policy is beginning to emerge in this country. The debate over when and how that policy is to be executed should not conceal the growing accord on the policy itself. Last week, the President, the former Vice President, the State Department and Republican critics of the State Department had different things to say about Cuba, but on two points there was general agreement. And on these two points there is a gathering agreement in the country.

The broad proposition on which there is accumulating accord is simply this: That the existence of a Communist regime, linked to the Soviet Union, in this hemisphere, is a threat to the safety and survival of the United States and of all other free countries in this part of the globe. No administration that openly opposes this belief can long survive. Sooner or later an administration that denounced this maturing conviction would be followed by an alternative government committed to it. In a negative way, there is almost the same accord on how this policy should not be pursued. There is almost universal agreement that invasion, openly and directly, immediately or in the near future, is not the way to pursue our policy.

This aversion to foreign control of Cuba by a hostile power is the constant of American attitudes toward our island neighbor. The Monroe Doctrine was an expression of a view already long held in this country. It was given even fuller expression in the administration of John Quincy Adams when this country made known its opposition to the transfer of Cuba from Spain to France, England, or any other power. The practical basis of this policy was clearly stated in Daniel Webster's support of President Adams' decision to send delegates to a conference with South American countries, in which the great orator said:

"A member has said that if Spain chose to transfer the island to any other power she has a right to do so, and we here cannot interfere to prevent her. I must dissent from this opinion. The rights of nations in matters of this kind are much modified by circumstances. Because France or Great Britain could not rightfully complain of the transfer of Florida to us, it does not follow that we could not complain of the cession of Cuba to one of them. The transfer of Florida to us was not dangerous to the safety of either of these nations, nor fatal to any of their great and essential interests. Proximity of position, neighborhood, whatever augments the power of injuring or annoying, very properly belong to the consideration of all cases of this kind. What might otherwise never be thought of is justified for these reasons and on these grounds."

If the American people are aware of such dangers now, they are aware of other dangers that unhappily and unfortunately also exist and that must be weighed with equal care and caution. Impetuous and impulsive and ill-considered acts by this country might bring on the dangers of thermonuclear war without diminishing the dangers of Soviet occupation of Cuba.

Therefore, it must be the object of the Government of the United States to develop some alternative to direct action that will further the policy of this country without incurring the hazards of invasion or like military intervention. It is very urgent that the Government develop such a policy and that it disclose it. It is very plain that, throughout this country, the conviction that the Nation is in peril is hardening to a point where no threats and no fears may be sufficient to inhibit the demand for action against the forces that occupy Cuba. Democratic governments are not wholly free agents. A government that does not develop a program of minimum risk runs the danger of being coerced into a program of maximum risks, almost against its will. The absence of an affirmative design, in such a situation, is dangerous—dangerous to this country, to its neighbors and to the peace of the hemisphere and of the whole world.

The Government of this country, the governments of friendly countries and the government of the Soviet Union as well had better take note of the increasing sense of Americans that the United States is endangered by the Soviet occupation of Cuba. This sense of jeopardy is beginning to pervade the whole body politic. The Soviet Government, whatever its fears and doubts, felt compelled, by such an impulse, to send its forces into Hungary. It ought to understand the much greater force that such sentiments exert upon democratic governments. Every day that passes without the termination of the Soviet occupation of Cuba increases the certainty and multiplies the likelihood that another Maine disaster will put the spark to the combustible materials in the Caribbean.

The Kennedy-Keating Cuban Policy

(By Walter Lippmann)

Cuba got a good airing last week before the American Society of Newspaper Editors, and the significant fact about the speeches of the President, Secretary Rusk, and Senator Keating was that there is substantial agreement about what the United States should and should not do. It is hard to say what Mr. Nixon's Cuban policy would be. He sounded like a man who was ready to go to war. But all he actually said was that he wanted the Cuban exiles to make hit-and-run raids.

Senator Keating, who is the most conspicuous of the critical opposition, began by saying that "it is foolish to pretend that there are easy answers to the Cuban problem." He did not pretend. Then in the course of his speech he admitted that he agrees with the main theses of our present Cuban policy. He is opposed to an invasion. He is opposed to a blockade. He is opposed to hit-and-run raids mounted from American soil. He is in favor of "greater stress on nonmilitary measures," and he wants to exert increasing economic pressure so that the Soviets "will be driven to the conclusion that the price of maintaining a base in Cuba is too high."

This is the same story which the administration is telling. Senator Keating's differences are not in the substance of the text but in the editing, the typography, the layout, and the captions. The Senator, like the President, excludes in present circumstances the resort to war—invasion, blockade, and raiding; like the President he too would deal with Cuba by surveillance, containment, isolation, economic pressures, and propaganda.

There is no doubt that at least for some time to come the Kennedy-Keating policy will leave the Soviet troops 90 miles from Florida. This is an affront to our pride. Not since Napoleon III put French troops into Mexico to enthrone and support the Emperor Maximillian has anything like this happened so close to us. In the end the French troops went away. But, because there was no prudent alternative, Lincoln put up with the Bonapartist troops for several years.

How long must we put up with the Russian troops? The honest answer is that we must put up with them until they can be gotten rid of by measures short of nuclear war. Here is the sticking point in the argument with Governor Rockefeller and Mr. Nixon. They sound, they intend to sound, as if they know a way to get rid of the Russian troops promptly without waging nuclear war.

What is this prompter way to make the Russians go away from Cuba? They do not tell us, but the most reasonable interpretation of what they say is that the prompter way is not to make war but to threaten war. Both Governor Rockefeller and Mr. Nixon have avoided saying plainly what they do mean. But if what they sound like has genuine meaning it is that they believe the United States can deliver an ultimatum which the Soviet Union will bow to.

If this is not what they mean, what in the name of commonsense do they mean with all their big words? If they are prepared to be so bold with the Russians, they ought to be bold enough to talk plainly to their fellow Americans.

The Rockefeller-Nixon position appears then to be that Cuba can be liberated by ordering the Soviet Union to withdraw from this hemisphere, and to stand by passively while we blockade Castro and arrange for a replacement of Castro's government. If this is what they have in mind, they are making an enormous guess. For nobody can possibly know that the Soviet Union would surrender its whole position in Cuba as it surrendered its offensive weapons last October. It is the supreme folly in the nuclear age to drive a nuclear power into a corner. And if the Soviet Union refused to bow to the ultimatum, all this would do for us would be to make us look like fools.

The President of the United States cannot play with an ultimatum to a government like that of the Soviet Union. He cannot use an ultimatum unless he is prepared to go through with it and begin a war. If he is not prepared to go to war, an ultimatum is a bluff and everyone will soon see that it is.

While the present policy does not promise a quick withdrawal of the Russians or the fall of Castro, it is surely not true to say that it is complacent do-nothingism. To a degree which is just short of war Cuba is being photographed, patrolled, embargoed and squeezed, and isolated. If Cuba were a great power, we would be at war with her for what we are already doing. I doubt whether there is any precedent where we have exerted such strong measures short of war on any other country.

However much we are impatient and frustrated we have to grasp the fact that Cuba is no military threat to the United States and is not very much of a threat to Latin America. The worst of Castro is his example and a long way after that such agents as he is able to train and infiltrate into the Latin American countries. He is an affront to our pride, he is a nuisance, he is a mischiefmaker. But he is not a mortal threat to the vital interests of the United States, and therefore, in this age of thermonuclear war, we must deal with him by measures that are short of war.

ADDRESS BY HON. AUGUST E. JOHANSEN, MANION FORUM, APRIL 7, 1963

More than 40 months ago, in a public address October 29, 1959, I asked this question, apropos of the Communist threat posed by Castro's takeover of Cuba: "Where better than in our own hemisphere and continent can we take the stand which survival itself dictates must be taken?"

In the years since, I have been repeating that question in varying forms and with many elaborations, so have countless other Americans, in and out of public office.

The answer, in terms of adequate policies and deeds, has not been forthcoming either under the previous or present administrations. For a moment, before the fiasco became evident, we thought we had found the answer at the Bay of Pigs.

For a brief few days last October we thought the stand was being taken. But this firm answer quickly faded out—with the announced willingness to give a no-invasion pledge, with abandonment of the demand for on-site inspection, and with the premature lifting of the naval quarantine.

I do not need to remind my listeners of the many other adverse developments of the past 40 months—or of the situation today. But I do call your attention to a statement last February 7 by President Kennedy: "I couldn't make any prediction about the elimination (of communism in Cuba). I am quite obviously hopeful that it can be eliminated, but we have to wait and see what happens * * *. I remember a good deal of talk in the early 1950's about liberation, how Eastern Europe was going to be liberated. Then we had Hungary, Poland, and East Germany and no action was taken. The reason no action was taken was that they felt strongly if they did take action it would bring on another war."

Granted that this statement was made in response to a newsman's inquiry—under the catch-as-catch-can conditions to which the President subjects himself in his news conferences.

Yet, how can even the most responsible Member of Congress or any thoughtful citizen avoid asking what message this statement signals to our enemies—to Khrushchev, Castro, to the international Communist plotters of progressive takeover of Latin America and of ultimate world conquest?

How can we avoid asking whether this statement does not, to an uncomfortable degree, correspond to the facts as to our Cuban policy—or lack of policy?

I address myself to two aspects of the President's statement.

It was Charles Dickens' famous character, Mr. Micawber, who immortalized the attitude of "waiting for something to turn up." Are we not in truth now following a Mr. Micawber foreign policy so far as Cuba and the Communist threat in Latin America are concerned? Or, at the very least, are we not giving our enemies the basis for so assuming—thereby laying the foundation for very grave miscalculations on their part?

Unfortunately I see no convincing evidence of any meaningful policy other than that of "wait and see." The Subcommittee on Inter-American Affairs of the House Committee on Foreign Affairs, in a report dated March 14, flatly declared, after extensive hearings, that "no plan for collective action against Communist subversive aggression has been put into effect."

WHILE WE "WAIT AND SEE"—THE COMMUNISTS ACT

The recent San Jose conference has apparently produced no specifics—except stepped up aid to Central American countries; and the same subcommittee report noted that the success of any long-range economic aid program for Latin America "is dependent on reducing and finally eliminating the threat of subversive aggression."

Isn't the emphasis on economic aid at this point like arguing that the foundations of a house should be repaired while the house is in flames?

Whether effective joint efforts will result from this conference adequate to stem Communist infiltration of arms and personnel remains to be seen. The President has declared that "further action, invasion, or blockade, at this time would (not) be fruitful."

Meanwhile, the propagandists for the do-nothing, or do-nothing-more philosophy, are operating full blast. Walter Lippmann pontificates that "there is no clear and certain solution in the present phase of the Cuban problem."

We are sternly warned against a "Cuban fixation"—which means, "quit worrying about it." And Columnist Murrey Marder sees the best hope of a solution in some unforeseen and unpredictable "lucky break."

For 40 months we have followed a "wait and see what happens" policy. The results have been calamitous. There is every reason to believe that results of a continuation of this policy will be no different—unless they are even more calamitous.

We may wait—but events don't wait, Mr. Khrushchev won't wait, and the Latin American countries and people who face the loss of their freedom to Castro-type takeovers can't wait.

Even more disquieting is the second half of President Kennedy's statement at his February 7 news conference. He said the reason no action was taken to back up the talk of liberation of Communist-captured countries in the 1950's was that it was "felt strongly if they did take action it would bring on another war."

Does this mean what it seems to mean? Are we telling Mr. Khrushchev that we automatically reject any measures against Communist takeover in Latin America or against Castro which he—Khrushchev—might decide justified his launching nuclear war?

Isn't this an open invitation to nuclear blackmail? Isn't this an abandonment of the courageous willingness to risk war which Mr. Kennedy briefly displayed last October? Doesn't this confirm Senator LAUSCHE's blunt warning: "Khrushchev is pushing us, we are retreating. The more we retreat, the more he will push."

I submit that there is not a single argument presently being offered against effective action regarding Cuba which cannot be offered with equal force and logic against effective action regarding any future Cubas.

Is there any doubt that there will be additional Cubas?

Or that these same arguments against action will again be advanced?

And will not any risks we might run in calling a halt now also be present in the face of new Cubas—and, indeed, may not such risks in the future actually be magnified?

And so doesn't the "wait and see" attitude and the "risk of war" argument all add up to piecemeal, and ultimate, capitulation?

There is another, immediate, grave problem. Is it now administration policy to prevent, at all costs, any liberation efforts by Cuban exiles themselves—on the grounds that such action will irritate Soviet Russia and risk war? Can we expect to retain world respect or our own self-respect—or can we expect to silence the Cuban exiles themselves—if we by words or worse openly oppose their own future liberation efforts?

Are we to do to any future Cuban liberation leaders what we did to Chiang Kai-shek when the 7th Fleet, on President Truman's orders, blockaded him on Formosa during the Korean war? Is this what is meant by waiting to see what happens? I am convinced that such a colossal blunder is actually in the making.

OUR ALTERNATIVE NOW: STAND UP TO COMMUNISM IN CUBA OR, SURRENDER

In February, I introduced a joint resolution expressing this Nation's determination to take, jointly with other free nations or unilaterally, such political, diplomatic, and military action as may be necessary, to remove and hereafter bar Soviet or other foreign Communist military forces from Cuba; to liberate Cuba itself; to neutralize Cuba as a base for Communist subversion, infiltration, sabotage, and aggression in this hemisphere; to establish representative constitutional government in Cuba through free elections, and to exercise such on-site inspection and supervision as are necessary to accomplish these results.

I believe these actions should proceed from less drastic to more drastic steps as circumstances may require; such as termination of diplomatic relations between Western Hemisphere countries (including the United States) and the Communist countries (including Soviet Russia); effective restrictions on importation of personnel and arms from Cuba to Latin American countries; restoration of effective naval blockade of Cuba; firm notice, with a time limit, that Soviet troops must be withdrawn; and finally, liberation of Cuba, either by the forces of a Cuban exile government, or by joint OAS forces, or by the United States alone—as may be necessary.

For 40 months I have lived—and, more importantly, the American people have lived—with the question I asked in October 1959. The question persists: "Where better than in our own hemisphere and continent can we take the stand which survival itself dictates must be taken?"

NO. 1 CITY: LIBERTY, KY.

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. SILER] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SILER. Mr. Speaker, a high honor and significant recognition has come to one of the cities in my congressional district. The city is Liberty, Ky., which I hope and trust will always live up to that sacred appellation, and it has been designated as the "No. 1 City in Kentucky," by the Kentucky Chamber of Commerce. The citizens of Liberty, where I have visited many times and where I have enjoyed the hospitality of some of their homes, are justly proud of this honor. Their Congressman is likewise proud of this honor and is grateful for a news item that refers to an outstanding award such as this instead of merely continuing to mention some of the dark tragedy of our depressed economy. Below is the news item that many will find stimulating and inspiring in the face of misfortune and hardship that are, like the poor, with us always:

The city of Liberty has been declared the No. 1 city in Kentucky.

The county seat of Casey County was proclaimed the overall State winner in the 1962 Kentucky Chamber of Commerce community development contest today at the State chamber annual meeting in Lexington.

Liberty won over 7 district winners who represented an original field of 84 entries.

The No. 1 city in community development is not a newcomer to the winner's circle as they won in the district competition in the 1960 and 1961 contests.

A new look came to Liberty through a well-planned and executed beautification program. Streets were repaved, new homes and churches were constructed, retail establishments were remodeled and improved, a "litterbug" contest was launched and a memorial shrub center was planted on the Liberty graded school lawn.

The presentation of a plaque designating the top spot was made by Malcolm Mason, Lexington, chairman of the State chamber's community development contest. The honor was received by Mrs. Arlis Sanders, representing the Liberty-Casey County Community Development Association. Later, Mason announced, a bronze plaque will be placed in a prominent spot in Liberty for generations in the future to see the city's recognition in the 1962 contest.

Receiving the runner-up awards as district winners were: Barlow, Campbellsville, Flemingsburg, Prestonsburg, Somerset, and Sturgis.

INCOME TAX REFORM

Mr. **KUNKEL**. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. ALGER] may extend his remarks at this point in the RECORD and include extraneous matter.

The **SPEAKER**. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. **ALGER**. Mr. Speaker, after many weeks of hearings before the Ways and Means Committee on President Kennedy's tax proposals, it has become increasingly clear that the Kennedy tax reforms will not achieve the results promised. For the information of my colleagues, I think it is important to point out that witness after witness before the committee has testified that the Kennedy proposals are self-defeating and, if passed, would curtail, not unleash our economy.

Certainly tax reform is needed. Most assuredly tax cuts are a necessity if we are to strengthen our private enterprise system. Our present hodgepodge of tax law, our almost disregard of fiscal responsibility when it comes to Federal spending which results in taxes which are bordering on being completely confiscatory, is drying up the basic food of capitalism, risk capital.

Several responsible proposals have been presented for workable tax reform. A number of us support the Baker-Herlong formula for gradual reform with tax adjustments in every bracket. I, myself, have introduced a measure to provide discussion for a flat percentage tax which would cost all of us less, provide greater equity and reduce the costs of tax collection.

To provide the latest available material in connection with our tax studies, I will include at this point in the RECORD an article from the U.S. News & World Report, by Rene A. Wormser, a leading tax authority. I think Mr. Wormser's study will convince many of the need for an entirely new tax code:

IS IT TIME TO WRITE A WHOLE NEW INCOME TAX LAW?—WHAT A LEADING TAX AUTHORITY SAYS

(NOTE.—"Reform" the income tax law? Not on any piecemeal basis, urges a top authority on taxes.

(The only solution, say René A. Wormser, is to start over and write a new law. As for the present law, "Congress has created a monster." Here, in detail, Mr. Wormser sets out the taxpayer's problem and offers a solution. In this article, written for U.S. News & World Report, he draws on 40 years' experience as a leading New York lawyer, specializing in taxes and estates.)

(By René A. Wormser)

Prompted by a message from President Kennedy, Congress is now struggling with proposals for the reform of our income tax laws.

There is general recognition that tax rates are far too high and that the system is badly maladjusted.

But the specific proposals of the President for reform are largely designed with political motivation, and, in great part, are unsound. They are likely to increase the harassment of already distressed taxpayers. They do not begin to strike at the basic fallacies of our tax system.

What is urgently needed is a careful reexamination of our whole tax structure. Tinkering with the tax laws is not the answer.

Congress has created a monster. As a former Internal Revenue Commissioner has put it: There is no answer short of wiping the slate clean and starting over.

Tax laws should be understandable to the citizen of average intelligence, but our Internal Revenue Code is so infinitely complex that it is far beyond the comprehension of all but experts.

Indeed, there are few experts, if any, who know and understand all its provisions.

In its rates, and often in its theory, our income tax system is frequently very harsh and even punitive. Therefore, considerable sections of the American bar and of our accountants apply their brains and energy to the devising of ways in which to get around objectionable features of the law by legal means.

A way is found in which legitimately to avoid a harsh rule, whereupon the Internal Revenue Service—at its own instance or prompted by a legislator or a pressure group—concludes that a loophole has appeared in the law. The loophole is then closed by a new piece of legislation, intended to be remedial.

Generally, more complexity results.

It is often impossible to anticipate the full effect of a remedial provision. It frequently opens up further loopholes of which clever tax experts take legal advantage. So the process of opening and closing loopholes goes on interminably until we have a pyramiding of provisions which truly are enough to confound genius.

As for the businessman who must deal with this complex monster, he not only cannot understand the beast himself but cannot always get a positive and clear answer from his confounded advisers.

Many of the President's current proposals are attempts to close what he or his advisers deem to be loopholes. Some, offered in part to simplify some rule, certainly will end by adding further complications to existing intricacy.

Consider, first, the impact of the tax laws themselves, and the effect of changes proposed by President Kennedy.

We have lived under the system of progressive tax rates so long that most of us have come to accept it as a self-evident logical application of the theory of paying in accordance with ability to pay.

Yet a top rate of 91 percent to a man whose income runs into the hundreds of thousands per year punishes him far less than a rate of 50 percent reached by a single man after attaining a taxable income of $16,000, or a married man after reaching $32,000.

Nor are the top tax brackets realistic. They produce very little in revenues. Not only can the wealthy use tax-exempt investments, but all sorts of mechanisms are available to them devised by tax experts for reducing the income tax impact.

This has been recognized now, even by those most anxious to use the income tax for sociological reasons.

The President has suggested that the top rate eventually be reduced from 91 to 65 percent, though he proposes an absurdly small reduction, to only 84.5 percent, for 1963.

But the unfairness of the progressive-rate system would persist if, in reducing the top rate, there were merely an approximately proportionate reduction in middle rates.

Suppose, for example, the top rate for a single man after attaining a taxable income of $16,000 were reduced from 50 to 35 percent. The impact of this rate upon him would be far greater in actuality than the impact of a 65-percent rate on a man with hundreds of thousands of dollars of income.

The conclusion is inevitable that the citizen who is most hurt by the progressive personal income tax system is the man in the middle, the man in the economic class which is most important to our society. The class includes the professionals, the self-employed, the high-grade artisans, the teachers, the small businessmen.

This class, in particular, is hurt by two philosophic absurdities which underlie the progressive tax system. The reward granted for extra work and greater effort is the imposition of a higher tax rate; and, after a member of this class has gone through what is usually a long period of economic struggle, his peak income is clipped off by the tax law during that often short period in which he has attained financial success. Indeed, Government-created inflation increases his tax burden.

Many idealistic reformers want to use the income tax to improve and extend education and to protect the public health.

Yet these same reformers are unwilling to give adequate tax relief to the citizen who wishes to support education or to protect his health.

This is a grave example of the distorted use of the tax system to sociological ends.

Why should a citizen have to pay any income tax on the money he uses to pay for his and his family's medical expenses?

If my family suffers illness, my ability to pay is certainly reduced, but the tax law gives me only very partial relief.

Pressure for public health-relief measures, such as medicare, are based in part on the fact that medical expenses have increased materially over the years. Why not, then, allow me to deduct my full medical expenses on my income tax return?

Similarly, Federal aid to education is pressed on the ground that education has become so expensive. Why, then, am I not permitted to deduct the expenses of educating my children?

The President's reform proposals indicate that he recognizes the logic of the foregoing arguments only in part. He proposes no relief for educational expense. He does—admirably—propose the abolition of the ceiling on medical deductions. But he suggests that the floor on medical deductions—including drugs—be increased from 3 to 4 percent of adjusted gross income.

There is a direct conflict here between those who believe that the individual should be encouraged to help himself and those who believe that he should be prevented from helping himself in order that the Government could step in, as a father, to protect him.

The President proposes an overall 5 percent floor on all itemized deductions—including medical. This could be tragic to many taxpayers. If a deduction is proper in theory, why should it not be deductible in full?

Here is but one of the odd results which would follow the President's deduction proposal: A taxpayer paying alimony to his wife could not deduct it in whole even though his wife, in turn, would be obliged to include the full payments in her own tax return.

The complexities of the rules of personal income tax are matched by those of the corporation income tax. They operate together to create virtually confiscatory conditions.

Again, the President's proposals leave much to be desired.

After a taxable income of $25,000 has been reached, a corporation enters an income tax rate of 52 percent. It is proposed that this rate be lowered in stages to 47 percent, but this reduction, desirable as it is, will not materially alter the impact.

For instance, there are rules which prohibit an accumulation of income after taxes in a corporation in an amount deemed to be improper. The stockholder-proprietor, therefore, is obliged to distribute such "unreasonable" accumulation of income to himself in dividends which are taxed to him with personal income tax.

Under our progressive-rate income tax system, he may thus find that the profits to which he has devoted his time, money, and energy are virtually confiscated.

Therefore, in order to come out with a reasonable return it is necessary for him to try to pass on to the customer, in his selling price, most of this tax burden. This creates fictitiously high prices to the consumer.

Recognizing that this form of double taxation of profits may be unfair and even confiscatory, relief has been given in some situations. In certain closely restricted cases a corporation can elect to be a "subchapter S" corporation, permitting it to be taxed as though it were an unincorporated enterprise, but the restrictions sharply limit its use.

Some types of corporations are prohibited from accumulating any income and are, therefore, forced to distribute their profits in dividends, with a resulting full double taxation. These are the ones classed as "personal holding companies"—roughly, corporations whose income comes from investment.

Not satisfied with the extent to which such corporations are already penalized, the President suggests that one rule by which it is now possible to escape being a personal holding company be withdrawn. Today, if half the income of a corporation comes from gross rents, the corporation is not a personal holding company.

The President does not like this escape and proposes its abolition.

In other respects, also, the President has indicated that he approves heartily of the double taxation involved in the interaction of the corporate and individual income tax rules. Among the evidence of this is his suggestion that the tiny dividends-received credit and the tiny dividend exclusion be eliminated.

AS EXECUTIVE SALARIES GO UP

Another interaction of corporate and personal income taxes is to be found in the sometimes fantastic scale of salaries paid by large corporations to their executives.

Because of the rapid progression of the personal income tax rates, it now requires salaries in very large figures to give executives the take-home pay—net income after income taxes—adequate to their contribution to the corporate enterprise and to society.

In spite of such large salaries, the take-home pay can be comparatively modest.

The income tax for a single man on a taxable income of $100,000 is $67,320, leaving him $32,680, subject to further reduction if he also has to pay a State income tax.

Now suppose we want this important executive to have another $10,000 of take-home pay. This would mean he would have to have a raise of almost another $100,000, for his Federal income tax on $200,000 would be $156,820, leaving him only $43,180.

There has been superimposed upon this economic extravagance which the progressive-scale system has nurtured a whole series of fringe benefits.

Some of these are of massive benefit to employees and executives. Each bears some special tax advantage and each adds, again, to the cost which the public must pay for product or service.

The President proposes to cut off two of these special benefits—one relating to group insurance paid for by an employer, the other relating to what are called restricted stock options.

This, again, is tinkering, and makes no attempt to solve the problems which brought about a wide series of employee tax benefits.

The tax law has encouraged such tax-saving fringe benefits and in doing so has promoted inflation and distorted our socio-economy. For many of these special tax benefits are not available to large sections of our citizenry.

Elsewhere in the President's tax program you find proposals which, at best, are only halfway measures. Others could be positively harmful.

In a conditional manner, the President has proposed a reduction of the alternative capital-gains tax from 25 to 19.5 percent. For corporations it is to be reduced only to 22 percent. He added, however, that, if his proposal to assess capital gains upon death and upon the making of a gift is not accepted, "there would be no justification for any reduction of present capital-gains rate schedules."

The President's rate-reduction proposal would be welcome—if not tied into the condition which he imposes—but would, in any case, not go far enough.

Virtually everyone who has any capital assets from time to time refrains from selling and taking a profit because this would involve losing part of his capital through the capital-gains tax.

If the tax rate were reduced, say, from 25 to 10 percent, most of these people would be glad to make periodic sales, to take the momentary profits which are offered by the markets and run. They would reinvest, then, and wait for another opportunity to take another profit.

There would thus be far more frequent capital turnovers, and the Government would receive a far larger aggregate capital-gains tax if the rate were 10 percent rather than its present 25 percent.

The President deserves approbation for his suggestion that the 5-year limitation on the right to carry losses forward be abandoned. It has been ridiculous and unfair that individuals have been taxed in full on gains but have been limited to a term of years within which they might carry losses forward.

However, his accompanying proposal that unrealized capital gains should be taxed to the donor upon making a gift and to an estate upon the death of a decedent is quite beyond the pale.

It is by no means certain that the theory of taxing long-term capital gains as income is sound, but at least it has been our consistent rule that no tax on any gain is to be imposed unless and until there has been a realization of gain—a sale of property or its virtual equivalent. To impose a tax on gains which have not been realized seems indefensible.

What hardship such a rule could cause.

In this era of high income taxes which prevent the easy accumulation of wealth through the direct method of savings, many a man dies leaving as the overwhelmingly major part of his estate a corporate business interest which represents a venture built up from scratch.

Providing for enough liquidity to pay the heavy estate taxes which may be due is difficult enough. To impose a death-precipitated income tax on an unrealized gain, and then an estate tax on the balance, would add tragically to the burden of many of these estates and often prevent the continuance of an enterprise which the deceased had the right to expect could be carried on by his family.

Consider also the case of the proprietor of an enterprise who wishes to give some of his stock to his son—or perhaps to an executive—for incentive reasons.

To compel this donor to pay a capital-gains tax—as well as a gift tax—on the theory that he has made a gain does seem oppressive. In addition, he might even be obliged to raise the capital-gains tax by selling some stock and thus having to pay a capital-gains tax to pay a capital-gains tax.

If Congress should be ill-advised enough to enact such a proposal, it would be found necessary to make exception after exception, and then exceptions to these exceptions. That has happened before in our law.

Let's look at one of the more simple complications: Are the new capital-gains rules to be coordinated with the respective gift tax and estate tax exemptions? You try to think that one through. It is too much for me.

Turning now to the administration and application of our chaotic tax system—

The income tax law is full of traps, traps which are sometimes wholly unreasonable and unfair.

The law so often concerns itself with form rather than substance. Accomplish a proper result one way and you escape a tax; do it another way and you are penalized.

Moreover, a taxpayer can be trapped through no fault of his own. To illustrate, in a recent case a retired employee was held to be taxable in his first retirement year with the entire value of the installments of pension he was to receive in the future. This was not because of anything the poor taxpayer had done, but because his employer had erred in the way it had set up the pension plan.

Here is what the individual's tax adviser is up against today in trying to comply with tax rules:

He must be sure to be currently conversant with not only the pertinent Internal Revenue Code sections, but he must also have pored over the pertinent regulations, examined the applicable case decisions and the published rulings. There may even be unpublished rulings of which he cannot be aware.

He may not feel safe without getting a ruling of his own. A ruling is an opinion by the Internal Revenue Service given after a statement of the exact proposed facts.

Given? It is not easy to get rulings. On many subjects, the Service refuses to give a ruling. On others, because it has not made up its bureaucratic mind, it refrains or delays. On still others, while it is willing to rule, a long period of time may elapse before the ruling gets through the departmental machinery—sometimes too long to wait.

It is difficult for the taxpayer to understand why, when his tax adviser tells him that the law is unclear as to the tax result of taking a proposed step, he cannot get from the Internal Revenue Service a prompt statement of the position it will take on the point. Why is he obliged to gamble?

Nor is this the end of the troubles.

The Internal Revenue Service can change its bureaucratic mind, and does not hesitate to do so. On top of that, the courts sometimes change their minds also and reverse what has been accepted law, so that even existing decisions cannot always be relied upon fully.

WHEN COURT RULINGS DIFFER

Then there is the frustrating phenomenon that the courts of one district will hold one way and those of another, another. This uncertainty is unrelieved until the Supreme Court has decided between them—if, indeed, it deigns to entertain the dispute.

The Internal Revenue Service, it seems, frequently acts as though it were our enemy.

It makes up its bureaucratic mind how the law should be interpreted in a given set of facts. If there is no finally binding opinion by the courts, and if the taxpayer is unwilling to accede to the Service's interpretation, he is given the choice of capitulating or engaging in a legal battle which is quite unequal. The reason: It is costly to the taxpayer, while the administrative agents of the Service do not have to worry about the cost of a litigation. That might be considered merely an unavoidable burden on the taxpayer if the Service always did its interpreting objectively.

But how objectively does the Service interpret the law?

Taxpayers are often given the impression that the Service's interpretations are not based on a desire to be fair and reasonable but rather to extract as much as possible from the public.

In dealing with a field agent the taxpayer often feels himself persecuted. This is sometimes due to the fact that the law in question is so obscure or intricate that the agent himself does not fully understand it.

Then there is the occasional agent who seems to have a resentment against anyone with substantial income, or has a general animus against society and shows it.

There is also the rare one who is venal.

Finally, there is the agent who seems to believe that his legitimate purpose is to try, by hook or crook, to amplify the Treasury of the United States.

These last three characters create ill feeling and bad public relations to an extent difficult to offset by the conscientious work of the overwhelming majority of the field agents who are able and try to be fair in their examinations.

Suppose an agent asks for an additional tax of $500 and it will cost you $1,000 to fight him. The chances are that, regardless of how indignant you may feel at what you believe to be an unjust assessment, you will pay up and merely growl.

Or you may have this experience: The field agent may contest four items on your tax return but finally agrees that you are right about three of them.

If, then, you say that you are willing to battle out the fourth issue, on which you are convinced you are utterly correct, the agent may reply that if you do not agree to his position on the disputed point, he will have to leave open even those points on which he has already indicated that he would otherwise concede.

This way of doing the Government's business is, in the taxpayer's opinion, "dirty pool."

THE RIGHT TO APPEAL

Yes, you have relief. You can appeal from the field agent's decisions to his group chief and from him to the appellate division, and you can start a lawsuit if that administrative agency does not satisfy you.

Do you always get reasonable treatment from these appellate units? I can cite one case in which the field agent made an assessment in a demonstrably ridiculous amount—more than twice the valuation accepted by the Service in another district—and was supported both by his group chief and by the appellate division.

Relief was finally obtained only after a lawsuit had been started and the Internal Revenue Commissioner himself learned of the case and caused the assessment to be cut in half.

The courts frequently rescue the harassed taxpayer. But all this is highly expensive.

A field agent has the right to go through all your financial records. He can examine your checkbook and see exactly how you spent what and why, to whom you paid money and from whom you got any.

A great deal of your personal business is reflected in your books and accounts, and, however private these may be, the agent of the Internal Revenue Service can compel you to give him access to most of them. This invasion of your privacy would have shocked our forefathers.

It is eminently distasteful to many Americans today that a perfect stranger, armed with a card showing that he is an employee of the Internal Revenue Service, can peer into their highly personal and private affairs.

The situation can be even worse when a professional man is concerned.

As a lawyer, I have an ethical duty not to disclose my client's business. But the income tax law, in administration, has little regard for my ethical obligations.

Suppose, for example, my books show a receipt from a client which I have not listed on my return as personal income. The agent may ask me why I have not done so.

My reply might be that it represents an expense item, a reimbursement of something paid for the client or a fund to be paid out for the client. He can then insist on my proving that this is not income. He can insist on knowing to whom I have paid it and why.

Suppose I answer that the client's affairs are none of the agent's business. That would merely cause me a tax assessment.

What needs to be done to improve upon our present punitive tax system?

Possibly there can be no perfect tax system, but ours is so disjointed, unfair, and economically regressive that it is obvious enough that a better one could be devised.

Tinkering with what we have through selected "reforms" may do more harm than good. Our whole tax system needs reconstruction from the ground up.

In order to create a sound platform upon which to build, the philosophic, social and economic principles which underlie the present law should be reexamined.

Among them are these, all of which seem to be fallacious either in theory or in practice:

1. That we should be burdened with a tax law which is uncertain and so intricate that not even experts can understand it fully.
2. That the Federal revenues should be produced predominantly through taxes on income, as against taxes on consumption.
3. That a progressive-rate income tax system is socially and economically sounder than a flat-rate system.
4. That double taxation, in the form of a personal income tax imposed upon profits already taxed with corporate income tax, makes economic sense.
5. That the Federal Government should absorb the aggregate taxing capacity to such a degree as virtually to make the States mere fiscal dependencies.

Congress itself is probably not the place to attempt to design a new system. Its operations are necessarily cumbersome and its committees would be subjected to so many conflicting pressures from Members of Congress and the public that a state of endless confusion could result.

NEEDED: A WHOLLY NEW CODE

Instead, Congress should create a special commission to make a fundamental study of taxation. This commission would then offer to Congress a wholly new code based upon carefully selected basic principles and sound economic theories.

Such a commission would be a calamity, however, if it were packed with representatives of pressure groups, such as special representatives of labor and of capital.

Nor should it be packed with academic intellectuals who might believe that the social objectives to which they happen to be attached are more important than economic horsesense.

There is precedence for a special commission to study problems of national importance.

More than 50 years ago, after the panic of 1907. Congress created a special commission, made up of 18 Senators and Representatives, to study the Nation's banking system and recommend changes.

The commission sought expert advice from bankers, finance specialists, lawyers, businessmen. Its report helped pave the way for the setting up, in 1913, of the Federal Reserve System.

Today, the urgent need is to remodel our chaotic tax system. Mere tinkering will solve nothing. A complete overhaul, by an objective commission, is the only answer.

Perhaps the best approach would be for Congress to ask the American Bar Association to create a commission to study and report.

The bar association is nonpolitical, and it could supply the technicians required to do the job. Such a commission would also be able to call on outside experts.

TWENTIETH ANNIVERSARY OF WARSAW GHETTO RISING

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. LINDSAY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. LINDSAY. Mr. Speaker, this is the 20th anniversary of the rising in the Warsaw ghetto. Twenty years ago this month 40,000 Jews were destroyed. They were desperate men; many of them were probably frightened men; but they died with courage and with dignity. They were destroyed, but they were not humiliated. In life the men and women and children in the Warsaw ghetto were despised and degraded. In death they won a great victory.

This month the Jews of the world are mourning the victims of the Warsaw ghetto. Memorial services have been held in Berlin and London and New York, as well as in Israel and in Warsaw itself. For, the 40,000 who died in the Warsaw ghetto were Jews, and they died because they were Jews. But before these men and women were Jews, before they were Poles, they were human beings. And they were destroyed, not by bullets or shells or fire, but by other human beings. The tragedy of the uprising in the Warsaw ghetto was not merely a tragedy for the Jewish people; it was a tragedy for the whole human race, for Jews and non-Jews alike. The Jews of the world are mourning this month; the whole world should mourn. "Never send to ask for whom the bell tolls, it tolls for thee."

FOREIGN BRANCHES OF NATIONAL BANKS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Rhode Island [Mr. ST GERMAIN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ST GERMAIN. Mr. Speaker, the bill would transfer from the Board of Governors of the Federal Reserve System to the Comptroller of the Currency the power to authorize foreign branches of national banks.

At present the chartering, regulation, and examination of national banks, including their domestic branches, rests with the Comptroller of the Currency. That Office also conducts the bulk of the examinations which are made of foreign branches. A thorough and systematic examination program is not possible, however, because of the existing division of the chartering and examination functions.

Since the Comptroller of the Currency has the entire supervisory authority over domestic branches of national banks, it would be logical for the Office to have the same authority over foreign branches of national banks. The duplication of work by two Federal instrumentalities in the same field of national bank branches with its attendant increased cost to the Government should be ended. The present division of responsibility dilutes the power of the Comptroller effectively to supervise the national banking system. Also, it is cumbersome to require national banks to petition one department of the Government to establish a domestic branch and another to establish a foreign branch. There should be a unified approach to the question of establishing branches of national banks. The passage of this bill is in the best interests of the national banking system and the Nation.

UPSTREAM FLOOD CONTROL IN OKLAHOMA

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Oklahoma [Mr. STEED] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. STEED. Mr. Speaker, the winner of a statewide conservation speech contest in Oklahoma sponsored this month by the Oklahoma Garden Clubs, Inc., was Miss Sally Cooksey, of Ada, a resident of my district.

Her subject, "Upstream Flood Control," is one of particular interest, because her home city of Ada is in an area where small watershed projects under Public Law 566 of the 83d Congress have been intensively developed. The leadership of the local people there has enabled this program, of which I am proud to have been a cosponsor when it was enacted in 1954, to go far toward remaking the face of the land. Conservation, flood prevention, water storage, all are provided by this worthwhile program.

Miss Cooksey has gone into the countryside around Ada and seen the upstream conservation dams in various stages of development. Her speech shows how young people of our State, as well as their elders, regard the realization of this program as a challenge for the future. Already achieved in a few fortunate valleys, it can by 1980, as Miss Cooksey predicts, make virtually all of Oklahoma's countryside abundant, a land dotted with small lakes and ponds, curving terraces green with sod:

UPSTREAM FLOOD CONTROL IN OKLAHOMA

(By Sally Cooksey)

Let's suppose the time is, say, 1980.

The place: Oklahoma.

The locality: your county.

A drive through the country shows you fields abundant with fully ripened grain, the land dotted with small lakes and ponds, curving terraces green with sod.

Does this sound like a description of a paradise or a fantasy of a dream world? I wonder if we could make this dream a reality.

Let us now think of another dream which was a reality and it was a nightmare for our parents. I have heard and read just as you have about the terrible droughts endured by people living in Oklahoma not too many years ago. We are told that at the end of a long, dry summer fields literally became parched and dead and worthless, that the ponds at which cattle drank became hard, crusty holes in the ground, and farmers were forced to haul water to keep the animals alive.

Now what makes the difference between this paradise we could have and the ugly truth learned by Oklahomans in the recent past? The difference lies in the upstream flood control. Could this one matter of controlling water in our streams take us from drought to abundance? There are many men who feel that it can, that one of the greatest needs in Oklahoma today is the successful management of our water resources.

How, then, can we do this? Is it one of those things that is simple and yet not so simple? For one thing it is a long-term program. I was surprised to learn that work in this area started as far back as 1903. The work progressed slowly for several reasons—probably because of lack of interest and certainly because of lack of funds. It seems that it takes a great deal of time and money to just survey and see what needs to be done. The current watershed program being carried on is a big step in the right direction.

I was interested to learn how and where these projects begin. An authority in the field explained to me that a watershed program must originate with a local group. They in turn prepare an application for a conservation district which they submit to the State agency. They then send experts to make a detailed study of that district. If the work is approved by State and Federal Governments, then the Federal Government will share with the State in financing the project. So, you see, each flood control project is a local undertaking with Federal help, not a Federal project with local help.

I believe educators tell us that the first step toward solving a problem is to recognize that we have a problem and to face it squarely. So, for a few moments, let's analyze our situation in Oklahoma. I know one group that saw the problem for the first time 2 years ago—that was the high school students who prepared for this same contest sponsored by the garden clubs. That year we studied gullies and the matter of soil erosion and we saw firsthand the terrible results of uncontrolled streams. By letting small streams run at will wherever the slope led, we were allowing this unruly water to do great damage to valuable land. Now, with this year's study of upstream control I can see that this runoff water damage could be prevented.

Of course, when we say the word "flood" the picture that comes to my mind is of low lands, or bottom lands which we have seen literally flooded and standing in water. We recognize that many times crops are lost by too much water just as by too little.

Actually, I guess, the kinds of floods which harm people are even more serious than those which destroy land. So a big part of our problem, then, is our neglect of larger rivers which rise and swell, and spread to engulf and endanger human life. Years ago floods were accepted as accidents—unpredictable and unavoidable. But men have learned that this is not entirely true. Men have learned something of control and prevention.

There is another phase of our problem encountered by people who travel by car over our highways. Oklahomans, like all Americans, increasingly spend more time and travel more miles in automobiles. It is not uncommon in certain areas for creeks, swollen by excessive rains, to dislodge a bridge and carry it forward in strong torrents leaving the road impassable.

In the face of all this I'm afraid we have to acknowledge that uncontrolled water running rampant over our State is a problem and should not be ignored. Our own watershed has its own combination of problems. So do all the other watersheds of the Nation, and solutions must fit the problems in each.

Now—is there a solution to our trouble? Luckily, there is. I believe the old saying is—"Heaven helps those who help themselves." And so it does.

We will have to have farmers, ranchers, small people, important people, conservation offices, State, and Federal agencies all working together to correct some mistakes that have been made and to take immediate action for improvement. All the people must be fully informed about what is being done and why. And what each group's responsibilities are. This calls for a continuing program of information and education. One thing that has been used for several years and is proving very successful is the land treatment called terracing. The county and State conservation service has taught land users the great value of retaining land by this method. Now the newest plan is what is called small detention dams. The idea here is that by having many small dams upstream the moisture is kept on areas that need it, rather than rushing downstream where it is not needed. One reason this is a good plan is that the smaller dams are so much less expensive than one very large dam making one large lake. The small upstream dams are usually earthen dams.

I want to take just a minute here to talk specifically about the construction of these dams and the control system used. Perhaps the reason I am especially interested in this is because of an on-the-spot inspection I made of several damsites. A few weeks ago two men from our local conservation office took me on a lengthy tour to see some structures in various stages of building. Our first stop was to see just the proposed location of a small dam. It had been surveyed and approved, but no work had been started. Our next stop was to one nearing completion, and the final and most impressive view was of a large dam which had been finished and in use for 2 years and which backed up quite a few acres of beautiful water. My escort explained that the base of this dam, and others, is clay. Above that is a dirt fill and on the very top is 6 inches of topsoil. This last layer had been sodded with Bermuda grass to prevent erosion. The next thing my guide pointed out was probably the most important feature of the flood control and that was the concrete spillway. This, he said, can be in any of various positions at the base of the dam, but is always in a very deep spot. This drawdown, as it is sometimes called, had a 36-inch pipe for the water to flow through constantly. As I watched that water flowing through the pipe I found it a little difficult to imagine that it would continue on to New Orleans and maybe even to the sea.

Another protective measure on pasture land is the building of ponds to hold water that might be a serious hazard if left free.

Here in this connection we become very aware of how closely water conservation ties into this flood control discussion. While I think the immediate concern in this upstream control program is not the accumulation and saving of water for future use, some day this may prove to be a great asset. We are being told by national planners the amount of water our Nation's people are using is rising tremendously and that there is danger that we may some day experience a real shortage of water in America. We had an example of this very close to home a few years ago when Oklahoma City found itself with an inadequate water supply for its growing population. So it will be well if anything we do now in the way of controlling water may later prove more valuable than we know.

Perhaps we should mention a matter that seems of less importance and that is that some of the larger dams are holding beautiful lakes which afford recreational facilities for Oklahoma residents.

Now let us suppose that it is April 1963 and the place again is Oklahoma. We can be mighty glad that at this point we see great sums of money being spent to preserve our land. And we should hope that in our future we can see the dream of the good earth come true.

SUMMARY OF NET BUDGET RECEIPT AND EXPENDITURE TRENDS (THE ADMINISTRATIVE BUDGET) IN CURRENT FISCAL 1963 (AS OF MARCH 31, 1963) COMPARED TO FISCAL 1962 AND TO BUDGET ESTIMATES FOR 1963

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CANNON] may extend his remarks at this point in the RECORD and include a table.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. CANNON. Mr. Speaker, in conformity with leave granted, I include the third monthly synoptic tabulation of the trend of net budget receipts and expenditures in the current fiscal year 1963 as of March 31, 1963, with comparisons to the official budget estimate for the fiscal year 1963 and to corresponding actual data for the previous fiscal year 1962.

BUDGET RECEIPTS

Budget revenues are officially projected by the President at $85,500,000,000 for the fiscal year 1963 ending this June 30th—an increase of $4,091,000,000 over actual budget revenues for fiscal 1962. Through the first 9 months—to March 31, 1963—actual budget revenues exceeded the corresponding 9 months of fiscal 1962—to March 31, 1962—by $4,609,000,000.

To reach the net budget revenue prediction of $85,500,000,000 for fiscal 1963 will require net revenues of $23,874,000,000 in the 3 months, April–June 1963. In the corresponding 3 months of fiscal 1962, net budget revenues were $24,392,000,000.

In contrast to budget expenditures which tend to recur more evenly throughout the fiscal year, the pattern of budget receipts shows the months of September, December, March, and June as the peak months; and receipts in the second half of the fiscal year, January–June, are usually higher than in the first half.

BUDGET EXPENDITURES

Budget expenditures are officially projected at $94,311,000,000 for the fiscal year 1963 ending this June 30th—an increase of $6,524,000,000 over actual budget expenditures for fiscal 1962, of which $1,901,000,000 is for national defense and $4,623,000,000 is for other than national defense.

Through the first 9 months—to March 31, 1963—actual budget expenditures exceed the corresponding 9 months of fiscal 1962—to March 31, 1962—by $4,701,000,000, of which $2,157,000,000 is for national defense and $2,544,000,000 is for other than national defense.

AVERAGE MONTHLY EXPENDITURES

Using straight averages in both instances, the table discloses that expenditures during the first 9 months of fiscal 1963 averaged $7,763,000,000—slightly less than the projected budget average of $7,859,000,000 for the full fiscal year of 1963 based on the official budget estimate of expenditures—a little less for national defense items and slightly less for nonnational defense items.

To reach the net budget expenditure prediction of $94,311,000,000 for fiscal 1963, net budget expenditures in the 3 months April 1—June 30, 1963, would have to aggregate at least $24,443,000,000—in other words, a monthly average of at least $8,147,000,000 during the 3 month period as against the actual monthly average of $7,763,000,000 in the first 9 months of fiscal 1963. Thus the monthly average expenditure in the 3 months, April–June, could rise $384,000,000 above the monthly average during the first 9 months without exceeding the budgeted total of $94,311,000,000 for the full 12 months. The table discloses that expenditures for all of fiscal 1963 are officially budgeted at a monthly average $544,000,000 greater than the actual monthly average of all of the preceding fiscal year 1962 and that, in comparison to this, in the first 9 months of fiscal 1963 the actual monthly average exceeded the corresponding 9-month average of fiscal 1962 by a little less; namely, by $522,000,000. Stated another way, in the first three-fourths of the fiscal year about 72 percent, or $4,701,000,000 of the officially projected $6,524,000,000 expenditure increase, fiscal 1963 over fiscal 1962, has been realized.

BUDGET DEFICIT

The official budget estimate of the deficit for all of fiscal 1963 is $8,811,000,000, or $2,433,000,000 larger than the actual deficit for all of fiscal 1962.

Through 9 months of fiscal 1963, the actual deficit is $8,242,000,000—only $92,000,000 larger than the actual deficit during the corresponding 9 months of fiscal 1962.

The comparisons and the trend will of course vary each month between April 1 and June 30 in relation to the full year amounts and in relation to each other.

THE PUBLIC DEBT

The official budget projection of last January is that the public debt at the end of fiscal 1963—on June 30, 1963—will be $303,494,000,000, a projected increase of $5,293,000,000 from the actual debt of $298,201,000,000 at the beginning of the fiscal year on July 1, 1962. The substantial explanation for the projected debt increase of $5,293,000,000 during fiscal 1963 being somewhat less than the projected budget deficit of $8,811,000,000, for the same period is that the general fund balance on hand at the start of the fiscal year is estimated to be drawn down to a lower level to help meet part of the deficit rather than borrowing an equivalent amount.

The actual public debt on March 31, 1963, stood at $302,993,000,000—or $6,905,000,000 above the corresponding date in fiscal 1962—at March 31, 1962—and $4,792,000,000 above the total of the debt at the start of the fiscal year on July 1, 1962.

The table follows:

Net budget receipts and expenditures (the administrative budget), 9 months of fiscal 1963 versus 9 months of fiscal 1962 and comparison with full-year estimates

[In millions of dollars]

	Actual for 9 months			Budget estimates for all of fiscal 1963 compared to actual for fiscal 1962		
	Fiscal year 1963	Fiscal year 1962	1963 compared to 1962	Budget estimate, 1963	Actual, 1962	Estimate 1963 over actual 1962
1. Budget receipts (net)	61,626	57,017	+4,609	85,500	81,409	+4,091
2. Budget expenditures (net):						
(a) National defense (per official budget classification)	30,126	36,969	+2,157	53,004	51,103	+1,901
(b) Other than national defense	30,742	28,198	+2,544	41,307	36,684	+4,623
3. Total expenditures	69,868	65,167	+4,701	94,311	87,787	+6,524
4. Net surplus (+) or deficit (−), (line 1 minus line 3)	−8,242	−8,150	−92	−8,811	−6,378	[1] −2,433
5. Average monthly expenditures:						
(a) National defense	4,347			4,417		
(b) Other than national defense	3,416			3,442		
Total monthly average	7,763	7,241	+522	7,859	7,315	+544

[1] That is to say, the budget projects an estimated increase of $2,433,000,000 in the size of the deficit in fiscal 1963 as compared to the actual deficit in fiscal 1962.

HOW THE AREA REDEVELOPMENT ACT WORKS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. Monagan] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. MONAGAN. Mr. Speaker, Congress has long recognized the importance and complexity of the problem created by unemployment and in order to deal with such unemployment, the 87th Congress enacted Public Law 87–27, the Area Redevelopment Act.

The Governor of the State of Connecticut, the Honorable John N. Dempsey, and Connecticut's labor commissioner, Renato E. Ricciuti were among the first to realize the great value of this act and immediately proceeded to implement it.

I believe my colleagues would be interested to know just how this law is operating in my State and district and, therefore, I append herewith an article from the Evening Sentinel of Ansonia, Conn., dated April 4, 1963, and describing the record already made in the important retraining aspect of this program:

Fifteen From Valley Complete ARA Machine Shop Practice Course

Fifteen valley residents were graduated from the seventh Gateway Area Redevelopment Act basic machine shop practice class at Bullard-Havens Regional Technical School, Bridgeport, last night.

Reinhardt Buchli of Shelton, assistant director of adult education at the school, states the men have completed 240 hours of intensive and concentrated instruction in shop mathematics, blueprint reading, and the setting-up and operating of the more common basic machine tools. Each student received a certificate. Graduates are as follows:

Ansonia: Robert A. Bruno, Charles R. Dickerson, Robert J. Koskolowski, David J. Mensch, Robert W. Reichelt, and Michael R. Spinelli.

Derby: Hollis B. Cox, Joseph J. Matto, and Anthony Nuzzo.

Monroe: Russell Bevans.

Seymour: Glenn S. Whitehill, Peter C. Morrow, David A. Bowen, and Raymond McDonald.

Shelton: Anthony J. Ottman.

Mr. Buchli stated the majority of the trainees have expressed an interest and desire to continue in advanced machine shop courses at the school. Any valley resident is eligible to apply. Registration for a variety of technical courses, many on a collegiate level and offering degree credits, will begin after Labor Day for the evening sessions. Further information can be obtained at the school any evening or at the Ansonia office of the Connecticut State Employment Service.

EXCEEDED NORMS

Alex Osedach, manager of the Ansonia office, reported 17 men started the class February 4. To qualify for entrance, each retrainee had successfully exceeded the minimum norms of the U.S. Labor Department machinist apprentice aptitude test battery administered at his office. During the course two dropped out, one to accept a formal 8,000-hour tool and diemaker apprenticeship and the other obtained an in-plant machine tool operator training opportunity.

During the past 2 weeks, three others were placed as a maintenance mechanic, general machine operator trainee, and a diecaster. In order that the three could receive their certificates the employers permitted the men to leave work with enough time to get to school.

Entering jobs immediately after graduation are three other students, two as Swiss automatic screw machine setup and operator trainees and one as an apprentice in a formal State-approved 8,000-hour machinist training program. All other retrainees are in open referrals but their placements in training-related work appears tc be no problem. Mr. Osedach states.

Both Mr. Buchli and Mr. Osedach agree that the ARA federally sponsored course for retraining, which has been operating continuously since October 1961, has consistently been gaining in stature and acceptance by area employers as evidenced by the fact that more and more applicants are being absorbed by industry prior to graduation time for formal apprenticeships or advanced inplant training.

RECORD BEST

The record of the present class is the best to date. Some of the men embarking on rewarding careers previously had work histories as a retail sales clerk, building supply salesman, woodworker, greenhouse helper, dairy farmhand, grocery stockboy, construction equipment serviceman, air compressor operator, drill press operator, and order clerk. Some had no work experience.

In an age of automation and fast-moving technological changes, they state, each is better prepared now to make his contribution to the area's basic industrial economy.

BOSTON COLLEGE CENTENNIAL CONVOCATION ADDRESSED BY PRESIDENT JOHN FITZGERALD KENNEDY, AN HONORARY ALUMNUS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. Boland] may extend his remarks at this point in the Record and include a speech by President Kennedy at Boston College.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. BOLAND. Mr. Speaker, Boston College, that great Jesuit university in the capital city of my native Massachusetts, observed its centennial of founding last Saturday afternoon with a resplendent convocation addressed by President John F. Kennedy, and attended by leaders of the church, state, and academic world.

As an alumnus of Boston College, I was proud to accompany President Kennedy on the round-trip Washington-Boston jet flight for this momentous occasion in the history of a university which has exercised a profound and beneficial influence upon the intellectual and moral thought of our community, our commonwealth, and our country. President Kennedy himself, when a Senator from Massachusetts in 1956, received an honorary doctor of laws degree from Boston College, an institution he described on Saturday as follows:

> Boston College for 100 years has been of the Nation and so it will be for the next 100.

Mr. Speaker, at this point I would like to read an excellent editorial from the Boston Globe of Friday, April 19, 1963, about Boston College entitled "Monument to Learning":

Monument to Learning

When the Very Reverend Michael P. Walsh, S.J., became president of Boston College in 1958, in the midst of its most concentrated building drive, he declared that his primary purpose was not physical plant but academic development. The extent to which that pledge has been fulfilled is extraordinary, even in an age of dynamic intellectualism and social demands.

New buildings at University Heights shoulder their tan granite through linden trees and maples, but the eye of pedestrian or motorist on Beacon Street cannot see, for instance, that the doctoral degree program in the past 5 years has doubled in scope. The casual visitor to the campus would have no way of knowing that faculty growth and heightened student competence have revolutionized the life of scholarship and communication in laboratory and lecture hall.

Depth in quality in student and teacher admits no precise measurement. A chronicler finds it easier to point out that Boston College was one of the first to adopt the advanced placement plan, that its honors program in the school of education has won the support of the Ford Foundation, that its honors program in liberal arts and sciences has earned the support of the Carnegie Foundation, that its research program has mounted in 5 years from $100,000 to $2 million in grants and that a full-time director of research has become a necessity.

The intensifying of undergraduate disciplines has further stimulated graduate school growth, with research only one measure of its success. Father Walsh was head of the biology department when he was named president of the college. But at his accession he showed his awareness that science was supplementary and not dominant. Jesuit education has always thought in terms of the whole person and the theological dimension. The centennial celebration began with a conference that was a high point in Christian ecumenicism at the university and a new beginning in human relations for its second century.

The celebration has continued with a mingling of humanities and sciences in the truest tradition of the West. The presence of President Kennedy tomorrow, however, is not merely a logical extension of the centennial program. It is a personal tribute of a statesman to an amazing achievement by a community of scholars.

Such explosive expansion as Boston College has seen in the past 5 years would not have been possible if the institution did not have behind it the traditions of the Society of Jesus, a teaching order for 400 years, with colleges ringing the globe. Such a treasury of wisdom, of insight, sensitive and visionary, makes for a ready integration of disciplines and a sure synthesis of multiplying knowledge which might otherwise be denied such a university, building and broadening at the same time.

Prospects for the second century, consequently, are stirring to the imagination. At Boston College, the Jesuits have built a commonwealth of learning that seeks to establish the city of God by exploring, charting, and perfecting the city of man.

HONORARY DEGREES TO LADY BARBARA WARD JACKSON, FATHER BUNN, AND PRESIDENT PUSEY

Mr. Speaker, during the convocation Saturday, the Very Reverend Michael P. Walsh, S.J., president of Boston College, conferred honorary degrees upon Dr. Nathan M. Pusey, president of Harvard University; Miss Barbara Ward—Lady Jackson—the esteemed British economist and author; and the Very Reverend Edward B. Bunn, S.J., president of

Georgetown University here in Washington, D.C., the oldest Jesuit university in the United States, founded in 1789. Under unanimous consent, I include the text of President Kennedy's address and the texts of these honorary degrees at this point in the Record:

Prepared Text of President Kennedy's Speech at Boston College Ceremonies Saturday

Your Eminence, Governor Peabody, members of the faculty, ladies and gentlemen, it is a great pleasure to come back to a city where my accent is considered normal and where they pronounce the words the way they are spelled.

It is good to be back in Boston; it is still better to be able to join in the heartiest congratulations to Boston College on the occasion of this centennial celebration. I feel the more pleased and the more at home—in that you have chosen this occasion to do honor to three friends and counselors of mine—a friend from Cambridge, Mr. Pusey; a friend from Washington, Father Bunn; and a friend from all the world of freedom, Lady Jackson.

Boston College is 100 years old by the lifespan of men, but young by that of universities.

In this week of observance you have rightly celebrated the achievements of the past—and equally rightly you have turned, in a series of discussions by outstanding scholars, to the problems of the present and the future. Learned men have been talking here of the "knowledge explosion"—and in all that they have said, I am sure, they have implied the heavy present responsibility of institutions like this one. Yet today I want to add a word on the same theme—to impress upon you as urgently as I can the growing and insistent importance of universities in our national life. I shall speak of universities because that is what Boston College has long since become—but most of what I say applies to liberal arts colleges as well.

HAILS ENCYCLICAL

My theme is not limited to any one class of universities—public or private—religious or secular. Our national tradition of variety in higher education shows no sign of weakening, and it remains the task of each of our institutions to shape its own role among its differing sisters. I must hope that my general comments on the condition of the higher learning can be interpreted usefully by those who understand most closely the particular needs of particular institutions.

In this hope, I am much encouraged by a careful reading, in this last week, of the remarkable encyclical, Pacem in Terris. In its penetrating analysis of today's great problems of social welfare and human rights, of disarmament, international order and peace, that document surely shows that on the basis of one great faith and its tradition there can be developed counsel on public affairs that is of value to all men and women of good will. As a Catholic, I am proud of it, and as an American I have learned from it. It only adds to the impact of this message that it closely matches notable expressions of conviction and aspiration from churchmen of other faiths, as in recent documents of the World Council of Churches, and from outstanding world citizens with no ecclesiastical standing.

We are learning to talk the language of progress and peace across the barriers of sect and creed. It seems reasonable to hope that a similar process may be taking place across the quite different barriers of the higher learning.

From the office that I hold, in any case, there can be no doubt of the growing meaning of universities in America. That, of course, is one basic reason for the increasing urgency with which those who care most for the progress of our society are pressing for more adequate programs in higher education, as in education generally. It is for this reason that I urge upon everyone here and in this country, the pressing need for national attention and a national decision in the national interest.

OUTLINES TASKS

In at least four ways the new realities of our day have combined to intensify the focal role of the university in our Nation's life.

First, and perhaps most obvious, the whole world has come to our doorstep, and the universities must be its students. In the strange geometry of modern politics, the distant Congo can be as close to us as Canada, and Canada itself is worth more attention than we have sometimes given. Cultures not our own press for understanding; crises we did not create require our participation; accelerating change is the one universal human prospect. The universities must help.

Second, there is indeed an explosion of knowledge, and its outward limits are not yet in sight. In some fields progress seems very fast, in others distressingly slow. It is no tribute to modern science to jump lightly to the conclusion that all its secrets of particle physics, or molecular life, or heredity, or outer space, are now within miraculously easy reach. The truth is more massive and less magical; it is that wherever we turn, in defense, in space, in medicine, in industry, in agriculture, and, most of all, in basic science itself, the requirement is for better work, deeper understanding, higher education.

And while I have framed this comment in the terms of the natural sciences, I stand squarely with those who insist that at every level of learning there must be an equal concern for history, for letters, and the arts—and for man as a social being, in the widest meaning of Aristotle's phrase. This also is work for the universities.

Third, as the world presses in, and knowledge presses out, the role of the interpreter grows. Men can no longer know everything themselves; the 20th century has no universal man. All men today must learn to know through one another—to judge across their own ignorance—to comprehend at second hand. These arts are not easily learned. Those who would practice them must develop intensity of perception, variety of mental activity, and the habit of open concern for truth in all its forms. Where can we expect to find a training ground for this modern maturity, if not in our universities?

SPIRIT OF SERVICE

Fourth, and finally, these new requirements strengthen still further what has always been a fundamental element in the life of American colleges and universities—that they should be dedicated to "the Nation's service." The phrase is Woodrow Wilson's and no one has discussed its meaning better. What he said in 1896 is more relevant than ever today—and I close with a quotation from him.

I offer it to you with renewed congratulations, and in the confident hope that as her second century opens, Boston College will continue to respond—as she did in her beginning—to the new needs of the age:

"It is not learning," said Wilson, "but the spirit of service that will give a college place in the public annals of the Nation. It is indispensable * * * if it is to do its right service, that the air of affairs should be admitted to all its classrooms * * * the air of the world's transactions, the consciousness of the solidarity of the race, the sense of the duty of man toward man * * * the promise and the hope that shine in the face of all knowledge * * * the days of glad expansion are gone, our life grows tense and difficult; our resource for the future lies in careful thought, providence, and a wise economy; and the school must be of the Nation."

Boston College for 100 years has been * * * of the Nation and so it will be for the next 100.

Texts of the Three Honorary Degree Citations Awarded at Boston College's Centennial Convocation

BARBARA WARD JACKSON

Barbara Ward shares with her husband, Sir Robert Jackson, the oldest title of honor within the gift of kings. But in the kingdom of the intellect she has won more golden opinions than ermine and quarterings can signify. Educated in her native England, in France and in Germany, she has continued her prophetic success in Modern Greats at Oxford by a long series of books in which her luminous mind has elaborated a philosophy of compassion, a politics of brotherhood, an economics of the heart.

Boston College asserts its affectionate gratitude for a voice that responds with uncommon beauty and wisdom to the question: "Who is my neighbor?"

Mindful of the honor she does us by joining the fellowship of the honorary doctors of the University the President and Trustees, empowered thereto by the supreme authority in the Commonwealth of Massachusetts, joyfully declare Lady Jackson doctor of letters honoris causa.

EDWARD BERNARD BUNN

For those who know the history of Boston College, the long look backward down the arches of the years brings us even further than an April morning in 1863. Not only was our founder a son of Georgetown, who joined the Jesuits there, and there was ordained to the priesthood, but our pattern of endeavor, the warrant on which we came into being, and the substance of our hopes were derived from the beloved university which was founded on the slopes of the Potomac in 1789.

These are the traditions we recall today as we greet with unbounded joy and affection the Reverend Edward Bernard Bunn, the president of the first Catholic university in the United States.

In Father Bunn we hail a gracious statesman of the educational establishment in America, whose ample talents have been superbly manifested in two university presidencies. More than any other, he symbolizes and hands on a commitment to the ancient ideal of Catholic higher learning, which along with religious liberty and the church itself, was first planted in the free air on the Maryland shore.

Wherefore, the president and trustees, empowered thereto by the supreme authority in the Commonwealth of Massachusetts, declare Edward Bernard Bunn, of the Society of Jesus doctor of laws honoris causa.

NATHAN MARSH PUSEY

The greatness of a university is ineluctably bound up with the characters of its founder and leaders. Some have left their splendid names upon the facades of colleges, like Robert de Sorbon and John de Baliol. Others have carved their deeds upon the tablets of history by enlarging the university's charters of instruction, or by setting in clearer view the ideals of faith and order which first called together the company of scholars.

Nathan Marsh Pusey, now in his 10th year as president of Harvard, has guided America's oldest university with a strength and diplomacy equal to the leverage of his office. Not content to preside over the growth of his ancient academy in Georgian brick and imaginative stone and glass, he has raised new pediments and spires on the landscape of the mind. Today the writs of Harvard scholarship run with more compelling voice than ever before in every quarter of the world.

To express their admiration and profound respect for a scholar so singularly blest, the president and trustees of Boston College have enrolled Nathan Marsh Pusey among our honorary alumni, and now proudly style him doctor of humane letters, honoris causa.

Mr. Speaker, I also include with my remarks a news story account of the Boston College's centennial convocation from the Boston Sunday Globe, by Ian Forman, including excerpts of the speeches of Father Walsh, Richard Cardinal Cushing, Roman Catholic archbishop of Boston, President Pusey, of Harvard University, and Gov. Endicott Peabody, of Massachusetts:

Calls for Decision on Education—20,000 Hear J.F.K. at Boston College

(By Ian Forman)

President Kennedy, speaking at Boston College's centennial convocation Saturday, urged a "national decision in the national interest upon the national question of education."

In the sun-bright oval of Alumni Stadium, brilliantly filled with academic colors from many colleges and universities, he said before the 20,000 assembled:

"From the office I hold * * * there can be no doubt today of the growing meaning of universities in America.

"That, of course, is one basic reason for the increasing urgency with which those who care most for the progress of our society are pressing for more adequate programs in higher education, as in education generally.

"It is for this reason that I urge upon everyone here the pressing need for national attention and a national decision—in the national interest upon the national question of education," he said.

The President put an emphasis upon the word "national" each time he said it.

His own legislative program for Federal aid to education, both at higher and lower levels, is once again deadlocked on the horns of conflicting interests and groups for the third straight year.

Aside from the seriousness of his words, Mr. Kennedy looked relaxed and happy, refusing to put on his black academic cap, as he joined in the climactic event of Boston College's 100th anniversary celebration.

He recalled that the honorary doctor of laws degree which Boston College had conferred upon him in 1956 had made him, as he put it, "an instant alumnus."

He expressed pleasure that the president of his Harvard alma mater, Nathan M. Pusey, was being honored on this occasion with an honorary doctor of humane letters degree.

The President, tanned, his hair tousled by the stiff breeze, listed four ways in which "the new realities of our day have combined to intensify the focal role of the university."

The fourth point was that "these new requirements strengthen still further what has always been a fundamental element in the life of American colleges and universities—that they should be dedicated to 'the Nation's service.' "

The phrase, he said, was Woodrow Wilson's and "no one has discussed its meaning better than what he said in 1896."

"It is not learning," he quoted Wilson as saying, "but the spirit of service that will give a college place in the annals of the Nation."

To Boston College, the President offered "renewed congratulations * * * in the confident hope that as her second century opens, Boston College will continue to respond—as she did in her beginnings—to the new needs of the age.

"Boston College," he said, "for 100 years has been 'of the Nation' (Wilson's phrase)—and so it will be for the next 100 years."

The setting for the centennial climax was bright and springy, with the fresh green turf of the stadium spreading a handsome carpet for the multicolored procession of gowned and capped representatives from 294 colleges and universities throughout the United States.

PUSEY HAILS BOSTON COLLEGE

President Pusey of Harvard spoke for the other institutions on higher education in congratulating Boston College upon its 100th birthday.

"It is a joy," he said, "to see Boston College forging ahead in its accomplishments."

On a light note, Dr. Pusey added:

"May I as the president of an institution over 300 years old say this discouraging word to Father Walsh and his associates—that the tasks do not get easier as the centuries pass."

Boston College's 22d president in its first 100 years, Very Rev. Michael P. Walsh, S.J., a scientist, conferred honorary degrees upon Dr. Pusey; Barbara Ward (Lady Jackson), British economist and author; and Very Rev. Edward B. Bunn, S.J., president of Georgetown University, the oldest Jesuit university in the Nation, founded in 1789.

Lady Jackson was given an honorary Doctor of Letters and Father Bunn, an honorary Doctor of Laws.

In his own talks, Father Walsh said: "A university must span many centuries before it can be said to be old.

"And so, after only one century, it would be fitting to say that Boston College is still young.

"While we pay grateful and most respectful tribute to our past, our energies and our interests are directed to our future. We are impatient to move on with greater and firmer strides into our second century," he said.

Father Walsh paid tribute to Cardinal Cushing, an alumnus of Boston College, Class of 1917, saying: "* * * at one our most benevolent father and devoted son, our welcome is what it has always been, one of gratitude and deepest affection."

Cardinal Cushing, in his remarks, replied: "For what Boston College has done, is doing and will continue to do for God and for country, for Church and for State, for the education world and for the common good, we are thankful today."

Governor Peabody, who brought the good wishes of the Commonwealth, said:

"All of us who are working for better education opportunities here in Massachusetts can take heart from the accomplishments of Boston College. For education is one of this Commonwealth's most precious assets."

ENCYCLICAL PRAISED

In addition, the President's brother, 31-year-old Senator Edward M. Kennedy, walked in academic dress beside his senior colleague, Senator Leverett Saltonstall, in his Harvard cap and gown.

President Kennedy, in his address, also commented upon "the remarkable encyclical, Pacem in Terris" which Pope John issued last week.

"As a Catholic I am proud of it, and as an American I have learned from it," he said.

"It only adds to the impact of this message that it closely matches notable expressions of conviction and aspiration from churchmen of other faiths—as in recent documents of the World Council of Churches—and from outstanding world citizens with no ecclesiastical standing.

"We are learning to talk the language of progress and peace across the barriers of sect and creed.

"It seems reasonable to hope that a similar process may be taking place across the quite different barriers of the higher learning," he said.

The President also cited the other ways in which the universities must help meet the "new realities of our day."

They are in helping the nation understand the world which "has come to our doorstep;" to continue the explosion of knowledge which "in some fields seems so fast, in others distressingly slow;" and to act as interpreter "as the world presses in, and knowledge presses out."

ROGERS CITES NEW FIGURES IN CUBAN SHIPPING

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. Rogers] may extend his remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ROGERS of Florida. Mr. Speaker, in the period from April 6 to 19, a total of six more ships flying the flags of our allies called in Communist Cuba. Five of these were British, one of which was an 11,182-ton tanker. Another was of Lebanese registry.

A total of 56 allied vessels have called in Cuba since January 1. Such trade is an affront to the United States and the entire hemisphere. Again I urge our Government to close its ports to all nations engaged in sea trade with Communist Cuba.

PRESIDENT KENNEDY'S CUBAN POLICY IS RIGHT AND HAS GROWING SUPPORT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Delaware [Mr. McDowell] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. McDOWELL. Mr. Speaker, President Kennedy's Cuban policy is basically correct and right and has growing support.

Walter Lippmann in his column of April 23, 1963, in the Washington, D.C., Post, declared that the significant fact about the speeches of the President, Secretary Rusk, and Senator Keating before the meeting last week of the American Society of Newspaper Editors was that:

> There is substantial agreement about what the United States should and should not do.

It is interesting that Governor Rockefeller and former Republican Vice President Richard Nixon have become almost singlehandedly "the war party."

I include the text of Walter Lippmann's penetrating article entitled "The Kennedy-Keating Cuban Policy."

[From the Washington (D.C.) Post, Apr. 23, 1963]

The Kennedy-Keating Cuban Policy

(By Walter Lippmann)

Cuba got a good airing last week before the American Society of Newspaper Editors, and the significant fact about the speeches of the President, Secretary Rusk, and Senator Keating was that there is substantial agreement about what the United States should and should not do. It is hard to say what Mr. Nixon's Cuban policy would be. He sounded like a man who was ready to go to war. But all he actually said was that he wanted the Cuban exiles to make hit-and-run raids.

Senator Keating, who is the most conspicuous of the critical opposition, began by saying that "it is foolish to pretend that there are easy answers to the Cuban problem." He did not pretend. Then in the course of his speech he admitted that he agrees with the main theses of our present Cuban policy. He is opposed to an invasion. He is opposed to a blockade. He is opposed to hit-and-run raids mounted from American soil. He is in favor of "greater stress on nonmilitary measures," and he wants to exert increasing economic pressure so that the Soviets "will be driven to the conclusion that the price of maintaining a base in Cuba is too high."

This is the same story which the administration is telling. Senator Keating's differences are not in the substance of the text but in the editing, the typography, the layout, and the captions. The Senator, like the President, excludes in present circumstances the resort to war—invasion, blockade, and raiding; like the President he too would deal with Cuba by surveillance, containment, isolation, economic pressures, and propaganda.

There is no doubt that at least for some time to come the Kennedy-Keating policy will leave the Soviet troops 90 miles from Florida. This is an affront to our pride. Not since Napoleon III put French troops into Mexico to enthrone and support the Emperor Maximilian has anything like this happened so close to us. In the end the French troops went away. But, because there was no prudent alternative, Lincoln put up with the Bonapartist troops for several years.

How long must we put up with the Russian troops? The honest answer is that we must put up with them until they can be gotten rid of by measures short of nuclear war. Here is the sticking point in the argument with Governor Rockefeller and Mr. Nixon. They sound, they intend to sound, as if they know a way to get rid of the Russian troops promptly without waging nuclear war.

What is this prompter way to make the Russians go away from Cuba? They do not tell us, but the most reasonable interpretation of what they say is that the prompter way is not to make war but to threaten war. Both Governor Rockefeller and Mr. Nixon have avoided saying plainly what they do mean. But if what they sound like has genuine meaning it is that they believe the United States can deliver an utlimatum which the Soviet Union will bow to.

If this is not what they mean, what in the name of commonsense do they mean with all their big words? If they are prepared to be so bold with the Russians, they ought to be bold enough to talk plainly to their fellow Americans.

The Rockefeller-Nixon position appears then to be that Cuba can be liberated by ordering the Soviet Union to withdraw from this hemisphere, and to stand by passively while we blockade Castro and arrange for a replacement of Castro's government. If this is what they have in mind, they are making an enormous guess. For nobody can possibly know that the Soviet Union would surrender its whole position in Cuba as it surrendered its offensive weapons last October. It is the supreme folly in the nuclear age to drive a nuclear power into a corner. And if the Soviet Union refused to bow to the ultimatum, all this would do for us would be to make us look like fools.

The President of the United States cannot play with an ultimatum to a government like that of the Soviet Union. He cannot use an ultimatum unless he is prepared to go through with it and begin a war. If he is not prepared to go to war, an ultimatum is a bluff and everyone will soon see that it is.

While the present policy does not promise a quick withdrawal of the Russians or the fall of Castro, it is surely not true to say that it is complacent do-nothingism. To a degree which is just short of war Cuba is being photographed, patrolled, embargoed and squeezed, and isolated. If Cuba were a great power, we would be at war with her for what we are already doing. I doubt whether there is any precedent where we have exerted such strong measures short of war on any other country.

However much we are impatient and frustrated we have to grasp the fact that Cuba is no military threat to the United States and is not very much of a threat to Latin America. The worst of Castro is his example and a long way after that such agents as he is able to train and infiltrate into the Latin American countries. He is an affront to our pride, he is a nuisance, he is a mischiefmaker. But he is not a mortal threat to the vital interests of the United States, and therefore, in this age of thermonuclear war, we must deal with him by measures that are short of war.

THE NEED FOR RESHAPING U.S. TRADE POLICY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. Reuss] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. REUSS. Mr. Speaker, in an article appearing in the forthcoming issue of Harper's magazine, I have appealed for an end to America's preoccupation with Europe and a redirection of our policy toward the broader goal of a free world community.

The text of the article follows:

America Gets an Unexpected Break

(By Henry S. Reuss)

Instead of cursing De Gaulle, we ought to thank him for compelling us to reexamine the goals of our foreign policy. For the past 2 years we have uncritically supported the Common Market, although it was bound to impair free world trade by discriminating in favor of the insiders and their former colonies, and against those on the outside looking in.

Our vision was warped. For, in fact, since World War II our goal should have been nothing less than a community of the entire Free World. In such a community, the industrialized countries—Western Europe, the United States, Canada, Australia, New Zealand, Japan, and perhaps some others—would strive together for full employment and rapid growth within their own borders. They would also work toward the removal of trade barriers which separate them from each other and from the developing nations. And they would seek a mechanism of international exchange and payments which would avoid crises and permit each country to progress socially and economically. The industrialized countries would achieve full employment and at the same time provide their partners, the developing countries, with growing export markets and a dynamic source of public and private capital.

From time to time there have been glimmerings from official Washington that we were dedicated to such a large concept. But mostly we have been preoccupied with a particular view of Europe, centered on the Common Market. European regionalism should have been seen as merely a means to an end. Instead we have allowed it to become an end in itself. When Common Market policy collided with free world policy, the former nearly always won out.

Immediately after World War II it made sense to concentrate on rebuilding war-torn Europe as a step toward a free world community. We invented the Marshall plan. We encouraged regional institutions, such as the Organization for European Economic Cooperation, the Council of Europe, the Coal-Steel Community, and Euratom. The Common Market of France, Italy, Germany, and the three Benelux countries (often called the Six) was part of this pattern.

In the beginning its entirely valid purpose was to strengthen the economies of its members by giving them a mass market and the spur of competition. Another sound objective was the ending of animosity between France and Germany. These things have now been done.

Curiously, the most significant steps toward free world unity were taken in the immediate postwar period, when emphasis on Europe was amply justified by the need to fend off chaos. At Bretton Woods in 1945, we laid the foundation for a worldwide monetary order. In 1948 we convened the countries of the free world to establish the multilateral tariff-cutting procedures of the General Agreement on Tariffs and Trade known as GATT. With the point 4 program in the early 1950's, we gave direct aid to the developing nations. Those programs have not been matched by any comparable efforts since the midfifties. European regionalism has had top priority in our foreign policy. Ironically, as Europe came to need less of our concern and the free world more, we gave Europe more and more and the free world less. In effect, we turned our backs on the larger goals and, as a result, little progress toward them has been made since the promising postwar beginnings.

We knew, for example, that the free world needed a better system of international payments. But we were unwilling to go to France and other prosperous European countries and frankly ask for needed help. So we staggered along with monetary arrangements that have remained at best precarious.

Likewise we recognized that the developing countries needed economic assistance. But until very recently, we allowed the Europeans to drag their feet on foreign aid. And, although we paid lip service to the principle of multilateral, liberalized trade, we hailed the Common Market, with its obvious discriminatory features, as a great progressive step.

Strangely, hardly anyone questioned the assumptions that led to our single-minded concern with Europe. In the Great Non-Debate, few people pointed out that the Common Market was encouraging a European particularism rooted in the ancient dreams of unity of Charlemagne, Dante, and Henry IV, at just the time in history when speedy communications and the aspirations of rising peoples everywhere required a free world generalism.

THE DISHWASHER GAP

To understand how great a mistake this was, let us see just how the Common Market works, and who gets hurt.

First of all, we do. Unless our surplus of exports can be increased to offset our deficit items such as military expenditures overseas and investments abroad, we face continuing deficits in our balance of payments. Incomes are rising in the Common Market countries. They could be our fastest growing export area. But if the Common Market continues on its recent inward-looking course, we will lose rather than gain exports. The Common Market aims to insulate its members against the rest of the world with an external tariff averaging 11 percent and no tariff wall between its members. Such discrimination will hurt us.

Metal lathes provide a case in point. In 1958, the last pre-Common Market year, we exported $1.5 million of metal lathes to Germany, and $3 million to France. The German tariff was zero; the French tariff 11 percent. The Common Market external tariff is now 9 percent. The increase in the German tariff from zero to 9 percent is likely to cut us off from that market entirely. And the decrease in the French tariff from 11 to 9 percent is not likely to help us, since the Germans can ship their lathes into France duty-free. Thus even if Americans were to lead a Spartan life, keep wages and prices stable, and make admirable gains in productivity, our export possibilities to the Common Market could be largely gobbled up by its own members.

Consider, for instance, our consumer durable-goods industry, which produces such things as washing machines, driers, refrigerators, dishwashers, garbage-disposal units, and lawnmowers. Market studies show that these commonplace amenities of the American home have been rare luxuries abroad. Now, however, there is a shortage of domestic help in Europe due to full employment. There is a huge new market for every kind of appliance from clothes driers to dishwashers. And we could easily meet this demand, for our appliance plants have vast idle capacity while over 6 percent of our labor force is unemployed.

Yet the new Common Market external tariffs effectively exclude most U.S. appliances (the tariffs are: electric percolators, 18 percent; dishwashers, 19 percent; vacuum cleaners, 18 percent). Were it not for this tariff wall, exports of our consumer durable goods to Europe could match the spectacular sales in America of Europe's compact cars, which have been admitted under our low (6.5 percent) automobile tariff.

The man from Mars might well clutch his forehead and wonder: Why don't these foolish mortals put some of the unemployed in the United States back to work making and exporting these household appliances which Europeans now want and can afford? This would not merely spur the U.S. economy and create jobs for Americans. It would also help the European countries. At present, a wage increase in Europe can cause inflation because higher purchasing power will compete for roughly the same amount of consumer goods. If Europe were to let down her trade barriers, new imports could sop up this excess purchasing power. And these sales of our products abroad would help wipe out the U.S. international payments deficit and Western Europe's payments surplus, to the advantage of the whole free world. Only thus can the dollar—the international currency of Europe and the United States—become stable once again.

The discriminatory tariffs of the Common Market imperil not only our exports of manufactured goods. Our farm exports face at least an equal threat from the market's policy of agricultural protectionism. For other countries of the free world—including the European countries left out of the Common Market—the prospect is ominous.

RICH MAN'S CLUB

Exports are the economic lifeblood of Sweden, Switzerland, Austria, and other members of the European Free Trade Association. A large share of their exports have traditionally gone to the Common Market countries.

Denmark's efficient farmers, for example, have earned about half of the Nation's export income. A major market for their products has been West Germany. However, as the Common Market agricultural policy goes into effect, Denmark is already beginning to feel the pinch. The Danes must anticipate the probable loss of $150 million yearly in export trade.

Israel, as well as Canada, Australia, New Zealand, and other British Commonwealth countries, also face serious problems of discrimination from the Common Market, although they are breathing a momentary sigh of relief at Britain's failure to join it.

Israel, for example, has staked her economic future on expanding trade with Europe. Sixty percent of her exports now go to Britain and the Six. She sells oranges, her principal export earner, to Britain at a nondiscriminatory tariff of 10 percent—that is, the same tariff paid on oranges from any other country. This enables Israel to compete successfully with other orange-growing countries. If Britain joins the Common Market, Israel would have to pay a tariff of 20 percent to sell her oranges in Britain. It would be hard to compete with oranges from Italy and North Africa, which are members of the Common Market and thus pay no tariffs.

Or take Canada, Australia, and New Zealand. They sell vast quantities of grain, meat, dairy products, and fruit to Britain duty free, or at a low tariff. Britain fought for a provision that would safeguard the present level of Commonwealth exports to Britain, and this insistence proved a major stumbling block to British entry.

Grave as is the threat to the other industrialized nations, the most damage will be done to the developing countries. A few former French and Belgian territories will receive preferential entry for their products into the Common Market. But to most of Latin America, Asia, and Africa the Common Market looks like a rich man's club designed to make the rich richer.

Argentina, for example, will be hurt if the Six proceed to eat French duty-free grain, rather than Argentine grain that must pay the Common Market external tariff. Brazil will be hurt when the former French African colonies increase their coffee production and export it to the Six duty free. Ecuador faces the same problem as cocoa production shifts to former French Africa. What the United States gives to Latin America through the Alliance for Progress it can take away by failure to bargain away the Common Market's discriminatory policies.

Some time ago our policymakers perceived that the Common Market could become a threat as well as a blessing. We then decided that Britain must be helped to join in order to leaven the lump of the Six with the yeast of British democracy and free-trade philosophy. Future historians may well dispute whether Britain's entry might not instead merely have enlarged the area of the Common Market's discrimination against the outside world.

But whatever the merits of the Britain-must-join-at-all-costs position, the method we used to pursue it did a disservice to ourselves and to the rest of the free world. We distorted and crippled the tariff-cutting power of President Kennedy's Trade Expansion Act of 1962 to make it a lever to push Britain into the Common Market. The key and much-publicized provision of this act was the power to abolish tariffs entirely on many major industrial commodities, such as consumer durable goods, machinery, chemicals, and paper. Not only the United States but the whole free world stood to benefit. But this power was conditioned on Britain's joining the Common Market. The intent was to convince all concerned that if Britain failed to join, there could be no effective tariff-cutting negotiations. Now that Britain is out, we awaken to find the act's zero-bargaining clause "full of sound and fury, signifying nothing."[1]

A second result of our fixation on the Britain-must-join policy has been the postponement of the negotiations made possible by the Trade Expansion Act. There is no reason why these negotiations should not be taking place now. But State Department spokesmen have let it be known that bargaining must be delayed until at least 1964 while we wait for the British position to be "clarified."

RIGHT THE FIRST TIME

What should the United States do now? To pursue an outworn policy would be the worst folly. It could result in a revival of American protectionism and isolationism. Such a course would make it impossible for us and other advanced countries to meet our responsibility to developing nations. This is a forbidding prospect.

But where there is danger there is also opportunity. De Gaulle's veto of Britain may shake us out of our obsession with the Common Market and its enlargement and cause us to concentrate on the logical goal—a free world community—in trade, in international payments, in economic growth, and in aid. We should take positive steps toward that goal now. This means that we must use the Trade Expansion Act to reduce free world trade barriers quickly and multilaterally, for our own benefit and for everyone else's.

When? Instead of a business-as-usual approach to negotiations, we should start tomorrow.

With whom? Our main bargaining partners, hopefully, will be the Common Market and the free world's other industrialized nations. If the Common Market refuses to negotiate, we should immediately conduct aggressive bargaining with the other industrial nations. We should extend the benefits of these negotiations to the developing countries, but not to a noncooperating Common Market. This would require an amendment to the present GATT most-favored-nation clause, under which tariff reductions negotiated between any countries accrue to the benefit of all other GATT members.

How deep? We should enact the Douglas-Reuss amendment to the Trade Expansion Act, which will give us the power to abolish tariffs on major groups of commodities. At present, administration policy is to the contrary. At his February 7, 1963, press conference, when he was asked whether he planned to seek passage of this amendment, President Kennedy said:

"No; we haven't planned to ask Congress, because we do have the power, under the trade expansion bill, to reduce all other tariffs by 50 percent, which is a substantial authority. We lack the zero authority."

It is true that a 50 percent tariff-cutting power is better than none at all. But it is far from sufficient to stimulate a large expansion in world trade. In fact we had this 50 percent tariff-cutting power several times under the old Reciprocal Trade Agreements Acts of the 1930's and 1940's which President Kennedy consigned to limbo on January 24, 1962, when he sent the trade expansion bill to Congress. "The Trade Agreements Act," he said at that time, "must be replaced by a wholly new instrument. A new American trade initiative is needed to meet the challenges and opportunities of a rapidly changing world economy."

---

[1] The wording of the zero-bargaining clause of the act is complicated. It allows us to bargain foreign tariffs down to zero on commodities of which the United States and the Common Market are the "dominant supplier"—carrying on together at least 80 percent of the world trade in that commodity. The big hitch is that without Britain in the Common Market, there simply are no such commodities (except jet aircraft and margarine). Senator PAUL DOUGLAS of Illinois and I, last year, pressed an amendment to the act which would have given the United States down-to-zero bargaining power on some 26 major groups of commodities, whether or not Britain joined the Common Market. The amendment was adopted by the Senate, but was deleted in Senate-House conference, and hence is not in the act. Under Secretary of State George Ball testified that the reason for the administration's opposition to the Douglas-Reuss amendment was that "we would be injecting ourselves into the UK-EEC negotiations." Senator DOUGLAS replied to Mr. Ball at this point: "I would say you have already been injecting yourself on the side of putting pressure on Great Britain to get into the Common Market.

The President went on to request the special authority to eliminate tariffs: "To be effective in achieving a breakthrough agreement with the EEC so that our farmers, manufacturers, and other free world trading partners can participate," he said, "we will need to use both the dominant-supplier authority (to eliminate tariffs) and the general authority (to reduce tariffs by 50 percent) in combination." [2]

The President, it would now seem, was right the first time—in his 1962 trade message rather than in his 1963 press conference. In the modern industrial world, a vestigial tariff of a few percentage points can effectively block trade.

There is an even more important reason why we need the power to eliminate, not just reduce by 50 percent, the Common Market's tariff wall. The Common Market internal tariffs will shortly be at zero. Discrimination against countries outside it can be eliminated only if the Common Market's external tariff is also reduced to zero. Unless we likewise have the power to reduce our own tariffs to zero we lack the leverage to get rid of those aspects of the Common Market which threaten us and the whole free world. Regardless of the benefits of the Franco-German rapprochement and a new market for the Six, our initial support of the Common Market made sense only if we were prepared to try to bargain away its threatening features as soon as possible.

As the Trade Expansion Act now stands, we are in effect saying: "Since France has kept Britain out of the Common Market, we are going to punish ourselves. We will make it impossible to bargain effectively for the entry of American goods into foreign markets."

Clearly this position makes very little sense. Instead, our first order of business should be to invigorate the Trade Expansion Act by including down-to-zero bargaining power. This would be helpful in many ways.

We in the United States, with our lagging growth rate, our persistent balance-of-payments deficits, our chronic unemployment, will benefit particularly.

The United Kingdom, the European countries not in the Common Market, Canada, and Japan, seriously damaged by the Common Market's protectionism, would also gain. They would welcome U.S. leadership in bargaining down tariffs.

Similarly, the developing nations of Latin America, and the Asian and African countries not affiliated with the Common Market, would profit. They need expanded outlets in the industrialized world for both their raw materials and their growing manufactures. American initiative in eliminating tariffs would be a major step in opening up such markets.

Even the nations of the Common Market themselves would be aided in their economic progress, if not in the political aspirations of some of their leaders. An attempt at autarchy does not make the best use of the resources of the Six or of their former colonies associated with them. They would do far better by concentrating on the items which they are best suited to produce, rather than by using protective tariffs to make uneconomic enterprises profitable.

As U.S. trade policy shifts from its Common Market fixation to a free-world-wide orientation, we must take other steps to advance the prosperity of the free world community.

Foremost, our rate of economic growth must be stepped up. We are already committed to this objective. President Kennedy's tax reduction is to be the prime mover. But this measure must be supplemented by the vigorous trade policy I have outlined here. It will serve to make our industry better able to compete in the world market and also give us some new customers.

Additionally, we need a more durable system of international payments. As the Joint Economic Committee of Congress has pointed out, the present policies of the Treasury and the Federal Reserve System to protect the dollar are inadequate. Our foreign creditors could still start a run on the dollar. Because of this possibility, the Federal Reserve is anxious to make bank loans harder to get, and interest rates higher, all "to protect the dollar." This threat of renewed tight money could mean continued stagnation for our economy.

Fortunately, a way out of this dilemma exists. The countries of Europe should be asked to do for us what we helped them do for each other in the fifties: form a payments agreement under which capital that flows from one country is matched by compensating credits from the others. With such an agreement in effect, the Federal Reserve would have no excuse for restricting growth "to protect the dollar," since the dollar would be protected by our international partners. If France's financial authorities have acquired the habit of saying "No" from France's President, and oppose such an agreement, we should go ahead and negotiate one without France.

At the same time we must continue to push all the industrialized nations to increase their foreign aid efforts in the developing countries. A good start in this direction has been made by the Organization for Economic Cooperation and Development. It should be energetically encouraged. However, I believe that a healthy economic relationship between the industrialized countries—with freer trade, an adequate system of international payments, and full employment—will actually help the developing countries more than any amount of direct aid they are likely to get.

Will the kind of free world community I am proposing involve the surrender of sovereignty by its members? The answer is surely: not much. Existing political machinery—like GATT, for trade; the International Monetary Fund, for payments; the Organization for Economic Cooperation and Development, for growth and aid—can do the job for a long time to come.

MEETING WITH A PURPOSE

Indeed, elaborate political machinery might do more harm than good. If it is less broad than the free world—just sixes or sevens or Atlantic powers—it may merely divide the free world. I do not think we need another supranational organization now. It would be far better, I believe, for parliamentarians and ministers from the industrial countries of the free world to meet from time to time to debate trade or payments or growth or aid. If new institutions are needed they should be allowed to evolve organically from progress in economic and social cooperation rather than from an advance blueprint.

Obviously the free world community cannot be born without the cooperation of other industrial nations. Cabinet ministers must agree to mutual tariffcutting, to buttress each other's currencies, and to share the foreign-aid burden. Such agreements, our own standpatters may say, are unlikely. Perhaps the Belgians will balk, or the Germans will refuse, or the French will once again say "No." How foolish, our pessimists will argue, to make requests that are bound to be turned down, to everyone's embarrassment.

I do not agree. I think we should go ahead and make our requests. Ministers in democratic countries come and go, but public opinion remains. If we place our proposals before the world, public opinion just might bring public officials around, sooner or later.

Sometimes, when the cause is just, the result comes sooner rather than later. In 1962, for instance, Congress had before it the bill to reimburse Philippine citizens for war damage caused by U.S. Armed Forces. On May 9, the House unexpectedly voted the bill down, 201 to 171. The Philippine Government stuck to its guns, saying very publicly that the bill was a just one and ought to pass. President Macapagal canceled his June trip to the United States. The Philippine Independence Day was changed from July 4 to June 12. The American people and then Congress got the message. On August 1 the House passed the bill, 194 to 35, and it became law on August 30.

Similarly if we develop a just proposal for a free world community, it is better to make it publicly, and to take our chances that it will one day prevail. To keep quiet about it is simply to insure failure.

A summit conference of the heads of the free world's industrialized nations might well serve to get us all moving toward the goal of community, and away from interim means that have failed. The sooner we can fix our minds on that goal, the better the chances that the free world will avoid shaking itself apart over United States-European political or military disputes—over who joins or does not join the Common Market, for instance, or over who should have nuclear weapons and how they are to be controlled.

These disputes will continue to occur. They may become more heated as, in one European country after another, power is transferred from the old men who now wield it to younger hands. But these disputes need not be fatal if the free world has a larger purpose to hold it together.

From the standpoint of domestic politics, the goal of a free world community is one the American people can grasp. Once they understand, they will give more support to programs designed to end our economic lag and unemployment at home. For Americans respond best when they can see the connection between domestic and foreign policy, between individual measures and broad goals, between practical means and idealistic ends.

COMMITTEE ON BANKING AND CURRENCY

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may sit Thursday afternoon when the House is in session but only during special orders; in other words, the gentleman from Ohio

---

[2] Administration witnesses testified to this same effect before the House Ways and Means Committee on the trade expansion bill. For example, Secretary of Commerce Luther H. Hodges on March 12, 1962, said:

"This 50 percent authority by itself is simply and clearly not enough to accomplish our objectives concerning the European Common Market. If we were able to reduce our tariffs by no more than 50 percent, the EEC could then be expected to impose a similar limitation in its reductions, still leaving an only partially reduced tariff wall as a formidable barrier against many particularly large U.S. export products.

"With the internal tariffs paid by our European competitors being eliminated altogether, this would still leave U.S. business trying to export to the EEC under a heavy cost disadvantage tariffwise * * *.

"The Europeans are moving to free trade; we need authority to go to zero, too, on at least part of our trade which is primarily concerned with European markets. Either we give our exporters a real chance to keep their markets and share in the growth of the new Europe, or we turn our backs in retreat * * *."

[Mr. OLIVER P. BOLTON] and I just discussed this matter, and the minority does not object if we commence our meeting when the special orders commence on the floor.

Mr. OLIVER P. BOLTON. Mr. Speaker, reserving the right to object, the gentleman from Texas and I have discussed this matter. I made the point that I did not want to sit while there was business on the floor of the House, and we agreed that once special orders came up, we would withdraw our objection, and I will be glad to sit during special orders.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

"REMEMBER THE 'MAINE'"

Mr. ADAIR. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include an editorial.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. ADAIR. Mr. Speaker, I read with pleased surprise this morning the lead editorial in the Washington Post. It now appears that that newspaper, or the editorial writers, are aware of the fact that we do have a problem in Cuba. I hope that this is only the first of a number of such editorials that we may find in that paper and elsewhere. Many of us during recent weeks and months have been saying on this floor and throughout the United States that as long as there is an aggressive Communist government in Cuba, we have a problem which cannot be solved simply by closing our eyes to it.

Mr. Speaker, it is my sincere hope that the administration will now take active, positive steps to remedy this evil and to remove this cancer from our hemisphere.

The editorial reads as follows:

"REMEMBER THE 'MAINE'"

Something like a consensus on Cuban policy is beginning to emerge in this country. The debate over when and how that policy is to be executed should not conceal the growing accord on the policy itself. Last week, the President, the former Vice President, the State Department, and Republican critics of the State Department had different things to say about Cuba, but on two points there was general agreement. And on these two points there is a gathering agreement in the country.

The broad proposition on which there is accumulating accord is simply this: that the existence of a Communist regime, linked to the Soviet Union, in this hemisphere, is a threat to the safety and survival of the United States and of all other free countries in this part of the globe. No administration that openly opposes this belief can long survive. Sooner or later an administration that denounced this maturing conviction would be followed by an alternative government committed to it. In a negative way, there is almost the same accord on how this policy should not be pursued. There is almost universal agreement that invasion, openly and directly, immediately or in the near future, is not the way to pursue our policy.

This aversion to foreign control of Cuba by a hostile power is the constant of American attitudes toward our island neighbor. The Monroe Doctrine was an expression of a view already long-held in this country. It was given even fuller expression in the administration of John Quincy Adams when this country made known its opposition to the transfer of Cuba from Spain to France, England, or any other power. The practical basis of this policy was clearly stated in Daniel Webster's support of President Adams' decision to send delegates to a conference with South American countries, in which the great orator said:

"A Member has said that if Spain chose to transfer the island to any other power she has a right to do so, and we here cannot interfere to prevent her. I must dissent from this opinion. The rights of nations in matters of this kind are much modified by circumstances. Because France or Great Britain could not rightfully complain of the transfer of Florida to us, it does not follow that we could not complain of the cession of Cuba to one of them. The transfer of Florida to us was not dangerous to the safety of either of these nations, nor fatal to any of their great and essential interests. Proximity of position, neighborhood, whatever augments the power of injuring or annoying, very properly belong to the consideration of all cases of this kind. What might otherwise never be thought of is justified for these reasons and on these grounds."

If the American people are aware of such dangers now, they are aware of other dangers that unhappily and unfortunately also exist and that must be weighed with equal care and caution. Impetuous and impulsive and ill considered acts by this country might bring on the dangers of thermonuclear war without diminishing the dangers of Soviet occupation of Cuba.

Therefore, it must be the object of the Government of the United States to develop some alternative to direct action that will further the policy of this country without incurring the hazards of invasion or like military intervention. It is very urgent that the Government develop such a policy and that it disclose it. It is very plain that, throughout this country, the conviction that the Nation is in peril is hardening to a point where no threats and no fears may be sufficient to inhibit the demand for action against the forces that occupy Cuba. Democratic governments are not wholly free agents. A government that does not develop a program of minimum risk runs the danger of being coerced into a program of maximum risks, almost against its will. The absence of an affirmative design, in such a situation, is dangerous—dangerous to this country, to its neighbors and to the peace of the hemisphere and of the whole world.

The Government of this country, the governments of friendly countries and the Government of the Soviet Union as well had better take note of the increasing sense of Americans that the United States is endangered by the Soviet occupation of Cuba. This sense of jeopardy is beginning to pervade the whole body politic. The Soviet Government whatever its fears and doubts, felt compelled, by such an impulse, to send its forces into Hungary. It ought to understand the much greater force that such sentiments exert upon democratic governments. Every day that passes without the termination of the Soviet occupation of Cuba increases the certainty and multiplies the likelihood that another Maine disaster will put the spark to the combustible materials in the Caribbean.

LAOS-SOUTHEAST ASIA-CUBA MESS

Mr. ALGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, as a Member of Congress sworn to uphold the Constitution, I intend to champion capitalism, U.S. sovereignty, and the Republic.

So, it is necessary for me to describe President Kennedy's program as a series of failures on the one hand, and attempts to assume dictatorial power on the other, regardless of existing law.

Yesterday I mentioned a domestic specific. Today I want to call attention to the Laos-southeast Asia-Cuba mess. Without authorization by Congress we are at war in South Vietnam, by President Kennedy's dictation, we are subsidizing Communist takeover of Laos, and we are doing nothing about Khrushchev and communism in Cuba and its spread throughout this hemisphere, in clear violation of the Monroe Doctrine.

The dictator complex which seems to be dominating the thinking from the White House is further pointed up in a news story in the Washington Daily News of April 22 by Virginia Prewett. This story reports the Kennedy administration has "been working on a plan for Cuba—a so-called Laos solution wherein the administration was actually attempting to make a deal with Russia to set up a coalition government to include Communists in Cuba. At the very moment his Laos solution is falling about his ears and we are about to give the Communists another complete victory in Asia, the administration is negotiating for the same kind of deal in Cuba. The world has been saved from the disaster of such a sell-out of freedom in Cuba only because of the magic Kennedy touch which results in failure for every administration-sponsored enterprise."

Mr. Speaker, Congress and the people must be aroused to the terrible danger we face from such arrogance, such disregard of constitutional powers, such an easy assumption to dictatorship now taking place in America. Once more, in the name of the people of the Fifth District of Texas, and as a responsible Member of Congress, sworn to uphold the Constitution and to protect from all enemies, foreign and domestic, I call upon the President to tell the American people his plans for the kind of government he envisions for this Republic.

I call upon the President to tell the American people what his plans are in connection with this violation of the Monroe Doctrine and the taking over of this hemisphere by the Communists and to confide in us without managing the news.

DISCUSSION OF ENTRANCE QUESTIONNAIRE FOR GUERRILLA TRAINEES IN CUBA

Mr. CRAMER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. CRAMER. Mr. Speaker, the amount of sabotage and subversion going on throughout the Americas with Cuba as the spawning grounds, as well as the high degree of efficiency on the part of the Communists in Cuba, has been brought to my attention in the form of a questionnaire which all guerrilla trainees from the Americas have to fill in upon their arrival in Cuba's training camp.

Containing 38 questions, the questionnaire was turned in by a Communist defector who was being trained in Cuba for Communist subversion in South America. The list shows that Communists, through Cuba as the beachhead, are blueprinting a plan for the communization of Latin America through subversion, sabotage, armed action, and encouraged uprisings, and every other detestable Marxist-Leninist tool being taught in Cuban training schools.

It shows the intent and purpose of Cuban subversive training camps, namely, the overthrow of the governments from which the trainees come.

It shows that Cuba is the focal point for gathering vital information for subversive activities by the international Communist conspiracy.

It proves that the forceful overthrow and sabotage activities, if peaceful political subversion does not succeed, is the program in the Western Hemisphere.

It proves long-range planning with Cuba as the base for future arming and training of subversives and for eventual striking at vital installations and existing weak spots.

After the usual questions dealing with the identity, occupation, and places of residence of the trainee, more salient questions are posed:

For example, question 15 asks: Give a description of the police organization and the investigative agencies of your place. Who are the officers in charge of repression? What is their rank? List the names and addresses of any victims of their repressive actions and state if they are persons of strong opinions.

Question 17 asks: What are the possibilities of guerrilla warfare in your region? What would be the morale of the people with regards to this struggle?

Question 18 asks: What is the morale and the preparation of the army for an antiguerrilla war?

Some questions deal with smuggling activities, such as question 23, which asks: List the names and addresses of persons whom you have knowledge to be involved in smuggling activities; and some questions deal exclusively with obtaining information about military establishments in the countries in question. Question 36 asks: Where are the military aircraft located in your region? How many aircraft are there? How are the airfields guarded? What type of documents are needed by the workers to gain access to the airfield? Are the workers under vigilance by the authorities?

Question 38 asks: Where are the naval bases located in your region? Where are the river patrol stations located, if any?

This list, the full text of which I am placing in the RECORD, evidences that Cuba is a clear and present danger to the security of the hemisphere and that it is urgent that we formulate planned action to eliminate Castro's communism.

Incidentally, U.S. citizens going to Cuba for subversive training are called upon to answer this same questionnaire, another reason why I am continuing my efforts to have the open door to subversion in this hemisphere, the Cuban Embassy in Mexico City, closed, and Americans who are taking this subversive route to Cuba prosecuted.

A copy of the questionnaire follows:

ENTRANCE QUESTIONNAIRE FOR GUERRILLA TRAINEES

1. Complete name.

2. Place and date of birth.

3. Residence address.

4. Professional training and occupation before entering Cuba.

5. Names and addresses of parents, brothers, and/or sisters.

6. Occupation of members of the immediate family. List title of position and address of office if any of them occupies a position of responsibility with the government, the armed forces, or the police.

7. Names and addresses of friends who occupy positions of responsibility in the government, the armed forces, or the police. List the titles of their positions, the addresses of their offices, and make a brief statement on the responsibilities of their positions.

8. Have you ever occupied a government position? If so, list title of position, address, the names and addresses of friends employed there. Reason for leaving? How long employed there? Are your friends still employed there?

9. Past and present political affiliations. Duration of affiliation and reasons for terminating them.

10. Have you held any office in the labor unions? In a cultural, social, or sport club? What was the nature of the office held? What was the political orientation of the club or other organization? In the case of a cultural or sport club, were there any events and competitions sponsored by it? If member of a sport club, what type of physical training was administered? Did this training take place in the country? What interest was shown by the police or other authorities about this training?

11. List the revolutionary organizations of your place. Who are their leaders and what is their capability?

12. Describe your personal experience in the underground struggle.

13. Have you ever been arrested? How many times? On what charges? Where were you arrested? How did you obtain your freedom?

14. Have you ever been deported? Reason? How many times? When?

15. Give a description of the police organization and the investigative agencies of your place. Who are the officers in charge of repression? What is their rank? List the names and addresses of any victims of their repressive actions and state if they are persons of strong opinions.

16. What means of transportation are used by the repressive organs of your place? What are the means of communication? What type of information net they have?

17. What are the possibilities of guerrilla warfare in your region? What would be the morale of the people with regards to this struggle?

18. What is the morale and the preparation of the army for an anti-guerrilla war?

19. What is the morale of the police? Was its response to acts of sabotage efficient?

20. What would be the attitude of the police subalterns and men in the eventuality of a revolution? Would they be favorably inclined?

21. What repressive acts by the police or the army are considered the most oppressive in your place?

22. What acts of resistence by the people have brought about the strongest measures of repression by the police?

23. List the names and addresses of persons whom you have knowledge to be involved in smuggling activities.

24. What are the articles most commonly smuggled in and by what method?

25. Give the names and addresses of any smugglers you came in contact. What would be the best way to approach them? When did you contact them? Where? Who are the ones you have most confidence and trust? On what basis?

26. What is situation on the borders of your country? What type of control does the government maintain? Who are the border guards of your region? Whom do you know personally?

27. By what means can one enter your country and what are the necessary procedures?

28. Can one obtain personal identification documents by paying cash?

29. What documents are the citizens of your country required to carry and how are they obtained normally?

30. Can a foreigner buy a home? Can he establish a commercial firm?

31. How can one obtain the necessary documents for an accredited institution?

32. Where do government officials gather? Where do the governing classes meet? How can one obtain admission to these social gatherings? How can credentials be obtained? Can one pay his dues or fees in cash?

33. How many persons know that you are in Cuba? List their names and addresses.

34. How and when did they come to know?

35. What was the length of your military service? Where? What units? What rank did you attain?

36. Where are the military aircraft located in your region? How many aircraft are there? How are the airfields guarded? What type of documents are needed by the workers to gain access to the airfield? Are the workers under vigilance by the authorities?

37. Where are the military bases located? Which are the units in garrison there? What are the means of transport and communization to them?

38. Where are the naval bases located in your region? Where are the river patrol stations located if any?

OHIO AMERICAN LEGION ESSAY WINNER

Mrs. FRANCES P. BOLTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

Mrs. FRANCES P. BOLTON. Mr. Speaker, the American Legion of Ohio annually sponsors an American essay contest among the young students of our great State.

This year I am very proud that one of my constituents, George Meese, a 12th-grade student of 5132 East Farnhurst, Lyndhurst, Ohio, is one of the winners.

One merely has to read his essay to understand why George Meese was declared a winner. He gives one the assurance that our youth of today have an abiding respect for America and a sincere sense of citizenship responsibility.

May I take this occasion to congratulate George Meese on his splendid essay, and include it herewith in the Record.

The essay follows:

American Legion Essay "How Can I Help Preserve the American Democracy"

(By George Meese, 132 East Farnhurst, Lyndhurst, Ohio, 12th grade, Brush High School)

I am a high school senior. I am a series of digits at a test-computing center; I am an impersonal, lifeless statistic on numerous records; I am almost insignificant. Despite this, one simple factor keeps me from becoming an oblivious atom in my own environment. I am an American.

I was created by a Supreme Being through my parents, and at the instant of my creation, I became an American citizen. Because a group of men had the courage and genius to create a new and unique society, I am not equal to a particle of dust, I am a human individual.

Our American democracy is founded on the simple proposition that every man is a sovereign state unto himself, and from this proposition are derived all of our freedoms and civil liberties. Preservation of our democracy, in the true sense of the word, depends entirely upon the individuals in our society. It is fitting, therefore, that as an individual and a sovereign state, I must develop, nurture, and stand by all of the principles which are worthy, and live by all of the standards which breed right.

So many times, attempting the right course seems futile and almost impossible. Yet to preserve democracy, diligence is essential. I'm not speaking of just the major acts and decisions of life, I'm talking about minute, seemingly trivial aspects. When I go to the store, do I return the grocery cart to its place after I have employed its convenience? Do I grumble in assemblies when I'm asked to give the pledge of allegiance? Am I ashamed to freely sing out my national anthem at athletic events? Do I respect my school, made free to me by democracy? The list of these small, seemingly insignificant actions of everyday life is endless, yet every question is extremely personal. Each question denotes a small, but specific, aspect of an individual's behavior. And since the individual is the basis of democracy, the individual's response to these questions is indicative of that democracy.

Preservation of our democratic state is not complete, however, with the mere adherence to rules and worthy standards, nor is it secure through blind devotion to our country. The United States is a society of human beings, and as such, is prone to human error as much as any single individual. Thus mass, blind devotion and extreme nationalism is as harmful to democracy as espionage. Without critics within our society, dedicated to the good of our society, we have no method of self-betterment, and no way of correcting cancerous errors. Thus it is the responsibility of every citizen to be informed concerning his country's policies and actions. To be informed, one must constantly strive for mental acuteness through education, whether formal or informal. As a high school student, then, my biggest responsibility, right now is to acquire a useful, well-rounded, and well-developed knowledge of the world about me. I must broaden my interests and develop my powers of observation and comprehension. In conjunction with this, I must fight apathy more vigorously than any other threat to our democracy. I must urge others to take an active interest in their country, for only with an enlightened, interested public can democracy thrive and progress.

Finally, as a student, I must carefully select and solidify my aspirations, morals, and convictions, with a constant awareness of the fact that I am an American citizen, that I am an individual, and that as such I am a part of the basis of my American democracy.

YITZCHAK BEN-ZVI, PRESIDENT OF ISRAEL

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. Halpern] is recognized for 10 minutes.

Mr. HALPERN. Mr. Speaker, we today join with the people of Israel to mourn the death this morning of their wise and able President, Yitzchak Ben-Zvi. His name was probably little known to most of us until we read in the newspapers, just the other day, of his illness; it is an irony of fate that a man so dedicated to his country and the development of its ideals should be eulogized for his work only after death.

Mr. Ben-Zvi was born in Poltava, Russia, in 1884, and was educated in the universities of Kiev and Istanbul. He was cofounder and leading member of one of the earliest Zionist organizations in Russia, in 1905, and he came to Palestine in 1906—a pioneer in the dream of a Jewish state in the Holy Land, a home for his people in the land of their ancestors. Mr. Ben-Zvi was a writer and scholar, but primarily a Jewish patriot to whom the education and advancement of the Jewish people then resident in the Hold Land was of prime importance. In keeping with this aim he was cofounder of the first Hebrew Secondary School in Jerusalem, and he set about devoting his life to related activities in the aid of his people.

War changed all of this and he was exiled from Palestine by the Turks in 1915. He made his way to the United States and lived in this country until 1918, writing, teaching, and devoting his energies to the eventual formation of a Jewish nation in Palestine. He was cofounder with David Ben-Gurion of the Hechalutz movement, as well as the American Jewish Legion for Palestine. Then, with the coming of allied victory in the war against Germany and her Turkish ally, he returned with the British Army under General Allenby, as a private, to Jerusalem and, with the Allied victory, to marriage, to establishing a home and family, and to new dedication in his work toward the Israeli nation.

Ben-Zvi became an emissary of world zionism to conferences throughout Europe during the 20 years between world wars, and was also a member of the roundtable discussions in London during the 1930's trying to work out the proposals for a separate Jewish state in British-mandated Palestine.

The agony of his fellow people during the years of Hitler's march of extermination through Europe bore heavily on Dr. Ben-Zvi's heart and mind, and he worked with renewed determination to secure a refuge for them in Palestine. The end of the war brought the Jewish revolution against the British authorities in Palestine, and in the fighting the Ben-Zvi's lost their son who died a soldier's death for a free Jewish state.

After independence in 1948, 15 years ago next month, Ben-Zvi, in spite of his loss, worked even harder for the solidarity of the state, and the cooperation of all its people. First as a member of the provisional council, then as a member of the first and second Knesset, finally as President, in 1952, succeeding Dr. Chaim Weizmann, Mr. Ben-Zvi, with quiet patience and firm conviction guided his country through internal crisis and external pressures, to the great and progressive state it is today.

His country is going through a new period of trial at this very moment, with Arab nationalism pressing all about and with voices of dissension within the country—Israel will sorely miss his counsel, but that this Jewish state has grown so strong of moral conviction and political compassion can be laid to the quiet efforts of this great man, whom we, in this House, must salute today—Yitzchak Ben-Zvi, writer, scholar, able politician, statesman.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. Frelinghuysen (at the request of Mr. Halleck), for the balance of this week, on account of death in family.

Mr. Dent (at the request of Mr. Libonati), for Tuesday, April 23, 1963, on account of illness.

Mr. Healey (at the request of Mr. Keogh), for Tuesday, April 23, 1963, on account of illness.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. Halpern (at the request of Mr. Kunkel), for 10 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Congressional Record, or to revise and extend remarks, was granted to:

Mr. Gross and to include extraneous matter.

Mr. Bennett of Florida and to include extraneous matter.

Mr. Moss to include in the remarks he made in the Committee of the Whole today an article and letter referred to in those remarks.

Mr. Charles H. Wilson and to include extraneous matter.

Mr. DEVINE to include in the remarks he made in Committee of the Whole certain extraneous material and charts.

Mr. SCHENCK and to include extraneous matter in his remarks made in Committee of the Whole.

(The following Members (at the request of Mr. KUNKEL) and to include extraneous matter:)

Mr. FINDLEY.

Mr. MAILLIARD.

Mr. CHAMBERLAIN.

(The following Members (at the request of Mr. ALBERT) and to include extraneous matter:)

Mr. GRABOWSKI.

Mr. ADDABBO.

Mr. DELANEY.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on April 22, 1963, present to the President, for his approval, bills and a joint resolution of the House on the following titles:

H.R. 277. An act to amend the act of April 22, 1960, relative to the transfer of certain public lands to the Colorado River Commission of Nevada;

H.R. 1087. An act to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve;

H.R. 1544. An act to authorize David H. Forman and Julia Forman to bring suit against the United States to determine title to certain lands in Maricopa County, Ariz.;

H.R. 2291. An act regarding a homestead entry of Lewis S. Cass;

H.R. 2294. An act to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Unalakleet, Alaska, to Mrs. William E. Beltz;

H.R. 4715. An act to incorporate the Eleanor Roosevelt Memorial Foundation;

H.R. 5067. An act to amend the Agricultural Adjustment Act of 1938, as amended; and

H.J. Res. 234. Joint resolution to provide for the reappointment of John Nicholas Brown as Citizen Regent of the Board of Regents of the Smithsonian Institution.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 26 minutes p.m.) the House adjourned until tomorrow, Wednesday, April 24, 1963, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

722. A letter from the Assistant Secretary of the Interior, transmitting the report on the Fruitland Mesa project, Colorado, pursuant to 53 Stat. 1187 (H. Doc. No. 107); to the Committee on Interior and Insular Affairs and ordered to be printed, with illustrations.

723. A letter from the Assistant Secretary of Defense (Installations and Logistics), transmitting reports submitted by the Army, Navy, Air Force, and Defense Supply Agency for the period July through December 1962, listing contracts negotiated under authority of sections 2304(a)(11) and 2304(a)(16) of title 10, United States Code, pursuant to provisions of title 10, United States Code, section 2304(e); to the Committee on Armed Services.

724. A letter from the Secretary of the Air Force, transmitting the third quarterly report of the fiscal year 1963 (March 31, 1963), showing the number of Air Force officers assigned or detailed, pursuant to section 8031 (c), title 10, United States Code; to the Committee on Armed Services.

725. A letter from the Deputy Administrator, National Aeronautics and Space Administration, transmitting a report on the space flight operations facility at the Jet Propulsion Laboratory, Pasadena, Calif., pursuant to 76 Stat. 383; to the Committee on Science and Astronautics.

726. A letter from the Comptroller General of the United States, transmitting a report on review of employees' air travel authorized by the Washington office, Veterans' Administration, pursuant to the Budget and Accounting Act, 1921 (31 U.S.C. 53), and the Accounting and Auditing Act of 1950 (31 U.S.C. 67); to the Committee on Government Operations.

727. A letter from the Comptroller General of the United States, transmitting a report on audit of Alaska International Rail and Highway Commission for the period July 30, 1957, through June 30, 1961, pursuant to the Budget and Accounting Act, 1921 (31 U.S.C. 53), and the Accounting and Auditing Act of 1950 (31 U.S.C. 67); to the Committee on Government Operations.

728. A letter from the Acting Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to amend the authorization to appropriate money for the maintenance and operation of three experimental stations of the Department of the Interior, and for other purposes"; to the Committee on Interior and Insular Affairs.

729. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to correct a land description in the act entitled 'An act to provide for an exchange of lands between the United States and the Southern Ute Indian Tribe, and for other purposes' "; to the Committee on Interior and Insular Affairs.

730. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to authorize the Secretaries of the Interior and Agriculture to furnish and receive emergency assistance, and for other purposes"; to the Committee on Interior and Insular Affairs.

731. A letter from the Secretary of Commerce, transmitting a draft of proposed legislation entitled "A bill to amend the act approved July 14, 1960, 74 Stat. 526, as amended, relating to the establishment of a register of names in the Department of Commerce of certain motor vehicle drivers"; to the Committee on Interstate and Foreign Commerce.

732. A letter from the Secretary, Department of Health, Education, and Welfare, transmitting a draft of proposed legislation entitled "A bill to amend the Social Security Act so as to provide assistance in the development of new or improved programs to help older persons through grants to the States for community planning and services and for training, through research, development, or training project grants, through grants for construction of recreational activity centers, and through grants to stimulate employment opportunities"; to the Committee on Ways and Means.

733. A letter from the Secretary, Department of Health, Education, and Welfare, transmitting a draft of proposed legislation entitled "A bill to improve the public assistance provisions of the Social Security Act relating to aged individuals and for other purposes"; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. O'BRIEN of New York: Committee on Interior and Insular Affairs. H.R. 2073. A bill to place certain submerged lands within the jurisdiction of the governments of Guam, the Virgin Islands, and American Samoa, and for other purposes; with amendment (Rept. No. 222). Referred to the Committee of the Whole House on the State of the Union.

Mr. SELDEN: Committee on Foreign Affairs. Report pursuant to House Resolution 60, 87th Congress, pertaining to a study mission to Latin America; without amendment (Rept. No. 223). Referred to the Committee of the Whole House on the State of the Union.

Mr. ASHMORE: Committee on the Judiciary. H.R. 1709. A bill to establish a Federal commission on the disposition of Alcatraz Island; with amendment (Rept. No. 232). Referred to the Committee of the Whole House on the State of the Union.

Mr. ASHMORE: Committee on the Judiciary. H.R. 5042. A bill for the relief of certain officers of the naval service erroneously in receipt of compensation based upon an incorrect computation of service for basic pay; without amendment (Rept. No. 233). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LIBONATI: Committee on the Judiciary. H.R. 2262. A bill for the relief of Catalina Properties, Inc.; without amendment (Rept. No. 224). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 2726. A bill for the relief of John F. Wood of Newport News, Va.; with amendment (Rept. No. 225). Referred to the Committee of the Whole House.

Mr. DOWDY: Committee on the Judiciary. H.R. 2753. A bill to authorize suits against the United States to quiet title of certain real property in Modoc County, Calif.; with amendment (Rept. No. 226). Referred to the Committee of the Whole House.

Mr. KING of New York: Committee on the Judiciary. H.R. 1395. A bill for the relief of Rear Adm. Walter B. Davidson; without amendment (Rept. No. 227). Referred to the Committee of the Whole House.

Mr. ASHMORE: Committee on the Judiciary. H.R. 2268. A bill for the relief of Mrs. Geneva H. Trisler; without amendment (Rept. No. 228). Referred to the Committee of the Whole House.

Mr. LIBONATI: Committee on the Judiciary. H.R. 2751. A bill for the relief of Mrs. Jesse Franklin White; without amendment (Rept. No. 229). Referred to the Committee of the Whole House.

Mr. SENNER: Committee on the Judiciary. H.R. 4773. A bill for the relief of referee in bankruptcy; with amendment (Rept. No. 230). Referred to the Committee of the Whole House.

Mr. LIBONATI: Committee on the Judiciary. H.R. 4811. A bill for the relief of Mrs. Marjorie Curtis; without amendment (Rept. No. 231). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 5760. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer a deduction for certain educational expenses; to the Committee on Ways and Means.

H.R. 5761. A bill to increase from $600 to $1,000 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for the dependent, and the additional exemption for old age and blindness); to the Committee on Ways and Means.

H.R. 5762. A bill to amend the Internal Revenue Code of 1954 to provide a partial exclusion from gross income of interest received by individuals; to the Committee on Ways and Means.

H.R. 5763. A bill to amend the Internal Revenue Code of 1954 to increase the maximum amount allowable as a child-care deduction, and to increase the amount of income which may be received without reducing such deduction in certain cases; to the Committee on Ways and Means.

H.R. 5764. A bill to amend the Internal Revenue Code of 1954 to eliminate the present percentage limitations on the deduction for medical, dental, etc., expenses; to the Committee on Ways and Means.

H.R. 5765. A bill to amend the Internal Revenue Code of 1954 to limit the deduction for depletion to the adjusted basis of the property involved, and to reduce the percentage depletion rate for oil and gas wells from 27½ to 23 percent; to the Committee on Ways and Means.

By Mr. ASPINALL (by request):

H.R. 5766. A bill to amend the authorization to appropriate money for the maintenance and operation of three experimental stations of the Department of the Interior, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BARRETT:

H.R. 5767. A bill to bring together families in the United States by granting nonquota status to brothers, sisters, and certain sons and daughters of citizens of the United States and their spouses and children; to the Committee on the Judiciary.

By Mr. BATTIN:

H.R. 5768. A bill to provide direct aid to the States and territories for educational purposes only for the benefit of the taxpayer and local governments; to the Committee on Ways and Means.

H.R. 5769. A bill to amend the Tariff Act of 1930 to impose additional duties on cattle, beef, and veal imported each year in excess of annual quotas; to the Committee on Ways and Means.

By Mr. BENNETT of Florida:

H.R. 5770. A bill to amend the Internal Revenue Code of 1954 to aid in small business survival by adjusting corporate income tax rates; to the Committee on Ways and Means.

By Mr. BROOMFIELD:

H.R. 5771. A bill to amend the act entitled "An act to authorize the payment of the balance of awards for war damage compensation made by the Philippine War Damage Commission under the terms of the Philippine Rehabilitation Act of April 30, 1946, and to authorize the appropriation of $73 million for that purpose"; to the Committee on Foreign Affairs.

By Mr. CELLER:

H.R. 5772. A bill to amend the Bankruptcy Act to authorize courts of bankruptcy to determine the dischargeability or nondischargeability of provable debts; to the Committee on the Judiciary.

By Mr. CORBETT:

H.R. 5773. A bill to amend title 39, United States Code, to increase from 10 to 20 miles the area within which the Postmaster General may establish stations, substations, or branches of post offices; to the Committee on Post Office and Civil Service.

H.R. 5774. A bill to amend the Civil Service Retirement Act to provide for mandatory retirement of employees upon attainment of 70 years of age and completion of 5 years of service, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 5775. A bill to amend the Federal Employees Health Benefits Act of 1959 so as to authorize certain teachers employed by the Board of Education of the District of Columbia to participate in a health benefits plan established pursuant to such act and to amend the Federal Employees' Group Life Insurance Act of 1954 so as to extend insurance coverage to such teachers; to the Committee on Post Office and Civil Service.

By Mr. DANIELS:

H.R. 5776. A bill to amend the Civil Service Retirement Act to provide for mandatory retirement of employees upon attainment of 70 years of age and completion of 5 years of service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. DELANEY:

H.R. 5777. A bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to require a premarketing showing of the safety of cosmetics; to clarify and strengthen existing inspection authority, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. DULSKI:

H.R. 5778. A bill to amend title 39, United States Code, to increase from 10 to 20 miles the area within which the Postmaster General may establish stations, substations, or branches of post offices; to the Committee on Post Office and Civil Service.

By Mr. FULTON of Pennsylvania:

H.R. 5779. A bill to amend section 1034 of the Internal Revenue Code of 1954 to provide that where the taxpayer or his spouse has attained the age of 65 no gain on the sale or exchange of the taxpayer's home will be taxed; to the Committee on Ways and Means.

By Mr. FUQUA:

H.R. 5780. A bill to amend the act of March 9, 1928, to permit the town of St. Marks, Fla., to use for any municipal purpose certain land heretofore patented to it by the United States for public park purposes; to the Committee on Interior and Insular Affairs.

By Mr. GARMATZ:

H.R. 5781. A bill to amend the act of August 1, 1939, to provide that professional nurses shall be registered as staff officers in the U.S. merchant marine; to the Committee on Merchant Marine and Fisheries.

By Mr. GLENN:

H.R. 5782. A bill to amend the Agricultural Act of 1956, as amended, and the Agricultural Act of 1949, as amended, to prohibit the subsidized export of any agricultural commodity to Communist nations and to prohibit sales by the Commodity Credit Corporation of any agricultural commodity to such nations; to the Committee on Agriculture.

H.R. 5783. A bill to amend the Agricultural Act of 1956, as amended, and the Agricultural Act of 1949, as amended, to prohibit the subsidized export of any agricultural commodity to Communist nations and to prohibit sales by the Commodity Credit Corporation of surplus agricultural commodities to such nations at prices less than those available to American consumers; to the Committee on Agriculture.

H.R. 5784. A bill to remove the percentage limitations on retirement of enlisted men of the Coast Guard, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. GUBSER:

H.R. 5785. A bill to amend the United Nations Participation Act of 1945 as it relates to the commitment of the U.S. Armed Forces; to the Committee on Foreign Affairs.

By Mr. HANNA:

H.R. 5786. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I and their widows and dependents; to the Committee on Veterans' Affairs.

By Mr. HOSMER:

H.R. 5787. A bill to create the Interoceanic Canals Commission, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. JOELSON:

H.R. 5788. A bill to amend section 111 of title 23 of the United States Code relating to agreements concerning the use of an access to rights-of-way on the Interstate System; to the Committee on Public Works.

By Mr. KEOGH:

H.R. 5789. A bill to extend the existing temporary suspension of duties on certain classifications of spun silk yarn to the same classifications of yarn of silk and rayon or other synthetic textile; to the Committee on Way and Means.

By. Mr. LANKFORD:

H.R. 5790. A bill to amend the act of October 24, 1951, in order to insure that the salaries of the police for the National Zoological Park shall equal those of members of the U.S. Park Police having comparable duties; to the Committee on House Administration.

By Mr. LIBONATI:

H.R. 5791. A bill to amend title 38, United States Code, to exclude, for purpose of dependent parent's death compensation or dependency and indemnity compensation, income derived from sale of a personal residence when ownership existed under certain conditions; to the Committee on Veterans' Affairs.

By Mr. MATTHEWS:

H.R. 5792. A bill to amend the act of May 21, 1928, relating to standards of containers for fruits and vegetables, to permit the use of additional standard containers; to the Committee on Science and Astronautics.

By Mr. MONAGAN:

H.R. 5793. A bill to provide for the designation of that portion of U.S. Highway No. 7 between Norwalk and Canaan, Conn., as a part of the National System of Interstate and Defense Highways; to the Committee on Public Works.

By Mr. MULTER:

H.R. 5794. A bill to provide an elected mayor, city council, and nonvoting Delegate to the House of Representatives for the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. MURRAY:

H.R. 5795. A bill to repeal the provisions of law relating to the fixing by the Postmaster General, with the consent of the Interstate Commerce Commission, of rates of postage on fourth-class mail, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. NATCHER:

H.R. 5796. A bill relating to the provision of facilities and services for the accommodation of visitors in the national parks, monuments, and reservations, authorizing the Secretary of the Interior to guarantee the obligations of concessioners incurred for such purpose; to the Committee on Interior and Insular Affairs.

By Mr. NEDZI:

H.R. 5797. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of national resources of timber, soil, and range, and of recreational areas; and to authorize pilot local youth public service employment programs; to the Committee on Education and Labor.

By Mr. O'NEILL:

H.R. 5798. A bill to promote State commercial fishery research and development projects, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. RHODES of Arizona:

H.R. 5799. A bill to provide for the precise determination of the southern boundary of the Salt River Indian Reservation, Ariz.; to the Committee on Interior and Insular Affairs.

By Mr. ST GERMAIN:

H.R. 5800. A bill to place in the Comptroller of the Currency authority over foreign branches of national banks; to the Committee on Banking and Currency.

H.R. 5801. A bill to eliminate the population limitation as it affects the eligibility of communities in redevelopment areas for certain benefits under title I of the Housing Act of 1949, and title II of the Housing Amendments of 1955; to the Committee on Banking and Currency.

By Mr. SCHWENGEL:

H.R. 5802. A bill to repeal sections 132 (a), (b) and 409(a) of the District of Columbia Code; to the Committee on the District of Columbia.

By Mr. SILER:

H.R. 5803. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. TOLL:

H.R. 5804. A bill to amend section 1114 of title 18, United States Code, so as to extend its protection to postmasters, officers, and employees of the field service of the Post Office Department; to the Committee on the Judiciary.

By Mr. TOLLEFSON:

H.R. 5805. A bill to amend section 27 of the Merchant Marine Act, 1920, to provide for the carriage of lumber by U.S. flag commercial vessels or by vessels of the country of origin of lumber; to the Committee on Merchant Marine and Fisheries.

H.R. 5806. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder; to the Committee on Ways and Means.

By Mr. CHARLES H. WILSON:

H.R. 5807. A bill to grant leave with pay for Government personnel engaged in any international athletic competition; to the Committee on Post Office and Civil Service.

By Mr. WYDLER:

H.R. 5808. A bill to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. DIGGS:

H.J. Res. 386. Joint resolution to amend the pledge of allegiance to the flag of the United States of America; to the Committee on the Judiciary.

By Mr. FASCELL:

H.J. Res. 387. Joint resolution providing for acceptance by the United States of America of an instrument for the amendment of the constitution of the International Labor Organization; to the Committee on Foreign Affairs.

By Mr. CONTE:

H. Con. Res. 139. Concurrent resolution requesting the President to urge certain actions in behalf of Lithuania, Estonia, and Latvia; to the Committee on Foreign Affairs.

By Mr. McINTIRE:

H. Con. Res. 140. Concurrent resolution requesting the President to bring the Baltic question before the United Nations; to the Committee on Foreign Affairs.

By Mr. DULSKI:

H. Res. 323. Resolution to create a Committee on Employment and Economic Growth; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. ALGER: Memorial of the House of Representatives of the State of Texas, memorializing the Congress of the United States concerning our present disarmament policy as proposed by the U.S. Arms Control and Disarmament Agency; to the Committee on Foreign Affairs.

By Mr. NORBLAD: House Joint Memorial No. 9, adopted by the 52d Legislative Assembly of the State of Oregon, 1963, urging the expeditious processing through the Federal agencies concerned of the review of the Tualatin Valley irrigation project plan, Washington County, Oreg.; to the Committee on Interior and Insular Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Florida, memorializing the President and the Congress of the United States relative to the Cuban refugee problem; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Texas, memorializing the President and the Congress of the United States relative to expressing appreciation to Members of Congress and to the President of the United States for instituting and retaining this capital gains tax treatment of timber under the Internal Revenue Code and requesting that it be retained; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States relative to naming a dam on the Columbia River after Judge Homer T. Bone; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Wisconsin, memorializing the President and the Congress of the United States relative to ratifying an amendment to the Constitution of the United States, relating to the abolition of the poll tax and other taxes as a voting requirement in Federal elections; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BATES:

H.R. 5809. A bill for the relief of Helen Stathopoulos; to the Committee on the Judiciary.

H.R. 5810. A bill for the relief of Frank Myung-Hi Sohn; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia:

H.R. 5811. A bill for the relief of L. C. Atkins & Son; to the Committee on the Judiciary.

H.R. 5812. A bill for the relief of Quality Seafood, Inc.; to the Committee on the Judiciary.

H.R. 5813. A bill for the relief of Col. and Mrs. Harvey H. Hewitt; to the Committee on the Judiciary.

H.R. 5814. A bill for the relief of Norman R. Tharp; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia (by request):

H.R. 5815. A bill for the relief of Mrs. Yok Sun Lee and her minor son, Mark Tom; to the Committee on the Judiciary.

H.R. 5816. A bill for the relief of Mrs. Elsie F. Larson; to the Committee on the Judiciary.

By Mr. BYRNE of Pennsylvania (by request):

H.R. 5817. A bill for the relief of Carlos C. Bancroft III; to the Committee on the Judiciary.

By Mr. CAREY:

H.R. 5818. A bill for the relief of Mrs. Colleen Woods; to the Committee on the Judiciary.

H.R. 5819. A bill for the relief of Audrey Fay Chin; to the Committee on the Judiciary.

By Mr. HAWKINS:

H.R. 5820. A bill for the relief of Chin Hyong Yoo and Dong Myong Shin Yoo; to the Committee on the Judiciary.

By Mr. LINDSAY:

H.R. 5821. A bill for the relief of Mrs. May Cagney; to the Committee on the Judiciary.

H.R. 5822. A bill for the relief of Theodore Zissu; to the Committee on the Judiciary.

By Mr. McFALL:

H.R. 5823. A bill for the relief of W. J. Hickey; to the Committee on the Judiciary.

By Mr. McMILLAN:

H.R. 5824. A bill for the relief of F. Mildred Huggins, Sarah Huggins, and Nettielee Huggins; to the Committee on the Judiciary.

By Mr. MILLER of New York:

H.R. 5825. A bill for the relief of Mrs. Ellen Mary Taylor; to the Committee on the Judiciary.

By Mr. MORSE:

H.R. 5826. A bill for the relief of Virgilio Vaccarezza; to the Committee on the Judiciary.

By Mr. NEDZI:

H.R. 5827. A bill for the relief of Czeslawa Podgorska; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 5828. A bill for the relief of Vincenzo Bua; to the Committee on the Judiciary.

H.R. 5829. A bill for the relief of Goffredo Barretta; to the Committee on the Judiciary.

By Mr. ROONEY:

H.R. 5830. A bill for the relief of Luigia Anceschi; to the Committee on the Judiciary.

By Mr. RYAN of New York:

H.R. 5831. A bill for the relief of Jacob Jambor; to the Committee on the Judiciary.

By Mr. SNYDER:

H.R. 5832. A bill for the relief of Dr. Yung Kook Im; to the Committee on the Judiciary.

By Mr. TOLLEFSON:

H.R. 5833. A bill to authorize the admittance of the vessel *City of New Orleans* to American registry and to permit the use of such vessel in the coastwise trade between the State of Alaska and the State of Washington; to the Committee on Merchant Marine and Fisheries.

By Mr. WALTER:

H.R. 5834. A bill for the relief of Anthony Joseph Calandi; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of of rule XXII,

92. Mr. HANNA presented a petition of the Committee for the Monroe Doctrine signed by several residents of California, which was referred to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

Questionnaire Results

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. CHAMBERLAIN. Mr. Speaker, because of the far-reaching implications—extending far beyond the boundaries of my own congressional district—I would like to call attention to the following results, just tabulated, of my seventh annual questionnaire on legislative issues.

Like many colleagues, I have had a tremendous response to the questionnaires distributed both by direct mail and printed in many newspapers throughout Michigan's Sixth District indicating to me the vital interest of those at home in Federal Government problems. I have found such a poll most helpful in measuring the sentiments of the people from time to time with regard to the many important issues facing the Congress.

The tabulation of the replies, stated in percentages, is as follows:

1963 questionnaire results

[In percent]

	Yes	No	Not sure
1. Should the Federal Government create a Domestic Peace Corps to help with social problems at home?	27	55	18
2. Do you favor the administration's request for a Youth Conservation Corps?	51	32	17
3. Should Congress approve $195,000,000 for a civil defense shelter program?	17	65	18
4. Do we need legislation to provide a Government-supervised secret ballot for union members before a strike can be called?	65	24	11
5. Would you favor a program of direct subsidies either to producers or processors of agricultural commodities to lower prices for consumers?	12	74	14
6. Do you favor the President's recommendations for tax reduction?	42	42	16
7. Should spending be cut to compensate for any tax reduction?	83	8	9
8. Should tax deductions be limited to amounts in excess of 5 percent of income for—			
Medical expenses?	25	58	17
Charitable contributions?	24	56	20
State and local taxes?	20	60	20
Interest payments?	20	59	21
9. If taxes are cut to stimulate growth, should reduction of the 10-percent excise tax on automobiles be part of the package?	78	14	8
10. Would you favor tax deductions for college tuition?	63	28	9
11. Do you approve raising the ceiling on the national debt?	10	76	14

12. Considering current economic conditions, do you regard a balanced budget:

	Percent
Essential	42
Desirable	49
Not important	7
No answer	2

13. Should the Federal Government aid colleges in construction of academic buildings:

	Percent
By loans	50
By grants	14
Not at all	31
No answer	5

14. With regard to medical care for the elderly, do you favor:

	Percent
Increasing social security taxes to finance hospital and nursing costs for those over 65 (King-Anderson approach)	22
A tax credit or Federal financing for private insurance for medical and hospital care for those over 65 (Bow bill)	24
No Federal participation in this field	32
Other	8
No answer	14

15. The budget requests $4.9 billion for foreign aid (military and economic assistance). Should this program be:

	Percent
Continued at this level	18
Substantially reduced	63
Discontinued	13
No answer	6

16. How do you rate President Kennedy's policies:

	Percent
Domestic:	
Excellent	8
Good	23
Fair	41
Poor	24
No answer	4
Foreign:	
Excellent	7
Good	21
Fair	34
Poor	33
No answer	5

The Army Times Guide to Army Posts

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. BENNETT of Florida. Mr. Speaker, coming to my desk the other day from the hands of John Ford, Washington correspondent, was the recently published Army Times Guide to Army Posts, a book edited by Tom Scanlan which seems to me to have great value to Army families—in fact it is designed for such families who want to discover as much as they can about housing, school, and general living conditions at their next post. I have read with great interest about posts where I have been stationed while I was in the armed services or which I visited since I have been on the House Armed Services Committee and it seems to me an excellent job has been done in putting this book together and a job very useful to those in the armed services.

It is my honor to represent a town which is very much interested in military affairs and so when I read the comments of this book I did so with the background of living in a town of this sort and having had an active service in the Army and the background from the House Armed Services Committee. It is my impression that the book should be useful to all Army families and to many others who may wish to make a general study of living conditions in the Army.

Olympic Athletes in Government Employment

EXTENSION OF REMARKS

OF

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. CHARLES H. WILSON. Mr. Speaker, I am today introducing a bill that would permit employees of the Federal Government a leave of absence with pay for the purpose of participating in recognized international athletic events.

I cite for the attention of the House the case of Herman Stokes, an employee of the Los Angeles Post Office.

Mr. Stokes, I understand, is one of the two most outstanding athletes of his particular classification that we have in the United States. This year, Mr. Stokes is unofficially a member of the U.S. team that will be competing in the Pan American games to be held in Brazil in the month of April. Also, Mr. Stokes is a likely candidate for the U.S. team that will be competing in the Soviet Union during the month of July.

It is necessary for Mr. Stokes to be granted at least 4 weeks of leave with pay in addition to his normal vacation leave to participate in these major international athletic events.

Mr. Speaker, the honor and prestige of the United States of America becomes a matter of great concern whenever a team from this country enters an international amateur athletic tournament. Whatever the semantics of discussion on sportsmanship may entail, the fact remains that our Nation is judged by people all over the world on the success or failure of our amateur athletes.

The Post Office Department is sympathetic to the problem presented here;

however, under existing rules and regulations can do nothing to aid or assist this fine young man in his desire to bring international sports trophies home to America.

Mr. Speaker, I trust the House will speedily deal with this proposed legislation. I believe the majority of honorable Members will support it, and I believe our country needs it.

Blasts New Frontier Policies

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. GROSS. Mr. Speaker, under leave to extend my remarks I submit for printing in the Record a newspaper report of a speech made by the gentleman from Wisconsin, William K. Van Pelt, to a meeting of the Fond du Lac, Wis., Chapter of the Daughters of the American Revolution.

The article follows:

REPRESENTATIVE VAN PELT BLASTS ADMINISTRATION POLICY

"If the present administration had a motto it no doubt would read 'If at first you don't deceive, try, try again' " said Representative William K. Van Pelt, Republican, Fond du Lac, in a talk given Friday afternoon following a luncheon for Daughters of the American Revolution and their guests.

Appearing at Raulf Hotel, Representative Van Pelt, in discussing present national and world conditions, said "they are serious."

The Republican Party, the speaker recalled, is in the minority and has been for some time. "But we have fought, we continue to fight for the preservation of this Republic, the very things which the DAR holds dear," he said.

"In Oshkosh and elsewhere they say we have conservative Democrats who will hold the line. I say that just isn't so," the speaker declared. Then he mentioned some of the so-called pork-barrel legislation pushed through Congress because it will provide things for the cities of the Representatives.

"I say to you that you get nothing for nothing. You pay for everything you get and you pay more when the Government does it than if you do it yourself."

Representative Van Pelt then briefly reviewed the accomplishments of the 88th Congress emphasizing two situations on which he focused attention.

One of these is the Cuban situation "more serious than the administration will admit," according to the speaker.

"Maybe the President thinks it's the Soviet Peace Corps which we have in Cuba. I say that any weapon called defensive in nature can also become an offensive weapon.

"I say that so long as one Russian technician remains on Cuban soil, it is one too many. It's serious, it's like having a pistol pointed at your head 24 hours a day."

"And I also believe," the speaker continued, "that we are losing face with the other Latin countries, who no longer, because of our weak and vacillating stand on Cuba, have any faith in the United States."

Van Pelt, before opening the meeting to a question and answer period, also touched on the Clay report on foreign aid.

"I have never realistically been able to see our aid program. We have tried to do something for all people and have spread ourselves so thin we have accomplished nothing," he declared.

The Clay report, the audience was told, "substantiates our stand that our aid is not accomplishing the purpose for which it was intended and should be curtailed."

The administration, he added, "practicing its customary deceit," curtailed a bit and recommended a small reduction.

"What will happen after the several committees complete their review, is hard to tell. All we can do is be hopeful. But let's," he urged, "stand up and be counted in the political arena."

The speaker was introduced by Mrs. O. C. Walstad, DAR regent, who welcomed the members and guests, seated for the luncheon at a flower-decorated table.

Tax Cuts and Tax Reforms

EXTENSION OF REMARKS

OF

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. ADDABBO. Mr. Speaker, during this past week of Easter recess, I met with many of my constituents at various functions throughout the communities in my congressional district. The Seventh Congressional District of New York has a population of nearly a half million people.

The question most asked of me by my constituents and others was in reference to the proposed tax cuts and tax reforms. I found that they, by and large, favor a tax cut, but they have expressed their opposition to tax reforms as the "reforms" affect charitable contributions, medical expenses, real estate taxes, and mortgage interest.

Mr. Speaker, I have today introduced several bills which I believe will give the fairest tax aid to those who are in most need of same. I find myself in accord with the views of those who have written to me on this subject and those with whom I have discussed the proposals in my district.

The several bills I have introduced encompass the following proposals:

First. Deduction for certain educational expenses.

Second. Eliminate the present percentage limitations on the deduction for medical, dental, and so forth, expenses.

Third. Provide a partial exclusion from gross income of interest received by individuals.

Fourth. Increase from $600 to $1,000 the personal income tax exemptions of a taxpayer—including the exemption for a spouse, the exemption for a dependent, and the additional exemptions for old age and blindness.

Fifth. Increase the maximum amount allowable as a child-care deduction, and to increase the amount of income which may be received without reducing such deduction in certain cases.

Sixth. Limit the deduction for depletion to the adjusted basis of the property involved, and to reduce the percentage depletion rate for oil and gas wells from 27½ to 23 percent.

It is my hope that the Committee on Ways and Means will favorably consider these proposals during their present deliberations on tax legislation and that this Congress will give to the people the best and most just tax relief, relief which the people deserve.

U.S. Naval and Marine Corps Reserve Composite Company 5–48

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. MAILLIARD. Mr. Speaker, I should like to draw the attention of my colleagues in the House to the U.S. Naval and Marine Corps Reserve Composite Company 5–48, which meets every Thursday while Congress is in session.

Ours is a volunteer training unit established in January 1957, to afford Members of Congress an opportunity to continue their active participation in the Reserve program of the U.S. Navy, Marine Corps, and Coast Guard. The time and place of meeting are such that Members may participate prior to the normal working day of their congressional duties.

Each weekly meeting consists of a classified operational briefing on Navy-Marine-Coast Guard matters throughout the world, followed by a formal presentation on a subject of current military interest by a foremost authority. Members receive no compensation for the performance of their assigned duties at weekly drill meetings. To further increase their knowledge of the military they engage in active duty training twice yearly. While these training exercises are scheduled during the Easter recess and fall adjournment of Congress, other 1- or 2-day inspections in the national military interest are arranged periodically during the session.

I am pleased to state that members of our unit take time from their already crowded and demanding schedules to participate in the Reserve program and inform themselves on matters which are vital to our national security.

The following Senators and Representatives assigned to U.S. Naval and Marine Corps Reserve Composite Company 5–48 are active in the Naval, Marine Corps, or Coast Guard Reserve.

NAVY MEMBERS

Representative William H. Bates, of Massachusetts.

Representative Robert B. Duncan, of Oregon.

Representative Edmond A. Edmondson, of Oklahoma.

Representative Robert F. Ellsworth, of Kansas.

Representative James G. Fulton, of Pennsylvania.

Representative Chester C. Hosmer, of California.

Representative George Huddleston, Jr., of Alabama.

Representative WILLIAM S. MAILLIARD, of California.

Representative CHARLES McC. MATHIAS, JR., of Maryland.

Representative HERBERT RAY ROBERTS, of Texas.

Representative KENNETH A. ROBERTS, of Alabama.

Representative DONALD H. RUMSFELD, of Illinois.

Representative JOHN P. SAYLOR, of Pennsylvania.

Representative HENRY C. SCHADEBERG, of Wisconsin.

Senator HUGH D. SCOTT, JR., of Pennsylvania.

Representative ARMISTEAD I. SELDEN, JR., of Alabama.

Representative ROBERT T. STAFFORD, of Vermont.

Representative SAMUEL S. STRATTON, of New York.

Representative FRANK THOMPSON, JR., of New Jersey.

Representative ALBERT C. ULLMAN, of Oregon.

MARINE CORPS MEMBERS

Senator DANIEL B. BREWSTER, of Maryland.

Representative JACK B. BROOKS, of Texas.

Representative JAMES C. CORMAN, of California.

Representative ROBERT C. WILSON, of California.

COAST GUARD MEMBERS

Representative CHARLES E. CHAMBERLAIN, of Michigan.

Senator CLAIBORNE D. PELL, of Rhode Island.

Representative JOHN F. SHELLEY, of California.

In addition to the Members listed above, congressional staff personnel with current reserve status are assigned to the unit.

Another Forward Step

EXTENSION OF REMARKS

OF

HON. BERNARD F. GRABOWSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. GRABOWSKI. Mr. Speaker, as a member of the Banking and Currency Committee, I want to express my sincere gratification at the passage of H.R. 5389, the administration's much-needed silver legislation. And to take this opportunity to congratulate all those who helped bring this about.

As Congressman-at-Large from the State of Connecticut, I am privileged to represent an area wherein some 22 establishments are engaged in the use and fabrication of silver as silver products and plateware employing approximately 6,000 employees. The payroll in 1958 for about 3,947 employees was $19,196,000. The value of shipments out of Connecticut in 1958 was $67,186,000 with a value added of $34,621,000. While this figure would be subject to modification because of the impossibility of differentiating out nonsilver products of these producers, the modification would be smaller for Connecticut than the Nation due to the location in Connecticut of such companies as the International Silver Co., Wallace Silversmiths, and Handy & Harmon Co., manufacturers of brazing alloys, silver paint, silver contacts, and so forth, used in defense production; companies which produce the lion's share of such silver products for the entire country.

During the course of the hearings before the Banking and Currency Committee, I was privileged to confer at length with Mr. Douglas Dillon, the Secretary of the Treasury, Mr. John B. Stevens, vice president and general manager of the International Silver Co., and many representatives of mining and producing interests both from Connecticut and other areas. But early in these hearings, I came to believe sincerely that such legislation is in the best interest of the Nation as a whole for many reasons.

Mr. Speaker, although it is not usually my practice to introduce printed testimony in my remarks, I should like to present the following excerpts as I believe that they very appropriately present the questions in a suitably brief and easily understandable form.

First, I would like to quote from the testimony of Mr. Dillon as contained in the "Hearings Before the Committee on Banking and Currency, House of Representatives, 88th Congress, 1st session, on H.R. 4413." His statements, I think, aptly present the need for and purpose of this legislation:

> Basic purposes of legislation: H.R. 4413 implements the recommendations of the President, going back to his instruction to me in November 1961 to suspend further sales of silver, and repeated in his Economic Report in January of this year. Its basic purposes are twofold:
>
> (1) To afford the Government a sure and substantial supply of silver for its coinage needs by making available for this purpose the stocks of silver bullion backing the presently outstanding $1 silver certificates. This amounts to approximately 1,300 million ounces.
>
> (2) To eliminate the obsolete and largely inoperative provisions on the statute books requiring the acquisition and holding of silver in our monetary reserves and putting a Government floor price of 90.5 cents an ounce under newly mined domestic silver, which is far below the current market price.
>
> For many years now silver has not served any major purpose as a monetary reserve metal. While it has been held as a reserve behind outstanding silver certificates, the amount of these in relation to total currency in circulation is small (approximately $2 billion in silver certificates, compared with $30 billion in Federal Reserve notes). Our basic currency is the Federal Reserve note which is backed by 100 percent collateral, 25 percent in the form of gold.
>
> Recent years have seen a sharply increasing worldwide demand for silver for industrial, professional, and artistic uses which is in marked contrast to the situation existing in 1934 when the Silver Purchase Act was passed and in subsequent years up to about 1959.
>
> Today, silver is at a point where current world production is not sufficient to meet current coinage and industrial demands. Most recently, annual free world production of newly mined silver has amounted to about 200 million ounces, compared to a consumption of around 350 million ounces.
>
> Since November 29, 1961, we have been retiring the $5 and $10 silver certificates, replacing them with Federal Reserve notes, and utilizing the silver so released for the coinage of subsidiary coins, but this supply is limited. Coinage requirements appear to be increasing each year, partly at least as a result of the ever-growing use of vending machines. Last year they amounted to about 75 million ounces.
>
> In addition, our increasing population leads to a steady growth in the number of $1 bills required for circulation. Since at present $1 bills can only be issued in the form of silver certificates, this leads to a further annual requirement, which last year amounted to $49 million, or roughly 38 million ounces.
>
> Problems arising if $1 Federal note not authorized: If the $1 Federal Reserve note is not authorized, the Treasury will soon be in the untenable position of being forced into the market to buy silver for its coinage needs. Since U.S. production is only one-third of our industrial requirements, all silver for coinage would have to be acquired from abroad, thus putting an unnecessary strain on our balance of payments.

The next excerpt, from a statement by Rear Adm. Donald J. Ramsey, U.S. Navy, retired, is of value because it dispels, I think, some longstanding misconceptions I have noted regarding the intrinsic monetary value of silver.

> Silver as money: The act of March 14, 1900, established the gold dollar as our standard unit of value. The Gold Reserve Act guarantees an ounce of gold will exchange for $35. Silver was actually demonetized in 1873 and is not a standard unit of value. It has no guaranteed value despite the use in various laws of such words as "standard silver dollars," "monetary value," "seigniorage," and so forth.

Despite the 40-percent increase in the price of silver during the last 15 months, domestic mine production of recoverable silver rose less than 5 percent in 1962. In fact, mine production in Nevada, Utah, and Washington declined. The gain in Arizona silver production reflects greater output of copper ore yielding byproducts of silver. An increase in the price of silver does not mean an increase in production because silver is largely a byproduct in the production of copper, lead, and zinc. These base metals are in oversupply.

Annual consumption of silver in the United States in now averaging 105 million ounces. A few large producers account for most of the 35 million ounces of domestic production. Approximately 40 percent of this production comes from ore mined primarily for its silver content—mostly in Idaho. The remaining 60 percent comes incidentally in the production of copper, lead, and zinc.

It should always be borne in mind that foreign producers greatly benefit by our silver policies. Two-thirds of our annual consumption now comes from abroad. Such purchases amount to about 70 million ounces a year which result in a claim against our gold supply of about $90 million.

Secretary Dillon stated that the silver producing industry has no further need for Government assistance. He pointed out that since late 1961 the producers have seen a spectacular increase in the price of their product amounting to about 40 percent. He stated that the recent rapid rise has created difficulties for the users, who have had to cope as best they can with these increased costs.

Mr. John B. Stevens, vice president and general manager of the International Silver Co., Meriden, Conn., said before the House Banking and Currency Committee:

> I do not feel qualified to discuss the monetary aspects of silver, but I would like to confine myself to what I understand—silver as a raw material."

In his economic report of January 1963, President Kennedy said:

> I again urge a revision in our silver policy to reflect the status of silver as a metal for which there is an expanding industrial demand.

A year earlier President Kennedy said:

> It is uneconomic for the U.S. Government to lock up large quantities of useful silver in the sterile form of currency reserves.

This I understand and applaud because silver is the single most important raw material which the International Silver Co. buys. In a single year we use over 4 million ounces in our silverplated and sterling silver products. Silver is, of course, the largest component in the cost of sterling silver products and a surprisingly large element in the cost of silverplate. For example, at the present price of silver bullion of $1.27 an ounce, the silver content comprises 75 percent of the manufacturing cost of sterling silver knives, forks and spoons, and 60 percent of the cost of sterling silver holloware, which is the trade name for coffeepots, teapots, candlesticks, bowls, trays, platters, and so forth. Even in silverplate such as the famous 1847 Rogers Bros., the silver content is 20 percent of the manufacturing cost of knives, forks, and spoons.

What this means in terms of selling prices is that the retail price of a typical five-piece sterling place setting, including the 10-percent excise tax, has had to be increased from $32.50 to $39.50 as a result of the increase in the price of silver which has taken place in the last year alone, if we are to maintain current profit margins. The retail price of a sterling teapot has had to be increased from $145.75 to $182.

When one considers the essential uses of silver in defense production as well as in less critical products such as silver-zinc batteries, alloys and solders, dental and medical uses, electrical controls, contacts and circuits, mirrors, and so forth, and the smaller, less diversified companies dependent upon moderate price margins for survival, the price of the raw material assumes a greater significance. This last excerpt from a statement by Mr. C. Edwin Ireland, vice president and treasurer, Hamilton Watch Co., on behalf of Wallace Silversmiths, points up some of these difficulties:

> Our company buys about 2 million ounces of silver annually. The sudden increase in the price of silver has therefore added, quite unexpectedly, about $700,000 to our manufacturing costs. To state the situation bluntly, our profit expectations have been substantially lessened.

The question might properly be asked that if the entire industry is faced with the same increase in the cost of raw materials would not an industrywide price increase in the cost of the finished product pass the burden on to the consumer and reserve the profits for the manufacturer. Unfortunately, it just is not that easy.

Changing our prices, once a year, in a period of rising costs can be handled. Changing prices twice a year in unusual circumstances can be tolerated. To do so more often is impossible.

Because of the wild fluctuations in the cost of our raw material, it is impossible to quickly adjust our selling prices to recover the added costs and still be competitive. In any industry, a price change normally entails careful forecasts of raw material costs based on past, current, and anticipated cost levels. With most raw materials, forecasts can be made within reasonable degrees of accuracy. With silver, it is impossible under present conditions. As a result, we find ourselves continually in need of price adjustments to recover, at least in part, the fluctuating cost of silver.

With continued upward and unpredictable fluctuations in the silver market, together with consequent increases in our product selling prices, our retail customers are confused and wary as to their purchasing policy. In general, they are restricting their purchases awaiting some clarification to emerge from which they can gain some assurance of normalcy.

We believe that the price of silver will become far more stable and predictable if it is freed from all artificial controls and supports and is permitted to react to the normal pressures and influences of a free, competitive market. As we understand it, there was no shortage in the supply of silver during 1962 and that all industrial requirements were satisfactorily met from regular suppliers of the commodity. If this is true, then we cannot believe that the elementary law of supply and demand was permitted to operate in that period. In our opinion, there is no other way to explain a 38-percent increase in price when there was no shortage in supply.

As we interpret the effects of H.R. 4413, silver will find its own proper price level as a commodity. To make this possible, it seems to us of great importance that the bill be passed in its entirety. The Secretary of the Treasury must not be required to enter the market for artificial reasons. At the same time, the 50-percent transfer tax must be eliminated so that buyers and sellers can operate normally, and without penalty, in a free market.

Mr. Speaker, I have gone to more length here than I ordinarily would, but so strongly do I feel passage of this legislation to be in the national interest, that I wanted to acquaint as many as possible with the subject matter of the bill. I am also going to urge the two U.S. Senators from Connecticut, Senators Thomas J. Dodd and Abraham A. Ribicoff, to give this proposal careful consideration when it comes up in the Senate. Not only would it aid Connecticut industry, but also strengthen the United States by placing somewhat less reliance upon foreign producers for our silver, at least as far as U.S. coinage is concerned.

Come to the Fair

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. DELANEY. Mr. Speaker, 1 year from yesterday, April 22, 1964, the gates will open on what Mr. Robert Moses has described as "the biggest, most fascinating showcase ever conceived and constructed by the mind and hands of man"—the New York World's Fair 1964–65. With equal humility I would like to say that this is undoubtedly going to be the greatest demonstration of peaceful international competition in the history of mankind—the Olympic of the arts, sciences, industry, and trade.

As the vast and complex preparations for this grand event move into the homestretch—we have less than a year to go—I extend a cordial invitation to every Member of this body and to his constituents. Come to the fair.

Today, with so little time left before the great occasion, it is difficult to imagine that the site for the fair, Long Island's Flushing Meadow Park, will be the magic city envisioned by Mr. Moses. It is a raw-looking place—cluttered with piledrivers, bulldozers, mounds of earth, and slabs of concrete.

The dream seems more real when you stop to consider the amount of work that has already been done to achieve this plateau of several hundred acres interlaced with miles of cable, conduit, and pipe, and containing all of the necessary roads, bridges, and utilities for this, the greatest of all fairs.

You become confident of the reality when you realize the infinite amount of planning and negotiation necessary to bring to the construction stage the exhibits of most of these United States, nearly a hundred foreign governments, and hundreds of producers of goods and services from all over the world.

This will be the greatest, but by no means the first, transformation of Flushing Meadow. In the mid-1930's a stalwart group of New Yorkers, including a new and zealous park commissioner, Mr. Robert Moses, began one of the most ambitious and unlikely reclamation feats of that era. They attacked almost 700 acres of ugly and odorous dump with the express purpose of creating on that site an international exposition. Through their diligent efforts, a blot on the New York landscape which F. Scott Fitzgerald described in "The Great Gatsby" as "a desolate area of land—a valley of ashes" became the scene of the legendary 1939 World's Fair.

After the fair the land was made into a park and became a pleasant oasis in what is now the geographic and population center of New York. It is this oasis, Flushing Meadow Park, that is once again preparing to play host to the world.

The variety of exhibits and events at the New York World's Fair 1964–65 will be almost endless. Visitors will have the opportunity to see the best in architecture and design from across the continent and around the globe. With a minimum of restrictions, the fair is encouraging the free display of talent and imagination in the construction of pavilions and exhibits.

Each State, country, and industry will bring forth their finest. A number of special exhibits, such as Michelangelo's "Pieta" and other religious art from the Vatican, will offer an impressive array of sights and sounds. Every major religion will be represented.

American and foreign industry will capture much of the fair's audience with diverse spectaculars ranging from lifesize reproductions of giant dinosaurs to a $5½ million futuristic wall-less pavilion displaying products of the gas industries. I cannot begin to describe the wonders of the fair. Let it suffice to say that this will be, without a doubt, a billion dollar fair.

There will be even more to the fair than the activity at Flushing Meadow. The cultural activities of the entire city of New York will be geared to the fair. Museums and galleries will hold special exhibits and the Lincoln Center for the Performing Arts will integrate its program with the performing arts presentations at the fair so that this fine new facility can be used to the best advantage of those visitors interested in opera, music, theater, dance, and related offerings.

In addition to all the wonderful things that will greet you at the fair, there is probably no other location that is so well suited for such a vast undertaking. The New York World's Fair 1964–65 will be accessible by parkway, expressway, bridge, tunnel, railway, subway, ship, or plane. Over $100 million is being spent in an accelerated highway improvement program to make the fair even more accessible to those visitors coming by car. Over $4 million in waterway improvements are underway and a 2,000-boat marina—the most modern—will accommodate those traveling to the fair by water. The hotel and dining facilities are more than adequate. Over 600 hotels and thousands of restaurants are keyed to meeting the needs of millions of visitors annually.

In 1 year the New York World's Fair 1964–65 will be ready to welcome you. Arrayed around the 135-foot-tall "Unisphere," symbol of man's achievements in an expanding universe, will be the fruits of the minds and hands and hearts of a good portion of mankind. On that spring evening a 24-billion candlepower tower of light will shoot into the sky and, surrounded by countless satellites, will send up a beacon that may be seen from Boston, Mass., to the District of Columbia.

For New York it will signal, among other things, the celebration of the 300th anniversary of the city's founding and the opening of the Lincoln Center for the Performing Arts. For all of us it will mark the launching of a magnificent endeavor toward that most difficult goal, "Peace Through Understanding." The international cooperation and peaceful competition demonstrated by the opening of the fair will give definition, form, and meaning to democracy for the 70 million people who will attend during its 2-year life. It is less than 1 year away. Mark it on your calendar and start planning now. Come to the fair.

Freeman Letter Means Trouble

EXTENSION OF REMARKS

OF

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1963

Mr. FINDLEY. Mr. Speaker, Members of Congress are in for trouble with farmers and other taxpayers if they try to explain their vote on the feed grain bill by quoting Secretary Freeman's April 19 letter to Members of the House. It tells only part of the story.

Text of Freeman's letter is as follows:

> DEPARTMENT OF AGRICULTURE,
> OFFICE OF THE SECRETARY,
> *Washington, April 19, 1963.*
>
> DEAR CONGRESSMAN ———: I understand the Feed Grain Act of 1963 will come before the House shortly after the Congress returns from its recess. This legislation would extend for 2 years the highly successful measures enacted in 1961 and 1962 which have:
>
> Contributed to a 10-percent increase in net farm income between 1960 and 1962.
>
> Reduced feed grain stocks from a record 3.2 billion bushels in 1961—prior to the time the new feed grains programs became effective—to an estimated 1.9 billion bushels at the close of the current marketing year.
>
> Maintained stable food prices for consumers.
>
> Resulted in savings of $920,000 each day in grain storage and handling charges as compared with this date in 1961.
>
> This is striking progress every citizen understands.
>
> If the House reaffirms its actions of 1961–62 by passing this bill, it means elimination of the unneeded, unwanted feed grain surpluses by 1964. Once the carryover has been reduced to a level adequate for emergency and security reserves, a supply-demand balance can be maintained with less acreage diversion and less cost in the years ahead.
>
> Further, if the House takes favorable action on this legislation, farmers participating in wheat and feed grains price support programs will have greater flexibility in utilization of their land. If the wheat referendum is approved May 21, and there is also a feed grains program, producers will be able to interchange these crops. It is desirable for farmers to know before voting in the referendum what the wheat-feed grain relationship will be.
>
> I am hopeful the success of the feed grain programs and the importance of action now on feed grains in the light of the upcoming wheat referendum will make possible your favorable support of H.R. 4997.
>
> Sincerely,
>
> ORVILLE L. FREEMAN.

He calls the 1961–62 programs highly successful and says they helped to boost farm income. Note these facts:

When direct payments to farmers are deducted, net farm income went down—not up—between 1960 and 1962. The direct tax outlay to farmers rose faster—$1.2 billion—than net farm income—$1.1 billion.

The cost-price squeeze for farmers is actually the worst in years. The farm-parity ratio—prices related to costs—is 77—down from 81 when Mr. Freeman took over. In Illinois, the parity ratio is now 71—lowest on record since 1934.

Mr. Freeman claims his programs have reduced feed grain stocks 1.3 billion bushels. He uses the word "reduced" at the beginning of the sentence but hid the telltale word "estimated" later on. This 1.3 billion figure is sheer speculation.

Based on USDA reports, I can prove that Government grain holdings are down less than half the amount claimed.

Mr. Freeman says the programs have "resulted in savings of $920,000 each day in grain storage and handling charges." This is not factual. It is guesswork, and it is misleading.

Total cost to taxpayers is actually up sharply. The Wall Street Journal, April 23, 1963, said:

> This year's acreage cutting plan, providing for higher price supports on 1963 feed grain crops and lower payments for idling land, will cost taxpayers nearly $1.2 billion, Federal economists estimate. That's $100 million more than probable 1962–63 costs.

Taxpayers are spending more but getting less results. This table shows what is happening—figures from committee report on H.R. 4997.

[In millions]

	Diverted acres	Payments
1961	25.2	$782
1962	28.6	842
1963	25.8	983

NOTE.—Administrative expenses and CCC realized losses not included.

The latest report of the Commodity Credit Corporation shows total Government investment in farm surpluses $8,445,793,604—up 10 percent from a year ago.

The latest USDA "Feed situation" report clearly shows the 1963 program will get far less results despite increased cost. Taxpayers will shell out $8.78 for each dollar's worth of surplus feed grain disposed of this year.

The Secretary said in a letter last June to Senator ELLENDER:

> The voluntary programs are too costly. * * * If the voluntary programs were extended further, through the 1966 crops, the cumulative additional cost would be about $4 billion. This amount is equal to the average yearly Federal income tax payments of nearly 5 million taxpayers; would build 27,000 miles of modern highways; would complete 4,000 watershed projects.

This bill would extend these costly programs through 1965. I contend they have been a gigantic and costly failure, and are a legislative mistake which should not be compounded.

HOUSE OF REPRESENTATIVES

WEDNESDAY, APRIL 24, 1963

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Job 28: 28: *Behold the fear of the Lord, that is wisdom; and to depart from evil is understanding.*

Almighty God, as we bow our heads in prayer, may we be blessed with a stronger and steadier faith in Thee and be inspired to trust and commit ourselves unreservedly to Thy leading.

May we never be inclined to feel that perhaps our faith is a fiction and that justice is only a dream and righteousness merely a delusion.

We humbly acknowledge that in these times of clashing ideals and conflicting ideologies we are tempted to stand with trembling feet on the threshold of a future we cannot foresee or foreknow but may we be sure that each day is in Thy divine keeping and control.

Grant that we may solemnly pledge that we will remain faithful and struggle to the utmost for the sanctity and safety of humanity whenever its fundamental laws and liberties are in peril.

Hear us in Christ's name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 2. An act to establish water resources research centers at land-grant colleges and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research; and

S. 1007. An act to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

CALL OF THE HOUSE

Mr. DEVINE. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 22]

Abbitt
Ashley
Betts
Buckley
Burton
Celler
Cooley
Diggs
Dorn
Fisher
Forrester
Frelinghuysen
Grabowski
Gray
Griffin
Healey
Hébert
Henderson
Lennon
Lloyd
Macdonald
Powell
Roosevelt
Saylor
Shelley
Talcott
Teague, Tex.
Tuck
Vinson
Walter
Widnall

The SPEAKER. On this rollcall 399 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

HEALTH PROFESSIONS EDUCATIONAL ASSISTANCE ACT OF 1963

Mr. HARRIS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 12) to increase the opportunities for training of physicians, dentists, and professional public health personnel, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 12, with Mr. KEOGH in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday the Clerk had read through section 1 ending on line 8, page 1 of the bill. If there are no amendments to this section, the Clerk will read.

The Clerk read as follows:

GRANTS FOR CONSTRUCTION OF MEDICAL, DENTAL, PHARMACEUTICAL, OPTOMETRIC, PODIATRIC, NURSING, OSTEOPATHIC, AND PUBLIC HEALTH TEACHING FACILITIES

SEC. 2. (a) Title VII of the Public Health Service Act (42 U.S.C. chap. 6A) is amended by inserting "AND TEACHING" after "RESEARCH" in the heading thereof, by inserting "AND TRAINING OF PROFESSIONAL HEALTH PERSONNEL" after "FACILITIES" in such heading, and by inserting immediately below such heading "PART A—GRANTS FOR CONSTRUCTION OF HEALTH RESEARCH FACILITIES", and by changing the words "this title" wherever they appear in such title to read "this part".

(b) Such title is further amended by adding at the end thereof the following:

"PART B—GRANTS FOR CONSTRUCTION OF TEACHING FACILITIES FOR MEDICAL, DENTAL, AND OTHER HEALTH PERSONNEL

"*Authorization of appropriations*

"SEC. 720. There are hereby authorized to be appropriated for each fiscal year in the period beginning July 1, 1963, and ending June 30, 1973, (1) not to exceed $45,000,000 for grants to assist in the construction of new teaching facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, or professional public health personnel, (2) not to exceed $15,000,000 for grants to assist in the construction of new teaching facilities for the training of dentists, and (3) not to exceed $15,000,000 for replacement or rehabilitation of existing teaching facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, professional public health personnel, or dentists.

"*Approval of applications*

"SEC. 721. (a) No application for a grant under this part may be approved unless it is submitted to the Surgeon General prior to July 1, 1972.

"(b) (1) To be eligible to apply for a grant to assist in the construction of any facility under this part, the applicant must be (A) a public or other nonprofit school of medicine, dentistry, osteopathy, pharmacy, optometry, podiatry, nursing, or public health and (B) accredited by a recognized body or bodies approved for such purpose by the Commissioner of Education, except that a new school which (by reason of no, or an insufficient, period of operation) is not, at the time of application for a grant to construct a facility under this part, eligible for accreditation by such a recognized body or bodies, shall be deemed accredited for purposes of this part if the Commissioner of Education finds, after consultation with the appropriate accreditation body or bodies, that there is reasonable assurance that the school will, upon completion of such facility, meet the accreditation standards of such body or bodies.

"(2) Notwithstanding paragraph (1), in the case of an affiliated hospital, an application which is approved by the school of medicine with which the hospital is affiliated and which otherwise complies with the requirements of this part may be filed by any public or other nonprofit agency qualified to file an application under section 625.

"(3) In the case of any application, whether filed by a school or, in the case of an affiliated hospital, by any other public or other nonprofit agency, for a grant under this part to assist in the construction of a facility which is a hospital as defined in section 631—

"(A) if the facility is needed in connection with a new school, only that portion of the project to construct the facility which the Surgeon General determines to be reasonably attributable to the need of such school for the facility for teaching purposes,

"(B) if the construction is in connection with expansion of the training capacity of an existing school, only that portion of the project to construct the facility which the Surgeon General determines to be reasonably attributable to the need of such school for the facility in order to expand its training capacity,

"(C) if the construction is in connection with renovation or rehabilitation of facilities used by an existing school, only that portion of the project which the Surgeon General determines to be reasonably attributable to the need of such school for the facilities in order to prevent curtailment of enrollment or quality of training of the school,

shall be regarded as the project with respect to which payments may be made under section 722.

"(c) A grant under this part may be made only if the application therefor is approved by the Surgeon General upon his determination that—

"(1) the applicant meets the eligibility conditions set forth in subsection (b);

"(2) the application contains or is supported by reasonable assurances that (A) for not less than ten years after completion of construction, the facility will be used for the purposes of the teaching for which it is to be constructed, (B) sufficient funds will be available to meet the non-Federal share of the cost of constructing the facility, (C) sufficient funds will be available, when construction is completed, for effective use of the facility for the training for which it is being constructed, and (D) in the case of an application for construction to expand the training capacity of an existing school of medicine, dentistry, osteopathy, pharmacy, optometry, podiatry, nursing, or public health, the first-year enrollment at such school during the first full school year after the completion of the construction and for each of the next nine school years thereafter will exceed the highest first-year enrollment at such school for any of the five full school years preceding the year in which the application is made by at least 5 per centum of such highest first-year enrollment, or by five students, whichever is greater;

"(3) (A) in the case of an application for a grant from funds appropriated pursuant to clause (1) of section 720, such application is for aid in the construction of a new school of medicine, osteopathy, pharmacy, optometry, podiatry, nursing, or public health, or construction which will expand the training capacity of an existing school of medicine, osteopathy, pharmacy, optometry, podiatry, nursing, or public health, (B) in the case of an application for a grant from funds appropriated pursuant to clause (2) of such section, such application is for aid in the construction of a new school of dentistry or construction which will expand the capacity of an existing school of dentistry, or (C) in the case of an application for a grant from funds appropriated pursuant to clause (3) of such section, such application is for aid in construction which will replace or rehabilitate facilities of, or used by, an existing school of medicine, dentistry, pharmacy, optometry, podiatry, nursing, osteopathy, or public health which are so obsolete as to require the school to curtail substantially either its enrollment or the quality of the training provided;

"(4) the plans and specifications are in accordance with regulations relating to minimum standards of construction and equipment;

"(5) the application contains or is supported by adequate assurance that any laborer or mechanic employed by any contractor or subcontractors in the performance of work on the construction of the facility (A) will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a–276a5), and (B) will receive compensation at a rate not less than one and one-half times his basic rate of pay for all hours worked in any workweek in excess of eight hours in any workday or forty hours in the workweek. The Secretary of Labor shall have, with respect to the labor standards specified in this paragraph, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267), and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276c); and

"(6) if the application requests aid in construction of a facility which is a hospital or diagnostic or treatment center, as defined in section 631, an application with respect thereto has been filed under title VI and has been denied thereunder because (A) the project has no or insufficient priority, or (B) funds are not available for the project from the State's allotments under title VI.

Before approving or disapproving an application under this part, the Surgeon General shall secure the advice of the National Advisory Council on Education for Health Professions established by section 725 (hereinafter in this part referred to as the 'Council').

"(d) In considering applications for grants, the Council and the Surgeon General shall take into account—

"(1)(A) in the case of a project for a new school or for expansion of the facilities of, or used by, an existing school, the relative effectiveness of the proposed facilities in expanding the capacity for the training of first-year students of medicine, dentistry, pharmacy, optometry, podiatry, nursing, or osteopathy (or, in the case of a two-year school which is expanding to a four-year school, expanding the capacity for four-year training of students in the field), or for the training of professional public health personnel, and in promoting an equitable geographical distribution of opportunities for such training (giving due consideration to population, available physicians, pharmacists, optometrists, podiatrists, nurses, dentists, or professional public health personnel, and available resources in various areas of the Nation for training such persons); or

"(B) in the case of a project for replacement or rehabilitation of existing facilities of, or used by, a school, the relative need for such replacement or rehabilitation to prevent curtailment of the school's enrollment or deterioration of the quality of the training provided by the school, and the relative size of any such curtailment and its effect on the geographical distribution of opportunities for training (giving consideration to the factors mentioned above in paragraph (A)); and

"(2) In the case of an applicant in a State which has in existence a State planning agency, or which participates in a regional or other interstate planning agency, described in section 728, the relationship of the application to the construction or training program which is being developed by such agency with respect to such State and, if such agency has reviewed such application, any comment thereon submitted by such agency.

"Amount of grant; payments

"SEC. 722. (a)(1) Except as provided in paragraph (2) of this subsection, the amount of any grant under this part shall be such amount as the Surgeon General determines to be appropriate after obtaining the advice of the Council; except that (A) in the case of a grant for a project for a new school, and in the case of a grant for new facilities for an existing school in cases where such facilities are of particular importance in providing a major expansion of training capacity, as determined in accordance with regulations, such amount may not exceed 66⅔ per centum of the necessary cost of construction, as determined by the Surgeon General, of such project; and (B) in the case of any other grant, such amount may not exceed 50 per centum of the necessary cost of construction, as so determined, of the project with respect to which the grant is made.

"(2) The amount of any grant under this part for construction of a project with respect to a school of public health shall be such amount as the Surgeon General determines to be appropriate after obtaining the advice of the Council, and may not exceed 75 per centum of the necessary cost of construction, as determined by the Surgeon General, of such project.

"(b) Upon approval of any application for a grant under this part, the Surgeon General shall reserve, from any appropriation available therefor, the amount of such grant as determined under subsection (a); the amount so reserved may be paid in advance or by way of reimbursement, and in such installments consistent with construction progress, as the Surgeon General may determine. The Surgeon General's reservation of any amount under this section may be amended by him, either upon approval of an amendment of the application or upon revision of the estimated cost of construction of the facility.

"(c) In determining the amount of any grant under this part, there shall be excluded from the cost of construction an amount equal to the sum of (1) the amount of any other Federal grant which the applicant has obtained, or is assured of obtaining, with respect to the construction which is to be financed in part by grants authorized under this part, and (2) the amount of any non-Federal funds required to be expended as a condition of such other Federal grant.

"Recapture of payments

"SEC. 723. If, within ten years after completion of any construction for which funds have been paid under this part—

"(a) the applicant or other owner of the facility shall cease to be a public or nonprofit school or, in case the facility was an affiliated hospital, the applicant or other owner of the facility ceases to be a public or other nonprofit agency qualified to file an application under section 625, or

"(b) the facility shall cease to be used for the teaching purposes for which it was constructed (unless the Surgeon General determines, in accordance with regulations, that there is good cause for releasing the applicant or other owner from the obligation to do so),

the United States shall be entitled to recover from the applicant or other owner of the facility the amount bearing the same ratio to the then value (as determined by agreement of the parties or by action brought in the United States district court for the district in which such facility is situated) of the facility, as the amount of the Federal participation bore to the cost of construction of such facility.

"Definitions

"SEC. 724. As used in this part—

"(1) The terms 'construction' and 'cost of construction' include (A) the construction of new buildings, the expansion of existing buildings, and remodeling, replacement, renovation, major repair (to the extent permitted by regulations), or alteration of existing buildings, including architects' fees, but not including the cost of acquisition of land or off-site improvements, and (B) initial equipment of new buildings and of the expanded, remodeled, repaired, renovated, or alterned part of existing buildings;

"(2) The term 'nonprofit school' means a school owned and operated by one or more corporations or associations no part of the net earnings of which inures, or may lawfully inure, to the benefit of any private shareholder or individual;

"(3) The term 'affiliated hospital' means a hospital, as defined in section 631, which is not owned by, but is affiliated (to the extent and in the manner determined in accordance with regulations) with, a school of medicine which meets the eligibility conditions set forth in section 721(b)(1);

"(4) The terms 'school of medicine,' 'school of dentistry', 'school of osteopathy', 'school of pharmacy', 'school of optometry', 'school of podiatry', and 'school of public health' mean a school which provides training leading, respectively, to a degree of doctor of medicine, a degree of doctor of dentistry or an equivalent degree, a degree of doctor of osteopathy, a degree of bachelor of science in pharmacy or doctor of pharmacy, a degree of doctor of optometry or an equivalent degree, a degree of doctor of podiatry or doctor of surgical chiropody, and a graduate degree in public health; and

"(5) The term 'school of nursing' means a department, school, division, or other administrative unit, in a college or university, which provides, primarily or exclusively, a program of education in professional nursing and allied subjects leading to the degree of bachelor of arts, bachelor of science, bachelor of nursing, or other baccalaureate degree of equivalent rank; or to a graduate degree in nursing.

"National Advisory Council on Education for Health Professions

"SEC. 725. (a) There is hereby established in the Public Health Service a National Advisory Council on Education for Health Professions, consisting of the Surgeon General of the Public Health Service, who shall be Chairman, and the Commissioner of Education, both of whom shall be ex officio members, and sixteen members appointed by the Secretary without regard to the civil service laws. Four of the appointed members shall be selected from the general public and twelve shall be selected from among leading authorities in the fields of higher education, at least eight of whom are particularly concerned with training in medicine, dentistry, osteopathy, pharmacy, optometry, podiatry, nursing, or the public health professions. In selecting persons for appointment to the Council, consideration shall be given to such factors, among others, as (1) experience in the planning, constructing, financing, or administration of schools of medicine, dentistry, osteopathy, pharmacy, optometry, podiatry, nursing, or schools of public health, and (2) familiarity with the need for teaching facilities in all areas of the Nation.

"(b) The Council shall advise the Surgeon General in the preparation of general regulations and with respect to policy matters arising in the administration of this part, and in the review of applications thereunder.

"(c) The Surgeon General is authorized to use the services of any member or members of the Council in connection with matters related to the administration of this part, for such periods, in addition to conference periods, as he may determine. The Surgeon General shall, in addition, make appropriate provision for consultation between and coordination of the work of the Council and the National Advisory Council on Health Research Facilities with respect to matters bearing on the purposes and administration of this part.

"(d) Appointed members of the Council, while attending conferences or meetings of the Council or while otherwise serving at the request of the Surgeon General, shall be entitled to receive compensation at a rate to be fixed by the Secretary but not exceeding $50 per diem, including travel time, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2) for persons in the Government service employed intermittently.

"Noninterference with administration of institutions

"SEC. 726. Nothing contained in this part shall be construed as authorizing any department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over, or impose any requirement or condition with respect to, the personnel, curriculum, methods of instruction, or administration of any institution.

"Regulations

"SEC. 727. (a) The Surgeon General, after consultation with the Council and with the approval of the Secretary, shall prescribe general regulations for this part covering the eligibility of institutions, the order of priority in approving applications, the terms and conditions for approving applications, determinations of the amounts of grants, and minimum standards of construction and equipment for various types of institutions.

"(b) The Surgeon General is authorized to make, with the approval of the Secretary, such other regulations as he finds necessary to carry out the provisions of this part.

"Technical assistance

"SEC. 728. In carrying out the purposes of this part, and to further the development of State, or joint or coordinated regional or other interstate, planning of programs for relieving shortages of training capacity in the fields of medicine, dentistry, osteopathy, pharmacy, optometry, podiatry, nursing, and public health, through constructing teaching facilities, providing adequate financial support for schools, or otherwise, the Surgeon General is authorized to provide technical assistance and consultative services to State or interstate planning agencies established for any of such purposes.

"Planning grants for health education programs

"SEC. 729. There is hereby authorized to be appropriated for each fiscal year in the period beginning July 1, 1963, and ending June 30, 1973, the sum of $500,000 to enable the Surgeon General to make grants to regional, interstate, State, or local public or nonprofit private agencies and organizations and to any public or nonprofit private institution for planning and determining the need for teaching facilities for, or otherwise planning a new, expanded, or improved program of, training physicians, pharmacists, optometrists, podiatrists, nurses, professional public health personnel, or dentists.

"PART C—STUDENT LOANS

"Loan agreements

"SEC. 740. (a) The Secretary of Health, Education, and Welfare is authorized to enter into an agreement for the establishment and operation of a student loan fund in accordance with this part with any public or other nonprofit school of medicine, osteopathy, or dentistry (as defined in section 724) which is located in a State and is accredited as provided in section 721(b)(1)(B).

"(b) Each agreement entered into under this section shall—

"(1) provide for establishment of a student loan fund by the school;

"(2) provide for deposit in the fund of (A) the amounts allocated under this part to the school by the Secretary, (B) an additional amount from other sources equal to not less than one-ninth of amounts deposited pursuant to clause (A), (C) collections of principal and interest on loans made from the fund, and (D) any other earnings of the fund;

"(3) provide that the fund shall be used only for loans to students of the school in accordance with the agreement and for costs of collection of such loans and interest thereon; and

"(4) contain such other provisions as are necessary to protect the financial interests of the United States.

"Loan provisions

"SEC. 741. (a) Loans from a loan fund established under this part may not exceed $2,000 for any student for any academic year or its equivalent, reduced by the amounts loaned to such student for that year out of a loan fund established under section 204 of the National Defense Education Act of 1958. In the granting of such loans, a school shall give preference to persons who enter as first-year students after June 30, 1963.

"(b) Any such loans shall be made on such terms and conditions as the school may determine, but may be made only to a student in need of the amount thereof to pursue a full-time course of study at the school leading to a degree of doctor of medicine, doctor of dentistry or an equivalent degree, or doctor of osteopathy.

"(c) Such loans shall be repayable in equal or graduated periodic installments (with the right of the borrower to accelerate repayment) over the ten-year period which begins three years after the student ceases to pursue a full-time course of study at a school of medicine, osteopathy, or dentistry, excluding from such ten-year period all periods (up to three years) of (1) active duty performed by the borrower as a member of a uniformed service, or (2) service as a volunteer under the Peace Corps Act.

"(d) The liability to repay the unpaid balance of such a loan and accrued interest thereon shall be canceled upon the death of the borrower, or if the Secretary determines that he has become permanently and totally disabled.

"(e) Such loans shall bear interest, on the unpaid balance of the loan, at the rate of 3 per centum per annum, computed only for periods during which the loan is repayable.

"(f) Where any person who obtained one or more loans from a loan fund established under this part—

"(1)(A) engages in the practice of medicine, dentistry, or osteopathy in an area in a State determined by the appropriate State health authority to have a shortage of and need for physicians or dentists; or

"(B) is employed full-time as a physician or dentist by any public agency, is on active duty as a physician or dentists with a uniformed service, or is employed full-time as a physician or dentist by any nonprofit private agency or organization located in a State; and

"(2)(A) in the case of practice described in paragraph (1)(A) of this subsection, the appropriate State health authority certifies to the Secretary of Health, Education, and Welfare in such form and at such times as the Secretary may prescribe that such practice helps to meet the shortage of and need for physicians or dentists in the area where the practice occurs;

"(B) in the case of employment (other than Federal employment or service in a uniformed service) by any public agency or nonprofit private agency or organization, the State health authority for the State in which the employment is performed certifies to the Secretary of Health, Education, and Welfare in such form and at such times as the Secretary may prescribe that such employment helps meet a shortage of and need for persons to perform such employment; and

"(C) in the case of Federal employment or service in a uniformed service, the head of the employing agency or uniformed service, as the case may be, certifies to the Secretary of Health, Education, and Welfare in such form and at such times as the Secretary may prescribe that such employment or service helps meet a shortage of and need for persons to perform such employment or such military service;

then 10 per centum of the total of such loans, plus accrued interest on such amount, which are unpaid as of the date such practice or employment, or such service in a uniformed service begins, shall be canceled thereafter for each year of such practice, employment, or service, or combination thereof, up to a total of 50 per centum of such total, plus accrued interest thereon.

"(g) Loans shall be made under this part without security or endorsement, except that if the borrower is a minor and the note or other evidence of obligation executed by him would not, under the applicable law, create a binding obligation, either security or endorsement may be required.

"(h) No note or other evidence of a loan made under this part may be transferred or assigned by the school making the loan except that, if the borrower transfers to another school participating in the program under this part, such note or other evidence of a loan may be transferred to such other school.

"(i) Where all or any part of a loan, or interest, is canceled under this section, the Secretary shall pay to the school an amount equal to the school's proportionate share of the canceled portion, as determined by the Secretary.

"Authorization of appropriations

"SEC. 742. (a) There are hereby authorized to be appropriated to the Secretary of Health, Education, and Welfare to carry out this part $5,100,000 for the fiscal year ending June 30, 1964, $10,200,000 for the fiscal year ending June 30, 1965, $15,400,000 for the fiscal year ending June 30, 1966, $20,600,000 for the fiscal year ending June 30, 1967, $21,000,000 for the fiscal year ending June 30, 1968, and such sums for the fiscal year ending June 30, 1969, and each of the two succeeding fiscal years as may be necessary to enable students who have received a loan for any academic year ending before July 1, 1968, to continue or complete their education. Sums appropriated pursuant to this subsection shall be allotted among loan funds at schools which have established loan funds under this part.

"(b)(1) The Secretary shall from time to time set dates by which schools with which he has in effect agreements under this part must file applications for allotments to their loan funds.

"(2) If the total of the amounts requested for any fiscal year in such applications exceeds the amounts appropriated under this part for that fiscal year, the allotment to the loan fund of each such school shall be reduced to whichever of the following is the smaller: (A) the amount requested in its application or (B) an amount which bears the same ratio to the amounts appropriated as the number of students estimated by the Secretary to be enrolled in such school during such fiscal year bears to the estimated total number of students in all such schools during such year. Amounts remaining after allotment under the preceding sentence shall be reallotted in accordance with clause (B) of such sentence among schools whose applications requested more than the amounts so allotted to their loan funds, but with such adjustments as may be necessary to prevent the total allotted to any such school's loan fund from exceeding the total so requested by it.

"(3) Allotments to a loan fund of a school shall be paid to it from time to time in such installments as the Secretary determines will not result in unnecessary accumulations in the loan fund at such school.

"Distribution of assets from loan funds

"SEC. 743. (a) After June 30, 1971, and not later than September 30, 1971, there shall be a capital distribution of the balance of the loan fund established under this part by each school as follows:

"(1) The Secretary shall first be paid an amount which bears the same ratio to the balance in such fund at the close of June 30, 1971, as the total amount of the allotments to such fund by the Secretary under this part bears to the total amounts in such fund derived from such allotments and from funds deposited therein pursuant to section 740(b)(2)(B).

"(2) The remainder of such balance shall be paid to the school.

"(b) After September 30, 1971, each school with which the Secretary has made an agreement under this part shall pay to the Secretary, not less often than quarterly, the same proportionate share of amounts received by the school after June 30, 1971, in payment of principal or interest on loans made from the loan fund established pursuant to such agreement as was determined for the Secretary under subsection (a).

"Loans to schools

"SEC. 744. Upon application by any school with which he has made an agreement under this part, the Secretary may make a loan to such school for the purpose of helping to finance deposits required by section 740(b)(2)(B) in a loan fund established pursuant to such agreement. Such loan may be made only if the school shows it is unable to secure such funds upon reasonable terms and conditions from non-Federal sources. Loans made under this section shall bear interest at a rate sufficient to cover (1) the cost of the funds to the Treasury, (2) the cost of administering this section, and (3) probable losses.

"Administrative provisions

"SEC. 745. The Secretary may agree to modifications of agreements or loans made under this part, and may compromise, waive, or release any right, title, claim, or demand of the United States arising or acquired under this part."

Mr. HARRIS (interrupting the reading of the bill). Mr. Chairman, it is obvious that certain language in the bill as introduced has been stricken and the committee has adopted amendments with reference to the program which I explained in detail yesterday. In view of that fact and also the further fact that this section goes to page 28 of the bill, I ask unanimous consent that it be considered as read, included in the RECORD, so that the amendments may be read and acted upon; and, of course, it would be open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment, page 2, strike out lines 14 through 25 and insert in lieu thereof the following:

"SEC. 720. There are hereby authorized to be appropriated over a period of three fiscal years, beginning with the fiscal year ending June 30, 1964, not to exceed the following amounts—

"(1) $105,000,000 in the aggregate for grants to assist in the construction of new teaching facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, or professional public health personnel, of which not more than $15,000,000 may be available for grants before July 1, 1964, and not more than $60,000,000 in the aggregate may be available for grants before July 1, 1965;

"(2) $35,000,000 in the aggregate for grants to assist in the construction of new teaching facilities for the training of dentists, of which not more than $5,000,000 may be available for grants before July 1, 1964, and not more than $20,000,000 in the aggregate may be available for grants before July 1, 1965; and

"(3) $35,000,000 in the aggregate for replacement or rehabilitation of existing teaching facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, professional public health personnel, or dentists, of which not more than $5,000,000 may be available for grants before July 1, 1964, and not more than $20,000,000 in the aggregate may be available for grants before July 1, 1965.

If and to the extent the Surgeon General determines such action will better carry out the objectives of this part, the limitations on the amounts available for grants before July 1, 1964, under any paragraph of this section shall be decreased and the limitation on the amount so available under any other paragraph of this section shall be correspondingly increased; and the amounts appropriated for the fiscal year ending June 30, 1964, under each of such paragraphs shall be similarly adjusted by transfer between them. In applying the dollar limitations of each of those paragraphs for the three-year period ending June 30, 1966, any amount appropriated under any such paragraph but transferred under the preceding sentence to the appropriation under another paragraph shall be deemed to have been appropriated only under such other paragraph."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 4, line 19, strike out "1972" and insert "1965" in lieu thereof.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 5, line 13, after "school of medicine," insert "or school of osteopathy."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 8, line 22, strike out "(A)."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 9, beginning in line 1, strike out ", and" and all that follows through the word "workweek" in line 5.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 14, line 23, insert "or school of osteopathy" before "which".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 19, strike out lines 1 through 12.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 21, strike out lines 19 through 22, and insert in lieu thereof the following:

"(e) Such loans shall bear interest, on the unpaid balance of the loan, computed only for periods during which the loan is repayable, at the rate of 3 per centum per annum, or the going Federal rate at the time the loan is made, whichever rate is the greater. For purposes of this subsection, the term 'going Federal rate' means the rate of interest which the Secretary of the Treasury specifies during June of each year for purposes of loans made during the fiscal year beginning on the next July 1, determined by estimating the average yield to maturity, on the basis of daily closing market quotations or prices during the preceding May on all outstanding marketable obligations of the United States having a maturity date of fifteen or more years from the first day of such month of May, and by rounding off such estimated average annual yield to the next higher multiple of one-eighth of 1 per centum."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 25, beginning in line 2, strike out "$20,600,000 for the fiscal year ending June 30, 1967, $21,000,000 for the fiscal year ending June 30, 1968,".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 25, line 4, strike out "1969" and insert "1967" in lieu thereof.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 25, line 7, strike out "1968" and insert "1966" in lieu thereof.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 26, lines 12, 13, 18, and 25, strike out "1971" and insert "1969" in lieu thereof.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

> Page 27, line 4, strike out "1971" and insert "1969" in lieu thereof.

The committee amendment was agreed to.

Mr. DEVINE. Mr. Chairman, I have an amendment to the bill.

Mr. HARRIS. Mr. Chairman, I wonder if my colleague would indulge with me 5 minutes to our colleague, the gentleman from Virginia [Mr. Gary] to give the House a bit of information that he has regarding another matter in which we are all interested with reference to the Post Office Department.

Mr. DEVINE. I should be very happy to.

The CHAIRMAN. Before recognizing the gentleman from Virginia [Mr. Gary], the Clerk will report the next committee amendment.

The Clerk read as follows:

> Committee amendment: On page 28, strike out lines 1 and 2.

The committee amendment was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Virginia [Mr. Gary].

Mr. GARY. Mr. Speaker, I ask unanimous consent to speak out of order.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. GARY. Mr. Chairman, I rise today to address the House regarding recent reports in the press and on radio and television of the Post Office Department's protests of reductions by this body of its budget requests for the current year and for fiscal year 1964.

I am sure that certain of these reports have caused concern among the Members because of the curtailment of service that has been threatened. I would remind the House that the Post Office Department can paint a black and tearful picture when its funds are being cut. Former Postmaster General Summerfield was a past master in this field.

In cutting the budget in years past as a member of two appropriations subcommittees, I have been accused, with my colleagues, of ruining the Post Office and wrecking our foreign-aid program. It should be noted that the postal service has survived and that the foreign-aid program is flourishing.

Now, because of our action, it is said the elimination of Saturday mail delivery will have to be considered and that the delivery of junk mail may have to be slowed down. It is charged that no delivery service will be possible to new homes and offices.

I have in my possession the only actual order the Post Office Department has made in this regard to date. It prohibits the appointment of new employees in 68 of the largest post offices across the country and calls on these same offices to limit their overtime. It asks that the Department be advised if these restrictions result in any curtailment of service. Richmond, Va., in my congressional district, comes under this order and I am willing to stand firm on the action taken by the Appropriations Subcommittee of which I am chairman and with which the House concurred.

It is true that the House cut $92 million from the budget request of the Department for 1964—but it gave the Post Office $227 million more than it is getting this fiscal year.

It is true the House did make the biggest cut in the Post Office budget in history—but the Post Office budget was also the biggest in history, almost $5 billion.

It is true the House cut $70 million in the operations end of the postal service—but this was less than a 2-percent reduction in the Department's request for operations.

It is true that the new appropriations will have to cover the pay increase voted last year—but we allowed the necessary $133 million for this purpose and approximately $100 million additionally.

It is true that the Post Office did not get $8 million it requested as a supplemental appropriation for fiscal year 1963—but it did get $162 million from a request for $170 million.

It was our deliberate intention to recommend appropriations that would require economies of operation.

But as I told the House when presenting the bill that has the Post Office up in arms, Postmaster General Day has done an outstanding job and I have the utmost confidence in his ability.

Our subcommittee is convinced he can meet the challenge demanded by our enormous postal deficit; our country's long string of unbalanced budgets and the huge public debt that has resulted.

If it is merely the job of this body, Mr. Speaker, to approve the actions of the executive branch of the Government without making a judgment of our own, we might as well pack up and go home.

This House has made a judgment. I am confident that it was a reasonable judgment and that the Post Office will be able to operate. Some tightening of the belt will be necessary but this is a chore that should be undertaken not only by the Post Office Department—but by the Federal Government as a whole.

Mr. HERLONG. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. HERLONG. I would like to say to the gentleman that the suggestion that we do away with Saturday mail could not bother me less. If they want to really help us they could do away with Monday morning mail. Then we would get some help.

Mr. GARY. I am sure you are all aware of the fact that some 10 years ago we did away with two deliveries a day in residential sections, reducing it to one. This has resulted in a savings over the 10 years of a billion and a half dollars on that item alone without causing a hardship to anyone.

Mr. HARRIS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. Harris: On page 14, line 14, immediately after the semicolon insert the following: but such term shall not include the construction or cost of construction of so much of any facility as is used or is to be used for sectarian instruction or as a place for religious worship;

The CHAIRMAN. The gentleman from Arkansas is recognized for 5 minutes.

Mr. HARRIS. Mr. Chairman, I will not take the 5 minutes.

Yesterday we had some discussion regarding the possibility that the funds could be used for constructing facilities which might be used for religious purposes. That is not the intention of the committee. The matter was never raised during the course of the hearings or in discussions we had in executive session. I have looked into the matter. In view of the definition that is included on page 14 of the bill of "construction" and "cost of construction," it appears that someone might interpret it in a way that such use would be possible. This amendment is simply to make it abundantly clear that none of the funds can be used for this purpose.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I will be glad to yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. I am very pleased that the chairman of the committee has offered this amendment. With his permission I would like to ask him a couple of questions. I have in my hand a memorandum from the Department of Health, Education, and Welfare dated April 20, 1961, in which they specify that none of the funds may be used for such construction. This would be under the Hill-Burton Act for public health services—that none of the funds could be used for such construction if it were for a particular denomination. But, for example, if a chapel in a hospital were to be used by all denominations then the construction funds could be used. I take it from the gentleman's amendment it would prohibit the use of Federal funds for the construction of any chapel where any religious instruction could be carried on.

Mr. HARRIS. For a house of worship, yes.

Mrs. GREEN of Oregon. Another question, if the gentleman will permit: Under this memorandum they say funds can be used for equipment under the present programs that are in existence for which funds are used; for example, for pulpits, for news, and so forth, in chapels and other places.

I notice in the bill that part of the funds can be used for original equipment, if I read the bill correctly. Would the amendment which the gentleman offers prohibit the use of any Federal funds for equipment as well as construction for places where there would be sectarian instruction or religious worship?

Mr. HARRIS. Yes, that is a fact. As a matter of fact, I do not think there would be any question that such funds could be used for religious equipment even if this amendment had not been offered.

Mrs. GREEN of Oregon. I thank the gentleman.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. PUCINSKI. Do I understand, then, that under this amendment, if a university obtained assistance to use these funds for construction of its university and then proceeded, with its own funds, to build a chapel for religious purposes, the amendment would bar any Federal assistance, even though the chapel was built with the university's own private funds?

Mr. HARRIS. No, the gentleman is not correct. It does not interfere with what any school might do on its own.

Mr. PUCINSKI. Would the distinguished chairman object if we had the amendment reread?

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that my amendment be reread.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk reread the Harris amendment.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. Yes.

Mr. PUCINSKI. So there can be no question as to what we mean by this amendment, and to establish legislative history, can we have an agreement that there is nothing in this language which would preclude the use of funds for the construction of an educational institution in which a facility of such an institution is to be built for religious purposes, so long as that particular facility for religious purposes is built with funds other than Federal funds?

Mr. HARRIS. I may say to the distinguished gentleman from Illinois that we cannot have any agreement about anything. The facts speak for themselves, the language speaks for itself. It is very clear none of the funds can be used in the construction of facilities for religious purpose. If the school, or someone else on behalf of the school, wants to take it upon themselves to build such facilities for such purposes, they may do so, and it would not be prohibited by this language.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. QUIE. Mr. Chairman, I rise in support of the pending amendment.

May I ask if the gentleman from Arkansas will yield for a question. We have a similar provision in the higher education bill which we have before our Education and Labor Committee. We also refer to the same exclusion in the recapture of payments portion of the bill. In your recapture of payments portion on page 13 it is stated:

> If, within 10 years after completion of any construction for which funds have been paid under this part.

And going down to (b), it is stated:

> the facility shall cease to be used for the teaching purposes for which it was constructed.

Would this mean if the facilities were used for the teaching of religion or used for sectarian purposes, then it would no longer be used for teaching purposes for the reason it was constructed; therefore, the Federal Government could recapture payments?

Mr. HARRIS. In the first place, the amendment provides that the facility cannot be used for sectarian purposes. The provision that the gentleman refers to is the recapture provision. That provision is aimed at a situation where the funds are allocated for a specific purpose and after a certain period the institution decides that it no longer needs the funds for that purpose. In such a case, the agency may go in and recapture a ratio of the Federal funds.

Mr. QUIE. In the event in the future if any of these facilities were used for religious instruction or sectarian worship, the recapture clause would apply?

Mr. HARRIS. I repeat, these funds cannot be used for sectarian and religious purposes. I am not going to make any comment different from that, because that is what the amendment says.

Mr. QUIE. What happens after the building is constructed and the institution uses it for religious purposes?

Mr. HARRIS. If the institution uses the facility for a religious purpose and they insist on using them for such purposes, the recapture provision would be a way to stop that.

Mr. QUIE. If we cannot recapture the funds, how can we enforce it?

Mr. HARRIS. We can recapture the funds but if the institution repays the Federal investment it is then free.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentlewoman from Oregon [Mrs. GREEN].

Mrs. GREEN of Oregon. Would it be agreeable to the chairman to accept another amendment on page 13, immediately below line 20, and insert this language:

> (C) The facility is used for sectarian construction or as a place for religious purposes.

I think that would cover the objection which the gentleman from Minnesota raises, and would be clarifying language to the provision that the chairman proposes.

Mr. HARRIS. I have not seen the language, I have not had any opportunity to know anything about it.

Now, I would think if the funds are used as intended by this program, and then at some subsequent date they tried to use the facilities for purposes that were not intended, then a proper procedure could be brought to prevent them using them for that purpose and to recapture the Federal grant. That is the only way you can get at that problem.

Mr. GOODELL. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from New York.

Mr. GOODELL. I would commend to the chairman the amendment offered by the gentlewoman from Oregon. We have a comparable provision in the proposed higher education bill. This provision would see to it that if, for instance, a classroom was built in a medical school and the medical school was side by side with a school of divinity and 2 to 3 years after the medical classroom was built it became the practice for the school of divinity to have regular classes in one of the classrooms built by these funds in the medical school section, that there could be resort by the Federal Government to recapture the funds used in that construction. This gives the Federal Government some leeway to see that the building is not, for 10 years after construction, turned over for any use for religious purposes. I think it is a very clear and simple amendment.

Mr. QUIE. In conclusion, Mr. Chairman, I want it clear that in supporting the Harris amendment, I in no way object to Federal grants to church-affiliated dental and medical schools. This language will add a further precedent that when Federal assistance is given in higher education, it is never limited to public institutions and that there is no danger of the Federal assistance being used for sectarian instruction or religious worship.

When the higher education bill providing Federal assistance for the construction of academic facilities in institutions of higher learning comes before this House—and I surely hope this might some day happen despite the stranglehold the President has on the measure by holding it in the omnibus bill—some people may feel disposed to object on the grounds that this is contrary to the constitutional separation of church and state. I want to point out to them that there are 11 church-affiliated dental schools and 13 church-affiliated medical schools in the country, the list of which I am inserting in the RECORD.

DENTAL SCHOOLS

California: Loma Linda University; Seventh-Day Adventist.
District of Columbia: Georgetown University; Catholic.
Georgia: Emory University; Methodist.
Illinois: Loyola University; Catholic.
Louisiana: Loyola University; Catholic.
Missouri: St. Louis University; Catholic.
Nebraska: Creighton University; Catholic.
New Jersey: Seton Hall; Catholic.
Tennessee: Meharry Medical College; Methodist Episcopal.
Texas: Baylor University; Baptist.
Wisconsin: Marquette University; Catholic.

MEDICAL SCHOOLS

California: Loma Linda University; Seventh-Day Adventist.
District of Columbia: Georgetown University; Catholic.
Georgia: Emory University; Methodist.
Illinois: Loyola University; Catholic.
Missouri: St. Louis University; Catholic.
Nebraska: Creighton University; Catholic.
New Jersey: Seton Hall; Catholic.
New York: Albert Einstein College of Medicine, Yeshiva University; Jewish Orthodox.
North Carolina: Duke University; Methodist.
North Carolina: Bowman Gray School of Medicine, Wake Forest College; Baptist.
Tennessee: Meharry Medical College; Methodist Episcopal.
Texas: Baylor University; Baptist.
Wisconsin: Marquette University; Catholic.

Mrs. GREEN of Oregon. Mr. Chairman, I move to strike out the last word.

Mr. HARRIS. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Arkansas.

Mr. HARRIS. I have had occasion to read the amendment as read by the distinguished gentlewoman from Oregon, and in view of the provisions of the act and what is intended by the amendment here, I can see no objection whatsoever to the amendment. As a matter of fact, I would expect the agency and those who enter into these agreements for this purpose to carry out the letter as well as the spirit of the law. This amendment would simply make it abundantly clear if ever it is necessary to use this provision, that the recapture provision would become operative in case a grantee would violate the terms of the agreement.

Mrs. GREEN of Oregon. Then, may I ask the chairman, will you offer that as part of your amendment, or separately?

Mr. HARRIS. Well, I will offer it after this amendment is disposed of.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas [Mr. HARRIS].

The amendment was agreed to.

Mr. HARRIS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. HARRIS: (1) On page 13, immediately below line 20, insert the following: "(c) the facility is used for sectarian instruction or as a place for religious worship,".

Mr. HARRIS. I think it is unnecessary to go into this further, because we have just discussed it.

Mr. CAREY. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from New York.

Mr. CAREY. My question is directed to the meaning of the words "sectarian instruction." Now, is this confined to anything that might be taught from a medical viewpoint, in other words, the question of medical ethics, the question of sterilization. All of this might be permissible from a medical viewpoint as long as they do not teach doctrine.

Mr. HARRIS. I think it is understood that the term "sectarian instruction" here has to do with religious instruction.

Mr. CAREY. Primarily medical instruction and not doctrinal in nature.

Mr. HARRIS. I will ask the gentlewoman from Oregon if that is not her interpretation.

Mrs. GREEN of Oregon. On the bills of the Higher Education Subcommittee we discussed this at some length and we said that in sectarian instruction presenting a particular denominational viewpoint, we felt that any administrator who was half smart could put any classes that were involved in another building that was not built by Federal funds and avoid that controversy.

Mr. CAREY. Mr. Chairman, will the gentleman yield for a further question?

Mr. HARRIS. Yes, I yield.

Mr. CAREY. Under this amendment the instruction could be carried out in a part of the building which would have to be privately financed or it could be another part of the building; is that not correct?

Mr. HARRIS. That is true.

I might say in further response to it that this is the type of approach which we adopted in the Federal Airport Program, I think in the 83d Congress—with regard to this type of problem. We provided that the grantee could not utilize any of the funds for the purpose of certain facilities in terminal buildings. We prohibited the use of funds for cocktail lounges and similar such facilities. No precedent is being set by this at all, and we simply follow the same pattern.

Mr. GOODELL. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from New York.

Mr. GOODELL. Does the term "facilities" as used in the gentleman's amendment mean the entire building?

Mr. HARRIS. Yes, if the facility is an entire building. However, it could mean a wing or other expansion of a building, if the grant is for a wing or expansion.

Mr. GOODELL. I beg the gentleman's pardon. I did not hear that last part of his statement.

Mr. HARRIS. It could mean the entire building or a part of the building, depending on the situation.

Mr. GOODELL. If the gentleman will yield further, my concern is that if a classroom in a building is used regularly for sectarian instruction, and there is no question that it is sectarian instruction, do they recapture the pro rata value of the classroom or will they go back to the whole value of the building?

Mr. HARRIS. I should think that the Secretary would take into consideration just what is intended here and then proceed to move accordingly. I just cannot see that there would be any difficulty in that regard.

Mr. GOODELL. If the gentleman will yield further, I am trying to give the Secretary some guidance as to our intention. In our Committee on Education and Labor we intended if they used any part of a facility which is constructed—and that means the entire portion that was constructed with Federal funds—for sectarian purposes, then the recovery clause would apply against the entire portion that was constructed and not just a pro rata share of a small area that might have been used for sectarian purposes. I would like to have that guidance for the Secretary.

Mr. HARRIS. I think the amendment is very clear and it speaks for itself on it. It says if the facility is used for a religious purpose.

Mr. GOODELL. Is it the intention of the chairman and, I believe, this House, that no portion of the building be used at any time for sectarian instruction or religious worship at any time?

Mr. HARRIS. It is my intention that the language be administered just as it reads. The instruction is very clear:

> No part of the funds can be used for this purpose.

Mr. GOODELL. We are talking about the recapture action, if I may say so.

Mr. HARRIS. Yes, sir.

Mr. GOODELL. The building is already constructed? I am talking about the problem that may arise after the building is constructed.

Mr. HARRIS. You can recover only the amount of funds that was put into the project by the institution.

Mr. GOODELL. Is it our intention that they not use any portion of this facility at any time for sectarian instruction or religious worship?

Mr. HARRIS. I am not going to make a statement here that would be contradictory to what I said to the gentleman from Illinois a while ago. If some institution or someone on its behalf comes in and establishes some kind of a chapel in the building with his own funds, then the recapture provision would not apply and religious worship in such chapel would be permitted under this provision.

Mr. GOODELL. My point does not apply to the facility which is constructed or part of it constructed for sectarian purposes with funds provided separately by someone other than the Federal Government. If a facility is constructed with Federal funds and subsequently they convert some part of it at any time for sectarian purposes, then I think it was our intention on the Education and Labor Committee through this type of amendment to have the Federal Government go in and recapture Federal funds used to construct that facility.

Mr. HARRIS. It says the "facility," and that means the entire "facility" but a "facility" under this program could be an entire building or a separate wing or an additional floor of an existing building.

Mr. PUCINSKI. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in opposition to this amendment for the following reasons. This is a very important amendment. It goes to the very substance of this act. It is an amendment that neither the committee reporting the bill has had a chance to study nor the other committee interested in education has had a chance to study. There has been no testimony on this amendment. I submit that my colleagues should know what they are doing here. If you read the entire section that we are amending, you will see the reasons why it is a bad amendment to adopt under the circumstances which brought it before this House.

We are amending section 723 on page 13 of the bill, "Recapture of Payments." It reads as follows:

> If, within ten years after completion of any construction for which funds have been paid under this part—

And then it lists (a) and (b), and then the proposed language, that the facility is used for sectarian instruction or as a place for religious worship. And then we read on—

> the United States shall be entitled to recover from the applicant or other owner of the facility the amount bearing the same ratio to the then value (as determined by agreement of the parties or by action brought in the United States district court for the district in which such facility is situated) of

the facility, as the amount of the Federal participation bore to the cost of construction of such facility.

The gentleman from New York raised the very question a moment ago which we are discussing here regarding an educational institution. We have Protestant colleges and universities; we have Jewish colleges and universities; we have Catholic colleges and universities; and we have nonsectarian institutions of higher learning. These institutions engage in the practice of teaching medicine and its many phases frequently including ethics in their particular field. We are now saying this, that in view of the answer of the chairman to the gentleman from New York when the question was raised, what constitutes a facility? the answer was the entire building could constitute the facility. Who is going to make that determination? the Surgeon General? the court? Who is going to decide?

Suppose a religious-oriented university has a chapel that has been built with its own funds. Earlier the chairman stated that under those conditions it would not constitute a bar to Federal aid for the construction of a school. But along comes the language of this amendment which says "if the facility is used for sectarian instruction or as a place of religious worship." If a chapel has been established in that school with private funds, that facility is being used for religious worship and under the strict interpretation of this amendment, it is entirely conceivable that the United States could move to recapture all the funds expended on the building of that school.

You are dealing with a fundamental question that has plagued this Congress for many, many years. I dare say it is dangerous to try to write amendments to an important act like this—and I think this is a very important bill—I think it is dangerous to be writing amendments under such circumstances; important, basic philosophical amendments that go to deep religious issues, philosophical issues. I say that the ramifications of this amendment are so manifest that I would just as soon take my chances on striking this amendment and proceeding to the approval of this bill. This amendment does not state who is going to make these determinations, who is going to decide. What portion of the facility would be subject to recovery if it is a chapel? What portion of the facility is subject to recovery if, as the gentleman from New York [Mr. CAREY], suggested, a school engages, as part of its curriculum, in the teaching of medical ethics of that particular religion?

Therefore, it is my hope that the House in its wisdom will reject this amendment simply because I do not think we have had sufficient time to study its full ramifications within the time allotted here on the floor. I believe the amendment needs further clarification before we adopt it.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Mr. Chairman, may I say to my colleague from Illinois that this is not an amendment that is new or different. This is language that was considered at some length by the Education Committee. Also, it is an amendment that this House adopted in the Higher Education bill in January of 1962. The only difference is that instead of "10 years after completion of construction," the Education Committee said within 20 years. The language which was adopted by this House in 1962 is more strict than the amendment which has been offered by the gentleman from Arkansas. It has been thoroughly considered. It was carefully considered by the committee on which the gentleman from Illinois serves. At the time it was voted out favorably by that committee this question was not raised. So I urge the adoption of the amendment.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all debate on this amendment close in 5 minutes.

The **CHAIRMAN.** Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The **CHAIRMAN.** The Chair recognizes the gentleman from Iowa [Mr. BROMWELL].

Mr. BROMWELL. Mr. Chairman, I would like to make an observation about this amendment. It is likely to cause trouble; I agree with the gentleman from Illinois. It is also fundamentally foolhardy. A great many of these institutions which propound and disseminate information concerning the healing arts have a religious connection. I do not see how you can separate the study and practice of any of the separate skills of the healing arts from the real or fancied spiritual needs of the people being cared for. Some of our great hospitals have been religiously founded, and some more of our medical schools, as the gentleman observed.

From personal observation I think everyone knows that when a hospital is connected to a medical school many, many of them have a system of morning and evening prayers which are acts of worship which involve not only the clericals of the faith, whatever it may be, but each patient. Moreover, many denominations have the practice of preparing a person about to die for entrance into the hereafter, which involves acts of worship, connected in many instances with institutions of learning.

We are moving into an area of study and practice of medicine in which all aspects of activity are coming under scrutiny, even though acts of mental activity shade off into the spiritual realm. I think the study of the healing arts should be made more unitary rather than fragmentary, for whatever that observation is worth. But I think this amendment represents the kind of silly secularism we should try to avoid in lawmaking activities in the United States because it bears no relationship to life as it is lived. It should be opposed.

The **CHAIRMAN.** The question is on the amendment offered by the gentleman from Arkansas [Mr. HARRIS].

The amendment was agreed to.

Mr. DEVINE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DEVINE: On page 19 strike out line 13 and all that follows down to line 24 on page 27.

Mr. DEVINE. Mr. Chairman, this amendment strikes out the entire loan provision of this bill. I addressed the House at some length yesterday in the Committee of the Whole relative to the provisions relating to the student loans. All of you have available here in the Chamber the CONGRESSIONAL RECORD of yesterday. I would invite your attention to page 6818 and the five pages immediately following wherein there is set out in detail, on a State-by-State basis, the private foundations, the private funds for private sources of loans and the private sources of scholarships that are available to medical school applicants and applicants to schools of higher education throughout the country.

As you know, the American Medical Association has a $16½ million loan program. There are many other foundations that have been set up by State governments and even by medical schools for loan funds. There has been a lot of talk here in the last 2 days about why this bill was before the House Committee on Interstate and Foreign Commerce. That is a good question. In fact, I asked that very question in committee of the Secretary of Health, Education, and Welfare, Mr. Celebrezze. I told him, this appears to me to be a Federal aid to education bill—which it is. He said, "No, this is a health bill." I said, "Mr. Secretary, how about medicare; is that not a health bill? Why is that before the Committee on Ways and Means instead of the Committee on Interstate and Foreign Commerce?" He said, "Medicare is not a health bill; it is an insurance bill." So we could go on and on at length, but I think there is no question here today but that we are talking about a Federal aid to education. And we are talking about loans or scholarships. The House must keep in mind that we resolved this very issue relating to scholarships on the floor of this House last year and a very important piece of legislation was passed by the House and sent to the other body where they could not reach agreement. They put some linguistic gymnastics in it in the form of a provision called "nonreimbursable loans." The bill came back to the House, but nothing ever happened because the House had established its position in opposition to scholarships.

Another thing that is being talked about here is this. All the testimony indicates that the students are beating on the doors of the medical schools wanting to get in, but we do not have room for them and, therefore, the Congress should by this bill, H.R. 12, build more medical facilities to take care of these applicants who cannot get into the schools.

Well, we have a self-defeating argument here. If we provide scholarships to get the kids into school; where are they going when they do not have the room for them?

Another part of the bill says to build the facilities so we can take care of these youngsters. Again it would take from 3 to 5, and, perhaps, 7 years under the terms of this bill to provide the additional medical facilities to take care of the new students for whom we are going to provide the money to go to these schools. As is indicated in the minority views, as contained in the committee report, while a large number of students avail themselves of NDEA, that is National Defense Education Act loans in fiscal year 1962, and there were 3,215 medical students and 1,881 dentistry students, the average loan was less than $700. Let me say this to you. If we leave the loan provisions in this bill, we are going to open up a Pandora's box the likes of which have never been seen before in the Congress. We all admit the medical profession is highly respected and they develop into a higher income category in their community. If these youngsters are not financially able to go into a profession where they can make all this money, what about those who will enter other professions that are less attractive from a future financial standpoint? It would seem to me, if all students need help to go to school, certainly, help should not be restricted to those who would go to the medical schools.

Further, as far as the applicants to medical schools are concerned, I received letters in the last few days and I read one letter before the Committee on Rules about other students who feel they are being discriminated against financially. I think the gentleman from Iowa [Mr. KYL] yesterday referred to his research to determine whether other programs from a scholarship standpoint which have been authorized by the Congress through the National Defense Education Act have, in fact, solved the problem that we are seeking to solve and that is to attract more people to a particular area where there apparently is a lack or a need. He demonstrated that the program failed to accomplish its objective.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARRIS. Mr. Chairman, I offer a perfecting amendment.

The Clerk read as follows:

Amendment offered by Mr. HARRIS: On page 20, line 13, strike out "and", and immediately below line 13 insert the following:

"(4) provide that loans may be made from such fund only to students pursuing a full-time course of study at the school leading to a degree of doctor of medicine, doctor of dentistry or an equivalent degree, or doctor of osteopathy, and that while the agreement remains in effect no such student who has attended such school before July 1, 1966, shall receive a loan from a loan fund established under section 204 of the National Defense Education Act of 1958; and".

On page 20, line 14, strike out "(4)" and insert in lieu thereof "(5)".

On page 20, beginning line 19, strike out ", reduced by the amounts loaned to such student for that year out of a loan fund established under section 204 of the National Defense Education Act of 1958".

On page 22, strike out line 14 and all that follows down through line 5 on page 24.

On page 24, line 6, strike out "(g)" and insert "(f)".

On page 24, line 11, strike out "(h)" and insert "(g)".

On page 24, line 17, strike out "(i)" and insert "(h)".

Mr. COLLIER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COLLIER. Is this a perfecting amendment? I contend that it is not, because it does not deal with the area where it could be construed as a perfecting amendment to the amendment just offered. I make a point of order against this amendment on that ground.

The CHAIRMAN. The Chair is of the opinion that the amendment offered by the gentleman from Arkansas is a perfecting amendment to the text of the pending bill.

Mr. COLLIER. The pending amendment?

The CHAIRMAN. It is a perfecting amendment to the text of the pending bill, to which language of the bill the amendment offered by the gentleman from Ohio is directed.

Mr. COLLIER. A further parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. COLLIER. This is a perfecting amendment to the amendment offered by the gentleman from Ohio.

The CHAIRMAN. No, it is not.

Mr. COLLIER. Then how does it get precedence over the pending amendment?

The CHAIRMAN. Because it is a perfecting amendment to the text of the bill to which the gentleman from Ohio offers his amendment. The vote will come first on the perfecting amendment before the vote is had on the amendment offered by the gentleman from Ohio.

Mr. COLLIER. A further parliamentary inquiry. Will there be an opportunity, then, to vote on the amendment of the gentleman from Ohio?

The CHAIRMAN. After the perfecting amendment is disposed of the question then will recur on the amendment offered by the gentleman from Ohio, but there cannot be a further amendment offered and pending until these are disposed of.

Mr. COLLIER. A further parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COLLIER. In the event the perfecting amendment is adopted it forecloses, does it not, a vote on the amendment offered by the gentleman from Ohio?

The CHAIRMAN. No; it does not. The vote then will come on the amendment offered by the gentleman from Ohio as changed by the perfecting amendment.

Mr. COLLIER. Which strikes out the purpose of the amendment offered by the gentleman from Ohio.

The CHAIRMAN. The vote then will be on the amendment offered by the gentleman from Ohio whether the text of the pending bill has been perfected by the amendment offered by the gentleman from Arkansas or not.

Mr. COLLIER. I thank the Chairman.

The CHAIRMAN. The gentleman from Arkansas is recognized.

Mr. HARRIS. Mr. Chairman, the amendment offered here has for its purpose the clarification of the question of duplication which is of concern to several Members. I appeared before the distinguished Rules Committee on this question.

I pointed out that the committee had given very careful attention to this problem, and that we included a discussion of it in our report and also referred to the specific provisions which are included in the amendment. The nonduplication provisions of this amendment are based on administrative decisions of the Comptroller General.

I also made the statement that if there were any questions in the minds of any Members about what we wanted to make abundantly clear, I would submit an amendment for that purpose. That is what the first part of this amendment I have offered here does today. It is very simple. It merely says if a student obtains a loan while pursuing a full-time course of study at the school leading to a degree of doctor of medicine, doctor of osteopathy, doctor of dentistry, or an equivalent degree, or that while the agreement with the school remains in effect no such student shall receive a loan from a loan fund established under the NDEA.

In other words, there is no duplication whatsoever. The H.R. 12 loan program is designed for this purpose, it is suitable for this purpose; therefore, those who endeavor to prepare themselves for this profession have a place to which they can go to obtain funds for this purpose.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Indiana.

Mr. HALLECK. If the language of the gentleman's amendment is adopted, would it follow that if a student wanted to he could obtain a loan under the National Defense Education Act instead of under this act?

Mr. HARRIS. Yes; but if he did, he could not receive a loan under this act.

Mr. HALLECK. I understand, but he could go the route of the National Defense Education Act instead of the route provided by this bill?

Mr. HARRIS. That is true, if he can get approval of his loan application.

Mr. HALLECK. In view of the fact scholarships are now provided for in the National Defense Education Act, will not the gentleman agree with me this actually is a duplication of what the Congress has been trying to do to assist needy students in getting a higher education?

Mr. HARRIS. No; I would not agree to that. That is not the intent and purpose of it; because, as I have said on many occasions, the provisions of the general education program provided in the National Defense Education Act are not well suited to the needs of medical and dental students. It was not designed for that purpose. The first amendment simply carries this purpose out.

No. 2 is merely a conforming amendment.

No. 3 is similarly conforming, in view of the fact that the bill now provides that such funds would be reduced by the amount received under NDEA. If this amendment is adopted, that provision will no longer be necessary.

The other major amendment would strike out the provisions on pages 22, 23, and 24 which refer to forgiveness of the loans. We have heard much about that. There seems to be a feeling that under this bill these provisions would, in effect, provide scholarships. In order to meet that objection, I offer to strike out the forgiveness provisions.

As a matter of fact, the committee considered at the outset the forgiveness provisions included in the NDEA in connection with the forgiveness feature of this bill. By amendments offered by the gentleman from California and the gentleman from Illinois, we perfected these provisions and expanded them to meet the purposes of H.R. 12.

In view of the fact that differences arose and that the loan provisions are so important, in order to remove any doubt in the mind of any Member, we thought we would just strike out these provisions altogether, and that is what is done in this amendment.

The other amendments are clearly conforming, in view of this proposal.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. MEADER. Mr. Speaker, I ask unanimous consent that the gentleman from Arkansas [Mr. HARRIS] may proceed for 2 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. MEADER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Michigan.

Mr. MEADER. Following up the colloquy between the gentleman and the minority leader, the gentleman from Indiana [Mr. HALLECK], with respect to availability of other loans, I would like to ask the gentleman's view of the eligibility for a loan under this section of one who also had received a loan from the American Medical Association Education and Research Foundation. And, I call the attention of the committee and the gentleman to page 251 of the committee hearings in which a witness on behalf of the AMA testified that in the 10 months their loan program had been in effect, they had granted some 5,299 loans to a total of 4,694 individuals. Now, my question is this: Will a medical student, if this bill becomes law, be able to go to the AMA fund and also go to the loan fund under this act?

Mr. HARRIS. We do not intend nor is there any implication in the language of the bill that might prevent or prohibit a student from going any place, legitimately, to get any assistance that he can, whether it is from this fund or the bank or their parents or whoever it might be.

Mr. MEADER. The only thing he could not do would be to go to the National Defense Education fund if he was applying for a loan here?

Mr. HARRIS. That is true.

Mr. MEADER. He could not get a loan from the Government?

Mr. HARRIS. That is true.

Since you mentioned Dr. Dorman, let me say that he testified before the committee that "there is a need for student loans.

"The question comes up whether these loans should be drawn from Federal sources, and on this we have no specific position, either for or against. We do not oppose it."

Mr. MEADER. They subsequently have made up their minds and sent a letter to every Member of the House definitely opposing the loan provision of this bill.

Mr. HARRIS. That was at the very last, too, only a few weeks ago.

The CHAIRMAN. The time of the gentleman from Arkansas has again expired.

Mr. POWELL. Mr. Speaker, I ask unanimous consent that the gentleman from Arkansas [Mr. HARRIS] may proceed for 2 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. POWELL. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from New York.

Mr. POWELL. Will the gentleman from Arkansas be kind enough to inform me whether any of his perfecting amendments amend the National Defense Education Act?

Mr. HARRIS. They do not, with one exception. If a student files an application through his own institution, where he proposes to go, and receives funds through this program, then he would not be eligible for an NDEA loan.

Mr. POWELL. Mr. Chairman, I make the point of order against that section of the perfecting amendment which amends the National Defense Education Act as it not being within the jurisdiction of the Committee on Interstate and Foreign Commerce.

The CHAIRMAN. In the opinion of the Chair, the point of order which the gentleman now raises comes too late.

Mr. HARRIS. I believe, Mr. Chairman, that these amendments are very appropriate. I believe they are very desirable, and will strengthen this program. They will certainly clear up some of the misunderstandings that a lot of Members have, in my judgment.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Florida.

Mr. CRAMER. One of the justifications for the legislation cited by the majority is that it will make doctors available in rural areas where they are not now available. Would not the striking of this provision do away with the justification for the legislation because the encouragement is thus gone?

Mr. HARRIS. Well, the committee went into that, too, and it found out that in many instances, called to our attention, that although through some such method they were caused to move into rural areas, when they get firmly established they sometimes move into other areas.

Mr. CRAMER. Then I understand the gentleman's amendment would eliminate anything in the bill so far as encouraging doctors to go to rural areas; is that correct?

Mr. HARRIS. We are trying to encourage doctors to go to all areas of the United States.

Mr. YOUNGER. Mr. Chairman, I rise in opposition to the perfecting amendment that the chairman has just introduced, and I do so because it was my amendment that provided for the forgiveness. Actually, if you will read the testimony you will find and I believe I attended every session when the hearings were held. There is very little evidence that there is a shortage of either dentists or doctors in the cities. Unless we can provide some method of getting doctors and dentists into the areas where there is a shortage—and those are the rural areas—then I must confess that there is not much evidence in the hearings which would support the stated purposes of the entire bill. For that reason I believe that we ought to provide some incentive for the doctors to go into the areas where they are needed. Therefore, I am opposed to this amendment.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. YOUNGER. I yield to the gentleman from Florida.

Mr. CRAMER. Then does the gentleman understand and agree with the answer of the chairman on the question I just asked, that the only incentive in the bill insofar as providing physicians or encouraging physicians to practice in rural areas is the loan forgiveness provision and the striking of the loan forgiveness provision results in the bill offering no incentive of any kind to doctors to practice in rural areas and therefore no assistance where the assistance is really needed?

Mr. YOUNGER. The gentleman from Florida is correct. In the committee I even went so far as to offer an amendment to give 100-percent forgiveness because unless we can provide some method of getting the doctors into areas where they are needed then we are not accomplishing very much by this bill.

Mr. CRAMER. Mr. Chairman, will the gentleman yield further?

Mr. YOUNGER. Yes.

Mr. CRAMER. I am not in favor of the forgiveness provision, but would there be any other way by which doctors could be encouraged to go to rural areas other than by providing for forgiveness or actual grants to the doctors? I do not think that is the approach that should be followed.

Mr. YOUNGER. In answer to the gentleman, evidence was presented where the communities have actually built a small clinical unit and persuaded a doctor to come into the area. He stayed there for a year or two and then left. It is my recollection that one of the Members yesterday told of a case where they got a doctor out of the Air Force to come into a particular area and practice. He practiced just long enough so that he could be sure that he was outside of the jurisdiction of the Air Force, and then he left, and avoided the draft in that way. There is nothing I know of which has been presented that would offer the incentive other than the forgiveness.

Mr. BENNETT of Michigan. Mr. Chairman, I rise in support of the perfecting amendment, offered by the gentleman from Arkansas.

Mr. Chairman, it is my opinion that this is a highly important amendment. It is my further opinion that it deals with a basic philosophy in connection with making loans to college students.

Mr. Chairman, when we undertake to make loans to young men who are studying to be doctors we are assisting them to enter perhaps the most lucrative profession that exists today. To provide as an incentive or whatever else you want to call it, the forgiving of a part of that obligation for the doctor to practice in a rural area or into a city area, or into any other particular area of the country after he graduates, is basically wrong in my opinion. If the medical student or any other student borrows $5,000 from the Government to pay for his education, he ought to be very happy to pay it back, and he ought to be very happy to voluntarily go to the area of the country where his services are most needed rather than being forced into a community through bribery or regimentation. Therefore, I think that this is one of the most important amendments to this legislation, in all deference to my distinguished friend, the gentleman from California [Mr. YOUNGER], who sponsored this provision. I think the gentleman's intention is the best, but in my opinion to give a medical student or a doctor a reward to control the location of his practice is un-American. In my judgment any American who does not want to repay a loan for his college education is not worth his salt.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. BENNETT of Michigan. I yield to the gentleman.

Mr. YOUNGER. What would happen if a student borrowed from the National Defense Education Act, took his doctor's degree and went into a section of the country, whenever it might be, and took a part-time teaching job and practiced medicine under the National Defense Education Act? He would be forgiven 50 percent of his loan under the present bill. Under this amendment you prohibit a doctor from borrowing from this fund, but only from the National Defense Education Act, and under that he could go into a community and get his forgiveness of 50 percent of his loan.

Mr. BENNETT of Michigan. Mr. Chairman, the fact that we made a mistake in some of these other bills as to forgiveness of loans is no reason we should do it again. We are headed in the wrong direction, if this kind of language is going to stay in the bill. It would mean that we have commenced a policy, of having the Government give medical students a free college education. If we are going in that direction, we ought to recognize it and make our decision now.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. BENNETT of Michigan. I yield to the gentleman.

Mr. HALLECK. Apropos of the question addressed to the gentleman from Michigan by the gentleman from California, it has been pointed out, but I think it is worthwhile to point it out again, that the last time the House of Representatives spoke on this matter was last year when we had a motion to recommit the bill for assistance in the construction of higher education facilities. The conference report came back with an arrangement for scholarships and an element of forgiveness that was called nonreimbursable loans. Decisively the House recommitted that bill. I think that was the attitude then and I think it is very well the attitude now.

Mr. BENNETT of Michigan. I thank the gentleman.

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. BENNETT of Michigan. I yield to the gentleman.

Mr. JONES of Missouri. Mr. Chairman, did the committee consider limiting the loans to those students who were willing to go and agreed to go into the rural areas which is where they are trying to get these doctors? Why not make their eligibility for a loan an agreement that he will practice in these areas where we now do not have the doctors?

Mr. BENNETT of Michigan. That would be regimentation, and, of course, this is a form of it, too. This is regimentation in the form of a bribe. You are asking him to practice in a certain area and if he does he will be forgiven a part of his loan. I say that he ought to pay for his education. If the Government loans him the money and provides the opportunity for his education, there is no reason why he ought not fully repay his Government. No red-blooded citizen would want to do anything else.

Mr. PERKINS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, from the best information that I can get, it costs on an average $20,000 for a qualified medical student to get his degree from the medical university. In the case of a dental student, the average is $15,000. As I view this legislation, the purpose of the loan fund is for that student who does not have the money, the student who cannot afford the $20,000 to go to medical school or the dental student who does not have the $15,000 to go to a dental school.

It is this group that this legislation would aid. It is this group who have no opportunity to attend medical school, even though they have the ability and all the qualifications. If a boy or girl does not have the money, though well qualified, this Nation stands to lose valuable medical services.

So as I view this program, the loan program makes it possible for this youngster of modest means or from a poor family to get this professional education. We should not price the ability of these youngsters to enter medical school clear out of the reach of these young men.

I want to make another thing clear. I realize there is some criticism of this loan program for medical students. I view this program as a health program. But there is a lot of misinformation about this. There is no intention to duplicate the present NDEA excellent loan program which is now operating in more than 1,600 American colleges.

This is the reason. Part C of H.R. 12 authorizes the Secretary of Health, Education, and Welfare, not the Surgeon General, to enter into agreements with medical and dental schools for operation of the student loan fund. The Secretary of Health, Education, and Welfare is going to exercise good judgment, he is going to work in the interest of the taxpayers. Naturally he would merge this loan fund with the National Defense Education Act fund, with no duplication. It would eliminate all the duplication of administration. It would work well.

I personally regret that the gentleman from Arkansas has offered an amendment to delete the forgiveness feature, because I do think that the forgiveness feature is a necessary one to assist the rural and less economically privileged areas. It has worked well in the National Defense Education Act for the public and elementary schools, and there is no reason why it would not work well here. If we do not maintain this loan program, the boy of modest means is just not going to have the opportunity to enter medical school. The doors are going to be closed from now on out for that youngster.

If this Congress in view of the shortage of doctors in rural areas fails to permit loans for this type of youngster, I am telling you we are really derelict in our responsibility. The doctor shortage is serious. There have been many charges and countercharges about what the actual situation is, but the fact remains that in many areas such as those in the district I am privileged to represent, we have as few as 46 doctors to every 100,000 people. If we go ahead here and kill this loan provision, you are going to create a much greater shortage in the future. Only the relatively wealthy will be able to attend medical school, and they in turn will never seek out those areas where these critical shortages exist.

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. COLLIER. Mr. Chairman, I rise in opposition to the perfecting amendment and in support, I might say, of the original amendment, whatever its parliamentary status may be at this time.

It is my understanding that the loans to be granted under sections 740 and 741 of this bill will be made on the basis of financial need in much the same manner that individual loans are granted under the National Defense Education Act.

Those of you who have seen the financial statement forms required for various types of college students' assistance are familiar with the great detail, information, and personal data required.

It is certainly as demanding in every detail as financial information required for assistance under the Kerr-Mills medical care program. Yet many of those who have indicated their support of the legislation before us have criticized the financial statement required under the Kerr-Mills proposal. They have charged that it is a pauper's oath. But, of course, we all know that a financial statement becomes a pauper's oath when there is an emotional appeal in opposition to any need requirement for financial assistance—but it becomes a financial statement by convenience on other occasions. And so I pose this question to you today: "When is a financial statement a financial statement and when is it a pauper's oath for the purpose of determining need?" Are we going to establish a double standard in this legislation as it relates to need for the doctor as compared to establishing need for the services he administers? If it is humiliating at any time, as has been charged, to divulge personal financial information under a need program, how then do we determine whether such a requirement should or should not be necessary of any individual seeking Government aid of any kind.

There is another point that I would like to make here today which I think is so very pertinent to the legislation before us. There has been extensive testimony given by even the most ardent proponents of this bill representing the medical schools to the effect that for the next 4 or 5 years enrollment of medical students cannot possibly be increased. I do not think there is anyone on the floor of this House that can refute this statement. Yet this is a 3-year program—and this simply means this: Any funds used for student loans are simply replacing funds which are now coming from private or other sources. It boils down to just this. Let us say, for example, we have John Doe ready to enter a medical school. He has saved or otherwise is in a position to pay for his own schooling. Let us further assume that John Doe is a "B" student. Now, John Smith is ready to enter medical school. He is an "A" student but does not have funds to enter medical school. The particular medical school to which both of these young men apply has a limited enrollment. Must we not then assume that if a choice is to be made between the two applicants that John Smith will be given preference over John Doe because his academic grade is a little higher and because he is able to secure Government money or a Government loan that might well keep the other young man able to pay his own way out of the medical school?

May I ask some member of the committee if it is not true that under the loan provisions of this program an applicant will have to file a financial statement, known in the Kerr-Mills Act as the pauper's oath?

Mr. COLLIER. I ask the chairman of the committee if that is the manner by which a student qualifies for a loan.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. I am happy to yield to the gentleman.

Mr. HARRIS. Let me say in the first place, the answer to the basic question is "No."

Mr. COLLIER. The student applying does not have to show need when applying?

Mr. HARRIS. Not under the terms of this bill; that is what the gentleman is asking.

Mr. COLLIER. That is right.

Mr. HARRIS. These loans are made at the instance of the institution. We make it abundantly clear that the Federal Government does not in any way run the institution or make the decision for it. An agreement is made with the institution and then the institution decides. The provisions of the bill have this language:

> (b) Any such loans shall be made on such terms and conditions as the school may determine, but may be made only to a student in need of the amount thereof to pursue a full-time course of study at the school leading to a degree of doctor of medicine, doctor of dentistry or an equivalent degree, or doctor of osteopathy.

That is what the language provides, and the institution carries it out.

Mr. COLLIER. Would it be safe to assume, therefore, that a financial statement would be necessary upon which the determination would be made with regard to a loan?

Mr. HARRIS. I think it would be safer to say, the institution would undoubtedly handle it, we must assume, and we must assume they will do so in the best way that they can to carry out the spirit and purposes and intent of the law.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. I am happy to yield to the gentleman.

Mr. GROSS. Then there is no needs test with respect to this bill? There is no true needs test; nor is there a full recovery provision dealing with loans.

Mr. COLLIER. There is no needs test written into the legislation before us, as I understand it.

Mr. GROSS. So then this is a refutation of the argument that we are trying to help needy students and that the loan money necessarily goes to needy students.

Mr. COLLIER. I think that is a fair observation, but I think it goes a bit farther. This is a 3-year program. Everyone who testified before the committee last year, when I was on the committee at that time, very specifically stated that not for 1 year and not for 2 years or 3 or 4 years would they handle one additional student. If it is a 3-year program, then how in the world are we going to get additional students into the schools under the loan provisions of this program? Instead, here is what will happen: Ten students who do not have funds to attend a medical school, but who might be rated "A" students in their previous academic work can get a loan and can go to a medical school and foreclose 10 "B" students who are in a position to pay their own way through medical school. Is this bill to grant preference to students with the best academic rating or is this a bill to increase the number of doctors? I think we are caught completely in a web of conflict of purpose. I think the amendment offered by the distinguished committee chairman, the gentleman from Arkansas, is more or less a sweetener to what is already an unnecessary portion of this bill, the loan program. Again repeating what the distinguished minority leader said, it was certainly the sense and will of the Congress, expressed last year on the higher education bill, that we did not want to get into this student loans. Furthermore we find ourselves faced with a new proposition on the forgiveness end of the program, which was the only means, whether I agree or disagree, and of getting doctors in those areas where there are shortages.

Now we write that off; I would like to know why we have a loan program before us at this point at all?

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. I am happy to yield to the gentleman.

Mr. KYL. To further bear out the point the gentleman is making, on page 40 of the hearings is an answer to a question by the gentleman from Illinois [Mr. SPRINGER] addressed to the Secretary of Health, Education, and Welfare, Mr. Celebrezze:

> My point, Mr. Secretary, is to bring it much closer: If you can grant the University of Illinois a grant, are any more students going to be able to study in that medical and dental school? That is my question.

The answer of Secretary Celebrezze is: "No."

The CHAIRMAN. The time of the gentleman has expired.

Mr. MOSS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, there should be no confusion as to the intent of the perfecting amendment. It is really very clear. It does two things: One, it makes certain there will be no duplication of loans to students borrowing under the provisions of H.R. 12. They will not be able to borrow concurrently under the National Defense Education Act; and, second, all forgiveness features are stricken from the language of the bill. I supported in committee the amendment offered by my distinguished colleague from California [Mr. YOUNGER] and the amendment offered by the gentleman from Illinois [Mr. SPRINGER]; but I think it is in recognition of the temper of the House that we are not going to have a forgiveness provision adopted whether it encourages doctors into rural areas, whether it encourages them into general practice, or wherever it might encourage them.

I was surprised here a moment ago to have a new item injected that this would require some sort of pauper's oath or means test. I do not know which was intended by the previous speaker, but the language of the bill is clear, the loans are to be made under an agreement entered into between the institution and the Surgeon General. I call attention to the language starting in line 25 on page 20:

> Any such allowance shall be made on such terms and conditions as the school may determine, but may be made only to a student in need of the amount thereof to pursue a full-time course of study.

This matter of need can be variously interpreted. I do not think it is the intention of the committee, nor would it be my judgment, that the temper of the House would dictate that the loan be made only to a pauper; the need would be a reasonable need. That would be my interpretation, and I think I correctly interpret the temper of the committee at the time we discussed this. There was no effort to write language so tight as to limit it only to someone who would qualify for a pauper's oath.

Mr. COLLIER. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield.

Mr. COLLIER. I was not even suggesting that this would be a requirement. I am simply trying to find out from someone in this Chamber when a pauper's oath is required and when it is not, whether you have to become a pauper to get consideration.

Mr. MOSS. I think the gentleman has a good enough background to know that whenever and from whatever source you seek a loan you normally are expected to file some statement of your financial condition. It is a reasonable and a normal requirement. I think in determining need under this language it does not have to be a case of the most necessitous, but of reasonable need. I think that is all that is intended. I think that is a reasonable construction of this language, and I do not think that places on the Surgeon General any onerous or difficult requirement. It is just a matter of good commonsense.

Mr. COLLIER. If the gentleman will yield further, in this legislation are we to understand that the word "need" as it applies to qualifications is entirely and totally an interpretation that this Congress in enacting this legislation will provide no restriction but will leave it entirely to another source? Is this responsible legislation?

Mr. MOSS. Well, there is a little more stiffness than the gentleman would indicate. I have been reasonable in the interpretation of the language. I think that is all that is required, a reasonable showing of need, no implication that you have to be a pauper.

Mr. QUIE. Mr. Chairman, I rise in support of the Devine amendment.

Mr. Chairman, I shall support the Devine amendment, whether the Harris amendment is adopted or not. I do not favor the forgiveness feature of this program in the medical school bill, but beside that it is unwise to provide a loan for students in this medical school bill.

At the present time there is one Federal loan program administered by the Commissioner of Education. It would be a duplication if this were passed. This provision in the perfecting amendment no longer provides a duplication for an individual student in his loans from an institution. But there would be duplication to the institution. The institution would do its best to derive money for loans both from the National Defense Education Act and from this medical school bill. Both would be made available. They would determine who would get the National Defense Education Act money and who would secure it under the Medical School Act. Duplication would make it more expensive to operate a loan program. Two agencies would be running a loan program at the same time. That particular kind of waste is uncalled for. There is no reason why the House cannot wait until the National Defense Education Act extension is reported out of our committee.

It has been pointed out earlier by the gentlewoman from Oregon [Mrs. GREEN], who will handle this National Defense Education Act in her committee, that we are already considering increasing the money for graduate students if they want it to enable them to borrow more money. The medical schools have been borrowing to lend the money to the students—3,213 students are receiving money under that act, amounting to better than $2 million.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Arkansas.

Mr. HARRIS. If I understand the gentleman correctly, his position is he believes we should have a Federal program for student loans under the General Higher Education Act?

Mr. QUIE. Yes, I supported the loan program under the National Defense Education Act.

Mr. HARRIS. The gentleman's position, if I understand it correctly, is that he is not opposed to loans for students studying for a doctors' or dentists' degree, but he thinks it should be included in the National Defense Education Act or be administered by the Commissioner of Education?

Mr. QUIE. That is correct.

Mr. HARRIS. I just wanted to be sure.

Mr. QUIE. Mr. Chairman, if we continue to fragment our education program, the next thing we can see that will be called justifiable, is the Aeronautics and Space Committee coming in here and asking us to provide a similar loan program for physics or anyone who goes into space. You can expect any profession to go to a committee of Congress for a loan program other than the Education and Labor Committee. They could go to the Committee on the Judiciary for loans to prospective lawyers, they could go to the Committee on Agriculture for loans to agricultural students.

What kind of sense can we make of this education picture if we fragment it all over the Federal Government and give no jurisdiction at all to the Commissioner of Education? From the study that has been made, there has been too much fragmentation already, and we should bring it all together.

Mr. GOODELL. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from New York.

Mr. GOODELL. I would like to point out that I think there might have been a misconception in the answer to the chairman's question. I do not believe that we on the Committee on Education and Labor think there should be a special provision for doctors and dentists, so far as loans are concerned, as distinguished from students in graduate schools, schools of physics, biology, mathematics, and others that are very expensive. These all ought to be considered in relation to each other. We do not want any priority here for doctors and dentists, least of all for doctors and dentists.

They are the best off in terms of their income subsequently, all the way along, to take care of themselves. We feel that all students who need assistance should have the opportunity to have loans, regardless of whether or not they are striving to become doctors or dentists or other occupations requiring long and expensive studies.

Mr. QUIE. I want to make one other point, that under the National Defense Education Act we still have an oath that a student must take. There is no oath in here. It also provides here that student doctor can delay the repayment of the loan if he goes into the Peace Corps. I think these are actual changes in a loan program that ought to be considered in the National Defense Education Act. It seems to me we ought to do this for everybody. And, I do not think the Committee on Interstate and Foreign Commerce should enter the educational field, as they have done here. I think they are setting a precedent.

For that reason, Mr. Chairman, I ask you, I implore you, to support the Devine amendment, to knock out the loan provision here, because I assure you I do this as a person who supports loans and not as one who opposes them.

Mr. HEMPHILL. Mr. Chairman, I move to strike out the last word.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. HEMPHILL. I am happy to yield to my chairman.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all debate on the perfecting amendments and the Devine amendment close at 3 o'clock.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no obection.

Mr. HEMPHILL. Mr. Chairman, I think that while we were arguing here, we perhaps have lost sight of the objective of this legislation. We are talking about the second most precious commodity on earth. The first is life, and the second is health. Everything else fades into the background when you consider the fact that health is something you cannot buy, and it is difficult to preserve, and I happen to be getting to the age where I know health is a most important consideration of my life and habits.

Now, in talking about this, let us go back to the hearing record. We find there is no question about the need for the mortar and the brick. It has not been questioned here; it was not questioned at the hearings, and so far as I can understand, it has not been questioned in the debate.

Now, as I understand the Devine amendment, its purpose is to question the necessity of loans to fill the mortar and the brick with the students necessary to preserve the health of a great and a free and a happy civilization.

Mr. GOODELL. Mr. Chairman, will the gentleman yield?

Mr. HEMPHILL. For a question, because I only have 5 minutes.

Mr. GOODELL. I only point out that these medical and dental students are getting loans today under the National

Defense Education Act, and I think the purpose is not to have overlapping student loan programs.

Mr. HEMPHILL. Well, if the person who testified for the American Medical Association had said that they were doing everything that was sufficient, you might have a case, but he admitted that they were not doing it. He admitted there was more to be done, and we intend to do it.

We have here a situation in which this committee considered—and this has not been brought out as yet—a proposal to give grants to students, and we determined in the committee, by a majority vote, that the reason we were not giving grants was that anybody who would not want to pay back at least a part, or most, of the loan would certainly not have the proper incentive or the proper motive in becoming a doctor or dentist or osteopath. I fought the student grant proposal vigorously. I was not too happy over the forgiveness feature attached to the loans, but accepted the amendment offered by the gentleman from California [Mr. Younger].

If the States, or the various denominations, had the necessary revenues to do this job of providing the caretakers of our health I would not support this bill. They do not. I pause to salute what they have done. But, with an admitted need, and no admitted or suggested source of sure and dependable relief other than the Federal Government, I must, in fairness to the hopes, the desires, the rights of the people of this great democracy to the best in life, including the best of health, and the best of health care. I must censure every Republican who has tried, or is trying, to defeat, or abort this legislation, for his individual effort, and his party for a collective effort, to deny the American people the doctors, the dentists, the osteopaths they need, and, in the process of exhibited selfishness, deny adequate schools to produce them.

Now, the Devine amendment seeks to knock out these loans. The gentleman from Ohio [Mr. Devine] referred to certain pages in the Congressional Record. When I turned to those pages in the Congressional Record I found this—that the loans were limited. Not only were the loans limited, but all the loans that have been provided for have been taken up. If that is true, if they have been taken up, and the Congressional Record so reflects, then certainly these loan provisions are necessary because there is no use in building the facilities to produce the help if we do not have the students who are going to be the guardians of our health such as the doctors, dentists, and osteopaths.

Mr. Chairman, with reference to the amendment which has been offered by the gentleman from Arkansas, the distinguished chairman of the Committee on Interstate and Foreign Commerce, we went along with that amendment in committee because we had compromised between grants and the straight-out loans. I agree with what was said yesterday about the fact that here are some forgiveness features when there are not similar forgiveness features included in educational legislation, but let me say this: Let me say that we have now taken out by that action the forgiveness features and eliminated any question about the sincerity of purpose of a person to whom the loan will be made.

In addition to that we have written into this particular legislation certain rules and certain provisions which I think give us some protection. We have said this: We have said that the institution to which the student applies will set the guidelines. Now, let us not be so ridiculous as to say that because the Congress did not set up a basis of need, or because the Congress did not set up the guidelines, that these people who would be entrusted with the administration of these rules, these people who have been entrusted with the training of doctors, dentists and osteopaths who now serve us well, because they have this legislation in a loan program, may now go out and dissipate what we would call the moral factors involved in the administration of any such program. It is ridiculous to say that. If they have had sense enough to supervise the medical colleges and the other colleges so far, certainly they have the know-how, the character, the integrity, and the experience to run the program as we have written it here in this particular legislation.

Mr. Chairman, I have had personal experience with students who have knocked at the doors of medical schools. I have seen them turned away. I have seen young boys with brilliant minds and dedicated hearts turned away because they neither had facilities nor did they have money, and the people who were turned away in most instances were people who did not have money. They did not have money to have any influence or anything else.

Mr. Chairman, the purpose of this loan program is to meet the needs of those people. I am for the legislation. I support the loan program. The Harris amendment should be accepted, the Devine amendment defeated.

The CHAIRMAN. The Chair recognizes the gentleman from New York [Mr. Stratton] for 2 minutes.

Mr. STRATTON. Mr. Chairman, I rise in opposition to the perfecting amendment. We have two purposes before us in connection with this legislation as I see it. One is to encourage more doctors. We desperately need more doctors. There, basically, is the purpose of this legislation as I see it.

But we also have a second purpose, and that is to encourage more doctors to go into practice in the rural areas of America where they are in desperately short supply.

Mr. Chairman, I have the honor to represent a very substantial rural area, and I know as a matter of personal experience how many rural communities in my district have been desperately trying, by every possible means, to attract a doctor into their areas. The American Medical Association cannot seem to help them. We in Congress have not been able to help them. Here at last is one program that does provide a method by which it might be possible to attract doctors in the rural areas. Maybe we can do the job in some other way, but nothing concrete has been offered, and this is the only program before us today.

Mr. Chairman, I think it would be a serious mistake to adopt the perfecting amendment and rule out the opportunity for rural areas to get the doctors they desperately need.

Mr. Chairman, yesterday several members of the committee were talking about the fact that doctors make an average of $19,000 a year. Let me say first of all that doctors do not make an average of $19,000 a year when they practice in rural areas. And in the second place, when a young man who is either trying to decide whether to go to medical school or who has graduated and is about to make his decision as to where he is going to practice, he does not make that crucial decision on the basis of the kind of income that statistics might show that he would be likely to receive 10 or 20 years from the day he decides where to practice. He makes it on the basis of what might relieve from him a portion of the heavy financial burdens he has assumed.

Mr. Chairman, this kind of a program would certainly have an important effect on the decision of a young medical graduate which would increase our chances of getting more doctors into the rural areas of America.

Mr. Chairman, I hope the perfecting amendment will be defeated.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey [Mr. Joelson].

Mr. JOELSON. Mr. Chairman, I want to congratulate the chairman of the committee for striking out the debt cancellation provision. I do not want to say "forgiveness" because being against forgiveness is like being against motherhood. But I do not think you can justify debt cancellation, especially to doctors who go into private practice, although it might be indicated, perhaps, for those who go into the armed services or into public health.

We hear a lot about the need for doctors in rural areas, but the bill as presently written does not meet that need. It provides for so-called forgiveness in any State where it is determined that there is a shortage of or a need for physicians and dentists.

Mr. Chairman, there is a shortage of and a need for physicians and dentists all over. In fact, that is the very reason for this bill. I daresay that if this forgiveness feature were not taken out, it might result in every student who participated in this program being relieved from the responsibility of paying back. Because there is such a shortage of and a need for these doctors, they will earn a good living and will be well able to pay back. Under the National Defense Education Act, the only people who get the forgiveness are teachers who admittedly are receiving low salaries. But the doctors are on top of the heap economically and can afford to pay.

We hear that doctors advocate self-reliance—we hear that time and time again. I think this is a good opportunity to give them a chance to indicate their self-reliance by having them pay back to Uncle Sam the money that Uncle Sam has advanced or will advance to them so that they can do a job for the American people.

The CHAIRMAN. The Chair recognizes the gentleman from Florida [Mr. MATTHEWS].

Mr. MATTHEWS. Mr. Chairman, I rise in opposition to the perfecting amendment of the gentleman from Arkansas [Mr. HARRIS], and to the amendment offered by the gentleman from Ohio [Mr. DEVINE].

I say to you that if this bill be passed it should contain the forgiveness feature and the loan feature in it, according to my humble opinion.

There is good precedent for the forgiveness feature. We tend to forget that last year when we talked on the bill on higher education that was presented, this bill contained scholarships, they were outright grants; they were gifts; they were scholarships that were not tied to any particular national need. We have in the National Defense Education Act a forgiveness feature for teachers, so I say to you that the forgiveness feature in this bill does not establish a precedent.

The tremendous need for doctors in this country is in the smaller areas, the rural areas. If there be any question about what would constitute a shortage, I would say if you have a community of 2,500 that does not have even one doctor, that is a shortage. If you have a community that serves 7,500 people and there is not even one doctor or dentist, it would seem to me that constitutes a shortage. If this bill be passed, it should have the forgiveness feature as originally suggested by the able gentleman from Arkansas, the chairman of the committee.

Then, Mr. Chairman, the gentleman from Ohio has suggested that we do away with the loan feature. The gentleman from Kentucky [Mr. PERKINS] very ably pointed out the difficulty of the poor students obtaining a medical education. I have in my hand here a statement by John A. D. Cooper, appearing in the Journal of Medical Education of March 1963.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. PERKINS. Mr. Chairman, I ask unanimous consent that I may yield the time allotted to me to the gentleman from Florida.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. MATTHEWS. I thank the gentleman from Kentucky.

This article to which I refer contains these words:

> There are data indicating that almost half of our medical students come from families with incomes of over $10,000 per year. These families make up only about 11 percent of the general population and supply less than a third of the bright students to our colleges, as judged by studies on the National Merit Scholarship Semifinals.

We talk about the gentlemen who finish medical schools, who make good doctors and high salaries, but what about the able students who are never able to go to medical school? So if you have a bill to help improve the health of this Nation, this loan provision should be included. A medical student faces 12 years of preparation after high school—4 years in college, 4 years in medical school, and 4 years as an intern and resident.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. MATTHEWS. I yield to the gentleman from Kentucky.

Mr. PERKINS. Does the gentleman from Florida agree with me that this type of loan program deserves priority from the Congress?

Mr. MATTHEWS. It would certainly seem to me that the health provisions in this bill should include the loan feature.

Mr. PERKINS. There is no conflict in the administration of this program, no duplication, because both the loan programs will be reviewed by the Secretary of Health, Education, and Welfare both under NDEA and under this medical program.

Mr. MATTHEWS. I agree with the gentleman.

In conclusion, Mr. Chairman, let me say again we ought to keep the forgiveness provision and the loan provision in this bill.

Thomas Jefferson said that all men are created equal. Mason of Virginia said that all men are by nature equally free and independent. America is still a land of opportunity. If we are going to have equality of opportunity, let us retain the loan provision to help enable every American student of ability to become a doctor if he so desires.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. WEAVER].

Mr. WEAVER. Mr. Chairman, I rise as a physician. There are three of us in this House. I have heard a lot of discussion about statistics the last few days and I have heard a lot of interpretation and misrepresentation of these statistics.

I rise in favor of the Devine amendment and am opposed to the Harris amendment. We have heard about the self-reliance of physicians. Yet, they are self-reliant. They do have a loan program, and they are making it work effectively.

This new program of loans if passed will be superfluous in that respect as well as a reduplication of the National Defense Education Act. I would also like to make the point that it will not serve the purpose which it was meant to serve in getting physicians into the rural areas. No forgiveness of loan or any other feature such as that is going to take our new physicians into the rural areas. We have had urbanization of physicians by drawing them into our large cities just as the general population is shifting to urban areas. We have had a specialization which has cut down on the number of family doctors such as I am. Twenty-five years ago 85 percent of all physicians were general practitioners. The ratio now is about 40 percent. This is partly what has cost us the number of active practitioners per family that we need. We do not have enough 24-hour physicians that we used to have. Any amount of construction that is done in the next few years will not add a single man to a medical school for 5 years. I am for the construction feature, but I am opposed to the loan feature of this bill as being reduplication of both private loans and the National Defense Education Act.

The CHAIRMAN. The Chair recognizes the gentlewoman from Oregon [Mrs. GREEN].

Mrs. GREEN of Oregon. Mr. Chairman, I do not understand the remarks that were made by the speaker who preceded me, who opposed the loan program, because we have today in existence a loan program from which doctors, dentists, and other graduate and undergraduate students are borrowing. This decision was made in 1958. The Congress said we need loans to enable more needy students to attend college. I rise in support of the amendment that was offered by the gentleman from Arkansas. I think it improves the bill immeasurably. I think it eliminates the inequities to which I referred yesterday. I said then, I cannot see any justice in saying to a person who is a doctor and who goes into the military at $415 a month, we will forgive you up to $5,000 but if a GI or a nurse borrows under the NDEA we will not forgive that GI or that nurse one dime. This, to me, is a great inequity and a great injustice. So both amendments offered by the chairman of the committee have improved this legislation to the point where I can support it; that is the amendment which the gentleman from Arkansas now recommends and the amendment previously adopted to prohibit the use of Federal funds for chapels or buildings for religious instruction. The remaining question is whether or not we are going to have two loan programs. I regret the position that I am in today in supporting the amendment that was offered by the gentleman from Ohio [Mr. DEVINE]; he offers it because he is opposed to all loans. I am in hearty disagreement with that position. I think we desperately need to provide loans for needy students. I think it is deplorable that more and more—we see only the sons and daughters of the affluent go to college. I want to see students who want to be doctors or dentists or nurses or teachers go to college even though they may be poor. They are the ones who need the loans. So I support the loan program. I am afraid I am in the position of having to support the Devine amendment for one reason, and that is the question: Do you want two loan programs established by this Congress? The gentleman from Alabama [Mr. ELLIOTT] introduced the NDEA program in 1958. Thousands of medical and dental students borrow under it. Under the amendments adopted in the Committee on Education, there will be no loan provision in this bill that will not be in the bill that you will be called upon to support or to oppose in a few weeks from now. Do you want to adopt two loan programs and impose on every single college and university in this country two sets of bookkeeping? People talk about economy—you are raising the administrative costs of the loan program in all the colleges and universities when you set up books for two of them.

The CHAIRMAN. The time of the gentlewoman from Oregon has expired.

The Chair recognizes the gentleman from New York [Mr. Goodell].

Mr. GOODELL. Mr. Chairman, I ask unanimous consent that the 2 minutes allotted to me be granted to the gentlewoman from Oregon [Mrs. Green].

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mrs. GREEN of Oregon. I thank the gentleman.

Mr. Chairman, I may repeat the duplication of programs is my one remaining objection. I would say to the members of the Committee on Interstate and Foreign Commerce this is not a jurisdictional dispute, as it has been described. I really do not care whether the whole loan program was under the Committee on Interstate and Foreign Commerce or under the Committee on Banking and Currency or under some other committee. This is not the argument—a jurisdictional dispute. The question is whether or not you want to require colleges to have two separate administrative procedures. I think this is unwise. I think it is costly. I think it adds to the burden of all colleges and universities.

Mr. GOODELL. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman.

Mr. GOODELL. I agree 100 percent with what the gentlewoman has said. I think it clarifies the issue that we face here today. It is not a question of whether you are for or against loans for medical students.

The question is clear. I think we now have a program that provides loans to all students of higher education including medical and dental students. If that program needs reviewing it should be done as part of a general program; it should all be coordinated and not put into two systems. I feel I will have to vote for the adoption of the amendment to eliminate all loans under this proposal. I also intend to vote for the Harris amendment which will eliminate the forgiveness feature. This to me is the worst kind of meddling. Those of us who are opposed to controls by the Federal Government and are sincere should not go into this indirect kind of control by going through the doctors. I thank the gentlewoman.

The CHAIRMAN. The Chair recognizes the gentleman from New York [Mr. O'Brien].

Mr. O'BRIEN of New York. Mr. Chairman, I rise in support of the perfecting amendment and in opposition to the Devine amendment.

I have asked for this brief time because I think we are getting this whole matter a little out of perspective. The gentlewoman from Oregon spoke about needy students who would like to continue their education. I would like to see all higher education helped. This bill is not in behalf of needy students but is in behalf of needy sick people, and we have a direct interest in aid to medical colleges. But I am not supporting this bill for that reason, I am supporting it because we need more people in the medical profession; we need them desperately. It is not sufficient to say, as one Member did, that he knows of no medical student who quit after he started. What about the families all across this land who have had to sacrifice a college education for two or three of their children so they could send one boy to medical college? This loan provision will enable that parent to give that child or other children their opportunity. I think that is sufficient reason to support it.

I think that the opposition at the last minute of the American Medical Association is most difficult, because during the Easter recess I spoke to members of a local medical society. I intend to support this bill with the loan provision. I told them so. They had no objection. They did not know what their trustees were going to do. My vote today is a selfish vote for people in my family and in my children's families who may need a doctor. I am not going to wait for a general education bill so some people can kill the whole animal with one blow of the axe.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. O'Hara].

Mr. O'HARA of Michigan. Mr. Chairman, a great deal has been said about the duplication that supposedly will result if we enact the loan provisions of H.R. 12. For this reason we ought to look a little more carefully into just how these loan provisions work and whether or not there will be harmful duplication. When I went to school—and I do not think it is much different now—there were any number of loan funds and scholarship funds available to students who needed financial assistance. Loans and scholarships were available to law students, medical students, and others. We did not apply for a loan from any particular fund. The school administered the program and matched each student's application to the loan program best tailored to meet his particular needs. The loan provisions of this bill provide one more weapon for the Administrator to use in helping students in financial need to continue their education. I can not believe that participating institutions would experience any real difficulty in administering these funds.

This will provide just one more form of assistance, a form of assistance, I take it from the report of the committee and from remarks made on the floor, which is necessary and vital.

A second point has been made that this objective can be better accomplished by amendments to NDEA, now being considered in committee. This may be so. As a matter of fact, it has been true for some time. The committee has been favorably disposed to such amendments for several years but has not been able to bring them before the House. The situation is such we may not be able to bring these amendments to the floor this year either. It seems to me that this is our best chance to provide needed assistance to students of the health professions.

The CHAIRMAN. The Chair recognizes the gentleman from West Virgina [Mr. Staggers].

Mr. STAGGERS. Mr. Chairman, I oppose the Devine amendment, and I certainly would like to oppose the Harris amendment, because I do believe, as any reasonable man would realize, that we need doctors in rural areas. No Member of the House has given a constructive idea of how to get these doctors into the rural areas. Other than this proposed plan.

There are 99 counties in America that do not have a doctor. That is the testimony before our committee. In 90 other counties which have a population of over 5,000, there is only 1 physician for those counties. We reach the ideal in only 391 counties which have 1 physician for each 1,000 or less of population.

The need for medical personnel, as testified before our committee, is that we need 6,500 more entering students each year.

There are 87 medical colleges, and 48 dental schools in America, and in only 20 States do they train as many physicians as they use.

It has been testified that the loan provision is duplication. In the one that is now in operation only $1,000 is loaned to a student, and he has to start paying back at the end of 1 year. Anyone who reasons knows a doctor has to have 2 or 3 years of internship residency and he does not have the money to start paying it back. As stipulated it costs around $20,000 to be a doctor. It has been testified that this precludes some of the best brains in America from ever going to medical school. Can we afford to have less than the best in charge of the health problems of the Nation? I think not.

The CHAIRMAN. The Chair recognizes the gentleman from Nebraska [Mr. Cunningham].

Mr. CUNNINGHAM. Mr. Chairman, I spoke on this matter yesterday. I am opposed to the bill, as is noted in the minority report. I was hopeful, however, that the bill could be cleaned up so that it would be something that might be workable.

I certainly will support the Harris and Devine amendments, because I feel all these scholarships, loans, grants, and so on ought to come under one committee.

I might say to all of the people who have been pleading for doctors in the rural areas that this loan program or the forgiveness of it will not guarantee you a doctor. There is no amount of money by which you can get a doctor to go into a rural area.

I said to my very good friend, the gentleman from Rhode Island [Mr. Fogarty], yesterday that he is probably the man who is responsible for this so-called shortage of doctors. He has done a magnificent job, which we all supported, to increase the money given to the NIH and other research agencies so that now the majority of the doctors are not going into general practice.

As an article contained in the U.S. News & World Report states, they are going into specialties and into research.

Only 21 percent of the doctors are going into general practice, and very, very few of them are going into rural communities because they prefer to practice in larger centers.

In our own family, in a remote area of Nebraska, a relative of mine was given a clinic; it was equipped; he was given a house. He went there for 3 or 4 years. He made good money. He did not like the rural life, so he came back to the big city.

What disturbs me more than anything else in this bill is this amendment that was adopted earlier on recapture of payments where the facility is used for sectarian training or as a place where religious worship is held. This must be spelled out. We have a great Jesuit university in my district. Does this mean if a Catholic priest should come and give a short talk to the medical students, perhaps on Catholic medical ethics, that they are going to have their building recaptured. There ought to be some clarification of this. This is a very serious flaw in this legislation.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

The Chair recognizes the gentleman from New York [Mr. Becker].

Mr. BECKER. Mr. Chairman, I have been on the floor of this House for many years and have listened to debate time after time, but I do not remember any time in my career that I have been so convinced in 2 days of debate on this bill and on the amendments, that this bill is not only unnecessary, but it is a bad bill. I have been convinced since yesterday that this bill is not intended and will never do the job which it was set out to do, and that is to provide more doctors in the rural areas of this country where it is claimed they are needed.

Statistics were given here yesterday that there is 1 medical doctor in this country to every 705 people, but if you are going to take the doctors and you are going to move them into rural areas, you are going to have to regiment and control them, and I think this bill would be a step in that direction, no matter how you read it.

We have now taken out of the bill the very part that the chairman of the committee said was necessary in the beginning. He is rewriting the bill, by taking out the foregiveness provision of the loans that was supposed to induce doctors to practice in rural areas. We have had an Indian Bureau in our Government for over 100 years. It has spent hundreds of millions of dollars, supposedly to take care of the American Indians, to solve their problems, but God help us if by this bill we try to solve the medical problem as we have the American Indian problem in the United States, because there is no group of people in this country, worse off than the American Indians. I have never seen a bill like this cure any problem. I think the American people are sick and tired of the spending of their money on this type of waste, to start a program amounting to $205 million. This is only a start. It will not cure any problem, and these 2 days of debate have convinced me beyond the shadow of a doubt that I must vote against this legislation.

The CHAIRMAN. The time of the gentleman from New York has expired.

The Chair recognizes the gentleman from Texas [Mr. Casey].

Mr. CASEY. Mr. Chairman, I listened very closely to the debate yesterday, and frankly, when the debate started, I had not made up my mind to support this bill. But, you are looking at a man that had to borrow every cent he could to go to school and work in the daytime besides. I am for the loan program. I am for every man having an opportunity to get an education, especially such a high-priced education as the medical education.

Now, yesterday during the debate they mentioned one of the very outstanding medical schools in this country, which happens to be located in my district, Baylor University College of Medicine, and there seemed to be an inference that since it was a Baptist college, that it would be opposed to this bill. Well, I do not know how the trustees feel; I do not know how the students feel; I do not know how the faculty feels. But the dean of that university says even though Baylor has been blessed and does not need such a bill, for the good of the country he thinks this bill should be passed.

Mr. Chairman, I heard an argument yesterday from one of the Members who said that we were curing a lot of the ills and, therefore, we do not need so many doctors. On the contrary, I think they have found more ills lately.

Mr. Chairman, my old grandmother used to say that there were only three ills, a little peaked, kind of puny, and plumb down, and I think the list has grown considerably since then.

Mr. Chairman, we need the doctors, and if we are going to head off socialized medicine let us make available an ample supply of doctors so that they are at the beck and call of the ill at a reasonable price.

Mr. Chairman, I urge support of this bill and its loan program.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri [Mr. Hall], for 2 minutes.

Mr. HALL. Mr. Chairman, I shall vote for the perfecting amendment. I shall vote for the Devine amendment and then, as I said yesterday, I shall vote against the entire bill.

Mr. Chairman, I defy any Member opposing this amendment to name a single medical student, anywhere in the country, who is making qualifying grades, and who has had to quit medical school because of inability to obtain a loan to continue to finance his medical education.

Mr. Chairman, I have here four different brochures. One pertains to the much discussed and sometimes maligned AMA's education and research loan program. I would like for the members of the Committee to know that it multiplies itself 12½ times through backing of private and nonrelated lending institutions on the basis of guarantees. It is a good loan program. Even the U.S. Government cannot do this. But in addition, today there are many county and State medical association loans in use for this purpose.

I would like for you to know that these loans are made at the rate of 5.5 percent, and do not have to be paid back until the recipient begins practice.

Mr. Chairman, in addition to that there are medical-scholarship and loan-fund programs which are provided by the various schools. This pamphlet pertains to all of those just as this first one does to the AMA-ERF loans, which I have personally supported over the last 10 years.

Mr. Chairman, in addition to these I have here a list of partial financial aid programs for medical students by the various components such as the county medical societies of the AMA, and the sample page of many other loan programs taken from an 8-page listing of approximately 100 county medical society loan programs. I am proud that my own Greene County Medical Society currently maintains over seven deserving students in medical schools in addition to our auxiliary scholarships. This is help at the correct level.

Mr. Chairman, I think first, it is not important that we have this; second, that there is a moral obligation; third, that we cannot afford it; and fourth, it is good to keep this moral obligation on the part of these students.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois, [Mr. Pucinski] for 2 minutes.

Mr. PUCINSKI. Mr. Chairman, I rise in support of the Harris amendment and in opposition to the Devine amendment.

Mr. Chairman, in Chicago we have the largest medical center in the world. Many of our students will benefit from this legislation.

Mr. Chairman, I think the House should keep this in mind: Under the private loan programs which have been listed in the Record yesterday and which have been mentioned here today, a student taking a loan and attending a medical school must start paying interest immediately at the rate of 5.5 percent while he is a student attending school. Under this procedure, by his fourth year his loan may have reached $8,000. This young man, even though he is still a student in school, may have to pay more than $400 a year in interest rates alone under existing programs for private loans to medical students. He then must begin paying off the loan a year after graduating.

Mr. Chairman, I and the other Members of the House know that most of these young doctors do not reach a position where they can pay these loans back until at least 3 or 4 or 5 years after they graduate. Most young doctors experience considerable financial difficulty during their first few years of practice. Under the amendment which has been offered by the gentleman from Arkansas [Mr. Harris], no interest would be paid while a medical student is attending school, and he would not start paying it back until 3 years after he has graduated.

Mr. Chairman, the gentleman from Arkansas [Mr. Harris] presents us with a realistic program, and I hope the House will approve the Harris amendment and reject the Devine amendment, so that we can let the young men of poor families in this country join the noble medical profession. I am getting tired of hearing people malign the doctor. We have heard here about their excessive earnings but no one has mentioned the hardships many doctors must experience before they build up a successful practice. Nor has anyone mentioned the difficulties a doctor experiences even in the prime of his success. I do not think many of us here would be willing to make the sacrifices the average doctor must make. He works long hours, he gets little time to himself. His family's privacy is frequently interrupted when the doctor must leave his home on emergencies at all hours of the day and night. No, Mr. Chairman, I do not envy the average doctor his lot. If, in the course of his profession, he carves for himself financial independence, he has more than earned it through many years of hard work and sacrifice. Furthermore, Mr. Chairman, the tremendous responsibility a doctor carries in fulfilling his professional duties fully entitles him to all the consideration. If I can help make his lot a little easier while the medical student is struggling through school, I am proud to be able to do so.

Mr. Chairman, finally, as to the need for doctors in rural areas, I share the concern of the gentleman from West Virginia about the need for additional doctors in rural areas. But I believe this is caused primarily by a shortage of doctors in America, and if we fill that gap we will fill the need for doctors in rural areas. You will find doctors gravitating to the rural areas of this country when you have trained sufficient doctors to overcome the present shortage with this legislation. And so, for this reason, Mr. Chairman, I rise in support of the Harris amendment. I think it is a good bill; it is a historic bill that will help the people of this country get the medical care to which they are entitled.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, I rise to try and place the loan program under this bill into perspective, to make it abundantly plain that the Devine amendment is not in the public interest.

Let me start out by pointing out the fact which I think should be easily observable and that is this. The gentleman from Illinois [Mr. SPRINGER], at the time this matter was being heard in committee, queried the doctor who was testifying on behalf of the AMA with regard to the adequacy of the AMA program. Dr. Dorman appeared for the AMA and said in response to the question as to the adequacy:

> No, sir. We say that it is filling a big need. We did not say that it was adequate. It was never designed to take the entire load. It was designed to assist in this area. It does not carry the full load, and I do not believe it ever could.

Subsequent to this, the AMA having taken no position, rushed forward to the Congress to advise all of us that it had changed its position, or that it had discovered its position anew and at this time we are expected to reject the program in favor of the AMA program. Let us look at the AMA program. It is a good program; it is useful. But it does not include dental students, nor does it aid students of osteopathy. Medical students are not eligible for loans until they have completed their first semester of instruction.

If we want to make it easy for young men to enter medical school, the way is to give them a loan program at a reasonable rate of interest, at a low rate of interest, on sufficiently liberal amounts, and early enough at the time of their entrance into medical school so that they may derive benefit from it so that we will attract the needed students into the medical schools. We have heard a lot of testimony in the committee to the effect that there are vacant places in the medical schools. There are vacant places in the medical schools. We have heard a good deal of testimony that the caliber of the young men entering our medical schools is not sufficiently high. I say that it is worth our trouble and worth the taxpayers' money to have a liberal program which will recognize the need and which will attract the capable to fill these vacant spaces.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio [Mr. DEVINE].

Mr. DEVINE. Mr. Chairman, much emotion has been demonstrated throughout the halls of the House today. Nobody is against the students. Nobody is against education. Nobody is against doctors. Let us see exactly what are the objectives of H.R. 12.

No. 1, apparently there is a shortage of physicians in America.

No. 2, apparently there is a shortage of facilities in which to train physicians.

No. 3, there is apparently a shortage of money which everybody needs who wants to go to medical school. So H.R. 12 is presented for the Congress and is before us today.

I have introduced an amendment that would strike the loan provisions from this bill for a very simple reason, or for two reasons: No. 1, the House has already expressed its will in this general area; it did last year, on the higher education bill.

No. 2, assuming the loan provisions were good, there is no place to put these students because we have to first build the facilities to accommodate them in order to get the loans for them to go to school. It is in connection with that section that my respected chairman, the gentleman from Arkansas, has introduced an amendment that would "perfect" the loan provisions, because apparently there is some feeling that maybe they are not strong enough. You strike out the forgiveness provision, and that is the only provision that provides the means to induce the medical students, the physicians, to go to the area where there is a need.

It seems to me that the proper thing to do here is this. It is not too important to me whether the Harris amendment is adopted or rejected. If it is adopted we will then have the opportunity to vote on the amendment that I offered, to strike the loan provisions. Let us then build the facilities, if that is the desire of the Members of the House. After they are built, then consider whether or not the loans or scholarships are the proper way to get the applicants into the medical schools.

The CHAIRMAN. The Chair recognizes the gentleman from Arkansas [Mr. HARRIS] to close debate.

Mr. HARRIS. Mr. Chairman, we are about to come to a vote, rather a crucial vote, as I understand it, on this far-reaching and important legislation. The vote will first occur on the perfecting amendment that I offered to the language of the bill in connection with student loans. The first amendment prohibits any duplication with respect to loans for medical and dental students. The second amendment eliminates the forgiveness provisions of the loan program.

As I said earlier, I urge you to vote for this amendment. Then following the action on the amendment, whether it is up or down, a vote will be had on the Devine amendment, which would strike the loan provisions entirely.

I recognize that many of those who are against the bill are against it all the way, but I urge you on the basis of the records of hearings held by our committee during four sessions—that is, within the last 4 years of the Congress—to vote for the loan program. It is very important to the future health of this Nation. There is no duplication. There will not be a double set of books. One program is for medical and dental training and the other is in the field of general education, particularly for scientific students. Lord knows, if we need scientists in this country we need doctors in this country.

The CHAIRMAN. The time of the gentleman from Arkansas has expired. All time has expired.

The question is on the perfecting amendment offered by the gentleman from Arkansas [Mr. HARRIS].

The amendment was agreed to.

The CHAIRMAN. The question is now on the amendment offered by the gentleman from Ohio [Mr. DEVINE].

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. DEVINE. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. HARRIS and Mr. DEVINE.

The Committee divided and the tellers reported that there were—ayes 150, noes 188.

So the amendment was rejected.

Mr. SIBAL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. SIBAL: Page 4, line 24, after the word "health" add: "which does not practice discrimination in its entrance requirements on the basis of race, creed, color or national origin."

Mr. SIBAL. Mr. Chairman, first let me make it clear that I am in favor of this bill. I supported it in committee and I will support it whether my amendment passes or not. My purpose in offering the amendment is not capricious. I am most sincere, because I think it is about time that the Congress of the

United States gave action in place of lipservice on this great issue.

We hear all the time that the executive and judicial branches of our Government have superseded the great legislative branch, the Congress of the United States, as the most effective branches of our Government. I do not agree with this. Yet, when we dodge important issues such as this, by hiding behind the skirts of the executive and the skirts of the judiciary, we are contributing to the general opinion that the Congress is on the downgrade.

The President of the United States within the past week has challenged Congress on this issue, and I am going to quote him. He said, in response to a question as to whether or not he could withhold funds from a State of this Nation that he could not, but he added:

> I do not think we should extend Federal programs in a way which encourages or really permits discrimination. That is very clear.

The bill we are considering today does not in any way deny participation to an institution which has discriminatory practices. It is eligible to participate unless we act today.

The previous Secretary of Health, Education, and Welfare, in testimony before the House Committee on Education and Labor on another matter said, in response to a question put to him by one of the members of the committee:

> Congressman, you people control the purse strings. You vote the impacted money in Congress. You vote us the money and say "Give it out." As far as I am concerned, our Department listens to the voice and the instructions of the Congress of the United States.
>
> You control the purse strings and you can determine how the money is spent. And this is a congressional problem and not an administrative problem. You can determine under what conditions the money is paid out.

This is our responsibility. The people of this Nation are beginning to look upon us as a bunch of hypocrites. We go around during campaign time talking about one thing, but when the matter comes before the House we vote another way.

Those who believe in this principle need not fear it is going to kill the bill. That is the excuse some people use, some people in leadership, I am afraid, in an effort to give some kind of solace to those who do not agree with this position.

We are talking about the need for doctors in critical areas. The need exists probably in our minority groups to a far greater extent than it does so far as the general public of America is concerned. There is no argument that can be made that Negro doctors and doctors among some of our newer citizens in this country are needed and needed badly. I cannot conceive that we should continue to practice in this country the principle that we collect the tax money from all the people but we distribute it in such a way that many of our citizens are denied the use of it.

This is one of the great issues in this country today. This affects our foreign relations, it affects our prestige in the world. The House of Representatives today can take a great step forward in once again establishing the principles upon which this country was founded.

I urge you to vote for the amendment.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. POWELL. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. SIBAL] may proceed for 5 additional minutes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. POWELL. Mr. Chairman, will the gentleman yield?

Mr. SIBAL. I will be happy to yield to the gentleman.

Mr. POWELL. This is the so-called Powell amendment, which I authored in 1954. I have always opposed this amendment when it was used as a device to kill legislation. The gentleman has assured this body that he voted for this bill in committee.

Mr. SIBAL. That is correct.

Mr. POWELL. He has assured this body that whether or not his amendment passes, he will vote for this legislation.

Mr. SIBAL. That is correct.

Mr. POWELL. Therefore, he comes with clean hands and with a pure heart.

Mr. SIBAL. I like to think so.

Mr. POWELL. I would like to also say to the gentleman that he is exactly correct when he states that you can pass this amendment and pass the legislation, because the last time that I offered this amendment it was passed by this body; and the legislation with the Powell amendment was then passed by this body. I would just like to clear the atmosphere for my own personal conscience before I vote on this matter, and I commend the gentleman from Connecticut for being forthright in his presentation.

Mr. SIBAL. I thank the gentleman.

Mr. LINDSAY. Mr. Chairman, will the gentleman yield?

Mr. SIBAL. I yield to the gentleman from New York.

Mr. LINDSAY. Mr. Chairman, I would like to commend the distinguished gentleman from Connecticut on the talk that he has just made. I voted with him to retain the loan provision, and I will vote on a rollcall to retain the loan provision. I know the importance of this provision with respect to the training of doctors and nurses in New York. Bricks and mortar are important, but in my area they are not as important as manpower. Time after time, as my colleagues in the House know, I have argued for equal access and equal treatment in the distribution and use of Federal money. In the housing fight 2 years ago I fought for the bill and also fought for an amendment that would bring about fair housing practices. I voted with the Democratic side of the aisle in order to have the bill, and even then, because of my fair practices amendment I was accused of trying to kill the bill. Those who make such accusations are experts at preserving the status quo. They are the most unprogressive of all. They talked this way 10 years ago, 20 years ago, and 30 years ago. And if they have their way they will be talking this way 30 years from now. The time has long passed to make the point that Federal programs designed to uplift the general welfare of the community have to be made available to all citizens regardless of race, creed or national origin.

Mr. SIBAL. I thank the gentleman.

Mr. REID of New York. Mr. Chairman, will the gentleman yield?

Mr. SIBAL. I yield to the gentleman from New York.

Mr. REID of New York. I would like to compliment the gentleman from Connecticut on his initiative. I feel strongly that this amendment should be voted on and passed by the House. I think it essential throughout these United States that the Congress be clearly on record that we believe in equality of opportunity for an education on merit. I think it would be repugnant if we passed legislation that might preclude any American from an opportunity to gain a medical education, for reasons of race, creed, color, or national origin and hence I hope the House will vote affirmatively on this amendment. We must have equality of opportunity for all Americans now.

Mr. CUNNINGHAM. Mr. Chairman, will the gentleman yield?

Mr. SIBAL. I yield to the gentleman from Nebraska.

Mr. CUNNINGHAM. The gentleman, I do not believe, mentioned the vote on this amendment in committee.

Mr. SIBAL. As I recall, the vote was 13 to 10.

Mr. CUNNINGHAM. I want the record to show that I supported the gentleman in committee and I support the amendment that he has offered at this time.

Mr. SIBAL. I thank the gentleman.

Mr. NELSEN. Mr. Chairman, will the gentleman yield?

Mr. SIBAL. I yield to the gentleman from Minnesota.

Mr. NELSEN. I wish to associate myself with the remarks of the gentleman in the well of the House. If you will look at the minority views, you will find I signed the minority views with the gentleman in the well, and I intend to vote for this bill.

Mr. SIBAL. I thank the gentleman.

Mr. HOLIFIELD. Mr. Chairman, I move to strike the last word.

Mr. Chairman, some of us have been here a long time, and we remember a gentleman from Alabama by the name of Judge Hobbs. Judge Hobbs was a man who had convictions, many of them opposite from mine. But I remember one story that he used to tell. He said he had a servant who worked for him who loved to go fishing, and he loved catfish. He would catch himself a mess of catfish, as we say, and he would take them out and put them on a stump in the backyard. Of course, a catfish will keep its life for a long time after it is out of water. As this catfish was wiggling around a little bit the old servant would say, "Hold still, little fish, all I is going to do is gut you."

This amendment would destroy the legislation.

Mr. Chairman, in my opinion—and I will put my record for voting for civil rights up against any Member in this

House, and I believe in the principle of civil rights—but I term this amendment as a mischievous amendment. It is an amendment which may or may not pass this House. If it does pass this House, assuming that it does pass this House, there is another step in the legislative process, and that is in the other body.

Mr. Chairman, in my considered opinion, if we want this bill to be passed and become law it must not only get through this body but get through the other body and I hope we will vote down this amendment. I am going to vote against it because I think we need more doctors in this country, more Republican doctors. I have 600 out in my congressional district, and I do not know of a single one that voted for me in the last election. Most of them sent out letters to all of their patients telling them to vote against this man HOLIFIELD and vote for his opponent. So, when I am voting for this bill to provide for more doctors I am voting to let these poor young fellows go to school and get their doctor's degree and by that time the American Medical Association will have indoctrinated them to the point where they will write letters against HOLIFIELD for reelection, if I am still in Congress at that time.

Mr. Chairman, on the important legislative question, I want to see more doctors and nurses in this country, throughout this country, and I am going to vote against this amendment.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from California.

Mr. SISK. Mr. Chairman, I simply ask the gentleman to yield to join with the gentleman in his excellent statement. I think the gentleman's story was well put, because some of us who have been around here year after year have seen this type of amendment, a device used to gut and defeat good legislation. That is exactly what this amendment amounts to.

Mr. Chairman, those of us who are concerned about making it possible for more of our boys and girls to get into medical school and to get into the medical profession later on should stand up and be counted for this legislation and against such amendments as this that will tend to detract from and destroy this legislation.

Mr. Chairman, I thank the gentleman for yielding.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I shall be glad to yield to our distinguished Speaker.

Mr. McCORMACK. Mr. Chairman, I am in complete agreement with the position taken by the gentleman from California. No one can question my convictions in connection with principle. This applies to civil rights. For 36 years I have voted for equal opportunity under the law for all citizens. But we have a bill pending before us now which is of tremendous interest and of great potential value to our country. I do not think we ought to take any calculated risk which would endanger the passage of this bill either in this House or in the other body.

Mr. Chairman, the Committee on the Judiciary is going to start hearings in a few weeks on civil rights legislation, and that is a proper place for this matter to be taken up.

We all recall the gentleman from New York, my dear friend, Mr. POWELL, who took a very fine statesmanlike position in connection with the housing bill a few years ago. I admired his action and the country applauded him because he was not going to permit anything to endanger the passage of that great bill and was not going to take any chances at all in relation to its possible defeat. The same situation exists today.

Mr. Chairman, in the interest of passing this progressive, forward-looking measure that is so important to the people of our country, I join with the gentleman from California [Mr. HOLIFIELD], in urging that this amendment be rejected and that this question be brought up in some other bill to which it is relevant.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

Mr. POWELL. Mr. Chairman, I object.

Mr. HARRIS. Mr. Chairman, I move that all debate on this amendment and all amendments thereto close in 5 minutes.

The CHAIRMAN. The question is on the motion of the gentleman from Arkansas.

Mr. YOUNGER. Mr. Chairman, on that I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. YOUNGER and Mr. HARRIS.

The Committee divided, and the tellers reported that there were—ayes 161, noes 133.

So the motion was agreed to.

Mr. MATHIAS. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

> Mr. MATHIAS moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken.

Mr. MATHIAS. Mr. Chairman, I offer this preferential motion because I feel this is a subject on which debate should not be curtailed. This is a vital subject of interest to the entire Nation, and it is shocking that an attempt should be made to preclude its discussion.

It has only been within the past week or 10 days that the Civil Rights Commission made a report and recommendation to the President of the United States. In that report it recommended that the President by Executive fiat deprive one of the great sovereign States of this Union of the benefits of Federal programs which were authorized by legislation approved by both Houses of the Congress.

In response there were a large number of people who advanced the argument that this would disrupt the constitutional balance of powers upon which this Republic stands, that it would immediately establish a precedent by which the President could assert the right to withdraw from a State the benefits which had been conferred upon all of the States equally and impartially by the Congress.

I think there is a good deal of substance to this argument that such an action pursued by the President would disrupt the foundation of the Constitution and the balance of powers. There is, however, an answer to that problem. The answer is that Congress live up to its responsibilities in the area of civil rights; that in the legislation which is proposed here and approved here we make provision for civil rights in a manner consistent with the ideals and aspirations of the American people for all of our citizens. I think that this is where we ought to do this job and not leave it up to the President to devise new extraconstitutional means to work his will or to satisfy his whim on any subject. Nor should we tempt Presidential advisers to tell him he should withhold from a sovereign State the benefits that we have legislated in their behalf. If we do the job here and if we do the job now, we will be preserving the fabric of the Constitution and preserving the rights of all Americans.

Mr. Chairman, I yield back the balance of my time.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the preferential motion.

Mr. Chairman, we are about to conclude, in my judgment, one of the most important bills that this Congress will consider during this session. I made the motion to limit debate for one purpose only. We have considered and we have debated the question of civil rights almost ever since I have been in this Congress, which is for a period of 23 years. There is not a Member on the floor of this House who does not know what the problem is. There is not a Member on the floor of this House this afternoon who does not know that this is a subject that can inflame the hearts and minds of the people and the hearts and minds of the Members. Certainly, in my judgment, it can do no good for us as responsible Members of the Congress to become engaged here in an inflammatory debate over a subject that we are all so familiar with. I believe, in all sincerity, in the wisdom of this program but I recognize the sincerity of those who feel some other way about it. I do not question anyone's motives. I do believe that in the interests of comity and the right kind of feeling that the motion to limit debate was justified. For that reason I believe we ought to proceed to vote down this preferential motion and then pass the bill.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

The question is on the preferential motion.

The motion was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from New York [Mr. RYAN].

Mr. RYAN of New York. Mr. Chairman, on Monday I introduced a bill, H.R. 5741, to deny Federal assistance to any program in which there is any form of discrimination. I believe the pending amendment is consistent with the bill which I introduced, and I intend to support it. The Federal Government should not contribute in any way to segregated programs. In the 87th Congress I was the only Democrat to vote for an antidiscrimination amendment to the Housing Act of 1961. The Democratic Party in Congress must face this issue squarely and stand firmly for full equality for all Americans.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, I am in wholehearted support of the amendment. I supported this matter in the committee and have always voted for this principle.

Perhaps one of the most critical problems facing us is that of providing equality of opportunity for all people, regardless of race, creed, or color.

This week the Civil Rights Commission recommended that Federal funds be withheld from support of segregation. In this matter we have a clear choice. To do other than to vote to outlaw use of Federal funds to support segregated schools is to vote to sacrifice the future of untold numbers of Americans of minority groups and to deny those Americans the privilege not only of equal opportunity but the privilege of making the fullest and best contribution to their land.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. CONTE].

Mr. CONTE. Mr. Chairman, I would like to say at this point that I am greatly disturbed with the motion to limit debate to 5 minutes on this important amendment by the gentleman from Connecticut [Mr. SIBAL]. This is absolutely ridiculous, and I am afraid that Congress is in serious danger of becoming a national laughing stock.

The press daily is lambasting us for our lack of genuine accomplishment and the Nation is beginning to grow restless. We have fiddled around, Mr. Chairman, since January. Rome, I might suggest, burned very quickly, while Nero played his fiddle. We cannot afford to be unconcerned with the great issues that confront this Nation.

The Congress has just reconvened after a 10-day vacation and here we are in a position of limiting debate to 5 quick minutes on a matter that threatens to split this Nation apart at the seams. It would be appropriate to paraphrase Voltaire at this stage—we may find disagreement, but we must defend our right to state our position. Free and open discussion is the only hope of a democratic society. I voted twice to expand the Rules Committee for this purpose. This is the great distinction of our Nation. We must have free discussion. I think that it is dastardly to cut off this discussion at this time.

I do not think, as Members of the other side have suggested, that this amendment will gut the bill, which I favor. I think that it will improve the bill considerably.

We must face this segregation issue squarely. Mr. SIBAL's attempt to deny aid to segregated schools is a noble effort on his part and coincides with the feeling that many of us have. We cannot willingly give Federal money to groups that defy the inherent intent of the Constitution and the Bill of Rights. We may start to take some of the sugar away. We cannot hope to continue being the paternal "sugar daddy" on the one hand, and expect that our recipients will respect us as "fathers." In fact, the more aid we give to segregated schools will compound the matter, intensify bitterness in the future and leave us in a position of no return.

We must begin to seriously consider all Federal programs that faintheartedly give away money to segregated institutions. It does not seem out of order to suggest that any institution receiving Federal moneys should, in theory and fact, accept the provisions of our Constitution and Bill of Rights. The whole world watches our every effort to solve this terrible problem—an American problem—through decency and common concern for our fellow man. The question, finally, is one of fairness. We must treat all men fairly, and we must begin now. To cut off debate on a matter that directly relates to this problem is, in my opinion, an affront to the free and open society in which we live.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri [Mr. CURTIS].

Mr. YOUNGER. Mr. Chairman, I ask unanimous consent that the time allotted to me may be granted to the gentleman from Missouri [Mr. CURTIS].

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. CURTIS. Mr. Chairman, I want to say to my so-called liberal friends who voted the motion up which closed off debate on such a serious matter that you have clearly demonstrated your concern for the basic civil liberties.

I would say to the press that this is a good observation——

Mr. BASS. Mr. Chairman, I make the point of order that the gentleman is out of order in addressing the press gallery or any other gallery from the floor of the House.

Mr. CURTIS. I am not addressing the press gallery. I am addressing——

The CHAIRMAN. The gentleman from Missouri will suspend. The Chair advises the gentleman that the correct parliamentary procedure is for the gentleman to address the Chair and only the Chair. The gentleman will proceed in accordance with the rules.

Mr. CURTIS. Mr. Chairman, I am very pleased to observe the carefulness with which the majority party has a care for the rules and wants to encourage straightforward debate. I would say to the press and others that we observe at this point of your proceedings what is the basic coalition in this Congress, the northern Democrats-southern Democrats coalition.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. NELSEN].

Mr. NELSEN. Mr. Chairman, I think it must be admitted that I am rather quiet as far as involving myself in debate on this floor is concerned as well as in the committees; but when the gentleman from California [Mr. HOLIFIELD] of this body gets up and repeats this little old phrase, worn out as it is: "Don't wiggle, little catfish, we're just going to gut you," it implies that this amendment is introduced as a means of killing this bill. It seems to me that in fairness when Federal moneys are to be parceled out that they be available to all the people. I am sorry anybody would impugn my objectives and that of my colleagues by such a statement as was made on this floor. I regret that it happened. I hope this amendment is adopted.

The CHAIRMAN. The gentleman from Wisconsin [Mr. SCHADEBERG] is recognized.

Mr. SCHADEBERG. Mr. Chairman, my integrity has been questioned by my colleague who suggests that this amendment is made merely to kill the bill. I oppose this legislation on grounds which have been amply discussed during the debate. I intend to vote against the bill. I am not so naive as to assume that there are not sufficient votes garnered to support it. That is the reason I am in favor of this amendment. If the bill is to pass, all the people of these United States must have the assurance that there will be no discrimination in programs involving Federal funds.

They would have that assurance and would not need to depend upon the whims or wishes or political consideration of one person's Executive order.

Mr. KUNKEL. Mr. Chairman, I ask unanimous consent that the gentleman from Washington [Mr. STINSON] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. STINSON. Mr. Chairman, I wish to state my support for the Sibal amendment. If we are to have help for students studying medicine then equal opportunity must be provided for all students, regardless of race, color, or creed.

Mr. WYDLER. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. WYDLER. Mr. Chairman, I support the amendment offered by the gentleman from Connecticut [Mr. SIBAL]. This amendment would insure that aid to be given under the provisions of this bill would go to all Americans regardless of race or religion. I support the purposes of the bill as being worthwhile, but without this provision the form of the bill is bad. I cannot subscribe to the argument that the adoption of this amendment will make the passage of the bill more difficult in the other House. Once that argument is accepted all hope for meaningful Civil Rights legislation is lost. If we want to achieve this goal we must fight it now and at every opportunity in the future. I do not believe that the other House will remain deaf to the justice of such provisions.

The CHAIRMAN. Does the gentleman from Arkansas desire recognition?

Mr. HARRIS. Yes; I do, Mr. Chairman.

The CHAIRMAN. The gentleman from Arkansas is recognized.

Mr. HARRIS. Mr. Chairman, I yield to the majority leader.

Mr. ALBERT. Mr. Chairman, may I make the point that our basic objective, whatever the coalition may be, is to pass progressive legislation to promote the health and education of the American people.

The CHAIRMAN. The time of the gentleman from Arkansas has expired; all time has expired.

The question is on the amendment offered by the gentleman from Connecticut [Mr. SIBAL].

The question was taken and the Chair announced that the noes appeared to have it.

Mr. CUNNINGHAM. Mr. Chairman, I demand tellers.

Tellers were ordered and the Chair appointed as tellers Mr. SIBAL and Mr. HARRIS.

The Committee divided and the tellers reported that there were—ayes 146, noes 186.

So the amendment was rejected.

Mr. CUNNINGHAM. Mr. Chairman, I move to strike out the last word.

Mr. Chairman and members of the committee, I am still somewhat disturbed and perplexed by an amendment that was adopted under the section called recapture of payments which reads that payments will be recaptured if the facility is used for sectarian instrument or as a place for religious worship. I think that this is a very serious amendment and there ought to be some definite clarification as to what this wording means. I am wondering if the chairman of the committee could enlighten me for the record as to just what this wording means.

Mr. HARRIS. Will the gentleman please repeat that?

Mr. CUNNINGHAM. I was referring to the amendment passed earlier under recapture of payments which says they may be recaptured if the facility is used for sectarian instruction or as a place for religious worship. I think that is rather broad language, and I do not know that it really will give anyone any guidance as to what it does mean.

As I say, I have in my congressional district a great Jesuit university and there are many great Protestant universities in the United States. They may want a building under this program. Being familiar with the Jesuit university, this building may be used for the teaching of medical students but, perhaps, the good Jesuit fathers will come in for a 15-minute talk on some subject, perhaps religious medical ethics. What will be the situation with the university under this program if this happens?

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. CUNNINGHAM. I yield to the gentleman from Arkansas.

Mr. HARRIS. I have no trouble with this amendment, myself. I tried to explain earlier in the day that it had a very simple purpose. You have got to consider the two amendments together in interpreting it. The first amendment makes it clear that chapels shall not be financed with Federal funds.

Mr. CUNNINGHAM. I understand that part of it.

Mr. HARRIS. The second amendment says that facilities constructed with Federal funds shall not be used for religious purposes. Now, that is just as simple as it can be.

Mr. CUNNINGHAM. I understand the wordage but what are "religious purposes"? These must be defined. What does the gentleman have in mind when he says "religious purposes"?

Mr. HARRIS. Where you have set aside a place as a place of worship.

Mr. CUNNINGHAM. Here is a building, no chapel in it, 20 classrooms, and medical students are going to school at a religious sponsored school. It could be a Methodist school or any other type of religious school; what is your definition of "religious services"?

Mr. HARRIS. If they were to conduct religious services in the facilities that the gentleman is talking about and they are set aside for that purpose. If they are not so set aside for that purpose——

Mr. CUNNINGHAM. I am no lawyer, but I have seen so many times when we pass broad legislation and the courts render an interpretation of our actions which is not compatible with what we had in mind. Again I say that what if a Jesuit priest comes in to talk to a group of medical students at a university where there is no chapel, but just a classroom, and he may refer to the Diety, he may refer to the precepts of the church, what is the gentleman's interpretation under this language?

Mr. HARRIS. If a Jesuit priest were to go into a room where there is a class and were to talk to the members of the class and mention the Diety, that would not be a violation. But if that classroom were to be used for religious services or religious instruction conducted regularly I think it would be a violation. I think it is a well-known term understood by everyone.

Mr. CUNNINGHAM. I have a hunch that the courts or an administrator may interpret it in another way.

Mr. HARRIS. If the gentleman will yield further; of course, those who have grave concern about this entire legislation naturally raise questions of this kind. But I myself, who have given long years of considerable thought to it, going back as far as the 1940's I have no difficulty with this at all.

Mr. CUNNINGHAM. I have a lot of difficulty.

Mr. HARRIS. I know you do, because the gentleman has been against the entire bill from the outset.

Mr. QUIE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. QUIE:

On page 11, line 22, strike out "66⅔" and insert "50".

On page 12, line 1, strike out "50" and insert "33⅓".

On page 12, line 8, strike out "75" and insert "50".

Mr. QUIE. Mr. Chairman, the purpose of this amendment is to provide that when the Federal Government participates in the construction of a building that the Federal share shall not be more than 50 percent.

Mr. Chairman, I should think that if the Federal Government pays 50 percent of the cost of any building this ought to be sufficient to encourage the local community, the State or whoever is involved in putting up additional facilities at a medical school, to finance at least 50 percent of it.

The bill presently provides for new construction; in the case of public health facilities the Federal share may be 75 percent and for new construction of medical schools the Federal share may be 66⅔ percent. That portion which has to do with remodeling of old buildings, the bill provides for 50 percent and there I should think one-third should be sufficient for the Federal share.

Mr. Chairman, we went into this in great depth in the Committee on Education and Labor. We considered general aid to higher education—that is, academic facilities. The American Council on Education asked us to support a Federal share of 50 percent. At that time we decided that in order to make the money go further we would limit the Federal grants to one-third of construction costs. But in order to be as generous as possible on this matter and still be sound, it seems to me that we ought to cut the Federal share back to at least 50 percent, and that is the purpose of my amendment.

The Committee on Interstate and Foreign Commerce chose to reduce the amount of money authorized for this program for the first year. That means there will be fewer buildings constructed and that the Federal Government will have to pay two-thirds or 75 percent of the cost of the buildings as the case may be. Therefore, with the lesser amount of money, $25 million in the first year, it seems to me we could construct so much more with the amount of the Federal participation if the Federal share were limited to 50 percent for new construction in public health buildings.

Mr. Chairman, that is the purpose of my amendment.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Chairman, I hope this amendment will not prevail. If we are going to have a program, let us do the job. I appreciate the great work of the Committee on Education and Labor. I have striven very hard to stay away from any implication of any controversy. I have always tried to indicate as strongly as I could that matters of public health are one thing and matters of general education are another.

Now, the gentleman is talking about a program of education when he talks about how fully they went into that problem. Do you know what a new medical school costs? A minimum of $10 million. And if they have to have a hospital in connection with it, it will cost a great deal more.

Those facilities that need rehabilitating and expanding can be provided up to 50 percent.

Someone said a moment ago, "The Indians have to be taken care of." Provision is made for the public health schools, which everybody knows we need in this country, and only a very few of them exist. Then it provides that up to 75 percent may be provided for the construction of that particular facility.

Mr. Chairman, I submit this bill has been very carefully worked out under the formula we have here. I urge that this amendment be voted down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. QUIE].

The question was taken; and on a division (demanded by Mr. QUIE) there were—ayes 74, noes 150.

So the amendment was rejected.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all debate on this section do now close.

Mr. BROMWELL. I object, Mr. Chairman.

The Clerk read as follows:

SEC. 3. (a) Section 705(c) of the Public Health Service Act is amended by striking out "and" at the end of paragraph (2), by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and", and by adding after paragraph (3) the following new paragraph:

"(4) the application contains or is supported by adequate assurance that any laborer or mechanic employed by any contractor or subcontractor in the performance of work on the construction of the facility (A) will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a–276a5), and (B) will receive compensation at a rate not less than one and one-half times his basic rate of pay for all hours worked in any workweek in excess of eight hours in any workday or forty hours in the workweek. The Secretary of Labor shall have, with respect to the labor standards specified in this paragraph, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267), and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276c)."

(b) Part A of title VII of such Act is further amended by inserting after section 710 the following new sections:

"Technical assistance

"SEC. 711. The Surgeon General is authorized to provide assistance to applicants under this part, and other public or nonprofit institutions engaging or competent to engage in research, or research and related purposes, in the sciences related to health, in designing and planning the construction of facilities for the conduct of such research or research and related purposes.

"Construction of regional facilities

"SEC. 712. When the Surgeon General finds, in accordance with regulations, that the purposes of this part can best be achieved through the construction of research, or research and related purposes, facilities of particular value or significance for the Nation or a region thereof, and that because of the cost of such facilities or their use as a national or regional resource for research or related purposes a grant pursuant to the preceding provisions of this part does not provide an effective or appropriate means of financing the construction of such facilities, he may construct or make arrangements for constructing, through contracts for paying (including advance or installment payments) part or all of the cost of construction or otherwise, facilities for the conduct of research or for research and related purposes, in the sciences related to health. The Surgeon General may, where he deems such action appropriate, make arrangements, by contract or otherwise, for the operation of such facilities (for the conduct of such research, or research and related purposes) or may make contributions toward the cost of such operation of facilities of this nature whether or not constructed pursuant to, or with aid provided under, this section. Title to any facility constructed under this section may be transferred by the Surgeon General on behalf of the United States to any public or nonprofit private institution competent to engage in the type of research, or research and related purposes, for which the facility was constructed. Such transfer shall be made subject to the condition that the facility will be operated for the research, or research and related purposes, for which it was constructed and to such other conditions as the Surgeon General deems necessary to carry out the objectives of this part and to protect the interests of the United States."

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: Page 28, line 11, strike out "(A)".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 28, beginning in line 15, strike out ", and" and all that follows through the word "workweek" in line 19.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 29, line 3, strike out "sections" and insert in lieu thereof "section".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 29, line 11, strike out "purposes." and insert "purposes.'" in lieu thereof.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 29, strike out line 12 and all that follows through line 18 on page 30.

The committee amendment was agreed to.

Mr. BROMWELL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I should like to make inquiry of the chairman of the committee along the line that inquiry was instituted by the gentleman from Nebraska to attempt to obtain for the record some specific reference which will illuminate the phrase "religious worship" as included earlier in connection with the recapture of payments in the earlier prohibitions.

I would like, if I may, ask a couple of questions. In connection with the hospitals that are associated with medical faculties of learning, is all religious observance to be barred by reason of the language of this bill? If not, what is included?

Mr. HARRIS. It merely provides, as I have said a number of times, that none of the funds here can be used for the construction of facilities to be used for the purpose the gentleman is talking about.

Mr. BROMWELL. Let me ask the gentleman from Arkansas this question. If a man is dying in one of the rooms built with money provided by this bill and a priest or a minister of his church comes in to bestow the last rites, is this then a place of religious worship?

Mr. HARRIS. No, it is not.

Mr. BROMWELL. And is this not then an act of worship?

Mr. HARRIS. No, it is not in the sense in which we deal here with this problem in the bill.

Mr. BROMWELL. I am not worried about that. I am worried about places built with this money where an act of religious ritual is conducted by an officer of a church inside. It happens every day.

Mr. HARRIS. The gentleman from Iowa is trying to place an interpretation on this which is not at all intended by the language of the bill.

Mr. BROMWELL. And prayers may be said; is that right?

Mr. HARRIS. Under the conditions mentioned by the gentleman, I should think so and I do not think anyone would object to it.

Mr. BROMWELL. Suppose in a religiously founded medical school an officer of a church, a sponsoring church, or a bishop or a lay person comes in and delivers a lecture on ethics from the point of view of that faith; is this sectarian instruction?

Mr. HARRIS. I think the gentleman knows, as well informed as he is, the generally accepted meaning of what is involved in religious worship.

Mr. BROMWELL. I know that I would include rites for the dying as religious worship.

Mr. HARRIS. I do not know of anyone who would exclude it either.

Mr. BROMWELL. You are by your very language.

Mr. HARRIS. I do not agree with the gentleman.

Mr. BROMWELL. It now appears, Mr. Chairman, that we have a bill in which it is difficult if not impossible to include the rites for the dying. In addition you exclude tax-paying citizens because they are of the wrong color. Both are done under limited debate. It is a strange commentary in liberalism.

Mr. ELLIOTT. Mr. Chairman, I support House bill No. 12, which is designed to help educate additional medical doctors to serve the medical needs of our people; and which is designed to help our medical schools expand their teaching facilities so as to train more doctors.

This bill will aid the efforts of small towns and rural areas to obtain badly needed doctors.

I am proud to have been the author in the U.S. House of Representatives of the National Defense Education Act in 1958. That act established a system of loans to enable boys and girls to attend college. Many thousands of doctors, as well as teachers, scientists, mathematicians, and many others have been educated under that act.

The loans provided in this bill will be more attractive to medical students than those now available to them. They will provide more doctors.

Our people must have more professional medical services than are now available to them.

The sons and daughters of parents from low income groups must have an opportunity to go to medical school if they qualify.

Opportunity is the key word of American democracy.

More doctors and larger medical schools add up to better medical care for the people. The people's interest should be paramount.

Mr. WEAVER. Mr. Chairman, during the course of debate over H.R. 12, I was interested and sometimes amazed by the statistics presented both for and against the passage of this bill. The statistics if emotionally distorted or misinterpreted will not give a true picture of the health personnel and facility needs of this country.

There are proven needs for increased medical personnel and educational facilities in this country. The United States has undergone a transition which has seen its population transformed from three-fourths rural to three-fourths urban. Naturally, there has also been a similar desire on the part of physicians to gather themselves around adequate health facilities in our larger cities and towns. This has been one trend which has urbanized the physicians of America. Another trend has been that of specialization. Whereas, a little over 25 years ago most physicians took care of all types of patients and families we now find that there are about 40 percent of the physicians of America who are in family medicine. With these two trends we have heard and accurately so that the number of physicians per hundred thousand of its population have remained the same over the past 20 years. This would be about 133 physicians per hundred thousand population with similar stabilized statistics in the other fields of dentistry, nursing, osteopathy, and podiatry. One-third of the 3,000 counties have more than 2,000 patients per physician. Sixty percent of the counties have more than 1,500 patients per physician. Ideally, we need 1,000 patients per active practicing physician. However, if we take into consideration the two basic factors of urbanization of physicians and the specialization of physicians, we then find that geographically we have a misdistribution of physicians or health personnel. Likewise, a decrease in the total number of physicians in the active 24-hour family medicine practice per hundred thousand population. As a family doctor who has been through the mill of 16-hour day service with 24-hour a day call, I can state to you that we do not have at this time in this country sufficient active practicing physicians to give the medical care that they prefer to give to the people of this country. And you can also see that with this need for active practitioners we cannot improve any form of our medical care by adding an additional burden of a catch-all partial hospital program through social security taxes.

It is true that in our country we have about 14,000 hospital internships with about 7,000 graduates of medicine per year. This is in contrast with a few years ago when we had roughly 8,000 hospital internships and some 6,000 available American graduates. The result of this disparity of graduates per hospital bed has been the influx of foreign interns, roughly 2,500 this last year, with about 6,000 foreign medical graduates studying in this country at the present time. It has been my personal opinion that the hospital bed requirement which has been roughly 1 intern per 25 hospital beds is no longer a realistic figure and should be roughly 1 intern for 35 to 50 hospital beds, and that the deficiency expressed through 14,000 internship vacancies each year is not realistic. Even a reduction of 4,000 internship requests would still leave a 3,000 deficit of American graduates to fill hospital internships. Another result of this disparity of graduates per hospital internship is that available American graduates cluster around the university centers in the larger cities leaving the community hospitals without adequate interns, thus thrusting upon them foreign graduates in larger numbers each year, some of whom are very fine and capable men but they still have not been trained in the American standard nor have they often the ability to meet the language requirements thrust upon them by our civilian population. These readjustments are in the state of being studied but, nevertheless, they do point out that we have in this country a need for more graduating physicians per year and this, of course, means more facilities in our medical schools.

The question was raised that our medical schools have more applicants than they do admissions. This is very true, but the number of applicants has decreased over the past decade for many reasons. One is the fear of prospective medical students that they will enter a long training period which may end in a Federal medical center rather than the private medical practice of the past. Other factors include the loss of many medically qualified students to other shorter training periods such as in the space and higher science fields, or in such fields as engineering where the training is less and more rapidly remunerative. The medical schools of America desire high quality, high caliber students. Their opportunity to teach this caliber student will decrease as the applicants decrease and many of the students applying may not be adequately suited for the field of medicine both scholastically and vocationally. So, in my opinion, the matter of applicants per medical school is not a realistic argument against medical personnel needs because individual applicants will apply to an average of three medical schools.

I am repulsed by any political suggestion that "H.R. 12 will give the doctors something then we can vote for increased social security taxation for hospital financing." Any expansion of educational facilities either private or public is for the people of America.

In conclusion I want to state that there is a very definite need both for health personnel and adequate educational facilities for such health personnel. This is very realistic and it is very practical if we are to maintain our position as world leaders in medicine with the highest standard of medical care enjoyed by any nation. In my opinion, the loan program for medical students provided for by private sources is adequate. I do not feel that we should place the Federal Government in this particular field to the discouragement of the free enterprise system and the private sources which are now providing and developing loan funds. I do feel that university medical facilities should be expanded and, therefore, I stand in support of the construction features and opposed to the loan features of this bill.

Whatever your philosophy—conservative or liberal—it should be actively applied to proven needs with compassion for people. These are proven needs that can jointly be made by private initiative with judicious governmental aid.

Mr. MATSUNAGA. Mr. Chairman, I rise in support of H.R. 12, the Health Professions Educational Assistance Act of 1963, and to urge favorable consideration of this bill.

The legislation is designed to help this Nation meet its critical needs for professional health personnel. It will do this in two ways: First, by authorizing a 3-year program of Federal grants to help in the construction of teaching facilities for several categories of health personnel; second, by establishing a 3-year program of Federal loans for students in medical, dental, and osteopathic schools.

The gentleman from Arkansas [Mr. HARRIS] has described the provisions of the bill and explained the reasoning behind the recommendations of the committee. I believe this reasoning is sound. I believe the bill, with the amendments which have been made by the committee, now represents a constructive approach for the Federal Government to take in this field. The measure is prudent and fiscally sound and at the same time responsive to the dimensions of the need.

It is my understanding that the committee gave this measure very serious attention; both this year and last year the committee heard from many of the Nation's leaders in the fields of medical, dental, and related professional education. It had the benefit of several carefully done studies, all of which documented the need and urged an expanded Federal program.

The committee is convinced and I am too that a national need does indeed exist. If the United States is to continue its progress in health, there must be an expanded supply of well-trained professional men and women. At present, however, the supply is barely keeping pace with population growth and the demand for services. The outlook for the future is even more serious.

From the committee's findings it is clear that there is a need for a national program, with the Federal Government playing a significant supporting role. With such support the schools themselves, as well as professional and voluntary groups, would play a greater role in increasing the training opportunities for professional health personnel.

The primary objective of H.R. 12 is to encourage expanded enrollments in professional schools. The recommended program, therefore, is aimed not at helping the schools meet their existing needs. Rather, it concentrates on the primary national goal of expansion of training capacity.

Of the $175 million authorized over the 3-year period for construction grants for teaching facilities, $140 million would be available only for new facilities. These include new schools or new construction to expand enrollments in existing schools. To be eligible for such a grant, a school must show that it will expand its enrollment by 5 percent or by the addition of five new student places in its first-year class.

The matching provisions of the legislation also reflect the emphasis on expanded enrollment. Matching above 50 percent of the cost of construction may be made only for major expansions of training capacity. In such instances, grants could be made covering up to two-thirds of the cost of construction. Although no uniform definition of major expansion was deemed feasible, the committee has laid down a general guideline of a first-year enrollment expansion of not less than 15 or 20 percent, or 15 first-year student places.

The committee has explicitly stressed its intent that the two-third matching figure constitute a ceiling on Federal grants. Applicants would by no means be automatically entitled to such a maximum grant simply by meeting the minimum requirements. A number of other factors would have to be taken into account in determining the amount of the Federal grant.

Only $35 million of the $175 million authorized would be available for renovation or replacement of existing facilities. These grants would be limited to bona fide hardship cases, that is, where the lack of modern school facilities seriously threaten enrollment or the quality of instruction. Again, this is in keeping with the overriding purpose of the legislation—to increase enrollments. It would mean that the financing for most of the modernization and improvement of existing facilities would be left to non-Federal sources.

This is as it should be. An exclusive or all-embracing Federal program is not one to be encouraged. Many groups have a stake in this effort; they should all participate. It is my hope that as in the past with similar programs of Federal aid in the construction of health facilities, this new program will stimulate financial contributions from many private and local sources.

According to studies made available to the committee and testimonies of expert witnesses there is an urgent need for some form of financial assistance to medical and dental students if the number of qualified applicants are to be increased. Medical and dental education is long and costly. The health professions are in a very poor competitive position with respect to other intellectually and financially rewarding careers, particularly in various scientific fields. Scholarship and fellowship support is available from a number of Federal and non-Federal sources for students interested in the natural and physical sciences. But support for medical and dental students is meager indeed.

The result has been an alarming decline in the number of applicants for these schools. Medical and dental educators are finding it difficult to attract enough well-qualified students to fill existing vacancies. They have expressed grave concern about a decline in the quality of applicants. Yet we cannot afford less than the best if we are to maintain our high standards of medical care.

Undoubtedly, some measure of student aid is necessary. It is my understanding that many witnesses urged the committee to adopt a scholarship program. Others suggested student loans. And there were some who felt that financial assistance to medical and dental students should be furnished entirely through private resources.

I agree with the committee that Federal action is necessary and that a liberal loan program similar to that authorized under the National Defense Education Act should be effectuated. The program would be authorized for a 3-year period, at the end of which a thorough report and evaluation would be made. This would enable this House to determine whether any changes or modifications are necessary.

In keeping with the particular needs of medical and dental students, the loans would be of a long-term nature and carry a low interest rate. They would also include forgiveness features for service in sections of the country with unusually heavy needs for health personnel, for active duty in the uniformed services, or for service in certain hard-pressed government agencies or nonprofit organizations. The loan program would be operated by the individual schools of medicine, dentistry, and osteopathy.

The student loan program of the American Medical Association will be of help to some medical students, and particularly to interns and residents. Because of its relatively high interest rate, however, and because it offers no repayment relief to physicians who would serve in areas of special need, it will be of limited attractiveness to students from low-income families. The proposed program would go a long way toward meeting this need. Together, both programs should make substantial inroads on the problem of assuring an adequate supply of well-qualified applicants.

In summary, H.R. 12 is directed toward getting the essential job done. It represents a sound and well balanced approach for the Federal Government to take. It concentrates on the truly national objective of assuring a reasonably adequate supply of professional personnel in the health fields.

I am happy to endorse the committee report on this important legislative proposal and to urge its enactment by the House of Representatives.

Mr. ROBERTS of Alabama. Mr. Chairman, I would like to say for the RECORD at this point that I have received telegrams in support of H.R. 12 from the Alabama State Nurses Association, the vice president of the University of Alabama, the Alabama School of Dentistry, and the dean of the Medical College of Alabama.

I am glad these individuals and organizations support this legislation.

Mr. LINDSAY. Mr. Chairman, I support this legislation. It is a reasonable and necessary approach to a problem that is fast reaching critical proportions. In New York and in the country there is a shortage of nurses, hospital technicians and even doctors. Applications to nursing and medical schools are not keeping pace with a growing and longer lived population.

In Manhattan, training facilities for nurses are in particularly short supply. But in addition to bricks and mortar, I favor the loan provisions of the bill. The training process for doctors and nurses is a long one—too long for most at the cost. Why should we not meet this crisis with a reasonable loan program? It is repayable not only in dollars but in a strengthened medical profession and a healthier population. It should be enacted.

Mr. JARMAN. Mr. Chairman, the bill before the House this afternoon, H.R. 12, proposes a 3-year program to alleviate a critical shortage of professional health personnel which already has begun to affect the level and quality of health care in this Nation. Furthermore, these shortages threaten to become worse during the coming decades.

In order to stave off this impending crisis, the legislation before us provides for a 3-year program of matching grants for the construction of teaching facilities for medical, dental, osteopathic, and professional public health personnel as well as for pharmacists, optometrists, podiatrists, and nurses. Also, provision is made for a 3-year program of loans for students of medicine, dentistry, and osteopathy. Consequently, it will be noted that H.R. 12 conforms generally to the construction grant and student loan programs proposed under H.R. 4999, which was reported favorably by our committee in the last Congress.

Under the provisions of H.R. 12, Mr. Chairman, a total of $105 million is authorized over a 3-year period for construction grants to new teaching facilities for the training of physicians, pharmacists, optometrists, podiatrists, nurses, or professional public health personnel. Further, for this same period $35 million would be authorized for the construction of new teaching facilities for the training of dentists and a similar amount for the replacement or rehabilitation of existing teaching facilities. The bill provides that grants up to two-thirds of the total cost could be made whereas all other grants may not exceed 50 percent of the construction cost. Such grants, however, will be made to existing schools only if they agree to expand their enrollment by at least 5 percent.

As set out in the bill, the student loan program authorizes loans to students of medicine, dentistry, and ostepathy. This is again a 3-year program and would be administered by the individual schools who would match Federal funds with a 10-percent contribution of their own. These student loans would be repayable within 10 years beginning 3 years following graduation. However, up to 50 percent of such loans—at the rate of 10 percent per year—may be forgiven for practicing in an area lacking medical personnel, for employment by a public or nonprofit agency, or for active duty in the Armed Forces.

Mr. Chairman, the benefits derived from the program as set out in the legislation before us make the total cost minor. As a matter of fact, the construction feature of the bill will cost the American taxpayer less than 33 cents per year, or about $17 million for the 3-year period. The loan program, a substantial portion of which would be repayed, would amount to only $30.7 million for the same period. Compared to our vast foreign-aid program, the expense of both features is indeed very slight.

Mr. Chairman, as already indicated, H.R. 12 provides for a 3-year program. This aspect of the measure stems from the wisdom of the committee and its distinguished chairman, the Honorable OREN HARRIS, and constitutes the basic change in the bill as compared with its original form. By virtue of this new language, at the end of a 3-year period the program will then be subject to review by the Congress. Its objective can be reevaluated and its worth reexamined. If changes are needed, they certainly can be made at that time; if the program proves ineffective, the Congress can then refuse to extend it.

Mr. Chairman, I suggest the need for legislation of the kind that is before us this afternoon is apparent. The hearings before our committee cite example after example which singularly would more than justify a program of educational assistance to the health professions. However, the situation that exists in my home State of Oklahoma is typical of the overall circumstances and indicates how a proposal such as that contained in H.R. 12 would be so beneficial.

Consider that the University of Oklahoma School of Medicine has been granting the M.D. degree for 51 years. Yet only as recently as 11 years ago they began admitting some 100 medical students per year. In this connection, Dr. Mark Everett, dean of the medical school, testified before the committee during hearings conducted last year that "since it has required all of the intervening time to secure anything like a comparable increase in the operating budget of the school, we have had to curtail every aspect of new construction and modernization and have been unable to set up scholarship funds." As a result, the university at the present time grants only two scholarships and is faced with the possibility of losing part of its faculty due to antiquated teaching facilities. Also, as pointed out in a series of articles recently published by the Oklahoma City Times, the university's teaching hospital is in such a financial squeeze that there is real danger of having to shut down some of the 470 beds. If help is not forthcoming from some source, medical teaching in Oklahoma faces serious curtailment.

Results of a survey recently made by the Oklahoma Chapter of the American Association of General Practice indicates only 21 percent of those who graduated from the medical school in 1957 were practicing medicine in Oklahoma, while another 13 percent were engaged in other professions. The remaining 66 percent had unfortunately left the State despite the fact that 8 of our 77 counties have no doctors who are graduates of the Oklahoma University Medical School. There is no specified reason for this deplorable exodus, but is simply an extension of that factor which causes the rural areas of this great land to lack adequate medical personnel. Happily, the bill before us takes cognizance of this condition and seeks to provide a loan program that would encourage young doctors to go into rural areas and discourage them from leaving a location where their services are needed.

Currently, the State legislature is considering a resolution which would submit to the voters of Oklahoma a proposal to issue $7 million in bonds to finance the construction of a modern teaching hospital in Oklahoma City. Should the $7 million become available and H.R. 12 becomes law, Oklahoma would be in a position to build a 600-bed teaching hospital worth some $22 million. Such a facility would enable the university to increase its student load by 25 percent and to provide better facilities for teaching and for patients. Further, with the enactment of this measure, there would be finances available to supplement the practically nonexistent scholarship and loan fund of the medical school.

In view of the circumstances just described, medical education in Oklahoma is at a crossroads. If help is not forthcoming from a source outside of the State, we in Oklahoma can expect to see a continued lack of medical care in rural areas, watch our teaching hospital curtail its already limited activities, and continue with insufficient scholarships for worthy, but nonetheless needy, students.

Mr. Chairman, I submit that the enactment of H.R. 12 would go a long way toward solving the crisis that now faces health education, not only in Oklahoma but in other areas as well. Therefore, I urge the House to approve this proposal.

Mr. GILL. Mr. Chairman, in a real sense this measure, H.R. 12, concerns itself with two very basic problems in the area of health and medical care: The first is an adequate supply of doctors, dentists, nurses and other needed medical professionals which will enable the people of this country to enjoy the level of health that is their right; the second, and more implicit problem, is the loosening in a modest fashion, of the economic and institutional barriers which restrict the entry of talented young people into the field of medicine.

The committee report on this bill is replete with facts and figures showing the need, across the country, for additional trainees in the field of medicine and dentistry. For example, the committee tells us that at the present time, there is something over 1,700 people in the United States for every family physician—general practitioner, intern, or pediatrician. The committe also tells us that, even to maintain our present inadequate ratio, we will have to increase the number of enrollees in medical and dental schools from 46,000 to 75,000 by 1970.

The national figures are important, but I am particularly interested in how these problems affect Hawaii.

Figures supplied to the committee by the Office of the Surgeon General indicate that the average number of non-Federal physicians per 100,000 population in metropolitan counties, which would include such areas as the city and county of Honolulu, is about 145; however, Honolulu only has about 106 non-Federal physicians per 100,000 population. The average for the State of Hawaii as a whole is about 101 non-Federal physicians per 100,000 people; this is below California's 144, Oregon's 121, and Washington State's 118. Of course, Hawaii does rank ahead of some States; Mississippi, for example, is listed as having 72 per 100,000; many of the predominantly rural States also suffer from a severe doctor shortage.

It is, therefore, extremely important that we do everything we can to increase the number of doctors across the Nation. The tremendous cost of a medical education is usually too much for a student to bear alone. We certainly should not restrict the medical profession to the wealthy; nor should we make the financial burden such as to force young doctors into the cities and the higher income areas of medical practice. Sickness knows no boundaries; it can strike the farm family as well as the city dweller; it falls as often on the poor as on the rich. Our supply of medical talent must be available to meet all of these needs. This bill will help.

There is a final factor which has probably caused the American Medical Association to enter its last-minute opposition to the student loan provisions of H.R. 12: The loans under the bill are far more desirable than the loan programs presently promoted by the AMA. The interest rate is around 3 percent and will not start to accrue until the student has finished training. Even more important, the fact that the money will be owed to a Government loan program will tend to dilute AMA control over members of the medical profession, and this, I suspect, is one of the basic reasons for AMA opposition to the student loan provisions.

Of course, the AMA program is of minor assistance to Hawaii. The exhibit submitted for inclusion in the Congressional Record of Tuesday, April 23, by our Republican opponents of the student loan program shows, on page 6824, that Hawaii only has six AMA loans outstanding and that only two areas in the Nation where such loan programs exist, the Canal Zone and Rhode Island, have fewer. This same exhibit, on page 6818 of the Record, indicates that Hawaii, unlike many States, has no loan program sponsored by the county medical societies.

Mr. Chairman, the medical profession in this country and in Hawaii should be open to all young people with the requisite talent who desire to enter it. This honored profession should not be stifled by the domination of any clique or by the forces of economics. H.R. 12 is a modest step in the right direction.

Mr. FRASER. Mr. Chairman, I wish to state my support for H.R. 12, the Health Professions Educational Assistance Act of 1963, which is to be voted on today. The expected shortage of doctors and dentists in this country by 1975 requires action now. H.R. 12 answers the need with construction grants of $175,000,000 and student loans of $30,700,000.

All America will benefit by this bill. That is why such organizations as the National Farmer's Union and the AFL–CIO favor it. There is strong support for this legislation in my State—the State of Minnesota. Several Minnesotans have expressed their opinions to me as follows:

> Dr. W. H. Crawford, dean, School of Dentistry, University of Minnesota: "We will appreciate anything you can do to make available funds for building and remodeling of dental and medical schools, and to provide loan funds for dental and medical students."
>
> Dr. Robert B. Howard, dean, College of Medical Sciences, University of Minnesota: "Strongly urge your support of H.R. 12 as important measure that will add materially to health resources of Minnesota and entire United States."
>
> Dr. Victor Johnson, director, Mayo Foundation, Mayo Clinic, Rochester, Minn.: "The Association of American Medical Colleges makes a good case for this legislation. As a member I voted to endorse it. Improvement in the quality and numbers of students graduating from medical schools will have an important effect on the graduate training program of the Mayo Foundation."
>
> Carl V. E. Cassel, D.D.S., secretary, Minnesota State Dental Association: "I respectfully urge, on behalf of the Minnesota State Dental Association and the dentists of Minnesota that you support H.R. 12, which will provide construction funds for dental schools and a low interest loan program for dental students."
>
> Phillip H. Moos, D.D.S., chairman, public policy committee, Minnesota State Dental Association: "The forgiveness feature of the student loan provisions should be most helpful in encouraging new graduates to practice in our smaller towns. This is good legislation for Minnesota, and I hope you will see fit to support it."
>
> William F. Braasch, D.D.S., Minneapolis, Minn.: "I have made many inquiries among my fellow dentists to sound them out on their stand. We would very much like to see loan funds substantially increased beyond the 4 year $1,500 limit now placed. Many students are married and with their families, this makes it almost impossible for some worthy students to complete their educations. The dental education costs upwards of $5,000 for the 4 years and is in addition to the 2 years predental training. Upon graduation these boys have to borrow again to equip offices and this frequently costs $10,000 to $15,000. Help in financing educations would be a Godsend to these boys."

STUDENT LOANS

The argument is sometimes made that there are enough loan funds available already for dental and medical students.

What are the facts?

At the University of Minnesota 4,000 to 5,000 students seek help from the bureau of student loans and scholarships. Many very competent students taking predental and premedical courses have to change their goals to other fields for no other reason than that they cannot get enough money through present loan and scholarship programs to pay for a dental or medical school education.

At the medical school of the University of Minnesota in the 1962–63 school year there have been 279 loans for a total of $101,245. The American Medical Association loan program provided funds for 34 of these loans.

Under the main scholarship program for these 562 students at our medical school 57 awards were made—mostly of $500 each. There had been 163 applications.

The freshmen are hardest hit by the shortage of funds. Next year's freshman class of 150 contains 100 who have applied for scholarships. Eighty percent will be disappointed because there are only 15 or 20 scholarships available for freshmen.

In the dental school the situation is the same. Dean W. H. Crawford has written me saying:

> I have talked with many young men who are thinking about entering dentistry but are giving it up because of the high cost. Minnesota is one of the lower cost university dental schools for residents and the absolute minimum for tuition and instruments at this university for a resident is $5,000 for the 4 years of training. This figure does not include room and board, clothing, or other expenses. It is possible for students to borrow $1,500 from the university during their 4 years of training. This is a far cry from what many of them need in order to get through the course in dentistry.

It is clear that H.R. 12 is needed. More students with the interest and ability to become doctors and dentists must receive financial help far beyond what is now available. Classrooms and laboratories must be expanded more rapidly than private funds and State legislatures have been able to provide alone. There is a nationwide shortage developing in the health professions. H.R. 12 is a national answer to this serious threat to America's health standards.

Mr. HARRIS. Mr. Chairman, I move that the Committee do now rise.

The CHAIRMAN. Under the rule the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. Keogh, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12) to increase the opportunities for training of physicians, dentists, and professional public health personnel, and for other purposes, pursuant to House Resolution 305, he reported the bill back to the House with sundry amendments adopted in the Committee of the Whole.

The SPEAKER. Under the rule the previous question is ordered.

Is a separate vote demanded on any amendment? If not the Chair will put them en grosse.

The amendments were agreed to.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. DEVINE. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. DEVINE. I certainly am.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion.

The Clerk read as follows:

> Mr. Devine moves that the bill H.R. 12 be recommitted to the Committee on Interstate and Foreign Commerce with instructions to report the bill back to the House forthwith with the following amendment: "on page 19, strike line 13 and all that follows down through line 24 on page 27."

Mr. QUIE. Mr. Chairman, I am going to vote for the motion to recommit which I understand will strike out the student loan provision. If this prevails, I will vote for the bill which will then provide only grants for the construction of academic facilities at medical and dental schools. If the motion to recommit does not prevail, I shall vote against H.R. 12 for two reasons.

One, as I stated in my support of the Devine amendment, I am opposed to fragmenting our student loan program. Such fragmenting would be duplicating, wasteful, and confusing to administer.

Two, I feel it is unwise for the Federal Government to assist a limited number of institutions to as great a proportion as 66⅔ percent or 75 percent. To me, a 50 percent Federal grant for the construction of any type of academic facility in an institution of higher learning is sufficient incentive.

Mr. HARRIS. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

Mr. DEVINE. Mr. Speaker, on this I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 171, nays 239, not voting 24, as follows:

Mr. Roosevelt with Mr. Rich.
Mr. Henderson with Mr. Widnall.
Mr. Lennon with Mr. Talcott.
Mr. Cooley with Mr. Wyman.
Mr. Forrester with Mr. Ashley.

Mr. BURKE changed his vote from "nay" to "aye."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks in the Record at the appropriate place on the bill, H.R. 12, just passed.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

HOUR OF MEETING TOMORROW

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 11 o'clock tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

FRANCIS KEPPEL, COMMISSIONER OF EDUCATION

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

Mrs. GREEN of Oregon. Mr. Speaker, a fine portrait of a splendid Commissioner of Education, Francis Keppel, has been drawn by George Oakes in an article published in the April 14, 1963, edition of the Sunday Star. Commissioner Keppel has impressed many members of Congress with his knowledge, his grasp of the complex education field, his charm, his vision, and his direction. We wish him well in his task.

In this connection, Mr. Speaker, I also ask unanimous consent to have placed in the Record an article that gives a glimpse of the major problems confronting public officials and educators alike as they grapple to bring our education system into harmony with the revolutionary, explosive trends in our economic system.

Francis Keppel, Commissioner of Education

The appointment of Francis Keppel as Commissioner of Education is probably the most important action taken so far by the Kennedy administration to advance its program for Federal aid to education.

The former dean of Harvard's graduate school of education is a professional whose entire career has been devoted to education at the highest academic level. He was born in the world of education for his father, the late Frederick P. Keppel, was dean of Columbia College and later president of the Carnegie Corp., one of the largest foundations dedicated to the improvement of American and international education.

Francis Keppel is noted for a keen, incisive mind, and the ability to express forcefully his ideas. A graduate of Groton and Harvard, he is 47, a dark-haired, slight man with a brisk manner.

Although he has only been grappling with his job as Education Commissioner since last December (he was confirmed by the Senate a little more than a month ago), he has had time to formulate some of his ideas on national education problems generally.

TIED TO NATIONAL STRENGTH

He is deeply convinced for example, that improvement of our entire educational system is central to the Nation's strength and status in the modern world. He believes that the American people must be made to understand that whatever this country can do to relieve unemployment, to retrain manpower, to accelerate the economy, to carry out our defense and space programs basically depends on the urgent expansion and upgrading of our education from elementary school through university graduate training. Once the public appreciates the relationship between improving the education of our youth and these national programs, which have widespread popular backing, then rapid progress will be made on the educational front. As he said on March 8 at the University of North Carolina: "A growing body of evidence indicates that the development of human capital—particularly investment in education—has actually been more important as a source of economic growth than has the accumulation of physical capital. Education contributes directly to economic growth becasue it improves the equality of the labor force * * *. As I see the situation, national security and economic growth now change the need for a Federal program in education from a desirable domestic goal to a deadly serious necessity."

SPECIALIZES IN COOPERATION

In tackling the task of trying to bring together the views of educators and educational organizations whose rivalry was partially responsible for the defeat of higher education legislation in Congress last year, Dr. Keppel has the advantage of commanding their confidence. He has already made a beginning in developing greater cooperation between the American Council on Education, the largest organization representing higher education, and the National Education Association, the major spokesman for elementary and secondary schools. A believer that successful operation results when a consensus has been achieved, Dr. Keppel has been moving vigorously to bring this about among various educational organizations and groups. He has pointed out that educators cannot pass education legislation, but by their action or inaction they can keep it from passing.

Dr. Keppel is convinced that the key element in raising the level of education is expanding the number and especially improving the caliber of our teachers both in school and college. The most significant factor in the learning process, next to the aptitude of the learner, is the quality of instruction.

This job of raising standards must start in the home. Parents must think that learning is important and show it when dealing with their children.

The Commissioner believes that the Federal Government must help increase very low starting salaries in many States to attract better schoolteachers and also to raise the top salaries, as he has proposed in the new education bill. Too often a 21-year-old man can reach the top salary after 15 years. If we are going to retain good teachers, there must be a satisfactory goal to work for. This would encourage more male schoolteachers to enter and stay in the profession and this Dr. Keppel feels is important, for he thinks that there is too large a proportion of women teaching in our public schools.

The tremendous expansion of college students between now and 1970, when college enrollments are expected to double is going to require a substantial number of new teachers, especially in science.

Starting from the premise that reforms in education "require training of people," Dr. Keppel is pleased Vice Adm. H. G. Rickover keeps stirring up a critical point of view toward our educational deficiencies but he believes a national examining standard must be considered flexibly. For example, it would be hard to give the same examination in schools located in wealthy suburban areas as in those in city slums. There is also the danger that a single examining standard might stultify the independence of the teaching staff. Dr. Keppel thinks that new curriculums and educational research projects will be important instruments in raising standards.

Pointing out that the role of the Federal Government in education "has been evident since before the adoption of the Constitution" and citing such landmarks as the Land Grant College Act, the GI bills of World War II and the Korean war and the National Defense Education Act of 1958, Dr. Keppel stresses that "Federal participation should continue to be selective, stimulative and, where possible, transitional." He favors the Federal Government working through and strengthening the State departments of education in quality and independence.

SEES A LIAISON TASK

Dr. Keppel is not pushing for the creation of a Department of Education as was proposed last year by Secretary Ribicoff. Rather he sees the role of the Office of Education in the Federal structure as a "convener" or "liaison point" but not a director of the 40 Government departments and agencies that operate different educational programs in schools and colleges. As Commissioner of Education, it is believed that the President, who occasionally telephones Dr. Keppel directly, regards him as his primary adviser on education matters. Dr. Keppel expects to keep his eye on the overall effects of government on education and, if possible, help to settle any obvious conflicts on educational policy among the departments and agencies.

Dr. Keppel plans to improve the Office of Education by upgrading the key positions and attracting more well-qualified personnel. However, some claim that his own status was not enhanced by the recent establishment of two additional new Commissioners of Welfare and Vocational Rehabilitation in the Department of Health, Education, and Welfare. Nevertheless, Secretary Celebrezze is reportedly letting Dr. Keppel run his own office without interference.

SEEKS TO PERSUADE STAFFERS

As the principal administration advocate for the primary school to graduate college education bill, Dr. Keppel began his campaign of persuasion with the strong personal indorsement of such influential figures as Senator Morse, Democrat, of Oregon, chairman of the Senate Subcommittee on Education, and Representative Edith Green, Democrat, of Oregon, chairman of the House subcommittee handling major elements of the bill. He has been active on the Hill, talking to Congressmen who both favor and look with skepticism on the administration's program. Unlike many Government administrators, he has taken pains to seek out influential staff aids on both sides of the Capitol who play a vital role in advising their congressional bosses.

Although Dr. Keppel contributed to the education bill and indorses it, many of its features and particularly the omnibus approach were determined before his arrival.

The real question on the education bill is whether the administration, highly sensitive to the religious issue it always stirs up, will give Dr. Keppel the support he needs for major education legislation before the 1964 presidential election or whether they will use him to prepare the ground for a possible push during a second Kennedy term.

Education Not Meeting Job Needs

(By Susanna McBee)

American education is failing to pass one of its most important tests: training enough people to meet the Nation's future employment needs.

Education never has achieved the goal of placing the most qualified people in the right jobs—right for them and for the country—and it probably never will.

The fault lies not just with the educational system but with the facts of life in a free society. Some men get engineering degrees and become high-salaried business administrators; some women prepare to teach and get married instead.

Thirty years ago it was not so important to be trained specifically for certain jobs; today it is.

With what educators call the "knowledge explosion" (the world's store of knowledge is doubling every 10 or 15 years), there is an increasing need for more people to perform more tasks produced by more new knowledge.

"This has become such a big problem that it isn't really being faced," says one of American education's strongest critics, Vice Adm. Hyman G. Rickover, father of the nuclear submarine.

"No country has ever had an educational system adequate to its needs," Rickover said. "That's inherently impossible because of the vast capacity of the human mind to learn and change society. But the issue really is, Are we doing all we should to provide the people for the kind of society we will have in the next decade?"

He and some others answer this question with a loud, impassioned "no." With notable exceptions, however, not many people seem concerned.

One who is concerned is Secretary of Labor W. Willard Wirtz, who told a House Education subcommittee last month that there is no future in America for the unskilled laborer.

Noting that the economy used to have a "shock absorber" mechanism permitting it to make use of millions of unskilled workers, Wirtz said machines are removing the shock absorber. The problem of older unskilled workers losing their jobs to machines will get worse between now and 1970, he said, as 26 million young people enter the labor market—"a far greater number than the country has ever had to educate, train and absorb into employment in any comparable length of time."

As Wirtz pointed out, the employment problem is twofold: technology is changing the job growth pattern, and the postwar baby boom is adding an unprecedented supply of manpower to the labor force this decade.

One difficulty is that no one knows exactly how many people will be needed in various vocations by 1970. Rough estimates by the Bureau of Labor Statistics are based on assumptions which are themselves uncertain.

It is assumed, for example, that there will be no major war, that business productivity will be high, that unemployment will be below the present 5.6 percent rate, that current labor force trends will continue without abrupt change, that college enrollment will double and "that the trend toward higher levels of education will not be stifled by lack of school facilities or staff or of needed aid to students."

With all these "ifs" in mind, the Bureau predicts that over this decade the labor force, about 67 million in 1960 and going up 21 percent to more than 80 million in 1970, will include:

A remarkable 43-percent increase in the number of professional and technical workers—from 7.5 million to 10.7 million, or 13.3 percent of the 1970 labor forces.

A 34-percent increase in the number of service workers, such as nurses, waiters, cleaners, to total nearly 14 percent of the work force. Growth percentages in other categories are clerical, 31; sales, 23; managerial, 21; craftsmen and foremen, 20, and semiskilled, 13. The semiskilled will continue to be the largest group in the labor force—16.9 percent in 1970 compared with 18 percent in 1960.

A static number, 3.7 million, of unskilled industrial laborers, who will drop from 5.5 to 4.6 percent of the work force.

A 22-percent reduction in the farmworker population, dropping from 8 to 5.3 percent of the labor force.

Given the uncertain profile of the Nation's 1970 employment, the next question—one with an even more uncertain answer—is: How many trained people will American education (public, private, vocational, and general schools and apprenticeship programs) supply? A few examples will demonstrate the problems.

Labor Department studies show that during this decade 5.5 million new professional and technical workers may be needed to fill new jobs and replace those leaving others. However, only 3.7 million college graduates are expected to enter these fields by 1970.

New engineers required by 1970 could total about 700,000 to provide the projected 1.4 million employes in this field. But unless drastic steps are taken, new engineering entrants will be only 450,000, including those transferring into engineering from other fields and those without degrees who are upgraded into the profession.

Scientists, who numbered 313,400 in 1960, should total 548,000 by 1970, according to a 1961 study. To meet the projected average annual demand for 25,000 new scientists to fill new jobs and to replace losses, 83,000 person with science degrees should be graduated each year. About 80,000 will be, but this near balance may not bridge a great gap between supply and demand in certain specialties.

Teachers required for elementary and secondary schools should number about 2.2 million, and nearly 2.1 million (newly graduated and those reentering the field) will be supplied. The deficit over the decade will be 84,000.

About 225,000 new electricians will be needed to meet growth and replacement requirements by 1970. Apprenticeship programs will supply only 31 percent, or 70,000.

For tool and the diemakers, 85,000 will be required to meet growth and replacement demands, and apprenticeship programs will supply 45 percent, or 38,000.

These projections take into consideration the fact that nearly 70 percent of American young people were high school graduates last year and that more than 72 percent will be by 1970. Now about 18 percent are completing college, and 20 percent will do so by the end of the decade.

What happens when education does not supply the manpower demand is simply that people without all the qualifications get the jobs. Teachers are hired on a "temporary" basis; nondegree holders become engineers; electricians learn their trade on the job.

"The saving thing is that people are adaptable, and industry is willing to be flexible," says Assistant Commissioner Harold Goldstein of the Bureau of Labor Statistics.

But, as he noted in a recent speech, "the implications are clear that the general educational level of the work force will have to increase and (that) there will be fewer jobs open to people without at least a high school education."

Goldstein sees a danger in the possibility that with one of four boys getting college degrees, "we may starve our skilled trades of the bright people they need" since most college men avoid this field.

Growing attacks have been directed at vocational training programs in public schools, and recently 81 percent of the school administrators responding to a survey by the Nation's Schools magazine said such programs must be improved and updated. Most criticism centers on the emphasis on agriculture in many programs and on their failure to keep pace with the country's technological development.

Ward Beard, consultant in the Vocational Division of the U.S. Office of Education, says additional funds can solve most of these problems.

Commissioner of Education Francis Keppel says that "we'll be shooting ahead of the 1970 employment target" if Congress passes the administration's proposed reform of vocational education, aid for technical institutes, and plans for improving the quality of education. "Vocational programs should stress the kind of knowledge that has the widest application—math, science and language," he added. Keppel also advocates more retraining for people on the job or those who must change jobs.

Other serious problems which the Nation is just beginning to attack are school dropouts (about one-third of the young people entering the work force lack a high school education) and job discrimination against Negroes.

The problems of both groups, who often are the same people, overlap—both lack the training for any but the most menial jobs. Most educated Negroes face additional difficulties of either inferior quality of schooling in segregated institutions or rebuffs in many trades and white-collar jobs despite their good education.

When the Nation's educational mechanism cannot keep up with employment demands, obviously the economy does not fall. But as Goldstein observed, "There will be more stresses, more pressures. We should be thankful that the adaptability of our people can alleviate the pressure. But then we cannot continue indefinitely to count on it."

PRESIDENT FAILS TO UNDERSTAND PEOPLE

Mr. ALGER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, the President's failure to understand people is at the root of the present trouble both at home and abroad. This is apparent as applied to the Cuban exiles who are seeking to free their homeland and is also why this Nation is moving ever closer to dictatorship.

President Kennedy shows no understanding of what motivates freedom-loving people. He does not trust them. In aggrandizement of his own role he substitutes his judgment and his solutions for the will of the people in the apparent belief that only he can be right.

Lacking human understanding, the Kennedy administration has come dangerously close to taking the heart out of the Cuban people. In his beautifully phrased speeches he promised them a brighter tomorrow in which their native land would be free; then he dashed their hopes and shattered their dreams by adopting a policy of protecting their oppressor and turning the might of this great Nation against those seeking freedom.

This same failure to understand the yearning and determination of the Cuban people to rid themselves of their Communist masters, has been in evidence in the domestic policies of the Kennedy administration. The President does not believe in the wisdom and the judgment of the people of his own country. He does not trust them to solve their own problems, to determine the course of their own lives, but insists that only through bureaucratic planning can free Americans achieve happiness. He does not understand that a people controlled by a dictatorship cannot be free and without freedom there can be no happiness.

The Kennedy failure to solve the Cuban problem emphasizes again that the administration is not telling all it safely could about Cuba. He ignores the fact that Khrushchev's position in Cuba is firmer than it was a year ago. He insists that Russian troops are being removed from Cuba while there is ample evidence to indicate they are merely being rotated. He ignores the threat of a Communist, Russian-dominated Cuba to the rest of Latin America. He refuses to use the means available to him, short of military action, to help free Cuba. In short, the President seems to lack any real plan to bring about the overthrow of communism in this hemisphere, and failing to have a plan is misleading both the Cuban freedom fighters and the American people through management of the news and by withholding information.

I would like to inquire once again of the President, What is your plan to enforce the Monroe Doctrine and protect this hemisphere from foreign aggression? What is the Kennedy master strategy for the United States? As the head of a Nation that is still free, the people have a right to know where you intend to lead us and what form of government you and your advisers have in mind for the United States.

HOUSE JOINT MEMORIAL 24—STATE OF OREGON ON EL PASO NATURAL GAS CO. PETITION

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. DUNCAN. Mr. Speaker, on behalf of the gentlewoman from Oregon [Mrs. GREEN] and the gentleman from Oregon [Mr. ULLMAN] and myself, I wish to place in the RECORD a certified copy of House Joint Memorial 24, adopted by the 52d Legislative Assembly of the State of Oregon, now in session. This memorial relates to a petition of the El Paso Natural Gas Co. for authority to construct a gas line from Eugene, Oreg., to Grants Pass, Oreg. I am pleased to bring this matter to the attention of the House.

HOUSE JOINT MEMORIAL 24

To the Honorable CHAIRMAN OF THE FEDERAL POWER COMMISSION:

We, your memorialists, the 52d Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the Federal Power Commission has under advisement the petition of the El Paso Natural Gas Co. for authority to construct a gas line from Eugene, Oreg., to Grants Pass, Oreg., being petition No. CP 62-265; and

Whereas the plans and proposals of many persons and organizations in Oregon and elsewhere are dependent upon the granting or denial of such petition by the Federal Power Commission; and

Whereas the season for construction of major facilities of various kinds in the State of Oregon is rapidly approaching; now, therefore, be it

Resolved by the Legislative Assembly of the State of Oregon:

1. The Federal Power Commission is urged to expedite its determination of petition No. CP 62-265 and render a prompt decision thereon.

2. The Secretary of State shall send a copy of this memorial to the President of the United States, to each Member of the Oregon congressional delegation, and to the Chairman of the Federal Power Commission.

Adopted by house March 26, 1963.

CLARENCE BARTON,
Speaker of House.

Adopted by senate April 9, 1963.

BEN MUSA,
President of Senate.

FREEDOM AND RESPONSIBILITY—LAW DAY U.S.A.

Mr. MACGREGOR. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MACGREGOR. Mr. Speaker, the United States and the Communist world celebrate May Day in sharply contrasting ways. The Reds will flaunt their military might. In quieter, less spectacular fashion, we will pay tribute to the law—for May Day is Law Day in America.

The basic differences between the rule of men in Communist lands and the rule of law in the free world are summed up in one phrase: individual liberty, and its handmaiden, law. Liberty without law is license, and law without liberty is tyranny. America's objective is the advance of peace and individual freedom throughout the world under the rule of law. Communism seeks to smother freedom under an oppressive rule of men.

A full flowering of human endeavor is possible only when the individual is free to think for himself, to follow his own bent, and to enjoy the fruits of his own efforts. Men can do this only when they live in a free society in which individual rights are protected and basic obligations fixed by law.

It is literally true that law is the alternative to chaos on the one hand, and to terror on the other. No system of government known to man is free from errors of judgment in the lawmaking process, or in the executing of its laws. There is need for constant vigilance against the modification of other laws that do not serve the general welfare.

It is true that no system of government is slower to change its course than a democratic society such as our own. In our Republic, lawmaking is usually a slow, thoughtful process. Representatives of the people must give individual citizens an opportunity to participate in that process by contributing their ideas and opinions. This format has produced the best system of government yet known to man.

We must never forget that we are an orderly people under the rule of law, and that if we do not like a law we nevertheless obey it while we work to change it.

May we never listen to those who say that our present form of constitutional government is outmoded in this advanced scientific age. Our Constitution and Bill of Rights are flexible documents which allow room for change within the guidelines of individual liberty.

As Somerset Maugham so aptly put it:

> If a nation values anything more than freedom, it will lose its freedom; and the irony of it is that if it is comfort or money that it values more, it will lose that too.

It is my pleasure to join with the Minnesota State Bar Association, the American Bar Association, the news media, and other civic, patriotic, and educational groups by urging Americans everywhere to participate in this, the sixth annual Law Day observance in America.

REPEAL OF SECTION 14B OF THE NATIONAL RELATIONS ACT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland [Mr. SICKLES] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. SICKLES. Mr. Speaker, at the present time, under section 14B of the National Labor Relations Act, State law is permitted to diminish a right recognized under Federal law. This section provides that if States enact legislation concerning union security that is more restrictive than the Federal law, which allows a union shop, the State law prevails. This provision permits a State to override and nullify the intent of Federal labor-management policy. The right-to-work laws enacted at the State level outlaw the union shop—an arrangement that is both permitted and regulated by the Taft-Hartley Act.

Today I am introducing legislation to repeal section 14B of the National Labor

Relations Act, by which States are empowered to enact the so-called right-to-work laws. This grant of power to the States abridges the right of free collective bargaining. It is neither equitable nor conducive to peaceful and enlightened labor-management relations.

Section 14B of the Taft-Hartley Act now permits any State to outlaw collective-bargaining agreements which are otherwise permissible under Federal law. Sixty percent of the States, including my own State of Maryland, do not infringe on the rights of employers and unions to include a union shop clause in their freely bargained contracts. In these States without right-to-work laws, a contract can be negotiated which requires an employee, after he has been hired, to join the union where he works or pay to the union an initiation fee and an amount equal to monthly dues. This is the maximum union security permitted under Federal law. In addition to permitting union shop, the Taft-Hartley Act also contains several safeguards to prevent abuse of the union shop. Of course, no contract is legal which requires union membership as a condition for getting the job in the first place.

At the present time, restrictive right-to-work laws exist primarily in nonindustrial States. Indiana is the only industrial State to enact such a law. Maryland has considered passage of this restrictive legislation but wisely rejected it, as have other States with maximum experience in labor-management relations.

The practical effect of the so-called right-to-work laws is to pit State against State in a ruthless battle to lure industry by virtue of restrictive State legislation.

For the most part, States which have adopted regressive laws to attract industry have done their citizens no favor. An employer with so little civic responsibility that he will abandon a community on the hope of paying lower wages and no taxes elsewhere is a questionable asset to the community to which he moves. When the "gifts" run out in this new area, so does the employer.

The term right-to-work itself is a misnomer. These laws do not give any person the right to work. These laws give him the right to enjoy the benefits of union negotiated contracts without "paying the freight" so to speak. It is not only fair, but the very essence of responsible democratic self-government in this country, that one who derives the benefit of a union negotiated contract, should be obliged to help pay his share of the cost of such services. It has been my experience that the absence of a provision for sharing the costs of union representation frequently leads to unstable labor-management relations. Thus, in reality, right-to-work laws undermine union security and with it responsible collective bargaining.

The workers themselves have overwhelmingly shown that they favor union security agreements in a collective bargaining contract. When the Taft-Hartley law was first passed in 1947, there was a section which provided that, after the union and the employer negotiated a union shop contract, that clause had to be ratified by a secret ballot vote of the affected employees. The results of these elections were so overwhelmingly in favor of the union security clauses that Senator Taft moved to discontinue these votes. In more than 97 percent of the elections, the union shop was ratified and 91 percent of the employees voted for a union shop. Moreover, the employees under a union shop agreement have the right to secure a secret ballot vote to rescind the provision. The use of this procedure has been negligible.

History has shown that the overwhelming number of workers want these union shop clauses. Where an employer and the union want to incorporate such a provision in a contract, it is unfair for a State to restrict this right. If the workers favor union security clauses, who then advocates right-to-work laws? These laws are of course advocated by those who have shown little real concern regarding the rights of workers. If the right-to-work advocates were really sincere about insuring occupational choice, they could properly concern themselves with fair employment practices legislation instead of using noble thoughts about freedom to cripple legitimate collective bargaining activities.

The 1960 Democratic platform adopted in Los Angeles states "we will repeal the authorization for right-to-work laws." Enactment of my bill would make this pledge a reality. Right-to-work laws are opposed by many religious groups on the grounds that such laws are an unnecessary restriction on free collective bargaining. These include the general board of the National Council of Churches, the United Presbyterian Church in the U.S.A., the Board of Social and Economic Relations of the Methodist Church, the Rabbinical Council of America, and the Catholic Committee of the South.

Enlightened members of the business community have also favored repeal of the authorization to the States to enact right-to-work laws because they realize that the mischief and divisiveness caused by this legislation is a heavy price to pay for legislation that is largely irrelevant to the great labor-management issues of our day.

In conclusion, I see no reason why any State should be permitted to exercise undue interference with the rights of negotiating parties in collective bargaining. Union membership as a basis for continued employment should be left to agreement by labor and management through collective bargaining. Reason, justice, and experience point to the need for repeal of the existing pernicious authorization to the States which enables them to infringe on the collective bargaining process.

FAIR HOUSING ACT FOR THE DISTRICT OF COLUMBIA

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. MULTER] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. MULTER. Mr. Speaker, I have today introduced H.R. 5843, which is designed to prohibit discrimination by reason of race, religion, color, ancestry, or national origin against persons seeking or utilizing housing in the District of Columbia. This bill is in the form as recommended by the Corporation Counsel of the District, acting pursuant to instructions of the chairman of Subcommittee No. 6 of the House District Committee.

Although I am convinced that the Commissioners have the authority under existing law to issue appropriate regulations accomplishing this purpose, I have, nevertheless, introduced this bill so that the District Committee and the Congress will have full opportunity to examine the issues and so that all interested parties can be heard.

PERMITTING NATIONAL BANKS TO UNDERWRITE AND DEAL IN SECURITIES ISSUED BY STATE AND LOCAL GOVERNMENTS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Rhode Island [Mr. ST GERMAIN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ST GERMAIN. Mr. Speaker, this bill is designed to aid States and municipalities by permitting national banks to underwrite and deal in securities issued by State and local governments.

Since 1933 commercial banks have been prohibited from all underwriting and trading in securities. An exception was made in the case of general obligations of States and municipalities, obligations of the United States and certain other issues. The purpose of the legislation which enacted this prohibition was to take commercial banks out of speculative development projects and out of the corporate and foreign bond business. At that time, the volume of bonds payable solely from the revenues of a specific project was relatively small and tended to be concentrated on new development projects. Therefore, with some exceptions, revenue bonds were considered greater risk investments than general obligation bonds.

For many reasons there has been a shift in municipal financing. More and more, new types of revenue bonds are being used in place of general obligations. However, these new types are quite different from the old high risk revenue bonds. They have an excellent record and are fundamentally general obligations in different form. They have been used to build schools, highways, bridges, water and electric plants. This type of revenue bond financing has greatly increased in recent years.

This bill will permit banks to underwrite, trade and deal in revenue bonds only to the extent national banks can invest in such bonds under the National Banking Act. Any bank can only own or be obligated to buy an amount of bonds limited to 10 percent of the bank's capital and surplus. Therefore, the risk level is not raised.

Revenue bond financing from which commercial banks are now automatically excluded runs about one-third of the total market. State and local governments need the broadest possible markets for their growing volume of securities. The broader the market the greater the competition and the lower the interest rate. If commercial banks were permitted to participate in revenue bond financing the interest rate that the municipalities and States must pay would be lower. Therefore, more public improvements which are financed in this way would be possible.

THE NIAGARA FRONTIER IN WESTERN NEW YORK STATE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. Dulski] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. DULSKI. Mr. Speaker, on Friday, April 19, 1963, the Niagara frontier in western New York State was honored by a very impressive ceremony—the New York Army National Guard assumed operational responsibility for the first Nike-Hercules air defense sites in the State of New York.

It was my pleasure to witness this eventful occasion and under leave to extend my remarks in the Record, I am happy to include the program.

Music by the 27th Armored Division Band, New York Army National Guard, which was followed by the rendition of honors. The invocation was given by a National Guard officer and the change of command ceremony followed. Lt. Ronald J. McQuaid, U.S. Army, was relieved by Capt. Robert H. Dupont, New York Army National Guard; Lt. William R. Pooley, U.S. Army, was relieved by Capt. Henry E. Close, New York Army National Guard.

Col. Thomas A. Rodgers, commanding officer, 31st Artillery Brigade—Air Defense—made the opening remarks which follow:

Distinguished guests, ladies and gentlemen, it is a pleasure and a privilege to welcome you to the Lancaster Missile Site. The symbolic ceremony that you have just witnessed marks the transfer of manning responsibility for two Nike-Hercules sites to the New York Army National Guard. This unit, the 2d Missile Battalion, 209th Artillery, has a proud record of service in the Nike-Ajax program. It is only proper that it is honored again today by being the first National Guard unit in the State of New York to be armed with the powerful Nike-Hercules.

By assuming this responsibility, the guardsmen here continue to participate as equal partners in the one-Army, U.S. Air defense effort. We are proud to have them as teammates, certain of their ability and confident that as a team we stand ready to meet any challenge.

At this time it is my privilege to present to you the acting commanding general of the 1st Aradcom region, who will speak on behalf of the Army Air Defense Command, Brig. Gen. Stephen M. Mellnik.

General Mellnik.

General Mellnik's remarks follow:

General O'Hara, Congressman Dulski, distinguished guests, ladies and gentlemen, the ceremony you have witnessed has more than passing significance. It deserves serious contemplation and reflection. For the first time in our history as a great nation we live in an atmosphere of continuing tension and danger. This ceremony recognizes the danger by placing powerful defense weapons into the hands of its citizen Army. We are a strong nation in every sense of the word. This quiet ceremony states our intention to use our strength to defend ourselves.

The Armed Forces are proud of the contribution they make to the defense posture of our Nation. You, as leaders of industry, government, and education, must be equally proud of the vital roles your professions play in developing the strength of this country. It is together—as a team—that we will grow and continue to remain strong.

Traditionally, America based its security on its potential strength—that is, on its ability to mobilize its resources at a leisurely pace to meet any challenge. This is a luxury we can no longer afford. Today, time and space factors have taken on new dimensions. Explosive devices have powers of destruction which stagger the imagination. These devices can be delivered by aircraft traveling 20 miles a minute.

The air defense of America is a unified responsibility with the Army, Navy, and Air Force contributing elements to the overall effort. We of the Army are proud of the part we play in this joint effort. We have a modern missile force; and you see before you what we believe to be the best air defense missile in the world today—the Nike-Hercules. Army research and development created this weapon and will continue to improve it to meet the challenge of the future.

It is most appropriate that the New York National Guard, in the traditional spirit of the minutemen of the Revolutionary War take its place in the active defense of our homeland. We are proud to turn over to the New York Army National Guard the most modern air defense missile arm, located here and at Grand Island. We do so with complete confidence. The units have demonstrated their professional competence in missile firings at Fort Bliss. Our citizens can remain secure in the thought that unfriendly aircraft will not have free access to our population and industrial centers. This Niagara frontier unit is the first unit to be equipped with the Nike-Hercules in the State of New York. There is no finer service, nor one more in keeping with tradition, than this mission which the National Guard of New York assumes today.

To you, General O'Hara, and to the fine soldiers of the Army National Guard of New York, I extend my congratulations on the superior fashion in which the citizen soldiers performed their duties with the Nike-Ajax missile system. I consider it a great privilege to pass on to you the responsibility for manning the Nike-Hercules sites at Lancaster and Grand Island.

Thank you.

Maj. Gen. Almerin C. O'Hara, commanding general, New York Army National Guard, and chief of staff to the Governor of New York State, delivered the principal address which follows:

General Mellnik, Colonel Rodgers, officers and men of the U.S. Army—Active and National Guard—Congressman Dulski, distinguished guests, ladies and gentlemen, having served in the military forces of the State and Nation for nearly 30 years—I, like you, have lived through many difficult and extraordinary changes in military technology.

Most of us have been participants or, at least, vitally interested spectators in the metamorphosis of military techniques from the days when infantry soldiers scattered and fired their Springfields or M–1 rifles at attacking enemy aircraft—through the days of radar-controlled guns—to the advent of missiles and the space age that staggers the imagination in 1963.

Through all of these advances one of the most exciting to me has been the steady progress of the National Guard from infantry minuteman to missileman.

June 1960 highlighted this progress:

On that day I was privileged to participate in the turnover ceremonies of the Nike-Ajax missile from the Active Army to the National Guard in the Metropolitan New York City area and in August of 1960 we duplicated those ceremonies at Orchard Park here on the Niagara frontier.

Now, 3 years later, our National Guard takes its greatest stride forward as the 2d Missile Battalion, 209th Artillery, New York Army National Guard, accepts the Hercules mission from so distinguished a group of soldiers as is represented here today by the Active Army units of batteries A and C of the 1st Missile Battalion, 4th Artillery, 31st Artillery Brigade.

In charging the National Guard, who are about to assume this most responsible mission from the capable hands of the active service, I can think of no more profound words than those of Gen. George Washington, our first Commander in Chief, in a message to his officers during the Revolutionary War, when he said:

"Impress upon the mind of every man, from the first to the lowest, the importance of the cause, and what it is they are contending for."

The seriousness of this day can be found in the question, "What are you contending for?" Let me answer.

You are contending with a ruthless enemy in the battle for world peace versus world domination. This enemy switches from cold war to hot war—from peaceful coexistence to threats of nuclear war—in maneuvers aimed at promoting fear, confusion, and frustration in the minds of men throughout the world that he would dominate.

This is the strategy of despair and it will continue to be the desperate strategy of communism so long as the U.S. Army—and you are the U.S. Army—continues to maintain its traditions of duty, honor, country, that have been chiseled out of history by the dedication and blood and suffering of soldiers of the U.S. Army.

For 179 years the U.S. Army has been the great equalizer against the threat of the tyrant.

Forty years of experience in antiaircraft weapons from guns to the supersonic Hercules missile and hopefully, on to Nike-Zeus or a more sophisticated weapon, will continue to frustrate the evil ambitions of the tyrant.

In August of 1960, at Orchard Park, I reminded our National Guardsmen that Pearl Harbor, with its day of infamy, with its death and destruction, did happen once.

On that day I reminded you that a great trust had been placed in your hands and I charged you to justify that trust.

To your great credit, you have not failed. You have reconfirmed faith in your ability, and I say again to you today, as I did nearly 3 years ago, that there can be no acceptable excuse for failure to be ready and prepared against the Pearl Harbor of the missile age.

Now yours will be a technical business and susceptible to mistakes. But you, in this business, can't afford mistakes, and this was brought clearly home several days ago while perusing some old military books when I ran upon an article entitled, "Tactics of the Future," from a German translation of 1899, which is as appropriate today as the day it was written, and I quote:

"Let not military theory disregard men with their mistakes and imperfections, for it is from these that in great part the victory accrues to the other side. The conqueror is always he who makes the fewest mistakes."

We cannot afford mistakes.

Remember that in Greek mythology "Nike" was the Goddess of Victory, and she will be your constant companion.

Unfortunately, the commander in chief of the State military forces, the Honorable Nelson A. Rockefeller, Governor of the State of New York, could not be with us today, but he has addressed a note to me which I should like to read:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, April 19, 1963.

Maj. Gen. A. C. O'HARA,
Chief of Staff to the Governor, State Division of Military and Naval Affairs, Albany, N.Y.

DEAR GENERAL O'HARA: I sincerely regret that I cannot join with you today to personally accept the Nike-Hercules mission for our Army National Guard units on the Niagara frontier.

The record of proficiency achieved by the Active Army Forces, who will today release control of a portion of their mission to the National Guard, is well known and is a most creditable performance deserving of the appreciation of all patriotic citizens. The example set by the Active Army in its personal relationship with the people of our community, as well as its outstanding proficiency, can be well emulated by our National Guard Forces.

The New York Army National Guard's progression from antiaircraft guns to Ajax missiles and now to the vitally important Nike-Hercules is a testimonial to their individual and collective abilities.

The achievements of our 2d Missile Battalion of the 209th Artillery (Air Defense) who will be charged with this new mission of great responsibility, speak eloquently of their capability to discharge this national defense responsibility.

As commander in chief of the State military forces, I enthusiastically accept this new mission and responsibility for our Army National Guard units who will continue to work shoulder to shoulder with their Active Army counterparts in the defense of this great country.

Please express my personal congratulations to the officers and men of the Active Air Defense units and the New York National Guard Missilemen who are today participating in this historic ceremony.

Sincerely,
NELSON A. ROCKEFELLER.

I join with Governor Rockefeller in expressing to all of you, Active Army and National Guard, my personal sincere appreciation for the things you have accomplished in the past and for the effective duty you will render in the future.

As New York State accepts this Nike-Hercules mission, I say to all of you, may Nike, the goddess of victory, walk by your side.

Following the ceremony the visitors had an opportunity to visit various areas of the installation which were supervised by the Guardsmen.

At this point, I would like to bring to the attention of the House the mission of the U.S. Army Air Defense Command.

MISSION OF THE U.S. ARMY AIR DEFENSE COMMAND

The mission of the U.S. Army Air Defense Command is to provide combat-ready Army air defense forces to the Commander in Chief, North American Air Defense Command, for air defense of specified critical locations. ARADCOM's contribution of forces to the air defense system includes surface-to-air missile units which shield major target centers of the United States.

ARADCOM's concept of defense is a combination of men, weapons, and determination that will prevent enemy aircraft or missiles from making a successful attack upon defended areas. Under this concept, the primary goal is to deter an enemy from an air assault on the United States by making him see in advance that his probable losses are not worth the risk. If that deterrent fails, the goal then is to deny the enemy destruction of the centers of America's great retaliatory and productive might. ARADCOM is a major component of the North American Air Defense Command, a unified command which is charged with the overall mission of air defense of the North American Continent. NORAD has full operational control of Army air defense forces assigned to continental defense, as well as those forces also contributed to this system by the U.S. Air Force, Air Defense Command and U.S. Naval Forces, Continental Air Defense Command.

Air defense is recognized as a joint task in which the Army shares responsibility with its sister services. Each component of NORAD contributes those forces which it is best suited by experience to train, equip, and sustain as an effective element of this single, unified system.

The component structure is designed to give the continental air defense system true depth. This "defense in depth" strategy combines the dimensions of distances with that of a variety of weapons. The enemy would be met and engaged not only along the full range of his attack, but by different weapons.

SOME GRAIN FIGURES

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. BECKWORTH] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. BECKWORTH. Mr. Speaker, for a long time I have felt it is important to ascertain how many farmers obtain price support loans on three crops. I have felt it is important to ascertain how many farmers obtain price support loans on two crops. I have felt it is important to ascertain how many farmers obtain price suport loans on three crops. I have felt it is important to ascertain how many farmers obtain price support loans on four crops. I wrote the following letter to a number of the divisions of our Government. Some effort has been made to help me obtain this information. I include at this point a copy of a letter I wrote and some information which has been furnished me by the Department of Agriculture:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 4, 1962.

DEAR DIRECTOR: For the years 1958, 1959, 1960, and 1961 I desire the following information for your county:

How many barley producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many corn producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county each year?

How many grain sorghum producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many oat producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many rye producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many soybean producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many wheat producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many peanut producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many rice producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many cotton producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your county in each year?

How many farmers participated in the programs of two of these crops? How many farmers participated in the programs of three of these crops? How many farmers participated in the programs of four of these crops?

For this information I shall be grateful.

Regards,
LINDLEY BECKWORTH.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., March 25, 1963.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in further reply to your request for information on loans made to farmers on one or more of certain crops for 1961.

The attached tabulation was prepared from estimates furnished by ASCS State offices. As you remember in our earlier correspondence we indicated that the cost of preparing this material on individual basis was in the neighborhood of $700,000, and without additional appropriations we could not develop it in that manner. Therefore, we have prepared this report based on the above-mentioned estimates.

This information supplements that previously furnished you on the number of loans and the amounts of commodities placed under support broken down by States.

Sincerely yours,

KENNETH M. BIRKHEAD,
Assistant to the Secretary.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., October 17, 1962.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR CONGRESSMAN: Attached is a list, by States, of the number of grain price support loans and the total dollar amounts of these loans made for 1961. This supplements the material which we prepared for you last year regarding loans made for 1958, 1959 and 1960.

In addition to this information, in response to your request, we are trying to develop information, by States, concerning the percentage of farmers who have loans in two or more of these crops. We hope that this information will be available at an early moment and we will send it to you immediately.

Your request has indicated your need for this same material by counties. We are exploring whether we could arrange to provide essentially the same information by counties by using our machine installations in Kansas City, New Orleans, and other locations. If this information is prepared at the local county office, it would be disruptive of carrying on assigned tasks since it would require an enormous number of man-hours and it would be tremendously expensive. It is our best estimate that it would take something in the neighborhood of 300,00 to 350,000 hours to collect the information and at the average hourly cost of about $2 for clerks, the total bill would be in the neighborhood of $600,000 to $700,000.

It has been brought to our attention that you have received a number of letters from the State of Kansas indicating that the county offices there were not providing the information, but that the information would be forthcoming from the State office. This resulted from a misunderstanding of the information you have requested. It was their understanding that the information you had requested was concerned with State figures and not with county figures and the State had indicated at the offices that the State information would be provided, as it is, in fact, in the attached material.

I might say that on peanuts and tobacco the price support program is handled through cooperatives and in the case of peanuts the records are kept by marketing associations and in the case of tobacco by grower cooperatives. In both of these commodities it is doubtful that there is any information by counties. The information is maintained primarily by post office addresses, thereby further complicating the task of providing the information in the form in which you desire it.

Sincerely yours,

KENNETH M. BIRKHEAD,
Assistant to the Secretary.

Mr. Speaker, I also include at this point in the RECORD some letters and statements pertaining to agriculture:

JUNE 18, 1962.

To: Hon. LINDLEY BECKWORTH.
From: Natural Resources Division.
Subject: CCC loans.

Response is made to your request of June 1, 1962, for information concerning the number of CCC borrowers participating in more than one commodity loan program.

Based on the listing of borrowers and related data furnished by your office, 27 parties who borrowed $50,000 or more on cotton or $25,000 or more on other supported commodities participated in two commodity loan programs. The data supplied failed to reveal any parties borrowing under more than two commodity loan programs.

The enclosed table lists the 27 borrowers by name, address, commodities, and amount of loan.

WILLIAM F. WOODS.

William F. Woods,
Natural Resources Division.

Department of Agriculture,
Office of the Secretary,
Washington, D.C., May 23, 1962.

Hon. **Lindley Beckworth,**
House of Representatives.

Dear Mr. Beckworth: This is in reply to your letter of May 14, requesting the names and addresses of individual farmers who have received price support on more than one agricultural commodity.

There are approximately 3.7 million farmers in the United States and many produce one or more commodity which is eligible for price support. Further, some individual producers obtain more than one loan on a commodity, a separate one for each storage location, for example. There are more than 20 agricultural products which are eligible for price support, and within this number there are distinct grades or classifications which are also eligible for support, such as extra long staple cotton, American Egyptian and so forth. Our records are not maintained to show the number of producers who obtain price support through cooperatives or groups, or who obtain more than one loan on a commodity or who obtain loans on more than one commodity. However, I am sure you recognize that farmers who do not directly participate in a price support program obtain benefits to the extent that the support price influences the market price of the commodity he sells.

We believe that it would be administratively and economically impracticable to maintain records which would show in detail the names and addresses of every individual farmer who received price support on more than one commodity. The cost in terms of money and man-hours would be very high and the utility of the information obtained of doubtful value from an operational standpoint.

Sincerely yours,
Kenneth M. Birkhead,
Assistant to the Secretary.

June 24, 1962.

Dear Mr. Birkhead: I would like this information on all who received loans of $50,000 or more on more than one crop. Please return.

Regards,
Lindley Beckworth.

Department of Agriculture,
May 29, 1962.

Hon. **Lindley Beckworth,**
House of Representatives.

Dear Mr. Beckworth: We are enclosing several tables showing 1960 crop price support commodity loans of $25,000 or more, by producer, in accordance with your communication of May 24.

Your communication is being returned as requested.

Sincerely yours,
Kenneth M. Birkhead,
Assistant to the Secretary.

GENERAL MILLS HOMEMAKER SCHOLARSHIPS

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from West Virginia [Mr. STAGGERS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. STAGGERS. Mr. Speaker, on this date, 50 high school seniors, each representing a sovereign State in our Union, with their 50 teacher-sponsors, honor us by assembling at their Capitol to receive college scholarship awards. The donor of the awards is the General Mills Corp., which has instituted an annual Betty Crocker search for the American homemaker of tomorrow.

This has come to be a feminine age. Women have fought for the right to enter every field of human activity, the professions, industry, commerce, Government. It might have been feared that their victory in this struggle would alienate their interest in the one indispensable occupation which has engaged their attention through the centuries, that of homemaking. That would indeed have been a sour and unsavory fruit of victory. But no such outcome has resulted. On the contrary, as the frantic activity of the marriage license bureaus attests, the foremost ambition of every young woman is to preside over a home of her own. There she has full scope to exercise every talent and skill with which nature has endowed her. Women instinctively realize that homemaking is a job in the full sense of the word, the noblest of jobs, one whose mastery brings more progress and joy to the individual and to society than all other jobs combined. We believe this job should be elevated to the rank of a profession. Our high schools and colleges marshal their resources to inculcate and dignify the many skills involved in becoming a successful and gracious homemaker. Now this great industrial concern has set aside a significant portion of its gains for the purpose of motivating an interest in becoming highly proficient in the art. General Mills is to be commended for a program designed to accentuate appreciation of what good homemaking means to our Nation. And the presence of these young women in Washington today should enlist the attention of every Congressman who is proud of his State and of the people whose accomplishments have made it great.

THE BETTY CROCKER SEARCH FOR THE AMERICAN HOMEMAKER OF TOMORROW

Educators have discharged with conspicuous success their responsibility for training the Nation's young women as future homemakers and citizens. The magnitude and quality of our schools' efforts, unfortunately, have often been overshadowed by the sensationalism of occasional juvenile delinquency. The psychological power of the negative has deprived the country's dedicated teachers and administrators of the credit they so richly deserve.

In establishing the Betty Crocker search for the American homemaker of tomorrow in 1954–55, General Mills set out, specifically, not only to help the Nation's teachers in educating future homemakers, but also to focus attention on the work of the schools. The program provides recognition for teacher and student alike. It endeavors to heighten interest in the world's number one career, homemaking. It establishes a scholarship program for exceptional young women and rewards every participant by exposing her to new ideas on homemaking as a career. It is the only national scholarship-educational program exclusively for girls, with $110,000 in scholarship grants awarded annually.

Highly significant and satisfying to General Mills is the fact that the scholarship winners represent more than 400,000 other girls in 12,900 high schools of the land, who each year have an opportunity to learn from the program. It is these young women, in large measure, who will shape the Nation's homes of tomorrow and therefore the Nation's future.

MAYOR RICHARD J. DALEY'S INAUGURAL ADDRESS: A RECORD OF ACCOMPLISHMENT FOR MUNICIPAL ADMINISTRATORS THROUGHOUT THE WORLD TO FOLLOW

The SPEAKER. Under previous order of the House, the gentleman from Illinois [Mr. O'BRIEN] is recognized for 20 minutes.

Mr. O'BRIEN of Illinois. Mr. Speaker, last Wednesday, April 17, Mayor Richard J. Daley was sworn in to his third term as chief executive of Chicago.

During the impressive ceremonies, Mayor Daley delivered his inaugural address. I shall ask unanimous consent today to include the text of his address at the conclusion of my own remarks.

The record which Mayor Daley has written in the past 8 years as chief executive of Chicago and the bold program which he has outlined for the next 4 years, can well serve as a model for municipal administrators throughout the world.

Richard J. Daley is today considered one of the most outstanding administrators in the world. A careful analysis of his inaugural address showing the awe-inspiring developments in Chicago during the past 8 years and his bold and imaginative program for the next 4 years will quickly convince anyone that Mayor Daley's worldwide recognition is more than well deserved.

I am including Mayor Daley's entire speech today because in my judgment the program outlined by Mayor Daley can serve as a guideline for administrators of large cities throughout the world.

Chicago is indeed fortunate to have a mayor with such tremendous foresight and imagination. It would be my hope that those who are quick to malign the city of Chicago will carefully read Mayor Daley's inspiring message. They will find that here is a city which has set the pace for urban modernization which can serve as a guideline for our Nation and the world.

In behalf of my colleagues in Congress from Chicago, I congratulate Mayor Daley for his inspiring message and hope that those who read his speech will find guidance in their own hopes for their own urban communities.

Mr. Speaker, Mayor Daley's inaugural address follows:

INAUGURAL ADDRESS OF MAYOR RICHARD J. DALEY, APRIL 17, 1963

The objectives, the policies, the goals of this administration are a matter of public record. In my inaugural address in 1955 I said, "We must take first things first, we must concentrate our efforts on city services which are essential to keep the people of Chicago the healthiest, best protected and most prosperous in the Nation.

"We want the finest police and fire departments in the Nation. We can't be satisfied with a school system in which 14,000 students must attend double-shift schools and where classes are overcrowded and school buildings are old and dangerous.

"We must provide the opportunity for every citizen to have decent housing. We must have slum clearance. While we are clearing the slums we must prevent the spread of blight into other neighborhoods."

I said then: "Community betterment programs will also include cleaner and safer streets, extension of sewers, the expansion of street lighting, and a bigger street cleaning department and a realistic human relations program. More recreation facilities are needed in the neighborhoods, more playgrounds and parks.

"There is no dispute among us that we need more police and a better police department; that we need more schools and more teachers; that government should be continuously streamlined and modernized; that there must be something done to improve our transportation system.

"There are great projects underway: slum clearance, new housing, school buildings, superhighways, street lighting projects, neighborhood redevelopment, offstreet parking in neighborhood communities, and many other improvements. I shall not only support these projects; I shall speed them vigorously and with energy. I will permit nothing to stand in the way of Chicago's growing civic consciousness and civic integrity."

This was my platform, my pledges in 1955 when I first took office.

During the past 8 years I have endeavored to fulfill those pledges and for me there can be no greater reward than the vote of confidence expressed by the people at the polls on April 2.

Tonight, as we continue our task of carrying out the mandate given by the citizens of Chicago, I find it difficult to express my mingled feelings of challenge and confidence, of pride and humility.

I have lived in one neighborhood of Chicago all my life. The desires of my neighbors for a community which will enable them to give their families the best possible environment, is shared by all the residents of the neighborhoods of Chicago. Their needs and their wants have been and will continue to be my guide in the 4 years to come.

Police, fire, health, sanitation, building, education, and recreation are the everyday responsibilities of local government. The program, the new plans, that any municipality can carry forward are dependent on the high standards of these vital services and the effective performance of city departments in providing them to city residents.

These are the mainsprings of local government and the continual improvement of these services will by themselves cause an improvement in all services and stimulate and make possible the success of new programs and new plans. In programing for the next 4 years and in planning for the future, we must first appraise the quality and performance of essential services, the programs which are underway and the steps which must be taken to further improve them.

Your Chicago today has a police force which is rapidly becoming a truly professional police department. Since he has taken command, Supt. O. W. Wilson has created a new image of the police department. The department enjoys the public respect and the public confidence. In the past 7 years the appropriations for the Chicago Police Department have increased by $36 million, of which more than $15 million was appropriated in the past 2 years. The Chicago Police Department now has the most modern communications system in the Nation.

The record is clear that the police department is run without interference by outside influences, and it will continue to be completely administered by the Chicago Police Board and the superintendent of police.

The police department will increase its emphasis on patrol and crime prevention activities, with more foot patrolmen and squad cars assigned to areas of high crime incidence. More personnel will be assigned to the task force undercover unit and to the canine section, which has proven to be a highly successful crime prevention operation.

Continued efforts will be made in the coming year to replace sworn personnel with civilians so that more police personnel can take part in crime prevention and crime fighting activities.

The 1963 budget provides $100 annual clothing allowance for all uniformed personnel and $50 annual uniform allowance for crossing guards.

Bringing the police force up to its present high professional standard has been costly. It will no longer be necessary to add 4,000 policemen, which we have done since 1956. Their salaries amount to approximately $26 million a year. It will not be necessary to provide for a communications system, the remodeling of police headquarters, and the new equipment that was urgently needed. It is generally agreed that in the future the compensation of our police and fire departments should be increased.

Your Chicago today has a fire department that is the most completely equipped firefighting force in the world. With the new fire academy, adequate manpower, new stations, new equipment, snorkels, the fire department has made a record of reducing extra-alarm fires, while in other cities extra-alarm fires have increased. How many cities in the Nation have emergency ambulance service within 2 to 3 minutes of every one of its residents?

As in the police department, bringing the fire department up to its high standards has been costly. It will not be necessary in the future to add nearly 1,000 firemen at an annual compensation of nearly $6,500,000, nor to provide for expensive equipment, and the construction of a new fire academy. In the months ahead, the fire department will carry on its building program of relocating and consolidating apparatus from single fire stations into multiple fire stations, reducing both operating and maintenance costs.

With the facilities of the new fire academy available, the department is able to give a much finer course of training to probationary firemen.

As in the police and fire departments, all of the city departments have been greatly improved.

Today, the Chicago Board of Health's leadership in preventive medicine is recognized throughout the world. Its programs of dental treatment, immunization, and inspection have been greatly increased. It is a pioneer in launching a chronic disease health program in such vital areas as heart, cancer, diabetes, and mental health. The city of Chicago is the only city in the State which gives physical examinations in our public and parochial schools to protect the health of medically indigent children.

It has expanded its services of quarantine inspection at both the port of Chicago and O'Hare Field. The city's first district health center will be opened in Garfield Park in early June. It will provide a comprehensive health service directly to the community and will include prenatal care, well-baby clinic, mental health program, dental health, chronic disease control program, and health education. In the future, we hope to provide for more of these health centers which work in full cooperation with the medical society and the local hospitals.

Chicago, which was once thought of as "a dirty city," has won first awards in the national contest in Washington for being the cleanest big city in the United States in 1959, in 1961, and again in 1962.

Actually, nothing is more important to civic pride and in creating an atmosphere in which the citizens will seek to maintain and improve their property than clean streets and alleys. It is not an easy task to keep a city of this size clean.

Making our big city clean and attractive has cost money, but it has been well worth it. The government alone could not have achieved the goal of a much cleaner city. It has been only through the cooperation of industry, commerce, labor, churches, civic groups, all of our media of communications, and above all, the people of Chicago who gave this program their whole-hearted support.

The goal of a clean and beautiful city is a never-ending task, and we will continue not only to maintain but to expand this program.

The building department has been expanded and most modern techniques are being continually adopted to insure that the codes are strictly followed. Owners of property now are voluntarily repairing and rehabilitating their buildings rather than waiting to be taken into court.

One of the most effective programs that has been carried on by the building and law departments is the demolition and vacation of dangerous and hazardous buildings which have long been eyesores in the community.

The inspection activities of the building department are vitally important, but not only in terms of enforcement. This administration believes that the building department is essentially a service department that can aid and assist property owners in protection and increasing the value of their property. The building department will continue its program of demolishing hazardous and dangerous buildings from the neighborhoods of Chicago.

These five departments—police, fire, health, sanitation, and buildings—account for 75 percent of the total operating fund of the city. Eighty percent of all of the increases in the budget since 1955 have gone to improve these essential services.

In the 1963 budget, the total appropriation for the city's operating and capital improvement expenditures was reduced by more than $40 million. The 1963 property taxes for the operation of the city's departments was reduced by more than $7 million—the most substantial reduction in the city's tax levy for more than half a century. This reduction will be effective next year.

The appropriations for virtually all city departments were reduced, but in no instance will there be a curtailment of their basic services.

The lightening of the tax burden for property owners, especially for the small home owners, was accomplished without diminishing the quality of vital city services—services which are being maintained at standards which are the highest in the city's history. These reductions were made possible by stringent economies in all operations involving contracts, personnel, commodities, equipment, and by improved supervision.

With few exceptions all of the home rule recommendations have been adopted. Also put into effect were: The executive performance budget, the classification and compensation plan, the consolidation of functions of the Chicago Park District and the city police, the consolidation of the land clearance commission and the community conservation board into the department of urban renewal, the creation of the departments of aviation and the Port of Chicago, the program of coordinated capital improvement budgeting, and the microfilming of records in all departments. These have all contributed to greater efficiency and superior service.

Nearly every department in the city has had surveys by expert municipal consultants, the consolidation of functions, the elimination of paperwork, and the introduction of electronic office machinery. In some departments there were nonrecurring costs. The modernization of equipment and the remodeling of offices has been virtually completed.

We can look forward to further benefits of this modernization program. We shall continue this program of efficiency and economy, to utilize the most modern business techniques, to streamline procedures, cut red tape, reduce overlapping by consolidating functions and agencies wherever possible, and employ the best talent in the field. We shall continue to utilize outstanding consultants.

The objective is to continue to give the taxpayer the greatest value for his dollar.

In 1952, under a previous administration, the Mayor's Commission on Revenue, which was not a political commission in any way, analyzed the needs of Chicago. Three years later, when I assumed office, I followed the recommendations of the commission.

Last January I appointed a citizens committee on city revenue and expenditures. The purpose of the committee was to study the proposition to place limitations on the real estate tax levy and to study alternative proposals in relation to revenue resources and city expenditures.

The committee will present its recommendations shortly, and we will then present to the city council a special message on taxes and revenue.

Our agencies dealing directly with the welfare of people have all been pioneers in new programs.

The Human Relations Commission has made great strides in developing better understanding among all our people in recent years. The commission has not only had great success in preventing racial stress but has also made great progress in increasing employment opportunities.

Our other commissions, senior citizens, youth welfare, newcomers, and the alcoholic treatment center, are making steady progress in their fields, all of these activities contributing to the well-being of our people.

Because of the unavoidable neglect which had caused an accumulation of urgent needs, this administration established a policy of expediting all of its public works programs so as to bring the benefits of new facilities to the citizens as quickly as possible.

To determine the city's needs and the needs of the many suburbs to which the city supplies water, we requested a survey to formulate plans for the next 25 years.

A few weeks ago, the southwest pumping station was in full operation, and within a few months the largest filtration plant in the world will supply filtered water to millions of people residing on the central and north sides of the city and to 19 suburbs.

The public works improvements during the past 8 years are evident everywhere. Included in this area of activity has been the construction of numerous new playlots and playgrounds, new sewers, new water mains, pumping stations, new filtration plant, bridges and viaducts, police and fire stations, new parks, beaches, and swimming pools, house of correction improvements, 50 miles of expressways to give this city the finest expressway system of its kind in the country.

Chicago is the best lighted city in the United States. We have rebuilt Navy Pier as a modern port. O'Hare Field is the busiest and most modern in the Nation, without cost to the taxpayer.

The city of Chicago has carried on this tremendous public works and community improvement program while at the same time it has improved its national credit rating, which will result in the savings of hundreds of thousands of dollars to taxpayers. Chicago's overall per capita debt is the fourth lowest of the Nation's 42 largest cities.

The city has underway 27 community improvement projects under the direction of the department of urban renewal. Six projects have been completed. The total assessed value of these six projects after redevelopment has increased so that they produce a tax yield that is 147 percent higher than before development.

For all 27 redevelopment projects, which include construction for educational, medical, and other nontaxpaying institutions, the annual tax yield is expected to more than double. These community improvement programs, working with the building and law departments, are leading the way to the goal of eliminating blighted and dilapidated buildings from every neighborhood in the city of Chicago.

The U.S. census of housing reported that in the period between 1950 and 1960 the number of dilapidated dwellings in Chicago was reduced by more than 50 percent, from 64,000 to 30,000. In the past 2 years the number of such dwellings has been further reduced by 5,000 to 6,000.

The fundamental principle behind all of our planning for community improvement is that there will be no program undertaken until the residents of the community have had every opportunity to participate in hearings and discussions, and to make their contributions to the plans for their neighborhoods.

Chicago's housing program for the aged is serving as a model for the Nation. Our senior citizens are being given an opportunity to live in housing they can afford, in their own communities where they will continue to maintain their ties with their relatives, neighbors, and churches. The department of planning is developing the comprehensive general plan.

The position of the city of Chicago today is far different than it was in 1955. Then we were faced with the urgent program maintenance and inadequate revenues. Every property owner, every businessman, knows that if he permits his property or his plant to run down for many years the job of bringing it back is far more costly and difficult than if maintenance and service is kept on a day-by-day basis.

The city now has for most part brought its plant and its services to standards that are able to meet the present day needs of its citizens.

It has been making up this deferred maintenance which has made necessary substantial expenditures and increased taxes.

We are now on the threshold of making progress with much greater speed because we have the tools and the climate in which to do so.

It is to the credit of the members of the city council and the people of Chicago that our city now is considered to have one of the finest administrative governments in the Nation. We can now reevaluate our programs for the future from this new position of strength, rather than of weakness.

It must be understood that urban renewal are words that cover nearly all of the activities of government, for urban renewal is just one way of saying community improvement.

We are now in the position where we can properly reevaluate the rebuilding of our communities taking under specific consideration:

Expanding and improving communication with the public and giving greater participation and a broader comprehension in what local government is doing to improve its neighborhoods, and reappraising what resources we have to finance a community improvement program which means much to all the people of Chicago. The need for reexamination of our program is not because we have not made substantial progress but because we feel that under the new Chicago we can make much greater progress.

A community improvement program must include better schools, libraries, beaches, and playgrounds.

We will continue our policy of noninterference with the board of education, but we will continue to join in every effort of giving all the young people of Chicago the finest educational opportunities.

All of us can take pride that Chicago is one of the few big cities in the nation where not a single student is on a double-shift in the public schools.

In 1965, a new branch of the University of Illinois will give unequaled opportunity to our young people in Chicago and in the surrounding area.

This administration and the people of Chicago will work hand in hand with university officials and the faculty to make this urban university a positive influence in serving the economic, the social, and cultural life of our city.

As mayor, I have felt that one of my great responsibilities was to present a true picture of our city, and to erase the unreal notion that many people had of Chicago and its people. Throughout the past 8 years, Chicago has been visited by the highest representatives of nearly every nation. We have had many events that have drawn worldwide attention to the beauty, the greatness of our city and the warmth and friendliness of our people. Chicago now is a magnet for visitors from all over the world.

Work to completely upgrade the outer drive will begin this year with the construction of the grade separation to eliminate the bottleneck at Oak Street. The entire drive will be repaved. Similar work will start at 57th Street and the outer drive repaved on the south side.

It is not our intention to make it a superhighway. The lakefront drives are a showplace of the world and this administration will keep it that way. It will be my firm policy to reject any attempt to commercialize or to build any structure along the lakefront unless it is directly concerned with public recreation or culture. We will do everything possible to further the enjoyment of this front yard of Chicago for its citizens with more landscaping, gardens, and additional recreational facilities.

In 1955 approximately 22,000 tons were handled at Navy Pier. Last year an alltime high for import-export traffic of general merchandise was established with more than 257,000 tons. Approximately $22 is added to the city's economy from each ton crossing the docks. Thus the $9 million invested in the port improvement is being returned to the economy and will be returned several times over in the future. We will intensify our efforts to promote the Chicago port and expand this trade. At Lake Calumet the city has one of the most modern ports in the world. We know that its full potential has yet to be realized. The completion of the Cal-Sag project in 1965 will have a greater impact to Chicago than the opening of the St. Lawrence Seaway. We will give all of our support and assistance to the growth of this great harbor.

Our goal is to open the Southwest Expressway in 1964. Studies are being made for a North-South Expressway near Cicero Avenue. In planning for new expressways we must be extremely careful that we do not adversely affect any of our fine neighborhoods. Our transportation program will provide a balanced and coordinated transportation network which includes expressways, major and preferential streets, and mass transportation.

Again, looking into the future, there is a definite need for a cultural center and central sports stadium convenient for all our residents. Studies are underway concerning these proposals.

The objective of our transportation program is not just to move vehicles but to move the greatest number of people safely and conveniently. This of necessity must involve the expansion and improvement of the mass transportation system. The utilization of the median strips in the Northwest Expressway and the Dan Ryan Expressway would provide a direct service to our neighborhoods and relieve congestion from the expressways and arterial streets. It would be a great improvement to tear down the El structure around our Loop and extend the Wells Street Subway.

Extending the State Street Subway south of 19th Street, down Archer Avenue, to connect with the Dan Ryan Expressway would provide mass transportation for many thousands. However, the CTA cannot expand and improve its service from its own revenues. It must have the combined financial assistance of the Federal, State, county, and city governments.

Chicago has less unemployment than most big cities. However, there must be increased emphasis upon expanding job opportunties.

Essential cooperative programs between universities and business have been formulated which will draw the proper attention to Chicago as a research and development center. Positive assistance to business and labor to bring more contracts to Chicago and to make known the industrial capabilities of the many excellent companies and unions in Chicago are being pursued.

In the area of youth welfare, Chicago has made important gains. But we must not be blind to the fact that we still confront serious problems. The problems of the out-of-school, out-of-work youth are serious.

One of the most crucial questions in the coming years will be youth employment opportunities. The greater proportion of the expansion in the labor force in the next 10 years will be in young persons under 24 years of age. More and more of Chicago's youth will be entering the labor force during the next 4 years and job opportunities and proper training must be provided for these youth.

We cannot permit the lack of opportunity to handicap the next generation. In the years ahead, we will carry out a vigorous program consisting of:

1. A maximum effort to attract to Chicago expanding industries.
2. A canvass of every industrial and business complex in Chicago and its environs for full- and part-time work opportunities for youth.
3. We will take advantage of every Federal and State resource for improving the skills of young people in order to make our youth eligible for employment opportunities.
4. We will support and give assistance to every neighborhood-centered program for counseling and helping youth to fit into the world of work.

Closely related to the problem of youth employment is the problem of the school dropout. We support the tremendous effort of the board of education to expand counseling and guidance services, their efforts to develop more vocational education programs geared to the work opportunities in the city of Chicago, the elimination of double-shifts for school children, the expansion and development of the junior college program.

This year, the commission on youth welfare, in cooperation with community groups and committees, is working with the schools to meet with every youth who is considering dropping out of school.

In the general area of youth welfare, we will continue community campaigns to build respect among youth for high standards of law and order, to control the availability of alcohol to youth, to eliminate the environmental hazards to the health and the welfare of children, to expand the child health program and improve the control of the diseases that particularly affect children, to eliminate discrimination, and to equalize opportunity.

These are goals which can be achieved only through a partnership between agencies and organizations of government and local community effort, including churches, schools, youth organizations and civic groups. This partnership is already working, and it will be expanded.

Our administration worked hard to bring about the consolidation of the railway terminals. This improvement, which will put precious land to its best use and provide free circulation to the South Side, must be carried out. We are continuing to meet with the railroad presidents and will intensify our efforts to bring about this civic improvement.

In 1965, the new civic center and courthouse will be ready. It will make a genuine contribution to the better administration of justice, to providing needed space for government office, and will bring to our central area a plaza and a modern building which will add to the attractiveness of that area.

One of the basic problems that faces Chicago and most metropolitan cities is the lack of equitable representation of the urban population in the State legislature. The people of our city, the residents of the entire metropolitan area, must insist that the laws which directly affect them are prepared and deliberated upon by representatives who understand their needs and their problems. It is not a question of political parties. It is basically a question of true representation for the greater majority of the people who live in the State of Illinois.

This does not mean that any one county or any one area should dominate our General Assembly, but it does mean that our urban population should have proper and fair treatment in determining their own destiny.

For all of us who are in city government, my running mates, City Clerk John C. Marcin; City Treasurer William G. Milota; the members of the city council, the heads of departments, city employees in all branches and agencies, this is a night of solemn rededication to the duties we are delegated to perform.

Uppermost in our minds is not the feeling of triumph nor of self-glorification, but rather the sense of gratitude and the devout wish to prove worthy of tremendous responsibility to our beloved Chicago.

I was elected on April 2 as a Democrat. I am proud that I had the support of my party. As in my previous terms as mayor, I will serve all of the people of this city, Republicans, Independents, and Democrats alike. I am especially proud of the strong and indispensable support that was given to me by the many thousands of citizens, responding to nonpartisan appeals, who put progress ahead of partisan considerations. As I have frequently said, I have tried always to conduct my public life in accordance with the principles that good government is good politics, and good politics is good government.

To the members of the city council who have been reelected, I extend my heartiest congratulations and my very deep appreciation of the fine cooperation my administration has had from them. To the newly elected members go equally hearty congratulations. I assure these men that they will have from me every consideration and assistance I can give. I am confident we can all work together, with diligence and with integrity, to make an even greater Chicago.

I would like to express my appreciation to all of the media of communications, the metropolitan press, the community press, the radio, and TV stations, civic organizations, the clergy, labor organizations, all who have a part in shaping public sentiment, all who are truly concerned with promoting the physical, material, social, and spiritual welfare of the millions of people, of every race, creed, and color, who live and work and worship here in harmony.

Always we have to bear in mind that in Chicago, great among the greatest of industrial, commercial, and cultural centers of the world, the greatest resource of all is the people themselves. It is from the people that our proud spirit of "I will" springs. It is with the people that this spirit resides, spurring all of us to greater effort, impelling us to live up to the heritage we have from those who have gone before us.

There is no greater honor to me than to serve the people of Chicago as their mayor. This is the city of my birth, this is the city of my upbringing and all that I am I owe to my mother and father, to my good wife and family, to my teachers and to my good neighbors and friends.

The goal of the metropolis is to offer to its citizens the widest possible variety of choice in all aspects of living and working, providing the greatest variety in choice of jobs, and the maximum variety of educational and cultural opportunities.

It is the destiny of Chicago to be a great metropolis.

With your cooperation and with the cooperation of the people of Chicago, and with God's help, we shall not fail.

TIME FOR MANDATORY SEVERANCE OF AID TO NASSER

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. HALPERN] is recognized for 15 minutes.

Mr. HALPERN. Mr. Speaker, it is ironic that our Nation is commemorating the 20th anniversary of the heroic but ill-fated uprising of the persecuted Jews in the Warsaw ghetto at the very time that a new totalitarian despot, Nasser of the United Arab Republic, is preparing new aggression to wipe out the State of Israel and to annex other territory.

If the observances of the Warsaw ghetto anniversary are to have any real meaning, it is essential that we prevent a repetition of the notorious atrocities of the Nazis. Former Nazis and other German technicians and scientists are now in Egypt aiding the United Arab Republic to perfect the missiles and weapons to destroy those Jews, now resident of Israel, who managed to escape Hitler's holocaust.

The United Arab Republic, in advocating "Arab socialism" is pursuing a policy reminiscent of the "national socialism" of Hitler's Germany. Instead of raising the living standards of the masses through reforms in education, health, housing, and peaceful production of necessary commodities, Nasser is concentrating on building a police state which is preparing for a space age war. Nasser is squandering his own assets to buy Soviet jet bombers and jet fighters as well as military rockets. The Arab peasant remains in the horse age but Nasser dreams of a vast Arab empire ruled by his missile-equipped army, trained by Soviet and ex-Nazi military technicians.

Mr. Speaker, we cannot dictate the internal affairs of the United Arab Republic despite the threat to peace. Nasser has openly announced that his expanded Arab union will "liberate Palestine" through destruction of Israel. His agents and spies are plotting to overthrow pro-Western Jordan and Saudi Arabia. His treasury is paying out millions for Soviet equipment of even more recent design than that supplied Cuba. His shipping, incidentally, trades with Cuba while his press condemns the United States and condones Castro.

No, Mr. Speaker, we cannot dictate the internal affairs of the United Arab Republic even though the conscience of mankind has just been shocked by the employment of former Nazis to perfect missiles to sow mass destruction on Israel.

But, Mr. Speaker, there are things that we can do in the national interest of the United States. There is certainly no logic in the American taxpayer subsidizing, however indirectly, the U.A.R. military missile build up and further acquisition of a dangerous arsenal of Soviet weapons. I do not think that 1 cent should go to defray the Soviet weapons expenditures of a country like the U.A.R. which supports Communist Cuba.

A country which takes upon itself to jeopardize world peace by irresponsible and power-mad proliferation of the rocket race does not deserve our subsidies.

Mr. Speaker, I am preparing therefore legislation which I intend to propose to make mandatory the severance of American assistance to the United Arab Republic in view of its use of its own resources to finance sophisticated Soviet weapons systems, to train its officers and specialists in the Soviet bloc military centers, and to establish a Nazi-staffed missile center in the inflammable Near East.

There has been on the books the stipulation introduced last session by Senator KEATING and myself known by some as the Keating-Halpern amendment to favor, in dispensing our aid, those nations which do not divert their own resources to buy Soviet arms. Those implementing our aid program have ignored this expression of the sense of Congress. The time has come for more forceful action and I call on all my colleagues to join with me in writing language into this year's bill to end our misguided and disastrous subsidy of Mr. Nasser, the Fidel Castro of the Near East.

I would like in this connection to draw attention of the Congress to a pertinent syndicated news column by Milton Friedman, a White House correspondent, whose writings appear in many newspapers. Mr. Speaker, I wish at this point in my remarks to insert the Milton Friedman column:

MILTON FRIEDMAN COLUMN

WASHINGTON.—There are actions the administration could take to give deeper meaning to President Kennedy's proclamation calling for observance on April 21 of the 20th anniversary of the Warsaw ghetto uprising.

Mr. Kennedy noted that the Jewish martyrs lacked military resources but struggled against the overwhelming forces of the Nazi occupiers for more than 3 weeks, thereby providing a chapter in the annals of human heroism.

Today, the scene shifts to Israel. Nasser's goal, annihilation of Israel, is no different from that of SS-General Jurgen Stroop, commander of the Nazi forces assigned to liquidate the Warsaw ghetto.

The survivors of the Nazi holocaust and other Israelis have no desire to die in another fiery and doomed ghetto. They see Egypt being armed and trained by the Soviet Union. Egypt has received Russian offensive weapons more modern than those removed from Cuba at American insistence. Meanwhile, Egypt is developing a new Afrika Corps of West German scientists and technicians, including Nazis, to build missiles and supersonic Messerschmitt jet fighters.

But the fact most difficult to live with is the indirect subsidization by the United States of the Egyptian military buildup. State Department officials still refuse to draw a moral distinction between democratic Israel and totalitarian Egypt and equate the two nations as equally worthy. There are hints that if Israel says too much about Egyptian missiles, some people here might start questioning Israel's development of new weapons.

President Kennedy last year met a situation which then existed. He authorized Israel to purchase Hawk antiaircraft missiles from the United States. Negotiations over purchase terms are just ending. The Hawks are yet to be delivered.

A gap now exists, to Israel's perilous disadvantage. An "escalation" of weapons system has occurred. Nasser no longer has to use bombers to blast Israel. He needs only to push buttons and dispatch salvos of missiles which are unstoppable by Hawks or anything else.

The Egyptian missile does not have to land on top of Tel Aviv's Dan Hotel, Allenby Road will do.

The Hawks will arrive this year to meet last year's situation. Israel once more lags behind.

Nasser has received hundreds of millions of dollars in American loans, grants, and other aid. He uses his own resources, thus freed, to build missiles and pay Nazis. Even funds generated by sale of American surplus food given to Egypt are used partially for military purposes.

The American taxpayer is thus made to help Egypt buy Soviet arms, pay Communists for instructing Egyptian personnel, and compensate Germans, including Nazis, now working in the Egyptian military establishment.

This issue will certainly be raised, by Democrats and Republicans alike, when the aid program comes before Congress this spring.

America is buying Nasser's favor by subsidizing the work in Cairo of former Nazi Storm Troop Col. Ferdinand Brandner who directs one of the new special weapons groups. America also finances, however indirectly, the German unit's medical officer, the notorious Dr. Eisele, who escaped to Egypt from Germany to avoid trial for atrocities he committed as camp doctor at Buchenwald concentration camp.

President Kennedy said the heroic uprising of Warsaw ghetto Jews was "an inspiration to the peace-loving people of the world and a warning to would-be oppressors which will long be remembered."

This proclamation was a kind and sincere statement by the President. But it would achieve functional significance if American policy withheld aid from "would-be oppressors" and otherwise prevented Nasser from becoming another SS Gen. Jurgen Stroop.

A fitting commemoration of the Warsaw ghetto uprising could include a new look by Washington at Egypt, the nation which is arming to wipe out the survivors of Hitler's holocaust.

U.S. POLICY IN CUBA

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. STRATTON. Mr. Speaker, I have just returned from a tour of Naval Reserve duty to our naval base at Guantanamo Bay, Cuba, our Atlantic Command headquarters at Norfolk, and several other top military bases.

I have come back deeply impressed with the clear and convincing evidence I found that the situation in Cuba is well under control, that our forces are well trained, alert, their morale high, their weapons outstanding, and ready for anything that comes. I found the level of our military intelligence about Cuba still of the highest quality.

After such a visit one realizes that only the sheerest kind of demagog could still maintain that the United States has no Cuban policy.

Of course we have a policy, clear, simple, and precise. It is to proceed, in company with our Latin American allies, to isolate Castro as completely as possible, to keep his Cuba under complete and constant military surveillance, to apply a whole myriad of political and economic pressures to his regime, and to maintain immediately available and in full combat readiness an overwhelming military force capable of completely wiping out his regime in case the Cuban dictator should ever again threaten direct military operations anywhere in the Caribbean. And our basic objective is to remove Soviet troops from Cuba, to eliminate the Castro regime, and to establish a free and independent Cuba.

This is a policy which at the moment involves actions short of war. But it is a policy which also takes into account every possible contingency. No reasonably informed American would expect us to publish those contingency arrangements in the newspapers any more than he would have expected us to broadcast the time and place of the Normandy landings over the radio a week before D-day.

It is not Castro who has us boxed in down there—it is we who have Castro boxed in. And I for one would certainly hate to be in his shoes, and on his side of the Cactus Curtain right now.

We can best understand what is going on in Cuba, I think, by comparing Castro to a fugitive from the police, holed up in a farmhouse with the farmer's wife and youngsters as hostages, and with the police surrounding the house on all sides. The police can wait the fugitive out, they can go in shooting and run the risk of hurting the wife and children, or they can lob tear gas shells at him until the heat and irritation force him out with his hands up.

Nobody in his right mind would criticize the police for momentarily resisting the temptation to shoot and trying the other alternatives first—nobody, that is, except someone who needed to keep his name in the headlines at any cost.

It has been something of a shock to me to come back and find that over the Easter week the same old people are at the same old stand, still peddling the same old campaign of fear, distortion, confusion, and pretense over Cuba. Obviously their information comes straight from the lecture platforms and the Mimeograph machines because it is a cinch it does not come from the foxholes or the command plotting rooms of American fighting men.

As one who is proud to be a naval reservist, I resent these continuing efforts to portray our American military forces as either stupid or liars. If the Member of the other body who claims he knows all about all these Russian troops getting back into Cuba had taken the trouble to visit Cuba instead of trying to run American Cuban policy from the press gallery at the other end of the Capitol, he would never have dared to launch those preposterous charges of a new Cuban buildup. The plain fact of the matter is that shipping into Cuba today is vastly smaller than it was last summer.

So how are these new Russian troops supposed to get into Cuba anyway—by paddling rubber boats all the way down from the North Sea?

Some people, I suppose, will never be happy until we are fighting a full-scale war in the Caribbean. But I am convinced that the overwhelming majority of Americans understand and support our present Cuban policy. If new conditions arise, if new actions become necessary, they know that that decision can only be made by the President of the United States—just as he made it bravely and effectively last October. It assuredly cannot be made on the floor of the U.S. Senate and much less so in its press gallery.

Coming back from Cuba, I find myself a little bored with the antics of old men still desperately trying to stir up wars for young men to fight—all the time piously proclaiming both their opposition to invasion and of course their complete nonpartisanship.

"PACEM IN TERRIS"—POPE JOHN'S ENCYCLICAL ON THE DIGNITY OF MAN

Mr. LINDSAY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. LINDSAY. Mr. Speaker, when 4½ years ago John XXIII ascended the papal throne, people everywhere sensed, I think, that something remarkable had happened, that a new force for good had come into the world. Here, it seemed, was a man of extraordinary wisdom and humility—a man who, though old in years, was young in his zest for life and in his sympathy for modern humanitarian ideas. Men of good will welcomed Pope John's elevation in 1958. They have not been disappointed since.

With the publication of "Mater et Magistra" in July 1961, it became clear that Pope John's pontificate would mark a turning point, not merely in the history of the Catholic Church, but in the history of all mankind. And now we have "Pacem in Terris"—"Peace on Earth." It is a great and good document. I earnestly hope it will be read and pondered by Catholics and non-Catholics, by Christians and non-Christians.

The whole of "Pacem in Terris" has already been included in the RECORD. It is a wide-ranging document and almost all of it impressed me. But what particularly caught my attention were the Holy Father's references to fundamental human liberties. Perhaps never before has a great Christian leader shown so clearly how the rights of man can be deprived from the religious doctrine of natural law.

> By the natural law every human being has the right to respect for his person, to his good reputation, the right to freedom in searching for truth and in expressing and communicating his opinions, and in pursuit of art, within the limits laid down by the moral order and the common good.

The Holy Father added:

> And he has the right to be informed truthfully about public events.

The Holy Father lists other human rights.

> From the dignity of the human person—

He says—

> there also arises the right to carry on economic activities according to the degree of responsibility of which one is capable.

There is also a right to a working wage sufficient to give the worker and his family a standard of living in keeping with the dignity of the human person. In addition, the individual has a right to move freely within his own country and to be immune from all arbitrary attacks.

> Human society—

The Holy Father states—

> is realized in freedom, that is to say, in ways and means in keeping with the dignity of its citizens, who accept the responsibility of their actions, precisely because they are by nature rational beings.

I should like to draw attention to two other points, both of them stressed by his holiness. The first appears in the section of the encyclical headed "Duties." Pope John notes that both rights and duties stem from natural law. He continues:

> Once this is admitted, it is also clear that in human society to one man's right there corresponds a duty in all other persons; namely, of acknowledging and respecting the right in question. For every fundamental human right draws its indestructible moral force from the natural law which, in granting it, imposes a corresponding obligation. Those, therefore, who claim their own rights, yet altogether forget or neglect to carry out their respective duties, are people who build with one hand and destroy with the other.

The lessons to be drawn from those sentences are many, but paramount among them is the absolute necessity of tolerance and restraint in our dealings with those who may differ from us.

The second point also appears under the heading of "Duties," where the holy father refers to human society as "a spiritual reality." He continues:

> Society should enable men to share in and enjoy every legitimate expression of beauty, and encourage them constantly to pass on to others all that is best in themselves, while they strive to make their own the spiritual achievements of others. These are the spiritual values which continually give life and basic orientation to cultural expressions, economic and social institutions, political movements and forms, laws, and all other structures by which society is outwardly established and constantly developed.

Those words should be engraved on the mind and heart of every American.

OCCUPATION OF THE CAMPUS OF THE UNIVERSITY OF MISSISSIPPI AND THE EVENTS RESULTING THEREFROM

Mr. WILLIAMS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WILLIAMS. Mr. Speaker, I hold in my hand a copy of the report of the general legislative investigating committee of the Mississippi State Legislature reporting on "Operation Rapid Road," concerning the alleged protection of civil rights by the Department of Justice in connection with the Oxford, Miss., incident. This report contains such shocking revelations of brutality on the part of the Justice Department agents of Attorney General Robert Kennedy as to shock the sensibilities of any good, patriotic, American citizen. I hope that the Members of this House will take the time to read this report and the press release which accompanies it, so they can learn the facts that have been so carefully censored from the American people by a controlled press.

Mr. Speaker, this report is of such significance and makes such serious charges that it should be followed by an objective investigation by the Congress. I hope, Mr. Speaker, that the appropriate committees of this House, and the other body, will make a thorough and complete investigation of these reported outrages and recommend appropriate action to the Congress.

The report and press release to which I refer are as follows:

REPORT OF GENERAL LEGISLATIVE INVESTIGATING COMMITTEE (FIRST SECTION) TO THE GOVERNOR OF THE STATE OF MISSISSIPPI AND THE MEMBERS OF THE MISSISSIPPI STATE LEGISLATURE CONCERNING OCCUPATION OF THE CAMPUS OF THE UNIVERSITY OF MISSISSIPPI AND THE EVENTS RESULTING THEREFROM

"OPERATION RAPID ROAD": THE PROTECTION OF CIVIL RIGHTS BY THE DEPARTMENT OF JUSTICE

The occupation of the campus of the University of Mississippi on September 30, 1962 (which was officially designated "Operation Rapid Road" by the Federal authorities), was upon direct orders of Attorney General Robert F. Kennedy, under the personal supervision of Deputy Attorney General Nicholas de B. Katzenbach, assisted by Mr. Ed Guthman, publicity director for the Department of Justice, Chief U.S. Marshal James McShane, Mr. John Doar, Mr. Norbert Schlei, and other members of the staff of the Department of Justice. This line of command was supported by 97 penitentiary guards, 336 border patrolmen, and 123 deputy marshals, all of whom are said to have been deputized for the occasion as deputy marshals. The events which occurred cannot be understood unless the actual conduct of the personnel utilized is considered to comprehend their nature and their complete lack of training and experience. A pattern of treatment of students and other citizens was followed from and including the first firing of gas, through the evening of Sunday, September 30, during the day and evening of Monday, October 1, and subsequent thereto. This pattern is best understood when considered in three categories:

1. The treatment accorded on Monday night and Tuesday to citizens detained in a garage adjoining the soil sedimentation laboratory near the campus used as a detention stockade. Up to 100 people at one time were confined therein. At that time violence had ceased and the entire area was under complete control of the marshals and the military.

2. The treatment accorded students and other citizens after they had been seized on the campus of the University of Mississippi and taken into the lyceum building Sunday night and Monday, where they were confined in a basement 17 feet by 40 feet (at times heavily contaminated with gas) in numbers up to more than 85 at one time.

3. The treatment of students on Monday morning after order had been restored and all violence had ceased, when they were taken into custody on the campus of the university on the way to classrooms, university buildings, or passing through the campus.

The treatment of university officials, campus policemen, highway patrolmen, and students upon the university campus on the evening of Sunday, September 30, and the early morning of Monday, October 1, is discussed in another section of this report. Treatment of citizens in the vicinity of the university on October 2 is also discussed in another section of this report.

In an attempt to give a clear picture of the treatment of students and other citizens by the Department of Justice of the United States and its representatives, the committee will first give the pattern of treatment followed in each of the three categories, followed by some of the individual instances illustrative of such pattern. Space will not permit the recitation of all such incidents. The general nature and type of treatment of those who were seized and taken into custody is supported by the sworn testimony of six or more witnesses. The treatment of individuals while incarcerated in the basement of the lyceum building and in the garage of the Soil Conservation Service and the treatment of individual students and other citizens before they were incarcerated in either of the places of detention are supported by the sworn testimony of two or more witnesses, with the exception of a few instances in which the sworn testimony of only one witness was available. General reference to marshals includes penitentiary guards and border patrolmen acting as deputy marshals.

1. Treatment of students and other citizens in the soil sedimentation garage Monday night and Tuesday, after the entire area was under control of the marshals and the military and all disturbances had ceased

Order was restored on the campus before 7 a.m., Monday, October 1. After 5:30 p.m.

on Monday the Justice Department set up a stockade or place of imprisonment in a garage adjacent to the soil sedimentation laboratory. The garage had a concrete floor, one end was open to the weather. It was not equipped with lights. Marshals were placed in charge of this place of detention and Chief Marshal McShane visited this spot several times. To this place of imprisonment there were taken between 100 and 150 persons. Some were transferred to this garage from the basement of the lyceum building, being told by the marshals they were to be taken to where bunks and food would be provided. Others were brought there after being seized on Monday or Tuesday by either marshals or members of the military forces. All disturbances had ceased before any persons were imprisoned in this garage. The persons seized varied in age from 14 or 15 years old to more than 60 years of age.

Some had been badly beaten, others were ill. All persons, regardless of age or physical condition, were forced to sit on the concrete slab for periods up to 20 hours, with their knees drawn up toward their chins, their hands clasped around their knees, their eyes to the front, without turning their heads or speaking to anyone. This was planned and executed as physical torture.

During the night of Monday, October 1, the marshals on duty changed shifts every 2 hours. During the entire night the marshals walked up and down between the rows of prisoners in pairs throwing flashlight beams upon them to prevent them from going to sleep or obtaining any rest. When a prisoner moved his head from a direct front angle or spoke to any other person and was observed by a marshal, he was either clubbed or kicked by the marshals.

If a captive fell asleep or became cramped and moved his hands from around his knees, or changed the position of his legs as he was seated upon the torture slab, and was seen by the marshals, he was struck with a club or kicked, and threatened with further beatings.

Some prisoners who fell asleep or changed positions were forced to place their hands above their heads, leaning tiptoe with their faces to the wall; then they were beaten, jabbed in the back, and their feet kicked out from under them. Others were jabbed in the kidney or the groin with the marshals' clubs.

Several young boys between 12 and 15 years of age, some older men, and members of a wedding party dressed in wedding attire, as well as disabled veterans of World War II, were thus treated.

Medicine required by one or more captives was confiscated. A disabled veteran begged the marshals for his medicine (required to prevent jerking and blackout spells) and they refused to give it to him. When he suffered from one such spell for lack of medicine, he was clubbed and manhandled.

Persons thus incarcerated, who appeared before this committee, were denied the right to make any telephone call or contact any person and were given no food until they were interrogated by FBI agents, between 2 and 5 o'clock Tuesday afternoon.

A few of the individual instances of mistreatment by the marshals in the garage are as follows:

(a) An 18-year-old boy went to sleep. A marshal pulled him up, hit him on the forehead with a club, two other marshals joined them, pushed the boy against the wall, struck him in the throat and jabbed him in the groin with clubs.

(b) A captive's hands became cramped and one of his hands dropped off his knees. One marshal hit him across the back with a club and another jabbed him in the kidney.

(c) A young boy went to sleep. He was first beaten on the floor by the marshals, then they stood him up against the wall and beat him some more, and when his father protested, he was also beaten.

(d) A sophomore, after having been held in the lyceum building all night, had been beaten about the body and beaten so badly on the head that 16 stitches were taken in the wound. After being released, he was again seized and taken to the garage. When, through loss of blood and exhaustion, he was unable to maintain the required position on the torture slab, he was twice clubbed on the back by the marshals.

(e) One prisoner who was ill begged for his medicine and was refused, and he passed out twice and each time the marshals kicked him in the mouth and forced him to sit back in the required position.

(f) A disabled veteran had a pin in his knee so that he could not bend it up under his chin. The marshals changed shifts every 2 hours. Several times he was clubbed on this leg by marshals when they saw it extended in the row.

(g) Several prisoners who failed to maintain the prescribed position on the torture slab were forced to stand with their faces to the walls, hands above their heads, on their toes, and the marshals kicked their feet from under them so they fell on their faces on the concrete.

2. Treatment by marshals of students and other citizens in the lyceum basement on Sunday night and Monday

During the night of September 30 and the day of October 1, students and other persons seized were taken to the basement of the lyceum building on the campus of the university. At one time between 100 and 150 captives were crowded into this room 17 by 40 feet in size. The marshals wore gas masks but none were given to the captives, who suffered severely from the presence of tear gas during a large portion of the time they were held in this basement. Prisoners were held in this basement up to as much as 18 hours, through the night of the 30th and the day of October 1, and some were then transferred to the soil sedimentation garage and handled there as outlined elsewhere in this report.

Prisoners, who were bleeding after having been badly beaten and in need of medical treatment, were held for as much as 6 hours without being given any medical attention. Requests to use the telephone, to be permitted to go to the toilet, or to call a lawyer, were frequently met with either being knocked to the floor with fists or hit with billies. Later captives were permitted to go to the toilet and upon demand of the university authorities, to use the telephone. While some of the prisoners were permitted to sleep sitting on the floor, others were kicked by the marshals when they went to sleep. Some of the students taken to the lyceum basement were forced to stand on tiptoe leaning against the wall with their backs to the marshals, and then were either jabbed in the back or their legs were kicked out from under them after having been struck on the legs with clubs. A number of students, as they were taken down to the lyceum basement, were either hit on the shins or back with the butts of the marshals' sidearms and with their clubs. Students were spit upon and repeatedly cursed by the marshals. From time to time at the end of the hall leading to the basement the students were struck severely on the shins, jabbed or hit on the back with night sticks or kicked on the legs.

A few of the instances of mistreatment by marshals in the lyceum basement are as follows:

(a) A university freshman, after being clubbed across the back of the neck with a billy, was kicked a number of times by the marshals.

(b) One of the prisoners found a spot where he could lie down and sleep in the crowded basement, and he was kicked in the stomach by a marshal.

(c) A boy who had been badly beaten about the head and was bleeding from the head asked for water and when he went to the water fountain and bent over to drink, the marshals grabbed him by the hair and shoved his head in the fountain, although he was bleeding from the head at the time.

(d) A student approached a marshal and asked to be permitted to call a lawyer and the marshal slugged him in the face with his fist and knocked him to his knees.

(e) A student asked a marshal to be permitted to use the telephone, and he was hit by the marshal with a club and knocked to the floor.

(f) One of the students went to a marshal at the door of the basement and while he was talking to him, another marshal came up and they both grabbed the student and beat him with their fists.

(g) While a freshman was standing in the hall of the lyceum building in custody, a marshal walked by and told him he did not like the way he was holding his feet, and when he did not move quickly enough, the marshal cursed him, struck him a severe blow with his club across the knee knocking him to the floor.

(h) A boy who had been shot in the face with a tear gas bomb, resulting in both eyes being badly swollen and bleeding, who also had been beaten, repeatedly asked for a doctor and was refused medical attention for a number of hours.

(i) A student who was placed in a bus called to some friends to ask them to get him help. Two marshals struck him on the arm with their clubs, and later when he asked to be permitted to make a telephone call, he was again hit by a marshal with a club.

3. Treatment of students on the campus Monday morning

On Monday morning, after order had been restored on the campus and in its vicinity, the campus remained in full control of the marshals. Members of the military forces participated with the marshals in seizing students and other citizens. The pattern of treatment included forcing students going from their dormitories to classes to lie spread eagle on the ground with faces in the dirt while they were searched at gunpoint.

Students passing along the campus to go to classes were treated as the junior going to his thermodynamics class in the engineering building who made a remark to several deputy marshals concerning the mess the campus was in. He was seized by two marshals, his arms were twisted behind his back, he was hit in the back with a billy, cursed, taken to the lyceum basement and, as he walked toward the basement, a marshal on each side kicked him in the shins. A billy was forced between his legs and he was struck on the testicles.

Students were beaten or jabbed with night sticks or billies. Students who were seized on Monday, after being taken to the lyceum building, were forced to lean forward against the wall with their hands over their heads on the wall and then their feet kicked out from under them. They were hit with clubs on their shins and ankle bones.

Students from other schools were found asleep on the campus in the early morning, were hit on their legs, backs or heads with billies. One was awakened, forced to stand with his legs spread apart, clubbed on both the inside and outside of his legs, and struck in his crotch and in his groin.

The above general patterns of conduct occurred after the penitentiary guards, border patrolmen and marshals had taken students and other citizens into custody, or after all disturbance had been quieted on the campus of the University of Mississippi.

Committee Release

"Deliberate and repeated brutalities, carried out systematically by U.S. marshals for a period of more than 20 hours at a detention stockade set up in a garage by the Justice Department at a remote spot off the campus of the University of Mississippi, have been revealed by the testimony of many of the more than 90 witnesses heard by the committee," said Chairman Russell Fox in a statement released today when he filed the first section of the general legislative investigating committee's report of its investigation of the occupation of the campus of the University of Mississippi last September 30. Chairman Fox also charged that the prison guards, border patrolmen and others used as deputy marshals deliberately gassed eight dormitories on the university campus on the night of September 30, forcing the students out upon the campus where they were gassed promiscuously by roaming bands of marshals and many were seized, incarcerated in the lyceum building basement and there hit with clubs, beaten with fists, kicked and spit upon by the marshals.

"The Department of Justice successfully concealed the actions of its marshals from the press and other news media by its management of news at the university. It took weeks of investigation for the committee to learn the facts concerning the brutalities at the garage detention stockade," said Mr. Fox.

SYSTEMATIC PATTERN OF BRUTALITY

The section of the report which was finalized and filed today dealt with the brutalities of the 97 penitentiary guards, 336 border patrolmen, and 123 marshals who were deputized and used as marshals by the Justice Department at the University of Mississippi. Mr. Fox stated that, in view of his announcement last week that the committee expected to file its report within 10 days, it is filing and releasing the portion which has been finalized and expects to complete and release the full report within approximately a week.

The committee announced that it ascertained from sworn testimony that late Monday afternoon, October 1, many hours after all violence in the university and Oxford area had ceased, nearly 100 persons, varying in age from 12 years to more than 60 years, were taken to a garage near a soil sedimentation laboratory by the Justice Department marshals. The garage was used as a detention stockade and was in charge of the marshals. Chief Marshal McShane visited it several times. Some of the prisoners had been badly beaten, others were ill. Regardless of age or physical condition, the prisoners were forced to sit on the concrete slab of the garage all night and for periods up to 20 hours, with their knees drawn up to their chins, with their hands clasped around their knees, their eyes to the front, without turning their heads or speaking. During the entire night the marshals worked in two-hour shifts walking up and down between the rows of prisoners, throwing flashlight beams upon them to prevent them from going to sleep or obtaining any rest. A systematic pattern was followed. When a prisoner moved his head from a direct front angle, fell asleep or spoke to any other person and was observed by the marshals, he was either beaten or kicked by the marshals. Some were jabbed in the kidney or the groin with the marshals' clubs. Many were imprisoned on this concrete slab without food and without sleep for more than 20 hours.

INDIVIDUAL BRUTALITIES AT THE GARAGE DETENTION STOCKADE

Some of the individual instances of mistreatment by the marshals in the detention stockade at the garage were:

An 18-year-old boy went to sleep. A marshal pulled him up, hit him on the forehead with a club, two other marshals joined them, pushed the boy against the wall, struck him in the throat and jabbed him in the groin with clubs.

A captive's hands became cramped and one of his hands dropped off his knees. One marshal hit him across the back with a club and another jabbed him in the kidney.

Medicine required by one captive was confiscated. A disabled veteran begged the marshals for his medicine (required to prevent jerking and blackout spells) and they refused to give it to him. When he suffered from one such spell for lack of medicine, he was manhandled and clubbed.

A young boy went to sleep. He was first beaten on the floor by the marshals, then they stood him up against the wall and beat him some more, and when his father protested, he was also beaten.

A sophomore, after having been held in the lyceum building all night, had been beaten about the body and beaten so badly on the head that 16 stitches were taken in the wound. After being released, he was again seized and taken to the garage. When, through loss of blood and exhaustion, he was unable to maintain the required position on the torture slab, he was twice clubbed on the back by the marshals.

One prisoner who was ill begged for his medicine and was refused, and he passed out twice and each time the marshals kicked him in the mouth and forced him to sit back in the required position.

A disabled veteran had a pin in his knee so that he could not bend it up under his chin. The marshals changed shifts every 2 hours. Several times he was beaten on this leg by marshals when they saw it extended in the row.

DORMITORIES GASSED

Mr. Fox stated that the remainder of the report being finalized will be filed within a week and that it will reveal that dormitories to which students had withdrawn when the violence erupted in the early evening of Sunday, September 30, were deliberately gassed by the penitentiary guards, border patrolmen and other deputy marshals. He stated that the report will reveal that "this deliberate gassing of the dormitories forced the students out upon the campus, where they were mistreated as will be detailed in the final report. The dormitories which were gassed by the marshals included Faulkner Hall, Garland Hall, DuPree Hall, Barr Hall, Howry Hall, LaBauve Hall, and Odom Hall. The pattern of gassing the dormitories was observed by the university police, dormitory managers, Lt. Gov. Paul Johnson and many others who have testified under oath before the committee. Canisters of tear gas were thrown by the marshals into several dormitories and they heavily gassed other dormitories by throwing gas canisters and shooting gas projectiles into the quadrangles formed by the halls so that the dormitories would be filled with gas."

Mr. Fox further stated that "disorganized groups of deputy marshals roamed the campus in groups of from 8 to 15, shooting gas projectiles and throwing gas canisters promiscuously at students, members of the university staff, including Dean L. L. Love, university police, and highway patrolmen upon sight, without regard to their location or actions."

TREATMENT OF STUDENTS AND OTHER CITIZENS IN THE LYCEUM BUILDING BASEMENT

The committee found that a pattern of brutalities was also followed by the Justice Department in its treatment of students and others who were seized and imprisoned in the basement of the lyceum building on the campus Sunday night and during the day Monday; that at one time there were between 100 and 150 persons crowded into this room, which was 17 by 40 feet, and during a part of the time the room was badly contaminated with gas, the marshals wearing gas masks, but the students were held for hours in this gas-contaminated basement without masks. The report stated that "prisoners were held in this basement up to as much as 18 hours, through the night of the 30th and the day of October 1, and some were then transferred to the soil sedimentation garage and handled there as outlined elsewhere in this report. Prisoners who were bleeding after having been badly beaten and in need of medical treatment asked repeatedly for a doctor, but were held for as much as 6 hours without being given any medical attention. Requests to use the telephone, to be permitted to go to the toilet, or to call a lawyer, were frequently met with either being knocked to the floor with fists or hit with billies. Later captives were permitted to go to the toilet and, upon demand of the university authorities, to use the telephone. While some of the prisoners were permitted to sleep sitting on the floor, others were kicked by the marshals when they went to sleep. Some of the students taken to the lyceum basement were forced to tiptoe leaning forward against the wall with their backs to the marshals, and then were either beaten on their backs, or their legs were kicked out from under them after having been struck on the legs with clubs. A number of students, as they were taken down to the lyceum basement, were hit on the shins with the butts of the marshals' sidearms or jabbed in the back with their clubs. Students were spit upon and repeatedly cursed by the marshals. From time to time at the end of the hall leading to the basement the students were struck severely on the shins, jabbed, or hit on the back with night sticks or kicked on the legs."

TREATMENT OF STUDENTS ON THE CAMPUS MONDAY MORNING AFTER ORDER WAS RESTORED

Mr. Fox stated that the sworn testimony revealed "after students going from their dormitories to classes had been searched in plain view of a military group, they would then be forced by such group to lie spread eagle on the ground with faces in the dirt while they were again searched at gunpoint."

The committee findings concerning the treatment of students on Monday included:

"Students passing along the campus to go to classes were treated as the junior going to his thermodynamics class in the engineering building who made a remark to several deputy marshals concerning the mess the campus was in. He was seized by two marshals, his arms were twisted behind his back, he was hit in the back with a billy, cursed, taken to the lyceum basement and, as he walked toward the basement, a marshal on each side kicked him in the shins. A billy was forced between his legs and he was struck on the testicles.

"Students were beaten or jabbed with night sticks or billies. Students who were seized, after being taken to the lyceum building, were forced to lean forward against the wall with their hands over their heads on the wall and then their feet kicked out from under them. They were beaten with clubs on their shins and ankle bones.

"Students from other schools were found asleep on the campus in the early morning, were hit on their legs, backs or heads with billies. One was awakened, forced to stand with his legs apart, beaten on both the inside and outside of his legs, and struck in his crotch and his groin.

"The above general patterns of conduct occurred after all disturbance had been quieted on the campus of the University of Mississippi."

RACIAL DISCRIMINATION IN THE UNIONS: AN EXCHANGE BETWEEN THE ILGWU AND THE NAACP

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri [Mr. CURTIS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. CURTIS. Mr. Speaker, early this Congress, January 31, I made a speech on the floor of the House—CONGRESSIONAL RECORD, January 31, 1963, pages 1569-1572—in conjunction with a number of speeches given that day on the subject of civil rights. In this speech I called attention to the difficulties that Negroes were experiencing in getting jobs. Our incidence of unemployment is highest among the young workers and among the country's Negro minority; where these two factors meet—the young Negro workers just entering the labor market—we find our severest unemployment problem.

As part of that speech I included a statement which had been presented by Mr. Herbert Hill, labor secretary of the National Association for the Advancement of Colored People, to the House Education and Labor Committee on the subject of racial discrimination in the labor unions of this country. I also included a letter which I had written Secretary of Labor Willard Wirtz forwarding a copy of Mr. Hill's testimony to him, asking him what action would be taken by the Department on this subject.

Thus the question has been referred to the two proper governmental bodies—the Department of Labor and the Education and Labor Committee—to be followed up, and both have failed to do so. The pages of the CONGRESSIONAL RECORD offer a second way to get into the details of this matter, a poor second I might say to the investigative process of either the Department or the committee, but in the face of the inactivity of these more adequate forums I am using the CONGRESSIONAL RECORD to try to get the facts of this matter before the Congress and the people of this country.

Apparently the Democratic Party leaders are backing off from looking into this. The leaders of organized labor are, in many cases, also the political leaders of the Democratic Party. Racial discrimination in our unions, led by those who have so large a part in guiding the destiny of the Democratic Party, is an important factor in the problem which I cited earlier—the extremely high rate of unemployment among young Negro workers. It is incongruous that the Negro voter will stand with a party led by those who, in their capacity as union leaders, have done so much to stand in the way of Negroes obtaining quality employment.

The testimony which Mr. Hill gave centered largely around the discrimination of the International Ladies' Garment Workers' Union against Negroes and Puerto Ricans. The ILGWU issued a statement in reply to Mr. Hill and Mr. Hill, in turn, has written an article responding to the ILGWU statement. I am placing both of these, although they are quite lengthy, in the RECORD. Unfortunately, this seems to be the only way in which we can carry this debate forward, and I believe it is a matter which we must look into.

I have assured the representatives of the ILGWU union that I will place any further response they care to make in the RECORD if that is their request.

THE TRUTH ABOUT THE ILGWU

(This brief statement has been prepared for two reasons and in response to many requests: (1) To set it clear that the ILGWU has no quarrel with the NAACP or any other civil rights organization on the principles of equal opportunity; and (2) to make a factual examination of the charges raised publicly by Herbert Hill, labor secretary of the NAACP, about the ILGWU.)

On August 17, 1962, the labor secretary of the National Association for the Advancement of Colored People, Herbert Hill, began to read testimony to the subcommittee of the House Education and Labor Committee investigating the extent of discrimination, exploitation, and corruption in the garment industry and the union. Hill never had a chance to finish his statement. Committee members objected to its inclusion in the record because it was not factual testimony but "opinions, conclusions, and characterizations" (New York Times, August 19, 1962).

Unable to have his testimony accepted by the committee (to which he was a special consultant) as submitted, Hill used the facilities of the NAACP to circulate the statement widely. The same piece appeared as an article in New Politics, volume 1, No. 4.

When David Dubinsky, president of the ILGWU, appeared before the committee to refute charges, he was repeatedly told that the committee would not entertain replies to Hill since the Hill statement was not part of the record.

On October 8, Hill's testimony became the basis for a resolution passed by the NAACP board of directors demanding further congressional investigation of the ILGWU. The resolution stated that "the union leaders have as yet made no adequate answer to charges."

Since the Hill testimony is the basis for a widening rift between the NAACP and the progressive labor movement, it may be worth while to see how much truth there is in this basic body of charges.

Hill charge: "As a matter of practice and policy, Negroes and Puerto Ricans are barred from membership in these locals: Local 10, Cutters, Local 60, Pressers, and the Pressers Branch Local 89."

The truth: In local 10, there are 199 known Negro and Spanish-speaking members (the ILGWU has many Cubans, Panamanians, Colombians, Dominicans, Salvadorians, Mexicans, etc., as well as Puerto Ricans) as of the summer of 1962. There are probably more. An exact count is difficult since the union does not tag its membership by racial categories. The 199 names were found in a shop count. (The count rose to 239 by November 1962.)

The 200 or more Negroes and Spanish-speaking members of Cutters' Local 10 is an impressive demonstration of integration, since in this trade where there is very little turnover of employment, the total number of jobs covered by local 10 has fallen in the last decade. Despite a diminishing number of available jobs, there are at least 200 Negroes and Spanish-speaking members in the cutters' union.

Hill charge: "Local 60 has an all-white membership."

The truth: One out of every five pressers (a skilled craft) in local 60 is either Negro or Spanish-speaking, mainly Puerto Rican. The total is well over 300. This, too, was accomplished in the face of diminishing jobs for pressers in the New York market.

Hill charge: "Locals 10, 60, and 89 are lily white."

The truth: The charge is pure fabrication, as we have seen, in the case of locals 10 and 60. The charge is comical in the case of local 89. This local was created at a time when dressmakers' local 22 conducted its meeting in Yiddish, because the members could not speak English. The newcomer Italians did not understand Yiddish, so they set up a parallel local to conduct the union's business in Italian. Local 89 still does so, with the result that it is not lily white, but pure Italian, barring Negroes, Jews, Puerto Ricans and all non-Italians from membership. To put Negro pressers in local 89, as Hill seems to suggest, would be to disfranchise them completely from union participation unless they were Italian-speaking Negroes.

Negro dress pressers (who work in the same shops as Italian local 89 dress pressers under the same contract with the same wage rates) are members of local 60—where the business is conducted in English, a language more convenient for most of the Negro pressers.

Hill charge: "Negro and Puerto Rican workers (in the New York dress joint board) are limited to membership in local 22 and in the unit known as 60A which is the Jim Crow auxiliary of local 60."

The truth: The locals of the dress joint board are 10, 22, 60, and 89. There are Negro and Puerto Rican members in every single one of these locals except 89, the Italian affiliate of the joint board. Local 60A is not "Jim Crow," it contains all races, religions, etc. It is composed of dress shipping clerks no matter what their race, creed or color. It is a craft affiliate of local 60 and not a racial grouping. Most of its members are Negro or Puerto Rican, but to call it a Jim Crow local for that reason would be the same as calling the Sleeping Car Porters' Union a Jim Crow union because all or most of its members are Negro.

Hill charge: "To anyone acquainted with the realities of the union's operations, the reason for denying a separate local union charter to 60A is that, given the ethnic composition of the membership, there would inevitably be a Negro or Puerto Rican local union manager."

The truth: In the ILGWU, around the country, shipping clerks do not have separate locals, whether they are white, Negro, gentile, Jewish or Mexican. Generally, ILGWU locals are industrial, not craft. The cutter and presser locals in New York and a few other areas is a historic fact that does not apply to parts of the country or even to the trades in New York that have been more recently organized.

More important: A majority of the combined members of local 60 and local 60A are Negro and Puerto Rican. Each member has an equal vote—whether in 60 or 60A. If the present manager is not a Negro or Puerto Rican, it merely indicates that the members of this union prefer not to cast a racial vote.

Hill's suggestion that a separate local of shipping clerks would elect a Negro manager is both inaccurate and vicious. It is inaccurate because local 60A is "mixed" with no one ethnic group—Negro, Puerto Rican, Cuban, Irish, Jewish, or Italian in a simple majority. What is more, if a predominantly gentile labor movement could elect a Jew, Samuel Gompers, as its president for more than three decades; and if a Protestant United States could elect a Catholic as President; and if the NAACP could choose a white Jew as its Labor Secretary, there is no reason to believe that the members of local 60A would elect a manager on a racist rather than unionist basis. The proposal is socially vicious because to create a separate local 60A just to guarantee the election of a Negro or Puerto Rican manager is to create a Jim Crow local—separate but equal. ILGWU members prefer integration: craft and color.

Hill charge: "These workers (members of local 60A) earn in the vicinity of $50 a week."

The truth: This may have been true before local 60A organized the shipping clerks into a union. A study of 536 shops, employing 1,220 members of 60A, shows: 3 percent earn from $46 to $49 a week; 13 percent earn from $50 to $60 a week; 21 percent earn from $60 to $70 a week; 22 percent earn from $70 to $80 a week; 17 percent earn from $80 to $90 a week; 9½ percent earn from $90 to $100 a week; 14½ percent earn more than $100 a week.

This means that about two-thirds (63 percent) earned from $70 a week up to more than $100. The truth is that the shipping clerks owe a vote of thanks to the pressers local, whose relatively stable membership, whose high dues rate (more than twice that of the shipping clerks), and experienced staff made these gains possible. Standing by itself, the clerks would have great difficulties primarily because of the very high turnover of workers in their craft. The clerks enjoy all benefits of being united in industrial union fashion with a more highly skilled craft. No student of labor relations has to be told why—and to destroy these advantages to create a Jim Crow local is bad economics and worse intergroup relations.

Hill charge: "Over a number of years, Negroes, who are members of other locals of the ILGWU, have attempted to secure membership in local 10 but are almost without exception denied membership."

The truth: Among the more than 200 members of Negro and Spanish-speaking origin (including Puerto Ricans) there are members of local 10 who were transferred from locals 23, 66, 91, 105, and even 60A.

Hill charge: "It is quite possible that for public relations purposes the ILGWU will produce one or two Negroes or Puerto Ricans who claim to be members of locals 10 and 60."

The truth: The actual count in locals 10 and 60 of members from these ethnic groups is well over 500. They do not claim to be members; they are. They have been for years.

On a November 9 broadcast, Hill stated, "There are in the vicinity of 50 [Negro] cutters of local 10 in the city."

Here it is clear that when Hill said "one or two," he had no regard for the truth. Now when he says 50 he still has no regard for the truth. This is the old McCarthy numbers game: a couple of thousand Communists in the State Department; a couple of hundred Communists in the State Department, may be a couple in the State Department.

Hill charge: Local 10 had been found guilty of excluding Ernest Holmes from membership because he was a Negro.

The truth: On November 4, 1962, WNBC-TV broadcast the following:

"On September 9, 1962, in the second half of a broadcast of 'Our Protestant Heritage,' over this station, a guest, Herbert Hill, labor secretary of the National Association for the Advancement of Colored People, made certain spontaneous and unrehearsed remarks concerning the International Ladies' Garment Workers' Union and two of its leaders.

"Mr. Hill stated that, in the Ernest Holmes case, local 10 of the International Ladies' Garment Workers' Union had been found guilty of discrimination by the State commission for human rights.

"The fact is that this case is still being investigated by the commission and no final determination of guilt has been made."

The full story will be available when the investigation is completed.

Hill charge: "To prevent the admission of nonwhite persons into that local union [local 10], the leadership exerts rigid control of admission into various training programs including the referral of young persons to the Fashion Institute of Technology High School."

The truth: Local 10, of course, does not prevent the admission of Negroes and Puerto Ricans. They are members of local 10.

The Fashion Institute of Technology High School is nonexistent. There are two separate schools of major importance to the needle trades in New York where the trade is taught. The first is the High School of Fashion Industries, run by the New York Board of Education. The other is the Fashion Institute of Technology, a 2-year college-level school, licensed by the State of New York. Despite the fact that these two schools are the great training ground for the industry since 1933, Hill has done so little research into the way people are trained and placed in the New York garment trades that he does not even know the names of these schools.

Neither local 10 nor any other union controls admissions, formally or informally, to the High School of Fashion Industries or to the Fashion Institute of Technology. Any grammar school graduate who wishes to may enroll in the high school. If that high school discriminates against any student, then the NAACP ought to denounce the New York Board of Education. The truth of the matter is that in the High School of Fashion Industries, the student body is presently about 40 percent Puerto Rican and about 30 percent Negro. The school graduates cutters as well as operators and has for years been successfully placing its graduates.

Hill charge: "The ILGWU continues to operate the union in the interests of a small and declining number of white garment workers with high seniority."

The truth: In the New York metropolitan area as in almost 95 percent of the ILGWU shops, there is no seniority clause in contracts. The ILGWU contracts call for equal division of work when there is not enough to go around.

The terrible irony is that the ILGWU is one of the few, perhaps the only major union, calling for equal division of work. In the ILGWU, the Negro or Puerto Rican in New York, or Mexican in the Southwest, or Japanese on the west coast is not the last hired and the first fired. Once a member of the union, any worker—regardless of origin—shares the work equally. No union in America—or anywhere in the world—has a greater job security clause for newcomers to the trade and union.

Hill charge: "A shortage of skilled sewing machine operators is developing [in New York]. The leadership of the skilled craft locals of the ILGWU must bear a share of the responsibility."

The truth: There is a shortage of skilled sewing machine operators. Nobody knows this better than the ILGWU. Some employers have either closed shop in New York or threatened to fold up for lack of skilled operators. Hill's charge implies that the ILGWU prejudice is so deep that rather than teach Negroes and Puerto Ricans these advanced skills, the union would prefer to lose the industry and lose its strength at its prime center in New York.

The truth is that as far back as 1938, the ILGWU worked with Max Meyer to set up the Central Needle Trades High School (now the High School of Fashion Industries) to train skilled workers. The school is a huge establishment, advertising its existence in subway car cards pleading for increased enrollment. Its student body numbers about 2,000. Its ethnic composition: 40 percent Puerto Rican and 30 percent Negro.

In addition: The high school runs evening sessions. Here there is open enrollment for any worker in the trade to learn any skill; operator, cutter, patternmaker. Last year, more than 700 ILGWU members attended. Ninety percent were either Negro or Puerto Rican.

In addition, to encourage ILGWU members to upgrade skills, New York locals run special union-sponsored classes—advertised by and recruited by the locals. The high school teaches the class on its premises. Five hundred and thirty-two ILGWU members attended last year. Ninety percent were Negro or Puerto Rican. These classes have been run for years.

(For any reader who may doubt that Hill could so have perverted the truth, I propose that you get the facts by writing either to Michael Katzoff, principal, or Theresa Fanelli, teacher in charge of the evening session, at the High School of Fashion Industries, 225 West 24th Street, New York 11, N.Y. Or better yet, organize a committee and go and look.)

Hill charge: The two Puerto Rican locals are denied Puerto Rican leadership.

The truth: The entire leadership of the Puerto Rican locals—director of organization, business agents, organizers, local presidents, and executive board members—are Puerto Rican. The sole exception: Jerry Schoen, a stateside man with many years of experience who serves as manager. (Schoen was appointed only after Alberto Sanchez, Puerto Rican director of organization, turned down the job as manager to stay with organizing.)

Perhaps more pertinent for those who prefer the "colorblind" approach to this problem is the letter submitted by Hipolito Marcano, president of the Puerto Rican Federation of Labor, to the subcommittee of the House Committee on Education and Labor, on this matter:

"The workers in Puerto Rico never look at the national origin, color, race, religion, or political ideas of their leaders with the only exception of Communist affiliation which is barred by our State federation constitution. A labor leader's worth cannot be measured by his religious beliefs, his origin, or color of his skin but by his service, dedication, and devotion to the cause of the working people whom he represents. We learned that lesson at the turn of the past century, when our labor movement was founded—not by a Puerto Rican—but by a native-born Spaniard, Mr. Santiago Iglesias.

"The workers in the garment industry in Puerto Rico were earning 2 cents an hour in 1940, when President Dubinsky and other 'continentals' representing labor, were appointed as part of the first wage and hour committee to investigate this industry. Today those workers average over $1 an hour and their wages are constantly increasing in addition to very reasonable fringe benefits. A great change has taken place and is going on. Organized labor has done a substantial part to win that battle for the enrichment of our life as a free and democratic community. We don't care about the color, origin, or religion of the leaders who have done that task of constructive leadership.

The credit goes to the union and in this particular industry the credit goes to the ILGWU for a job well done and for which we are grateful."

Hill charge: In the locals where there is a major concentration of nonwhite workers, the so-called minimum wages are in fact the maximum wages.

The truth: ILGWU members, with rare exception, work on a piecework system. This means that a rate is set for a given operation and workers are paid for what they produce. The minimum is set so that the slowest worker will, on the set rate, make the minimum; the faster worker makes proportionately more—some twice as much or more. The average wage and the maximum wage in an ILGWU shop on piece work are never the minimum or even near the minimum.

In addition, ILGWU contracts provide for supplementary benefits—medical care, hospitalization, optical care, vacations with pay, holidays with pay, death benefits, retirement benefits, severance payment, etc.—that automatically add 10, 15, or 20 percent to the money wage. This does not exist in similar ways in nonunion shops.

ILGWU contracts provide that the union minimum shall not only be above the Federal minimum but shall automatically rise whenever the legal minimum rises.

ILGWU policy is to set union wages as high as possible without jeopardizing the jobs of unionized shops that must meet nonunionized competition in one of the most fiercely competitive industries in America. To pave the way for higher union wages, the ILGWU has successfully spearheaded repeated campaigns to raise the Federal legal minimum. For an account of the pioneer role of the needle and textile unions in the fight for an improved Federal minimum, see "A Legislative Campaign for a Federal Minimum Wage—1955," by Gus Tyler, published by the Eagleton Foundation, Rutgers University, New Jersey. Also see Dissent, summer 1961, "Marginal Industries; Low Wages, High Risks," by Gus Tyler.

Hill charge: "I cite the Fine Art Pillow & Specialties Co. of 37 West 26th Street in Manhattan as a typical example of conditions. * * * Here, virtually all nonwhite workers, male and female, who are union members are paid $1.15, $1.20 or $1.25 an hour."

The truth: According to a payroll check, 54 of the 104 employees are paid more than $1.25 an hour. These are overwhelmingly Negro and Puerto Rican. Of the top 10 earners—from $1.53 an hour to $3.23 an hour—7 are Negro or Puerto Rican.

The further truth is that Fine Art Pillow is about as typical of ILGWU conditions as Mississippi is typical of America. This is a rubber and plastic shop in a trade where union jurisdiction is contested by dozens of legitimate unions plus dozens of racket unions. Of the thousands of ILGWU shops in New York, Hill chose this one for an on-the-spot check. And, even then, Hill got the facts all wrong.

Hill charge: There is "systematic exclusion of Negro and Puerto Rican members from effective participation in the leadership and policymaking procedures of the union." Hill refers specifically to the fact that the ILGWU constitution sets up rules on caucuses and qualifications for holding top offices in the international union.

The truth: The caucus clause dates back to the 1920's, when the ILGWU was in a battle with the "standing" caucuses of the Communist Party. Whatever the merits of the clause—a good subject for a full set of articles—it certainly is no bar to Negroes, Puerto Ricans, Mexicans, Cubans, Portugese, French and other minorities running for and winning office in the union. Dozens out of these background presently hold both appointed and elected office. If this "clause" is a sign of the "Decay of a Labor Union," then the ILGWU has been decaying ever since it beat the Communists several decades ago and increased its membership tenfold.

Other qualifications provide that to run for president a member must be elected as delegate to the ILGWU convention. Hardly a disqualification. If a member cannot be elected by his own local, he is hardly presidential timber. In any event, this clause applies to all members—regardless of race, creed, or color.

To run for the general executive board (top legislative body of about two dozen elected at the convention) a candidate must have served as a paid officer with the benefit of 3 years' experience. Hardly a disqualification. Virtually every paid officer of the ILGWU has seen 3 years' service, including the dozens of Negroes and Puerto Ricans on staff.

Most important: Every convention of the ILGWU is a constitutional convention. At any convention, a simple majority may remove all these qualifications to elect anyone the delegates want under any qualifications they set up.

The truth is that the ILGWU has made labor history by a most extensive and expensive program for leadership development, unparalleled in the world labor movement, with a conscious concentration on the development of leadership that would reflect the newer ethnic groups in the industry of the union.

In 1938, the ILGWU set up an officer qualification course to prepare candidates for elective union posts. Enrollment was open to all members of 2 years' standing. Eight hundred and thirty-two applied. Of these, 19 were Negro and 8 were Spanish-speaking—a total of 27 in 24 years.

Why so few? The answer is the composition of the union, where 80 percent of the members are female, with little interest in and less time for full-time union jobs. Of the 832, only 106 were women.

Because of the predominantly female composition of the ILGWU, especially among the fewer ethnic groups, the union set up a full-time, full-year training institute in 1950 to reach outside the trade, if necessary to recruit leadership talent. (The only such program in the entire American labor movement.) In the first 11 years of its existence, the institute graduated 30 trainees of Negro or Spanish-speaking origin. (Ninety applied. One out of three was graduated, a higher percentage than for the institute as a whole.)

Some idea of the philosophy of the institute and of the ILGWU can be obtained from a letter written by an ILGWU vice president when one Spanish-speaking graduate left the union staff. The letter was addressed to a Puerto Rican social agency in February 1960:

"No one knows better than you that in the last few years many Spanish-speaking workers, especially Puerto Ricans, have entered our industry and union. To develop staff and leadership from this community of working people, we have a special training institute, a full-year course. We look forward with keen interest to the growth and maturation of such new personnel so that in the coming years they may be able to play a major role in our union.

"To us, C——— represented more than an individual. He represented a trend. His progress, we felt, would be an encouragement for other young men and women with his interests to serve in the labor movement.

"To put it bluntly, we feel that C——'s departure represents a setback to our program of developing Spanish-speaking staff and leadership in our union."

In the report of the general executive board of the union to its 1959 convention, progress was reported. "The call for the development of such leadership in the ranks of the ILGWU, on the basis of merit only, has taken the form of numerous appeals in the Spanish-language press and in Justicia for Spanish-speaking ILGers to enroll in the ILGWU training institute. The results of the recent ILGWU elections indicate that a corps of such leaders is already emerging from the ranks."

The report went further. "President Dubinsky urged that the Puerto Rican government establish a training institute for developing community, civic and labor leadership for the thousands of islanders who are in transition. This would be the greatest preventive to their being exploited by misleaders and charlatans taking advantage of language and initial cultural confusion in the slum environment, as well as in the homeland island itself."

The ILGWU offered to provide on-the-job training on the mainland for these Puerto Rican trainees and pledged to place them on ILGWU staff immediately after graduation.

Without appearing to be superior or self-righteous, may I ask whether there is any other union in the world that can show a comparative record of trying to develop new leadership—with a specific eye on new ethnic groups?

Hill charge: "Workers who take home $49 a week tell each other jokes about the greed of union business agents."

The truth: The ILGWU has one of the tightest systems ever devised by a union to check on the conduct of its officers: an army of accountants with a special corps of accountants to check accountants. In the last 30 years, the union has had occasion to drop some 40 of its officers for improper conduct.

The Hill charge is trial by rumor and humor. It is an anonymous smear: the kind of smear used to characterize races, religions, the NAACP, or the labor movement by reference to some piece of gossip embedded in jokes. No facts. No names. No evidence. Just a report on alleged jokes.

The truth is that, although I knew this anonymous piece of evidence—trial by rumor—was in the Hill "testimony," I was shocked that New Politics did not use the editorial scissors here.

To characterize a union or any body of humans by the anonymous smear—the great mark of McCarthyism, of the antisemite, of the white racist, of the bigot—is hardly "evidence." This is the lynch spirit.

(Unfortunately, this piece is limited to answering charges. For those who would like to know what the ILGWU has done over 62 years to promote intergroup understanding and civil rights—may I suggest a reading of "Equal Opportunity—Union Made," Educational Department, ILGWU, 1710 Broadway, New York City, N.Y.)

A Reply to Gus Tyler: The ILGWU—Fact and Fiction

(By Herbert Hill)

In "The ILGWU Today: The Decay of a Labor Union," which appeared in the summer 1962 issue of New Politics, I charged that: "In the International Ladies' Garment Workers' Union in New York City, the Negro and Puerto Rican members are concentrated in the low-paid job classifications and with very little employment mobility." This was my main charge. I further stated that: "There is a direct connection between the permanent condition of semipoverty experienced by these workers and discriminatory racial practices. The factual record discloses that Negro and Puerto Rican members of the International Ladies' Garment Workers' Union are discriminated against both in terms of wages and other conditions of employment and in their status as members of the union."

These charges were and remain justified. No statement or explanation by officials of the ILGWU or their apologists refutes the major points of my arguments. On the contrary, their defense of the union essentially confirms my criticism of the ILGWU's policies and practices.

The most serious effort made to counter my charges was the reply by Gus Tyler, educational director of the ILGWU, which appeared in the last issue (fall 1962) of New Politics (also distributed in mimeographed form). Much of Tyler's material had previously appeared in a widely circulated document by Harry Fleischman, director of the American Jewish Committee's National Labor Service, entitled "Is the ILGWU Biased?" November 5, 1962. The Jewish labor committee distributed the same material in the form of a memorandum from Emanuel Muravchik, national field director, dated November 16, 1962.

Tyler's technique was to quote me (Hill Charge: * * *) followed by his answer (The Truth: * * *). After almost 12 pages of rapid fire dialog between "Hill charge" and "The Truth" I can readily understand the reader falling under a semihypnotic spell. Tyler, the "Truthsayer," writes with such seemingly inviolable "facts" that one might think he is really giving a point by point refutation of my charges. Aside from the failure to refute my charges, his is not a point by point discussion of my article. A number of the most important specific charges I made are not commented upon at all, others obviously distorted or treated so perfunctorily that he might well have omitted any comment and, most seriously, his "fact" fails completely to come to grips with the basic charges I directed against the ILGWU concerning the source discriminatory practices suffered by nonwhite garment workers in New York City.

At no time did I charge the ILGWU with discriminatory practices emanating from a conscious racist ideology. What I have argued is that the social fact of discrimination is rooted in the ILGWU today because of the interaction of the old union leadership with the changing social composition of the membership and the nature of the industry.

In the first place, there is the sheer weight of numbers of the Negro and Puerto Rican minorities. They comprise nearly one-third of the national membership and more than a half of the membership in the New York area, the heart of the international union's operation. Given the rapidly increasing number of Negroes and Puerto Ricans in the garment industry in New York, they have a unique status within the union which the all-white top leadership clearly sees as a growing threat to its monopoly of control.

A second factor contributing to discriminatory practices relates to the garment industry itself. The industry is made up of many small, highly competitive firms, further threatened by low priced imports. It therefore seeks to draw workers from a large, cheap labor market, one that in New York consists largely of nonwhite workers. This directly encourages discriminatory practices as the unskilled, lowest paying jobs are the only jobs available to Negroes and Puerto Ricans.

The many problems that the ILGWU faces in the industry are very real. To improve the living standards of its members and particularly those who are doubly victimized by a sick industry because of their color would pose a problem to the best of unions. The issue is how to meet the problem: to resist or acquiesce to the employers' demand that the ILGWU maintain a cheap labor market for the garment industry in New York City.

It is clear that some years ago the ILGWU leadership made a fundamental decision to keep the industry in New York City on the basis of maintaining low wages and minimal standards for tens of thousands of unskilled workers; i.e., Negroes and Puerto Ricans. Thus, the union provides itself with a vast dues paying membership which also constitutes the base of its extensive political operations in New York City and State. In this manner the ILGWU has chosen to operate as a stabilizing force in the industry.

The present wage rates of the unskilled and semiskilled garment workers, most of whom are nonwhite, are below the subsistence levels indicated by the 1960 Interim City Workers Family Budget established by the Bureau of Labor Statistics of the U.S. Department of Labor. (Data given in my previous article.)

A detailed report of wages in New York City, released by the Bureau of Labor Statistics on June 27, 1962, clearly indicates that New York City has become a low-wage area. One of the major reasons for this development is the wage policies of the apparel unions.

The U.S. Government report found that between 1950 and 1960, wages for the city's apparel workers fell from 2d place among 16 industrial categories to 11th place, and dropped below the national average for all manufacturing.

The tacit collusion between employer and union to maintain a cheap labor market was revealed by the ILGWU's opposition to a bill introduced in the New York City Council in 1962 to establish by law a minimum wage in New York City of $1.50 an hour. The ILGWU representative on the Mayor's Citizens' Commission on the City Economy, E. Howard Molisani, manager of Italian Cloakmakers' Local 48 and a vice president of the ILGWU, originally voted against the commission's report which recommended prompt enactment of a law establishing a $1.50 minimum hourly wage in New York City, but, for the public record, later changed his vote to an abstention.

This is evidently "the philosophy of the ILGWU" to which Tyler repeatedly alludes and which Fleischman and Muravchik defend.

Arnold Witte, general manager of the Commerce and Industry Association of New York City, writing in the October 5, 1962, New York World Telegram and Sun, cited the ILGWU's opposition to the city minimum wage bill. Mr. Witte noted that "the garment workers, the largest union of the largest industry in the city, has refused to indorse this legislation."

On February 12, 1963, a mass demonstration was held in Albany in support of passage of a $1.50 minimum wage law for New York City. Several major trade unions participated, as did the NAACP, the Negro American Labor Council, and many other groups. The ILGWU was conspicuous by its absence.

There is a third factor behind the discrimination suffered by nonwhite garment workers. It pertains to the ingrown quality of the union leadership. Again, I do not charge that the ILGWU leadership is motivated by a deliberate racist ideology. But it is evident that the top all-white leadership has grown contemptuous of the younger, less educated, the less sophisticated—the altogether different—newer members who are overwhelmingly Negro and Puerto Rican.

That many of the older leaders of the ILGWU have nothing in common with their radical past is beside the point; that they have a certain past in common is very much to the point. (Talk about discrimination in his union and David Dubinsky will recount ad nauseam how he was imprisoned under the Czar for his Socialist activities.) The picture which would emerge from any detailed study of the leading personnel is of an old, conservative, ingrown bureaucracy. It has become an elite club which seeks to preserve for itself the leading power positions in the international, the local unions and the best jobs in the shops for those most closely identified with its own history and nostalgia. It passes these desirable, well-paying positions on from father to son, and from father to son-in-law. The "business" is kept within the family.

Prof. Daniel Bell of Columbia University recently commented on this serious problem in an article in the New Leader (Jan. 21, 1963):

"The fact is—and this is the 'bite' in Hill's charges—that the Negroes are underrepresented in the leadership of many of the unions where they form a significant proportion of the membership. In the case of these unions, what the Negroes want is 'recognition' at the level of top leadership and a growing share of the spoils of office. For one thing, the realistic political process in the United States, at least in the northern urban centers, has been one of ethnic groups advancing themselves precisely in this fashion; by organizing on bloc lines, electing their own kind, and using the patronage system to enhance the wealth and status of their group."

Bell concludes by noting that:

"In economic and educational opportunity, the Negro is in a position of inequality, and the Government is bound to help him move ahead." But doesn't the trade union movement have a special obligation to help redress the balance?

Tyler knows that crucial to my argument is my characterization of the ILGWU leadership as being rigidly bureaucratic. Yet, his "discussion" of this documented charge is so feeble and unresponsive as to be an unwitting admission of its truth.

I sought to establish that the ILGWU leadership, as is the case with virtually every bureaucracy, has tried to legitimize its privileges through constitutional provisions. While these provisions make everything "legal," they also paralyze initiative from below, prevent an influx of new life into the leading policymaking bodies of the organization and transform conventions into tedious rituals. For example, I pointed to the clause in the ILGWU constitution which prohibits a democratic internal life in the organization. Here is what Tyler has to say on the matter:

"The caucus clause dates back to the 1920's, when the ILGWU was in a battle with the 'standing' caucuses of the Communist Party. Whatever the merits of the clause—a good subject for a full set of articles—it certainly is no bar to Negroes, Puerto Ricans, Mexicans, Cubans, Portuguese, French and other minorities running for and winning office in the union." (Emphasis added.)

This will not do. Frankly, I do not know if the clause was justified at the time by the struggle against the Communists. And this might make for a full set of articles by labor historians. But it also makes for a full set of articles by the labor secretary of the NAACP and others on the character and practices of the ILGWU today. While the clause deprives the entire membership of democratic rights today, it takes on the added edge of discrimination against those minorities which are thus deprived, in addition, of their right to organize within the union to press for their special needs and rights.[1]

Other constitutional provisions reduce the number eligible to run for the top offices in the union to a few hundred out of a total of over 400,000. This is bad enough. Worse yet, it reduces the number of Puerto Ricans and Negroes eligible to run for the general executive board to proportionally a very small number (Tyler says, "dozens") and those eligible to run for the offices of president and general secretary to even less. (Tyler doesn't give a number.)

In the same vein he writes of these constitutional restrictions on democratic rights: "At any convention, a simple majority may remove all these qualifications [from the constitution—H.H.] to elect anyone the delegates want [to the general executive board—H.H.] under any qualifications they set up." Getting a "simple majority" at an ILGWU convention is not quite that simple. To do that would require a long, arduous campaign against the solidly entrenched leadership, a campaign which would require far more time than the 3-month preconvention limit on caucuses. And there's the rub. The ILGWU constitution itself, through the extreme limitation and control placed on opposition, is the best, built-in, guarantee that Tyler's "simple majority" will never materialize.

It is as though an assailant caught belaboring a defenseless victim with a club argues that if he is doing wrong, the poor bastard underfoot has the right to take his club away.

It is revealing to see what sections of my article completely escaped Tyler's roving but very selective eye.

Hill charge: "There is not a single Negro or Puerto Rican on the 23 member general executive board."

Tyler answer: Silence.

Hill charge: "* * * not a single Negro or Puerto Rican vice president of the union * * *"

Tyler answer: Silence.

Hill charge: "There are no Negro or Puerto Rican local managers who are usually handpicked by the Dubinsky controlled administration."

Tyler answer: Silence.

Hill charge: "Dubinsky's practice of requiring a signed undated resignation from all officers of the international union and from members of the general executive board, absolutely guarantees the perpetuation of what really amounts to one-man rule of the ILGWU."

Tyler answer: Silence.

Hill charge: "I cite the basic contract between local 98 and the Manufacturers' Association in effect until August 14, 1963. The contract provides the following minimum wages (p. 7, art. 4(a)):

	Per hour
Floor girls	$1. 15
Operators	1. 20
Shipping clerks	1. 20
Cutters	1. 20

In September 1961 the Federal wage was increased to $1.15 an hour. The current minimum for floor girls is $1.25 an hour at the end of 7 months (only 10 cents above the minimum wage required by law) and $1.30 an hour for the other classifications at the end of 9 months.

Tyler answer: Silence.

(Tyler does try to answer some of the other charges made about wage scales. All the worse for his case, as we shall see.)

Hill charge: "In this case of the Haffkine Co. the ILGWU completely organized a group of Negro and Puerto Rican workers employed by a 'sweatshop' employer whose workers engaged in a 2-day ILGWU strike for union recognition. However, these striking workers were turned over to a local of another international union, one well known for signing 'sweetheart agreements' and generally with an unsavory reputation. This was done by Herbert Pokodner, the manager of local 98."

Tyler answer: Silence.

Hill charge: "An analysis of the data provided by the Bureau of Labor Statistics of the U.S. Department of Labor concludes that only 11 percent of the unionized garment workers in New York can realize the basic earnings necessary for the 'modest but adequate' standard of living established by the Bureau for the 1960 interim city worker's family bduget.

Tyler answer: Silence.

Hill charge: "In addition, it must be noted that the very modest figure of 11 percent has been reached by assuming that these workers will be employed uninterruptedly for 52 weeks. However, given the seasonal character of the New York City garment industry this is highly unlikely.

Tyler answer: Silence.

Hill charge: "'The available data clearly indicates that the wages of workers in the New York City ladies' garment industry have declined relative to the total manufacturing average."

Tyler answer: Silence.

These are, among several others, omissions of major points in my article that Tyler, Fleischman, and Muravchik make no attempt to answer, although they create the illusion they are "answering Hill item by item."

In his article, Tyler writes:

"Hill charge: 'To prevent the admission of nonwhite persons into that local union (local 10),' the leadership exerts 'rigid control of admission into various training programs * * *' including the 'referral of young persons to the Fashion Institute of Technology High School.'"

If we substitute my words for Tyler's three little dots, the question would then be that the leadership exerts:

"Rigid control of admission into various training programs. Local 10 exclusively decides who shall be referred to on-the-job-training opportunities created as the result of informal arrangement made by the union and employers operating with ILGWU contracts, or into the grading school operated by local 10 in its headquarters, or in the referral of young persons to the Fashion Institute of Technology High School."

Thus, there are three training programs mentioned in my article and Tyler dots his way over the first two: (1) the informal arrangement made between employer and union for on-the-job training, and (2) the grading school operated by local 10 in its headquarters. Why? The answer is clear enough. My charges in these two instances are incontrovertible. Where the union exercises its control, the number of Negroes and Puerto Ricans is so embarrassingly small that Tyler discreetly resorts to his dots. He discusses, instead, only the third form of training, that offered by the New York City Board of Education where the ILGWU, fortunately, does not exercise control—and here I stand corrected—about who is admitted. Tyler then rests his case on the nondiscriminatory policies of the New York City Board of Education and tacitly concedes that he has no case where the union is concerned.

What is more, the figures Tyler gives of the number of Negroes and Puerto Ricans trained by the board of education contradicts any claim that the extremely small number of nonwhite workers in the skilled trades is due to a shortage of skilled Negro and Puerto Rican labor.

The New York Times of August 18, 1962, reporting on the testimony of Moe Falikman, business manager of Cutters' Local 10, before a hearing of the subcommittee of the House Committee on Education and Labor, states that "Mr. Falikman explained that local 10 had no formal training program for cutters and no apprentice system." That led Congressman ROOSEVELT to observe that "with the changing pattern of population in New York it seems to me you would have gone to some lengths" to provide training and jobs for members of racial minorities.

"We are not an employment agency," Mr. Falikman replied.

"But you are," Mr. ROOSEVELT declared. "I'd have greater faith in you if you would face this situation honestly and say, 'Yes, this needs looking into.'"

After consulting with a union attorney, Falikman did agree that he would look into it.

The New York Times of August 25, 1962, in reporting Mr. Dubinsky's appearance before the House subcommittee stated that: "Mr. Dubinsky denied that it was the union's responsibility to upgrade Negroes and Puerto Ricans, as much as we would like to see them go to higher brackets. The union," he said, "is not an employment agency." Other ILGWU officials appearing before the subcommittee insisted that upgrading and promotion "was not the union's responsibility." "We are not an employment agency," they all said.

But in Mr. Dubinsky's testimony reprinted in the October 1 issue of the ILGWU newspaper Justice (p. 10), in reply to a question as to why Negroes and Puerto Ricans do not advance in the union or in the industry, Dubinsky is quoted as saying, "We are doing everything under the sun on this score."

Either the ILGWU is "doing everything under the sun," or "we are not an employment agency, it's not our responsibility." The union cannot have it both ways.

Then there is the following sleight-of-hand. According to Tyler:

Hill Charge: "Local 10 has been found 'guilty' of excluding Ernest Holmes from membership because he was a Negro."

Tyler incorporates this alleged "Hill Charge" in what purports to be an answer to my article in New Politics. Here is what I actually wrote:

"On July 2, 1962, the New York State Commission for Human Rights, which administers the State's fair employment practices statute, found 'probable cause' against local 10 in the case of Ernest Holmes, a Negro who was repeatedly denied membership in local 10 although he worked on the cutting tables of a union shop."

Tyler's dishonest practice consists of using the word "guilty" attributed to me in an unrehearsed television interview but nowhere stated in the article he is presumably answering. In this way, he relieves himself of the responsibility of answering why, after an 8-month investigation, the New York State Commission for Human Rights found "probable cause" (the first stage in a finding of guilt) against local 10 of the ILGWU. On September 14, 1962, Ruperto Ruiz, investigating commissioner, New York State Commission for Human Rights, in a letter to Emil Schlesinger, attorney for local 10, stated that the commission had "repeatedly requested and for a period of 8 months tried to obtain data pertinent to a resolution of the charges of discrimination against the Amalgamated Ladies Garment Cutters Union—Local 10. These efforts were unsuccessful. The failure of representatives of that local to cooperate in the investigation, despite their promises to do so, left me no alternative but to find 'probable cause to credit the allegations to the complaint.' "

---

[1] Incidentally, what is interesting about Tyler's answer is that it is almost exactly what I predicted he would say. I wrote in my previous article that "Mr. Dubinsky's spokesmen will answer that this is done to prevent Communists from taking over the union." Mr. Tyler performed as expected. Naturally, he did not quote my rebuttal about this anticipated canned reply which was that "one can only compare" such an answer "to the argument that we should suspend the U.S. Constitution and the Bill of Rights because it endangers the country in fighting subversion."

Sixteen years ago the ILGWU entered into an agreement with the New York State Commission Against Discrimination (the predecessor to the State Commission For Human Rights), that it would not bar Negroes, Spanish-speaking or other persons from membership in the all-Italian locals. (*Elsie Hunter* v. *Agnes Sullivan Dress Shop*, Sept. 4, 1946.) This was an action brought by a Negro member of local 22 who was barred from higher paying jobs controlled by local 89. Today, 16 years later, not a single Negro or Spanish-speaking person holds membership in the two Italian locals which have control of some of the highest paying jobs in the industry and no action has been taken to comply with the State law forbidding such practices.

Yet in the recent statement prepared by Mr. Tyler, the ILGWU asserted that the NAACP charge that locals 48 and 89 discriminate is "comical."

What Mr. Tyler must explain is why, if the NAACP charge is "comical" today, the ILGWU agreed to go along with the comedy 16 years ago.

Tyler makes such a grand production of his comedy; so much joshing. He good humoredly tells us that the reason for all-Italian locals dates back to the days when Italian immigrant unionists who spoke no other language needed their own locals to conduct union business. Being Italian language locals, only those speaking Italian can belong. Not only Puerto Rican and Negroes are excluded (unless, as Tyler wittily thrusts, they are "Italian-speaking Negroes") but all other non-Italian groups are excluded. What could be more fair? And, if all non-Italians are excluded, how can Hill claim that Negroes and Puerto Ricans are thereby specially victimized? The Jewish Labor Committee and the director of the National Labor Service also defend this practice in a similar manner.

I submit that it is not "comical" that the largest local in the ILGWU (Italian Dressmakers' Local 89) and the largest local in the coat and suit industry (Italian Cloakmakers' Local 48) bar Negroes and Spanish-speaking persons from membership. I submit that it is not "comical" that as a result of being barred from membership in local 48 and local 89, Negro and Spanish-speaking persons are further denied access to certain high paying jobs in the two branches of the garment industry of New York City where such jobs are concentrated.

Other national and religious groupings, all of them white, have access to skilled jobs via other locals which are virtually closed to Negroes and Puerto Ricans on the basis of tradition and practice. That is the point. The practical effects of the operation of Italian language locals is to further keep Negroes and Puerto Ricans concentrated in the low paid unskilled classifications with little opportunity for advancement.

While it appears that all are equally unequal where the Italian locals are concerned, some are actually far more unequal than others.

It is obvious that the ILGWU's humorous rationalizations and glib assertions completely fail to answer the charge that these locals discriminate against Negro and Spanish-speaking persons. Indeed their admission of the facts is the proof of the charge. I further submit that the barring of Negroes, Spanish-speaking and other persons from locals 48 and 89 is a violation of the AFL–CIO constitution and a violation of the nondiscrimination pledge which the ILGWU recently signed in the office of the President of the United States. We of the NAACP do not think, moreover, that it is "comical" that the ILGWU subscribes to no-discrimination pledges for public relations purposes when in reality it fails to put an end to such discriminatory practices. Sixteen years have passed since the ILGWU entered into the stipulation agreement with SCAD concerning the Italian locals, but these locals are still "lily-white." Shall this, too, be hailed as "an impressive demonstration of integration"?

Mr. Tyler is not above borrowing a trick or two from management associations which, when pressed by unions for higher wages, place statistic-ridden ads in the New York Times and other newspapers to prove to the world that their employees never had it so good. One such gimmick is to advertise workers' wages without corresponding figures on how many hours of work the payroll represents. Tyler commits the same patent and deliberate fraud.

My report, for example, indicated that push-boys and shipping clerks in the "Jim Crow" auxiliary known as 60A—mainly Negroes and Puerto Ricans—receive extremely low wages.

Tyler "refutes" this charge by arguing that some of these workers earn from $70 to $100 per week. Of course, by working long overtime hours at time-and-a-half wages, by working 60 or 70 hours a week and more, they can earn $80 and $90. But my report, as Tyler knows, describes straight hourly wages, not overtime wages earned at time-and-a-half pay. I am describing 1 week's pay for 1 week's work, that is, a regular week's earnings for the "normal workweek," of 35 hours.

The wages set forth in the section of the union agreements that cover members of 60A are as follows:

The following minimum rates of pay for the normal workweek, as hereinafter defined, shall apply to the following employees:

Group I: Assorters, piece goods workers, push boys, porters, delivery boys, packers, and errand boys. Minimum wages of $46 per normal workweek.

Group II: Shipping clerks, receiving clerks, chargers, order pickers, checkers. Minimum wage of $50 per normal workweek.

The overwhelming majority of members of 60A are employed in the job classifications contained in group I as described above and receive a minimum wage of $46 ($1.31 an hour) for 35 hours, a "normal workweek."

In my article, I cited the pay of workers—almost all Negroes and Puerto Ricans—in a particular unionized shop as an example of an ILGWU substandard negotiated contract. Tyler takes up the "Hill charge" and then proceeds to demolish only himself with "the truth" as follows:

Hill charge: "I cite the Fine Arts Pillow & Specialties Co. of 37 West 26th Street in Manhattan as a typical example of conditions. Here, virtually all nonwhite workers, male and female, who are union members are paid $1.15, $1.20, or $1.25 an hour."

The [Tyler] truth: "According to a payroll check, 54 of the 104 employees are paid more than $1.25 an hour. These are overwhelmingly Negro and Puerto Ricans. Of the top 10 earners—from $1.53 to $3.23 an hour—7 are Negro or Puerto Ricans.

Tyler's truth is that "54 of the 104 employees are paid more than $1.25 an hour." But this means that 50 workers, approximately half the work force, in a unionized shop receive less than $1.25 an hour. That is not all. Tyler boasts that the 10 top earners receive from $1.53 to $3.23 an hour (how many earn that miserable $1.53 or only a few cents more he doesn't say). What this figure further reveals is that at least 45 additional workers receive between $1.25 and $1.53 an hour (how many are just slightly above the $1.25 scale he doesn't say either). Thus, at least 95 out of 104 workers earn from less than $1.25 to $1.53 an hour.

To cover himself in the event that some readers might work out the arithmetic presented by his "truth," Tyler argues that the shop under discussion in any case is "as typical of ILGWU conditions as Mississippi is typical of America." How typical it really is can be seen in the following exhibits of ILGWU-negotiated contracts in New York City where there is the heaviest concentration of Negro and Puerto Rican workers, in some cases as high as 90 percent.

	Progression rates for "unskilled" workers—Time intervals and rates					Contract minimum for "skilled" workers
	1 to 8 weeks	9 to 10 weeks	11 to 13 weeks	14 to 16 weeks		
Corset and Brassiere Workers' Union of New York Local 32 (6,632 members):						
Operators	1.15	1.20	1.25	1.30	--------	1.36
	1 to 8 weeks	9 to 10 weeks	11 to 12 weeks			
Pressers	1.15	1.20	1.25	--------	--------	1.30
Cleaners	1.15	1.20	1.25	--------	--------	1.30
Examiners	1.15	1.20	1.25	--------	--------	1.30
	1 to 8 weeks	--------	--------	--------	--------	
Beltmakers' Local 40 (4,504 members):						
Machine operators	1.15	--------	--------	--------	--------	1.38
Operators	1.15	--------	--------	--------	--------	1.43
General help	1.15	--------	--------	--------	--------	1.43
Shipper	1.15	--------	--------	--------	--------	1.30
Floor girls	1.15	--------	--------	--------	--------	1.30

	Progression rates for "unskilled" workers—Time intervals and rates						
	1 to 8 weeks	9 to 10 weeks	13 to 15 weeks			Class R shops	Class S shops
Undergarment and Negligee Workers' Union, Local 62 (16,802 members):							
Operators	1.15	1.25	1.30–1.33	----	----	1.30	1.33
Ironers	1.15	1.20	1.25–1.25	----	----	1.30	1.30
Examiners	1.15	1.20	1.25–1.25	----	----	1.30	1.30

Plastic, Molders and Novelty Workers' Union, Local 132 (5,400 members):							
	1st month	2 to 6 months	6 to 9 months	----	----		
All workers other than molders	1.15	1.20	1.25	----	----	1.30	
	1st month	2 to 4 months	5 to 7 months	8 to 10 months	11 to 13 months		
Molders	1.20	1.25	1.30	1.35	1.40	1.45	
Unit 60A section of dress joint board agreement (1,943 members):							
Assorters, piece goods workers, pushboys, porters, delivery boys, packers, and errand boys	----	----	----	----	----	1.31	
Chargers, order pickers, checkers, shipping clerks, receiving clerks	----	----	----	----	----	1.43	

"As typical of ILGWU conditions as Mississippi is typical of America"? The United States has only one Mississippi. The ILGWU, as the above figures indicate, has a whole flock of them.

It is evident from the data above, that new workers do not even receive the contract minimum for "skilled" workers, but must work a considerable period before they even receive this low wage. Indeed, in the case of local 62, for example, workers must work 8 weeks at the Federal minimum wage and a full 15 weeks before they receive the contract minimum of $1.30 or $1.33 an hour. At the same time, of course, these workers are required, as a condition of employment, to become members of the union after 30 days and pay an initiation fee and dues.

Tyler's explanation for the creation of the "Jim Crow" auxiliary 60A is completely fraudulent. I must repeat some of the facts mentioned in my first article and supply some added information before reviewing Tyler's incredible performance.

60A is a unit composed of "pushboys," packers, piece goods workers, porters and shipping clerks. It has about 2,000 members, of whom more than 90 percent are either Negroes or Spanish-speaking persons. The existence of 60A is, in keeping with the tradition of the "old-line" AFL craft unions, an auxiliary to another local, Dress Pressers' Local 60, with less than 1,300 members.

60A is a new unit in the ILGWU. While the women's garment industry in New York City has had "pushboys," packers, piece goods workers, porters and shipping clerks for as long as the industry existed, the ILGWU did not consider these workers, virtually all Negroes and Puerto Ricans, worthy of union membership until a few years ago, and then only because other unions began organizing activities among these workers. The ILGWU, for the sole purpose of preventing another union from getting a toehold in the garment industry, and not because of the urgent needs of the low-paid, exploited Negro and Puerto Rican workers, then reluctantly organized these workers. Rather than granting them a separate charter, however, the ILGWU made them an auxiliary to Dress Pressers' Local 60.

The NAACP has charged that this was done among other reasons to prevent a Negro or Spanish-speaking person from rising to the position of local union manager.

It should be noted that the collective bargaining agreements negotiated between the Dress Joint Board and the employers' associations covering the members of the Dress Joint Board locals has two sections concerning wages, hours and conditions of employment: one section covers the members of locals 10, 22, 60 and 89, and the other covers the members of 60A. Aside from the question of wages, there are other striking and illuminating differences concerning conditions of employment between the two sections which are described below. Here are two clauses in the collective agreements between the Dress Joint Board and the employers' associations:

Fifteenth: Hours of work (covering members of locals 10, 22, 60, and 89).

A regular week's work shall consist of 35 hours in the first 5 days of the week. Work shall begin at 9 a.m. and end at 5 p.m., with 1 hour interval for lunch. There shall be no more than one shift of workers in any day.

During the season, when the inside shop and each of the contracting shops of the manufacturer or jobber for whom a member of the association is registered or designated as fully supplied with at least a full week's work, and when there are no vacant accommodations in the said shops for additional worker or additional workers cannot be secured, overtime may be worked by all the workers therein except the cutters, provided the member of the association notifies joint council in writing, in advance of the period during which overtime will be worked. In no event shall overtime worked beyond the first 5 days of the week exceed 1 hour per day. All week workers, when working overtime, shall receive pay at the rate of time and one-half. (Collective agreement 1961–1964—United Better Dress Manufacturers' Association, Inc., with International Ladies' Garment Workers' Union and Dressmakers Joint Council.)

Compare the above with below, which covers 60A:

Sixty-ninth: The normal workweek, for the purpose of this agreement, shall be deemed to mean a 35-hour week. Each employer shall, in his discretion, be free to fix the hours of the day within which each employee in the unit shall work, but work in excess of 7 hours performed in any 1 day shall be compensated for at the rate of time and one-half. Saturday work shall likewise be compensated at the rate of time and one-half. All overtime shall be performed in the discretion of the employer. (Collective agreement—United Better Dress Manufacturers' Association, Inc., with International Ladies' Garment Workers' Union and Dressmakers Joint Council.)

It is clear from the foregoing that members of 60A are considered by the ILGWU as different than, and inferior to, the members of the other locals affiliated to the Dress Joint Board. With respect to members of 60A, unlike the members of the other Dress Joint Board affiliates, the employer has full discretion both as to hours within which they will work and how many hours they will work. It is clear, too, how members of 60A can earn more than $50 per week: many long hours beyond the so-called normal workweek.

How does Tyler discuss the status of those consigned to 60A? In the first place, according to him, their segregated position is for their own good. Tyler writes: "The clerks (in 60A) enjoy all the benefits of being united in industrial fashion with a more highly skilled craft. No student of labor relations has to be told why." I'm afraid that Mr. Tyler takes too much for granted. The supposedly self-evident advantage of the unskilled workers being affiliated to a skilled craft local as argued by Tyler is simply an exercise in fantasy. What, concretely, have been the benefits for the members of 60A getting $46 to $50 for a normal workweek of being affiliated to a craft local with pay scales ranging up to close to $5 an hour (the highest in the industry)?

Then there is Tyler's ludicrous analogy designed to counter my charge that 60A is a Jim Crow affiliate:

Most of its (60A) members (over 90 percent to be more exact—H.H.) are Negro and Puerto Rican, but to call it a "Jim Crow" local for that reason would be the same as calling the Sleeping Car Porters' Union a Jim Crow union because all or most of its members are Negro.

In the first place, 60A is not a local. It is an auxiliary to local 60. Quite a difference there. In the second place, the Sleeping Car Porters' Union would be a Jim Crow organization if it had a parallel construction to that of 60A. If the Sleeping Car Porters' Union were an auxiliary to, say, the Brotherhood of Railroad Trainmen and, if instead of A. Philip Randolph there were the equivalent of a white local manager, selected in reality by the international office of the Brotherhood of Railroad Trainmen to service the needs of the Sleeping Car Porters' local, then the Sleeping Car Porters' local would be a segregated auxiliary just as 60A is a Jim Crow unit.

Then we have Tyler the expert on ethnology:

"Hill's suggestion that a separate local of shipping clerks would elect a Negro manager is both inaccurate and vicious. It is inaccurate because local 60A is mixed with no one ethnic group—Negro, Puerto Ricans, Cubans, Irish, Jewish, or Italian—in a simple majority."

It is Tyler who is inaccurate and vicious. Inaccurate, because I did not say that a separate local would "elect" a Negro manager but that "there would inevitably be a Negro or Puerto Rican manager." While the ILGWU constitution provides for the formal election of local managers they are not really elected. In practice they are selected by the international and confirmed by the local.[2] In the second place, I said "Negro or Puerto Rican," and not just "Negro." Tyler decided to omit the Puerto Ricans in his reference in order to make his sly point that no one ethnic group is in a simple majority in 60A. (To be sure, in a previous quote from Tyler on this matter, the reader can clearly see that he says, "most of its members are Negro and Puerto Rican." Suddenly, in an effort to fudge over the question we are introduced to Cubans, Irish, Jewish, or Italian as though they represent a significant part of the membership of 60A.) Now, it is true that Negroes and Puerto Ricans constitute a separate group. But they are coupled in my discussion and in Mr. Tyler's—except when inconvenient to him—because they are both the victims of economic, political, ethnic, and racial discrimination different in kind and degree from other ethnic groups which comprise less than 10 percent of 60A.

Tyler goes even further:

"There is no reason to believe that the members of Local 60A would elect a manager on a racist rather than unionist basis. The proposal is socially vicious because to create a separate Local 60A just to guarantee the election of a Negro or Puerto Rican manager is to create a Jim Crow local—separate but equal. ILGWU members prefer integration: craft and color."

Most damaging here (aside from the "elected" managers) is Tyler's sophistry, that pseudo-liberal conception that for Negroes and Puerto Ricans to seek their own leadership is racism in reverse. Of course, I think that Negroes and Puerto Ricans would take special interest and justifiable pride in electing a Negro or Puerto Rican manager or joint board chairman or president of the international union.

I might ask Mr. Tyler whether he uses the same standards in judging political gerrymandering when it is done to deny Negroes representation in Congress. Does he then virtuously declare that it is "socially vicious" to speak of allowing Negroes to have Negro Congressmen? Or does he, good liberal that he is, protest this kind of gerrymandering—another form of "craft and color"—because it specifically denies Negroes their representational rights?

And look at what Mr. Tyler italicizes in the above passage. How vicious it is, he writes "to create a separate Local 60A just to guarantee the election of a Negro or Puerto Rican." However, Negroes and Puerto Ricans are already separate. Who is responsible for this? The NAACP or the ILGWU? They are separated, not as an independent local as are other crafts in the Dress Joint Board, but as an auxiliary of a skilled local. Thus, they are separate and unequal. It is also interesting to note that 60 and 60A have separate executive boards but one manager for both units.

The NAACP claims that when the boundary of separation is drawn at the point where autonomy begins, this is evidence that discrimination is a hard fact. As against this affiliated status, local autonomy would, indeed, be a step in the right direction. And not "just to" guarantee the election of a Negro or Puerto Rican, but as a means of better protecting the rights of both groups and offering the enormous educational and training advantage of self-leadership.

Tyler says as against local autonomy for 60A, "ILGWU members prefer integration: craft and color." Bravo. The NAACP looks forward to seeing Negro and Puerto Rican ILGWU members on the general executive board, as local union managers, given a more equitable share of the better-paying jobs and that the union conduct a vigorous union campaign against exploitation.

One final quotation from Tyler on 60A: "a majority of the combined members of local 60 and local 60A are Negro and Puerto Rican. Each member has an equal vote—whether 60 or 60A. If the present manager is not a Negro or Puerto Rican, it merely indicates that the members of this union prefer not to cast a 'racial' vote."

I am obliged for the third time to point out to the reader that whether the manager of Local 60 is or is not a Puerto Rican or a Negro has little to do with normal elections. The manager is actually selected by the general executive board and ritualistically confirmed at a local union meeting. Apart from this little detail what Tyler is suggesting is completely demagogic. Everyone knows that given the situation as I have described it—and as Tyler unwittingly confirms—the "equal vote" that he boasts of is nonexistent because of the lack of involvement of these minorities in the union. Their apathy and the refusal to use their "equal vote" is an indication of the controlled, undemocratic atmosphere in which they are treated with contempt as "things" to be manipulated by an arrogant bureaucracy.

Am I exaggerating when I say that the ILGWU is contemptuous of Negroes and Puerto Ricans? A comparison of the clauses in the same collective agreement concerning discharge of workers, first that covering members of locals 10, 22, 60 and 89, then covering members of 60A, is in order.

THIRTY-EIGHTH: Discharge (of members of locals 10, 22, 60 and 89—H.H.); (a) no member of the association shall discharge a worker, except for misbehavior sufficient to justify a discharge, before a notice in writing is served on joint council of the reason for the intended discharge. In case of a discharge for alleged misbehavior, and it be determined that the worker be reinstated, he is entitled to receive pay for all the time he stayed out; (b) joint council shall investigate the notice of the intended discharge within 48 hours of the receipt of same. If joint council does not consent to the proposed discharge, the question shall be referred to the impartial chairman, whose decision shall be final. Pending such decision the employee shall continue working at full pay (Collective Agreement 1961–64—United Better Dress Manufacturers' Association, Inc., with International Ladies' Garment Workers' Union and Dressmakers' Joint Council).

SEVENTY-FOUR: On discharge (of members of 60A—H.H.).

The employer may discharge regular employees for any just and reasonable cause including the following: incompetence, insubordination, dishonesty, intoxication, soldiering on the job, repeated lateness or absence; and assault or attempted assault on the job.

Repeated breach of reasonable rules established by the employer:

In the event that the union questions any discharge as not being for just and reasonable cause, it shall so inform the association within 5 days after the discharge. Representatives of the union and the association shall attempt to settle the grievance by negotiation. If no settlement can be reached, the joint council may invoke the arbitration machinery provided in this agreement. (Collective agreement, 1961–64—United Better Dress Manufacturers' Association, Inc., with International Ladies' Garment Workers' Union and Dressmakers' Joint Council.)

In the discharge of members of locals 10, 22, 60, and 89, the burden is on the employer, not the worker.

In the discharge of a member of 60A, the burden is on the worker. It is significant that specific reasons for which a member of 60A can be discharged are set forth, while with respect to members of locals 10, 22, 60, and 89, they are not.

What do Tyler, Fleischman, and Muravchik have to say about these specifics contained in a contract negotiated by the ILGWU? Are "dishonesty," "intoxication," "soldiering on the job," "assault or attempted assault on the job" the characteristic habits of Negroes and Puerto Ricans? Or do they recognize in this listing the hallmark of the bigot enthusiastically perpetuating the sickening stereotypes of racial and national minorities? If Tyler does not understand this, his stint with the ILGWU has served to corrupt his sensibilities completely. Mr. Tyler and the other apologists for the ILGWU neglect to state that the "integrated" members of 60A are covered by a separate union agreement from that covering members of locals 10, 22, 60, and 89.

Further evidence of discrimination is documented in Tyler's own discussion of the ILGWU's officer qualification course and the union's training institute.

The officer qualification course was set up in 1938 "to prepare candidates for elective office." A total of 832 applied. Of these 832, only "19 were Negro and 8 were Spanish speaking—a total of 27 in 24 years." An annual average of one (and one-eighth).

---

[2] The Bureau of Labor Management of the U.S. Department of Labor recently investigated a complaint from an ILGWU member in New Bedford, Mass. The Bureau found improper election practices by the ILGWU and ordered a new election. This case has clear implications for the internal practices of the ILGWU nationally.

Tyler then tries to compensate for this failure with the reputed success of the union's training institute. We are told that in 11 years, 30 Negroes and Puerto Ricans were graduated by the institute. An excellent record. Certainly, it is better than the officer qualification course showing. However, far from proving the ILGWU's concern with promoting Negro and Puerto Rican leadership, the greater success of the institute reveals just the opposite when placed side by side with the failure in the officer qualification course. The reason lies in the difference between the two programs which Tyler deliberately tries to gloss over. The failure was in recruiting trainees within the union for officers with the (theoretical) right to participate in formulating and influencing the policies of the union. On the other hand, where the ILGWU achieved some success, in the institute, it has been with individuals who are not necessarily even members of the union, who are to become employees and not officials of the union and who have no voice in determining union policy. Also, the ILGWU must employ some Negro and Spanish-speaking organizers given the changing racial and ethnic composition of the industry.

As an example of discrimination, I mentioned in my article the fact that two locals in Puerto Rico—locals 600 and 601—were placed under the managership of an official from New York, one Jerry Schoen. Here is how Tyler discusses my charge:

Hill charge: "The two Puerto Rican locals are 'denied Puerto Rican leadership.'"

Now, the words are mine, but the period after the quoted phrase belongs to Tyler. What I wrote was: "However, both these locals are denied Puerto Rican leadership as they are managed by one Jerry Schoen, a former business agent for local 62, who was sent from New York City by the international union to manage these two Puerto Rican locals."

By trimming my sentence as he does, Tyler thinks that all he has to do is rattle off a list of Puerto Rican "officials" in these locals, although the point I am making, seen clearly in the omitted words, is that the two locals are denied self-leadership "as they are managed by one Jerry Schoen."

And as Tyler knows, as I know, as anyone who knows anything about the ILGWU knows, it is the manager who wields the power in ILGWU locals. It is Schoen who represents the international in Puerto Rico. His is the real power.

More than a year and a half ago, officers of local 10 claimed, before representatives of the New York State Commission for Human Rights investigating a complaint of racial discrimination, that there were 400 nonwhite members of this local of skilled, higher-paid workers. I offered to withdraw the complaint if this were proven. The figure was then reduced to 300 by the union representatives. Harry Fleischman later said that there are "250 Negro and Spanish-speaking cutters in local 10," ("Let's Be Human," October 1962, Newsletter of the National Labor Service.) In Fleischman's other article "Is the ILGWU Biased?" he refers to "Negro ILGWU member Ernest Holmes" (p. 1, 3d par.). Holmes was never, at any time a member of the ILGWU. This was precisely the charge of his highly publicized complaint, that he was refused admission into local 10 of the ILGWU. This falsehood is typical of Fleischman's frequent distortions.

In Gus Tyler's article we are told that there were 239 Negro and Spanish-speaking workers in local 10—only slightly more than one-half of what the ILGWU originally claimed.

On the basis of these figures, either the ILGWU lied one and a half years ago, or it has dropped nearly 200 Negro and Spanish-speaking people from local 10.

Of the 239 figure in Tyler's article, it would be interesting to know how many are Negro and Puerto Ricans, since his count embraces "Cubans, Panamanians, Colombians, Dominicans, Salvadorians, Mexicans, etc., as well as Puerto Ricans * * *." I, of course, am not discussing "Cubans * * * etc," but Negroes and Puerto Ricans, over 120,000 strong, with problems quite distinct from those presumably located by Tyler in his quest for as large a number as possible. It would also be interesting to know how many Negroes and Puerto Ricans have been brought into local 10 in the past 18 months—i.e., since the NAACP focused national attention on the status of Negroes and Puerto Ricans in the ILGWU.

Tyler says that when Hill claims in a television broadcast "that there are in the vicinity of 50 (Negro) cutters of local 10 in the city," that he "still has no regard for the truth."

However, if one makes a modest deduction for "Cubans * * * etc." from Tyler's strained-for 239 his number of Negroes and Puerto Ricans would no doubt go below 200. Since it is most likely that there are considerably more Puerto Ricans than Negroes in local 10, I suggest that Tyler take out his slide rule and let the reader know how far off my estimated "vicinity of 50 (Negro) cutters" is from his "regard for the truth."

Now, even less than 200 skilled Negro and Puerto Rican workers would not be too bad in a local of 1,000 or 2,000 craft workers. But, if Tyler wants to play the numbers game, why does he hide the most revealing figure, "239 Negroes, Puerto Ricans plus Cubans * * * etc.," out of 7,531 members. Slightly more than 3 percent. This, Tyler tells us, "is an impressive demonstration of integration." This figure that represents integration to Mr. Tyler is not much better than the integration of Negro children in the public schools of North Carolina.

The NAACP finds this impressive evidence of discrimination, especially when over one-half the New York membership of the ILGWU is composed of Negroes and Puerto Ricans.

Tyler tells us that what makes the over 200 figure such an impressive demonstration is that "there is very little turnover of employment; the total number of jobs covered by local 10 has fallen in the last decade." While this might explain a disproportionately fewer number of Negroes and Puerto Ricans, it cannot explain the excessiveness of that disproportion.

Though they tell us that Negroes and Puerto Ricans never had it so good, as in local 10, ILGWU spokesmen usually feel compelled to explain that the union is not responsible for hiring cutters; it is all the employers' fault. This won't do. In the first place, if there is impressive integration no one is really at fault. In the second place, if it is only the employers who discriminate in hiring, it is the responsibility of the union to combat that policy. In the third place, the union does have considerable control in the hiring of cutters.

In the November 1, 1962, issue of Justice, the official ILGWU publication, there is a news story which would seem not only to substantiate the union's placement role, but to boast of it. The article states: "A total of 576 members of local 10 have been placed on permanent jobs during the year since last October, Vice President Moe Falikman, manager of the organization reported at its membership meeting on October 29. This was disclosed by a tabulation based on reports submitted by officers and business agents functioning in the various trades in which cutters are employed."

The report continues with reference to the local's placement activity over a 3-year period and says that placing its members in permanent jobs "is a major continuing activity."

Thus, it is clear beyond doubt, despite the ILGWU's public denials, that local 10 has considerable control in the placement of cutters in all branches of the women's garment industry in New York City.

On the total number of Negroes and Puerto Ricans in all the skilled craft locals, Tyler makes a boast of what is actually a confession of moral bankruptcy. He writes that the number of Spanish-speaking and Negro members "runs into the tens of thousands"[3] and in the next breath he takes pride in his reference to "hundreds of Negroes, Puerto Ricans, plus other Latins, Japanese, etc.," who are in the skilled craft locals.

A further analysis, employing the ILGWU's own figures, discloses the following: out of a total of approximately 14,500 members of Cutters' Local 10, Pressers' Locals 35 and 60, and the Pressers' branches of the two Italian Locals, 48 and 89, there are some 550 Negroes, Puerto Ricans, and Cubans * * * etc. This constitutes about 3.7 percent of the total membership of the locals controlling the highest paying jobs in New York City; 96.3 percent white and 3.7 percent Negro, Puerto Rican, Cuban * * * etc., cannot be considered "an impressive demonstration of integration." I submit that the ILGWU figures are greatly inflated; 2 percent is closer to the truth.

Why does the NAACP single out the ILGWU? Aren't there unions with far worse records than this one? These questions are usually asked by those who will candidly acknowledge that the charges against Dubinsky's union are justified in large measure, but bridle at concentrating so much fire on a "progressive" union which passes fine resolutions on civil rights, and contributes to worthy causes.

I believe that this approach is unwarranted for the following reasons:

1. The ILGWU is the largest union in the largest manufacturing industry in New York City, the world's largest city. It affects the economic welfare and dignity of hundreds of thousands of Negro and Puerto Rican men, women and children in New York. Is the NAACP supposed to refrain from presenting the truth about this union because it passes good resolutions on integration in Mississippi?

2. The "go soft on Dubinsky" line has the disagreeable connotations of "Uncle Tomism": it is suggested that the liberal and Negro community should be appreciative of small favors and not attack its "benefactors" even if those friends aren't completely perfect. This is of course nonsense and is rejected by responsible and serious elements in the Negro community.

3. It implicitly fails to give credit to the NAACP for its work in combating the anti-Negro practices of blatantly discriminatory unions, North and South. A part of my time for the past 16 years as a staff member of the NAACP has been devoted to exposing and combating the vicious racial practices of the railroad unions, the building trades unions and other labor organizations where discriminatory practices are blatant and to open new job opportunities for Negro workers in the craft jurisdictions. Most of the major breakthroughs in the past decade made by Negro workers in the "old-line" AFL-controlled craft occupations as well as in industrial union jurisdictions are the direct result of NAACP exposure and pressure.

---

[3] That many of these tens of thousands are "relative newcomers," as he puts it, helps naught, since tens of thousands of the more than 120,000 have been in the industry for many years and are "newcomers" only "relative" to those who have been there for decades.

4. Those who say "Hill is really right but why make such a fuss over a 'progressive union' substitute sentimentality for thought, myth for reality. Judging the ILGWU by its current practices and not by its past, the 'progressive' label is a nostalgic hangover." The word suggests militancy, internal democracy and social vision. On none of these counts does the ILGWU qualify.

5. The ILGWU leadership is greatly concerned with presenting a progressive liberal public image, without critically examining the social consequences of its policies and practices. This is perhaps the most dismal factor in the entire situation, their incapacity to admit that anything at all is wrong. But they do care obsessively about their public image. The concern, I believe, increases the possibility that the pressures applied by the NAACP might have salutary effects. I think that as a result of the activity of the NAACP there may be more Negroes and Puerto Ricans in better-paid jobs, that the operational bar against Negroes and Puerto Rican local managers might be raised slightly; Dubinsky will perhaps allow a Negro or Puerto Rican to find his place on the General Board and the ILGWU might feel obliged to do something about the substandard wage levels in the industry which victimizes, primarily, the Negro and Puerto Rican worker. Already one notes perhaps a little less arrogance on the part of ILGWU officials in the daily treatment of Negroes and Puerto Ricans in the shops and within the unions.

I now know that the above will produce anguished cries of "anti-Semite." The epithet has already been hurled at me (and at Paul Jacobs for his article on the ILGWU in Harper's magazine December 1962).[4] The charge is too obscene, too rotten to permit dignified comment.

I anticipated that my analysis of the ILGWU would be met with the fury with which any powerful and entrenched bureaucracy retaliates when challenged. The attacks upon me for telling the truth are characterized by a viciousness and hysteria that tells much about the institution defending itself. Among a variety of other personal attacks the ILGWU leadership has charged publicly and in corridors that I am a Jewish anti-Semite, a kind of McCarthyite, and in the camp of the Birchites.

No less incredible than the anti-Semitic smear was the abortive attempt to discredit me by Evelyn Dubrow, an ILGWU staff member who together with other union representatives went to several Congressmen and other public officials and "explained" that Hill was a Communist stirring up racial strife, an anti-Semite, etc.

If I am incensed at the anti-Semitic smear, the reader will surely understand. I am, after all, a "white Jew" as Tyler so delicately puts it in his New Politics article.

Had I committed a gross injustice in my charges, the Dubinsky leadership's reaction would never take such grotesque forms. That it struck out so wildly, with such malevolence, is evidence that my criticism pierced a bureaucratic shell and pricked what there is of a sense of guilt among those who have led the ILGWU from what it was yesterday to what it has become today.

While Tyler does not make this charge—at least, not in his article—he must accept responsibility for it considering its source. I am not debating Tyler the individual, but Tyler the defense counsel for the ILGWU.

Roy Wilkins, executive secretary of the NAACP, responding to a Jewish Labor Committee attack on the Association, stated in a letter dated Oct. 31, 1962, to Emanual Muravchik as follows:

We assert with the greatest emphasis that nothing, absolutely nothing, in Mr. Hill's recent or more remote statements can be construed as anti-Semitic. This is a grave charge to make. It requires more substantiation that your flip reference in a part of a sentence. The charge is not only against Mr. Hill, but against the NAACP itself. We do not deign to defend ourselves against such a baseless allegation. Its inclusion in the resolution, as well as in the statements to the press by Mr. Zimmerman is unworthy of an organization like the Jewish Labor Committee which, in the very nature of things must be conversant with the seriousness of such a charge and with the evidence required to give it substance. No such evidence has been submitted in this case beyond the citation of the use by Mr. Hill of one word, "ethnic," out of a total of 4,500 words in his testimony before the House subcommittee. The relevance of his comparison of the ethnic composition of the membership and the leadership of the ILGWU can hardly be questioned in this context.

Wilkins also said: "We reject the proposition that any segment of the labor movement is sacrosanct in the matter of practices and/or policies which restrict employment opportunities on racial or religious or nationality grounds. We reject the contention that bringing such charges constitutes a move to destroy 'unity' among civil rights groups unless it be admitted that this unity is a precarious thing, perched upon unilateral definition of discrimination by each member group. In such a situation, the 'unity' is of no basic value and its destruction may be regarded as not a calamity, but a blessed clearing of the air.

In this connection, it is well to reiterate a facet of this discussion which appears to have escaped the attention of the various reviewers and resolution writers. It is that Herbert Hill, our labor secretary, has but one duty and that is to serve the interests of the Negro worker through the NAACP. Other groups, including trade unions, have powerful machinery to protect their principal interests. Mr. Hill is employed to maintain antidiscrimination work in the employment field as his top and only priority. He is not for trade unions first and Negro workers second. He has no divided loyalties."

In the years to come the effective work of the NAACP in fighting for a decent, socially conscious labor movement that is sensitive to the needs of the Negro worker will be appreciated. If trade unions in the United States are to be more than just another "business enterprise," more than just organizations that negotiate terms under which labor is bought and sold, then the struggle today for an immediate end to anti-Negro practices within the unions will provide the social basis for defending the labor movement tomorrow.

Herbert Hill is national labor secretary of the NAACP.

TEST BAN CAVE-IN A DISGRACE

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. HOSMER] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. HOSMER. Mr. Speaker, reported United States-United Kingdom offers to Khrushchev of 30 on-site inspections during a 7-year period to police a test ban treaty amount to a craven surrender to the Soviet test ban treaty bargaining position.

Premier Khrushchev has offered only "2 or 3 inspections annually," and then only under the most restrictive conditions, actually exempting from inspection any area declared by the Kremlin to be a "military area."

When negotiations began in 1958, 20 inspections annually were demanded. The Kennedy administration dropped demands to "10 to 12," then to 7. Although the presently reported concession averages 4¼ inspections annually, the effective number would actually be Khrushchev's demanded three. This is because inspections could not reasonably be consumed on an annual basis, but must be reserved by at least 25 percent to use if needed during a period of greater suspicion during the last portion of the 7 years.

This cave-in to Soviet demands deserves the most severe censure. It is time that Americans demand that courage be restored in the Nation's leadership. The constant withering of U.S. leaders in the face of Communist threats, demands, and truculence can only bring the United States down to a second-rate status and earn the world's contempt.

The ridiculous absurdity to this token number of inspections is best grasped when it is realized the Soviet Union spreads across two continents, contains one-sixteenth of the world's land mass and occupies 8½ million square miles. Three inspections could have no more deterrent effect on Soviet cheating than none at all.

It is past time that commonsense and sanity be restored to our side of the Geneva bargaining tables. The danger of Soviet cheating on a test ban treaty is real and ever present. Otherwise machinery to deter it would not have been the subject of discussion and negotiation over the past 5 years. To now abandon the very machinery that might prevent such cheating is only another way of trusting the Nation's future security and survival to no more than a Soviet promise not to sieze the opportunity to achieve overwhelming military superiority and thereby satisfy communism's fiery ambition for world domination.

MUSIC FOR YOUNG AMERICANS

Mr. KUNKEL. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. KYL] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

---

[4] The Jewish Daily Forward, Dec. 10, 1962. J. Fogel writes that "Two Jewish young men, Hill and Jacobs, spread anti-Semitic poison against the ILGWU and against President Dubinsky." The frequent treatment of these matters in the Jewish Daily Forward is worthy of a separate study. The Forward regards all criticisms of the ILGWU as an act of anti-Semitism and while freely distorting the news, reports these events in a tone of hysteria and self-pity. Headlines in the issue of Aug. 22, 1962—"The Racist Assault on the ILGWU."

Mr. KYL. Mr. Speaker, 1,100 young people from 24 schools in 13 States, including New York, New Hampshire, Ohio, Rhode Island, Tennessee, and Wisconsin, were present at a concert last night, in the departmental auditorium of the U.S. Department of Labor in the Nation's Capital, which marked the opening of the eighth annual Music for Young America concerts by the National Symphony Orchestra under its conductor Howard Mitchell.

The American Federation of Musicians, AFL–CIO, chose this occasion to confer a distinguished service award on Mrs. Herbert A. May, one of our country's greatest private patrons of music, whose generosity has made these music programs possible. The award was presented by Herman Kenin, president of the international union, and it read in part:

> In grateful appreciation for efforts in behalf of live music and musicians and devotion to the advancement of the cultural arts.

In his presentation, Mr. Kenin said:

> In presenting this symbol, I wish to address myself also to the many hundreds of young people and the distinguished citizens here tonight.
>
> Music and all of the performing arts need much the same guidance and help that is so necessary to the maturing years of our young people. You, as one of the foremost patrons of music in our whole society, have provided this influence.

By completely underwriting 5 weeks of free concerts for the past several years Mrs. May has provided an introduction to symphonic music for thousands of young Americans and has provided an extended music season and additional employment for the musicians of the National Symphony Orchestra.

The Secretary of Labor, W. Willard Wirtz, told the young people at last night's opening concert, as provided by the Washington, D.C., Daily News, that he hoped they would "take away a picture of a gracious lady, an extraordinary conductor and one of the finest orchestras in the whole world."

To qualify for admission young visitors to the Nation's Capital must be high school students, and many tickets are made available through the offices of Members of Congress.

The Washington, D.C., Evening Star commented editorially that this music series has the dual purpose of, first, enriching the lives of young people through an introduction to good music; and, second, financially assisting the orchestra members by extending their season.

For many young people these music programs are "the entry into a new and wonderful world," the Star added.

The Washington, D.C., Post editorial says of Mrs. May that she has long been "a generous and imaginative patron of music in this community," and this editorial added that "all of us owe her the warmest thanks."

We do, indeed, owe her our thanks for opening this important vista on our Nation's cultural heritage to so many of our young people, who are the leaders of tomorrow's world.

I include as part of my remarks a newspaper article and editorials which give a fuller account of Music for Young America programs:

[From the Washington (D.C.) Daily News, Apr. 24, 1963]

YOUNG AMERICA MUSIC SEASON OPENS—MRS. MAY GETS A CITATION

(By Milton Berliner)

Boys and girls from 24 schools in 13 States were on hand at the Departmental Auditorium last night for the opening of the eighth annual Music for Young America series by Howard Mitchell and the National Symphony.

"This is something of record," Mr. Mitchell told them just before the orchestra launched into the overture to Rossini's "The Thieving Magpie."

This was followed by some Bach, Beethoven and Tchaikowsky.

Midway in the program there was a break for the presentation of an American Federation of Musicians award to the sponsor of these series, Mrs. Herbert A. May.

The citation, union's president Herman Kenin said, was "in grateful appreciation for efforts in behalf of live music and musicians and devotion to the advancement of cultural arts."

In the 8 years of underwriting these series of free concerts, Mrs. May has provided a total of 40 weeks' employment for the 95 National Symphony musicians and an introduction to symphonic music for thousands of young Americans.

Labor Secretary W. Willard Wirtz told the audience that he hoped it would "take away a picture of a gracious lady, an extraordinary conductor and one of the finest orchestras in the whole world."

[From the Washington (D.C.) Evening Star, Apr. 24, 1963]

MUSIC AND MRS. MAY

The National Symphony Orchestra is fortunate to have thousands of "angels" who contribute to its welfare. But a very special angel is Mrs. Herbert A. May who for 5 weeks each spring practically owns the orchestra. Graciously, she shares Howard Mitchell and his 95 players with visiting schoolchildren so they may enjoy "Music for Young America." This is the series she began financing 8 years ago with the dual purpose of (1) enriching the lives of young people through an introduction to good music and (2) financially assisting the orchestra members by extending their season.

The opening of this year's series was particularly auspicious. For the American Federation of Music recognized Mrs. May's generosity with a bronze plaque. It was an award well deserved, but no more significant than the audience of bright-faced youngsters from Wautoma, Wis., Suncock, N.H., Whitesburg, Ky., New York City, St. Louis, St. Paul, Mount Vernon, Ohio, and 14 other cities. For many of them it was the entry into a new and wonderful world.

[From the Washington (D.C.) Post, Apr. 23, 1963]

MUSIC PATRON

The National Symphony Orchestra will play the opening concert today of its eighth season of free concerts for schoolchildren visiting Washington. It is altogether fitting that the American Federation of Musicians should have chosen this occasion to confer a Distinguished Service Award on Mrs. Herbert A. May, long a generous and imaginative patron of music in this community. Her generosity affords not only a great boon to the children who attend these concerts but an extended period of employment for the orchestra's musicians as well. As in past years, Mrs. May has completely underwritten the 30 concerts that will be performed between the opening concert and May 24. All of us owe her the warmest thanks.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. BRAY (at the request of Mr. KUNKEL), for 30 minutes, on Tuesday, April 30, 1963.

Mr. HALPERN, for 15 minutes, today.

Mr. O'BRIEN of Illinois (at the request of Mr. PUCINSKI), for 20 minutes, today, and to revise and extend his remarks and include extraneous matter.

Mr. RYAN of New York (at the request of Mr. ALBERT), for 15 minutes, tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. THOMPSON of New Jersey in four instances and to include extraneous matter.

(The following Members (at the request of Mr. KUNKEL) and to include extraneous matter:)

Mr. ROBISON.
Mr. FINO.
Mr. BECKER.
Mr. GOODELL.
Mr. BOW in two instances.
Mr. WHALLEY.

(The following Members (at the request of Mr. ALBERT) and to include extraneous matter:)

Mr. CELLER.
Mr. FARBSTEIN.
Mr. COHELAN.
Mr. JENNINGS.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 2. An act to establish water resources research centers at land-grant colleges and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research; to the Committee on Interior and Insular Affairs.

S. 1007. An act to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes; to the Committee on Interior and Insular Affairs.

THE LATE PRESIDENT OF ISRAEL, YITZCHAK BEN-ZVI

Mr. ALBERT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. Mr. Speaker, I take this time to offer, on behalf of the House of Representatives, a resolution expressing the profound sorrow of the House on the death of His Excellency Yitzchak Ben-Zvi, President of the State of Israel. In the death of the late President the free world has lost a great champion. The American people have lost a friend. The people of the State of Israel have lost one of their most distinguished statesmen and beloved citizens.

Mr. Speaker, I know that I express the sentiment of all the Members of the House of Representatives and of all the people of this country when I say we have learned with the deepest sorrow of the death of the late President. To his family and loved ones, and to the people of the State of Israel we extend our heartfelt sympathy.

Now, Mr. Speaker, I yield to the distinguished gentleman from New York, former U.S. Ambassador to the State of Israel [Mr. Reid].

Mr. REID of New York. Mr. Speaker, I would like to associate myself with the resolution and with the remarks of the distinguished majority leader.

Mr. Speaker, I believe truly that the free world has lost one of its best friends. President Yitzchak Ben-Zvi was truly a statesman and a scholar. He believed in close relations between Israel and the United States. He worked nobly in the vineyards of peace. He cared deeply about doing everything possible to establish strong and abiding relationships between Israel and the emerging as well as the older nations of the free world. Above all, let me say this: I had the privilege of knowing the President personally, and I remember him for his humanity, his humility, his simplicity, and for his scholarly statesmanship. He had many friends in this country and his loss will be much felt here and throughout the world.

Mr. Speaker, I remember in 1960 at a diplomatic reception in Jerusalem when the President of Israel talked simply and movingly of peace. I would like here, perhaps as a fitting tribute, to quote a passage of the Bible that was especially meaningful to President Ben-Zvi. He was a scholar who was long interested in Isaiah, and I quote from a passage on peace that was particularly meaningful to him, and a passage that he called to the attention of the diplomatic corps. It is from chapter II of Isaiah, verse 2:

> And it shall come to pass in the last days, that the mountain of the Lord's house shall be established in the top of the mountains, and shall be exalted above the hills; and all nations shall flow unto it.

Verse 4:

> And he shall judge among the nations, and shall rebuke many people: and they shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more.

Mr. Speaker, it is in this spirit that I remember President Ben-Zvi, who will long be an inspiration to those who were privileged to know him, and I indeed think it most appropriate that the Congress adjourn out of respect to his memory and that the sense of the Congress be that we deeply mourn the loss of this distinguished leader and extend our condolences to Mrs. Ben-Zvi, to his family, and to the people of Israel.

Mr. ALBERT. I thank the gentleman from New York.

Mr. Speaker, I now yield to the gentleman from New York [Mr. Multer].

Mr. MULTER. Mr. Speaker, it is indeed with a sad heart that I rise to commend our distinguished majority leader for bringing this resolution to the floor expressing the sincere regret of the Congress upon the passing of this distinguished statesman, the President of the State of Israel.

Mr. Speaker, it was my proud pleasure and privilege to have visited with him on many occasions in the State of Israel. He was indeed a learned and a profound scholar. He was a good man. It was his terrible burden to live at a time and be President of a country that was beleaguered on all sides by enemies who sought to destroy it. Yet through it all he was a man of peace.

As has so well been indicated in the remarks that have already been made on this floor, he was certainly all that a good man could be. He was deeply religious and, as I say, a profound scholar and a true statesman. The world has lost one of its finest leaders.

Mr. Speaker, I join with all of our colleagues in extending to his family and his bereaved countrymen our sincere and heartfelt sympathy.

Mr. ALBERT. Mr. Speaker, I thank the gentleman from New York; I now yield to the gentleman from New York [Mr. Rooney].

Mr. ROONEY. Mr. Speaker, I, too, find myself saddened on the news of the passing of the late President of the State of Israel, Mr. Ben-Zvi. I had the pleasure of meeting him. If I recall correctly, I was first introduced to him by the distinguished gentleman from New York [Mr. Reid], in Jerusalem, some years back. I found President Ben-Zvi and Madam Ben-Zvi two of the finest people whom I have ever met. He was very democratic. He was profound in his religious devotions. He was a fine gentleman and a splendid host upon the occasion of our visit with the former Ambassador to Israel.

At this time I extend my deepest sympathy to Madam Ben-Zvi upon the loss of her great helpmate.

Mr. ALBERT. Mr. Speaker, I thank the distinguished gentleman from New York; at this time I yield to the gentleman from Illinois [Mr. Pucinski].

Mr. PUCINSKI. Mr. Speaker, I should like to join the distinguished majority leader in support of this resolution and with the remarks that have been made here earlier in tribute to a great apostle of democracy in the world. There is no question that all Americans may grieve the passing of this great man who has made such a profound contribution toward building an island of democracy in the Middle East. I, indeed, join on behalf of the people of my congressional district in support of this resolution of tribute to a great person.

Mr. ALBERT. Mr. Speaker, I thank the distinguished gentleman from Illinois and yield to the distinguished gentleman from New York [Mr. Lindsay].

Mr. LINDSAY. Mr. Speaker, I should like to thank the majority leader for bringing this resolution before the House commemorating the life and mourning the passing of President Ben-Zvi. This was a man who gave luster and strength to a noble country and a noble people. I should like to associate myself with the remarks of our distinguished colleague from New York [Mr. Reid], and to pay a tribute to him, because it is partially through his efforts and his friendship with the late President of Israel that American-Israeli relationships have remained firm and warm and close.

The passing of this great leader reminds us that the trials and tribulations of the Israeli people at a time of special strain and stress are great, probably as great as they have been for many, many years. We as a Congress and as individual Members of Congress express our concern for the State of Israel, for those courageous people, and our determination to see to it that they will always remain free and independent.

Mr. ALBERT. Mr. Speaker, I thank the gentleman from New York. I yield to the gentleman from New York [Mr. Ryan].

Mr. RYAN of New York. Mr. Speaker, I join in support of this resolution offered by our distinguished majority leader. I know that all Members of the House recognize the great humanitarian contributions of the late President of Israel. He led a great democracy in times of trial and the world has lost a great leader. I should like to add my voice in extending my deepest sympathy to the people of Israel and to his family.

Mr. ALBERT. Mr. Speaker, I thank the gentleman from New York. I yield to the gentleman from New York [Mr. Stratton].

Mr. STRATTON. Mr. Speaker, I want to join with my colleagues to support this resolution and to express my deep sympathy to the people of Israel and to the family of the late President for the grevious loss they have suffered. Israel has been fortunate indeed over the years to have such distinguished leadership not only in the late President, but also in Dr. Chaim Weizmann before him, men who have provided the kind of great moral and spiritual leadership and inspiration to the people of Israel that has made it possible for this new nation to overcome what might indeed have once seemed to be insuperable obstacles.

In adopting this resolution today the Members of Congress can indeed renew our sense of friendship with the State of Israel and also reaffirm our determination to make certain that this great bastion of freedom in the Middle East, the State of Israel, shall continue to remain free and strong in spite of all the efforts that may be directed against her.

Mr. ALBERT. I thank the gentleman.

EXTENSION OF REMARKS

Mr. FINNEGAN. Mr. Speaker, over the past weekend the news of the death of Israel's President, Yitzchak Ben-Zvi, has cast a pall over the preparations for the 15th anniversary of the State of Israel. There, as well as in many other countries throughout the world, the news of Ben-Zvi's death has come as a great shock and a sad reminder of the toll of time.

Mr. Ben-Zvi's role in Israel began early in the 20th century when the plan of a national homeland for the Jews was in its infancy. Ben-Zvi came to Palestine from Russia in 1906, uprooted and exiled in the wake of the cruel anti-Jewish programs that swept Russia at that time. From the moment of his arrival in Palestine, he had dedicated his generous heart and vigorous mind to the task of providing a place for Jews to live without ghetto and persecution.

Questions of national defense, education and the labor movement occupied this pioneer during the years between the wars. Uppermost in his mind seemed to be the work of preparation for the birth of a national state. The culmination of these labors of preparation came in 1948 when Ben-Zvi affixed his signature to the Israeli Declaration of Independence. Ben-Zvi directed his energies in the years after independence to the consolidation and strengthening of the gains he had given so much to secure. In 1952, Israel rewarded Ben-Zvi's 46 years of dedicated service by electing him the second President of the new State. He has served in this capacity until his death last week, 57 years after his arrival in Palestine.

I wish to join with Israel at this time in offering my deepest sympathy on the death of this distinguished patriot. Israel's sorrow will be tempered by its profound gratitude to one who, in the most honored sense of the phrase, gave his life to his country.

Mr. FARBSTEIN. Mr. Speaker, I am deeply saddened at the passing of the late President of the State of Israel, Mr. Yitzchak Ben-Zvi.

It was my privilege to have known him personally and to have spent some time with him in the privacy of what was undoubtedly the favorite room in his modest home, his library, where the walls were covered with well-worn volumes on religion, history, and archeology, as well as copies of his own works. I was particularly impressed with his gentleness, his kindliness, and his humility.

Although he was 78 years of age at the time of his death, one would never think of President Ben-Zvi as 78 years old; rather, he was 78 years young. He represented the intellectual element of the State of Israel complementing the activist group.

His idealism, his desire to foster the traditions of Judaism and his lifelong devotion to the State of Israel remained eternally alive until his last mortal moments on earth. His last official message contained a warning that the State of Israel had no choice but to keep its defenses at peak strength and alertness.

Few individuals are singularly fortunate to see come to fruition the ideals and visions of their youth. In the establishment of the State of Israel, and in the esteem in which the State of Israel is held today by all but its Arab enemies, President Ben-Zvi realized his dreams.

His death will be mourned by all who have known and respected him for his wisdom, his courage, and his devotion to the cause of human freedom and the principles of peace and democracy.

I extend to his family, to his lifelong friend, Prime Minister Ben Gurion, and to the people of Israel, my sincerest sympathies.

Mr. ROYBAL. Mr. Speaker, I would like to join with my colleagues in expressing deep sorrow at the passing of Yitzchak Ben-Zvi, President of the State of Israel.

The world has lost a valiant fighter for freedom, a true scholar, and distinguished statesman. And the people of Israel have been deprived of the great moral and spiritual leadership and inspiration that have helped to make it possible for this new nation to overcome what would otherwise have been almost insuperable obstacles.

This great man, born in czarist Ukraine in 1884, went through the shameful persecutions and pogroms of the 1905 year of revolution in Russia, and with his family experienced exile in Siberia.

As one of the early refugee-escapees to arrive in Israel, Mr. Ben-Zvi soon distinguished himself as a legal scholar as well as an organizer in the labor movement and one of the first leaders of Hashomer, the underground citizens' army which spearheaded the long struggle for an independent Jewish state.

It was my great honor and privilege to have met and talked with this outstanding citizen of the world during a tour of the Middle East and Europe in 1954.

I was thoroughly impressed by President Ben-Zvi's dedication and devotion for the cause for which he had worked and toiled for so many years and against such great odds. He will long be remembered and revered by men who cherish the dignity and rights of all men to live according to the dictates of their conscience.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that all Members who spoke today on the subject of the late President of Israel be permitted to revise and extend their remarks, and that all Members desiring to do so may have 5 legislative days in which to extend their remarks at this point in the RECORD on the same subject.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

PRESIDENT YITZCHAK BEN-ZVI

Mr. ALBERT. Mr. Speaker, I offer a resolution (H. Res. 324), and ask unanimous consent for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That the House of Representatives of the United States of America has learned with profound sorrow of the death of His Excellency Yitzchak Ben-Zvi, and sympathizes with the people of the State of Israel in the loss of their beloved President.

Resolved, That the President of the United States be requested to communicate this expression of sentiment of the House of Representatives to the Government of the State of Israel.

Resolved, That as a further mark of respect to the memory of President Ben-Zvi the House do now adjourn.

The SPEAKER. Is there objection to the present consideration of the resolution?

There was no objection.

The SPEAKER. The question is on the adoption of the resolution.

The resolution is agreed to unanimously.

A motion to reconsider was laid on the table.

ADJOURNMENT

Accordingly (at 5 o'clock and 29 minutes p.m.), under its previous order, the House adjourned until tomorrow, Thursday, April 25, 1963, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

734. A letter from the Foundation of the Federal Bar Association, transmitting a report of the audit of the financial transactions of the foundation for the fiscal year ended September 30, 1962, pursuant to section 14b of Public Law 662, 83d Congress, 68 Stat. 795; to the Committee on the District of Columbia.

735. A letter from the President, Panama Canal Company, transmitting a draft of a proposed bill entitled "A bill to provide for reimbursement of the Treasury by the Panama Canal Company for the annuity paid to the Republic of Panama; to the Committee on Merchant Marine and Fisheries.

736. A letter from the Assistant Secretary, the National Institute of Arts and Letters, transmitting the report of activities of the Institute for the year 1962, pursuant to section 4 of the charter; to the Committee on House Administration.

737. A letter from the Secretary of Commerce, transmitting the third semiannual report of the Secretary of Commerce on the U.S. Travel Service, October 1962 to March 1963, pursuant to section 5 of the International Travel Act of 1961; to the Committee on Interstate and Foreign Commerce.

738. A letter from the Secretary of Commerce, transmitting a draft of proposed legislation entitled "A bill to amend section 104(b)(5) of title 23, United States Code, to provide for the submission of certain cost estimates for the completion of the National System of Interstate and Defense Highways, and for other purposes"; to the Committee on Public Works.

739. A letter from the Deputy Administrator, National Aeronautics and Space Administration, transmitting a request for additional funds for reprograming facilities at Marshall Space Flight Center, Huntsville, Ala., pursuant to section 3 of the act of July 21, 1961 (75 Stat. 216, 217); to the Committee on Science and Astronautics.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MONAGAN: Committee on Foreign Affairs. Report on conditions behind the iron curtain and in selected countries of Western Europe; without amendment (Rept. No. 234). Referred to the Committee of the Whole House on the State of the Union.

Mr. MORRIS: Committee on Interior and Insular Affairs. H.R. 4152. A bill to authorize the addition of certain donated lands to the administrative headquarters site, Isle Royale National Park; without amendment (Rept. No. 235). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BROOMFIELD:

H.R. 5835. A bill to amend the Foreign Agents Registration Act of 1938, as amended, to prohibit political contributions by agents of foreign principals, and to require the furnishing of certain detailed information concerning expenditures made by such agents; to the Committee on the Judiciary.

By Mr. HARRISON:

H.R. 5836. A bill for the relief of certain veteran homestead entrymen, their heirs, and other owners of farm units on the Third Division Irrigation District, Riverton reclamation project, Wyoming; to the Committee on Interior and Insular Affairs.

By Mrs. MAY (by request):

H.R. 5837. A bill to amend the act entitled "An act to authorize the purchase, sale, and exchange of certain Indian lands on the Yakima Indian Reservation, and for other purposes", approved July 28, 1955; to the Committee on Interior and Insular Affairs.

By Mr. MILLER of California:

H.R. 5838. A bill to amend the act of March 3, 1901 (31 Stat. 1449) as amended, to incorporate in the Organic Act of the National Bureau of Standards the authority to make certain improvements of fiscal and administrative practices for more effective conduct of its research and development activities; to the Committee on Science and Astronautics.

By Mr. MILLS:

H.R. 5839. A bill to improve the public assistance provisions of the Social Security Act relating to aged individuals and for other purposes; to the Committee on Ways and Means.

H.R. 5840. A bill to amend the Social Security Act so as to provide assistance in the development of new or improved programs to help older persons through grants to the States for community planning and services and for training, through research, development, or training project grants, through grants for construction of recreational activity centers, and through grants to stimulate employment opportunities; to the Committee on Ways and Means.

By Mr. MORRIS:

H.R. 5841. A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942 (56 Stat. 368); to the Committee on Armed Services.

By Mr. MULTER:

H.R. 5842. A bill to permit certain proceedings supplementary to judgment in the U.S. District Court for the District of Columbia and in the municipal court for the District of Columbia; to the Committee on the District of Columbia.

H.R. 5843. A bill to prohibit discrimination by reason of race, religion, color, ancestry, or national origin against persons seeking or utilizing housing in the District of Columbia; to the Committee on the District of Columbia.

By Mr. OLSEN of Montana:

H.R. 5844. A bill to provide for a National Service Corps to strengthen community service programs in the United States; to the Committee on Education and Labor.

By Mr. ST GERMAIN:

H.R. 5845. A bill to assist cities and States by amending section 5136 of the Revised Statutes, as amended, with respect to the authority of national banks to underwrite and deal in securities issued by State and local governments, and for other purposes; to the Committee on Banking and Currency.

By Mr. SICKLES:

H.R. 5846. A bill to repeal section 14(b) of the National Labor Relations Act; to the Committee on Education and Labor.

By Mr. BARRY:

H.R. 5847. A bill to repeal the act of August 30, 1962, providing for payment by the Foreign Claims Settlement Commission of unpaid amounts of awards under the Philippine Rehabilitation Act of 1946; and to provide full settlement of the awards for war damage compensation made by the Philippine War Damage Commission by authorizing the payment to the Philippine Government of a sum to be administered as a development grant under title II of chapter 2 of the Act for International Development of 1961; to the Committee on Foreign Affairs.

By Mr. GIAIMO:

H.R. 5848. A bill to amend the Federal Water Pollution Control Act, as amended, to establish the Federal Water Pollution Control Administration, to increase grants for construction of municipal sewage treatment works, to provide financial assistance to municipalities and others for the separation of combined sewers, to authorize the issuance of regulations to aid in preventing, controlling, and abating pollution of interstate or navigable waters, and for other purposes; to the Committee on Public Works.

H.R. 5849. A bill to amend the Internal Revenue Code of 1954 to encourage the construction of treatment works to control water and air pollution by permitting the deduction of expenditures for the construction, erection, installation, or acquisition of such treatment works; to the Committee on Ways and Means.

By Mr. ROSENTHAL:

H.R. 5850. A bill to amend title 38, United States Code, to permit for 1 year, the granting of national life insurance to certain veterans heretofore eligible for such insurance; to the Committee on Veterans' Affairs.

By Mr. GIAIMO:

H.R. 5851. A bill to promote water and air pollution control and abatement by authorizing the Secretary of Health, Education, and Welfare to provide certain assistance to small business concerns in obtaining necessary treatment works; to the Committee on Public Works.

By Mr. HALPERN:

H.R. 5852. A bill to provide for a National Service Corps to strengthen community service programs in the United States; to the Committee on Education and Labor.

By Mr. CLANCY:

H.J. Res. 388. Joint resolution designating November 19, the anniversary of Lincoln's Gettysburg Address, as Dedication Day; to the Committee on the Judiciary.

By Mr. FUQUA:

H.J. Res. 389. Joint resolution to amend section 316 of the Agricultural Adjustment Act of 1938 to extend the time by which a lease transferring a tobacco acreage allotment may be filed; to the Committee on Agriculture.

By Mr. KING of New York:

H. Con. Res. 141. Concurrent resolution expressing the determination of the United States with respect to the matter of general disarmament and arms control; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. HARRISON: Joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States concerning the Cooperative Extension Service and opposing the use of the Extension Service as a promotional arm of the Federal Government; to the Committee on Agriculture.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States of America to repeal Public Law 87-297 of the 87th Congress commonly known as the Arms Control and Disarmament Act; to the Committee on Foreign Affairs.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing Congress to enact legislation governing the acquisition and relinquishment of legislative jurisdiction over Federal holdings within the 13 Western States; to the Committee on Government Operations.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States to provide legislation designed and with reference to the recognition of the rights and laws of the States of the United States relating to the control, development, appropriation and use of waters within the States' boundaries; to the Committee on Interior and Insular Affairs.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States of America, the Secretary of the Interior, and the Bureau of Land Management, with reference to passing legislation granting 90 percent of all moneys from the sale of, or as bonuses, royalties, or rentals, on federally controlled minerals within the State of Wyoming to the State of Wyoming. The people of the sovereign State of Wyoming recognize that the United States of America controls over 50 percent of all the lands within the borders of the State of Wyoming, and over 70 percent of the minerals on, in or under the lands of the State of Wyoming; to the Committee on Interior and Insular Affairs.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Federal Power Commission and the congressional delegation of the State of Wyoming in favor of the Rock Springs project and calling their attention to the overwhelming importance of such project to the economy of the people in the State of Wyoming; to the Committee on Interstate and Foreign Commerce.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States with reference to calling a convention for the purpose of proposing an amendment to the Constitution of the United States which would provide that the Federal Government may not, through legislative or judicial action restrict or limit any State in the apportionment of representation in its legislature; to the Committee on the Judiciary.

Also, joint memorial of the Senate, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States reaffirming support of the House Committee on Un-American Activities and the Senate Internal Security Committee; to the Committee on Un-American Activities.

Also, joint memorial of the House of Representatives, 37th State Legislature of the

State of Wyoming, memorializing the Congress of the United States concerning the Federal Insurance Contribution Act and opposing any future increase in the social security tax rate; to the Committee on Ways and Means.

Also, joint memorial of the House of Representatives, 37th State Legislature of the State of Wyoming, memorializing the Congress of the United States with reference to passing legislation which would place the timber industry of this country in a competitive position with foreign production through the establishment of import quotas or other means; to the Committee on Ways and Means.

By the SPEAKER: A memorial of the Legislature of the State of Colorado, memorializing the President and the Congress of the United States to call a convention for the purpose of proposing an amendment to the Constitution of the United States, concerning taxation; to the Committee on the Judiciary.

Also, memorial of the Legislature of the State of Hawaii memorializing the President and the Congress of the United States relative to requesting the Congress to aid the State of Hawaii in the development of Waikiki Beach; to the Committee on Appropriations.

Also, memorial of the Legislature of the State of South Carolina, memorializing the President and the Congress of the United States to enact legislation which will provide additional income tax exemptions for persons attending institutions of higher learning; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Wisconsin, memorializing the President and the Congress of the United States to extend the coverage of the Farmers Home Administration for recreational enterprises to include resort owners; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FEIGHAN:

H.R. 5853. A bill for the relief of Robert J. Beas; to the Committee on the Judiciary.

By Mr. FINNEGAN:

H.R. 5854. A bill for the relief of Anastasija Dancevic; to the Committee on the Judiciary.

By Mr. GONZALEZ:

H.R. 5855. A bill for the relief of Arthur Wendell Bolta; to the Committee on the Judiciary.

By Mr. HARDY:

H.R. 5856. A bill for the relief of the estate of Dorothy Michels Sever and the estate of Julianne Elizabeth Sever, deceased; to the Committee on the Judiciary.

By Mr. KILBURN:

H.R. 5857. A bill for the relief of Sara Schneider Pascu; to the Committee on the Judiciary.

By Mr. SIBAL:

H.R. 5858. A bill relating to the effective date of the qualification of the United Brotherhood of Carpenters & Joiners of America, Local Union No. 746 pension fund as a qualified trust under section 401(a) of the Internal Revenue Code of 1954; to the Committee on the Judiciary.

By Mr. WALLHAUSER:

H.R. 5859. A bill for the relief of George Napier, Sr.; to the Committee on the Judiciary.

By Mr. FEIGHAN:

H.J. Res. 390. Joint resolution authorizing the Attorney General to cancel deportation proceedings in the cases of certain aliens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

93. The SPEAKER presented a petition of the City Council of Mansfield, Ohio, petitioning consideration of their resolution with reference to requesting that immediate steps be taken within their powers and as are necessary to terminate the influx of Communist-made goods into the United States, which was referred to the Committee on Ways and Means.

SENATE

Wednesday, April 24, 1963

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Eternal Father, in whose will alone is our peace, Thou hast taught us that only in the reach of our love is the richness of our life.

We seek Thee as our fathers in every generation before us have sought Thee. We come with the confident assurance that we shall find, as they found, that if with all our heart we truly seek Thee, we shall surely find Thee.

Our needs throng our days as we turn in all our perplexities, from problem to problem. But our greatest need is of Thee. Unless we really find Thee as our help and hope and are found of Thee, the laws of Thy physical universe will break our mortal existence and the laws of Thy moral realm will make mockery of our futile rebellion.

Our lives become significant only as they are linked with Thy eternal purposes and become the channels of Thy will. Thus, may our work become a sharing of Thine own which gladdens this sad world; and even the drab details of our earthly tasks which chafe us, and so often seem monotonous and meaningless, will flash and flame with unexpected glory as our labor becomes a part of Thy plan.

We ask it in the name of the Master of all good workmen. Amen.

THE JOURNAL

On request of Mr. Mansfield, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, April 23, 1963, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Jones, one of his secretaries.

LIMITATION ON STATEMENTS DURING MORNING HOUR

On request of Mr. Mansfield, and by unanimous consent, statements during the morning hour were ordered limited to 3 minutes.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. Mansfield, and by unanimous consent, the Committee on Aeronautical and Space Sciences was authorized to meet during the session of the Senate today.

Upon request of Mr. Dirksen, and by unanimous consent, the Committee on Interior and Insular Affairs and the Subcommittee on Antitrust and Monopoly of the Judiciary Committee were authorized to meet during the session of the Senate today.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of executive business, to consider the nominations on the Executive Calendar, beginning with the new reports.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

Charles B. Fulton, of Florida, to be U.S. district judge for the southern district of Florida.

By Mr. JOHNSTON, from the Committee on Post Office and Civil Service:

L. J. Andolsek, of Minnesota, to be a Civil Service Commissioner.

Also, 229 postmaster nominations.

The VICE PRESIDENT. If there be no further reports of committees, the nominations on the Executive Calendar, beginning with the new reports, will be stated.

DEPARTMENT OF JUSTICE

The Chief Clerk proceeded to read sundry nominations in the Department of Justice.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

DEPARTMENT OF STATE

The Chief Clerk read the nomination of Roger Hilsman, Jr., of Maryland, to be an Assistant Secretary of State.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

DIPLOMATIC AND FOREIGN SERVICE

The Chief Clerk proceeded to read sundry nominations in the Diplomatic and Foreign Service.

Mr. THURMOND. Mr. President, I wish to have the RECORD show that I oppose confirmation of the nomination of George C. McGhee, of Texas, to be Ambassador to Germany; Edwin M. Martin, of Ohio, to be the representative of the United States to the Economic Commission for Latin America; and Walter M. Kotschnig, of Maryland, to be the representative of the United States to the Economic Commission for Europe.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations in the diplomatic and Foreign Service be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

UNITED NATIONS

The Chief Clerk proceeded to read sundry nominations in the United Nations.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

INTER-AMERICAN DEVELOPMENT BANK

The Chief Clerk read the nomination of David Elliott Bell, of Massachusetts, to be Alternate Governor of the Inter-American Development Bank for a term of 5 years and until his successor has been appointed.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

HOLDING OF TERMS OF U.S. DISTRICT COURT FOR VERMONT AT MONTPELIER AND ST. JOHNSBURY

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 137, Senate bill 980, to provide for holding terms of the U.S. District Court for the District of Vermont at Montpelier and St. Johnsbury.

The motion was agreed to; and the bill (S. 980) to provide for holding terms of the U.S. District Court for the District of Vermont at Montpelier and St. Johnsbury was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of section 126 of title 28, United States Code, is amended to read as follows:

"Court shall be held at Brattleboro, Burlington, Montpelier, Rutland, Saint Johnsbury, and Windsor."

NATIONAL ACTORS' EQUITY WEEK

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 138, Senate Joint Resolution 39, designating the week of May 20–26, 1963, as National Actors' Equity Week.

The motion was agreed to; and the Senate proceeded to consider the joint resolution (S.J. Res. 39) designating the week of May 20–26, 1963, as National Actors' Equity Week.

Mr. KEATING. Mr. President, Senate Joint Resolution 39 would designate the week of May 20–26, 1963, as National Actors' Equity Week, in recognition of the outstanding contribution which Actors' Equity Association and its 13,000 actor-members have made to the cultural life of our Nation.

The Actors' Equity Association was founded on May 26, 1913, by distinguished members of the American theatrical profession to advance, promote, foster, and benefit all those connected with the art of the theater. It has provided responsible and creative leadership in the field of the performing arts and has encouraged and reflected the artistic ideals of our country. It has served not only in the best interests of actors and performers in the legitimate theater, but has materially enhanced and inspired the cultural life of the United States.

Observances of Actors' Equity's 50th birthday will be numerous and widespread. Special events are scheduled during the month of May to take place in California, Chicago, and New York. A golden anniversary show featuring the stars of the American theater and depicting the great theatrical events of the past half-century will be presented on May 5. The New York public libraries and the museum of the city of New York will present exhibits on the history of the American theater, and the New York celebration will be climaxed by a banquet and ball at the Astor Hotel in New York on the night of May 25.

Equity's golden anniversary promises to be one of the memorable events of the American stage. Passage of this resolution is intended not only to do honor to Equity but also to call nationwide attention to the role of the legitimate theater in our culture.

Mr. President, this resolution was unanimously approved by the Senate Committee on the Judiciary, but I am confident that it is supported by every Member of the Senate.

The VICE PRESIDENT. If there be no amendment to be offered, the question is on engrossing the joint resolution for a third reading.

The joint resolution was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the week of May 20–26, 1963, is hereby designated as National Actors' Equity Week, in recognition of the outstanding contribution which Actors' Equity Association has made to the cultural life of our Nation.

The preamble was agreed to.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON TRANSFER OF RESEARCH, DEVELOPMENT, AND OPERATION FUNDS, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

A letter from the Deputy Administrator, National Aeronautics and Space Administration, Washington, D.C., reporting, pursuant to law, on the transfer of fiscal year 1963 research, development, and operation funds to the fiscal year 1963 construction of facilities appropriation and the use of such funds for the addition of a third story to the Space Flight Operations Facility, Jet Propulsion Laboratory, Pasadena, Calif.; to the Committee on Aeronautical and Space Sciences.

REPORT OF DEPARTMENT OF DEFENSE ON MILITARY PROCUREMENT ACTIONS FOR EXPERIMENTAL, DEVELOPMENTAL, OR RESEARCH WORK, NEGOTIATED IN THE INTEREST OF NATIONAL DEFENSE OR INDUSTRIAL MOBILIZATION

A letter from the Assistant Secretary of Defense, transmitting, pursuant to law, a report of that Department on military procurement actions for experimental, developmental or research work negotiated in the interest of national defense or industrial mobilization, for the period July–December 1962 (with an accompanying report); to the Committee on Armed Services.

REPORT OF ACTIVITIES OF U.S. TRAVEL SERVICE

A letter from the Secretary of Commerce, transmitting, pursuant to law, a report on the activities of the U.S. Travel Service, for the period October 1962–March 1963 (with an accompanying report); to the Committee on Commerce.

REPORT ON FRUITLAND MESA PROJECT, COLORADO

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a report on the Fruitland Mesa Project, Colorado (with an accompanying report); to the Committee on Interior and Insular Affairs.

AUTHORIZATION FOR SECRETARIES OF THE INTERIOR AND AGRICULTURE TO FURNISH AND RECEIVE EMERGENCY ASSISTANCE

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to authorize the Secretaries of the Interior and Agriculture to furnish and receive emergency assistance, and for other purposes (with an accompanying paper); to the Committee on Interior and Insular Affairs.

CORRECTION OF A CERTAIN LAND DESCRIPTION

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to correct a land description in the act entitled "To provide for an exchange of lands between the United States and the Southern Ute Indian Tribe, and for other purposes" (with an accompanying paper); to the Committee on Interior and Insular Affairs.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution of the House of Representatives of the State of Washington; to the Committee on Interior and Insular Affairs:

"Whereas Homer T. Bone, judge emeritus of the U.S. Circuit Court of Appeals for the Ninth Judicial Circuit, has dedicated his life to public service and has faithfully served therein for many decades and is widely renowned as a pioneer in the fight for public power; and

"Whereas his faith and foresight in various public enterprises has been of great value to the State of Washington and to the United States as a whole; and

"Whereas he was for many years the U.S. Senate's leading public power advocate; and

"Whereas, the development of public power projects in these United States is greatly indebted to his courage and labor; and

"Whereas it would be desirable and proper to honor him for his dedication and service; and

"Whereas no dam nor hydroelectric project has been named after him: Now, therefore, be it

"*Resolved by the house of representatives*, that we most respectfully request the Congress of the United States to name a dam on the Columbia River after Judge Homer T. Bone during his lifetime; and be it further

"*Resolved*, That copies of this resolution be transmitted by the chief clerk of the house to the Honorable John F. Kennedy, President of the United States, the President of the Senate and Speaker of the House of Representatives of the United States, the Secretary of the Interior and the Federal Power Commission, and to each member of the Washington delegation in Congress.

"Attest:

"S. R. HOLCOMBE,
"Chief Clerk, House of Representatives."

A resolution adopted by the City Council of the City of Mansfield, Ohio, relating to the sale of Communist goods in the United States; to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PASTORE, from the Committee on Appropriations, with amendments:

H.R. 5517. An act making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes (Rept. No. 155).

REPORT ENTITLED "STUDY OF THE FEDERAL JUDICIAL SYSTEM" (S. REPT. NO. 153)

Mr. JOHNSTON, from the Committee on the Judiciary, pursuant to Senate Resolution 262, 87th Congress, 2d session, as extended, submitted a report entitled "Study of the Federal Judicial System," which was ordered to be printed.

REPORT ENTITLED "REVISION AND CODIFICATION" (S. REPT. NO. 154)

Mr. ERVIN, from the Committee on the Judiciary, pursuant to Senate Resolution 257, 87th Congress, 2d session as extended, submitted a report entitled "Revision and Codification," which was ordered to be printed.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS (for himself, Mr. HRUSKA, Mr. BENNETT, Mr. BYRD of Virginia, Mr. CARLSON, Mr. EASTLAND, Mr. ERVIN, Mr. HICKENLOOPER, Mr. JAVITS, Mr. KEATING, Mr. METCALF, Mr. MILLER, Mr. RANDOLPH, Mr. SCOTT, Mr. TALMADGE, and Mr. WILLIAMS of Delaware):

S. 1347. A bill to amend the Internal Revenue Code of 1954 with respect to the priority and effect of Federal tax liens and levies, and for other purposes; to the Committee on Finance.

(See the remarks of Mr. CURTIS when he introduced the above bill, which appear under a separate heading.)

By Mr. YARBOROUGH:

S. 1348. A bill to authorize the establishment of the Alibates Flint Quarries and Texas Panhandle Pueblo Culture National Monument; to the Committee on Interior and Insular Affairs.

S. 1349. A bill for the relief of Mrs. Louise Sheridan; to the Committee on the Judiciary.

(See the remarks of Mr. YARBOROUGH when he introduced the first above-mentioned bill, which appear under a separate heading.)

By Mr. KEATING:

S. 1350. A bill for the relief of Giuseppe Fiannaca; and

S. 1351. A bill to repeal subsection (d) of section 1346 of title 28 of the United States Code relating to the jurisdiction of the U.S. district courts; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the last above-mentioned bill, which appear under a separate heading.)

By Mr. MUNDT (for himself and Mr. MCGOVERN):

S. 1352. A bill to provide that certain lands shall be held in trust for the Lower Brule Sioux Tribe in South Dakota;

S. 1353. A bill to provide that certain lands shall be held in trust for the Crow Creek Sioux Tribe in South Dakota; and

S. 1354. A bill to provide that certain lands shall be held in trust for the Rosebud Sioux Tribe in South Dakota; to the Committee on Interior and Insular Affairs.

By Mr. JACKSON (by request):

S. 1355. A bill to authorize the Secretaries of the Interior and Agriculture to furnish and receive emergency assistance, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. JACKSON when he introduced the above bill, which appear under a separate heading.)

By Mr. BURDICK:

S. 1356. A bill to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, the Railroad Unemployment Insurance Act and the Temporary Extended Railroad Unemployment Insurance Benefits Act of 1961 to increase the creditable and taxable compensation, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. BURDICK when he introduced the above bill, which appear under a separate heading.)

By Mr. SMATHERS:

S. 1357. A bill to amend the Social Security Act so as to provide assistance in the development of new or improved programs to help older persons through grants to the States for community planning and services and for training, through research, development, or training project grants, through grants for construction of recreational activity centers, and through grants to stimulate employment opportunities; and

S. 1358. A bill to improve the public assistance provisions of titles I and XVI of the Social Security Act, relating to aged individuals, and for other purposes; to the Committee on Finance.

(See the remarks of Mr. SMATHERS when he introduced the above bills, which appear under separate headings.)

By Mr. DOUGLAS:

S. 1359. A bill to provide for an additional Assistant Secretary in the Treasury Department; to the Committee on Finance.

(See the remarks of Mr. DOUGLAS when he introduced the above bill, which appear under a separate heading.)

By Mr. HAYDEN:

S. 1360. A bill to authorize the construction, operation, and maintenance of the Buttes Dam and Reservoir, Middle Gila River project, and for other purposes; to the Committee on Interior and Insular Affairs.

RESOLUTION

ADDITIONAL FUNDS FOR COMMITTEE ON APPROPRIATIONS

Mr. HAYDEN submitted the following resolution (S. Res. 128); which was referred to the Committee on Appropriations:

Resolved, That the Committee on Appropriations hereby is authorized to expend from the contingent fund of the Senate, during the Eighty-eighth Congress, $25,000, in addition to the amounts, and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act, approved August 2, 1946.

AMENDMENT OF FEDERAL TAX LIENS AND LEVIES STATUTE

Mr. CURTIS. Mr. President, on behalf of myself, my colleague [Mr. HRUSKA], the Senator from Utah [Mr. BENNETT], the Senator from Virginia [Mr. BYRD], the Senator from Kansas [Mr. CARLSON], the Senator from Mississippi [Mr. EASTLAND], the Senator from North Carolina [Mr. ERVIN], the Senator from Iowa [Mr. HICKENLOOPER], the senior Senator from New York [Mr. JAVITS], the junior Senator from New York [Mr. KEATING], the Senator from Montana [Mr. METCALF], the Senator from Iowa [Mr. MILLER], the Senator from West Virginia [Mr. RANDOLPH], the Senator from Pennsylvania [Mr. SCOTT], and the Senator from Georgia [Mr. TALMADGE], I introduce a bill, for appropriate reference.

A similar bill has been introduced in the House of Representatives by the very distinguished chairman of the Ways and Means Committee, Representative WILBUR MILLS, of Arkansas, and also by the very distinguished ranking minority member of the Ways and Means Committee, the Honorable JOHN BYRNES, of Wisconsin.

The bill would alleviate many inequities which have resulted from the judicial interpretation of present provisions of law, under which mortgagees, contract purchasers, mechanic lienors, sureties, landlords, attorneys, warehousemen, State and local governments, and other lien creditors have been subordinated to subsequently arising Federal tax liens, and thus in effect have been required to bear the burden of another person's Federal taxes. The bill would also modernize the 160-year-old law giving the United States virtually absolute priority in nonbankruptcy insolvency proceedings—receiverships, assignments for creditors, decedents' estates, etc.—and would bring the insolvency rules more into line with the principles applied in bankruptcy. The bill would also clarify the rights and obligations of debtors of a taxpayer upon whom a levy is made, so as to assure that they will not be placed in a worse position than if the taxpayer himself had sued them; and it will make a number of procedural changes—clarifying the rights of third parties to protect themselves by suit when their property is seized or threatened with seizure for the taxes of another, and simplifying the procedure for removing a Federal lien when a senior lien is enforced.

The urgent need for the bill arises out of a number of recent developments. A series of decisions of the U.S. Supreme Court has engrafted a new limitation on citizens' rights under these statutes, which has substantially extended the scope of Federal tax liens and priorities, and has imperiled the security of many common, everyday business transactions. The holders of mechanics' liens, perfected under State law, have seen the product of their efforts snatched from them and sold—in what amounts to an unjust enrichment—to satisfy Federal taxes that were assessed and became liens after the materials were furnished and the work was done. Lawyers who recovered judgments for their clients, and had a lien on the recovery to secure their fees, have seen the fund created by their work taken to satisfy intervening Federal tax liens against their clients. Home buyers, who had made payments and taken possession but had not obtained title, have had their homes taken to satisfy Federal tax liens against the seller, which liens arose long after the purchase of the homes and the taking of possession.

Further, although present law, on its face, protects mortgagees and pledgees from Federal tax liens unless notice of the tax lien has first been filed, secured credit transactions have been made insecure by the new judgemade rule that an assignment for security is protected against a subsequent tax lien only if the assignment is "choate." That means that a bank or commercial finance company which loans money on the security of inventories and receivables is unsafe because its security is "inchoate." The lender who finances a construction or manufacturing contract, upon a pledge of the contract, is unsafe for the same reason. The savings and loan association or insurance company that takes a mortgage on a house, with an open-end clause to encourage further borrowing for home improvement, must incur the expense of a new search for Federal tax liens before each advance, and that expense, of course, is passed on to the homeowner.

These new courtmade rules are not only unfair; they are in part self-defeating, and are harmful to our economy. The business losses which they cause are tax deductible, so the Government shares the loss. Worse, whenever a businessman contemplates those rules and declines or hesitates to incur the added risks they entail, business suffers and tax collections inevitably decline.

Title I of this bill would remedy the inequities of those rules. It reflects a careful balancing of the Government's legitimate interest in collecting the revenues against the need of the public for security of real estate titles, convenience, and security of business transactions, and the avoidance of undue oppression of taxpayers and unjust enrichment of the Government at the expense of innocent third parties.

Title II relates to the absolute priority of the United States in insolvency proceedings other than bankruptcy. It takes the ancient law on that subject, last revised in the year 1799—100 years before the National Bankruptcy Act first was enacted, and brings the rules substantially in line with the priorities established in bankruptcy.

Title III is procedural, and is designed principally to facilitate the removal of clouds on title resulting from the existence of subordinate Federal liens. It broadens the existing consent of the Government to be joined as a defendant in actions involving the determination of rights in and liens upon property, and eliminates the Government's present 1-year right of redemption from a foreclosure sale. It also protects the Government by assuring that it will have notice of a nonjudicial sale under a mortgage or deed of trust, notice which is now denied it under recent court decisions.

This bill is the fruit of several years of study by four sections of the American Bar Association, and is unanimously approved and recommended to the Congress by the house of delegates of the association. The bill also has the general support of numerous State and local bar associations, the American Bankers Association, U.S. Savings and Loan League, the American Title Association, and many other organizations.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1347) to amend the Internal Revenue Code of 1954 with respect to the priority and effect of Federal tax liens and levies, and for other purposes, introduced by Mr. Curtis (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Finance.

TO CREATE A NATIONAL MONUMENT PRESERVING THE HISTORIC ALIBATES FLINT QUARRIES AND PUEBLO RUINS NEAR AMARILLO, TEX.

Mr. YARBOROUGH. Mr. President, I introduce, for appropriate reference, a bill to create a national monument preserving the historic Alibates flint quarries and pueblo ruins near Amarillo, Tex.

The quarries and ruins are to be acquired by the Canadian River Municipal Water Authority, which has offered to donate the entire site to the National Park Service for preservation for its historic interest.

The quarries were a source of flint for weapons and tools for the North American Indian for thousands of years. Historians say the flint was traded over an area of hundreds of miles from the quarries, and Alibates flint has been found in Indian burials thousands of miles from the quarries. These quarries were worked by primitive man in a prehistory period long before the Comanches and Apaches arrived to dominate this region.

Mr. President, this flint has a peculiar, wavy colored line structure, and comes only from those quarries. It can be identified wherever found all over the United States. Findings which have been made in old burial grounds have shown there was wide trade among the American Indian tribes of this flint. This flint has been found in use by Indians as far east as the Atlantic seaboard.

The pueblo is said to be the only such ruin in Texas, and perhaps the easternmost structure of its type in the Nation.

The ruins are near Highway 66 and easily accessible to the public. It is also near Palo Duro Park, a great canyon Frontiersmen Kit Carson and Charles Goodnight, first rancher in the Panhandle, helped make famous.

In support of the resolution, I offer resolutions of local, State, and area governmental authorities and historical and geological societies. Among them are statements of support from Gov. John Connally, the Texas State Historical Survey Committee, the Potter County Historical Survey Committee, Potter County Commissioners Court, Panhandle Geological Society, and the Texas Panhandle Heritage Foundation. Hubert Mewhinney, Houston Post newswriter and one of the foremost authorities on flint, has also urged preservation of the site.

Mr. President, I ask unanimous consent that the bill be printed in the Record, and that all of these supporting documents be printed in full in the Record, including the names of the people who signed them and the names of the committees on the letterheads.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill and other documents will be printed in the Record.

The bill (S. 1348) to authorize the establishment of the Alibates Flint Quarries and Texas Panhandle Pueblo Culture National Monument, introduced by Mr. Yarborough, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized to accept from the Canadian River Municipal Water Authority, Borger, Texas, on behalf of the United States, title to those lands comprising the Alibates Flint Quarries and the Texas Panhandle Pueblo Culture sites, together with any structures and improvements thereon, located in and around Potter County, Texas.

Sec. 2. (a) The property acquired under the provisions of the first section of this Act shall be set aside as a national monument for the benefit and enjoyment of the people of the United States and shall be designated as the Alibates Flint Quarries and Texas Panhandle Pueblo Culture National Monument. The National Park Service, under the direction of the Secretary of the Interior, shall administer, protect, and develop such monument, subject to the provisions of the Act entitled "An Act to establish a National Park Service, and for other purposes", approved August 25, 1916, as amended and supplemented, and the Act entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes", approved August 21, 1935, as amended.

(b) In order to provide for the proper development and maintenance of such national monument, the Secretary of the Interior is authorized to construct and maintain therein such markers, buildings, and other improvements, and such facilities for the care and accommodation of visitors, as he may deem necessary.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

The documents presented by Mr. YARBOROUGH are as follows:

SENATE CONCURRENT RESOLUTION

Whereas the Alibates Flint Quarries of Potter County, Tex., are outstanding in their interpretation of North American prehistory; and

Whereas the materials removed from these quarries were used by prehistoric man in the making of chipped flint instruments over a period of more than 10,000 years; and

Whereas the area to be acquired is the only area in the State of Texas where an advanced prehistoric sedentary culture constructed pueblos; and

Whereas this prehistoric sedentary culture conducted extensive trade, hundreds of miles radially, with this material; and

Whereas the area is to be acquired in the immediate future by the Canadian River Municipal Water Authority as a recreation area; and

Whereas the imminent acquisition of this recreation area by the Canadian River Municipal Water Authority will expose an irreplaceable prehistoric site to destruction by carelessness and indifference; and

Whereas many authorities of the archeological and geological sciences concur that this site be preserved for future generations: Now, therefore, be it

Resolved, That the Senate of the State of Texas (the House of Representatives concurring) recommend to the President of the United States that this area be designated as a national monument or a national park.

PRESTON SMITH,
President of the Senate.
BRYON TUNNELL,
Speaker of the House.

I hereby certify that Senate Concurrent Resolution No. 7 was adopted by the senate on January 14, 1963.

CHARLES SCHNABEL,
Secretary of the Senate.

I hereby certify that Senate Concurrent Resolution No. 7 was adopted by the house on January 15, 1963.

DOROTHY HALLMAN,
Chief Clerk of the House.

RESOLUTION BY THE TEXAS STATE HISTORICAL SURVEY COMMITTEE

(Members of the Texas State Historical Survey Committee: George W. Hill, executive director, Austin, Tex.; Rupert N. Richardson, president, Abilene; Mrs. Mike Butler, vice president, Austin; F. Lee Lawrence, secretary, Tyler; Mrs. John M. Bennett, Jr., San Antonio; Millard Cope, Marshall; Roy H. Cullen, Houston; Mrs. L. E. Dudley, Abilene; Jenkins Garrett, Fort Worth; Walter Malec, Hallettsville; Tom B. Medders, Wichita Falls; Mrs. Mary Moody Northen, Galveston; I. C. Parma, Granger; Sam Privitt, Childress; Mrs. Edward Randall, Jr., Galveston; John Ben Shepperd, Odessa; Charles R. Tips, Dallas; Mrs. Max Weinert, Seguin; James E. Wheat, Woodville.)

Whereas the Alibates Flint Quarries of Potter County, Tex., are outstanding in their interpretation of North American prehistory; and

Whereas the material removed from these quarries was used by prehistoric man in the making of chipped flint implements over a period of more than 12,000 years; and

Whereas this is the only area in the State of Texas where an advanced prehistoric sedentary culture constructed pueblos and simultaneously conducted extensive trade with this material; and

Whereas prehistoric cultures traveled hundreds of miles to acquire this choice material for the making of their finest weapons points and tools; and

Whereas the area is to be acquired in the immediate future by the Canadian River Municipal Water Authority as a recreation area thus exposing an irreplaceable prehistoric site to destruction by carelessness and indifference; and

Whereas this site must be preserved for future generations: Therefore be it

Resolved, That the Texas State Historical Survey Committee, the official State historical preservation agency, recommend to the President, the Secretary of Interior, and the Congress of the United States that this area be designated a national monument or a national park.

Attest:

JOHN BEN SHEPPERD,
President.
ELEANOR BENNETT,
Secretary.

RESOLUTION BY THE PANHANDLE GEOLOGICAL SOCIETY

(Panhandle Geological Society, 1962–63: president, Harold T. Henslee; vice president, Morgan W. Eddleman; secretary, David J. Tinsley; treasurer, Eugene M. Peeples. Committees: ways and means, Clyde E. Little; program and entertainment, Morgan W. Eddleman; vice chairman (program), Harold J. Trepagnier; vice chairman (entertainment), Ernest S. Brainard; vice chairman (golf), Harold W. Price; vice chairman (bowling), Frank Morris; membership, David J. Tinsley; editorial and publicity, Jere W. McKenny; field trip, William M. Quackenbush; stratigraphic, Charles B. Morgan; youth, Paul Nygreen; librarian, Ellsworth Vachon.)

Whereas the Alibates Flint Quarries and the Alibates pueblo ruins of the Texas Panhandle pueblo culture of Potter County, Tex., are outstanding in their interpretation of more than 12,000 years of prehistory on the North American Continent; and

Whereas many prehistoric cultures traveled hundreds of miles to acquire this choice material for the making of their finest weapons points and tools; and

Whereas this is the only area in the State of Texas where an advanced prehistoric sedentary culture constructed pueblos and at the same time conducted extensive trade with this material; and

Whereas the area is to be acquired in the immediate future by the Canadian River Municipal Water Authority as a recreation area of the Sanford Reservoir thus exposing an irreplaceable prehistoric site to destruction by carelessness and indifference; and

Whereas the board of directors of the Canadian River Municipal Water Authority will dedicate the required acreage of this recreation area to the National Park Service for development as a national monument or as a national park; and

Whereas many authorities of the historical, archeological, and geological sciences concur that this site be preserved for present and future generations; and

Whereas the development of this site will be of great historical, geological, archeological, and cultural significance to the Nation as a whole: Therefore be it

Resolved by the executive committee of the Panhandle Geological Society, That it recommend to the President, the Secretary of the Interior, and the Congress of the United States that this area be designated a national monument or a national park.

Attest:

HAROLD T. HENSLEE,
President.
DAVID J. TINSLEY,
Secretary.

RESOLUTION BY THE TEXAS PANHANDLE HERITAGE FOUNDATION, CANYON, TEX.

Whereas the Alibates Flint Quarries of Potter County, Tex., are outstanding in their interpretation of North American prehistory; and

Whereas the material removed from these quarries was used by prehistoric man in the making of chipped flint implements over a period of more than 12,000 years; and

Whereas this is the only area in the State of Texas where an advanced prehistoric sedentary culture constructed pueblos and simultaneously conducted extensive trade with this material; and

Whereas prehistoric cultures traveled hundreds of miles to acquire this choice material for the making of their finest weapons points and tools; and

Whereas the area is to be acquired in the immediate future by the Canadian River Municipal Water Authority as a recreation area thus exposing an irreplaceable prehistoric site to destruction by carelessness and indifference; and

Whereas many authorities of the archeological, geological, and historical sciences concur that the site be preserved for future generations: Therefore be it

Resolved by the executive committee of the Texas Panhandle Heritage Foundation, Inc., That it recommend to the President, the Secretary of the Interior and the Congress of the United States that this area be designated a national monument or a national park.

Attest:

MARGARET HARPER,
President.
EDITH ECKHARDT,
Secretary.

RESOLUTION BY POTTER COUNTY HISTORICAL SURVEY COMMITTEE

(Members of the Potter County Historical Survey Committee: W. M. Adams, county judge, Amarillo, Tex.; Floyd V. Stuber, chairman; Henry Hertner, vice chairman; Ernest R. Archambeau, secretary; Clayton Heare, legislative committee; S. B. Whittenburg, publicity committee; Ernest R. Archambeau, archives committee; J. Robin Allen, museum committee; Charles Woodburn, historical markers committee; Ray S. Daniel; and Charles Gunn.)

Whereas the Alibates Flint Quarries of Potter County, Tex., are outstanding in their interpretation of North American prehistory; and

Whereas the material removed from these quarries was used by prehistoric man in the making of chipped flint implements over a period of more than 12,000 years; and

Whereas this is the only area in the State of Texas where an advanced prehistoric sedentary culture constructed pueblos and simultaneously conducted extensive trade with this material; and

Whereas prehistoric cultures traveled hundreds of miles to acquire this choice material for the making of their finest weapons points and tools; and

Whereas the area is to be acquired in the immediate future by the Canadian River Municipal Water Authority as a recreation area, thus exposing an irreplaceable prehistoric site to destruction by carelessness and indifference; and

Whereas many authorities of the archeological, geological, and historical sciences concur that the site be preserved for future generations: Therefore, be it

Resolved by the Potter County Historical Survey Committee, That it recommend to the President, the Secretary of the Interior, and the Congress of the United States that this area be designated a national monument or a national park.

Attest:

Floyd V. Stuber, *Chairman.*
Ernest R. Archambeau,
Secretary.

Resolution by State of Texas

The State of Texas,
Executive Department,
Austin, Tex.

Whereas it is agreed that the Alibates Flint Quarries and the Alibates pueblo ruins of the Texas Panhandle pueblo culture exemplify the most outstanding interpretation of more than 12,000 years of continuous North American prehistory, and the lands on which they are located will be acquired by the Canadian River Municipal Water Authority as a recreation area of the Sanford reservoir and the required acreage will be dedicated without cost to the National Park Service for development; and

Whereas many eminent authorities of the geological, archeological, and historical sciences have adopted resolutions and concur in the importance to the Nation of the Alibates Flint Quarries and the pueblo culture in that there is no duplication in the proposed use of these areas in any of the existing National Park Service areas or sites and that they meet the requirements for the establishment of a national monument or a national park:

Now, therefore, I, John Connally, Governor, State of Texas, in recognizing the great and urgent need to preserve and develop this nationally significant area as a national monument or as a national park, do hereby urge the Honorable John F. Kennedy, President, to take immediate and appropriate action as recommended by this and the attached resolutions.

John Connally,
Governor, State of Texas.

Attest:

Scott P. Sayers.

Resolution by Canadian River Municipal Water Authority

(Canadian River Municipal Water Authority, office of secretary, City Hall, Borger, Tex.—Executive committee: George W. Finger, president; Ray Renner, vice president; A. A. Meredith, secretary-treasurer. Member cities and directors: Amarillo, Tex., Al E. Banasik, A. F. Madison; Borger, Tex., George W. Finger, Hudson Davis; Pampa, Tex., Fred Thompson, Clinton Evans; Plainview, Tex., R. V. Payne; Lubbock, Tex., J. Ray Dickey, Irving L. Jones; Slaton, Tex., W. Howard Hoffman; Tahoka, Tex., E. R. Edwards; O'Donnell, Tex., Clyde Winans; Lamesa, Tex., Sam Richardson, Ray Renner; Brownfield, Tex., Lee Brownfield, A. M. Muldrow; Leveland, Tex., I. F., Lea J,. Spencer Ellis.)

Whereas the board of directors of the Canadian River Municipal Water Authority in recognizing the archeological and geological significance of the Alibates Flint Quarries and the Texas Panhandle pueblo culture sites as outstanding in their interpretation of over 12,000 years of continuous prehistory on the North American Continent; and

Whereas this authority will acquire the area as one of the recreation areas of the Sanford Reservoir; and

Whereas it is the desire of this authority to preserve these outstanding prehistoric sites for future generations and to dedicate to the National Park Service the required acreage for development; and

Whereas it is urgent that the appropriate action be taken by the National Park Service to designate and develop this area as a national monument or a national park: Therefore be it

Resolved by the board of directors of the Canadian River Municipal Water Authority, That it recommend to the President, the Secretary of the Interior, and the Congress of the United States that this area be designated a national monument or a national park.

Attest:

George Finger,
President.
A. A. Meredith,
Secretary.

Resolution by County of Potter, Tex.

Whereas the Alibates Flint Quarries of Potter County, Tex., are outstanding in their interpretation of North American prehistory; and

Whereas the material removed from these quarries was used by prehistoric man in the making of chipped flint implements over a period of more than 12,000 years; and

Whereas this is the only area in the State of Texas where an advanced prehistoric sedentary culture constructed pueblos and simultaneously conducted extensive trade with this material; and

Whereas many authorities of the archeological and geological sciences concur that the site be preserved for future generations: Therefore be it

Resolved by the Potter County Commissioners Court, That it recommend to the President of the United States that this area be designated a national monument or a national park.

Attest:

W. M. Adams,
County Judge, Potter County, Tex.
Ann Lyle,
County Clerk, Potter County, Tex.

Mr. YARBOROUGH. Mr. President, in June of last year when we went to the Canadian River with the Secretary of the Interior, Mr. Stewart Udall, for the ground breaking of the great Canadian River project, with the longest pipeline system to be built by the Interior Department in the United States to date, a presentation was made to Secretary of the Interior Udall by archeologists of that region. One of the archeologists came from as far away as Houston, Tex. Mr. Hubert Mewhinney, a Houston Post newswriter, is one of the foremost authorities on flint structures in the Nation. At that time all of the data was presented in support of the bill.

JURISDICTION OF U.S. DISTRICT COURTS IN PENSION AND PAY CASES

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to repeal subsection (d) of section 1346 of title 28 of the United States Code.

Subsection (d) of 28 United States Code, section 1346 provides that the district courts shall not have jurisdiction under section 1346 of any civil action or claim for a pension or any civil action or claim to recover fees, salary, or compensation for official services of officers or employees of the United States. The purpose of my bill is to repeal this subsection so that the district courts shall have original jurisdiction, concurrent with the Court of Claims, of civil actions or claims for a pension or for salary of officers and employees of the United States. But for the subsection which this bill proposes to repeal, the district courts would have jurisdiction of these matters under 28 United States Code, section 1346(a)(2), which generally authorizes district court jurisdiction of all claims against the United States, not exceeding $10,000, based upon either the Constitution, any act of Congress, any executive regulation, or any contract with the United States.

This proposed repeal of a narrow limitation upon the jurisdiction of the district courts would not, of course, create any new liabilities or new causes of action against the U.S. Government; substantive law, in other words, is entirely unaffected. Nor would this bill, if enacted, change in any manner the present jurisdiction of the Court of Claims. As before, the Court of Claims would retain its exclusive jurisdiction of Tucker Act cases where the amount in controversy exceeds $10,000, regardless of the precise nature of the individual case. My bill is designed solely to permit the district courts around the country to share in the Court of Claims' jurisdiction of pension and pay cases where the amount in controversy does not exceed $10,000.

The chief beneficiaries of the bill would be present and former Government employees and present and former members of the Armed Forces of the United States. Whereas under present law pension and pay cases brought by such persons may be filed only in the Court of Claims, my bill would permit them to bring suit in the district courts. Under the applicable venue statute now on the books, which is title 28 U.S. Code Section 1402(a), these suits could be brought in the judicial district where the plaintiff resides. This bill is, therefore, in line with modern venue policy in Government litigation, since it offers individual citizens the convenience of litigating against the United States in or near their place of residence. At the same time, no hardship is placed upon the United States as defendant, as under the present organization of the Department of Justice the Government is presumably equipped to defend equally and conveniently in any Federal judicial district.

Mr. President, in my view this bill dovetails neatly with a measure enacted into law during the 87th Congress, and it is to be regretted that the provisions of this bill were not considered at that time. Public Law 748 of the 87th Congress added to the Judicial Code a new section 1361, which generally confers upon the district courts original jurisdiction of any action in the nature of mandamus to compel an officer or employee of the United States or any of its agencies to perform a duty owed to the plaintiff. The principal purpose of this enactment was to rectify the peculiar situation where a person seeking to have a Federal court compel a Federal officer to perform an official duty had to channel his action into the District Court for the District of Columbia. This, in the words of our Committee on the Judiciary (S. Rept. 1992, 87th Cong., pp. 2–3), was certainly "an unfair imposition upon citizens who seek no more than lawful treatment from their Government." The committee went on to say, and here I should like to quote extensively because what is said is equally applicable to my bill, as follows:

> The committee is of the view that the current state of the law respecting venue in actions against Government officials is contrary to the sound and equitable administration of justice. Frequently, the administration determinations involved are not made in Washington but in the field. In either event, these are actions which are in essence against the United States. The Government official is defended by the Department of Justice whether the action is brought in the District of Columbia or in any other district. U.S. attorneys are present in every judicial district. Requiring the Government to defend Government officials and agencies in places other than Washington would not appear to be a burdensome imposition.
>
> On the other hand, where a citizen lives thousands of miles from Washington, * * * to require that the action be brought in Washington is to tailor our judicial processes to the convenience of the Government rather than to provide readily available, inexpensive judicial remedies for the citizen who is aggrieved by the workings of Government.

In similar manner, if the bill I am introducing today is enacted into law, a plaintiff in a pension or pay case against the United States will have the choice of bringing suit either in the Court of Claims here in Washington—and, of course, this avenue will remain convenient to the many Government employees who reside in the Washington area—or, instead, for the many who do not, in the U.S. district court in the district of the plaintiff's residence.

What is most significant from the standpoint of the history of our Federal judicial system, is that this bill would restore the situation as it essentially existed in the 11-year period between 1887, when the Tucker Act first conferred jurisdiction upon the district courts concurrent with the Court of Claims, and 1898, when the Congress enacted what is now the subsection that this repealer is directed against.

As pointed out by the Supreme Court in *Bruner* against *United States* (343 U.S. 112, 114–5), a 1952 case, it was because of claimed inconvenience for the Government to defend against pay claims in the various district courts under the 1887 Tucker Act that the Congress in 1898 withdrew those cases from district court jurisdiction and centralized them here in Washington in the Court of Claims.

Now, Mr. President, 1898 was 65 years ago. The Department of Justice has grown a bit since then, and a vast body of Government litigation is conducted throughout the country in every judicial district by the local U.S. attorneys and their assistants, under the general supervision of the Department. To paraphrase an ancient common law maxim, where the reason that gave rise to the law no longer holds water, the law ought to go.

I would expect that repeal of title 28 United States Code section 1346(d)(2) would have its best practical application in the area of civilian and military discharges. Today, when a nonprobationary civil service employee is separated from Government employment following administrative procedures under the Lloyd-LaFollette Act, or, in the case of a veteran, under section 14 of the Veterans' Preference Act of 1944, as amended, or when a member of the Armed Forces is discharged, the former employee or serviceman who believes his discharge was contrary to law or regulations has a number of judicial remedies open to him, but none provides one-step complete relief if he is entitled to it. First, he can bring a back pay suit in the Court of Claims, but that court, if it enters judgment in his favor, has no power to grant the specific relief of ordering him restored to his former position. Or, in the alternative, he can bring an action in the nature of mandamus in the appropriate U.S. district court under the recently enacted title 28 United States Code section 1361, which, if successful, would result in a decree compelling the defendant Government officials to reinstate him in his former position. However, because of title 28 United States Code section 1346(d)(2), the district court could not supplement the reinstatement decree with a money judgment for the lost back pay that the employee was wrongfully deprived of.

Now, it is true that, whether the employee sues in the Court of Claims or in a district court, complete relief is available as a practical matter. A victorious litigant in the Court of Claims can keep on suing the United States for separate installments of lost back pay until he gets his job back, so that in order to prevent having to pay salary for services not rendered, the agency typically restores the man to his former position voluntarily. And a successful prosecution of a mandamus action in a district court, which results in employee reinstatement, sets into motion administrative repayment of the lost back pay. But in neither event could complete relief be gained in a single court action.

This bill, by removing an artificial limitation on the jurisdiction of the district courts, would enable a wrongfully discharged Government employee to sue to get his job back and to recover his lost back pay all in a single court action so long as the pay claim did not exceed $10,000. And in my judgment, very few back pay claims would exceed that jurisdictional amount. Because of the doctrine of laches, the plaintiff would be forced to bring suit in most cases before his back pay accrual reached $10,000. In rare cases, a high-salaried official might have accrued more than $10,000 and be forced to go into the Court of Claims, but this is his remedy under present law and my bill would not disturb this arrangement in the slightest.

Mr. President, this bill, if enacted, would also result in a more equitable distribution of employee discharge cases throughout the Federal court system. The Court of Claims calendar today is extremely congested. In the fiscal year ended September 30, 1962, a total of 5,116 back pay cases were pending in the Court of Claims at the beginning of the period, 832 additional such cases were instituted, 3,131 were disposed of, and, therefore, 2,817 were left pending at the end of the year. To be sure, many of these were class cases, involving identical claims, but still this segment of the Court of Claims' workload is truly burdensome.

This bill would result in spreading much of this work around the country. And the district courts would have a tremendous body of Court of Claims precedents available for adjudicating these cases with no more difficulty than is involved in interpreting and applying the usual Federal statutory problems they have to deal with.

It is my hope, Mr. President, that the Judicial Conference of the United States and the interested bar and Government employee associations will accord this proposal earnest study and consideration, and will express themselves on it to the appropriate committee as promptly as possible. The sooner we eliminate from the Judicial Code jurisdictional provisions which no longer have a reason for being, the more we shall contribute to the speedy, effective, and just administration of causes in the Federal courts.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1351) to repeal subsection (d) of section 1346 of title 28 of the United States Code relating to the jurisdiction of the U.S. district courts, introduced by Mr. Keating, was received, read twice by its title, and referred to the Committee on the Judiciary.

AUTHORITY FOR SECRETARIES OF THE INTERIOR AND AGRICULTURE TO FURNISH AND RECEIVE EMERGENCY ASSISTANCE

Mr. JACKSON. Mr. President, by request, I introduce, for appropriate reference, a bill to authorize the Secretaries of the Interior and Agriculture to furnish and receive emergency assistance, and for other purposes. I ask unanimous consent that a letter from the Assistant Secretary of the Interior, requesting the proposed legislation, be printed in the Record.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the Record.

The bill (S. 1355) to authorize the Secretaries of the Interior and Agriculture to furnish and receive emergency assistance, and for other purposes, introduced by Mr. Jackson (by request), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The letter presented by Mr. JACKSON is as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., April 17, 1963.
Hon. LYNDON B. JOHNSON,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill, "To authorize the Secretaries of the Interior and Agriculture to furnish and receive emergency assistance, and for other purposes."

We suggest that this bill be referred to the appropriate committee for consideration, and we recommend that it be enacted.

The bill would enable the Secretaries of the Interior and Agriculture both to give to and receive from other Federal and non-Federal entities, emergency assistance in case of fires, floods, snow, and ice conditions interrupting transportation and communication, and in other situations. We believe such legislation is desirable and in many cases would constitute a form of insurance against injury and damage to Federal personnel, properties, and areas. It may not be amiss to say, in addition, that the need for relief of human suffering and the demands of ordinary public relations make it difficult to refuse assistance when such is requested.

There is need for greater Federal, State, and local cooperation in such cases than exists at present. This would be secured by the reciprocal provisions of the measure submitted.

In cases of emergencies requiring fire control assistance, many of the areas under the management and control of the National Park Service are situated within or in the general vicinity of political subdivisions where fire emergencies have occurred. When fire emergencies had occurred in nearby areas it was logically and naturally expected by the political subdivisions that available fire control equipment and personnel of the Federal Government would assist and cooperate in controlling such fires. Such assistance was an actual necessity at times.

Accordingly in 1953, the Congress gave the following authority to the National Park Service:

"Rendering of emergency rescue, firefighting, and cooperative assistance to nearby law-enforcement and fire-prevention agencies and for related purposes outside of the National Park System and miscellaneous areas." (16 U.S.C., 1b.(1).)

It is not only the National Park Service, however, which has such problems. The Congress in 1955, therefore, gave authority to each agency head to enter into reciprocal fire protection agreements with any fire organization (42 U.S.C. 1856a). This legislation provided further:

"In the absence of any agreement authorized or ratified by section 1856a of this title, each agency head is authorized to render emergency assistance in extinguishing fires and preserving life and property from fire, within the vicinity of any place at which such agency maintains fire-protection facilities, when the rendition of such assistance is determined, under regulations prescribed by the agency head, to be in the best interest of the United States." (42 U.S.C. 1856b.)

Other emergencies arise in which Federal assistance is requested. For instance, the Bonneville Power Administration is asked from time to time to make its personnel and equipment available to non-Federal agencies in emergency situations. The following are some examples of requests received:

1. The Washington State Highway Patrol, the Washington State Highway Department and the Oregon State Highway Commission have asked for the use of a sno-cat and operator for the purpose of restoring communication services, particularly radio stations located in mountainous areas and otherwise inaccessible during periods of heavy snowfall.

2. The telephone company has requested the use of its helicopter as a means of access to some of its facilities in the Cascade Mountains which were inaccessible because of snow conditions.

3. Airline officials, in 1955, requested the use of its helicopter and pilot on a standby basis for possible rescue work in connection with a Pan-American airliner that was down off the Oregon coast.

4. A sheriff's office requested the use of the helicopter and pilot in locating two lost hunters in the vicinity of Woodland, Wash.

5. The helicopter and pilot were requested for rescue measures in the vicinity of Coos Bay during heavy floods along the Oregon coast.

6. Many types of equipment were requested during the 1948 Columbia River flood disaster, particularly at Vanport.

These are instances of requests for assistance from agencies other than the actual users of electric energy supplied by Bonneville Power Administration. However, other agencies of the Department of the Interior are, from time to time, faced with the same types of emergency situations—the National Park Service and the Bureau of Sport Fisheries and Wildlife, to cite two such agencies.

The Department of Agriculture is confronted with similar emergency situations. In many States, lands administered by the Department of Agriculture are in the same general area or adjacent to lands administered by the Department of the Interior, and the emergency needs of the two Departments are comparable. Both are sometimes asked to provide assistance in the same emergency. The Secretary of Agriculture has asked that the proposed legislation be extended to his Department.

This proposed legislation places no specific limitation on the distance to which Department personnel and equipment may go in offering assistance. In practice, the seriousness of the emergency, and the urgency of the need for assistance, will necessarily determine the distances to which departmental forces would travel.

While there may be no legal responsibility to furnish emergency assistance outside of Federal areas, it clearly appears desirable that, in the public interest, and in order to insure useful or necessary reciprocal assistance by local agencies within the Federal areas during emergencies, Government agencies should cooperate in similar circumstances by rendering all possible assistance. Under the terms of the proposed legislation, the Federal Government would be reimbursed for services rendered, if such reimbursement is not unreasonable, as determined by the Secretary of the Interior, in light of the emergency involved.

The Bureau of the Budget has advised that there is no objection to the presentation of this proposed legislation from the standpoint of the administration's program.

Sincerely yours,

D. OTIS BEASLEY,
Assistant Secretary of the Interior.

AMENDMENT OF RAILROAD RETIREMENT, RAILROAD RETIREMENT TAX, RAILROAD UNEMPLOYMENT INSURANCE, AND TEMPORARY EXTENDED RAILROAD UNEMPLOYMENT INSURANCE BENEFITS ACTS

Mr. BURDICK. Mr. President, I introduce, for appropriate reference, a bill to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, the Railroad Unemployment Insurance Act, and the Temporary Extended Railroad Unemployment Insurance Benefits Act of 1961 to increase the creditable and taxable compensation, and for other purposes.

This bill, like its forerunner, S. 729, proposes to improve and strengthen the financial condition of the railroad retirement and railroad unemployment insurance systems. The provisions in this bill differ from those in S. 729 in two respects, both of which I regard as important.

The first affects the interest rate now paid by the Treasury Department of specific obligations issued for the railroad retirement account. The Railroad Retirement Act now prescribes an interest rate of 3 percent for these obligations which is substantially less than the rate the Treasury must pay for medium and long-term general obligations. The current 3-percent rate is also less than the market yield on U.S. Government obligations in general. This bill, like S. 729, would correct this inequity by specifying a rate of interest equal to the average market yield on outstanding marketable Treasury obligations. The current market yield is now in the area of 3⅞ percent. The fairer and more equitable formula of market yield is prescribed both by the bill which I now introduce and by S. 729.

This bill, however, would retain the current 3-percent rate as a minimum rate or floor, whereas S. 729 contemplates a complete spread without regard to a minimum figure. Most financial experts consider it highly unlikely that the interest rate will fall below the 3-percent floor and upon the basis of this expert judgment, it is fair to say that the provisions of this bill will not involve any appreciable risk for the Treasury Department. Imposition of the 3-percent floor, however, will serve the important and useful purpose of offering to the actuaries a more favorable basis for making an actuarial estimate of the market yield. Without the floor, the actuaries will in all probability project an interest figure which will be somewhat lower than it would be with the floor. Upon the basis of some preliminary figures, I can estimate that the difference in the actuarial estimate will amount to somewhere in the neighborhood of $3½ million per year, a sum which cannot be ignored in the present situation of the railroad retirement system.

The second difference, which is equally significant, would provide for an immediate conversion of all the funds in the railroad retirement account to the new interest yield. S. 729 provides for a gradual conversion over a period of 10 years, whereas the bill which I now offer would require immediate conversion.

The Government has had the benefits from the substandard current 3-percent rate for a number of years. In fact the substandard yield prescribed under the present law has contributed to the deterioration of the financial condition of the railroad retirement system. The correction of this inequity by providing for market yield will go a long way in repairing the actuarial deficiency now experienced by the current retirement system. It appears to me that the provisions of S. 729, providing for a graduated 10-year conversion to the market yield formula, have the effect of perpetuating this inequity throughout the 10-year period contemplated by the earlier bill. Immediate conversion of the entire 3-percent fund into special obligations bearing market yield interest is the fairer course to follow.

This adjustment in the formula specified in S. 729 yields additional revenues in about the same amounts as those resulting from the establishment of a 3-percent floor.

Overall, it may be roughly estimated that these two changes will produce an additional $8 million for the system and will cut deeply into the residual deficit which S. 729 does not reach.

I pointed out earlier in the year that the situation confronting the Board is a serious one which warrants the earliest possible attention of the Congress.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1356) to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, the Railroad Unemployment Insurance Act and the Temporary Extended Railroad Unemployment Insurance Benefits Act of 1961 to increase the creditable and taxable compensation, and for other purposes, introduced by Mr. BURDICK, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

THE SENIOR CITIZENS' COMMUNITY PLANNING AND SERVICES ACT OF 1963

Mr. SMATHERS. Mr. President, I introduce for appropriate reference a bill entitled "The Senior Citizens Community Planning and Services Act of 1963." The bill would amend the Social Security Act by establishing a new title XVII to provide assistance in the development of new or improved programs to help older persons through grants to the States.

Briefly stated the bill, if adopted, would do the following:

Part A of the proposed new title XVII to the Social Security Act would provide financial assistance to the States to help meet the costs of projects for: First, community planning and coordination of programs, second, demonstrations of programs or activities, third, training of special personnel needed to carry out such programs and activities and, fourth, establishment of new or expansion of existing programs, except for costs of construction other than minor alterations or repairs.

Parts B and C would encourage research, development, demonstration, and evaluation projects leading to the development of new and improved approaches and techniques to help older people, and would establish and expand training programs.

Part D would provide grants to assist public and nonprofit organizations in the construction of multipurpose recreational activity centers for older persons.

Part E would provide grants to assist public and nonprofit organizations in carrying out experimental and demonstration projects designed to stimulate an expansion of employment opportunities for older persons who desire to work.

Man's ancient desire to live longer is being realized at last. Life expectancy in this country has risen to 70 years. There are present today in our population 17½ million people aged 65 or older. Their numbers increase at the rate of a thousand each day.

Though this is a towering achievement of medical science, it has not yet been translated into a wholly successful human achievement.

These added years should be bonus years for the individual and for the Nation as well. They have not yet proved to be.

This is true partly because science is ahead of society—and perhaps ahead of itself—not realizing how quickly and extensively these added years would come and what profound changes they would bring with them.

Science built the bridge to longer life before the destination was prepared. Now we are attempting to carry on construction during the rush hour.

We have also been caught in the midst of other developments. As the number of people of older ages has increased, other balances have been shifting. The total population has increased, crowding housing, health facilities, and job opportunities.

The rural has given way to the urban and this, with increased mobility, changes the family structure and the place of the elderly within the family.

Thus today, the senior citizen is not only a new category. He exists within a new framework. We have not quite known what to do with him. Nor have we thought sufficiently about what he could do for us. We have too often simply closed our eyes to his predicament and shut him out of sight.

In speaking of senior citizens we have not fully recognized that we are not speaking of one group, but of many. The needs of the Nation's 10,369 men and women who have passed their century mark are very different from those of the 2,500 who are celebrating their 65th birthday each day.

Too often the tendency has been to equate the entire senior group of our population with infirmity—to think of everyone over the age of 65 as someone to be taken care of. This is patently a false grouping and a false assumption.

There are, in all age groups, the weak and the strong, the dependent and independent.

There are, of course, infirm aged. Many of them—particularly among those beyond age 75. Many are bedridden. Many are mentally confused and unable to care for themselves. Four out of five persons over the age of 65 suffer from some chronic ill. We must be conscious of their needs.

But there are also sturdy, active, creative and self-sufficient elderly men and women. We must be equally aware of their need to participate in life. Even among those with chronic ailments, there will be degrees of impairment. Some may need only to walk a little slower. Others may need certain aids in order to remain productive. Given such help, they can continue to contribute to their own happiness, to that of their families, and to the achievements of this Nation.

In point of fact, the elderly who are presently well and able are in many cases in as distressing a predicament as the chronically ill and infirm aged.

Retirement has too often meant a forced disengagement from life. In contrast, this increased lifespan of the individual could mean that for the first time in history a nation exists in which the people will have time enough to think, time enough to reach full self-realization.

It now could mean that when men and women reach the time of retirement, which was once nearly the end of life, they are merely at the beginning of a whole new period of later maturity.

The immediate personal needs for a private career and family have been taken care of. There is time left. There is energy left. There is experience available for public service. A new dimension could be added to life. But it will take action to bring this about.

Ironically, the scientific and technical advances which have made longer life possible for more people also make utilization of this gift more difficult.

In earlier societies few lived to be old and the majority of those who did were able to reserve to themselves—or were assigned—functions essential to the survival of the group.

The elders were the counselors of the people. It is harder for us today to provide this role for our senior citizens, despite the fact that the older members of any group are still its true source of continuity, and a resource of experience, talent, and skill.

Simply put, what all senior citizens need today is "A place in the world." This may be a relationship, a friend, a job to do, a role to fill, a house in which an elderly person can move about safely, a nursing home bed, home care—a chance to live, not by sufferance taking up room in somebody else's world but by continuing their earned right in their own world.

This is a goal—simple to state—but not simple to achieve.

The enactment of the Senior Citizens Community Planning and Services Act of 1963 will contribute greatly to its achievement.

It is only in recent years that we have begun to understand this variety of need. We have begun at last to seek appropriate solutions.

On the national scene, the Congress has in the last 2 years provided new tools to do these things—the Community Health Services and Facilities Act of 1961 and the Public Welfare Amendments of 1962 in particular have made possible a wider array of services.

The work of the President's Council on Aging and of the Office of Aging in the Department of Health, Education, and Welfare in coordinating and stimulating programs and progress for senior citizens is having and will have an important effect.

The heart of any program for the elderly must be opportunities for, and actual services to, older citizens in their home communities.

While at the Federal level we can urge greater opportunities for older men and women, it is the community that must develop the specific plans and offer the services.

That is why perhaps the most significant proposal of all the proposals in the President's message on the elderly is that calling for the establishment of a 5-year program of grants to States and localities, to public and voluntary organizations, educational institutions, to serve the elderly, to make possible comprehensive, coordinated, adequate services, and programs.

Enactment of the proposed legislation entitled "The Senior Citizens Community Planning and Services Act of 1963" would carry out this part of the President's program.

It would provide Federal financial assistance to those who would provide care and opportunity for the elderly on their home grounds. It involves four kinds of grants under four major titles.

PART A—GRANTS FOR COMMUNITY PLANNING, SERVICES, AND TRAINING

Under part A the new title XVII of the Social Security Act would provide formula grants to each State based on the ratio of the State's population aged 65 or older to the national population of that age. These moneys are to be used by the State to strengthen its program and agencies for the aging and to work with communities to strengthen theirs. Funds would be available for community planning and coordination of programs, establishment, expansion, and demonstrations of programs and services, and the training of necessary personnel.

A comprehensive State plan would be drawn up; a single State agency would administer or supervise the program.

The States are deeply concerned with the needs of their older citizens. Many have moved to action with increasing urgency. Permanent State commissions or committees on the aging have been established in 31 States, Puerto Rico, and the Virgin Islands; temporary State units exist in 12 other States. But only 25 of these State agencies have a State appropriation—in most cases very small—and only 22 have a full-time executive director or secretary.

Funds proposed under this part of title XVII would permit States to encourage planning and coordinating committees in cities and counties to determine the needs of their older citizens and to stimulate public and voluntary agencies to develop communitywide programs of health, social services, employment recreation, education, and housing to meet them.

Pilot projects could be developed and existing programs improved in such areas as preretirement education, the teaching of creative skills, development of social and recreational programs, provision of meal centers and home-delivered meals, establishment of homemaker services, development of sales outlets for senior craftsmen, and such safety measures as establishment of special telephone service to maintain contact with older people living alone.

Grants could be made by the States from their allotments to agencies and organizations such as adult education and training centers and university extension services.

These Federal funds would make it possible for the State to obtain and maintain up-to-date information on the numbers and general needs of their older citizens, to analyze existing programs and available services to plan improvements, new approaches, and techniques. In particular they would make possible better coordination of services and provision of guidance and consultation to communities.

I ask unanimous consent that a table of State allotments indicating the Federal sum each State can expect to receive under Part A in the peak years of the program be inserted in the RECORD at this point of my remarks.

PARTS B AND C—RESEARCH, DEMONSTRATION, AND TRAINING PROJECTS

Parts B and C of the new title would provide funds for research, demonstration, and training grants to be made by the Secretary of Health, Education, and Welfare, with the advice of a 15-man advisory committee and special review committees.

Under this provision grants could be made to public and nonprofit agencies, voluntary organizations, institutions, and individuals to develop or demonstrate new approaches, techniques, and methods, which hold promise of substantially contributing to worthwhile and meaningful life for older persons.

Estimated allotments to the States under part A of the Senior Citizens Community Planning and Services Act of 1963

	Maximum annual allotment
Alabama	$215,965.63
Alaska	126,860.00
Arizona	156,445.63
Arkansas	192,715.63
California	604,356.87
Colorado	180,102.50
Connecticut	209,513.75
Delaware	137,438.75
District of Columbia	149,063.75
Florida	317,684.37
Georgia	226,253.75
Hawaii	135,171.87
Idaho	145,285.63
Illinois	464,624.37
Indiana	280,193.75
Iowa	239,157.50
Kansas	208,700.00
Kentucky	226,835.00
Louisiana	209,165.00
Maine	162,141.87
Maryland	203,933.75
Massachusetts	324,136.25
Michigan	347,328.13
Minnesota	248,457.50
Mississippi	191,204.37
Missouri	300,363.13
Montana	147,785.50
Nebraska	182,195.00
Nevada	131,335.63
New Hampshire	148,598.75
New Jersey	320,241.87
New Mexico	142,844.37
New York	712,818.13
North Carolina	233,751.87
North Dakota	145,401.87
Ohio	437,538.13
Oklahoma	211,064.37
Oregon	188,995.63
Pennsylvania	518,099.37
Rhode Island	$156,213.13
South Carolina	177,486.87
South Dakota	149,935.63
Tennessee	232,589.37
Texas	384,644.37
Utah	145,866.87
Vermont	140,228.75
Virginia	225,672.50
Washington	222,185.00
West Virginia	185,101.25
Wisconsin	265,313.75
Wyoming	134,009.38
Puerto Rico	167,547.50
Virgin Islands	63,255.63
Guam	62,906.88
American Samoa	62,674.38
Total	12,500,000.00

Research is needed in many areas. There are great gaps in our knowledge about the elderly. Many current approaches and programs need to be evaluated and improved. Current patterns and conditions of living of older persons need to be studied to determine what factors are beneficial and what detrimental.

We know little of the social-psychological processes of aging.

We know little of the preferences and patterns of older people as consumers.

We know little of the most satisfactory design and method of providing services in housing projects for older people.

We know little of the extent and kinds of activity in which older people are interested and of which they are capable.

Demonstration projects would, in the main, be pilot projects of national scope and significance, which could serve or be adapted to varying local conditions.

They could, for example, include experiments in total community organization designed to keep older people informed of all services available to them.

They could be experiments in activity, education, and recreational programs and concerted social services within or adjacent to senior housing projects designed to determine which are most effective in maintaining independence, mental health, community participation and good family relationships among older people.

They could be projects to develop teaching and training tools, study units and materials, for use by educational institutions and the professions.

Training of personnel to teach and work with the elderly is greatly needed. Institutions of higher education have only begun to work in this field. Colleges, universities, and professional schools need teachers with knowledge of aging, and almost every profession and technical occupation involved in serving older people is acutely short of persons adequately prepared to work with them.

There is immediate need for university-based training and research centers in all parts of the country.

The proposed legislation would provide funds for internships and fellowships, for establishment of courses, institutes of gerontology, and development of new training materials and curricula.

PART D—CONSTRUCTION OF RECREATIONAL ACTIVITY CENTERS

Part D of the new title would provide grants for construction, remodeling, or equipping multipurpose recreational activity centers for the elderly.

These unique centers are essentially community centers especially designed for older people. Comparatively new to the American scene, they are generally regarded as the most important facility that has come into existence in connection with community efforts to meet the needs of their older people.

They serve both the elderly and the community.

They provide opportunity for older people to continue as active participants in community life, to build retirement lives based on the pursuit of interests, skills, and recreation.

They help prevent tragic withdrawal and isolation which so often lead to premature physical and mental deterioration and hospitalization, and consequent family breakdown.

For the community they provide a point of contact at which to offer older people educational experiences promoting health, literacy, and mental alertness, a place to give personal counseling and information concerning existing community services, and a source from which to recruit the elderly for volunteer service to others in the community.

Although there has been a widespread increase in interest and development of such centers over the past 15 years, most of them today exist in old houses, store buildings, lofts, and other makeshift quarters, often unsafe and poorly suited to the purposes they are intended to serve.

Ideally, a senior activity center would offer as many as 50 or 60 different activities in response to the widely varying interest of older people. It should be centrally located, accessible by public transportation and, preferably, in an area where retired people are concentrated. It would be open every day and often during the evenings. The membership fee—if any, would never be too high to preclude low-income people.

Construction grants for these centers could be made by the Secretary of Health, Education, and Welfare, to public agencies or voluntary organizations. Staffing and operating of the centers could be assisted under the State formula grants in part A. The programs contemplated by the centers applying for construction grants would be subject to approval by appropriate local authorities.

PART E—SPECIAL PROJECTS TO STIMULATE EMPLOYMENT OPPORTUNITIES

Part E of the new title XVII provides for grants to stimulate employment opportunities for the elderly, primarily through projects to demonstrate their employability.

It is one of the anomalies of our day that while more people reach their 65th birthday than ever before, the percentage of older persons in gainful employment has declined steadily. To the extent that this is a result of voluntary retirement, it is good. No one would deny retirement to the worker who seeks it after many years of toil.

But there is evidence that for many of our older citizens, retirement is forced and unwelcome. They are able to work. They wish to work, yet opportunity is denied them, largely because of age. As the President has said, rules of employment that are based upon the calendar rather than upon ability are not good rules. No economy can reach its maximum productivity by wasting its human resources. This is both personal tragedy and a national loss.

Prevailing attitudes, casting doubt upon the capability of senior citizens to continue working beyond arbitrary retirement age, are major barriers to their employment. Yet, as the Presidential message points out, studies of the Department of Labor show large numbers of older workers exceeding the average performance of younger workers, and doing so with steadiness, loyalty and dependability.

In order to demonstrate this employment capability of older citizens, part E of title XVII under the administration of the Secretary of Labor, would make grants available to public and nonprofit agencies to provide employment to older persons in public or community undertakings or services that would not otherwise be possible.

PART F—GENERAL—ADVISORY COMMITTEES AND ADMINISTRATION

To strengthen the effectiveness and administration of all grant programs in the act, part F of the new title would establish, in the Department of Health, Education, and Welfare, an Advisory Committee on Aging, made up of 15 distinguished citizens, men and women of demonstrated experience and interest in special problems of the aging. They would advise the Secretary of Health, Education, and Welfare on matters of general policy concerned with the program. Each member would hold office for a term of 3 years; none should be otherwise in the employ of the United States.

In addition, part F would authorize the Secretary of Health, Education, and Welfare and the Secretary of Labor, in administering their respective functions under the act, to draw upon the services and facilities of "any agency of the Federal Government and of any other public or nonprofit private agency or institution" that can be of assistance in strengthening the program.

The Secretary of Health, Education, and Welfare in carrying out the purposes of the title could give consultative services and technical assistance to public nonprofit private agencies, organizations, and institutions. He can provide short-term training and technical instruction. He can also conduct research and demonstrations, and can collect, prepare, publish, and disseminate special educational and information materials to assist the purposes of the act, including reports of projects for which funds are provided under the act.

SUMMARY

I have, of necessity, greatly condensed my description of this far-ranging piece of legislation. It is, I feel, of equal importance to any in our entire program for the elderly.

This proposed legislation would cost a total of $149 million over a 5-year period. I believe our senior citizens are deserving of this investment.

I cannot imagine anyone opposed to the services proposed. I can imagine some thinking, perhaps, "Yes they're fine—I'm all for them, but we have to take care of the young first, and then the middle aged and productive. We can leave the old folks till last."

May I say that they have been left till last too long. And our point is that they are or can be productive to themselves, their communities, their Nation. We cannot delay any longer. In counting their numbers, we have become eyewitnesses to their need.

I would like to speak out against the ridiculous fallacy that somehow these people are different from others, that they were always old—that they sprang full fashioned at age 65 from somewhere. These people were the young. They bore the burdens of the Nation and of those who were old, in their young days. They are us—ourselves—a few years from now—only we will have benefited by years of social enlightenment and legislation.

As President Kennedy said in his special aging message to the Congress:

> Place, prestige, status, cannot be legislated. But we can see that legislation enhances the opportunity to obtain them.

This enhancement of opportunity for the elderly is one of the major purposes of the new title XVII of the Social Security Act which Senior Citizens Community Planning and Services Act of 1963 would establish. It is intended to make possible continued, extended, improved and new services and programs, yes; but it is also designed to help change the picture—the stereotype—so many carry in their minds of older persons. Its aim is a fair one—a place in the world.

The assistance to be provided under this proposed legislation will not duplicate services now possible under other grant programs; indeed it will make possible the more effective use of these grants.

The very act of developing a comprehensive community plan, of drawing together and evaluating existing services, will enable communities to discover where gaps exist, where unnecessary duplications lie, and to determine precisely where a health grant is most needed, a sound social service program should be strengthened, or an adult education program or senior housing development is justified.

Program operations and services made possible by enactment of the measure would not infringe upon the prerogatives of State or local health, welfare, recreation, education, or housing agencies, but would assist and work with and through existing authorities wherever possible.

Just as the Federal Government, through the Children's Bureau now in the Welfare Administration, of the Department of Health, Education, and Welfare, has long been able to assist

States and communities in meeting the needs of children in both health and social welfare fields largely through grants-in-aid and the stimulation of research and demonstration projects, so should the Government be able to assist States and communities in similar broad programs for the elderly.

What we do for our elderly citizens today will allow us to touch hands with the past through their experiences.

What we do today for those who will be senior citizens in the future will indicate something of the value we really place upon the gift of added life.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1357) to amend the Social Security Act so as to provide assistance in the development of new or improved programs to help older persons through grants to the States for community planning and services and for training, through research, development, or training project grants, through grants for construction of recreational activity centers, and through grants to stimulate employment opportunities, introduced by Mr. SMATHERS, was received, read twice by its title, and referred to the Committee on Finance.

THE SENIOR CITIZENS PUBLIC WELFARE AMENDMENTS OF 1963

Mr. SMATHERS. Mr. President, I introduce for appropriate reference a bill entitled "The Senior Citizens Public Welfare Amendments of 1963."

This bill has as its purpose a number of important improvements in provisions in titles I and XVI of the Social Security Act, which deal with our Federal-State programs of old-age assistance.

Section 2 of the bill would require States to provide medical protection for old age assistance recipients which would be at least equal to that provided those in the new medical category established pursuant to the Kerr-Mills Act.

Section 3 would eliminate the 42-day limitation for medical care in a general hospital for a person suffering from mental illness or tuberculosis.

Section 4 would provide that as a condition for receiving Federal grants for old age assistance, a State's plan must establish and maintain standards of health and safety for housing rendered to recipients of this program.

Section 5 would provide that the maximum period of residence which may be required for eligibility under old age assistance programs be gradually reduced to 1 year by 1970.

Section 6 would provide that protective payments under old-age assistance may be made to a third party in behalf of the needy recipient comparable to provisions adopted last year for dependent children.

Of the 17½ million persons aged 65 and over in this country today, somewhat less than 1 in 7, or about 2¼ million receive old-age assistance payments.

These payments are made on the basis of individual need and these 2¼ million aged are accordingly the neediest among our senior citizens.

About half of them are over age 76.

About one-third of them are 80 or over.

A large majority of them are women.

Many of them are widows whose husbands died before they were able to qualify for old age and survivors insurance benefits.

To a somewhat greater degree than the aged generally, they live in rural areas or small towns.

A considerable number of them, or approximately three-quarters of a million—receive modest social security benefits usually at or near the minimum. Many have high medical expenses which increase their needs. About 30 percent of these individuals are in nursing homes, institutions, confined to their own homes, or need the help of another person in getting about. Nearly 1 in 10 is in a nursing home or institution.

MEDICAL ASSISTANCE TO THE NEEDY

There are a number of specific improvements that can and should be made in the provisions of the Social Security Act concerned with old-age assistance, all of which have been recommended by the President.

Two and one-half years ago, the Congress enacted a new program of medical assistance for the aged, generally referred to as the Kerr-Mills Act. This program is now in operation in just over half of the States. In a few States, six—Tennessee, California, Connecticut, Idaho, Michigan, and South Carolina—medical assistance under the new program is more generous in amount, scope or duration than the assistance that is available for medical care of the very neediest old-age assistance recipients. It seems poor policy for us to provide less in the way of medical care to persons on old-age assistance, who require help with their day-to-day living expenses, than we provide to the recipients of medical assistance for the aged, who have enough resources to meet their regular expenses other than their medical bills.

To cure this defect, section 2 of the proposed legislation would require that by July 1, 1965, States have provisions for at least the same scope of medical assistance to the persons eligible to receive old-age assistance as they provide to the persons who receive only medical assistance for the aged. The effective date—2 years hence—would give the States that may be in this situation time to work out any existing differences.

AID FOR THE TUBERCULAR AND MENTALLY ILL

Another provision of the bill is directed toward aged persons who are mentally ill or who have tuberculosis. In 1960, recognizing the trend toward more care of mentally ill persons in general hospitals where needed treatment could some times be effected in a relatively short time in the individual's home community, the Congress provided that in both old-age assistance and in the new program of medical assistance for the aged, the Federal Government would participate for up to 42 days in public assistance payments for medical care of recipients who are mentally ill or tuberculous in general hospitals.

Two problems have arisen in relation to this 1960 provision. One is that the 42-day period is a short one in relation to certain individuals.

The second is that the administrative burden of keeping track of individuals to determine exactly when the 42d day ends and the 43d day begins is unduly time consuming and has acted as a deterrent to States taking advantage of this provision. The Congress can at very small cost eliminate the 42-day time limitation on such care in general hospitals. This would be done by section 3 of the proposed legislation. Since no State is required to take any legislative action under this provision, it would become effective July 1, 1963, as an additional resource to State public-welfare programs. The provision would be applicable to medical assistance for the aged as well as old-age assistance. This section would amend the old-age assistance provisions by deleting, as of July 1, 1963, the existing limitation which precludes Federal participation in cash payments to individuals who are tubercular or mentally ill in general hospitals.

BETTER HOUSING FOR THE AGED

The studies and hearings of our Special Committee on Aging have shown that many aged persons are especially subject to various types of exploitation. One aspect of this problem is that many old-age assistance recipients live in housing that does not meet even the barest minimum of health and safety.

Studies have shown that the needy aged frequently must pay exorbitant rentals for grossly substandard quarters. Census data indicate that among households headed by a person age 65 or older who live in rental housing nearly 40 percent are in quarters that are classified as substandard.

The rental costs represent a major segment of our payments of old-age assistance despite the fact that, a large proportion of our aged own their own homes, including many of the needy aged who receive old-age assistance.

It is estimated that one-half billion dollars a year—about one-fourth—of the $2 billion total expenditure for old-age assistance—goes to pay rent.

Clearly the time has come when States and localities must come to grips with this basic problem. The bill does not propose to tell States how to set standards or who in the State government should administer those standards.

The bill would simply require that by July 1, 1966, the States establish or designate some agency to establish and maintain standards of health and safety for the quarters which recipients of old-age assistance rent. This would give the States very broad latitude in providing realistic protection for aged renters and sufficient time in which to get their provisions into operation.

LIBERALIZING RESIDENCE REQUIREMENTS

It is estimated that one person in five in the United States moves each year. Substantial numbers move across State lines. Aged persons almost certainly do not move as often as younger workers. However, many aged persons may need to change their State residence in order to be near relatives who can offer care and companionship.

At present a State may impose a residence requirement for old-age assistance as long as 5 years out of the preceding 9. Today there are 20 States that impose this maximum requirement permitted under the Federal law. They are: Alaska, Arizona, California, Colorado, District of Columbia, Florida, Indiana, Iowa, Kansas, Louisiana, Michigan, Missouri, Montana, Nebraska, Nevada, New Hampshire, Oklahoma, Oregon, Texas, and Washington. The Governor's conference several years ago recommended that this be reduced to 1 year. The proposed legislation would reduce the present 5-year limitation to 3 years, beginning in 1968, and to 1 year immediately preceding application, beginning in 1970. This time span would permit States to make any necessary adjustments. With the continued decline in the old-age assistance caseload the cost of this humanitarian step would be minimal.

PROTECTIVE PAYMENTS FOR THE AGED

As I indicated earlier, there are among our aged on old-age assistance substantial numbers of persons who are very old and feeble. These persons, while not mentally ill, are often forgetful. Some tend to lose things, some are subject to exploitation by unscrupulous persons. Some of these individuals live with children or relatives. Others live in nursing homes or institutions. By and large they do not need formal legal guardianship. However, they do frequently need help in managing money.

Under existing law we can make money payments to a recipient or his legal guardian. We can make payments directly to doctors, hospitals, or other suppliers of medical care, but we cannot make payments to a third person to help a feeble senior citizen.

Section 6 of the bill would make provision, with appropriate safeguards, for protective payments made to a third person in behalf of an old-age assistance recipient.

Last year the Congress enacted a provision for protective payments in aid to families with dependent children. While the need among the aged arises for somewhat different reasons, I am convinced that this provision will serve a highly useful and humane purpose.

Throughout the bill corresponding changes have been made in the new title XVI of the Social Security Act which the Congress enacted last year permitting those States that choose to, to have a combined program for the aged, blind, and disabled so that aged persons under the combined program would receive the advantages of the provisions of the bill.

Mr. President, I consider that this bill would make possible a number of modest, positive noncontroversial steps which would improve the situation of some of our neediest senior citizens. I believe that it is worthy of prompt consideration and early enactment by the Congress.

The cost of the amendments which I have proposed here is negligible.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1358) to improve the public assistance provisions of titles I and XVI of the Social Security Act, relating to aged individuals, and for other purposes, introduced by Mr. SMATHERS, was received, read twice by its title, and referred to the Committee on Finance.

ADDITIONAL ASSISTANT SECRETARY OF THE TREASURY

Mr. DOUGLAS. Mr. President, I introduce, for appropriate reference, a bill to provide for an additional Assistant Secretary in the Treasury Department.

This bill will correct, if favorable action is taken, an inequitable anomalous administrative situation in the Treasury Department. This bill will not result in any additional salary costs to the Government.

Mr. President, in order to explain the need for this legislation, I ask unanimous consent that the bill, a letter to the Secretary of the Treasury from me dated April 4, 1963, and the Secretary's reply dated April 10, 1963, be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill and letters will be printed in the RECORD.

The bill (S. 1359) to provide for an additional Assistant Secretary in the Treasury Department, introduced by Mr. DOUGLAS, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 234 of the Revised Statutes, as amended (5 U.S.C. 246), is amended by striking out "three Assistant Secretaries of the Treasury" and inserting in lieu thereof "four Assistant Secretaries of the Treasury".

The letters presented by Mr. DOUGLAS are as follows:

APRIL 4, 1963.

Hon. C. DOUGLAS DILLON,
Secretary of the Treasury,
Department of the Treasury,
Washington, D.C.

DEAR MR. SECRETARY: During the hearings on S. 874, the bill to authorize the Treasury Department to construct additional facilities for the U.S. Mint, it was brought out by the chairman that the Director of the Mint reports to you through Mr. Robert A. Wallace, an assistant to the Secretary.

This raises a question in my mind as to whether it would not be more appropriate for the Director of the Mint, a Presidential appointee, to report to you through a Presidentially appointed Assistant Secretary rather than an assistant to the Secretary in the classified civil service. Upon looking into this question, I found that there are only three such Assistant Secretaries in the entire Treasury Department. This number seems unusually small when compared with other departments. The State Department has 12 such posts, Defense has 16, Justice has 8 and Post Office has 5. The Departments of Interior, Commerce, and Labor also have more Presidentially appointed Assistant Secretaries than does the Treasury.

If the Treasury Department were to be authorized an additional Assistant Secretary, bringing the number of such positions more in line with other Departments, would it then be possible for the Director of the Mint to report to you through a Presidential appointee rather than a member of the classified service? Would you favor the creation of an additional Assistant Secretaryship in the Treasury Department for this purpose?

With best wishes,

Faithfully yours,

PAUL H. DOUGLAS.

THE SECRETARY OF THE TREASURY,
Washington 25, D.C., April 10, 1963.

Hon. PAUL H. DOUGLAS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DOUGLAS: Thank you for your letter of April 4, 1963, pointing out that the Director of the Mint, who is appointed by the President, reports to me through a member of the classified civil service rather than a Presidentially appointed Assistant Secretary. As you noted, the Treasury Department has only three such Assistant Secretaries which is fewer than most other departments.

All three of the Presidentially appointed Assistant Secretaries in Treasury have full assignments. This makes it necessary for both the Director of the Mint and the Chief of the U.S. Secret Service to report to me through Mr. Robert A. Wallace who is authorized to perform any functions relating to these bureaus which I am authorized to perform. Mr. Wallace carries out these and other duties at the Assistant Secretary level. He is responsible for fiscal policy planning and directs departmental activities relating in Federal budgetary policies. He works closely with members of the Council of Economic Advisers, Bureau of the Budget, and White House officials in the development of programs of the Kennedy administration and represents the Treasury on many interagency committees assigned to this task.

Despite the fact that Mr. Wallace performs the functions of an Assistant Secretary, he must do so as an Assistant to the Secretary because of the limitation on the number of Assistant Secretaries in the Treasury Department. This is a distinct handicap from an organizational standpoint since he must supervise Bureau Chiefs and direct fiscal policy planning activities inside the Treasury, and work with various interagency groups where other agencies are often represented by Presidential appointees. It certainly would be helpful, therefore, if this situation could be corrected by the creation of another Assistant Secretaryship in the Treasury Department, bringing the number of such positions more nearly in line with that of other departments.

Sincerely yours,

DOUGLAS DILLON.

NOTICES OF MOTIONS TO SUSPEND THE RULE—AMENDMENTS TO SUPPLEMENTAL APPROPRIATION BILL

Mr. PASTORE submitted the following notice in writing:

In accordance with rule XL of the Standing Rules of the Senate, I hereby give notice it writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, the following amendment, namely, on page 19, after line 17, insert:

"CONSTRUCTION AND REHABILITATION

"For an additional amount for 'Construction and rehabilitation,' $6,000,000, to remain available until expended and to be nonreimbursable."

Mr. PASTORE also submitted an amendment, intended to be proposed by him to House bill 5517, making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, which was ordered to lie on the table and to be printed.

(For text of amendment referred to, see the foregoing notice.)

Mr. PASTORE submitted the following notice in writing:

In accordance with rule XL, of the Standing Rules of the Senate, I hereby give notice in writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, the following amendment; namely, on page 55, after line 9, insert the following:

"TITLE IV

"Philippine Rehabilitation Act Amendments of 1963

"The Act entitled 'An Act to authorize the payment of the balance of awards for war damage compensation made by the Philippine War Damage Commission under the terms of the Philippine Rehabilitation Act of April 30, 1946, and to authorize the appropriation of $73,000,000 for that purpose', approved August 30, 1962 (Public Law 87–616), is hereby amended to read as follows:

"'That there is hereby authorized to be paid by the Government of the United States to the Government of the Republic of the Philippines the sum of $73,000,000 less the administrative expenses referred to in the third section of the Act: *Provided*, That such payment shall not be made until the Secretary of State shall have received assurances satisfactory to him from the Government of the Republic of the Philippines that such sum will be received by the Government of the Republic of the Philippines in full satisfaction and final settlement of any and all claims arising out of awards for war damage compensation made by the Philippine War Damage Commission under the terms of title I of the Philippine Rehabilitation Act of 1946 (60 Stat. 128) and that the Government of the Republic of the Philippines shall insure that no part of such sum shall be directly or indirectly paid to any former Commissioner or employee of the Philippine War Damage Commission as compensation for services rendered as attorney or agent in connection with any such claim.'

"SEC. 2. All documents currently held by the Foreign Claims Settlement Commission and relating to unpaid claims arising out of war damages in the Philippines, except for internal documents of any agency of the United States, shall be transferred to the Government of the Republic of the Philippines by the Foreign Claims Settlement Commission.

"SEC. 3. Funds appropriated by the first paragraph of title V of the Foreign Aid and Related Agencies Appropriation Act, 1963, not heretofore expended for administrative expenses, shall be used for making the payment authorized by the first section of this Act, except that of such funds, not to exceed $20,000 shall be available to the Foreign Claims Settlement Commission for administrative expenses which may be incurred in terminating its functions with respect to awards for war damage compensation made by the Philippine War Damage Commission under the terms of the Philippine Rehabilitation Act of 1946 and in transferring documents in accordance with the second section of this Act.

"SEC. 4. This title may be cited as 'The Philippine Rehabilitation Act Amendments of 1963'."

Mr. PASTORE also submitted an amendment, intended to be proposed by him to House bill 5517, making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, which was ordered to lie on the table and to be printed.

(For text of the amendment referred to, see the foregoing notice.)

Mr. PASTORE submitted the following notice in writing:

In accordance with rule XL, of the Standing Rules of the Senate, I hereby give notice in writing that it is my intention to move to suspend paragraph 4 of rule XVI for the purpose of proposing to the bill (H.R. 5517) making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, the following amendment; namely, on page 9, line 3, after $450,000,000, insert: "to remain available until June 30, 1964."

Mr. PASTORE also submitted an amendment, intended to be proposed by him to House bill 5517, making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes, which was ordered to lie on the table and to be printed.

(For text of amendment referred to, see the foregoing notice.)

CELEBRATION OF SIGNING OF DECLARATION OF INDEPENDENCE—ADDITIONAL COSPONSOR OF CONCURRENT RESOLUTION

Mr. HRUSKA. Mr. President, on February 28 the distinguished Senator from Connecticut [Mr. RIBICOFF] submitted Senate Concurrent Resolution 25, favoring observing on July 4 of each year, by the ringing of bells throughout the United States, of the anniversary of the signing of the Declaration of Independence. The Senator is to be commended for the initiative he has displayed by submitting the resolution. I ask unanimous consent that my name may be added as a cosponsor on the next printing of that resolution.

The VICE PRESIDENT. Without objection, it is so ordered.

NATIONAL SERVICE CORPS ACT—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of April 11, 1963, the names of Mr. COOPER, Mr. DOUGLAS, Mr. JACKSON, Mr. LONG of Missouri, and Mr. MCGEE were added as additional cosponsors of the bill (S. 1321) to provide for a National Service Corps to strengthen community service programs in the United States, introduced by Mr. WILLIAMS of New Jersey (for himself and other Senators) on April 11, 1963.

Mr. COOPER. Mr. President, I am happy to join the junior Senator from New Jersey [Mr. WILLIAMS] in sponsoring S. 1321, legislation which would establish a National Service Corps. As one who has, from the outset, supported the idea of making American abilities and energies available to developing nations abroad, I believe the same abilities and dedication could be used effectively to assist local communities and areas here at home.

The National Service Corps, like the Peace Corps, fits naturally into an old and well-established American tradition of helping others to help themselves. However, while I join as a cosponsor of the bill, I believe that its provisions should be examined carefully and closely by the Committee on Labor and Public Welfare, and I reserve my position to offer amendments while this bill is under consideration.

In organizing and encouraging the people-to-people program during the last decade, President Eisenhower correctly recognized the great value to be gained by using the talents and ideas of our people abroad. In the same manner, considering the great diversity in wealth and opportunity among men and women in our country, I believe that the National Service Corps can address itself at home to problems requiring ever more attention.

In my State of Kentucky, particularly in the sorely depressed eastern portion, I have in recent weeks and months seen a variety of situations in which the services of some of these volunteers—and I hope many will be Kentucky volunteers—might well be utilized. The men and women in these areas ask—also furthering an old tradition of ours—nothing more than the chance to earn a living and to improve the conditions and opportunities which affect their lives and the lives of their children. The Corps which this bill would establish, though small in numbers, can be of help working on community and regional problems. And the volunteers will also be learning about the problems of the Nation and preparing themselves for service to the Nation during their lifetime.

I shall not speak further on this subject now, except to say that, as I observed in discussing the Youth Employment measure on April 10 in the Senate, we must provide hope and training for our youth if we are to meet our responsibilities to the Nation. This legislation we have introduced will materially assist this purpose—and more—and I hope the Congress will pass it this year.

NOTICE OF RECEIPT OF NOMINATION BY COMMITTEE ON FOREIGN RELATIONS

Mr. FULBRIGHT. Mr. President, as chairman of the Committee on Foreign Relations, I desire to announce that today the Senate received the nomination of Adm. Jerauld Wright, U.S. Navy, retired, to be Ambassador to China.

In accordance with the committee rule, this pending nomination may not be considered prior to the expiration of 6 days of its receipt in the Senate.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. McINTYRE:

Address entitled "A Tax Policy for Economic Growth," delivered before the New Hampshire Associated General Contractors, at Concord, N.H., on April 19, 1963.

PROBLEMS OF THE DEFENSE DEPARTMENT AND EFFORTS TO MEET THEM

Mr. MANSFIELD. Mr. President, on April 20 the Secretary of Defense, Mr. Robert S. McNamara, delivered an address before the American Society of Newspaper Editors. It is a straightforward and illuminating statement of the great scope of the responsibilities of the Secretary's Office and of Mr. McNamara's approach to these responsibilities.

It is an impressive statement which sets forth the problems of the Defense Department and the efforts to meet them. It suggests to me, Mr. President, that Mr. McNamara not only understands the imperative of insuring that this nation have the kind of defense it needs, but that he also has the capacity and integrity to see to it that this defense is made available at the lowest practical cost to the people of the United States. I commend this address to the Senate, Mr. President, and ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SECRETARY OF DEFENSE ROBERT S. MCNAMARA BEFORE THE AMERICAN SOCIETY OF NEWSPAPER EDITORS, STATLER-HILTON HOTEL, WASHINGTON, D.C., SATURDAY, APRIL 20, 1963

What I want to talk to you about is the problem of decisionmaking in the Defense Department, and the way we are trying to approach the problem.

The Department of Defense is responsible for spending nearly 10 percent of the national income of this country. It employs 3.7 million Americans directly, in and out of uniform, and millions more indirectly in every aspect of our economic life. It absorbs over half of every tax dollar, as it has done for over a decade.

All of this is well enough known. If anything, the potential dangers of this so-called military-industrial complex have been overstated rather than understated in recent months. But at risk of repeating the obvious, let me point out once again that this unavoidably vast establishment exists for one purpose and one purpose only: to act as the servant of U.S. foreign policy. Our responsibility is to provide this Nation with the means to safeguard its legitimate interests and to meet its commitments at home and around the world. The Defense Department exists to serve that purpose, and to serve none other.

Yet, although it is easy enough to say in a few words what our purpose is, the translation of this purpose into decisions on force levels, on contingency war planning, on weapons developments—and cancellations—on reorganizations, on all the range of decisions which shape our Defense Establishment, cannot be readily or easily deduced from the general principles. You probably remember General Marshall's shrewd remark: "Don't ask me to say we agree in principle; that just means we haven't agreed yet."

What I want to do is to outline, as best I can in a single talk, how we are trying to translate these general principles, on which all Americans would agree our defense policy should be based, into specific decisions that will effectively carry through those general principles. These specific decisions will inevitably and properly remain the subject of searching, even harsh, criticism. We are, after all, dealing with issues which could affect the very life of this Nation, indeed the life of a great part of this planet. We cannot and do not claim infallibility. Only the future can tell when and where we have been right, when and where we have been wrong. We can only do our best to approach these problems as sensibly and realistically as we know how.

Let me start with two points which seem to me axiomatic. The first is that, at least within any range of defense spending that is likely to appear at all desirable in the foreseeable future, the United States is well able to spend whatever it needs to spend on national security. The second point is that this ability does not excuse us from applying strict standards of effectiveness and efficiency to the way we spend our defense dollars.

Last fall, while we were preparing for the fiscal 1964 budget decisions, the separate requests for funds of the three military departments totaled over $67 billion. The budget as finally submitted to the Congress totaled nearly $54 billion, a cut of over $13 billion. This was still $2 billion more than the current defense budget, and $10 billion more than when we took office in 1961. We have been criticized both for overruling the military, in cutting the service requests, and for spending too much money, presumably in failing to cut the service requests far enough. Sometimes, to my continuing surprise, we are criticized on both counts by the same people.

The fact is that we could, as a nation, afford to spend more than we are proposing if that were judged to be in our national interest. Our national security does not need to be compromised to keep defense spending down. Where we have cut, the cuts have not represented decisions to compromise national security in the name of frugality. For our children will hardly admire us for our frugality if it is achieved at a price they will have to pay in blood and suffering. And where we have added to defense spending, those additions have not been based on the naive notion that the bigger our defense budget is, the safer we will be. National security in this age of hydrogen bombs and intercontinental missiles is more complicated than that.

The facts are that national security in these times cannot be purchased by military spending alone, however generous a scale, and that the task of assuring that our military spending truly serves the national interest is more complicated than it has ever been in the past. And more urgent. The test we have to apply, over and over again, is whether a particular expenditure for a specific purpose is really in our national interest.

Every dollar we spend inefficiently or ineffectively is not only an unnecessary addition to the arms race which threatens all mankind, but an unfair burden on the taxpayer, or an unwise diversion of resources which could be invested elsewhere to serve our national interests at home or abroad, or a dollar that could, even if kept in the military budget, be invested in something that would better strengthen our military posture. The fact that we cannot be poor enough to grudge the price of our own survival does not mean we are rich enough to squander our resources in the name of national security.

I do not mean to suggest that we can measure national security in terms of dollars—you cannot price what is inherently priceless. But if we are to avoid talking in generalities, we must talk about dollars: for policy decisions must sooner or later be expressed in the form of budget decisions on where to spend and how much.

When we took office, we saw three major tasks before us. First, we had to accelerate the strengthening of our strategic nuclear force, a task which involves not merely increases in the size of the force, but major improvements in its survivability and in the provisions to maintain responsible command and control at all times. We had a firm base from which to work. My predecessor, Tom Gates, had already given strong support to such programs as Minuteman and Polaris, which are designed to ride out any conceivable attack, so that they do not have to be launched on short or ambiguous warning. But we felt further impetus was needed. We have, for example, increased by 50 percent the programed rate of Polaris procurement, and doubled our production capability for Minuteman. We have increased by 50 percent the portion of B-52 bombers on 15-minute ground alert. The kind of flexibility that these programs provide is absolutely vital. Overall, in the last 24 months we have doubled the number of warheads in our strategic alert forces. And during the same period we have increased by 60 percent NATO's tactical nuclear forces in Western Europe.

Second, major increases in our nonnuclear capabilities were urgently needed. Accordingly, we increased the number of combat-ready Army divisions by 45 percent. We augmented by 30 percent the Air Force capability for tactical air support of combat operations. We have increased our procurement of combat supplies and equipment, to correct serious imbalances and inadequacies that had developed over the years. We have increased nearly sixfold our special forces, made up of highly trained men who cannot only deal with guerrilla warfare, but more important, can train the people under terrorist attack to defend themselves.

The third major effort cannot be so easily defined. What it involves is a broad effort to improve the effectiveness and efficiency of the Defense Establishment. It is this effort that I want to talk about most, partly because it is the most controversial—really the only one of these three efforts which has been widely controversial—partly because it is, by its nature, very diffuse, involving a wide variety of largely independent efforts, which cannot properly be summed up in a few sentences.

The first two of our major objectives—the improvement of our strategic retaliatory forces and the buildup of our nonnuclear forces—commanded wide support by the time we took office.

The importance of additional effort to assure that our strategic retaliatory nuclear forces were both adequate and subject to effective control at all times was widely accepted. Consequently, it was clear that a number of major and expensive steps were needed in the strategic retaliatory area. It would have been national folly to allow any question to arise in the mind of a potential attacker that U.S. forces were not capable of absorbing a surprise attack and striking back with devastating fury.

It was equally clear that we could not either effectively or sensibly count on the threat of massive retaliation to deter the whole range of political and military aggression open to an ingenious and determined adversary. It is doubtful whether such a threat was ever a universal deterrent. It did not deter the attack on Korea, the pressure on Berlin, or the attempt to subvert southeast Asia. Still less is it likely to be a universal deterrent in an age when nuclear superiority, even though substantial in terms of numbers, cannot guarantee a victory in any meaningful sense.

No one in a position of responsibility seriously believed that a decision to employ our strategic nuclear forces could make sense except in the face of massive aggression—such as a large-scale attack on Western Europe—and consequently it was clear that, unless we were willing to live under a constant threat of having to choose between nuclear holocaust and retreat, we required major improvements in our less-than-all-out war capabilities. It remained for us to translate these general notions into specific programs, to fill in the details, to carry the programs through vigorously and expeditiously. But on the general aims, there was little quarrel.

It is only in the third area, the problem of increasing the effectiveness and efficiency of our Military Establishment, that controversy has developed. Not that there was much disagreement about the need: for years everyone who has thought seriously about the Department of Defense has felt that major improvements were needed. The solutions offered ranged from drastic proposals for complete unification of the Armed Forces to vague suggestions about "cutting the fat out of the military budget."

Thus, there was a national consensus here that reforms were in order. But there was no consensus on just what should be done. And there was an additional and inevitable human problem. For these reforms would necessarily take the shape of changes in the traditional ways of doing things, and limitations on the customary ways of spending defense money. It is inevitable that people will take more easily to suggestions that they should have more money to spend, as in the improvement of our nuclear and nonnuclear capabilities, than to suggestions that they must spend less, or that they must abandon established ways of doing things. Yet the very substantial increases in the budget which we felt necessary added a further strong incentive, if any were needed, to move ahead on these problems of increasing efficiency and effectiveness.

The first and most important thing to notice about the effort in this area is what it is not. It is not an effort to save dollars at the expense of military effectiveness. What we are trying to do can be divided into two parts; the first is essentially a series of management reforms of the kind you will find in any well-run organization, an effort which is in large part covered by the formal 5-year cost-reduction program we set up in July 1962. The common characteristic of reforms in this part of the effort is that they have very little, if anything, to do with military effectiveness, one way or the other. They neither increase nor decrease our military effectiveness; they merely save money by introducing more efficient methods of doing things.

To give a small example of what I mean, we found that the various elements of the Department were using slightly different forms for requisitions—16 in all. As a result, nearly every time a piece of property was transferred from one part of the Department to another, a new requisition form had to be typed out, tens of thousands of forms per year. By establishing a common requisition form and system, we eliminated tens of thousands of man-hours of labor formally wasted in having clerks retype the forms. This will save us about $20 million a year when the change becomes fully operative.

The creation of the Defense Supply Agency to handle the purchase of common supplies for the Department saved $31 million this year in overhead costs alone, and these annual savings will grow in succeeding years. I need not dwell on such colorful but relatively minor accomplishments as the consolidation of the 18 different types and sizes of butcher smocks, the 4 kinds of belt buckles, and the 6 kinds of exercise bloomers.

We estimate that actions initiated this year will ultimately save nearly $300 million through increased use of competitive, as opposed to noncompetitive procurement; over $300 million through shifts from cost-plus-fixed-fee contracts to fixed or incentive price contracts; over $300 million through better management of inventories; nearly $300 million through closing or reducing operations at 330 installations, freeing 45,000 men and 280,000 acres of land, and so on down the line. The total savings which will ultimately be realized from actions taken so far in the cost-reduction program will be over $1.9 billion.

Our target by fiscal year 1967 is saving $3.4 billion a year, each year, every year, through reforms in the procurement and logistic areas alone. So we are not talking about trivial sums of money. And my own judgment is that we are still only scratching the surface. I believe that we should eventually be able to surpass our own present goal of $3.4 billion annual savings, and I emphasize that we are talking about annual, not one-time savings. Several years ago there was talk of saving $8 billion per year by unifying the armed services. I think that through vigorous pursuit of the cost reduction effort we can save the same kind of money that had been envisaged through unification of the services without the serious disadvantages of a single service.

As I have said, most of this formal cost-reduction program has little or nothing to do with military effectiveness, one way or the other. It merely saves large sums of money.

The second, and really the more important, part of the effort does bear directly on military effectiveness. Although dollar savings are sometimes an important byproduct, here the essential point is to increase military effectiveness. For example, we found that the three military departments had been establishing their requirements independently of each other. I think the results can fairly be described as chaotic: the Army planning, for example, was based primarily on a long war of attrition, while the Air Force planning was based, largely, on a short war of nuclear bombardment. Consequently, the Army was stating a requirement for stocking months of fighting supplies against the event of a sizable conventional conflict, while the Air Force stock requirements for such a war had to be measured in days, and not very many days at that. Either approach, consistently followed, might make some sense. The two combined could not possibly make sense. What we needed was a coordinated strategy seeking objectives actually attainable with the military resources available.

We are moving with all reasonable speed toward a properly balanced force structure. I say with all reasonable speed because there would be enormous practical difficulties in trying to get this job done overnight. But we are moving as fast as we sensibly can to balance men against supplies; deployable divisions against sea and airlift capability to handle those divisions; ground combat units against tactical air squadrons to support those units.

A realistic reappraisal of our needs resulted in a reduction of stated requirements by $24 billion, but also in a doubling of the division-months of combat equipment actually on hand. The fact is, that in the past, so-called requirements bore almost no relation to the real world: enormous requirements existed on paper, often almost entirely disembodied from the actual size and nature of the procurement program. There were gross inventory imbalances: the Army, for example, while in general far short of its stated requirements, had 270 percent of its requirement for 105 mm. towed howitzers, 290 percent of the requirements for 4.2-inch mortars; we had 10 times as many 2.75-inch rockets as were required. By taking a more realistic look at the whole requirements picture, we were able, for example, to save $150 million on Sparrow missiles for the Navy and Air Force, $163 million on Army .50-caliber machine guns.

The new form of budget for the first time grouped together for planning purposes units which must fight together in the event of war. The Navy strategic force, the Polaris submarines, are considered together with the Air Force Strategic Air Command; Navy general purpose forces are considered together with the Army and Marine divisions and the Air Force Tactical Air Command. This kind of reform provides substantial improvement in the effectiveness of our Military Establishment. Even where it does not lead directly to lower expenditures, it is economical in the true sense of the word; that is, it gives us the maximum national security obtainable from the dollars we do spend. We can imagine many different kinds of wars the United States must be prepared to fight, but a war in which the Army fights independently of the Navy, or the Navy independently of the Air Force, is not one of them. Quite obviously, the coordination of the planning of the four services makes eminently good sense on the narrowest military grounds.

So I would repeat: It is a mistake to equate our efforts toward improving effectiveness and efficiency solely with a desire to save money. That is very important. But military effectiveness is even more important. Money savings are what is easiest to talk about: For it is easy to explain something in terms of saving x hundreds of millions of dollars; and complicated to get into the details of planning and logistics, and the like. But the fact is that the total effort is aimed both at saving money and improving military effectiveness. And it is the latter, improving the effectiveness of our Military Establishment, which is the first priority, for it is the latter which directly affects national security.

Where the situation becomes more complicated is when decisions must be made on requested force level increases or development or procurement of new weapons.

The first thing to remember is that adding a weapon to our inventory is not necessarily synonymous with adding to our national security.

The second thing to remember is that even if we were to draft every scientist and engineer in the country into weapons development work, we could still develop only a fraction of the systems that are proposed. We must pick and choose very carefully among the proposals to get the ones on which we should actually proceed. This process of choice must begin with a requirement for solid indications that a proposed system would really add something to our national security. Even then, we still have to pick and choose, but we cannot even seriously consider going ahead with a full-scale weapons system development until that basic requirement has been met.

The whole subject of research and development management deserves a separate speech. Development costs alone on typical major weapons systems today average upward of $1 billion. Over a billion dollars was spent on the atomic airplane, which was little closer to being a useful weapon when we canceled it, shortly after taking office, than it had been half a dozen years earlier. Eighty million was spent on the Goose decoy missile, essentially a pilotless aircraft that the enemy would confuse with our B–52's. But the device, once launched, could not be recalled. Since the B–52's have to be launched on ambiguous warning to avoid being destroyed on the ground, the nonrecallable decoys were obviously incompatible with the B–52's. These are a few examples of the sort of thing we hope will happen less often in the future.

The RS–70 is an example of a weapon which, it seems to me, fails to meet the basic requirement for a major systems development: a solid indication that the weapon, if developed, would add significantly to our national security. It happens to be a particularly expensive weapon: to develop, procure, and operate a modest force of these planes would cost us at least $10 billion. Yet considering the weapons we already have, or will have by the time the RS–70 could be operational, it is very hard to see how this weapon would add to our national security.

The whole debate on the RS-70, in fact, has tended to be conducted in terms which have very little to do with the facts of the situation. There is a lot of talk about missiles versus bombers. I have no feeling about missiles versus bombers as such. If bombers serve our national interest, then we should be interested in bombers; if missiles, then we should be interested in missiles; if a mix, then we should be interested in the mix. As General LeMay observed: "If kiddie cars will do the job, we will use them." But the question is really not about bombers versus missiles, because the RS-70 is not a bomber in anything like the traditional meaning of the term. The RS-70 would carry no bombs. It would attack its target with a very complex air-launched missile system from distances of hundreds of miles. Now there are various platforms from which to launch missiles. We can launch them from hardened silos in the ground; we can launch them from submarines under the sea; we can launch them from aircraft. The question is not bombs versus missiles. We are all agreed it must be missiles. The debate is about alternative launching platforms and alternative missile systems. And the particular launching platform and missile system proposed in the RS-70 program just is not an effective means to accomplish the missions proposed to be assigned to it.

Skybolt was a somewhat different story. The Skybolt development was begun in 1959 to meet a very specific need. This was to clear a path for our bombers by knocking out the enemy's air defenses. The defense suppression role is vital: unless it is performed, the bombers cannot get through to their targets. One reason that it is now agreed that by the 1970's the traditional manned bomber will be obsolete is that by then we anticipate it will be more costly to suppress air defenses in order to carry out an effective bombing attack than it will be to attack the target directly with missiles. Even now, bombers are of limited value unless we have something that can go in ahead and clear a path for them. That means a missile.

The Hound Dog had been developed for that job, but the Skybolt, it was planned, would do it much better. Two important things have happened during the Skybolt development that changed this judgment: First, the development itself fell far short of its goals: Skybolt turned out to be much more expensive than had been anticipated; it would be less accurate than had been anticipated; it would take longer to achieve acceptable levels of reliability than had been anticipated. Second, we had been successful in developing other weapons that were still on the drawing board when Skybolt was proposed. What all this added up to was that while the defense suppression role remained vital, Skybolt was no longer vital. In fact, it became clear that by using the already developed Hound Dog plus some additional Minutemen, already developed, we could do the defense suppression job for about $2 billion less than we could by continuing to go ahead on Skybolt as if nothing had changed since 1959.

These two illustrations, the RS-70 and Skybolt, point up some of the fundamental considerations that must enter into defense policy decisions. Does the proposal really add something significant to our national security? If the proposal does serve an important need, does it do so as well as other alternative means of reaching the same end? Do the assumptions on which you based your preliminary decisions several years ago still hold true?

Let me note also another reason for restraint in pushing ahead uncritically on proposed new weapons of doubtful importance. As weapons systems grow more complex, more expensive, and more difficult to maintain in a high state of military readiness, it is essential that we limit as far as possible the number of new systems that we bring into operation; for we want to be as sure as possible that we can depend on every system to operate when it is really needed. A basic fact of life is that under the chaotic conditions of combat you do not get anything like the efficiency of weapons systems that you get on a test range. Relative simplicity is a most desirable characteristic of a weapons system, or of a combination of systems.

One of the difficulties in the past has been the tendency of planners, concentrating on a particular proposed system, to forget that every additional bit of complexity you add to your operation tends to degrade the overall efficiency of the operation. Eventually you reach a point where the advantage of adding a new system is outweighed by the effect of the additional complexity. We have accumulated some disturbing evidence about the effect of proliferation of weapons systems in the recent past on the operational dependability of those systems. We don't want to put ourselves in the position of the camera bug who weights himself down with so much specialized equipment for every contingency that he actually gets poorer results than a more lightly equipped competitor. And let me add that not only do the proliferation and complication of weapons reduce dependability, but they are also major factors contributing to enormous excess inventories of parts and equipment—excesses which today amount to over $12 billion.

These considerations had a great deal to do with the TFX decisions. On that issue, the really difficult decision was not the choice of contractor, but the cancellation of the Services two-plane program and the substitution of a single aircraft to serve both the Air Force and the Navy. After extended discussion and great controversy, both the civilian and military leaders now agree such a program will meet the military requirements. It will yield a saving of approximately $1 billion. The choice of a contractor for such an aircraft was a subsidiary decision. Both contractors presented acceptable designs, each capable of meeting the military requirement, and with little to choose between them on the basis of performance. The choice of contractor, therefore, could be determined by the civilian authorities who are charged by law with making such decisions, on considerations of ultimate cost and program risk.

What I have been suggesting in these illustrations is that the question of how to spend our defense dollars and how much to spend is a good deal more complicated than is often assumed. It cannot be assumed that a new weapon would really add to our national security, no matter how attractive the weapon can be made to seem, looked at by itself. Anyone who has been exposed to so-called "brochuremanship" knows that even the most outlandish notions can be dressed up to look superficially attractive. You have to consider a very wide range of issues—the missions our forces must be prepared to perform, the effects of a proposed system on the stability of the military situation in the world, the alternatives open to us for performing the missions required.

You cannot make decisions simply by asking yourself whether something might be nice to have. You have to make a judgment on how much is enough.

I emphasize judgment because you can't even be sure yourself, much less prove to others, that your decision was precisely right to the last dollar—even to the last billion dollars. But the decision has to be made.

There is an important difference between the way we make these tough decisions today, and the way they used to be made. Formerly, an arbitrary budget ceiling was fixed for national defense, and funds were then apportioned among the services. Today we examine all our military needs, and then decide at what point our military strength is in balance with the requirements of our foreign policy.

There are, of course, sharp differences of opinion on where we should spend our marginal defense dollars. And here is where the responsibility most clearly falls on the Secretary of Defense, because here is where it must fall not only constitutionally but under any rational system. For these decisions can only be made from the point of view of the Defense Establishment as a whole, not from the point of view of the individual services. Indeed the very biggest decision—such as the basic kinds of forces we need, and the occasions on which we might want to commit those forces—must be made at an even higher level: for they involve basic questions of national policy which transcend the interest of the Defense Department, or the State Department, or indeed any part of the Government, and must be made at the Presidential level.

Earlier, I described the chaotic situation that resulted from the individual Services deciding unilaterally what kind of defense preparations were most urgently needed. Each of the services had a different concept of what kinds of wars we should be prepared to fight, with the result that the forces under the Army, Navy, and Air Force simply did not fit together in the way they must to maximize their combat effectiveness. Now, this same problem comes up when the services recommend weapons systems. There is nothing wrong with that. It is inevitable. The services properly fight hard for their viewpoints. This is probably the greatest single advantage of having separate services, instead of one unified service. But as a practical matter, although it is important to consider a variety of alternative policies, at the end we must have one defense policy, not three conflicting defense policies. And it is the job of the Secretary and his staff to make sure that this is the case, just as it is the job of the President to see that we have one national security policy, and not a series of conflicting policies in the State Department, the Treasury, the Defense Department, and so forth.

There is nothing innately desirable about centralization. But the fact remains that when national security decisions affect broad interests they must be made from a central point, not from subordinate points each specially concerned with one part of the forest—and not even by a committee made up of representatives of the different parts of the forest. For the nature of committees is to compromise their special interests, which is not the same as making the decision from the point of view of the national interest.

The Secretary of Defense—and I am talking about any Secretary of Defense—must make certain kinds of decisions, not because he presumes his judgment to be superior to his advisors, military or civilian, but because his position is the best place from which to make those decisions.

This same kind of argument applies when economic interests affected by defense decisions generate, as they inevitably will, political pressures on defense officials. Such pressures are an intrinsic and necessary part of a democratic political process. There are a good many advantages in forcing public officials to listen to people outside of their own staffs who do not share their views and assumptions. But it is the duty of Government officials, representing the national interest rather than any smaller interest, to stand up to these pressures where what is asked cannot be reconciled with the national interest.

No single speech can do justice to the full complexity of defense decisionmaking. But at heart the problem comes down, always, to the same questions: What is really in our national interest? What will help this country to play the role we want it to play in this terribly critical period of the world's history? We are interested in saving money, in alleviating economic hardships from base closings and the like, in sound military-civilian relations, in the whole range of issues which tend to dominate the headlines. But the national interest towers above them all; and it is the national interest, above all, that we seek to serve.

OBJECTION TO EARLY CONSIDERATION OF APPROPRIATION BILLS

Mr. PROXMIRE. Mr. President, customarily all Senators give unanimous consent to waive the 3-day rule. Appropriations measures have often been taken up a day or two after the committee has reported, and with very little time for Senators to study hearings and committee reports and to be prepared to act on them.

What has happened today in connection with the supplemental appropriations bill is typical. On Tuesday, the majority leader asked me if I was willing to have the bill brought up the following Monday, which is next Monday. This was in compliance with the 3-day rule and gave time over the weekend to study the measure. Of course, I agreed.

This morning I was asked by a distinguished Senator to waive the rule, so the bill could be taken up and passed on Friday of this week. As a matter of accommodation to a colleague, I reluctantly agreed.

But this will be the last time I shall waive this right, unless a clear need for prompt passage can be shown.

This supplemental bill involves more than $1½ billion of the taxpayers' money. It deals with a broad complexity of spending programs. It involves a $52 million increase in the appropriations requested by the House. It is extremely difficult to determine by how much, if any, this measure should be reduced.

But if Senators do not take the time to analyze these huge spending proposals when they come to the floor, how can they possibly vote responsibly on spending huge sums?

Majority Leader MIKE MANSFIELD has been doing an excellent job of handling important legislation under very difficult circumstances, and after a gallant fight to speed up our record slow start.

I am very reluctant to add to the majority leader's difficulties, by holding up Senate consideration of appropriation bills. But I can see no other alternative to a responsible discharge of our duty to the taxpayers.

Mr. President, I make this statement with great reluctance; but I feel that under the circumstances this is necessary, because these bills are extremely difficult to analyze. The hearings being held right now before our Joint Economic Committee emphasize this fact. That is why I am serving this notice now. However, I shall not object to having the supplemental appropriation bill taken up on Friday.

Mr. MANSFIELD. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I am very happy to yield to the majority leader.

Mr. MANSFIELD. What the Senator from Wisconsin has said is correct, although I believe that if he will search his memory, he may recall that I left a small opening, so that if it proved at all possible for the supplemental appropriation bill to be brought up on Friday, I could see him again, and, if he had time to look at the hearings and at the bill itself, he would reconsider.

Frankly, I do not know whether it will be possible to bring up the bill on Friday. Other developments which may occur may prevent our taking it up then.

However, I did request, through the staff of the Appropriations Committee, that the Senator from Wisconsin be contacted, and asked whether he would, on the basis of his having had a chance to study all the pertinent material, be willing to consider the possibility, if circumstances permitted, of permitting the supplemental bill to be taken up on the coming Friday.

As he has said, he has graciously consented to have that done. I believe that this morning he did receive a copy of the hearings and a copy of the report.

I wish to say that the Senator from Wisconsin has been most insistent on seeing to it that he has the necessary time in which to study these most important bills, and that on many occasions he has allowed us to bring up such a bill in less than 3 days after the report was filed—which is allowed under the rule—after he had a chance to study and to peruse the contents of the bill in question.

Mr. PROXMIRE. I thank the Senator from Montana.

Mr. President, what the majority leader has said is, of course, absolutely correct.

I yield the floor.

THE MURDER OF WILLIAM L. MOORE

Mr. BREWSTER. Mr. President, last night while alone and peacefully walking along U.S. Highway 11 about 60 miles northeast of Birmingham, Ala., William L. Moore, a citizen of the State of Maryland, was brutally and wantonly shot and killed by a person, or persons, as yet unknown.

The exact facts of this murder are not now known, but I predict that William Moore's death and the manner of his death will not soon be forgotten.

Who was William L. Moore, and what—we must ask ourselves—had he done to incur the enmity of his murderer?

William Moore was a 35-year-old white man, a native of the State of New York, and in recent years a resident of Baltimore, Md. He was a career Federal employee, a mailman in the Baltimore City Post Office. He was a combat veteran of service with the U.S. Marine Corps in the Pacific during World War II. He is survived by his widow to whom he had been married for many years. I have related a brief sketch of who and what William Moore was before his life was suddenly ended by two pistol bullets on an Alabama roadside.

What then was his fault? Why did some depraved mind conceive and carry out his execution? He was a man who strongly believed in, to quote his own words, "The right of peaceful protest." He had taken his annual leave from the Post Office and was embarked on a solitary walk from Chattanooga, Tenn., to Jackson, Miss., to deliver a personal letter to Gov. Ross Barnett expressing his personal feelings on the problem of race relations.

There may be some who will classify Mr. Moore as a crusader, as an eccentric, but it appears from the facts now at hand that he was only doing what he professed to do—exercising his inalienable right for peaceful protest against the conditions which he personally abhorred. He was not part of an organized group. He was not engaged in an activity calculated to incite civil unrest or riot.

William Moore is dead. The deed cannot be undone, but I am sure my colleagues in the Senate join me in calling on the law enforcement officials of the sovereign State of Alabama to launch an all-out effort to swiftly ferret out and bring to the bar of justice his murderer or murderers.

This heinous crime has snuffed out the life of one citizen, but more than that, it painfully and forcefully reminds us that anarchy's ugly head has reared again in our land.

The freedom we enjoy is bound to our respect for the law. Disrespect for and disobedience of the law restricts the area of freedom we all enjoy. Our society can tolerate disagreement because we know that disputes can be settled within the framework of our judicial and legislative system. Our society cannot and will not tolerate defiance of the law. The failure to take swift and deliberate action under the circumstances in this case could have lasting repercussions throughout our country.

RICE QUOTAS

Mr. WILLIAMS of Delaware. Mr. President, in June 1962 my attention was called to the alleged abuse in the assignment of rice acreage allotments in Matagorda and Brazoria Counties, Tex. Allegedly these irregularities involved certain officials of the office personnel and pertained to several illegal transfers of producer rice allotments between Matagorda and Brazoria Counties. Involved in such irregularities were charges that in certain instances the producers were paying some of the county office employees for their cooperation in these illegal transfers.

Following my inquiry to the Department of Agriculture of June 29, 1962, I was advised that the Department had already received similar allegations and that they were in the process of an investigation.

Under date of April 3, 1963, I received a report from the Department of Agriculture, signed by Mr. H. D. Godfrey, Administrator of the Agricultural Stabilization and Conservation Service, confirming the results of their investigation and outlining the prosecutions and disciplinary actions which resulted therefrom.

I will ask unanimous consent that a copy of this report be printed in the RECORD immediately following my remarks here today.

This report confirms that there was a rather widespread abuse under which certain employees were receiving illegal payments for their part in arranging the illegal transfer of these rice allotments. Criminal indictments and convictions were obtained against several individuals involved in the conspiracy.

As one who on occasions has been a critic of the Agriculture Department this time I wish to commend the Secretary of Agriculture, Mr. Freeman, upon the prompt manner in which he initiated this investigation when it was called to his attention and the diligence with which his Department has prosecuted those responsible.

I ask unanimous consent that the Department's letter of April 3, 1963, signed by Mr. H. D. Godfrey, Administrator of Agricultural Stabilization Conservation Service, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURAL STABILIZATION AND
CONSERVATION SERVICE, OFFICE OF
THE ADMINISTRATOR,
Washington, D.C., April 3, 1963.

Hon. JOHN J. WILLIAMS,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILLIAMS: This is in further reference to your letters of June 29, 1962, and February 28, 1963, with respect to multiple assignments of rice acreage allotments in Matagorda and Brazoria Counties in Texas.

On June 3, 1962, Carl E. Lively, the Matagorda ASCS county office manager died of cancer. Immediately thereafter the Texas State office became aware of some indicated rice allotment irregularities in the county. A preliminary investigation by State office personnel pointed up several illegal transfers of producer rice allotments between Matagorda and Brazoria Counties. A further check in Brazoria County confirmed their suspicions. Similar transfers appeared to have taken place between these and other counties, Jackson and Waller.

Evidence indicated certain persons in the county offices of Brazoria, Matagorda, Jackson, and Waller Counties had accepted money from producers for rice acreage allotments or for increases in producer allotments.

The services of the Agricultural Stabilization and Conservation Investigation Division, Office of the Inspector General; Agricultural Stabilization and Conservation Internal Audit Division, Office of the Inspector General; and the Federal Bureau of Investigation were requested on or about June 8, 1962, to determine the extent of the acreages and personnel involved. As their findings were disclosed, certain actions were taken by the Department.

When the investigations were well under way it became apparent that the indicated violations fell into the following categories:

A. Instances where a producer paid a county office employee annually over the past 2 or 3 years a monetary fee per acre for an increase in his producer rice acreage allotment. These irregularities appeared to be confined to four counties. This allotment acreage is usually duplicated by having been allocated to two or more farms and planted, but in some cases the producer allotment so allocated was in the name of a fictitious person.

B. Instances where two producers entered into an agreement or partnership for the purpose of producing rice on a joint basis, although it appears that one of the producers actually withdrew from the production of rice and was paid money at the time by the other producer for the use of his allotment, on an annual or permanent basis. In either instance, annual applications for allocation of producer allotments to a farm were approved on the basis that both producers were to be "engaged in the production of rice" on the farm. Effective with the 1958 crop year, regulations have provided for the recall of any producer rice acreage allotment and a reduction of the farm allotment upon a finding after a scheduled hearing before the ASC county committee, that the producer was not "engaged in the production of rice" as indicated at the time of allocating his producer allotment to the farm.

Category A cases are of a limited number; category B cases are numerous and affect many producers directly and indirectly. One or more years during the period 1958 through 1962 are involved in each. However, subsequent to the initial action taken by the State committee, which resulted in the recall or revocation of allotments in the category B cases, many of the producers involved have furnished the State committee with evidence which substantiated their claim that they were "engaged in the production of rice" in the 1962 crop year, thereby clearing their operations for such year.

Your inquiry was directed to category A cases in Brazoria and Matagorda Counties.

The excess or unexplained acreages in this category in Brazoria County from 1958 through 1962, and the illegal transfers of such acreages which emanated from Brazoria County, during this period, are, as follows:

	1958	1959	1960	1961	1962
Brazoria	90.0	1,518.7	1,706.0	1,541.1	2,357.0
Fort Bend	----------	271.4	125.0	----------	----------
Jackson	----------	908.2	1,019.2	427.1	200.0
Matagorda	146.0	315.5	242.2	455.9	420.6
Victoria	----------	110.0	60.0	----------	----------
Waller	----------	----------	166.8	639.1	1,183.7
Total	236.0	3,123.8	3,319.2	3,063.2	4,161.3

As information became available, the field officials of the Department took steps to cancel improper allocations in the category A cases and to recall or revoke producer allotment allocations in the category B cases as provided for in existing regulations.

In view of the fact that these violations came to light just prior to or at the time of harvest of the 1962 crop of rice, administrative action was directed to 1962 cases only, with action on violations for 1961 and prior years to be taken at the earliest practicable date.

On September 7, 1962, suit was brought in the U.S. District Court for the Southern District of Texas against the Texas ASCS State executive director, the ASCS county committees and county office managers of six counties in Texas by seven Texas rice farmers, praying for a preliminary injunction to prevent the recall of the allocation of producer rice acreage allotments to farms and the cancellation or reduction of farm acreage allotments as a result thereof and asking also for affirmative relief to require the return or issuance of rice marketing cards which had been canceled or withheld. Basis for the suit was that the Government's regulations under which the defendants had acted were invalid. The suit was a class action on behalf of all farmers in Texas similarly situated and it was sought to join as party defendants all other ASCS county committees and county office managers in the Texas rice-producing area. One plaintiff withdrew from the case at the start of the trial. Trial was held on October 1, 2, and 3, 1962, and decision was rendered on October 5, 1962. The court upheld the regulation and ruled also that the plaintiffs should have exhausted their administrative and judicial remedies provided for in the Agricultural Adjustment Act of 1938, as amended. Plaintiffs appealed to the U.S. Circuit Court of Appeals for the Fifth Circuit and requested a stay order pending the appeal to prevent defendants from adjusting any more farm rice acreage allotments. The stay order was granted. Arguments before the Circuit Court of Appeals for the Fifth Circuit were heard on February 21, 1963, but to date no decision has been handed down. At the close of the argument, motion was filed by counsel for plaintiffs seeking withdrawal from the action by three of the remaining plaintiffs.

The stay order has been in effect since October 15, 1962, and the Department has been precluded by reason thereof from taking administrative action leading to the recall or revocation of the rice acreage allotment in any case in which action had not already been taken at the time the stay order was issued.

Practically all farmers whose allotments were reduced or canceled before the stay order was issued have availed themselves of the opportunity to apply for a review of the administrative action before a review committee, as provided for in the Agricultural Adjustment Act of 1938. Many hearings before review committees were scheduled, but most were postponed or continued at the request of the farmers pending the outcome of the court action.

However, six category A cases were heard by the review committee for Matagorda County and three category B cases were heard by the review committee for Chambers County. In each case, the review committee found for the farmer. The Matagorda County cases were reopened on behalf of the Secretary of Agriculture, but the review committee affirmed the prior determinations.

If the decision of the Circuit Court of Appeals for the Fifth Circuit is favorable to the Government, further administrative and review committee action will be taken in accordance with applicable regulations. If the decision is unfavorable, no such action can be taken and any prior action by the Department under the regulations would likely have been invalidated.

We are informed by the Criminal Division, Department of Justice, that as a result of the investigations, criminal indictments have been obtained against Victor M. Dziewas, Farmer Fieldman, district 13, Texas ASCS State office, David C. Stephens, Brazoria ASCS county office manager, Tacitus Thornhill, Waller ASCS county office manager, J. W. Killough, Jr., farmer, Brazoria County, Lawrence G. Newman, and (Mr.) Pearl Bellard. The latter two men posed as farmers from Brazoria County, but actually were not engaged in farming. Carl E. Lively, former Matagorda ASCS county office manager and Norman E. Scaff, former Jackson ASCS county office manager, who were involved in the investigations, are deceased. Dziewas has pleaded guilty, but has not been sentenced pending trial of Stephens, who has pleaded not guilty. Thornhill originally pleaded guilty and was sentenced to 2 years in prison and fined $30,000; he later had a nervous breakdown, his guilty plea was withdrawn and a not guilty plea entered for him, a motion was filed to test his competency, and he is now in a hospital undergoing treatment. Killough pleaded guilty, but has not been sentenced, pending trial of Stephens. Newman pleaded guilty and was given a 2-year sentence, which was suspended, and fined $1,500. Bellard has pleaded not guilty and will be tried with Stephens. It is expected that the trial of Stephens and Bellard will be held during the summer months, although no date has been set.

As it became known that employees of the Department were involved in illegal transfers of rice allotments, appropriate personnel actions were initiated. As a result, all the persons indicted who were employees of the Department were removed from office. Many others who, although not considered to have violated any criminal statute, were considered to have been guilty of conduct incompatible with their continued employment, and were removed from office or their employment was terminated. These include three county committeemen, one alternate county committeeman, one county office clerk, one performance supervisor, two performance reporters, two community committeemen, and two alternate community committeemen. One review committeeman was not reappointed when his term of office expired. Three county committeemen and four community committeemen were permitted to serve out their terms of office. In addition, resignations were accepted from one State committeeman, one community committeeman, and one county office clerk.

Personnel actions in the cases of certain persons holding minor offices or positions have been withheld pending the holding of review hearings which have been initiated by such persons, and/or the results of further investigation currently in progress. Additional personnel actions of the types indicated above are currently underway and it is contemplated that others may be forthcoming.

If we can furnish you any additional information, we shall be glad to do so.

Sincerely yours,

H. D. Godfrey,
Administrator.

EAVESDROPPING AND WIRETAPPING

Mr. ERVIN. Mr. President, several Congresses have considered the question of wiretapping and eavesdropping. The Subcommittee on Constitutional Rights, of which I have the honor to be chairman, has investigated these problems since 1958.

These investigations have been detailed and far-reaching. Initially, the subcommittee examined the general area of "wiretapping, eavesdropping, and the Bill of Rights." Then the subcommittee sought to define, as precisely as possible, the extent of wiretapping and eavesdropping and the law governing these activities. During the 87th Congress, hearings were held on various legislative proposals designed to deal with the practical and legal problems posed. One of these proposals, S. 1086 as amended, was reported by the subcommittee to the full Judiciary Committee. This bill would have permitted wiretapping by State law enforcement officers where State statute authorizes it, and then, only under court order in four specific crimes, gambling, liquor, narcotics, and prostitution, and in crimes punishable by imprisonment for 5 years or over. In addition, the bill would have incorporated certain standards for the courts in issuing and making reports on wiretapping orders.

Since that time, I have cosponsored two bills proposed by the administration which would clarify existing wiretapping statutes. The most recent of these, S. 1308, a bill to prohibit wiretapping by persons other than duly authorized law enforcement officers engaged in the investigation of specified offenses, was introduced during this session of Congress.

On April 9, 1963, the Wall Street Journal published an article entitled "Electronic Advances Aid Snoopers Using Eavesdropping Devices," which clearly points up the need for legislation prohibiting wiretapping except by officials acting within a narrowly defined area. This article illustrates with alarming clarity the serious threat which scientific developments can pose to basic constitutional rights guaranteed our citizens. I hope Congress will see fit to take appropriate action on this important subject in the very near future.

I ask unanimous consent that the article to which I have referred be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Electronic Advances Aid Snoopers Using Eavesdropping Devices—Miniature Transmitter Traps Steel Firm Spy—Government Agencies Are Big Customers

(By William M. Carley)

Guy W. Wadsworth, Jr., president of Southern Counties Gas Co., of Los Angeles, recently was shocked to find a tiny radio transmitter in his desk telephone. "We don't really know when or why it was put there, or who did it," says Mr. Wadsworth. "But it apparently had been broadcasting my private conversations to someone's receiver outside."

As Mr. Wadsworth's experience illustrates, professional eavesdroppers have been taking advantage of miniature components and other advances in electronics. Some skilled investigators build their own listening devices or "bugs." But such equipment also is produced by a handful of small electronics companies that cater mainly to private detectives, industrial security forces, local police, and Federal agencies.

These firms have been developing new gadgets and refining standard items, such as telephone tapping equipment. Solar Research, Inc., in Oakland Park, Fla., makes a device that not only records phone conversations but also prints the number, time, and date of the call on tape. It sells for $995.

Solar, which claims to be "the world's largest manufacturer of concealed listening devices," says its sales last year increased fourfold over 1961. The company sells only to law-enforcement agencies or to customers approved by them. And it offers lawmen a month-long, $175 course covering such topics as jail "bugging," concealment of wire, and telephone tapping.

"SUGAR LUMP" TRANSMITTER

"The science of investigation demands the most advanced electronic tools of the trade," advertises Tracer Electronics, Inc., of Newport Beach, Calif. Tracer offers, among other "tools," an FM transmitter, little bigger than a sugar lump, which attaches to a matchbox-sized battery. In some locations investigators plug a short antenna into the transmitter, which Tracer claims will broadcast normal conversations up to a block away for 3 days. The transmitter sells for $94.95 and a special receiver to pick up its signals costs $199.95.

James R. Swallow, of Santa Ana, Calif., who sells and services eavesdropping equipment, says he installed several sugar lump transmitters in the offices of an eastern steel forging company last year. The company wanted to learn who was leaking some trade secrets.

One night a detective monitoring the transmitter overheard the company janitor phoning technical information to a rival firm. The steel company promptly fired the janitor who turned out to be a metallurgical engineer employed by the competitor. He had posed as a janitor so he could rifle desks and files at night.

Mr. Jay Tracer, vice president of Tracer Electronics, says some aircraft companies scatter the tiny transmitters around big warehouses. A guard at a central point monitors them for the sound of shuffling feet or other suspicious noises.

CIGARETTE PACKS AND DESK SETS

Transmitters also come disguised as cigarette packs and desk pen sets and built into picture frames—with a picture of a church included by one firm. Such devices often are used by police to gain evidence on suspected blackmailers and extortionists and by private detectives working on divorce cases.

Some transmitters work without batteries. Telephone bugs similar to the one encountered by Mr. Wadsworth in Los Angeles, are designed to operate on a small amount of current drawn from the telephone line itself.

Sometimes structural interference or other conditions make radio transmission impossible. In such cases, eavesdroppers can connect a microphone to a nearby tape recorder or other receiver with electrically conductive paint, instead of conspicuous wires. The conduction coating can be camouflaged by covering it with ordinary paint.

If investigators can't gain access to a room to install listening devices they can use a spike-mike, which C. H. Stoelting Co., of Chicago, sells for $46.50. When driven into the outside wall of a room the 12-inch spike picks up conversations within the room and conducts them to listening equipment.

The Federal Government is a major customer for eavesdropping devices, manufacturers say. Some of this equipment is used for espionage and counterespionage, particularly by the Central Intelligence Agency. But manufacturers know few of the details since the CIA often buys eavesdropping devices through the Army, the General Services Administration, and dummy corporations, rather than under its own name.

Government agencies also are important customers for devices designed to detect the presence of eavesdropping equipment. The State Department received a $1.5 million appropriation to buy antieavesdropping equipment during the year ending June 30, compared with $637,000 during the preceding year. And State Department security officials are seeking about $1.5 million more for this purpose in the next budget.

For protection from eavesdroppers, Mosler Research Products, Inc., of Danbury, Conn., offers a soun-d-tect kit, which sells for $390. The kit includes a radio frequency probe that indicates the presence of concealed transmitters and an instrument, similar to a mine detector, that locates microphones hidden in walls. Mosler says its sales of eavesdropping and antieavesdropping devices have increased by 10 percent in each of the last 3 years and now exceed $60,000 a year. The company sells only to Government agencies.

Although it's legal to manufacture eavesdropping devices it isn't always legal to use them. In February a Federal grand jury in Washington, D.C., indicted three men for bugging a lawyer's hotel suite where he conferred with clients. The jury charged the three men with operating a radio station without a station license or operator's license and operating a transmitter at frequencies and strengths forbidden by the Federal Communications Commission.

A GIANT MIKE

Eavesdropping police sometimes run into legal problems, too. To check on a suspected gambling operation, Washington, D.C., police entered a vacant row house and drove a spikemike through a wall into the heat duct of an adjoining house. This converted the heating system into a giant microphone that picked up conversations throughout the home.

The police listened undetected for several days and gathered enough evidence to convict three men on gambling charges. But the U.S. Supreme Court reversed the convictions because it ruled the police tactics violated the constitutional ban against unreasonable searches.

Eavesdropping laws vary from State to State and from device to device, and for some devices the law has yet to be laid down. One manufacturer's catalog cautions prospective customers: "It must be remembered that unauthorized interception of intelligence by a third party is sometimes highly illegal. However, to the agencies who deem this instrument a useful tool in the detection and prevention of crime * * * this equipment is available."

Solar Research doesn't even list 45 of its products in its catalog. "The Government has asked us not to, so the public, particularly criminal elements, won't become aware such sophisticated devices are available," explains Jack N. Holcomb, company president.

SHIFTING OF MIDDLE TO LEFT IS TRICK

Mr. SIMPSON. Mr. President, I invite the attention of Senators to an article written by Mrs. Pegge A. Cooksley. Mrs. Cooksley of Ucross, Wyo., was awarded for the second time the Freedoms Foundation George Washington Medal of Honor.

Mr. President, I ask that the excellent article "Shifting of Middle to Left Is Trick," which brought her the award, be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Shifting of Middle to Left Is Trick

(By Pegge A. Cooksley)

February 9, 1962.

Just what is the middle of the road as related to rightwing and leftwing?

There are hawkers bouncing around who have employed the loathsome pastime of attempting to discredit our American constitutional form of government and throw off balance public logic and principle by a campaign of confusion.

These factions have been head-hammering the public with welfare-statism and bending the ear drums of individuals with sleight of hand remarks until some are actually beginning to believe that socialism is the middle of the road and that anyone right of Norman Thomas is an extreme rightwinger—a Fascist.

When this Socialist taffy-pull of the human mind is over (and should they win) we will find the finished product not quite so sweet as some have been led to believe.

Let's set, and keep, our keel on the Constitution of the United States and see who comes out left or right—red or white.

We should guard with jealousy the principles embraced in our Constitution and fend off any attempt to alter its meaning. The men who gave us our Constitution did not place their signatures on this document blindly; many of them not only sacrificed their wealth but life as well to give us something many times more precious than the Socialist promise of material gain—they gave us freedom and opportunity.

In return, this freedom and opportunity give us material gains that no other form of government can offer its people. Under our form of government the wealth is to remain with the people—not a body of government. Our free competitive enterprise system, as provided by the Constitution, encourages quality development, expansion, and creation of new jobs for more people. These things, too, are motivated and enhanced by our profit system. Once this system is disrupted we find a decay of the economic and social atmospheres.

This trick play to move the middle to left is only another effort to destroy, bit by bit, our constitutional provisions and incite our people into battle against each other even though their principles, beliefs, and loyalties are the same. By confusing the "middle of the road" issue and injecting some choice namecalling they have suppressed many people from standing up for those things they really believe in for fear of being called a Fascist or neofascist. To oppose socialism certainly does not indicate that one embraces fascism.

Our representative-democracy was set up in opposition to both national and international dictatorships, ordaining that ours would be a government for the people and by the people who would not be subject to slave state controls and regimentation such as we find in Fascist, Communist, and Socialist states.

It has been unfortunate that all liberals are being labeled "leftists" and all conservatives "rightist." Through all the namecalling and labeling we are beginning to lose the perspective of our two political parties as well as the middle of the road.

Our house does seem a little untidy and confused but we have only to read and study our Constitution of the United States to determine where the middle of the road really is. If the so-called rightwingers appear to be pulling farther to the right, 9 chances out of 10 it is only the middle of the roaders joining hands with the rightwing in an effort to pull our constitutional provisions back into true perspective.

True, there are extremists both to the left and to the right. We must approach both these segments with caution but beware of namecalling until you are sure you, yourself, are off the detour and on the straight road to freedom and constitutional government.

DEATH OF PHILLIP MAGGARD

Mr. SIMPSON. Mr. President, on March 2 a tragic airplane crash in the Philippines ended the lives of two Peace Corps volunteers, one of them 22-year-old Phil Maggard from my State of Wyoming. Since losing their son, Phil's parents have carefully sorted his mail and letters received from Filipino citizens who wrote to express their grief and shock at the death of this fine man who had given of himself to help others. Let me add that I had long counted Phil and his family among my dearest friends.

What the Maggards compiled can best be described as a tribute to this outstanding young man and his selfless work among the Filipino people, for whom he had the highest respect and admiration.

Phil's parents, with the help of their many friends, compiled a partial summary of correspondence which was printed in the Buffalo, Wyo., Bulletin.

It is apparent that Phil went to the Philippines both to learn and to teach. What he learned—especially about the image of America as discerned by his Filipino friends—does not make pretty reading.

I ask unanimous consent of the Senate to have printed in the Record at this point the Buffalo Bulletin newspaper story, including the Maggard letters.

There being no objection, the article was ordered to be printed in the Record, as follows:

Filipino People Express Deep Regret at Loss of Peace Corps Volunteer

It has been more than 6 weeks since Phillip Maggard, son of Mr. and Mrs. J. Merrida Maggard, of Buffalo, met death in a tragic air crash in the Philippine Islands, which took the life of Nancy Ann Boyd, another Peace Corps volunteer, and 25 Philippine citizens.

Since then literally hundreds of letters have poured in from the Philippine people, those who were personally acquainted with Phil and the work he was doing. Among the letters are those from public officials, including President Macapagal, of the Philippines, and dozens of public officials and mayors of various cities.

There is no question, as the communications will show, that the work being done by Phillip Maggard was outstanding. He had endeared himself to the people by becoming one of them, yet they looked up to him for his ability and genuine desire to help them become better citizens and obtain a better education.

A fund established by his parents in his memory, to be used for books and educational materials for the children in the area where he taught, has now reached $1,085.

Contributions have been made in the name of Phil Maggard to Rev. Stuart Frazier, of St. Luke's Episcopal Church in Buffalo. The Maggards are hoping to travel to the Philippines later this year and deliver the money in person to the people for whom it was raised in Lianga Bay. Any further contributions will be included in this fund.

The Philippine Airlines, at the time of the accident, offered to fly Mr. and Mrs. Maggard to the area where their son was killed. When this proved impractical, the airlines extended the offer to them for use at a later date. The Maggards have indicated they would like to make the trip this summer.

An unusual fact about Project 7 was revealed recently by a Peace Corps official. There were about 143 assigned to this project in the Philippines, and shortly before Phil Maggard's death, this group petitioned the Peace Corps office in Washington to reduce their monthly salary from $75 to $55.

The reason for this unusual request was because the Filipino teachers receive only $55 per month and the Peace Corps members wanted their salaries to be no more than that received by these teachers. Actually, they were granted only a small sum for spending money and the rest of their salary was kept in escrow in the United States for when they completed their mission.

A letter to Mr. and Mrs. Maggard from the mayor of the city of Zamboanga expressed condolences and regret at the untimely death of Phil and Nancy Ann Boyd, and it underscored the splendid work being done by the Peace Corps.

"We grieve their loss most profoundly," wrote Mayor Thomas F. Ferrer, "considering the fact that the tragedy struck at a time when the good old United States has embarked on a program known as the Peace Corps movement, dedicated to the worldwide enlightenment through education in varied fields of knowledge toward lifting up from the quagmire of ignorance and poverty and to help crush the so-called barrier of racial prejudice."

Mayor Ferrer said Phillip and Nancy Boyd and hundreds of other selfless men and women Peace Corps volunteers are working with no thought of personal gain, but only their desire to contribute their humble share in the moral, educational, and economic uplift of their fellowmen in a world being torn asunder by the ugly hands of communism.

"Phillip and Nancy Ann are gone but their memory will continue to live in the minds of a grateful people of this city and of the country in general," Mayor Ferrer concluded.

From Quezon City, Carlos del Cortith wrote: "Your son is not dead—he still lives with us. He is a symbol of a man dedicated to service of your and our countries, and for the promotion of friendship which ties us. Your son is a hero to us."

President Diosdada Macapagal had his executive secretary write to Mr. and Mrs. Maggard as follows: "To us, Phillip was an outstanding example of the Peace Corps volunteers who come to our country with the purpose of extending assistance to our people at the sacrifice of their personal ambitions and comforts. It was perhaps for this reason why our people felt over Phillip's death a sense of personal loss, as if he were one of our own people.

"We are heartened by the knowledge that you are planning to visit the Philippines next summer. This will give you an opportunity to see for yourselves that Phillip had indeed brought a gift of light and brotherhood to those countrymen of ours who had the privilege of knowing him in person."

Members of the teaching force at the Diatagon elementary school at Lianga all signed a letter extending sympathy. "We share with you the grief of his passing. He was an asset to the school and the community life and his unselfish concern and devoted service to the community and our children especially, will never slip from the memory of the people he loved and who have learned to love him as a brother and friend.

"Of course, all of us will sooner or later follow him. In the interim that we are still in the battle for life existence, it behooves that we pull together and say our prayer that Phil may rest in peace."

One young man addressed his letter to Mrs. Maggard as "Dearest Mommy."

It was a very touching letter, which read in part:

"DEAREST MOMMY: Maybe you will be surprised why I'm calling you mommy. You know, I'm one of the best friends of your late son, Phillip. He treated us as his brother, even in our young ages. My name is Lolito Rivos Ladanan at the age of 13 years. During our schooldays Phil was one of our schoolteachers. During his vacant time wherever he went (picnic, boating, show, playing, hunting, and every kind of outing) there we were.

"On March 2 we heard a news from the radio that a plane from Zamboanga to Davao was crashed. Upon hearing this, the whole family of ours prayed to God that Phil will not be one of the accidents.

"But on Sunday it was very clear that Phil was one of the dead. All of us cried with tears on our eyes, especially my mother. The whole night we did not fall asleep, we can't find anymore a friend like him.

"You know, Mommy, we have a prayer every night, led by my mother. Lastly, I'm sending my condolence. Because of late Phil, let me call you Mommy, and you call me, your son.

"LOLITO RIVOS LADANAN.

"(Errors are under your consideration.)"

A close friend of Phil's wrote a very tender letter of his last day with the people of Lianga Bay logging camp. It was from Irene Panganika, who said "the tragic event about Phil has caused us all a heavy heart. We have come to love him in his stay here.

"He is a person with such a warm personality and had spent his time with full dedication to the Peace Corps. You should have seen how these children cried with disbelief when it became known he was one of the victims.

"Before he left he went all around the place and bade goodbye. He mingled with all the people with great ease. He could discuss things intellectually with the older people and could act like a boy with the kids.

"He had just moved to a new house and we had planned a sort of house-warming.

"We will miss his jokes, his laugh and all the good things he used to do. I work as a laboratory technician in the hospital and everyday he used to pass by with a bunch of children. We have an organization here and we are going to dedicate a novena of prayer for his soul.

"I am trying to collect pictures taken of him and will try to send them to you soon. We really loved Phil as much as you love him."

Rebecca S. Pena of Quezon City wrote as follows:

"Since I am at the other end of the world in the country where your son gave his life to help make a better place for us to live in, I feel the compulson to try and tell you in my inadequate way that we share your grief and your loss. No one can give of himself to us without becoming a part of us, too.

"That Phillip gave so unselfishly cannot be questioned—ask any Filipino youngster whose life he had touched. I don't know who wrote this line, but it is the most fitting tribute to Phillip—'No man ever stood so straight as when he stooped to help a boy.'

"To you and to that great country of yours, in behalf of Filipinos in all walks of life, especially the underprivileged, to whom he gave his devotion, with aching hearts we thank you ever so much for Phillip."

Pedro P. Senarillos, of Hagonoy, Davao, Philippines, wrote that—"We can never repay you and the American people, for the contribution to the cause of world literacy.

"We are deeply grateful for the unselfish endeavor of the Peace Corps volunteers, most especially your son, who had foregone the conveniences, luxuries, and comforts that your American home could offer, in order to give my countrymen the blessings of a higher form of education.

"Your son, you may rest assured, will forever live in the hearts of my people, particularly to us living in the immediate vicinity where he died."

From San Juan, Rizal, Philippines, Rudolfo Mr. Gaerlan wrote: "I find words inadequate to convey to you my personal feeling of sympathy on the recent death of your beloved son * * * our friend and brother * * * your own Phillip, who had a special mission in life as a Peace Corps volunteer and much depended upon his performance as an 'ambassador of goodwill' from America.

"We are greatly indebted to you and the American people for having sons and daughters who left the comforts of home to come to our backward region to shed a light in the darkness of ignorance and disease and want. We can never repay you for the amount of time and effort and sacrifice that your beloved son gave to us, and I am sure that he would have given us more had not our Lord beckoned him to His eternal kingdom."

Amelito R. Mutuc, ambassador from the Philippines in the Washington embassy, wrote that he regretted he could not attend the funeral, but expressed his deepest sympathy.

"No amount of human effort can assuage your pain and loss, but you can take consolation and pride in the fact that your son, Phillip, died for a noble cause, in service, not only of your country, but mine as well.

"I have met the Peace Corps volunteers in the Philippines. I have seen them at work and know the tremendous impact which their selfless endeavors have made upon my countrymen, who will always remember your son for his help, counsel, and friendship. To the people and government of the Philippines, to whom he had endeared himself, he did not die in vain."

From the Governor in Cebu City an eloquent letter was written, pointing out how much the Philippine people appreciated what Americans did at Corregidor, where they fought side by side with Filipinos for the cause of freedom and peace.

"Your son has already carved a temple in our hearts and as long as those hearts beat, we shall always remember him. Together with our condolence for losing a beloved son, goes our congratulations for bringing up a hero."

There are literally hundreds of other letters, many eloquently describing how much the people of the Philippine Islands have appreciated the work of Peace Corps members. Many of them demonstrate the confidence these people have in the future and how much they appreciate what America has done, and is doing, to bring happiness and prosperity to a proud, but backward, nation.

Mr. SIMPSON. I beg the Senate's indulgence for another moment to read from one of his letters that has not yet been published. Phil wrote:

> Speaking of images, the American image here is distorted to a fantastic degree. To Filipinos we possess Hollywood, Las Vegas, rock 'n roll, big cars, and sex. And, due to their worship of us, they imitate us. Consequently, rock 'n roll is all you hear on the radio, the twist is taught in the schools, and boys wear ducktails. There is absolutely nothing in Western Culture. No symphonies, no art, no literature. All Filipinos know who Chubby Checker is, but they can't tell you who wrote St. Matthew Passion, nor anything about Lincoln Center. The books sold here are all comics or True Confessions—no U.S. News & World Report nor good American novels. Movies shown here are grade Z or worse. A Filipino will promptly tell you the latest on Liz Taylor's sex life, but they would be blank if you mentioned Jonas E. Salk, Leonard Bernstein, or Carl Sandburg. It is the cheap, smutty, and flashy America that is brought to the Filipino. And some gigolo in Hollywood is paying alimony of $50,000 to his fifth wife from the pesos Filipinos pay to see one of his pictures, instead of for food. (Current cinema here is House of Women, The Wild and Wanton, and Twist All Night.)

I invite particular attention to this point:

> If the Peace Corps can even be a catalyst in the eradication of this image, then we will have served our country well.

I recommend this letter not only to the Peace Corps for its attention, but also to the U.S. Information Agency as well, for it is a description of the American image as seen through the eyes of a man who truly gave his life to improve that image.

RAMPART DAM—THE GREATEST HYDROPOWER DAM IN THE FREE WORLD

Mr. GRUENING. Mr. President, in central Alaska studies of the greatest hydroelectric project in North America, indeed in the Western World, are nearing completion. They deal with the proposal to construct a dam on the famed Yukon River and to harness its mighty waters, now running wastefully to the sea, for the generation of hydroelectric power, for flood control, and for navigation purposes.

Funds to undertake the study of the Rampart Dam project were first secured in 1959 when, over administration protests, Alaska's Senators persuaded the Senate Appropriations Committee to include the sum of $100,000 in the Public Works Appropriations Act for 1960. The studies are being made under the general direction of the U.S. Army Corps of Engineers, and the work is being watched expectantly by citizens of both the free and captive worlds.

We of the West tend to overlook the technical abilities of the Iron Curtain nations, although we know that our grand Grand Coulee has been surpassed by two Russian dams on the Volga River which have been completed—Volgograd with a capacity of 2.3 million kilowatts and Kuibyshev with a capacity of 2.1 million kilowatts.

And, in Russian Siberia today workmen are constructing two larger dams—one at Bratsk on the Angara River which will have a capacity of 4.5 million kilowatts and a second at Krasnoyarsk on the Yenisey River which will have a capacity now estimated to be 6 million kilowatts.

Our Rampart studies should be carried forward to conclusion as rapidly as possible. Any needless delay is harmful to the Nation. Rampart Dam will accelerate the growth of our gross national product. The installed capacity of Rampart will be close to 5 million kilowatts, enough to furnish Alaska with a stable economy which it does not now have, by attracting industries requiring large quantities of low-cost power. Rampart's power will be the lowest cost power under the American flag.

The need to develop the resources of Alaska concerns President Kennedy. As a Member of this body, he said on June 24, 1960:

> We must meet the challenge of Alaska—the challenge to reap its abundance, build its strength, and provide a reservoir of natural wealth for a growing America. We must, of course, press forward with bold, and vitally needed projects such as the Rampart Canyon Dam.

Later the same year, inside Alaska, then Senator Kennedy continued his efforts on behalf of power development within the State. He reminded his listeners at the State fair in Palmer that the U.S.S.R. is well aware that power is "the key to the future—to the development of industry—to the dispersal of armaments—to the race for power and prestige in every field of endeavor." After pointing to the advances of the Soviets in the hydroelectric field, he said on September 4, 1960:

> The tragic fact of the matter is that if Alaska still belonged to the Russians, Rampart Canyon Dam would be underway today.

Later the same day in Anchorage, then Senator Kennedy described the Alaska of the future as he foresaw it:

> A land of over 1 million people—a giant electric grid stretching from Juneau to Anchorage and beyond. I see the greatest dam in the free world at Rampart Canyon, producing twice the power of TVA to light homes and mills and cities and farms all over Alaska.

Under the direction of President Kennedy the Rampart Canyon studies are nearing completion. That giant electric grid will be a reality.

The Alaska Legislature endorses Rampart.

The 20 members of the senate on April 4 approved and passed Senate Resolution 60 in which the Federal agencies involved were urged to speed the conclusion of the remaining Rampart and other Yukon River studies, "and to report promptly to the Congress, and make possible the early request by the Alaska delegation in Congress for legislation providing authorization and appropriation for the Rampart Canyon Dam."

We do not have time to drag our feet and any agency so inclined does so only to the detriment of the Nation's strength and economy.

Mr. President, I ask unanimous consent that the full text of the resolution be printed in the RECORD at this point in my remarks.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION 60, IN THE LEGISLATURE OF THE STATE OF ALASKA—THIRD LEGISLATURE, FIRST SESSION

(By Senators Hansen, Harrison, Hopson, Kilcher, McNealy, Nolan, Owen, Peratrovich, B. Phillips, V. Phillips, Smith, Walsh, Banfield, Begich, Bradshaw, Bronson, Butrovich, Coghill, Foster, and Hall)

Whereas a sound and vigorous development of Alaska's resources is desirable, and indeed essential, not only from the standpoint of the people of Alaska but of the Nation whose great northernmost and westernmost outpost and underdeveloped dominion and potential is the State of Alaska; and

Whereas a diversification and enlargement of Alaska's economy is needed for the above declared objective; and

Whereas the resources on which the people of Alaska depended when their numbers were far fewer in territorial days, namely gold mining and fishing—both now diminished in quantity and in economic impact—will not suffice to create a vigorous, thriving, and expanding economy; and

Whereas for years the Federal Government has developed the hydroelectric resources of the 48 older States with such projects as the Tennessee Valley Authority, Hoover Dam, Grand Coulee Dam, Bonneville Dam, Hungry Horse Dam, and others, and is now engaged in the continuance of this sound utilization of our water resources with Glen Canyon, Arkansas Frying-Pan, and other hydroelectric projects; and

Whereas the greatest hydroelectric project on the North American continent, and indeed in the free world, is available on the Yukon River in Alaska, which can generate power at 2 mills a kilowatt hour, which will be the lowest cost power under the American flag; and

Whereas studies by the Corps of Engineers of the U.S. Army have already established the engineering feasibility of the dam at Rampart on the Yukon; and

Whereas the marketability of its low-cost power and the consequent attraction to Alaska of diverse industries and the utilization thereby of Alaskan and other raw materials not practically exploitable without low-cost power has been determined in the authoritative study by the Development & Resources Corp., of New York, a qualified agency retained by the Corps of Engineers for that purpose; and

Whereas the United States, through its foreign-aid program, is financing hydroelectric projects in many parts of the world among people who pay no taxes to the United States, and the products derived from them will be competitive with our own U.S. products; be it

Resolved, That the Alaska Senate strongly urges the Federal agencies involved to speed the conclusion of the remaining Rampart and other Yukon River studies, and to report promptly to the Congress, and make possible the early request by the Alaska delegation in Congress for legislation providing authorization and appropriation for the Rampart Canyon Dam; and be it further

Resolved, That copies of this resolution be sent to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable Robert S. McNamara, Secretary of Defense; the Honorable Stewart L. Udall, Secretary of the Interior; the Honorable Cyrus R. Vance, Secretary of the Army; the Honorable Lt. Gen. W. K. Wilson, Jr., Chief of the Corps of Engineers, U.S. Army; the Honorable John W. McCormack, Speaker of the House of Representatives; and to the members of the Alaska delegation in Congress.

Passed by the senate April 4, 1963.

FRANK PERATROVICH,
President of the Senate.

Attest:

EVELYN K. STEVENSON,
Secretary of the Senate.

Mr. GRUENING. Mr. President, the story of Rampart is exciting. It is a story of America on the march, a march of progress. Mrs. Irene E. Ryan of Anchorage, Alaska, recently told the story up to this moment in history at the conference on "Yukon's Resources, Today and Tomorrow," held in Whitehorse in the Yukon Territory of Canada.

Mrs. Ryan is a mining engineer. She served in both the Alaska Territorial House of Representatives and Senate and later was a member of the Alaska State Senate. Mrs. Ryan is well acquainted with the work of the Rampart Economic Advisory Board, having served as a member by appointment of the Chief of the Corps of Engineers. She is admirably qualified to speak about Rampart and to describe the potential of this vast project which will be located at the edge of the Arctic Circle in a canyon 100 miles northwest of Fairbanks.

Mrs. Ryan can speak authoritatively of the power which will be generated by the dam at the bus bar, for the lowest cost under the American flag—2 mills per kilowatt-hour. The marketability of the power was fully attested to in a report made for the U.S. Army Corps of Engineers by the Development & Resources Corp. of New York. This knowledgeable agency, officered by men of national and international experience in hydroelectric development, who received earlier experience as developers and administrators of TVA, men such as the Chairman of the Board David E. Lilienthal, President Gordon Clapp, and Vice President Walton Seymour. Their report has been issued previously as a Senate document by the Public Works Committee and is titled "The Market for Rampart Power Yukon River, Alaska."

Now Mrs. Ryan has added another splendid page in Rampart's history with her Whitehorse report.

Mr. President, I ask unanimous consent that the full text of her remarks on "The Rampart Project" be printed in the RECORD at the close of my remarks. I hope my colleagues and other readers of the CONGRESSIONAL RECORD will find them helpful.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE RAMPART PROJECT

(By Irene E. Ryan, Anchorage, Alaska)

INTRODUCTION

Mr. Robert Campbell, president; members of the Whitehorse Board of Trade; distinguished guests; I consider it an honor to be invited to this conference on "Yukon's Resources, Today and Tomorrow," to tell you about the Rampart project. I wish to congratulate you for sponsoring a conference of this nature. I have felt during my years as a consulting engineer and as a member of the legislatures in Alaska that the development and full and wise utilization of the resources of our northwest quarter of the North American Continent is directly dependent upon the understanding and cooperation of the citizens of your nation and of mine. Let us meet often.

OUR INTERNATIONAL RIVER

The mighty Yukon River is one of the geographic features in which we share an interest. It, together with its tributaries and bordering resources, is one of the greatest reservoirs of undeveloped wealth on the continent. In studies to 1961 of the hydropower in Alaska, made by the U.S. Corps of Engineers, Federal Power Commission, and Bureau of Reclamation, of the total estimated potential installed capacity of 19,870,000 kilowatts, the Yukon basin has 10,743,000. To this figure on the Yukon potential should be added the kilowatts that can be developed at Taku and/or Taiya. The Yukon is the largest river flowing into the Pacific, and the fifth longest in North America. It rises as the Lewes River in British Columbia, flows through your territory before bisecting Alaska to enter Norton Sound in the Bering Sea some 2,100 miles from its source. It is the fourth in the world in capacity, being exceeded only by the Amazon, Mississippi, Missouri, and the St. Lawrence. When the potential power of this river and its tributaries has been fully developed our Pacific Northwest will support one of the largest industrial complexes on this continent. It will substantially increase the wealth of our two nations, support our growing populations with an increasing standard of living and add materially to the trade and commerce of the entire Pacific. To accomplish this task we must work together and show the industry and commerce of our two nations that the time has come to shift their interest and efforts to the Northwest.

RAMPART—THE GIANT

A survey of the waterpower potential of Alaska is relatively new. Not until the Flood Control Act of 1948, as amended by the Flood Control Act of 1950, was passed by the U.S. Congress was a comprehensive investigation of the possible hydropower potential of Alaskan rivers started. This act directed the Army under its Secretary and with the supervision of the Corps of Engineers to make a study of harbors and rivers of Alaska with a view to determine the advisability of improvements in the interest of navigation, flood control, hydroelectric power and allied purposes. When the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs of the U.S. Senate of the 86th Congress held hearings in Alaska in the fall of 1960, Colonel Hanburger, District Engineer, U.S. Army District, Alaska, appeared to make this statement:

"During the early stages of the investigation leading to Interim Report No. 7, covering the Yukon and Kuskokwim River basins, it was apparent that the Rampart Canyon project had the greatest potential power output of any hydroelectric project in the United States."

The 4,690,000 kilowatts potential first estimated from this one project (almost one-third of the total Alaskan hydropower potential) coupled with the low cost (estimated at 2 to 3 mills at the bus bar on a 50-year payout) immediately captured the interest of those Alaskans who have been hoping for some large scale development that would result in broadening our economic base and bringing in industry with year-round payrolls to the State.

Our U.S. Senator, ERNEST GRUENING, who was Governor of Alaska as a territory, was quick to realize that Rampart could secure within a relatively short time that industrial and commercial development in Alaska, which without some comparable effort, would take decades. Early in 1959 the Senator introduced a resolution in the Senate Public Works Committee requesting a full scale report on the hydroelectric capability of the Rampart project. Following this initial appropriation, Senator GRUENING, together with our Senator BOB BARTLETT and Representative RALPH RIVERS have succeeded in securing congressional approval for the necessary continuing funds to complete the investigations.

INVESTIGATION TIMETABLE

On April 24, 1959, the corps was directed to initiate the study. Following preliminary geologic investigations and mapping, test drilling of the granite rock underlying the proposed site was started in March 1961 and completed April 1962.

Funds were allocated by the corps to the U.S. Fish and Wildlife Service in 1960 to investigate the effect of the project on the wildlife resources of the area and these investigations are still continuing with assistance from the State Department of Fish and Game.

In the spring of 1961 a contract was awarded by the Corps of Engineers to the Development and Resources Corp. of New York City to make the power market study involving consideration of the local and world resources and the industries that might be established in Alaska to utilize the large blocks of low cost power. The Development and Resources Corp. is an internationally recognized consulting firm in this field. Mr. David Lilienthal, chairman, was former Chairman of the Atomic Energy Commission and Mr. Gordon R. Clapp, president, was former General Manager of the Tennessee Valley Authority.

Also, establishing thereby a precedent, an advisory board of specially qualified and recognized individuals was named to serve under the chairmanship of the division engineer to assist the corps in defining the scope of the economic study and to review the progress of the study at several stages of its development.

The members of the advisory board, which concluded its assignment in August of 1962 following review and approval of the report "The Market for Rampart Power," by the Development and Resources Corp., were Mr. Samuel B. Morris, consulting engineer, Los Angeles, Calif.; Dr. Edward Steve Shaw, Stanford University economist, California; Mr. Gus Norwood, executive secretary of the Northwest Public Power Association, Vancouver, Wash.; Mr. Frank H. Mapleton, mechanical engineer, Fairbanks, Alaska; Mr. W. T. Kegley, president, First National Bank, Juneau, Alaska; Judge Vernon D. Forbes, president, National Bank of Alaska, Fairbanks, Alaska; Mr. Bernard Gottstein, owner J. B. Gottstein & Son., Anchorage, Alaska; Mr. Edward A. Merdes, attorney, Juneau, Alaska; Mr. Stanley McCutcheon, attorney, Anchorage, Alaska; and myself.

The feasibility report, originally scheduled by the corps for completion by the fall of 1964, will according to an announcement by Col. Christian Hanburger be completed in August of this year.

The U.S. Geological Survey published in 1962, Bulletin, 1111–H, "Geologic Reconnaissance of the Yukon Flats District, Alaska."

In addition to continuing investigations by the U.S. Department of Fish and Wildlife, the Weather Bureau, and others, Mr. T. T. Contine with the Bureau of Reclamation is working under directive from the Department of Interior (which Department has been the marketing agency for federally produced power), to compile data and prepare the marketing section of the Corps of Engineers report and to prepare an impact report consisting of the summation of the views of all Interior Agencies.

In addition this year the Federal Land Department has requested withdrawal of the public domain affected, under the limitations and for the purposes defined in power withdrawals.

LOCATION

Two locations for the axis of the dam are being considered near the upstream end of 30-mile Rampart Canyon, and approximately 36 miles upstream from the confluence of the Tanana River. The site is some 30 miles northwest of Eureka (which is connected to the city of Fairbanks by road) and about 100 airmiles northwest of Fairbanks. The first, or upstream site lies approximately 3,000 feet downstream from Texas Creek. The second site is some 4,500 feet downstream from the first site. Its proposed axis falls across the center of a teardrop shaped rocky island that is exposed at low water.

HYDROLOGY

The tributary drainage area is about 200,000 square miles. Average rate of flow from this area has been estimated at 118,000 cubic feet per second and the average annual runoff (equivalent to about 8 inches from the contributing drainage area) at 85,400,000 acre feet. The reservoir behind the proposed dam would have a surface area of some 10,700 square miles (10 percent larger than Lake Erie). The storage volume would be 1,252 million acre feet; 40 times larger than that of Lake Mead behind Hoover Dam, which is the largest manmade reservoir in the United States. Because of the tremendous volume of storage it is anticipated that the seasonal drawdown will be less than 4 feet, thereby allowing the generating units to operate at peak efficiency throughout the year.

STRUCTURE

A concrete gravity dam rising approximately 565 feet above its deepest foundation would impound the water to an elevation of 660 feet. With allowance for freeboard this would place the crest at 675 feet. The crest of the dam would be about 2,800 feet long at the upstream site and about 3,900 feet long at the island site. The crest width of the dam is planned for 40 feet to allow for two lane vehicular traffic and the base width would be about 580 feet. On the basis of rough early estimates 8 to 10 million barrels of cement would be required. However, the concrete volume would be 25 percent less than that of Grand Coulee Dam for a power potential 2½ times greater.

SOME COMPARISONS

Comparing Rampart with the four largest concrete dams in the United States:

	Rampart	Grand Coulee	Hoover	Shasta	Hungry Horse
River Basin	Yukon	Columbia	Colorado	Sacramento	Flathead
Height above bed rock	565	550	726	602	520
Crest length (maximum)	3,900	4,173	1,244	3,460	2,070
Concrete (cubic yards)	8,000,000	10,585,000	3,246,000	8,710,000	2,900,000
Reservoir storage (acre-feet)	1,252,000,000	9,517,000	31,000,000	4,500,000	3,500,000

POWER

The proposed dam would control the annual discharge of Yukon River to a uniform release of 118,000 cubic feet per second. This flow combined with a 440-foot head would furnish 3,735,000 kilowatts. Based upon a 78.5-percent load factor an installation of 4,760,000 kilowatts would be warranted. Design studies indicate that the best efficiency can be secured under an average 440-foot head of a turbine capable of developing 384,000 horsepower. These turbines would be designed to drive 280,000-kilowatt generators. Seventeen of these turbine generator units would be required to develop the presently 4,760,000-kilowatt capacity and would produce an estimated 32,720 million kilowatt-hours of firm energy per year.

CONSTRUCTION AND POWER SCHEDULE

Preliminary design studies indicate that passage of 25 percent of the flow is considered adequate to permit the passage of anadromous fish and to provide adequate water for downstream navigation. Storage of 75 percent of the mean annual flow will require 19½ years to fill the reservoir to pool elevation 660. This rate of filling was considered by the Corps of Engineers in scheduling the construction period. Estimates are that the dam could be constructed to the 450-foot elevation in about 4 years and reservoir stages would begin when the dam is completed to this elevation. About 2½ years are required to fill the reservoir to elevation 440, the minimum required for power generation. The head of water available at this elevation would warrant the installation of two generating units and one standby unit, following which the dam could then be raised and units installed in a schedule corresponding to the filling rate of the reservoir. Rampart Dam could be generating a substantial block of power, approximately 350,000 kilowatts, in less than 7 years after start of construction and could be producing its ultimate potential within 24 years.

COSTS

Based upon engineering considerations only, and using January 1961 price levels the Corps of Engineers has estimated a total project cost of $1,300 million for the presently proposed power installation of 4,760,000 kilowatts. Based on these estimates the energy cost at tidewater, including the cost of transmission would be 3 mills per kilowatt hour.

ECONOMIC FEASIBILITY?

On April 26, 1961, the effective date of their contract, the Development and Resources Corporation undertook a study for the U.S. Army Engineer District, Alaska, Corps of Engineers to develop information and judgments concerning the probable size and characteristics of the power market in Alaska within feasible transmission distance of the Rampart project on the Yukon River. This study was to provide the major basis for answering the question Is it in the interests of Alaska and the United States to develop a large block of low-cost hydroelectric power at the Rampart site?

BASIS OF STUDY

Some of the basic assumptions for the study were that—

Rampart power would be on the line at a level of 350,000 kilowatts of primary power in 1972, increasing at a constant rate to 1 million kilowatts in 1989, with a jump to 3,735,000 kilowatts (5 million kilowatts installed) in 1989 upon completion of the filling of the reservoir.

The power would be made available at high load factors at (a) 2 mills, (b) 3 mills and (c) 4 mills per kilowatt hour, and should take into account other principal competing locations in the United States and elsewhere in the free world.

CONCLUSIONS

In their final report submitted April 26, 1962, the Corporation states that the principal conclusion of the study is that, if the Rampart project proceeds on the contemplated schedule, its power output can be sold substantially as it becomes available.

The projected market by 1990 was delineated as follows:

Energy available from Rampart, billions of kilowatt-hours	32.7
Less transmission losses	1.6
Net supply from Rampart	31.1
Composition of use (with minimum estimates in parentheses):	
By consumers who would use power whether or not Rampart is built:	
Energy they would use even from relatively high-cost sources	7.0(5.5)
Additional energy use by the same consumers if low-cost energy is available	3.8(2.5)
By new industries (other than primary aluminum production) attracted by low-cost power and Alaskan raw materials	9.2(7.6)
By new homes and businesses stimulated by Rampart and by the new industries	5.1(3.7)
Subtotal	25.1(19.3)
Remainder available for primary aluminum production plants (desiring up to 35 billion) unpredictable developments inter-regional markets	6.0(11.8)

TOO MUCH POWER

Although the installed capacity at Rampart makes it the largest on the North American continent in terms of potential power from one project, Mr. Gus Norwood of the Northwest Public Power Association pointed out that this amount is not going to be a very significant part of the total U.S. energy supply. The General Electric Co. load estimates for the United States assume 500 billion kilowatt-hours used in the year 1956, and it is now running about 800 billion kilowatt-hours; in the year 2000, 10.5 trillion. From 1950 to the end of the century we will have a 21-fold increase in the electric power supply needed for the American economy. Drawing Rampart into that curve, you will find that in 1972 the amount of power that Rampart would bring into the economy would be one-half of 1 percent of the total U.S. energy supply. When Rampart is in full production it would represent its highest percentage of the U.S. power supply, which would be about one-half of 1 percent.

The Development & Resources Corp. also touches on this in its report as follows:

"The projected growth in the Nation's economy will require prodigious amounts of electrical energy. Federal Power Commission estimates cited earlier indicate that more than twice as much additional generating capacity must be built in the United States before 1980 as the total of all plants built heretofore. Between now and 1990 it probably will be necessary to build nearly a billion kilowatts of generating capacity. The Rampart project's 5 million kilowatts would be only one-half of 1 percent of the required U.S. total new capacity. Devoting one-half of 1 percent of our new national power supply to development of the largely untapped resources in Alaska would not seem a disproportionately large allocation of national power capacity."

THE POWER MARKET FOR ALUMINUM

In the allocation of power from the Rampart project the Development & Resources Corp. have designated a possible range between 6 and 11 billion to primary aluminum production plants, unpredictable developments and inter-regional markets. According to conservative market forecasts aluminum production will increase between 6 and 15 million short tons annually by 1990. If all Rampart's potential were used by the aluminum industry, it would account for about 2 million short tons—only a fraction of the anticipated demand.

A major consideration in evaluating the possibility of the industry programing its expansion needs to utilize Rampart power is the extremely favorable competitive position pricewise. Again in the report it is stated:

"Any doubt that Rampart's ½-percent contribution to U.S. needs for expanded power supply would be economically useful should be removed when it is considered that Rampart would produce and deliver energy to tidewater at lower cost than any other projected powerplant anywhere in the Nation." They further state Rampart energy is in the cost range of all but one or two of the very cheapest of the great energy blocks in the world.

Competitive power users, able and willing to pay for relatively higher cost power are slowly pushing out the aluminum industry in present large power producing areas in the Nation and this situation will accelerate as the national demand increases under normal growth.

IMPACT ON ALASKAN AND NORTHWEST ECONOMY

Quoting from the study, "It is hardly possible to exaggerate the significance to regional economic development of adequate supplies of low-cost electrical energy. When regions are fortunate enough to have abundant energy resources and when steps are taken to make those resources economically available at locations convenient for their effective utilization, their use can be expected to develop rapidly. Economic benefits to the region, the Nation, and to the international communities of which the region is a part inevitably follow."

There is neither time, nor would you have the patience to listen to a detailed report of the possible developments in the fields of mining, processing or manufacture in south and central Alaska should the low-cost power from Rampart become available.

One can readily visualize however, the impact it will have on development from the first day that authorization for construction of the project is won in Congress. Construction of an extension to the railroad, improvement and extension of the road to the site, camp and construction facilities, the cement and other material requirements will spark a development in products and services within Alaska that will be utilized in Alaska after the construction needs are met. Our known mineral deposits within economical reach of transmission lines will be reexamined and reevaluated and many will be found to become profitable with the use of low-cost power; giving impetus for more intense and hopeful prospecting in known mineralized areas. With each new increment of development, whether in mining, in processing of fish and forest products, in construction and operation of tourist facilities, in use of land, in small manufacturing plants; a further expansion of population, local demand and services ensues. And with this population growth and increasing consumer demand, coupled with exports that can compete on the buying counters of the Nation, our water and land transportation facilities will improve and increase with an accompanying lowering of the unit cost of imports.

Rampart is not the complete answer nor the only one in the search for means to develop Alaska and the Pacific Northwest. However, it is today the only one that I can see possible of bearing fruit within the lifetime of my generation.

It is large enough and the cost of the developed power low enough to challenge the imagination of industry and commerce, to start their first large move into this area, where once they get their feet wet they too will catch the vision of a great northwestern industrial empire serving the needs of the Pacific.

ACKNOWLEDGMENTS

I have drawn freely from the various reports prepared by the Corps of Engineers, or made available to me while serving on the advisory board, as well as the comments of my fellow members and from the reports and material furnished by the Resources & Development Corp. To them I give my thanks.

MENTAL TOOLS FOR SCIENTIFIC THINKING AT THE HIGH SCHOOL LEVEL

Mr. LAUSCHE. Mr. President, the 100th annual meeting of the National Academy of Sciences is now being held in Washington, D.C.

A distinguished participant is Dr. William Shockley, a Nobel Prize winner. He has demonstrated the improvement which can come in logical thinking of high school students through thinking experiences with puzzles.

Participating with him, I am glad to state, are two Ohio high school juniors, David Agricola and Fredrick Walker, of Toledo. These students, because of their aptitude and keenness in thinking, are collaborating with Dr. Shockley in a teaching demonstration which had its origin at Columbus, Ohio, in the presence of a thousand outstanding science students from the State high schools.

Mr. President, recognizing the distinguished achievements of Dr. Shockley and the honors which have come to the two Ohio boys, David Agricola and Fredrick Walker, I ask unanimous consent to have included in the Record a statement issued by the National Academy of Sciences on the subject "Proposed Important Mental Tools for Scientific Thinking at the High School Level."

There being no objection, the statement was ordered to be printed in the Record, as follows:

Proposed Important Mental Tools for Scientific Thinking at the High School Level

(Press release based on a contributed paper to be presented at 2 p.m., Wednesday, April 24, during the 100th annual meeting of the National Academy of Sciences in Washington, D.C.)

(By William Shockley)

Some generalizations about logical thinking, similar in their usefulness but more advanced than "two plus two makes four," can be learned by high school science scholars through thinking experiences with puzzles, members of the National Academy of Sciences were told on April 24 by Dr. William Shockley, cowinner of the Nobel Price in physics for creation of the transistor at Bell Telephone Laboratories and now research director for Clevite Corp.'s Shockley Laboratory in Palo Alto.

The objective of Dr. Shockley's teaching approach is to develop comprehension of the essential features of a basic scientific principle or law in elementary terms by stating it as something which is always true, no matter what the particular circumstances may be, provided that the basic conditions for the law to be applicable are not violated. The qualifying phrases "no matter what" and "provided that" serve to convey the concept that a law has a certain range of validity; in a wide variety of cases it applies but there are usually limits which must not be exceeded.

Dr. Shockley illustrated his teaching approach by treating the answers to puzzles as simplified basic laws. The puzzles were presented with the aid of a projector and worked on by two high school juniors, David Agricola and Fredrick Walker, from Ohio. Dr. Shockely described his previous experience with these students at a teaching demonstration in Columbus, Ohio, where more than 1,000 of the outstanding science students from the State high schools met for a "project honoring the science scholar" organized by A. F. Forance, president of the Ohio Science Education Association.

Dr. Shockley suggested that learning these concepts at the junior high school level, or earlier, would make students more alert to recognize essential features of their scientific courses in high school and college, quicker to learn and better able to retain their knowledge. He proposed that the concepts focused in the minds of the students by the three phrases, "always true," "no matter what," and "provided that," might constitute the most important mental tools for scientific thinking at the high school level. He emphasized that research would be required to test the validity of his proposal but that there would be enormous value in finding the most useful mental tools for high school science students to develop. (A particular example of these concepts is that it is always true that what goes up must come down no matter what solid body it is that goes up provided that the solid body does not acquire enough speed to go into orbit. In this principle, the practical aspect of the "provided that" limit of validity was unimportant before 1957.)

Dr. Shockley illustrated the puzzle solving approach in terms of Euler's problem, published in 1736, in which seven bridges over the Pregel River in Koenigsberg connect two islands to each shore. The problem is to take a walk in such a way as to cross each bridge once and only once. (One island has three bridges, one to the other island and one to each shore; the other island has two bridges to each shore; and the problem cannot be solved.) The analysis of this problem illustrates the importance of three steps in problem solving: "familiarity" with the features of the situation, a "hunch" as to what the truth is, and finally "progress" to an ultimate answer by detailed analysis. The comprehension of the sequence "familiarity," "hunch" and "progress" is Dr. Shockley's proposed second most important mental tool for scientific thinking at the high school level. His third most important mental tool is the translation of quantitative physical reality into algebraic symbol and back again. He stated also that the practice of science is an art.

Dr. Shockley emphasized the very rewarding aspects of contributing to the learning of the eager, intelligent high school science students and expressed concern that our educational system so rarely gives these outstanding young minds intimate contact with the first-rate creators of new science.

THE GOLD RESERVE

Mr. LAUSCHE. Mr. President, happily and approvingly I read that Secretary of Defense Robert S. McNamara has issued an order for global belt tightening in an effort to overcome the daily drain of U.S. gold to other nations of the world.

The relentless and constant drain upon our gold reserves has created a frightening monetary situation not only for the United States but also for practically all of the nations of the world. The gold possessed by our country now, in the amount of about $15.9 billion, is far below what we need to support and back up the paper dollar certificates issued by the Federal Reserve Bank and the dollar obligations that bank has to its depositors, and the ability of our Government to meet the approximately $20 billion in short-term obligations that it owes to foreign creditors around the world.

In the year of 1949, we reached the high mark of our gold possessions, amounting to $24.7 billion. The drain on our gold reserves resulting from the fact that at the end of each year the dollars which American citizens spend abroad in various ways are in excess of the dollars that foreign countries spend in the United States in various ways, has been one of the grave and concealed problems confronting our Nation.

While we export by way of dollar value more goods than we import, nevertheless, at the end of the year we have an adverse imbalance of dollar obligations because of the moneys that are expended by tourists, by our foreign aid program, by our military men situated practically in every country in the world, and by our constantly increasing capital investments in foreign industries.

The Secretary of Defense has given recognition to the grave contributions which the military aspects of our Government serving around the world are making in reducing our gold reserves. I commend him for what he is doing in attempting to strengthen our balance-of-dollar obligations—for which the foreign creditors can demand payment in gold. The dollar obligations of the United States to foreign creditors are increasing because tourists of the United States are visiting foreign countries in great numbers while tourists of foreign countries are visiting the United States in numbers inconsequential; because U.S. dollars under the foreign aid program are being spent in greater quantities in foreign nations than the currency of foreign nations is being spent in the United States; because the military men and the activities of the United States are spending dollars in about 70 nations of the world while few of those nations are spending their currency in the United States.

The problem is grave, relief must be found in solving it. Secretary McNamara is in a position to provide the greatest relief if he strikes at the cause with vigor and courage.

SENATOR GRUENING PROVES CASE FOR GI BILL

Mr. YARBOROUGH. Mr. President, yesterday it was my privilege to preside at a hearing on S. 5, the cold war GI bill, at which the distinguished junior Senator from Alaska [Mr. GRUENING] testified to the great need for enactment this year of that bill. The Senator from Alaska has been a great supporter of the cold war GI bill in the three Congresses that he and I, with many others, have been working for the enactment of this bill. His testimony yesterday presented a closely reasoned argument in support of his opening statement on S. 5:

> It is sensible. It is deserved. It has been earned—if, indeed, legislation must be earned—many times over by our men and women in military service.

Because of the great merit of his statement to the Veterans' Affairs Subcommittee yesterday, I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY BY SENATOR ERNEST GRUENING BEFORE THE SENATE LABOR AND PUBLIC WELFARE'S SUBCOMMITTEE ON VETERANS' AFFAIRS ON BEHALF OF S. 5, THE COLD WAR VETERANS' READJUSTMENT ASSISTANCE ACT, TUESDAY, APRIL 23, 1963

Mr. Chairman and members of the subcommittee, I am pleased to have this opportunity to appear before you and to testify on behalf of S. 5, the Cold War Veterans' Readjustment Assistance Act. Once again I endorse this proposed legislation as I have in previous Congresses. I hope that the Members of the 88th Congress will enact this bill. It is sensible. It is deserved. It has been earned—if indeed, legislation must be earned—many times over by our men and women in military service.

S. 5. may be the only general education bill we will have an opportunity to enact this year.

President Kennedy has sent to the Congress a wonderful and comprehensive Federal aid to education program this session. That bill (S. 580) would strengthen and improve educational quality and educational opportunities in our country. However, for reasons I deplore, it seems to have little chance and, therefore, I believe we would be wise to speed action on what can be passed and give to some the opportunities for improvement which they so richly deserve.

The President's omnibus bill includes student loans and greatly improves the National Defense Education Act. It would provide needed construction funds, speed modern foreign language study, improve teacher training programs, better our research facilities, constructively strengthen our elementary and secondary education, and enable our schools to implement and improve vocational and special education programing. The President's omnibus bill should be passed, but the legislative history of similar proposals tends to be discouraging.

Therefore, let us move ahead now on the Cold War Veterans' Readjustment Assistance Act.

Since becoming a Member of the U.S. Senate, I have become increasingly interested in our foreign aid expenditures. I have repeatedly suggested that we should do as much for the folks at home as we do for those in other lands.

The United States of America has contributed in the past 7 fiscal years some $300 million in foreign aid funds to other nations for educational purposes. We shall doubtless spend more along these lines. These taxpayer dollars have been used sometimes to build schools, train and pay teachers, pay consultants, establish universities. The money in countless ways has advanced the meritorious cause of education. It could have been spent in this country to improve our lagging educational facilities and to help improve our own educational standards.

It is not my purpose today to discuss at length our oversea spending, but I do call attention to it in this particular area because it is relevant.

Earlier this month our colleague from Hawaii, Mr. FONG, endorsed S. 5 when he appeared before you. I thought his remarks particularly pertinent as I read them. Senator FONG through the use of human examples vividly underscored the hazards of the cold war in which this Nation participates. He said that guarding freedom in the cold war is the "very hazardous mission" of American GI's serving all over the globe.

We know where those particular hazardous missions are. Perhaps you read as I did Sunday that we have at least 12,000 servicemen in Vietnam. We know that U.S. casualties continue to mount. We know that the men and women of our Armed Forces guard us and freedom today just as their predecessors did in earlier battles. Keeping the peace is also a battle. Maybe the so-called cold war will be hot. It is certainly hot for those on some of these fronts.

Senator FONG suggested that the classification "nonbattle" * * * "is somewhat a distinction without a difference insofar as the dead and wounded American soldiers and their families are concerned."

The proposed legislation embodied in S. 5 would provide vocational readjustment and restore lost educational opportunities to those service men and women whose educational or vocational aspirations have been interrupted or impeded by reasons of active duty between January 31, 1955, and July 1, 1963. Further, the bill would help these young people attain the education and training status to which they might normally have aspired and obtained had they not been called to serve their country.

We are told that the GI bills of earlier years were helpful to more than 10 million veterans and that of that vast number 3,435,000 entered institutions of higher education; 4,364,000 entered schools below the college level; and 2,656,000 learned skills in on-the-job and on-the-farm training programs.

We read that between the years 1955 and 1973 an estimated 25 million men and boys will be a part of the age group which is subject to the draft.

With only minimal debate Congress earlier this year once again extended the Universal Military Training and Service Act. The 4-year extension keeps the draft of our youth until July 1, 1967, and since we appear reluctant to modernize our military training system it would not surprise me to see that law reextended again in 1967 again without a survey to ascertain how the draft procedure can be modernized to meet our military manpower needs and at the same time not impede the work and study potential of our young men.

A young man of draft age in college at the undergraduate or postgraduate level may request a deferral from his draft board. The time which he would spend in the military service probably would do little to further his specialized educational pursuit and the interruption in the midst of graduate study could be harmful. He may be given his requested deferral. However, draft quotas must be filled.

In 1959 my colleague from Alaska, Senator E. L. (BOB) BARTLETT suggested a number of ways in which our draft procedure might be improved. His observations are as pertinent now as then and I ask unanimous consent that they be reprinted in the hearing record at this point in my remarks, along with comments which I made at the time.

Why should not these youths who are drafted be given opportunity to further their education at the close of their military service? The simple and honest response is that they should have such opportunity.

I suggest that too many young men now have "neither fish nor fowl status" as they await the call of the draft board.

Why is our national unemployment rate so high in the draft age group? I suggest that the employer who seeks to train a young man as a salesman or plumber or reporter is understandably reluctant to hire an employee who may at any moment be drafted. Business-wise it isn't sensible. So our unemployment percentages remain high and our archaic draft structures implement those percentages.

The language proposed in S. 5 won't correct the inequity I have touched on. But the language in S. 5 will provide vocational training to the young serviceman who generally has no skill or trade at all upon his return to the civilian labor force.

The cold war GI bill embodies sound business practices and should be termed an investment in the United States. We know that World War II and Korean GI bill participants are earning more and paying more taxes than they would had they not had an opportunity to learn.

Senator YARBOROUGH—you who have sponsored and fought so gallantly for this legislation—you have suggested that the cold war GI bill will likewise be self-liquidating, and I agree. The cost of this proposal is very little. The highest estimate I have heard is approximately $290 million a year through 1973. Our defense budget for this fiscal year alone is $52 billion or nearly 200 times more in one year alone.

I suspect that the young men we ask to man our defenses and train to use those weapons which cost so much, understandably find it difficult to comprehend our reluctance in spending $290 million annually over the next 10 years to implement S. 5 and establish a program which can only strengthen the Nation. The program isn't identical to the earlier GI or Korean plans. There is no mustering out pay or business loans. Veterans must have had 180 days of active service. Six-month trainees under the Reserve program are not eligible.

When I testified in support of similar legislation in 1961, I noted that in Alaska the number of veterans who would be entitled to educational and vocational training benefits under provisions of the bill would be approximately 600. The figure in 1963 is substantially the same. The assistance provided by the bill would enrich the contribution of each to Alaska and to the Nation. Certainly the post-Korea GI is as much in need of assistance in obtaining loans for the purchase of homes and farms as was his older comrade who served in a different time. Interruption of a man's career cannot be heeded one moment, and ignored the next.

Senator William Fulbright made a valuable contribution to our heritage education when he fought for and successfully enacted legislation which we know today as the Fulbright scholarship program. Only last year, Senator Fulbright in a speech on the Senate floor on March 22, said:

"Through education we strive to bring out the good in our young people and to cultivate in them a desire to preserve and protect the values of our society. A good education is basic to good citizenship."

Later in the same speech, he recalled the words of President James Madison who once said:

"Popular government without popular education is a prologue to a farce or tragedy."

Madison's words are pertinent as we discuss the need for this proposed legislation. We dare not set the U.S. stage for either farce or tragedy. We dare only to set our stage for our posterity. We do not have much time for scene changes, nor do we have many pieces of furniture with which to work. We need the new tools and equipment of S. 5.

In his state of the Union address to the Congress on January 11, 1962, President Kennedy discussed the importance of education. He said the quality of our education was equally important to our strength. Said the President:

"If this Nation is to grow in wisdom and strength, then every able high school graduate should have the opportunity to develop his talents. Yet nearly half lack either the funds or the facilities to attend college."

A few lines later the President referred to the remark of H. G. Wells that "civilization is a race between education and catastrophe." Added the President:

"It is up to you in this Congress to determine the winner of that race. I welcome his challenge and I accept it.

"Nearly 150 years ago another President suggested: 'If a nation expects to be ignorant and free, in a state of civilization, it expects what never was and never will be.' "

The words are Thomas Jefferson's, a man who never stopped in his fight to improve men's minds, a man who after serving 8 years as our President continued his efforts of enlightenment by helping establish the University of Virginia in Charlottesville.

Americans, given the choice, will select enlightenment and freedom for these are inseparables in a democracy. The bill, S. 5, now under consideration offers simple equality. Nothing more.

And the bill offers assistance to young farmers and to men and women who would like to have homes of their own. Last year in its report on this measure, the committee said it expects that some 1 million post-Korean veterans would be able to purchase homes and farms under one title of the bill. The proposed language has been retained in this bill.

Conservative estimates place the possible construction of new homes at 700,000.

The simple extension of veterans' benefits of title 38, chapter 37 as proposed in new section 18 for "veterans who serve between January 31, 1955, and July 1, 1963," is important. It will provide a valuable economic incentive for many industries.

Seven hundred thousand new homes, be they in the city or on farms or in suburbia, will use vast quantities of lumber, bricks, glass, electrical wiring, plumbing, tile, paint, concrete, insulation, sewage facilities, shingles, etc.

The new jobs stimulated by this proposed legislation will mean a great deal to the unemployed.

Mr. Chairman, I thank you and the committee for this opportunity to endorse S. 5, and I ask unanimous consent that an excellent article by Dr. Sar A. Levitan, director of the area redevelopment project at George Washington University, Washington, D.C., entitled "Youth Unemployment—A Problem That's Getting Worse: What's To Be Done?" be placed in the hearing record at the close of my testimony.

Dr. Levitan describes the pressing need and demand "for skill, education, and technical know-how needed to man jobs in our complex technological civilization."

GROWING EVIDENCE OF A BIPARTISAN CONSENSUS ON CUBA

Mr. KEATING. Mr. President, reports that the United States is preparing to ask the OAS to declare an economic embargo against Cuba are very encouraging.

These follow the suggestions of the majority leader on a Sunday television interview that the United States participate with the OAS in an economic quarantine against Cuba similar to the one used successfully against the Dominican Republic in 1960.

It has been my view of some time that strong economic measures are the key to a successful policy toward Communist Cuba. The first steps of the program of graduated economic sanctions which I outlined in the position paper which I presented to Secretary Rusk and CIA Director McCone in February included the curtailment of flights and steamship routings between Cuba and other Latin American countries, a trade boycott between Cuba and other Latin American countries, and the denial of Latin American cargoes or refueling facilities to ships or planes trading with Cuba.

No one would realistically expect such measures alone to drive the Soviets out of Cuba. The United States embargo has not had this effect, and trade between Cuba and most other Latin American countries is already at a low point. The real lifeline to Communist Cuba runs from the Soviet Union, and any realistic long-range program must contemplate an economic squeeze on the Soviet Union as well as Castro. This will require, as I discussed in my February position paper and earlier this month on the Senate floor, action by NATO paralleling the steps we are now urging upon the OAS.

Nevertheless, I am heartened by the growing evidence that the United States is attempting to shape the economic advantages of the free world into a powerful weapon against communism. This is not an easy task, and it will require determination and sacrifice. I am convinced, however, that a concerted program of this character can lead the Soviets to the conclusion that their Cuban venture was a costly and foolish mistake. Certainly this is a policy worth pursuing before more drastic measures are considered.

The majority leader has recognized the importance of constructive debate on Cuba and has never joined with those who treat every suggestion or criticism as an attack on our Government. In his remarks in the Senate last Thursday he made several references to my views on Cuba and voiced his own plea for "sound and good bipartisanship." All of us, I am sure, place our Nation's interests above those of any political party. I am certain that if this debate can be carried on in the tone and spirit exemplified by the majority leader's comments, it will help rather than hinder the development of an urgently needed bipartisan consensus on Cuba.

MANPOWER DEVELOPMENT AND TRAINING ACT OF 1962

Mr. LONG of Missouri. Mr. President, the retraining provisions of Public Law 87–415, the Manpower Development and Training Act of 1962, have been remarkably successful during the first year they have operated.

As is more often than not the case with such Federal-State programs, the key to success lies in the level of local interest and support. In this regard, my State of Missouri is a good case in point. Industrial and civic leaders have joined with representatives of both local and State governments to launch in Missouri an aggressive program under the new law. The sure-fire formula that attacks both ends of the domestic employment problem by making it possible for the unemployed and underemployed to learn new skills and upgrade present skills to fill the critical occupational shortages that exist, is proving to be a great mutual benefit to workers and employer alike. Moreover, Missouri's program is serving to uplift and stabilize the local community and State economy.

In a recent thoughtful editorial, the Columbia Missourian lauded the program as "something new, but tried and proven," and traces the success it has been in my State. I believe all the readers of the Congressional Record will find this editorial interesting and edifying. For that reason, I ask unanimous consent that it be printed at the conclusion of these remarks.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Off to Good Start

Seven out of every ten persons retrained through the Government Manpower Retraining Act of 1962 found work after completion of their courses.

Public Law 87–415 authorized the 3-year, $435-million program for the training of unemployed persons in vocational skills or on-the-job training to develop new skills. The first 2 years the cost will be paid by the Federal Government while the third year the cost will be shared equally by the States.

The program offers up to 52 weeks of training with monetary allowances equal to the normal unemployment compensation given by the State. Monetary allowances depend on age and family status ranging from no compensation for those under a certain age and no head-of-family status, such as a recent high school graduate, to head-of-household pay of approximately $33 per week while in training status.

A checking with the Missouri State Employment Service disclosed that in Missouri the Manpower Retraining Act is a going concern and that courses are offered in the clerical, service, medical occupational, farm, mechanical, construction, and production fields on a continuing statewide basis dictated primarily by needs of both people and places.

As an example, an auto mechanic course is slated to begin soon in Mexico with 15 students, with both travel allowance and pay granted in pertinent cases. A practical nursing course of 16 weeks is well past the planning stage here. A clerk-stenographer course of 48 weeks is scheduled to begin this summer. Aptitude tests are required of prospective students in every case.

Here is something new, but tried and proven in one short year of existence. For unemployed, or the underemployed person, this training can provide a new skill where needed or upgrade present skills to meet the job needs of workers displaced by automation, technological change, geographical change of industry, and shifts in market demands.

However, job openings in most cases, must be available or anticipated in an area before courses are established. The trainee must have reasonable expectation of employment in the immediate area or give assurance that he or she will accept employment elsewhere.

There is a need for more trained personnel in the practical nursing field and in the clerk-stenographer field here in Columbia.

Here is a program that portends a bright future, and is a good deal for the unemployed or the underemployed. For further information, job seekers should check with the Missouri State Employment Service, 804 Locust Street, which acts as the project office for the adjacent four-county area.

TRIBUTE TO GEORGE E. MAHER, OF IOWA

Mr. MILLER. Mr. President, too often a State sees its outstanding residents pack up their bags and leave for what appear to be greener pastures elsewhere. But the tide can be stemmed when a young man demonstrates his willingness to contribute to the betterment of his community and State, thus setting an example for others not only to follow but to imitate in selling their State. Such a man is George E. Maher, of Red Oak, Iowa, recently named winner of the 1962 Iowa Junior Chamber of Commerce's Distinguished Service Award. His story is the reason why Iowa and other States are able to retain their young leaders. To list all of Mr. Maher's accomplishments would be no small job. But to cite only a few:

First, a member of a special church committee to raise several hundred thousand dollars for construction of a new church.

Second, chairman of a citizens' steering committee to push a successful million-dollar school bond issue.

Third, active in a drive for funds to enable Red Oak's Industrial Foundation to purchase an 80-acre tract of land to attract new industry. One firm already has located there.

Fourth, chairman of a committee to modernize the Red Oak Jaycee Community Development Survey, which resulted in water fluoridation, renovation, and painting of all street signs. As a result, his committee won first place in State competition.

Fifth, chairman of a committee urging turnout for the oral polio program. Some 15,000 persons, more than double Red Oak's population, participated.

Sixth, chairman of the Red Oak Jaycee committee for establishment of a youth center.

With all this time spent in civic activities, George Maher still has not neglected his wife, Pat; son, Mike; or daughters, Kim and Kristy.

He has been an inspiration and an example to those in his community and his State.

TENURE AND THE PUBLIC LANDS

Mr. MORSE. Mr. President, on March 11, 1963, Mr. L. C. Binford of Portland, Oreg., who is now the national president of the Izaak Walton League of America, made a very thought-provoking talk before the National Advisory Board Council of the Bureau of Land Management.

In his position as president of the Izaak Walton League, he outlined in extremely capable fashion the views held by many in the league. I believe that his speech deserves serious consideration by all who are interested in public land management, and therefore, I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TENURE AND THE PUBLIC LANDS

(Address by L. C. Binford)

It is a pleasure to join with you in counseling the Bureau of Land Management as to the public lands under their direction.

I want to thank you for having invited me, as national president of the Izaak Walton League of America, to present our views on the joint and multiple uses of the public lands and areas of understanding and misunderstanding of the users.

This meeting may become a new milestone in public land management. As a council, you have evolved from a body elected by the livestock user group plus wildlife representatives from each State, to a group that represents all users.

At your first meeting under the expanded membership held only last November at Las Vegas, Karl Landstrom, Director of Bureau of Land Management, reminded you that you reflect broader consideration than domestic livestock grazing alone, and that you must carefully identify the place of public land management in the natural resource program as a whole.

At Las Vegas, you were necessarily involved almost entirely in the question of grazing fees, which I hope is settled for now. By the nature of the subject you have asked me to discuss, I take it that this meeting will consider the broad aspects of public land management. If you do this it will truly be a milestone, and could mark the beginning of sound, comprehensive, multiple use management of Interior's 178 million acres of land. Maybe we should include Alaska and add another 273 million acres.

As an Advisory Council, you now represent 186 million people, the folks who own the public lands. We in the Izaak Walton League say that we, too, have a trust to represent the public's interest in U.S.-held lands.

As an official elected by a group of conservationists, most of whom are hunters and fishermen, I am aware of the problem faced by the rest of you, especially you stockmen who are here by the election of your user group. No doubt you are to a large degree beholden to them as I am to my sportsmen electors. You wildlife members have a mixed loyalty—if one is due our electors. You got on an Advisory Board by selection of a State director, who probably picked you from the nominees submitted by the State fish and game department and then the State advisory board selected you for this national group.

The rest of you—representing county government, urban-suburban development, oil and gas, outdoor recreation, forestry and fish, conservation, petroleum, and soil conservation—were selected and appointed by the Secretary rather than by the interest you represent.

Within your Council every user interest is represented—at least if broad definition is given to such interests as outdoor recreation and conservation. Numerically you are still a livestock group.

Let me suggest that John A. Carver, Jr., Assistant Secretary of the Interior, in his address to you at Las Vegas, used words which should become the preamble to all your deliberations.

"We are concerned not just with the economic benefits which flow directly, but we are also concerned with values which do not easily have an economic base attached to them; certainly some types of recreation value, certain types of outdoor experiences are included in this, and certainly the wildlife values have an importance above and beyond any economic price tag that you may put upon wildlife benefits.

"In larger sense, we are interested in the future. We are conservationists, all of us, whether you are a sheep or a cattle operator or whether you are a county official or whatever. We have an interest in the future. We want to leave the land in at least as good a shape and if possible in better shape than we found it when we came upon it. So we have that common objective in the correct management of the land."

If you follow this broad concept as your common objective, it will be a milestone in public management. If you do not do so, if you are only individuals each representing a special user interest, the public will eventually demand your abolition and the creation of a comprehensive advisory group.

Multiple use of public lands is not a concept created by some public official or department of Government.

Multiple use is a fact created by people. There are values on the public-owned lands people want to use. Primary push was for some economic advantage, such as trapping fur-bearing animals, even early day market hunting, logging, grazing, and mining. As the numbers of people increased, there came recreational hunting, fishing, berrypicking, fossil and rock hunting, camping, and innumerable varieties of outdoor use.

Just to cope with this multiple-use fact, governmental agencies put into management program these demanded uses. This multiple-use concept has long been the guiding principle of land management by the Department of Agriculture and the Department of the Interior, its application being carried out to the extent of public demand.

In 1960 the Forest Service was given a congressional mandate to apply the principle of multiple use, and now the people's demand for multiple use on BLM lands is recognized in a bill before Congress.

After I prepared this introductory part of my speech, I was informed that my subject was limited to "Tenure and the Public Lands." My first thought was to prepare another introduction, then I realized "tenure" is just a part of the joint and multiple use of public lands, and certainly an area of conflict.

I had hoped that we could discuss other areas of conflict and agreement, especially those of public access to federally owned lands; fencing; gates; ownership marking; mining laws; wildlife and wilderness areas;

urban and suburban developments; recreational areas; watershed management; recreational user fees and methods of financing rangeland rehabilitation and improvement.

Even though these are not subjects of our immediate assignment, we cannot discuss tenure of any one use without consideration of it in relation to the problems and the rights of other users and the public generally.

If I understand the proposed tenure stripped down to its simplest elements, as we lawyers usually attempt to do, we have the situation of a trustee owner of land (BLM) who holds title for all the people of the United States, being asked by present grazing permittees for a better deal.

FACTS TO BE CONSIDERED

1. There are approximately 29,000 grazing permittees:

Permittees in grazing districts (1961)	18,041
Sec. 15 leases	8,951
Other permittees (principally Bankhead-Jones)	2,008
Total	29,000

Only 18,041 of above are represented on advisory boards.

Now pay a total of about $3 million which will increase to about $4 million in 1963. These fees are substantially under the market value of the grazing. However, the permittee also makes some contribution in way of improvements to the public lands. Also, by reason, in part, of his low-cost use permit, his base property is valued beyond its worth if no grazing rights were attached to it.

2. Public lands being used are, on the average, in need of substantial capital investment to keep the range from deterioration and to rehabilitate and restore it to full production. Based on current budget, BLM will spend in 1963 $17 million for such range improvement. Approximately $1 billion is needed to do the job on the portion of the lands where feasible. (Kenneth B. Pomeroy, April 1962 American Forest Magazine, estimated that $700 million would increase production of public domain threefold to tenfold.)

3. Range rehabilitation and improvement can increase by two to three times the present livestock carrying capacity of the range.

4. There are now livestock ranch properties contiguous or near to BLM lands which have no grazing permits on the public lands, and which desire a use if the carrying capacity is increased to make it possible.

5. Present users contend that increase in carrying capacity should accrue to present users.

6. Most of the land used for grazing is also subject to recreational use, which includes hunting and fishing. Approximately 30 million people annually use the land for recreation. There is presently a bill under consideration to charge for this use, a fee of $3 to $5 per motor vehicle. Your speaker suggests a fee of $2 per person in the form of a stamp (or identification card) to be purchased at the post office as we now buy migratory bird stamps. By my computation this would produce, by excluding children under 16 years, about $50 million on BLM lands.

7. These lands are also subject to use for mining, forestry, watersheds, and for community expansion.

8. "The livestock industry has made it unmistakably clear that it does not believe that it should be required to pay increased grazing fees or other compensation to obtain a more secure tenure." (Letter written by Edward W. Clyde, member of this Council and a member of the special committee to study "Tenure," written January 23, 1963.)

This Advisory Board Council can, in its deliberations, take one of two courses.

If you are here as representatives of the livestock industry, it is up to you to get the best possible deal for the livestock industry.

If you are here in the capacity of a board charged with the public interest in the land, you must give consideration to all users.

LAW TO BE CONSIDERED

Before we go further we must ascertain the law that controls the situation.

1. Law that controls the use of the public lands over which BLM has jurisdiction, is the Taylor Grazing Act of June 28, 1934, to which minor amendments have been made. Under authority of this act and limited by it, grazing regulations have been promulgated by the Secretary of the Interior.

2. By the Taylor Grazing Act, persons owning nearby land who had been using the public lands for grazing were given the right to continue its use, the numbers of livestock permitted to be used on the highest 2 years out of the prior five.

The law under consideration applies only to permittees in grazing districts. It does not apply to those leasing land under section 15 of the act. This land is leased for terms up to 10 years, "upon term and conditions as the Secretary may prescribe." There is no perpetual right in the grazing user and fees and conditions of use are not necessarily the same as in the districts—in fact, fees in one area for section 15 are at the Forest Service rate.

3. This right to those within or near a district is perpetual. That is, once it is exercised, it cannot be terminated by the Department of Interior except in two situations:

(a) Interior may withdraw the land from grazing use by reason of classification for other use, or by its sale or exchange.

The original right of use as granted by Congress clearly states that the grazing districts are established for use of the land pending final disposal. In other words, the right continues until the Secretary, acting under congressional authority, makes a disposition of the land for other than grazing. Congress, of course, could at any time terminate the right.

(b) Secretary may cancel the right for certain violations, which has almost never been done.

4. Right to use may continue on a year-by-year basis or on adjudicated land, a term of 10 years may be granted, but whether by the year or term the right to renewal cannot be terminated except as the right of use is terminated.

5. Secretary is required by law to regulate use to "preserve the land" and to fix "reasonable fees." Right of use is subject to payment of the fee and the regulations to preserve the land.

6. The historical right to graze for a given number of livestock may be reduced by the Secretary's order, based on adjudication. By present regulations the historical number is not lost, and is restored to the permittee when the Secretary finds the range will provide forage for the greater number.

7. Permittee, whether operating on a year-to-year basis or for a term, can sell, mortgage, make a gift or transfer by will or by intestate death, his grazing rights, provided of course that the base property follows the transfer.

8. Under the law Secretary of the Interior must regulate the number of livestock to protect and improve grazing districts. He has no authority to regulate use or fix fees based on economic needs of the permittee, except in period of drought or general epidemic, he can "remit, reduce, refund * * * payment of grazing fees."

9. Permittee can appeal by administrative procedure and to the courts, an order that denies or limits his use. Pending appeals the order is suspended.

As a lawyer, I assure you that the present Taylor Grazing Act and administrative order is just a dandy device which we can use with almost certain success in keeping the permittee on the land with the maximum number of livestock of his historic use. Appeals can run into years—then conditions will have so changed that we can demand a new range survey and start the appeals all over again.

SUMMARY AND ADVICE ON THE LAW

Now it is said that the stockmen want a better deal than they now have. Very well—I must first tell you that the Secretary, if he carries out his directive under the law, cannot give a better deal. For that the permittee will have to go to Congress.

Obviously, Congress can, if it chooses, rewrite the entire Taylor Grazing Act. Do you dare open the Pandora box?

What can the permittee gain? There isn't much more to give him except the legal title. He now has a use for grazing in perpetuity, subject to termination only in the event of his own acts or by disposition or reclassification of the land for other uses. His use can now only be reduced when the Secretary finds the reduction necessary to preserve the land.

Would Congress give or sell the permittee the title to the property? This is unlikely. Multiple values would be lost to the public. Observe that the tendency is to acquire more Federal land, not to dispose of it except for public uses. Probably the permittee does not desire title for the property would go on the tax roll, which would generally be far beyond present grazing fees. In fact any extension of present right would likely become a taxable leasehold. Even the present tenure may be taxable in some States.

Would Congress give the permittee the right to determine the extent of his use—that is, number of animals to be grazed? Not likely—there is no precedent for giving such a right to a single user group on public lands. Could the timber industry be permitted to determine the trees to be cut? Congress might delegate some other administrative body instead of Interior to determine the permissive use. Would some other agency, such as Soil Conservation Service, do a better job? Should the standard be changed from present protection of soil and watershed to the protection of the livestock industry?

Should Congress fix the fee for the use or give positive instruction to some administrative agency other than Interior, to do it? What standard should Congress set up—cost of public land administration? Value of the forage? Ability of the permittee to pay? Regardless of standard, is it likely that any device would produce as favorable a fee as the stockmen have been given? Please note that there are stockmen not now enjoying public land use who are willing to pay a grazing fee substantially over the BLM rate as can be observed from competitive sales of Indian land leases.

It is not a pleasant task to talk about tenure. It brings back the memories of the bitter land tenure fight of 1953–54 when the D'Ewart bill was under consideration. At that time, it was the Forest Service lands more than the BLM that were involved, but the effect of the bill was to give the permittee a vested interest in rangeland use.

You know the outcome of that fight. Recreation and conservation groups, which frequently have differences, united with others in a solid front of opposition and won, but we are still licking our wounds. On both sides there remains bitterness and prejudice, which I pray may never be reactivated.

We have so much in common—the recreationist and the livestock man.

We in the league want the public lands managed for their multiple uses. We believe in management by scientifically trained and experienced personnel, not by the political spoils system.

We recognize the economic importance of the livestock industry.

We think that grazing on most lands is compatible with other uses.

We urge that livestock and wildlife numbers be kept in harmony with the land, that is, that there not be overuse by either.

We have indicated that recreationists should pay a user fee.

We believe that rangelands should be rehabilitated and improved to provide for an increased number of livestock and wildlife.

We believe that public lands should be adequately marked as to ownership and accessible to the public.

We ask that scattered ownership be exchanged or sold to provide better units of management.

I would expect that in all of these things you agree with the Izaak Walton League. But now I must say that we have been, and now are, most emphatically opposed to any one user group having a vested right of use on and to the public lands. Objection would be made to any tenure that goes beyond present rights of permittee.

We have called upon the Department of the Interior to raise the grazing fee to a fair market value, not because we wanted to pick on the stockmen, but because we want to improve the rangelands, and in our efforts to get Federal appropriation for the purpose of such improvement and adequate BLM budget, we have been confronted with the low grazing fee.

We have insisted for many years that the Secretary reduce grazing use when he finds it necessary to do so to preserve or improve the rangelands, not because we want to pick on the stockmen or to gain an advantage for wildlife, but to carry out the principles on which the league is established; namely, to preserve, protect, and use wisely our soils, woods, waters and wildlife. Secretary Udall, in our opinion, is to be complimented for carrying out the duties imposed upon him by the Taylor Grazing Act.

We have demanded a position for other users of the BLM lands on advisory boards and councils, a request which is now in effect. We aren't sure that the boards and council will represent all interests. There is complaint that only the West is represented and recreation, inadequately. Time will determine.

It is my understanding that in addition to tenure, permittees want some form of compensation for their loss if their permit is terminated or reduced.

This actual situation has not been reviewed by our organization, but I will attempt to state what I think our position would be.

1. Base property's present high valuation is due to the fact that the owner has had a low grazing fee. Had the fee been at competitive market value, little additional value would have attached to his property. This additional value is the value of his bargain. It would not seem fair to the taxpayer to be called upon to compensate such an owner for the loss or reduction of his permit.

In the case of the original owner, this is no hardship—the subsequent buyer assumed the risk in his purchase. Title he acquired was purchased subject to the Government's right to terminate. If grazing rates go up to more nearly market price, the value of the grazing permit and base property will likely decline.

2. The permittee should not be paid damages for the loss of the market value of his permit. As in the case of the base property, the value was created by the lowness of the fee he has been paying. He has had that value and is not entitled to a second payment.

3. Now in the case of the permittee who makes improvements on the public lands we have a slightly different situation. It has been generally pointed out as a justification for the low rate for grazing use of BLM lands that the permittee makes range improvements.

If that is to be considered part of his use payment and he usually contends it is, it would seem that he is not entitled to compensation for the residual value of the improvements in the event of termination or limitation of his use. As a practical matter, it seems desirable to encourage the permittee to make improvements. In most cases he can do so at lower cost than can a governmental agency.

I would suggest that if the improvement is made in conformity with the BLM plans and approval, the permittee be paid the residual value of such improvements based on the original cost less depreciation at some established basis.

Nothing is found in the record to indicate that the economic insecurity of the permittee's position is by reason of his grazing rights.

Nearly half the cattle permits issued by the BLM in the 10 Western States are for 50 head or less—two-thirds for 100 or less. Only 1 rancher in 100 runs more than 1,000. Eighty-five percent of the permits are for 200 or less. A 1961 study by the Agriculture Department's Economic Research Service indicates that 360 head and a $200,000 investment are needed to cover all costs, without a return in the investment.

The surveys that have been made indicate that small units of operation, possibly those of less than 200 cattle, some figures are as high as 500, are uneconomic. The same conclusion would be reached if the range were free and the expense of range management and improvement were all paid by the taxpayers. It is an unfortunate situation that small operations in almost every field are ceasing to be profitable. Doubling the range carrying capacity, as will happen with range improvement, should help the small rancher if he has the capacity to expand. In any event, the community as a whole should benefit for there will be ranchers who can profitably use the range.

The rancher who wants to keep his grazing permit has almost without exception done so, unless the range is overused and cuts are necessary for range improvement. In this situation the practice is to restore his use when the range is capable of carrying his livestock.

In precedence, the rancher who is in has tenure on BLM lands, which has been so infallible as to have a very substantial sales value and has given the base property this blown-up value.

Any effort to get any form of vested right or tenure in the public lands, beyond that now enjoyed by the stockmen, is going to stir the public's opposition to the point that legislation may well follow that calls for full market value of rangeland use. In fact the public would be shocked if they knew that the permittee now has a right of perpetual use.

There are more beef cattle producers in the Midwestern States than there are BLM permittees. They have no public lands and are inclined to dislike competition that feeds on forage that costs less than a dollar per ton. Any effort to enlarge tenure would be branded as a giveaway of public lands and the day for that passed 50 years ago.

Let me urge that you abandon any efforts to secure a change in tenure and limit your request to compensation for improvements. Let us not stir up the millions who own the land except to get their help in its rehabilitation and improvement. To do this, we who use the land, including recreationists, must pay a fair value for our use.

By some method more of what we pay or from funds of the taxpayer, local governments must have a greater take in lieu of taxes from these lands. (Read the address of Judge Lloyd Rea of this Council, to National Association of Counties at Las Vegas, Nev., December 13, 1962).

We in the Izaak Walton League stand ready to help you develop a sound, long-range program that gives consideration to all uses and users. Let us aggressively develop plans and implement the rehabilitation and improvement of the rangeland for a greater use. Let us double or triple the livestock carrying capacity, and provide better habitat for wildlife, and with all our use—borrowing words from Mr. Carver—"leave the land in at least as good a shape and if possible in better shape than we found it when we came upon it."

It's time we quit calling names ("necktie parties" are a thing of the past even in Nevada); it's time we users cooperate with agencies in carrying out their duties assigned to them by law for the use and preservation of public lands. The 186 million owners, nearly a third of whom visited these lands last year, expect the use and management to be in the public interest.

FENCES, GATES, AND OWNERSHIP MARKINGS

(Supplement of speech for the BLM meeting given by L. C. Binford, Mar. 11, 1963)

Most of us who go on the public lands for recreation do not like fences. There is a public attitude that a person can go across these lands anywhere he pleases. In fact he has done so for years, but now he finds a fence. His reaction is one of resentment and I am sorry to say, has occasionally found an outlet in using his wirecutters or kicking the stapled wire loose from the post in order to cross over.

Personally I hate jeeps and tote goats, and all other forms of motor vehicles that travel across my public lands. I use a horse and wish those other guys could be kept out, but unfortunately the gasoline boys outnumber us who use hay for fuel.

We who are familiar with the management of the public lands know that fences are necessary for good management (some method must be devised to get the antelope through), but there aren't enough of us to get this over to the public. In this we need your help.

Now it would help us get the message over if fences had more gates, at least at points of natural passage. Then it would help if the gates were something the city outdoorsman could operate.

Interior press release of Mr. Udall's speech to the National Cattlemen's Association in January at Las Vegas, has him to say "for there will be those who leave the gaps in the fence down." I am sure some zipper-minded secretary translated "gates" as "gaps." However, the word "gap" better describes some of the devices used to fill in the opening in the fence than the word "gate."

These 4, 5, 6, or 7 barbed wire strands (I suppose numbers depend on whether erected by sheep or cattlemen) strung between two struts, wired to the post at one end and looped, lashed, or trussed to the openable end, are a formidable device to nonrural people. The method of a lever arm to pull the gate up to the loop or as holding device has knocked many a greenhorn for the count.

Even more baffling as a method of holding the gate closed, is the section of an old lariat used as a wrap around with a knot known to a bulldogging cowhand, but completely foreign to a grocery clerk out to take a look at his public land.

To add to the confusion, he occasionally finds the gate open and tossed to one side of the road. He has been told that leaving gates open is endangering the sportsmen's relationship with the livestock people, so he carefully closes the gate which the rancher has left open so the stock can get to water.

Maybe the gate has a "no trespassing" sign, but he is in a public lands area and he knows, or has been told, that some permittee has improperly posted signs, so he ignores it.

I could go on with the problems of the outsider. He has a map but in the broad open spaces of irregular roads, he is lost. He is accustomed to named roads and directional signs. What can we do to help him out? Remember, he is one of the taxpayers, one of 30 plus million who come upon the BLM lands for recreation and we need his support in a public lands management program.

In brief—when we fence, let us provide passage through that the novice can open and close. It would be desirable if such devices were uniform. Let us provide these openings at frequent intervals. Principal ones should be identified on a map of the area. It has been suggested that all gates to Federal property be painted yellow if ownership is both sides, otherwise yellow on Federal ownership side.

Let us mark ownership. Under Director Woozley we had a marking program to which the stockmen objected, so the order was never entered. I understand I am the one who stirred up the subject, but the markings proposed at the time went beyond my proposal.

I suggest that BLM provide a small identification marker of 2 or 3 inches in diameter, circular in design which would have a knockout section which would hook onto a wire fence. The same plaque should have two small holes to permit it being nailed to a post. Pressed into the metal would be the words, "U.S. Lands, Both Sides." A second wording would say, "U.S. Lands, This Side Only."

With the rivalry between governmental departments, I am sure there must be added Department of the Interior. It would be desirable if Forest Service of the Department of Agriculture would use the same plaque. The public is not too much interested as to which Department of the United States manages the land.

There would seem to be no reason why the Government could not supply the signs. It should be a requirement in all new fencing that the simple emblem be attached at specified intervals. On existing fencing, BLM fieldmen could, with volunteer cooperation of user groups—that is, livestock men and recreationists—get them put up. It would remove a lot of friction between users.

With this administration's emphasis on physical fitness, it should be no trouble to get outdoor people in their 50-mile walks, to put the plaques up as they go. I'll take a 50-mile stretch if I can bend them to the top wire so I won't have to get off my horse.

ADDRESS BY SECRETARY OF THE TREASURY AT YALE DAILY NEWS ANNUAL DINNER

Mr. CLARK. Mr. President, one of the many characteristics which distinguish the present able Secretary of the Treasury, Douglas Dillon, from some of his predecessors is his keen and sincere interest in what President Kennedy calls our No. 1 domestic problem, which is the slow rate of economic growth, bringing in its wake chronic, persistent, and increasing unemployment.

As many Senators know, next week, the Manpower and Employment Subcommittee of the Senate Committee on Labor and Public Welfare will commence a comprehensive study of the unemployment problem, in an effort to develop a legislative program to deal with unemployment at the next session of the 88th Congress, next year.

A substantial contribution to this study has already been made in a very closely reasoned and excellent address by Secretary of the Treasury Dillon at the Yale Daily News annual dinner, at New Haven, Conn., on April 4. The address came to my attention only recently.

I ask unanimous consent that the text of the address be printed at this point in the RECORD in connection with my remarks. I commend the address to all Senators as an exceedingly able statement of the complicated and difficult problems confronting the country in the fields of employment, fiscal and monetary responsibility, the possibility of a tax cut and tax reform, and the very difficult problem of our international balance of payments.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE DOUGLAS DILLON, SECRETARY OF THE TTEASURY, BEFORE THE YALE DAILY NEWS ANNUAL DINNER, NEW HAVEN, CONN., APRIL 4, 1963

Tonight I want to discuss with you a few of the basic economic problems facing our Nation today and then examine some alternative ways of meeting them.

At the outset, let me make it clear that when I talk of economic problems, I by no means intend to imply that our situation is bleak. Far from it. The postwar years as a whole have witnessed a flowering in our economy and in our manner of living that has been unmatched in this century for its persistence and vigor.

Why, then, is there cause for concern?

First of all, there has been a marked slowdown in our rate of progress since 1957. By that time, our economy had satisfied most of the unfulfilled needs that had accumulated during the depression years of the thirties and during wartime. Since 1957, therefore, our economy has been operating without the stimulus of that huge backlog of demand, and it has not performed as well as we would have liked.

The shortcomings in our economic performance have been most glaringly apparent in terms of unemployment. In the years 1947–57, our unemployment rate averaged 4.2 percent, and was for the greater part of that time below, or only slightly above, the 4-percent level that is regarded by many as reasonably full employment. During the past 5 years, however, unemployment has averaged 6 percent and has never fallen below 5 percent, even for a single month.

Over 4 million of our citizens were unable to find the jobs they sought. Such hardship simply cannot be tolerated in these times of relative prosperity.

Another reason for concern lies in the outlook for the future. Unless we improve our economic performance—and quickly—we must face the fact that another recession would bring with it unemployment levels such as we have not seen in more than 20 years. Next year, those young people who were born in 1946, the first year of the postwar baby boom, will turn 18 and begin to enter our labor force in large numbers. The average annual inflow of young people into our labor force during the mid-sixties will be 2,700,000, compared to 1,800,000 during the mid-fifties. We must be able to provide jobs for all of these young men and women. And we must find those jobs in a time of ever-increasing automation. The impact of automation has long been felt by our blue-collar factory workers, and it is now spreading rapidly in the white collar and service areas.

What automation can accomplish today is well illustrated by the experience of the Treasury Department, which has been in the forefront of the shift to automatic data processing. In the last 15 years, for instance, while the number of checks and bonds issued annually by the Treasury has nearly doubled, mechanization has cut in half the number of employees it takes to issue these checks and bonds—a fourfold increase in productivity.

We cannot hold back the progress represented by automation. But we can—and must—take positive and energetic steps to meet the twin challenge of automation and a rapidly growing labor force with a many-sided response. We cannot afford to sit idly by and do nothing. The potential results of inaction were graphically forecast by the president of the National Association of Manufacturers, Mr. W. P. Gullander, who recently pointed out that if our economy continues to create jobs no faster than it has during the past 5 years then, by 1970, our unemployment rate would climb to a shocking 12.7 percent. Such a result would be totally unacceptable to the American people, and properly so. It would inevitably call forth massive governmental action to fill the void left by the inability of our private economy to provide the needed jobs. I can assure you that such a prospect is just as unwelcome to us in Washington as it must be to you.

The major domestic question facing us in the sixties, then, is how to act to create the jobs we lack today, as well as the millions of new jobs that will be needed in the years immediately ahead? While the welfare of its people is a natural concern of any government, the specific responsibility for action to relieve unemployment has been laid upon our Government by the Employment Act of 1946, which was adopted by overwhelming bipartisan majorities. It reads, in part:

"It is the continuing policy and responsibility of the Federal Government * * * to promote maximum employment, production, and purchasing power."

In facing up to this overriding responsibility, we have to take into account at least two other major problems: First, the matter of Federal budgetary deficits. In considering deficits, remember that the past 2 years have been extremely critical in the cold war—years during which Soviet communism has mustered all of its forces in an effort to overrun the free world—years during which the Soviet rulers felt enough confidence in their power to confront us with a military challenge on a scale that has not been seen since the Berlin blockade, 15 years ago. President Kennedy saw what was coming, and, in one of the very first moves of his administration, ordered a rapid and substantial build-up of our military power. Increased military strength and the steadfastness of our citizens enabled us to withstand both the Berlin crisis of 1961 and last fall's Cuban crisis. That military buildup was vitally necessary to preserve our freedoms. Inevitably, it was also expensive. Our annual defense budget increased by some $10 billion.

In addition to their military threat, the Soviets have also challenged us in the vast new arena of space. Thanks to a considerable headstart and rockets far larger than ours they have been able to out-perform us in manned space flight and to capture the imagination of the world by their feats. But our Congress decided in the spring of 1961 that we were no longer willing to continue second best in space. It approved a program designed to put an American on the moon before the end of the decade, and hopefully before the arrival of any Soviet space explorer. That decision was extremely costly, but it involved far more than a symbolic race to the moon. It represented our clear determination as a nation that we will not permit the Soviet Union to preempt world leadership in a new and unknown environment whose eventual potentialities we cannot yet foresee.

These two decisions in the field of defense and space, coupled with increases in other areas of Federal expenditure that are mandatory to meet the basic needs of our growing population—increases of the same general order of magnitude as those of previous years—have combined to push our expenditures substantially higher than the revenues we collect from our underemployed economy.

Once again, therefore, a major problem can be traced to the inadequate performance of our economy. For if it were operating at reasonably full capacity, our tax system would be producing more than enough revenue to adequately meet the cost of financing our critical national needs with a balanced budget. Instead of worrying about deficits we would be enjoying budgetary surpluses.

But our economy is not operating at anywhere near full capacity and shows no sign of moving up to capacity to meet the very real challenges of the cold war and to fulfill the basic needs of our growing population. So once again we see that action to stimulate our economy is essential, not only to provide jobs for our people, and to guard their security, but also to provide the revenues to balance our budget.

Finally, we have to take account of another major problem, one that first became acute during 1958: the deficit in our international balance of payments. After running moderate payments deficits for a decade—deficits which helped to redistribute the world's liquid financial resources and enabled our friends in Western Europe to return their currencies to convertibility—our international deficit soared to $3.5 billion in 1958, followed by deficits of $3.7 billion in 1959 and $3.9 billion in 1960. These payments deficits were accompanied by substantial drains on our gold stock amounting to $4.7 billion for the 3-year period, 1958–60.

By early 1961, action to reduce these deficits became imperative, and it was taken. The deficits were reduced to $2.4 billion in 1961, and to $2.2 billion last year. At the same time, the annual gold drain was reduced by 45 percent. But these figures are still far too high. Further action to reduce and eliminate the deficit is imperative, and will be undertaken within the existing free world trade and payments system.

In considering our balance-of-payments deficit, we should realize that it is unique in the world's financial history. Usually, balance-of-payments deficits are associated with domestic inflation leading to an unfavorable trade balance. In our case, the reverse is true. We have the largest favorable trade balance of any nation in the world. Ever since 1958, our wholesale prices have remained absolutely level, while those of our competitors have risen.

Why, then, a deficit?

Our deficit has been due, first and foremost, to the dollar cost of maintaining substantial military forces overseas for the defense of the free world. In addition, there has been the dollar cost of our foreign aid programs. This latter, however, is being substantially reduced as we increase the proportion of aid funds spent on American goods and services. Finally, there has been a large outflow of private capital as foreign borrowers have increased their activity in U.S. markets, and as American companies have increased their investments overseas. But in this connection it is worth noting that the annual increase in the value of our foreign investments has regularly exceeded our payments deficits. All of these outflows have combined to outweigh our favorable trade balance and our other earnings abroad, and so have given us our recent deficits.

Our current balance-of-payments deficit necessarily limits our choices in meeting our domestic economic problems. Flooding the market with bank credit designed to create artificially low interest rates—a course which has often been appropriate in the past—would, under present circumstances, only mean that more funds would flow abroad in search of higher rates, creating an unmanageable problem for the dollar and doing little to help the domestic economy. On the other hand, the sharply higher domestic interest rates and the strong restrictions on credit that have been classic medicines for balance-of-payments problems are just as clearly inappropriate to the state of our domestic economy.

Since the fundamental answer to all of the problems I have cited lies in stimulating economic progress, it has long been clear to us in Washington that the Government should spare no effort to encourage our private economy to move ahead until it once more operates at reasonably full capacity. Last year, we took our first important steps in this direction. They were the enactment of the investment credit and the complete revision and extensive liberalization—for the first time in 20 years—of the tax rules dealing with depreciation. The combined effect of these two actions was to reduce the tax load on business by some $2.5 billion a year—the equivalent of a five-point reduction in corporate taxes.

Today, business is reacting to these twin measures as we anticipated. The expanding flow of new orders for machinery and equipment that marked the opening months of the year, and the recent sharp increase in business appropriations for modernization and expansion, can be traced largely to these actions. It is this reaction by business that gives us our best reason for hoping that the current recovery still has considerable momentum.

These twin actions are only a beginning. The performance of our economy over the past 5 years makes clear that it is being forcibly impeded in its natural effort to push ahead to full capacity operation. The culprit is not hard to find. The overwhelming national consensus is that our economy suffers from the harsh restraints of a tax system that was created to meet the needs of wartime, and has never been readapted to the quite different needs of peacetime. If our economy is to surge ahead, we must break the shackles of this oppressive tax system. That is precisely what the President is recommending in his new tax program. He has proposed a broad, top-to-bottom reduction in tax rates, both corporate and personal, accompanied by a number of structural reforms. The overall result would be a reduction of $10.3 billion in taxes, designed to unleash our economy and allow it to reach its full potential.

The vigor of the debate so far over the various suggestions for structural changes and the argument over just how the reduction should be applied has somewhat obscured the central importance of the President's basic proposal—which is simply to reduce taxes in order to encourage the economy to do better. Nevertheless, it is both surprising and gratifying that in the 6 weeks of public hearings that have just been completed before the House Ways and Means Committee in Washington, there has been literally no opposition to the central thesis. It has been accepted as proper policy by all, although it is usually subject to understandable reservations reflecting the special interests of particular groups.

The main thrust of the concern which has been voiced is that the tax reduction be carried out in a fiscally responsible manner. That is a concern which we in the administration fully share and, indeed, it is clearly spelled out in the President's budget message, as well as in his tax message.

It is our belief that the tax reduction we have proposed will so invigorate the economy that, in a few years, our revenues under the new, lower rate structure will be larger than if we were to continue with our present rate structure, which stifles economic growth. Nevertheless, the first and immediate fiscal impact of tax reduction will be lower revenues and a somewhat larger deficit. This calls for the most careful expenditure control. And that is just what the President has pledged. First of all, since increases in defense, space and interest on the public debt are unavoidable, he has held fiscal 1964 expenditure levels below those of the current year in the overall civilian programs of the Government.

Second, he has specifically stated on more than one occasion that a substantial part of the increased revenues from our expanding economy will be set aside to reduce the deficit until such time as it is eliminated. And, third, he has already begun to translate his pledges into action. Since January, he has cut expenditure requests by over $750 million, including the recent cut of $400 million in his foreign aid request. This is sure proof of the effectiveness of the program of expenditure control that is such an important and integral part of the President's tax reduction program.

In a further effort to minimize the effect of tax reduction on the budget, its impact has been spread over 3 fiscal years. This is surely the course of fiscal responsibility. Yet it does not mean that we have to wait 3 years to feel the economic impact of tax reduction. Quite the contrary. The tax program would release a very large amount of money throughout the economy in a very short period of time. If the tax program were enacted in September of this year and became effective in October then in the 9 months between October 1, 1963, and July 1, 1964, the economy would benefit from roughly $6 billion in tax relief, and within 15 months after October 1, 1963, the entire $10 billion reduction would be in effect.

Finally, in an effort to achieve the maximum possible rate reductions, and still hold the overall tax cut to the $10–$11 billion that seems to us to be the maximum that fiscal responsibility will allow, we have suggested a number of revenue-raising measures. None of them are essential to our objective of a freer economy as the rate cuts, but they do not permit lower marginal rates than would otherwise be possible. The largest revenue-raising proposal is a 5-percent floor under personal income tax deductions which would raise $2.3 billion. The only feasible alternative to a base-broadening approach of this general nature is to lower our sights on rate reduction by an equivalent degree.

A number of the structural changes we have suggested are highly desirable to relieve hardship and to promote growth. Important among them are the liberalized minimum standard deduction, the $320 million of relief to our older citizens, the provisions on income averaging, the deductibility of moving expenses, and the expensing of equipment used for research. Some of our other proposals deal with provisions that were written into law to provide relief from our exorbitantly high rate structure. With the sharp reduction in rates we are proposing, these special provisions will no longer be justifiable. They should be repealed or substantially modified at the same time that we eliminate the high rates which gave birth to them.

In considering possible courses of action to release our domestic economy, there are some who have felt that the answer lies in much easier money. But the fact is that we already have a monetary policy which has been a strong element in the expansion of our economy. Without going too deeply into the many complex facets of monetary policy, let me point out that during the past 25 months of recovery, our level of liquid assets has risen faster than our gross national product. From the first quarter of 1961 to the fourth quarter of 1962, our total liquid assets have risen by 13 percent, while GNP has risen by only 12 percent.

Our liquid assets, in fact, have risen far faster in recent months than they have in similar periods of economic expansions in the past. During the 6 months ending January 31, total liquid assets rose at a seasonally adjusted annual rate of 7.8 percent. Yet they increased by only 0.1 percent during the similar period—the 6 months ending March 1960—of the preceding economic expansion. During the 6-month period ending in February, time deposits have increased by about 18 percent, the money supply plus time deposits by roughly 10 percent, and the money supply alone by 5 percent. These figures well demonstrate that our monetary climate has been favorable to economic growth.

Most corporations already have a large flow of cash relative to investment. In recent periods, corporate cash flow has in fact expanded more rapidly than plant and equipment expenditures. Last year's more than $39 billion in corporate cash flow—undistributed profits plus corporate capital consumption allowances—was $3½ billion higher than the nearly $36 billion in 1961.

Nor should we forget that long-term interest rates have generally declined over the past year. From March of 1962 to March of 1963, for example, average rates for new issues of double-A corporate bonds declined from 4.40 percent to 4¼ percent, municipal bond rates also fell and mortgage rates declined from 5.70 percent to 5½ percent.

Monetary policy, therefore, has done all that can reasonably be expected of it toward providing the extra impetus we need today. The evidence is overwhelming that tax reduction alone can offer a permanent and vigorous stimulus to our economy without at the same time creating new economic difficulties.

Those are the considerations that led President Kennedy to propose his program of across-the-board reduction in income taxes. The increased demand and investment that would result from enactment of this program will in turn interact upon each other and set off a chain reaction of rising economic activity. And over and above this direct income effect of a tax cut, will be the sustained impact of the lower rates themselves as powerful inducements to greater investment—an impact which itself reinforces the income effects of the tax cut.

A higher growth rate will mean larger Government revenues. This will be true even with lower tax rates. And the enlarged revenues flowing from an economy operating at reasonably full capacity, when coupled with the firm control on expenditures that the President will continue to exert, will make it possible for us to achieve the balanced budget that is our goal.

We are not a people to stand idly by when the means to achieve our national aims lie close at hand. We are not a people who wait upon catastrophe before we act or who bestow upon our future the decisions that are ours to make here and now. At no time in our postwar history has the need been greater to regain the economic momentum that can carry us to full employment. The President's tax program can meet that need far better than any proposal yet set before us. Our choice could not be clearer.

FLIGHT OF REFUGEES FROM COMMUNIST COUNTRIES

Mr. BEALL. Mr. President, Vincent Godfrey Burns, poet laureate of Maryland, recently composed a poem concerning the refugees fleeing from Communist countries. This work was printed in the Evening Capital of Annapolis, Md., together with a vivid commentary on the plight of these persons.

This article is so forceful and thought-provoking that I think it should be read by all Americans, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POET BURNS WRITES OF REFUGEE DRAMA

All over the world refugees are fleeing from Communist countries as if from a plague. More than a million Chinese have fled across the border into Hong Kong and thousands of pitiful men, women, and children fleeing the terror and the starvation of Red China have been turned back to that pathetic land by border guards.

In India, hundreds of thousands of Tibetans have fled over the mountains from their homeland in Tibet, where the Red Chinese have carried on a savage war of extermination against the Tibetan people.

And, in Florida and elsewhere in our own land hundreds of thousands of Cubans have sought refuge from the brutal tyranny of Castro and his Red cohorts in Cuba.

But perhaps the most voluminous flood of pathetic refugees in all the world is the millions of tragic human beings who have fled the terror and the tyranny in East Germany. Since World War II ended probably close to 5 million people have fled across the border into West Germany.

Then, the Communists, realizing that this flood of refugees provided towering proof of the false claims of communism, decided to try to prevent any further emigration by building a huge barrier of stone and concrete and barbed wire on the border. The wall was erected in August of 1961. But since that time more than 14,000 people have somehow managed to flee East Germany—by going over the wall, under it, around it, and right straight through it.

Think of it. These unfortunate people must leave behind their homes, their possessions, their friends, their jobs, their families—indeed all they possess except what they carry on their backs. What hopelessness and suffering, what oppression and cruelty there must be in that unhappy land to force so many people to take this step.

One man escaped with his fiance by binding her underneath his car. Some, at the risk of their lives, have driven trucks straight through the concrete wall and barbed wire. Others have swum through icy water to freedom.

Perhaps the most spectacular escapes of all have been through tunnels, dug 50, 75 or 100 feet under the wall. An old man of 73 years of age, assisted by his wife, dug a tunnel, which began in the living room of their home, and right under the eyes of the Vopos (the Red guards) they and 13 other old people fled from the terror of communism into the free air of West Germany.

The tyrants built a concrete wall,
A hideous barrier 10 feet tall,
Designed by lords of slavery
Who hate to see men glad and free.

With rock and stone and strong barbed wire,
With machineguns and with rifle fire,
They herd their hapless victims in
Behind this wall of shame and sin.

But human life breaks every band,
No earthly wall can long withstand
The pressure of the human soul,
Resolved upon its freedom goal.

So thousands brave the evil breath
Of Communist violence, pain, and death
And, spite of all the Reds can do,
Go over, under, round and through.

Imagine, if you can, what fear
And human suffering must be here,
That people would forsake their all
To flee across this frowning wall.

O friend, if still your heart can know
A twinge of pain for human woe,
You will—like me—not sleep tonight
Till earth is cleansed of this Red blight.

Though Reds have built this wall today—
The symbol of their wicked way—
The human race will someday be
Purged of this awful slavery.

—*Vincent Godfrey Burns.*

THE REPUBLICAN PARTY—CONSERVATIVE AND LIBERAL

Mr. COOPER. Mr. President, I ask unanimous consent that there be inserted in the body of the RECORD a letter from our colleague, the distinguished senior Senator from California, which appeared in the New York Herald Tribune last Sunday, April 21. Senator KUCHEL, the Republican whip, who was reelected in California in 1962 by a majority of almost three-quarters of a million votes, wrote on a subject which is of immediate importance. He is a patriotic American who has been a great leader of our party, and I think this statement should be read by all members of the Republican Party, and by all Americans.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE REPUBLICAN PARTY—CONSERVATIVE AND LIBERAL

To the HERALD TRIBUNE:

The direction the Republican Party must take, in my view, is not a matter of turning left or turning right—but going forward.

If the world were blessed with a just peace and perfect security, if the America we love gleamed with shining cities, modern towns and prosperous farms, in an atmosphere of clean air and clean water, and if our Nation brimmed with full employment and equal opportunities, quality education and decent shelter, and civil rights and human freedoms for all, then—

Then I might feel that we, as a party, could stand back and, for a moment at least, stand still.

America, unfortunately, remains a reservoir of unsolved problems. But they are soluble problems, and they are problems worth solving.

Nor are we alone on earth. There remains an implacable totalitarian evil called communism, challenging us to the hilt—militarily, economically, politically, ideologically.

I devotedly believe in our capitalist, free competitive enterprise system.

And, as a Republican, deeply committed to individual and private initiative, I believe this force must take the lead in the opportunity to improve America—not simply to surpass the Russian challenge, but to fullfill the American dream.

Our party must provide the incentives to unleash private industry and business to provide goods and services and to create jobs, as has lately been accomplished in Western Europe.

Yet where free competitive enterprise cannot or will not do the job alone—and where, clearly, the job deserves to be done—government, I believe, must be called upon to help. That was Lincoln's creed. And through the years it has been good American—and good Republican—creed.

For government—Federal, State, and local—is our government, yours and mine, not the enemy's, as some seem to feel in both of our political parties. Nor is it our master, as others seem to feel in our opposition party.

Government, to me as a Republican, is simply our instrument, to be used cautiously but realistically and responsibly, to help America achieve the common good.

Just because a little bit may be good, however, does not mean—as a good portion of our opposition apparently believes—that a whole lot more is automatically better.

At the same time, I believe our party must continuously resist needless and repeated executive intrusions into the legislative domain at the Federal level, and must awaken the State and local levels to their responsibilities as well as their prerogatives.

On another front: some have called the Republican Party the party of big business. And the Democratic Party the party of big labor.

I don't care what the Democrats choose to do, but I do not want my party to be the captive of either or, indeed, of any special interest or segment of our economy.

The Republican Party, as the party of Lincoln, should, it seems to me, be the party of them many—the people—not the few, whether the few represent industrial giants, powerful unions, great farm organizations, or the few anything else.

The Republican Party must welcome businessmen, big and little; laboring men, skilled and unskilled; farmers, retired people, the young, the rich and the poor, black and white, all segments of our population to its ranks—but first and foremost as Americans who value what our party believes in, as generally and honestly set down in our last forward-looking national platform.

Within the framework of our Republican structure, built upon Lincolnian principles, there is and, of course, must be room for disagreement on specific issues, including the issues which will assume a critical importance in 1964 and beyond.

But the extremists of both the Left and the Right can find no living room in Lincoln's house.

Our party, to make American progress, must, I believe:

Continue to fight for fiscal integrity, because an unsound economy is just as hazardous as an unsound national defense:

Take the lead again, as it has so often, in the cause of human progress (which is not in the least incompatible with fiscal responsibility), in health, in housing, in education, and in civil rights—not because it may please a minority but because it is morally right and best for all America; we are the party of Lincoln, not Calhoun;

Take a realistic approach to the Communist menace, based on fact, rather than on foolishness or fear; let us be hardheaded, not softheaded or bullheaded; the latter attitudes, I fear, play only into Communists' hands.

Republicans have, for years, spent long angry hours hurling about the terms "liberal" and "conservative," while the Democrats, with an astonishing philosophical split, have been spending them happily and busily winning elections.

There are many worthwhile things to conserve in America: our ideals, our freedoms, our institutions, our resources—the very heart of our greatness.

Let us, by all means, be conservative about them.

But let us also be liberal in seeking, under our American charter, to better our people, our country, and our world.

If we, as Republicans, can preserve the best of America while improving it—and let no one mistake it: ours is the finest country on earth—our party will once again carry America forward. And future election victories will take care of themselves in abundance.

Thomas H. Kuchel.

INTER-AMERICAN POLITICAL AND ECONOMIC AFFAIRS—ADDRESS BY IGOR GORDEVITCH

Mr. WILLIAMS of New Jersey. Mr. President, last week Mr. Igor Gordevitch, vice president of the publication Vision, the largest circulation news magazine in Latin America, addressed the 18th Annual Cleveland World Trade Conference, Cleveland, Ohio.

Mr. Gordevitch, who has been closely involved with inter-American political and economic affairs, talks in frank and positive terms of private enterprise in Latin America.

We have heard much about the problems which private enterprise has encountered in Latin America. It is refreshing to encounter a knowledgeable, constructive statement which gives proper perspective not only to the problems but also to the progress of private enterprise in Latin America.

I commend the address to my colleague, and ask unanimous consent to have it printed in the Record at this point.

There being no objection, the address was ordered to be printed in the Record, as follows:

Address by Igor Gordevitch, Vice President of Vision, Inc., Before the 18th Annual Cleveland World Trade Conference at the Pick-Carter Hotel on April 4, 1963

Mr. Kolby, ladies and gentlemen, it is a great pleasure to renew Vision's contacts with the Cleveland World Trade Association and the Cleveland Chamber of Commerce. As some of you may remember, our president, William Barlow, had the privilege of addressing you just 3 years ago.

It is also a great pleasure to listen again to Don Felipe Herrera who, as his words indicate, is a man of both insight and foresight.

I especially welcome the conference committee's invitation to attend this conference, for it gives me an ideal opportunity to discuss a matter of prime importance to all of us, as businessmen and as citizens of this hemisphere. I refer to the unwarranted and, I believe, dangerous attitude toward Latin America that has developed over the past few months. Given a certain amount of psychiatric license, it could be called the down-the-drain syndrome. It manifests itself through angry table pounding and loud talk of flight capital, dwindling exports, bankruptcy and the imminent collapse of most if not all of the governments to our south. It crops up at business lunches from New York to San Francisco, in casual conversations in Washington, and—most of all—in the press.

Last September, Business Week magazine led off a special report on Latin America with these words, and I quote: "Latin America today is heading for its worst troubles ever."

Last December the magazine followed up with a subhead reading: "Latin America: Gloomy Days Ahead."

In January, U.S. News & World Report told its readers: "One consolation about Latin America: things can hardly get worse in an economic sense."

In February, Time magazine reported that "instead of plunging in, U.S. investors are pulling out of Latin America; in the first 9 months brought home $37 million more than they invested."

And last month Malcolm S. Forbes, returned from a short trip to the area, wrote in his magazine: "Invest private capital in South America today? Not unless you consider wagering at roulette or at a crap game an 'investment'."

And so on, and on, and on—gloom and intimations of disaster on all sides.

I have the greatest respect for our press, and as a publisher in Latin America, I am fully cognizant of the enormous, wrenching problems besetting the continent. But, gentlemen, at the risk of being called a Pollyana, I would like to venture the suggestion that Latin America is not on the verge of departing this world—by way of the drain or any other exit. It is very much with us and, by all accounts, will continue to be so for sometime.

We accentuate the negative in matters Latin American because we tend in many instances to regard these 20 republics as creatures of the moment. Thus, the political and economic upheavals that have afflicted Brazil during the past 2 years are often regarded in the U.S. public mind as the sum total of Brazilian history. Even the better informed are inclined to think of Latin America as something that appeared suddenly at the end of World War II.

When we put things back into context and continuum, we see that Latin America has had about as many ups and downs as any other world area. It has gone through dictatorships and depressions, prosperity and peace—more of the latter than is commonly found in the world.

May I remind you, gentlemen, how Europe looked 15 years ago. Two countries—Italy and France—were dangerously close to communism. Britain was run by a Socialist Government that was nationalizing basic industries. And the Soviet threat in Europe, crystallized in the Berlin crisis, was far more explosive than today's Soviet presence in Cuba.

And today, how does stability in Latin America compare with that in Asia and Africa. Favorably, I think, in view of economic and political conditions prevailing in Indonesia, Communist guerrilla attacks in South Vietnam, assassinations in Laos, the possibility of further Red Chinese invasions of India, and the hopeless deterioration in the Congo.

With this in mind, permit me to do a little accentuating of the Latin American positive, starting with our private investments there. According to official estimates, during the first 9 months of last year there was a net capital flow back to the United States amounting to $49 million. That's a pretty depressing figure as it stands. But there's more to the story. First, there was a considerable return of funds from U.S.-owned petroleum companies in Venezuela during the first three quarters of 1962. If the Venezuelan figures are excluded from the total, the result is a positive capital flow into Latin America on the order of $150 million or so. For the full year, the figure will be even higher, since preliminary estimates for the fourth quarter show a net capital outflow to Latin America.

There are other positive elements in our Latin American investment picture. Take the up-and-coming manufacturing industry. One of the Government's top statisticians, Samuel Pizer, said recently that capital outflows in this sector during 1962 will have reached the record figure of $125 million set in 1960.

These are Mr. Pizer's words: "What has happened in this industry is that Brazil, which received 43 percent of the total capital flow in the previous 10 years, dropped out of the picture by the end of 1961, with many firms returning funds to the United States on balance even as others continued capital outlays for which they had earlier been committed. Flows to Cuba have also been sizable in some years but have been nonexistent since 1958. On the other hand, capital flows to Argentina, Mexico, and possibly also Venezuela, have risen enough to maintain the overall average. This means that if it were not for the dropping out of Brazil and Cuba, the record this year would look comparatively good."

No matter how you rearrange them, our capital outflows to Latin America last year fell far short of the $300 million quota for

U.S. private investments envisaged by the Alliance for Progress.

But the feeling is growing among a number of economists that capital flow is not an accurate measure of the impact of U.S. investment in Latin America. A better device, they say, is to add in reinvested earnings to show approximate increases in book value. The total—capital outflow plus reinvested earnings—came to over $400 million in 1961. And if you add in expenditures for depreciation, depletion, amortizations, and the like, you come up with a rough estimate of $1 billion for 1961.

Is this playing with figures? If it is, it is at least an admirable illustration that one can play just as well on the positive as on the negative side.

I'd like to touch for a minute on trade. All of you have read the comments of eminent economists, United States and Latin American, on Latin America's deteriorating terms of trade. The prices of her export commodities are slipping, the experts say, and the prices of the industrial goods she needs for development are rising. This is demonstrably true in many instances. But a glance at the March issue of the International Monetary Fund's International Financial Statistics suggests that it is not entirely true.

According to the IMF, the dollar value of Latin America's exports have been going up of late—from $8.58 billion in 1960 to $8.65 billion in 1961 to an annual rate of $9.1 billion for each of the first three quarters of last year.

Imports have followed suit. Despite austerity plans, exchange regulations, import substitution programs and so forth, Latin America imported $8.3 billion worth of goods in 1960, $8.6 billion in 1961, and, according to estimates, somewhere around $8.7 billion last year.

We get into the realm of the metaphysical whenever we start pushing continental statistics around. I'd like to get back to the practical by reviewing with you last year's economic development in some of the individual Republics. For, gentlemen, if one thing is sure in the incredibly complex business of inter-American relations, it is that you simply cannot regard 20 different countries as an economic—or as a political or social—entity. A good year in Mexico can be a bad one in Argentina and vice versa. And as you know better than I, even a bad year is never all bad.

Venezuela is a case in point. For months now, the papers have been full of Mr. Castro's overt attempts to do away with the tough and tenacious Mr. Romulo Betancourt. There have been reports of uprisings, sabotage, terrorism, art theft, piracy on the high seas—you name it. Now, if the down-the-drainsters are right, this sort of thing should result in flight capital, economic anemia, and a rash of ulcers. It is most certainly not conducive to improving that mysterious prerequisite for economic development, the business climate.

But the facts are, gentlemen, that last year was an uncommonly good one for many sectors of the Venezuelan economy. This is what Department of Commerce specialists have to say about it in an upcoming report: "There was continuing economic recovery in Venezuela during 1962, and at the outset of 1963 the prospects are more favorable than at any time since 1958. In 1962, gross production of goods and services increased at an annual rate of 6 percent and equilibrium was reestablished in the balance of payments * * *. With the April 1962 exchange reforms there have been indications of growing business confidence and an abatement or reversal of capital flight."

Venezuela's neighbor, Colombia, had its share of troubles last year, what with balance-of-payments difficulties, devaluation of the peso, and a considerable increase in taxes. But it was a record year for the Bogotá Stock Exchange. The number of stockholders in Colombia increased from 350,000 in 1961 to over 400,000 last year, the third largest such group—after those in the United States and Canada—in the hemisphere. Per capita GNP growth came to 3 percent last year—well over the Alliance for Progress minimum of 2.5 percent. Even more important, Colombia made significant headway in diversifying its exports—in freeing itself from the historic and crippling reliance on one or two commodities. Exports other than the usual items—coffee, petroleum, and bananas—increased by 63.5 percent in 1962. Cotton exports doubled, and textile shipments were up 290 percent.

Peru suffered an annulled election and a military coup last year. There has been labor unrest, a tax hike that has made the country one of the world's heaviest taxers, and a 24-percent increase in planned governmental expenditures for 1963. Mineral exports have slumped due to depressed world market prices for lead and zinc.

But exchange reserves at the end of the year stood at $106.6 million, as against $82.4 million in December of 1961. The S.O.L. held steady during the political troubles. Power consumption and the sales of cement jumped more than 10 percent. Exports rose 9 percent, thanks chiefly to the booming fishmeal industry, which earned $110 million for Peru last year—double that industry's 1961 export earnings.

The Chilean economy is commonly thought of as stagnant. The country's budget deficit was one-third larger in 1962 than in 1961. A fresh wave of wage hikes at the end of the year broke through President Allesandri's austerity measures and started a fresh inflationary movement. But. Again the but. Chile's industrial sales value index rose 30 percent during the first 10 months of 1962, and the retail sales value climbed 21 percent. Even though the mining industry continued to be plagued by tough and often discriminatory taxes, mining led all other sectors of the economy. Copper production, much of it by U.S.-controlled mines, rose over 9 percent last year. The iron and steel industry continued to move ahead, with domestic demand up an estimated 50 percent over 1961. Total construction activity increased by 75 percent during the first 7 months of last year.

Brazil, as you know, has been going through an economic and political crisis that would challenge the structure of any nation in the world. The fact that it has survived is, indeed, a tribute to its innate strengths. But survived it has—and grown, although not at the astounding 6- and 7-percent rates registered in recent years. Production records were set in a number of industries, most strikingly in the automotives. Motor vehicle unit production was 30 percent ahead of 1961 figures. Passenger cars were 44 percent ahead. Wheat, which has been an important item in Brazil's balance-of-payments difficulties, made a good domestic showing. According to unofficial estimates, production went from 150,000 tons in 1961 to 275,000 tons last year.

Argentina has had a plague of troubles. Inflation, though not as strong as in Brazil, has taken its toll. There have been a record number of business failures. Investment is down as businessmen try to feel their way through one political crisis after another. But there have been plus signs. Argentina's exports during the January-November period of last year were 24 percent higher than for the similar period in 1961. Beef exports alone shot up by 42.6 percent last year. And although there was a general decline in manufacturing, rubber goods, petroleum and paper industries all registered sizable gains. Production in the extractive industries increased by 11.5 percent, paced by petroleum.

I could lengthen this exercise by mentioning solid advancements in Mexico, and relatively good showings in a number of the other republics. But I trust I have made my point.

There is, however, one area of Latin American economic development that deserves special mention—economic integration. It is easy to scoff at the small size of the Central American common market or at the seemingly slow start of the Latin American Free Trade Association (LAFTA). But it is most decidedly unwise to do so.

As President Kennedy emphasized during his recent visit to Costa Rica, the economic union of the five Central American States—and the probable inclusion of Panama within not too many more months—will give the isthmus a viability it has never had before. And a market of 14 million people with a $4 billion gross product is nothing to be sneezed at.

It is true that LAFTA's nine members often nitpick over tariff reductions on thousands of individual items rather than moving toward sweeping cuts. But they are going ahead. Consider Mexico's sales to its fellow LAFTA members: $7.8 million in 1961, $16.7 million in 1962, and an estimated $40 million for 1963.

No one would wish to criticize an investor for being cautious. But there is a difference between caution and a refusal to take risks. In my opening remarks I mentioned Mr. Malcolm Forbes and his equating of investment in Latin America with a crap game. I'd like to quote another U.S. business leader on this point—Mr. J. R. White, vice president of the Standard Oil Co. of New Jersey. "A prospective investor in Latin America should be precisely as alert for risks, and for opportunities, as he would be in any other area. He should not take counsel of his fears or be deterred by imaginary dangers. Latin America has a long way to go and, just like the rest of us, a lot to learn. It can certainly experience setbacks and upsets along the way. But it is also an area of enormous potential and accelerating growth."

Frankly, gentlemen, it is hard to judge who subscribes more fully to Mr. White's admirable statement—ourselves or the Europeans and Japanese. Certainly, our oversea counterparts are trying very hard to enlarge their slice of the pie. Their share of Latin America's trade has been getting larger since the war. Peru is now Japan's major foreign supplier of iron ore, though competition in this field is increasing from Brazil and Chile. In contract and financing work, European and Japanese firms are stepping up their activities in Latin America, witness the German group that will build a new copper refinery in Chile and the European consortium that will handle the expansion of Peru's Chimbote steel complex.

In manufacturing investment, our oversea competitors seem to have a slightly better feel of what lies in store for Latin America than we do. They too are cautious about the trouble spots. But they are willing to take big risks. Volkswagen do Brazil, for instance, has announced a multimillion-dollar expansion program that will make it the largest automaker in Latin America. VW sees the potential small car market that will be created once LAFTA begins to jell, and it is willing to gamble.

But as I have said, it is next to impossible to compare our recent record in Latin America with that of the other Western countries. Certainly an impressive group of American businessmen have proved immune to the down-the-drain syndrome. A check of any newspaper—yes, we have them in New York—or of any newsletter that pays much attention to these things will show that U.S. investors are still moving south. Many are doing so on the basis of commitments made 2 or 3 years ago—that is true. But others are making their decisions to move today—

particularly those who have taken the trouble to take a good long look for themselves. I am reminded of a top finance executive of one of our large manufacturing firms who was dead set against sinking his company's money in Brazil. After visiting the place himself—and any of you who have spent any time in Brazil will know what I mean—he did a complete about face.

As is to be expected, manufacturing in Latin America is unattractive to potential investors, especially those who have read of expropriations of utilities and nationalistic attacks on extractive industries. Esso, Shell, Phelps Dodge, Sears, Westinghouse, and a number of others are either setting up or expanding shop in Central America. Ford is expanding auto production in Brazil, after a recent talk between Henry Ford II and President Goulart, and has opened a new assembly plant in Venezuela. A large U.S. group is going ahead with a $72 million investment in a petrochemical plant in Argentina, despite the political alarums and excursions there. Caterpillar is doubling the size of its São Paulo plant. J. I. Case hopes to be building a completely Argentine-made tractor by 1964. Johnson's Wax is building a new plant in Buenos Aires Province. In Mexico, U.S. capital is flowing into foodstuffs, petrochemicals, automotives, electronics and machinery.

The joint venture is coming into its own as a precaution against anti-U.S. discrimination. And the investment guarantee program, or at least some phases of it, is beginning to have something of the same effect. You might be interested to know that of the $3.2 billion worth of investment guarantee applications in process at the end of last year, almost half were for enterprises in Latin America. The figure for Argentina was a tidy $400 million. This is an indication of U.S. apprehension over the risk involved in Argentine investments, but it is also an indication of U.S. desire to invest in that country.

The outlook for the next few years is, I am convinced, more optimistic than pessimistic. Men far more expert than I in the ways of the Argentines and Brazilians profess to see signs of improvements. So far, the Argentines have stuck to their guns on the vital matter of trying to put the economy on a sound basis. The Brazilians have promised to abide by a stabilization program that includes elimination of wasteful subsidies and progressive reduction of inflation. Our aid agreement with them is designed to see that they keep their promise.

There is another factor which can't be overlooked, whether you favor it or not. That is the emergence of the various national development plans, called for under the Alliance for Progress, and their effect on future patterns of investments and trade. Venezuela's 4-year development plan, with its goal of an annual 8 percent increase in GNP, puts heavy emphasis on manufacturing and agricultural development. That means a bigger market for—or investment opportunity in—capital goods and farm machinery. In Colombia, the first to submit its plan, the government will be increasing its bids for such items as trucks, tractors, generators and the other tools it needs to build up the Colombian infrastructure. The same is true of Chile, Bolivia, Mexico, and Honduras—the other countries that have submitted their plans to the Alliance. Performance does not always match the planning, but you would be surprised how close the two were last year in Chile and elsewhere.

In these development plans and in recent declarations of many Latin American governments there is at least the outline of what to me is a most important positive development: The realization at long last that the public section, necessary as it is, cannot possibly finance or administer economic progress on the scale set down by the Alliance for Progress. While there was talk of the importance of the private sector at the Punta del Este Conference, now there is concern and action. Last February, delegations from Latin America and the United States met to discuss ways of improving governmental relations with the private sector and of bringing businessmen into the planning and implementation stages of the national development programs. And over the past year or so, businessmen have been getting help from a promising and, in many areas, new source of financing: The Development Bank, geared to helping firms in expansion and modernization and to giving a hand up to small- and medium-size firms, the backbone of any democratic economy.

Our own Government has taken a decidedly warmer attitude toward the U.S. investor and his future role in Latin America. The investment guarantee program is decidedly a step in the right direction. So are the proposed steps to provide certain tax incentives for our Latin American investments.

As I see it, we have two alternatives. We can make our export and investment decisions on the basis of rumors, fears, intimations of disaster. Or we can make them on the basis of fact balanced against fact, good balanced against bad. We can make individual use of research available to us, or we can read the scare headlines and play follow the leader into blind pessimism.

A lot has ben said of the fact that you can't drive private money anywhere. You must attract it. I contend that there is a lot of attraction in a continent that has one-quarter of the world's forests, one-fifth of its copper production, at least 30 percent of its iron ore reserves. I contend that there is a lot of attraction in an area in which industrial output has jumped 40 percent in the past 5 years and in which gross product now stands at over $80 billion. Attractions and risks, too; yes, but there is no such thing as a riskless investment.

Not very much has been said, however, of the political and strategic implications of our investments in Latin America. It is perfectly clear that the Communists would like nothing better than to see every U.S. entrepreneur in Latin America turn tail and run. The Reds are actively working toward that goal. Every project dropped or shelved helps, in a very real way, the advancement of the Communist cause in Latin America.

The complaint has been made that the Alliance for Progress is not giving free enterprise a fair shake. The shake will be much less fair in the future if the Latin Americans get the idea that while we preach free enterprise, we are not courageous enough to help its development in their countries. Thank you.

COMPARISON OF VARIOUS ANALGESICS

Mr. WILLIAMS of New Jersey. Mr. President, there is quite a bit of current public discussion of the question of comparability of various analgesics, much of which centers around the recent Federal Trade Commission sponsored study of this subject. During the recent hearings of the Special Committee on Aging, comments were made by one of the witnesses, which were given considerable publicity, on the effectiveness of various kinds of aspirin.

I have before me a letter addressed to the Senator from Michigan [Mr. McNamara] from Dr. F. J. L. Blasingame of the American Medical Association which, among other things, explains the association's position in this matter, and a letter addressed to me from Mr. J. N. Cooke, president of the Bayer Co. The statements of these gentlemen merit attention, and in fairness to the point of view they represent, I ask unanimous consent that these letters be printed in the Record.

There being no objection, the letters were ordered to be printed in the Record, as follows:

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., January 23, 1963.
Hon. Pat McNamara,
Chairman, Special Committee on Aging,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: On behalf of the American Medical Association, I want to thank you for the opportunity to testify on medical and nutritional quackery before your Special Committee of Aging on January 15.

In the course of the testimony by Dr. Gerald D. Dorman and Dr. Robert E. Shank, who were accompanied by Mr. Oliver Field, director, AMA's Department of Investigation, and Mr. Paul R. M. Donelan, AMA legislative attorney, it was promised that the association would submit a statement to you covering (a) the association's new program of original jurisdiction in medical disciplinary cases and (b) the association's policies and programs urging physicians to aid in the presentation of impartial medical testimony.

In addition to presenting information on these two points, I would like to comment on the remarks made by Mr. Field in response to one of your questions.

MEDICAL DISCIPLINE

Traditionally, the local medical societies have been charged with the responsibility of handling disciplinary actions against the membership of organized medicine. Over the years, the American Medical Association has been an appellate body in these actions. At the AMA's annual meeting in Chicago, June 11–15, 1962, the association was granted original jurisdiction, under certain conditions, in local disciplinary cases.

In order to understand medical discipline in organized medicine, it is necessary to know the relationship of the AMA to individual physicians and to State and county medical societies. First, 197,369 of the 269,325 physicians in this country belong to the AMA. The AMA has no authority over those physicians who are not members.

The constitution of the AMA defines the association as "a federacy of its constituent (State) associations." The State associations are separate sovereign associations. County medical societies are chartered by the respective State associations and derive their existence from the State associations.

In the past, the State associations have been the authority through which member physicians could be disciplined. Generally, the States have delegated most original disciplinary authority to the county societies. The "trial" of a disciplinary case is usually heard by a committee of the county medical society. The "defendant" physician had the right to appeal to the State medical society and then to the Judicial Council of the AMA.

There are certain members of the AMA who are not necessarily members of State or county medical societies. They are service, affiliate, or honorary members of the association. The judicial council, for a number of years, has had authority to discipline these members directly.

In 1958, the AMA board of trustees established a medical disciplinary committee to assess the status of medical discipline. This committee submitted its report in June 1961. One of its recommendations was that "the bylaws of the American Medical Association be changed to confer original jurisdiction on the association to suspend or revoke the AMA membership of a physician guilty of a violation of the principles of medical ethics or the ethical policy of the American Medical Association regardless of whether action has been taken against him at the local level."

The following year, the house of delegates implemented this recommendation by granting the judicial council original jurisdiction under the following conditions: (a) When a State medical association, to which a member belongs, requests the AMA to take such action, and (b) when, at the request of the AMA, a State medical association, to which the member belongs, consents to such action. In these instances, the judicial council has the right to admonish or censure the accused physician or expel him from AMA membership.

In November 1962 the judicial council adopted rules of procedure for original jurisdiction cases (attachment 1). Thus, the AMA is now in a position to exercise an effective role in disciplining its members.

MEDICAL TESTIMONY

Developments in the law have placed increased emphasis on the importance of medical testimony in the administration of justice. Today, about 70 percent of all litigation invokes medical testimony. The American Medical Association has kept pace with this development by carrying out an educational program to encourage physicians to live up to their responsibility by cooperating with attorneys and with the courts.

As early as 1882 the AMA was interested in assuring impartial medical testimony. In 1928 the association endorsed the principle that in civic and criminal cases the court should appoint expert medical witnesses.

At the AMA's annual meeting in New York, June 25–30, 1961, the association's house of delegates approved supplementary report J of the board of trustees on nonpartisan medical testimony. The report resolved that the house of delegates endorse the principle of nonpartisan medical testimony in the trial of personal injury litigation. It also resolved that the AMA invite the American Bar Association and other national bar and judicial organizations to participate in a joint venture of formulating a model plan for nonpartisan medical testimony.

On November 20, 1962, representatives of the American Bar Association, the American Judicature Society, the National Association of Claimants' Counsel, and the International Association of Insurance Counsel participated in a conference on impartial medical testimony at AMA headquarters. Final agreement on a model plan was not reached, but substantial progress was made. For your information, I am enclosing the latest draft of the model plan proposed by the American Medical Association (attachment 2).

Thus far, there are nine impartial medical testimony plans in operation. These are in New York, Philadelphia, Chicago, Baltimore, Cleveland, Utah, Los Angeles, Illinois, and New Jersey.

In addition to impartial medical testimony plans, physicians, and attorneys at the State and local level have established joint committees to screen cases where physicians have been accused of malpractice. These professional liability screening plans have been established in Idaho; Pima County (Phoenix), Ariz.; California; Scott County, Iowa; Bucks County, Pa.; Virginia; Washoe County (Reno), Nev.; and Salt Lake County, Utah.

The American Medical Association sponsors biennially a medicolegal symposium at which it stresses physician cooperation with the courts and better physician-attorney relations. At the last medicolegal symposium in New York, April 28–29, 1961, David B. Allman, M.D., Atlantic City, N.J., a past president of the AMA, said in a keynote speech:

"The physician must realize that he has an obligation to himself, to his profession and to the public to cooperate with the legal profession and the judiciary in providing sound, impartial medical testimony under whatever mechanism exists in his particular geographic area."

The next meeting of this type will be held by the AMA at Miami Beach on March 8–9, 1963. It is anticipated that over 1,000 physicians and attorneys will attend.

MR. OLIVER FIELD'S COMMENTS

During your questioning of Mr. Field on the matter of aspirin, he made the following statement: "* * * Aspirin, in order to be labeled as aspirin, must meet the requirements or the standards of the United States Pharmacopoeia. Otherwise, the shipper would be subject to the Food and Drug Act for misbranding his product. Now, the truth is if you buy it for 10 cents a hundred, or a dollar a hundred, it is all the same."

This remark prompted the United Press International to report in a January 16 dispatch: "The American Medical Association confirmed today that aspirin is aspirin, despite the price."

For the record, I would like to state the association's position on this matter.

It is true that a product, in order to be labeled as aspirin, must meet the requirements of the United States Pharmacopoeia. But it is equally true that these are minimum standards and drug products labeled as aspirin are not all the same.

There is a mistaken belief that the active ingredient as a chemical product is the sole basis for the effectiveness of a pharmaceutical product. Actually, the physiological response to the administration of a given drug product is frequently a function of both the way in which the drug is made and the particular dosage form of the active ingredient.

The medical profession recognizes the varying standards in the manufacturing of drug products and is aware of the integrity of brand-name products. It knows that the manner and conditions under which a drug product is manufactured may be as important as the active chemical ingredients.

The association's house of delegates, at its annual meeting in New York, June 25–30, 1961, approved resolution No. 82, entitled "Opposition to Compulsory Use of Generic Names in Prescribing Drugs." This resolution stated in part:

"Whereas passage of any legislation requiring pharmaceuticals to be sold under generic names would place public health in jeopardy; when human life is at stake, the strength, purity, and quality of a drug is of critical importance; and

"Whereas all drugs containing the same active ingredients are not identical; drugs having the same active ingredients and subject to the same standards may vary in more than 24 different respects and still be entitled to share the same generic name; * * *: Therefore be it

"*Resolved*, That the house of delegates of the American Medical Association go on record in opposition to legislative and administrative mandates which would compel physicians to prescribe drugs, or require pharmaceuticals to be sold, by generic name only."

As you can see, there has been some misunderstanding on this matter, and I hope this clears it for the record.

In closing, I again want to thank you for allowing the American Medical Association to testify before your committee. If we may be of further assistance to you in your current inquiry, please do not hesitate to call on the association.

Sincerely yours,

F. J. L. BLASINGAME, M.D.

THE BAYER CO.,
New York, N.Y., February 20, 1963.

Hon. HARRISON A. WILLIAMS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILLIAMS: In your presence on January 14, before the Senate Special Subcommittee on Aging, Mr. Oliver Field, director, Department of Investigation of the American Medical Association, stated:

"Now, the truth is if you buy it (aspirin tablets) for 10 cents a hundred, or a dollar a hundred, it is all the same" (transcript p. 71).

Senator, this is not the truth. This is a serious error and one which should certainly be corrected in the interests of the American public of all ages and, particularly, in the interests of many of your constituents.

You are probably aware that our plant in Trenton manufactures all the Bayer aspirin tablets used in the United States. Perhaps you are not aware that on the basis of Bayer aspirin production in Trenton alone, more aspirin tablets are manufactured in the great State of New Jersey than in any other State in the United States and, indeed, more than in any other State or country in the entire world. In the year 1962 more than 6½ billion Bayer aspirin tablets were manufactured in our plant in Trenton.

We understand that Dr. Blasingame, executive vice president of the American Medical Association, and on behalf of that organization, has written to Senator PATRICK MCNAMARA as chairman of the Special Committee on Aging pointing out that Mr. Field's statement was actually contrary to the view of the American Medical Association and explaining that the medical profession recognizes and relies on the fact that products composed of the same chemical ingredients are by no means the same in physiological activity and effectiveness. I commend this correspondence to you and to the committee.

Because of the importance of this matter and the wide publicity which Mr. Field's statement has received I do not think it should be concluded without a statement from our company whose product has been disparaged and who, after all, is the world's leading authority on aspirin. Although excellent and correct in every way, Dr. Blasingame's letter does not and cannot call upon the wealth of factual background and experience which we have at our command. Accordingly, I would like to develop certain features of this subject for you.

I assume that everyone would concede that all items in a given generic class are not necessarily the same. All aspirin is not the same for very much the same reason that—to cite a few examples—all automobiles are not the same, that all radios and television sets are not the same, and that all brands of chocolate ice cream are not the same.

Important differences between Bayer Aspirin tablets and other aspirin tablets result from qualitative differences in basic raw materials, in manufacturing and packaging methods, in the skill, care, and experience of manufacturing personnel, in particular product specifications and in the number and types of controls imposed.

Let's look at some of these differences and see what they mean.

Bayer Aspirin tablets differ from aspirin tablets made to minimum U.S. pharmacopoeia standards in purity, in stability, and in their resulting uniformity of therapeutic effectiveness and performance. They also differ in their relative freedom from acetic acid odor, in the rate and uniformity of disintegration and in the uniformity of available fine particles during and at the end of disintegration. Among the reasons for the rapid disintegration of Bayer Aspirin tablets are the specific proportions of special corn starch, the unique waterless method by which the acetylsalicylic acid itself is made, as well as the use of unique apparatus and methods in the tableting process.

From the beginning of the manufacturing process until the tablet leaves the plant, Bayer scientists perform over 100 separate laboratory tests to insure the uniformity, quality, potency, and purity of Bayer Aspirin tablets for adults. Over 200 such tests are made in connection with Bayer Aspirin for children.

The Bayer method and technique of preparing, manufacturing, and tableting aspirin tablets is distinctive and, in many important respects, is substantially different from and much more expensive than that of all other manufacturers.

Aspirin was first introduced in the United States by our Bayer Co. at the turn of the century. We put Bayer Aspirin out in tablet form in 1915. Unlike most other manufacturers of aspirin tablets, we make our own tablets from the ground up. Moreover, the entire Bayer Aspirin production is used in Bayer Aspirin tablets and not sold under any other brand name. Although the chemical configuration of Bayer Aspirin is no different from that of aspirin that meets U.S. Pharmacopoeia specifications, Bayer Aspirin has always been made by a unique process—a process quite different from that used in the manufacture of the other brands of aspirin that are on the market. In the acetylation of salicylic acid to make aspirin, no water or moisture—aqueous moisture—ever comes in contact with the Bayer product. Pharmacologists will tell you that aspirin is highly sensitive to moisture and that moisture will quickly break it down to free salicylic acid and acetic acid which is irritating.

Bayer control specifications show that all Bayer Aspirin and Bayer Aspirin tablets exceed U.S. Pharmacopoeia requirements in at least the 12 particulars described on the breakdown attached.

By imposing very careful controls Bayer is able to produce a minimum of 20 million Bayer Aspirin tablets a day and yet it is able to insure their uniformity, high quality, purity and effectiveness. Doubtless, no other manufacturer attempts to maintain such close range specifications.

In order to provide you with current data actually comparing Bayer Aspirin and other brands of aspirin, on January 21 we had our Control personnel in Trenton make random purchase of 12 different brands of aspirin, including Bayer. These purchases were made in nine different retail outlets in the Trenton area.

Routine analysis showed that the Bayer Aspirin met or exceeded all U.S. Pharmacopoeia standards and also met all of Bayer's own higher standards. Of the other 11 brands, 3 had one or more broken tablets, 2 had one or more tablets spotted with grease, 3 had an acetic odor, 3 were offwhite in color, only 1 was enclosed in a carton with a separate direction circular, 9 had no outer carton, and 2 had either an illegible or no control number.

Quite apart from this survey we know that Bayer aspirin is the only aspirin which reaches the consumer in a sealed carton. The fact that Bayer's carton is sealed and that detailed directions are enclosed is more important than it may seem at first. Besides making a pharmaceutically elegant package and providing precise and complete directions and other information conducive to proper and safe usage, this method of packaging serves to protect the product from damage in transit, from deterioration while held in stock, and from tampering at any point in the channels of distribution.

Other shortcomings in the 11 other brands of aspirin analyzed were these: One failed the U.S.P. minimum standard for weight variation, three barely passed the U.S.P. minimum for free salicylic acid and, of course, failed to meet the Bayer specifications, four did not meet the Bayer specification for aspirin grainage, and three failed to meet the Bayer specification for disintegration time.

Although these differences clearly suggest that further important differences would be found if further analysis and tests were conducted, I think the above is sufficient to demonstrate that while "all aspirin is not the same," all Bayer aspirin is—and that this is important.

In closing I would like to extend again to you, Senator, and to your staff as well as to the Special Committee on Aging, a standing invitation to visit our plant in Trenton and see for yourself the great care, skill, and experience that go into the manufacture of Bayer Aspirin tablets. Just call or write to me and we shall surely be able to accommodate your busy schedule.

Respectfully yours,
J. N. Cooke, *President*.

ACETYLSALICYLIC ACID U.S. PHARMACOPOEIA	BAYER ASPIRIN
1. Contains not less than 99.5 percent of acetylsalicylic acid.	Contains not less than 99.9 percent of acetylsalicylic acid under such test (one-fifth of permitted variance).
2. White crystals.	Crystals are of the purest white. Crystals initially produced do not thereafter need recrystallization.
3. Tabular or needlelike crystals, or crystalline powder.	Special flake shape and needle shape (i.e., slender and elegant crystals tapered at both ends); flakes translucent and unctuous.
4. Weight loss on drying: 0.5 percent permissible maximum.	Bone dry; no weight loss.
5. Residue on ignition (i.e., inorganic residue): permissible maximum 0.05 percent.	Average residue is 0.025 percent (one-half of maximum).
6. Chloride (an impurity) 0.014 percent i.e., 140 parts per million permissible maximum.	Chloride content of Bayer Aspirin never exceeds 0.007 percent. i.e., 70 parts per million (one-half of amount permitted).
7. Sulfate (very common impurity): 400 parts per million permissible maximum.	Two hundred parts per million Bayer maximum (one-half of amount permitted). Since sulfate is considered an impurity, Bayer does not even use sulfuric acid as a catalyst although it is an excellent catalyst and is used in industry.
8. Free salicylic acid: 0.1 percent permissible maximum.	Thirty-five one-thousandths percent Bayer maximum (three times better than U.S. Pharmacopoeia.
9. Heavy metals: 10 parts per million permissible maximum.	Five parts per million Bayer maximum (one-half of amount permitted).

ACETYLSALICYLIC ACID TABLETS U.S. PHARMACOPOEIA	BAYER ASPIRIN TABLETS
1. There must be 95 to 105 percent of labeled amount of acetylsalicylic acid (4.75–5.25 grain permissible potency variation in each tablet; i.e., .50 permissible potency variation).	Always 100 to 105 percent of Bayer labeled amount of acetylsalicylic acid (5.0–5.25 grain; only .25 potency variation; i.e., every tablet contains a minimum of five grains).
2. Free salicylic acid (i.e., undesirable free salicylic acid in tablet on basis of aspirin content): 0.15 percent permissible maximum (USP permits 50 percent increase in free salicylic acid to allow for deterioration of aspirin powder during manufacture into tablets).	Thirty-five one-thousandths percent Bayer maximum (four times better) (percentage of free salicylic acid same as in powder; Bayer does not take advantage of U.S. Pharmacopoeia allowance).
3. Disintegration: Must be complete in 5 minutes. (Until October 1960 was 15 minutes.)	Starts to disintegrate in less than 2 seconds. Complete disintegration within 30 seconds maximum.

THE SMALL BUSINESS ADMINISTRATION

Mr. WILLIAMS of New Jersey. Mr. President, each year many thousands of small business firms, with nowhere else to turn, seek assistance from the Small Business Administration, that independent agency established by Congress to safeguard the welfare of the Nation's 4,500,000 small business enterprises.

The 13th annual report of the Select Committee on Small Business, which was filed by the committee chairman, my distinguished colleague from Alabama, on April 3, recites in persuasive detail the accomplishments of the Small Business Administration in its efforts to make it possible for small concerns to exist competitively side by side with their larger rivals. The report sets forth the progress the SBA has made in assisting small firms to obtain needed financial assistance, to secure a fair share of Government purchases, and to improve their skills as managers of business enterprises.

It is not surprising, Mr. President, that the more successful the Small Business Administration is in achieving its objectives, the more criticism it invites from quarters not noted for their sympathy with the struggles of small businessmen to survive in the highly competitive climate of the 1960's.

One such recent attack on the financial assistance programs of the SBA appeared in the Washington Daily News. I do not believe that the point of view expressed in this series of articles accurately reflects the opinions about the Small Business Administration of the vast majority of small businessmen. In support of this belief, Mr. President, I ask unanimous consent that there be printed at this point in the Record a comment on this series of articles from the National Federation of Independent Business, a nationwide organization having nearly 200,000 small businessmen as members.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Small Business Agency Essential

I reviewed with considerable interest your recent series on the Small Business Administration by Dickson Preston.

Bringing this subject matter out in the open may prove a blessing in disguise; that is, to make certain that the administration of the act be kept along the original planning of Congress. This agency was created to be a help to efficient independent business where their long-term financial needs were not available through regular financial circles.

Generally speaking, loan programs of banks are more or less controlled by Federal or State laws on long-term capital loans. Due to this condition, there was need for the creation of the Small Business Administration Act.

The National Federation of Independent Business has a nationwide membership of close to 200,000 independent business and professional men. From the very first, as a result of majority vote of our entire membership, it led the fight in support of the legislation (1953). During the life of the agency we took the same position in urging that it be made a permanent agency.

Those of us who have had actual business experience in owning and operating an independent business well know during the depression years the inability of the average, efficient independent business to get any kind of relief or even an entry into RFC to present its story.

There has never been any question of short-term loans from banks to small business where credit responsibility was satisfactory; when it came to long-term capital loans it was a different situation.

The establishment of the Small Business Administration will be found to be the outgrowth of congressional action in long-overdue recognition to small business, starting with the establishment of the Small Business Committees in the House and the Senate in 1940. This resulted in waking up many of the Federal agencies to the fact that efficient small business must get due recognition, the same as all other segments in our overall economy.

George J. Burger,
Vice President, National Federation of Independent Business.

BOSTON—AN ALL AMERICAN CITY

Mr. SALTONSTALL. Mr. President, I am very pleased to learn that the National Municipal League and Look magazine have chosen Boston, Mass., as 1 of the 11 All America Cities for 1962. This marks the third time that this honor has been conferred upon Boston since the contest was inaugurated 14 years ago. Only one other American city, Philadelphia, has received this honor three times. The All America Cities jury has also chosen the city of Medford, Mass., for honorable mention in this contest.

This is certainly a well-deserved tribute to the people of the Greater Boston area who have been working so hard to bring about major improvements in their city. Boston is a city with deep roots in the past, the locale of many of the important events which took place during our Nation's formative years. But Boston is also very much a city with a grip on the present and an eye to the future. Integrated with the many historical landmarks are new massive construction projects which will build Boston into one of the Nation's most modern cities.

The educational institutions in the Boston area are among the finest in the country. There are a total of 47 institutions of higher learning in the Metropolitan Boston area. These schools in addition to providing superlative educational opportunities for their students, are a constructive force for good in the intellectual life of the general Boston community.

Supplementing the cultural opportunities afforded by the colleges and universities in and around the city are many outstanding art galleries and museums. The Boston Symphony Orchestra has earned worldwide acclaim in the field of music. The legitimate theater is well represented in the area and Boston audiences are given an opportunity to see many plays and musicals before the latter open on Broadway.

Private research firms both in the city of Boston as well as along the developing Route 128 are making the area a world center of research and development, working for the advancement of space technology, our national defense programs, medical science, and commercial and industrial improvements.

Boston's potential for continued development and improvement is unlimited. I join with the National Municipal League and Look magazine in saluting the people of Boston for the fine work they have done thus far.

I ask unanimous consent that the portion of the article which appeared in the April 23 edition of Look magazine, dealing with Boston, be printed as part of my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

All America Cities—Boston, Mass.

Boston, 333 years old, is ancient as American cities go, but it has kept its youthful vigor. A variety of citizen and business groups are facing up to the problem of urban blight: Community associations have worked out a $120 million urban-renewal program; the chamber of commerce raised $150,000 for a study of the aged waterfront area, and plans are being made for intensive redevelopment; businessmen in one part of the city have donated $58,000 to plan improvements for their neighborhood. The teenage organization for urban renewal spent hours repainting benches on historic Boston Common.

The Citizens Committee for a Cleaner Boston has also sparked massive cleanup drives. A mayor's department of citizens relations has been established to help citizen groups carry out their projects. The action for Boston community development, a nonprofit organization using Ford Foundation funds, is tackling the social complications arising out of urban renewal, as well as juvenile delinquency, the school dropout problem and training of unskilled youths.

DEATH OF YITZCHAK BEN-ZVI PRESIDENT OF ISRAEL

Mr. SALTONSTALL. Mr. President, the people of Israel and indeed the entire world are today mourning the passing of the second President of the State of Israel, Yitzchak Ben-Zvi.

Throughout his 78 years of life Yitzchak Ben-Zvi worked with tireless and selfless devotion and energy to establish and maintain the free State of Israel. Since 1952, when he assumed the Presidential Office following the death of Chaim Weizman, he has led the State of Israel with the quiet determination of a true statesman, seeking his reward only in the continued strengthening and solidarity of the Israeli nation.

I extend my heartfelt sympathies to the family of this eminent gentleman, and to the nation of Israel, which will miss his wise counsel.

I ask unanimous consent that an editorial from the New York Times of April 24 be printed as part of my remarks.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Yitzchak Ben-Zvi

Nation-builder, statesman and historian, Israeli President Yitzchak Ben-Zvi, left an unforgettable impression upon his country. The deep grief that now grips Israel over his death at 78 is evidence of the affection and respect he had won among his fellow citizens. It was characteristic of this simple, devoted man that he protested publicly a proposed salary increase to $6,000 recently, and when this failed he donated half of that salary to research. In any history of the State of Israel, Yitzchak Ben-Zvi must be remembered as one who helped accomplish miracles despite enormous odds.

AMERICAN COUNCIL ON EDUCATION RECOMMENDATIONS ON FACULTY SALARIES CHARGED TO GOVERNMENT CONTRACTS

Mr. MORSE. Mr. President, Dr. Logan Wilson, president of the American Council on Education, recently provided me with a statement of the position of the American Council on Education with respect to the recommendations on faculty salaries charged to Government contracts.

Because of the widespread interest in this subject, both among institutions of higher education and Government agencies concerned, I feel it would be helpful to Senators to have this information available. I ask unanimous consent, therefore, that the recommendations to which I have alluded be printed at this point in my remarks together with the names of the committee members of the Committee on Sponsored Research of the American Council on Education.

There being no objection, the recommendations were ordered to be printed in the Record, as follows:

Recommendations on Faculty Salaries Charged to Government Contracts—A Statement of the Committee on Sponsored Research Endorsed by the Commission on Federal Relations, American Council on Education

The Committee on Sponsored Research of the American Council on Education has been aware for some time of the growing concern in certain universities, and in a number of Government agencies, about the lack of uniformity in policies relating to the billing of the Government for a portion of the salaries paid to regular faculty members for their work on sponsored research grants and contracts.

The committee believes that it is sound policy to regard the prorated portion of the salaries of faculty members working on such grants or contracts as a proper direct cost of research, and we believe that the Government should pay the full costs of the research work it sponsors in colleges and universities.

Nevertheless, such a wide variety of procedures and practices has developed among universities and various Government agencies that misunderstandings have arisen—and some abuses may have arisen—causing certain Government representatives to propose more uniform and rigid regulations covering salary reimbursement. Such rigid or uniform regulations would not recognize the differing situations present in various institutions, and would partially destroy the flexibility essential for good relations between the universities and the Government.

On the other hand, the universities themselves must recognize that there must be one overall guiding principle that is rigidly adhered to; namely, the Government should not be billed for more than that share of the total annual salary of a faculty member that is represented by the effort actually expended on the sponsored research project or projects. Careful adherence to this principle would avoid abuses and misunderstandings, as well as unreasonable intrauniversity salary competition for support by Government funds.

Specifically, the committee proposes the following recommendations:

1. It would be ideal if the salaries of all faculty members carrying on scholarly work throughout the calendar year were on a 12-month basis, including 1 month paid vacation. Such a salary basis simplifies the identification of the percent of effort charged to extramural sponsors. Thus, if a faculty member devotes 50 percent of his effort during the 12-month period to a project, the university should be reimbursed for 50 percent of his total 12-month base salary. Thus, no portion of a faculty member's salary is contingent on Government support of his research.

2. Wherever it is not feasible for the salaries of faculty members to be converted to a 12-month basis, the percent of effort devoted to sponsored projects should be determined for the academic year and the university should request reimbursement for the corresponding portion of each salary.

3. The additional amount requested by the university for summer salary should be determined by the percent of effort and period the faculty member devotes to a project. Thus, if a faculty member devotes 100 percent of effort to research during certain summer months, the university should claim the appropriate one-ninth, two-ninths, or three-ninths of the base salary, depending on whether the faculty member works 1, 2, or 3 months. Other ratios may also be justified, but a claim of 3 months' salary for less than 3 months' 100-percent effort must be avoided, as should arrangements which charge the sponsor for more than a properly prorated share of the vacation allowance. Faculty work schedules allowing for no vacation should not be regularly permitted.

4. If the sponsors of projects require periodic reports on percent of effort, they should be called for only at the end of each academic period (for example, quarter, semester, trimester).

5. In consonance with the principles expressed in the foregoing paragraphs, universities should avoid extra compensation (compensation above the full-time base salary) for work on special projects during the academic year. The base university salary should include compensation for all university duties (for example, teaching, research, administration, intrauniversity consulting). Exceptions to this rule should be made only for very compelling reasons and in unusual cases.

COMMITTEE ON SPONSORED RESEARCH,
AMERICAN COUNCIL ON EDUCATION

Lee A. DuBridge, president, California Institute of Technology, chairman.

Fred R. Cagle, vice president, Tulane University.

Lowell T. Coggeshall, vice president, University of Chicago.

Milton S. Eisenhower, president, the Johns Hopkins University.

Clifford C. Furnas, president, State University of New York at Buffalo.

T. Keith Glennan, president, Case Institute of Technology.

Virgil M. Hancher, president, State University of Iowa.

Laurence R. Lunden, vice president, business administration, University of Minnesota.

Logan Wilson, president, American Council on Education, ex officio.

Earl W. Lindveit, staff associate, American Council on Education, secretary to the committee.

The PRESIDING OFFICER (Mr. BAYH in the chair). Is there further morning business? If not, morning business is concluded.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of executive business, for the purpose of considering nominations on the Executive Calendar beginning with the nominations of persons to be incorporators of the Communications Satellite Corp.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

COMMUNICATIONS SATELLITE CORP.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations of persons to be incorporators of the Communications Satellite Corp. be considered en bloc.

The PRESIDING OFFICER. Is there objection to the request by the Senator from Montana? The Chair hears none, and it is so ordered.

The question is, Will the Senate advise and consent to these nominations en bloc?

Mr. ANDERSON. Mr. President, there are many Senators who are interested in this matter and involved in it. If the majority leader is agreeable, it seems to me there should be a quorum call at this time, so that other Senators may be put on notice.

Mr. MANSFIELD. The Senator has read my thoughts. With the Senator's permission, and the understanding that he will not lose his right to the floor, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from New Mexico [Mr. ANDERSON] has the floor.

Mr. PASTORE. Mr. President, will the Senator from New Mexico yield to me?

Mr. ANDERSON. I yield.

Mr. PASTORE. Mr. President, every Senator will recall the extensive discussion surrounding the consideration of the communications satellite legislation in the last session. Under section 302 of the Communications Satellite Act of 1962, it is provided that the President of the United States shall appoint incorporators, by and with the advice and consent of the Senate, who shall serve as the initial board of directors until the first annual meeting of the stockholders or until their successors are elected and qualify.

It will be recalled that the President submitted the names of the incorporators to the Senate in the closing days of the 87th Congress, and it was extremely difficult to conduct hearings and report the nominations in time for action by the Senate before adjournment. It has been suggested that recess appointments be given to the nominees so that the business of proceeding with the establishment of the Communications Satellite Corp. would proceed and that the Senate would act on the nominations in the 88th Congress. On January 30, 1963, the President submitted the following persons to be incorporators of the Communications Satellite Corp., which nominations were referred to the Senate Committee on Commerce:

John T. Connor, of New Jersey.
George Feldman, of New York.
Edgar F. Kaiser, of California.
David M. Kennedy, of Illinois.
George Killion, of California.
Beardsley Graham, of Kentucky.
Sam Harris, of New York.
A. Byrne Litschgi, of Florida.
Leonard Marks, of the District of Columbia.
Bruce G. Sundlun, of Rhode Island.
Sidney J. Weinberg, of New York.
Leonard Woodcock, of Michigan.

On February 28, 1963, the President submitted two additional persons to be incorporators, Leo D. Welch, of New York, and Joseph V. Charyk, of California, to bring the number of incorporators to 14.

On March 11, 1963, the Commerce Committee held hearings on these nominations, at which time all 14 nominees appeared and were available for questioning by the committee. Copies of those hearings have been printed and are available. The committee considered the nominations in executive session and reported them favorably on March 12, 1963, and subsequently they were referred to the Aeronautical and Space Science Committee. Hearings were held by that committee on the nominations on March 19, 1963, and so far as I know, they were unanimously reported favorably the same day. Full and ample opportunity was given to everyone to appear before the committee with reference to these nominations.

Having been in charge of the original bill which was debated before the Senate for a prolonged period of time last year, I realize that reputable, honorable, and sincere Members of this body were opposed to the formation of this private corporation, Senators who still remain sincere, Senators who today remain opposed to the formation of that kind of private corporation. The fact that they continue to be opposed only accentuates their original sincerity in being opposed to the formation of the corporation.

The question before the Senate today is not whether there should be a Communications Satellite Corp.; that question was decided by Congress last year.

It was decided by this body by a vote of 66 to 11. As I see it, the only question is as to the competence of the nominees and their qualifications to be incorporators of the corporation. I daresay, with deference to the entire body of our American society, that if the President of the United States were to search all over again for 14 individuals who could competently fulfill this responsibility, he could do no better than he has already done.

The question before the Senate is the honesty, the integrity, the ability of the men who have been selected. I repeat, the President of the United States, if he were to act in this situation again, and if any Member of the Senate were called upon to assist him in selecting 14 men more competently qualified, we could not end with a better group than the group of nominees whom the Senate is now considering.

With that short statement, I urge upon the Senate to consider and, to discuss at length, and finally to approve the nominations made by the President of the United States.

Mr. GORE. Mr. President, I know of no one who intends to question the fitness of the persons whose names are before the Senate. The present question the Senate must resolve is the propriety, the advisability, and the constitutionality of the confirmation by the Senate of the nominations of officers and directors of an entirely private corporation.

I should like to inquire of the Senator from Rhode Island whether the Communications Satellite Corp. has been created.

Mr. PASTORE. We all know that it has been. The Senate voted on that question last year. The corporation was created by an act of Congress.

Mr. GORE. No; I wish to correct the distinguished Senator. The act authorized the creation of the corporation.

Mr. PASTORE. Did the Senator from Tennessee ask me about the act or about the articles of incorporation?

Mr. GORE. I asked the Senator if the corporation had been effectuated; if it had been brought into being.

Mr. PASTORE. So far as the articles of incorporation are concerned, they have been filed.

Mr. GORE. What are the assets of the corporation?

Mr. PASTORE. Why does the Senator wish to know?

Mr. GORE. I know the answer. The corporation has no assets.

Mr. PASTORE. Then why ask me, if the Senator already knows?

Mr. GORE. I find it remarkably strange that a corporation without $1 in assets should obtain a line of credit of $5 million, should immediately start paying the chairman of its board $10,000 a month, and should employ another gentleman, who was previously in Government employment, at a rate something like four times the amount of his previous salary.

Mr. PASTORE. I thought the Senator wished to ask me a question. Now he is making a speech.

Mr. GORE. Does the Senator find that strange?

Mr. PASTORE. It is not a question of whether I find it strange. Is there anything irregular about it? Has there been any contravention of law? Is there anything about the nominations which offends the President of the United States? Certainly the nominations do not shock or offend me. These nominees have been commissioned to fulfill certain responsibilities, and that has been done with the approbation of the President of the United States. If all this activity is intended to lead people to suspicion, certainly I will not join in giving comfort to such suspicions.

Mr. GORE. I was not seeking to cast either aspersion or suspicion; I was trying to illustrate the unusual character of the question soon to be before the Senate.

Mr. PASTORE. I realize that the Senator from Tennessee did not like this corporation from the start. He was honest in his point of view. He was honest in his belief. He still is. He regrets very much that the Senate did not go along with his views. I realize all that.

But the fact which remains before the Senate today is that we have a corporation. The corporation does have incorporators. It must have them. The incorporators have filed their articles of incorporation, with the approval of the President of the United States.

The President of the United States has submitted these nominations. The nominees did not submit them. I did not submit them. The President of the United States submitted the nominations to the Senate.

The question now is, Are these nominees competent to assume this responsibility? Or should their nominations be rejected by the Senate?

If we are to get into the unusual character of the corporation, I am afraid we shall be starting to warm up, all over again, the filibuster of last year. I hope we will not warm it over again.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. The question soon to be before the Senate involves neither the competency of the nominees before the Senate nor the merits or demerits of the corporation which the Senator from Rhode Island says, "We have." I might inquire, since the Senator acknowledges that the corporation is something we already have, why is it necessary for the Senate to confirm the nominations of private businessmen in order to accomplish the purposes of the corporation?

Mr. PASTORE. Because that is what the Senate voted. It is in the law. The law requires that the President of the United States shall submit the names of the incorporators, whose nominations shall be subject to the advice and consent of the Senate.

I realize that the Senator from Tennessee intends to argue that the incorporators are not U.S. officers, and for that reason are not subject to the advice and consent of the Senate. But I remind the Senator from Tennessee that he should have made that argument last year. He did not make it. At that time he should have submitted an amendment to change that situation. When the original bill came from the White House, such a provision was not contained in it. It was the Senate, through its committees, that wrote in the provision that the nominations should be subject to confirmation. The Senate did that.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. The junior Senator from Tennessee did, in fact, raise that question. Unfortunately, the Senate at that time had got itself into a position in which many serious questions involving the proposed legislation were not given serious consideration.

The question I raise—indeed, the question is fundamental—is that an act passed by Congress containing a provision requiring Senate confirmation in no way can or does change the Constitution of the United States. The Senator from Rhode Island knows perfectly well that there is in the Constitution but one provision relating to the exercise of advice and consent by the Senate. I should like to read it to the Senator.

Mr. PASTORE. I am already familiar with it.

Mr. GORE. Would the Senator let me refresh his memory?

Mr. PASTORE. I do not need refreshment; I already know the provision.

Mr. GORE. Would the Senator be willing to have the RECORD of the Senate contain the provision?

Mr. PASTORE. All right. That is different. If the Senator wishes to read the provision for the RECORD, that is all right; but he need not read it for my benefit, because I already know it.

Mr. GORE. Article II, section 2, provides that the President "shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the Supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments."

That provision was not included in the Constitution as a mere formality or offhand statement. A study of the debates at the Constitutional Convention reveals that this question was debated at length. No authority is given to the Senate—and this is the only provision in the Constitution which refers specifically to confirmation—to consider and confirm the nominations of businessmen engaged in a private venture for profit.

What is sought in this instance is to enmesh the Senate into the organization, the selection of the management of a private corporation organized for profit.

I ask the Senator: If that is done in this case, unprecedented in the history of our country as it is, where will it stop?

Shall the Senate next be considering the confirmation of nominations of officials of the United States Steel Corp.—perhaps the nomination of Mr. Roger Blough in the event he were nominated?

Mr. PASTORE. Does the Senator from Tennessee want me to answer his question?

Mr. GORE. Yes.

Mr. PASTORE. I hope the Senator from Tennessee is becoming unduly alarmed; I think he is blowing this matter up into undue proportions. As a matter of fact, no one here would suggest that the President would begin to appoint the director——

Mr. GORE. Well, this is a beginning.

Mr. PASTORE. I hope the Senator will permit me to finish my statement.

Mr. GORE. Of course.

Mr. PASTORE. If I may continue, I was saying that no one here is suggesting that the President is going to begin to appoint as the director the head of the United States Steel Corp. or the head of General Motors Corp.

As a matter of fact, this corporation could not come into being except through an act of Congress. That is point No. 1.

Point No. 2 is that we keep talking about "purely private." But such expressions are cliches. I do not know what is "purely private" or what is just "private." But the Government and the people of the United States have an interest in this corporation; there is no question about that.

No. 3, what the Senator from Tennessee is actually saying is that if the President had the authority to make these appointments, without confirmation by the Senate being required, they would be valid appointments; but that because we of the Senate provided that they would have to be confirmed by the Senate, and inasmuch as the President said, "All right; if that is what you want, I will go along with you," now we are saying he is wrong.

But we are the ones who wrote into the law the provision that these appointments by the President would have to be confirmed by the Senate. We wrote that provision into the law; the President did not ask us to write it in.

The Senator from Tennessee is actually saying that if we had not done that, these appointments would have been constitutional; but that because we did do that, something unconstitutional has been done. I say that is a rather specious argument.

Furthermore, if any Senator wishes to take the position that these appointments are unconstitutional, he has a perfect right to say so and to believe so; but, at the same time, Senators should give to other Senators the benefit of sincerity in their beliefs.

I hold in my hand a memorandum of the Attorney General of the United States, which says that provision of the law is absolutely constitutional, and that if the U.S. Senate joins hands with the President of the United States by confirming these nominations, the nominees will be lawfully appointed and selected; and they will then have fully qualified for their office. Thus we shall have done something in furtherance of the mandate of the law itself.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. I respectfully submit that in the statement the distinguished and able Senator from Rhode Island has just now made, he has committed some errors. First, he said this corporation could not come into being without a special act of Congress. As a matter of fact, the articles of incorporation were filed pursuant to the laws of the District of Columbia. A satellite communications corporation could have been created without the passage of the special act of Congress. Indeed, it was chartered under the laws of the District of Columbia.

What are the facts? The facts are that without a special act of Congress, exemption from the antitrust laws could not have been effected for the communication carriers. Without a special act of Congress, authority of a private corporation to enter into international negotiations, on behalf of the United States, but for its own private profit and benefit, would not have existed. A special act of Congress was necessary.

Mr. PASTORE. I ask the Senator from Tennessee to wait just a moment, please, before he goes any further. He is speaking in my time.

He began by saying that I was in error, and that the corporation could not have come into being without an act of Congress; but now he is saying that Congress did pass a special act.

Mr. GORE. Would the Senator from Rhode Island be willing——

Mr. PASTORE. I ask the Senator from Tennessee not to say that I was in error, but simply to state his own opinion. He should not say on the floor of the Senate that the Senator from Rhode Island is wrong and is in error. He should simply say what he believes, and should let the people judge who is right and who is wrong.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. No offense is committed when a Senator makes an error. Many of us are at times in error. Now and then I find myself in error.

Mr. PASTORE. I think the Senator from Tennessee is in error now.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. In order to complete the point I was making, I say my distinguished friend was in error——

Mr. PASTORE. Again?

Mr. GORE. Or, rather, I say there is a point on which my distinguished friend, the Senator from Rhode Island, and I have a disagreement.

Mr. PASTORE. I thank the Senator from Tennessee; now he is being statesmanlike. [Laughter.]

Mr. GORE. Well, I do not wish to become too statesmanlike in this particular instance, because statesmanship will not resolve this particular point.

To complete my statement on this point, let me say that the enactment of a special bill was necessary in order to give this particular corporation its unique privileges and unique opportunity, including monopolistic control of this new and vastly important medium of communication. A special statute was necessary in order to give exemption from the antitrust laws.

But I repeat that it was not necesssary to have a special act of Congress in order to bring a corporation into existence. Indeed, it was not created by that act of Congress. That act only authorized it to have these unique powers and privileges.

There are two more statements which the distinguished Senator——

Mr. PASTORE. But, first, will the Senator from Tennessee permit a question?

Mr. GORE. Yes.

Mr. PASTORE. Is the question not before us today: whether the incorporators are qualified?

As to the organization of the corporation in the first place, I know how the Senator from Tennessee feels. We went all through that last year. The Senator from Tennessee now is arguing about the monopoly, the special privileges, and the unusual nature of the corporation. But last year we went all through that, and it is now a fait accompli.

If the Senator from Tennessee does not like it, I suppose all he needs to do is introduce a bill to repeal the action we took last year. But that is not the question which is before us at this time.

I know that Senators who are opposed to the corporation are going to discuss the nomination for 2 or 3 days, and I shall enjoy it as much as they will. But the fact is that Senators are losing sight of the real point. The real point here is the question of confirmation of these nominations. Whether a Senator likes the corporation or does not like it, is entirely aside from the question now before the Senate.

The only question before the Senate today is whether it should give its advice and consent to the nominations of these men.

I realize that the Senator from Tennessee will never like this arrangement. I know that; and I am not going to argue about it with him, because I give him the benefit of believing that he is sincere in his beliefs. But I am not going to stand here and begin—this year, all over again—answering questions about the monopolistic aspects of the corporation or about whether we are giving these people special privileges. That question is not before us now; we went all through it last year.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. It was the Senator from Rhode Island who raised the question.

Mr. PASTORE. About what?

Mr. GORE. It was he who made the statement that the corporation could not have been created except for the special measure which Congress passed.

Mr. PASTORE. Is that wrong?

Mr. GORE. It is incorrect.

Mr. PASTORE. Why is it incorrect?

Mr. GORE. Because of the reasons I have already stated.

Mr. PASTORE. But all the Senator from Tennessee is saying is that we could not have given that authority to this corporation unless it had been included in an act of Congress; and that is precisely why we had to do that.

Furthermore, how could such a satellite be put into space unless the Government rendered its assistance; and Congress authorized that in this act.

How can the Senator from Tennessee say that there could have been a communications satellite corporation which would have amounted to anything, unless it had been done in this way?

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. I have been replying to statements made by the distinguished Senator from Rhode Island. A moment or so ago he said that the question before the Senate was the confirmation of the nominations of directors of the Communications Satellite Corp. I agree. That is the question. But I do not agree that the question is upon the fitness or the qualifications of the nominees. The question is upon the propriety, advisability, and constitutionality of the Senate confirming nominations of officers and directors of an entirely private corporation, organized solely for profit.

Mr. PASTORE. I should like to make a big compromise with my friend from Tennessee. May we agree to disagree?

Mr. GORE. On what?

Mr. PASTORE. On what the Senator from Tennessee has just said.

Mr. GORE. How can the Senator disagree with my previous statement?

Mr. PASTORE. Because I do disagree; and I have the inherent right to disagree.

Mr. GORE. I know of the great competence of the Senator from Rhode Island and his capability for reasoning. I wonder if he would mind stating why he disagrees with that statement.

Mr. PASTORE. First, no law is unconstitutional until the Supreme Court declares it to be unconstitutional. Time and time again the Congress has enacted laws which later were declared to be unconstitutional. Until they were declared unconstitutional, they were the sovereign law of our country. The Congress of the United States does not have the right to declare a law unconstitutional. It has only the right to repeal a law if it believes it to be unconstitutional. If my friend from Tennessee believes that the law is unconstitutional and should be repealed, he ought to introduce a bill to do so.

But I repeat. The question before the Senate today is as follows: Are the men whose nominations have been submitted to the Senate qualified to receive confirmation by the advice and consent of the Senate?

Beyond that point I admit no error, with due deference to my good friend from Tennessee. All I admit is that there is a sincere area of disagreement between him and me.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. With the highest of respect for the senior Senator from Rhode Island, not only as a gentleman, statesman and scholar, but also as a lawyer, I must respectfully suggest that he has just uttered strange legal philosophy. He has made statesments from which I can only infer that the Senate is under no compunction to conform to the Constitution of the United States.

Mr. PASTORE. Wait a moment. I would not even use the word "compunction."

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. The Senator has said that only the Supreme Court of the United States can determine questions of constitutionality.

Mr. PASTORE. Am I correct or not?

Mr. GORE. The Senator is incorrect.

Mr. PASTORE. Will the Senator tell me why?

Mr. GORE. Soon there will be placed before the Presiding Officer of the Senate a point of order regarding the constitutionality of the proposed procedure. Under the powers vested in him, the Presiding Officer of the Senate may render a ruling on that point of order. The ruling of the Chair may be appealed to the Senate, and the Senate itself must reach its own conclusion as to the constitutionality, propriety, and correctness of the ruling of the Chair.

Mr. PASTORE. Mr. President——

Mr. GORE. Will the Senator permit me to proceed for an additional minute?

Mr. PASTORE. This is on my time. Does the Senator state that we should give the Presiding Officer of the Senate authority to declare a statute unconstitutional?

Mr. GORE. Oh, no. That was not my point at all.

Mr. PASTORE. Of course not. I do not know what point the Senator is making. The Senator from Rhode Island reiterates that only the Supreme Court of the United States can declare a statutory provision of a federally passed law unconstitutional. That statement relates to the Vice President, the President pro tempore, and any other Senator who may occupy the chair of the Presiding Officer.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. Does the Senator contend that the Senate should proceed to work its will irrespective of the Constitution of the United States?

Mr. PASTORE. Of course not. I never said any such thing. I would never say such a thing, and the Senator from Tennessee knows that I would not make such a statement.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. Does the Senator find any provision in the Constitution which authorizes the Senate to participate in the selection of the officers of a private corporation through giving its approval in pursuance of the advice and consent clause of the Constitition?

Mr. PASTORE. I find nothing in the Constitution which prohibits such approval.

Mr. GORE. Mr. President, will the Senator yield further?

Mr. PASTORE. I yield.

Mr. GORE. Does the Senator find anything in the Constitution which authorizes such procedure?

Mr. PASTORE. Yes; under the interpretation of the Attorney General's office; the Constitution authorizes the action.

Mr. GORE. Under the interpretation of the Attorney General of the United States?

Mr. PASTORE. I remind the Senator that at the time the Constitution was written the formation of a Communications Satellite Corp. and the naming of its incorporators were not contemplated. I hope the Senator will not ask me to find in the Constitution, which was written more than 150 years ago, a provision relating to the corporation. At that time we were not up in space. We are up there now. Today on the floor of the Senate we are up there in more ways than one.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. The Senator has now taken another strange and unusual position, namely, that the Attorney General of the United States can determine the constitutionality of the measure.

Mr. PASTORE. Oh, no. He has not done so at all. He has rendered his interpretation of whether or not the provision to which I have referred is in contravention of the Constitution. That is all he has done. The Senator has a perfect right to give his opinion as to whether it is or not.

All I am saying is that the Congress of the United States cannot declare a law unconstitutional. Until such time as it is declared unconstitutional by the Supreme Court, it is the law of the land. I do not know how more simply I can say that.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. No statute can, in and of itself, change the Constitution. The Senator knows that.

Mr. PASTORE. I know that. Whoever said I thought differently?

Mr. GORE. A few moments ago the Senator said that he did not find in the Constitution any prohibition of such action as is proposed. That is a remarkably strange dictum. If one is to infer that the Senate can undertake to do anything and everything not specifically prohibited by the Constitution, that is tantamount to saying that there is really no need for a written Constitution.

Mr. PASTORE. I did not say that; and the Senator knows I did not say that. I do not know how I can better state my position. If we are to fence with semantics, if we are to use strained constructions of words, that is one thing; but all I am saying to my distinguished friend is that the power which we gave to the President is not in contravention of the Constitution, it is in perfect constitutional order. We asked for an interpretation from the Attorney General, and he agrees with that interpretation.

The Senator from Tennessee has a right to adopt any other interpretation he wishes. But are we not saying the same thing over and over again?

Mr. GORE. No.

Mr. PASTORE. I understand the point made by my friend from Tennessee. The point my friend from Tennessee makes is that because the Constitution provides that an officer or ambassador appointed by the President shall be appointed with the advice and consent of the Senate, anybody else is precluded from coming to the Senate for advice and consent. That is what the Senator is saying.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. In response, the Senator made the statement that he found nothing in the Constitution which prohibited it.

Mr. PASTORE. That is correct.

Mr. GORE. This raises a question of delegated powers. Since the Senator has said that such questions are determined by the U.S. Supreme Court, I should like to read to him briefly from a decision of the U.S. Supreme Court, if he will be so kind as to permit me. It is the decision of *Kansas* v. *Colorado*, 206 United States 46:

> The proposition that there are legislative powers affecting the Nation as a whole which belong to, although not expressed in, the grant of powers is in direct conflict with the doctrine that this is a government of enumerated powers.

Mr. PASTORE. Who disagrees with that? What does that prove?

Mr. GORE. It proves that the Senator was in error in the position he took.

Mr. PASTORE. I do not think so. I can read the Constitution as well as can my good friend from Tennessee. I think the Attorney General can read the Constitution as well as can my good friend from Tennessee. We have both read it.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. We have read it separately. We have read it together. We have reached a conclusion which is a little contrary to that of my friend from Tennessee. What is so wrong about that?

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. The Senator said more than that. The Senator went on to say that the proper agency for determining the constitutionality of the question was the U.S. Supreme Court. I have just read to the Senator an excerpt from a decision of that Court, and now he wants to talk about the Attorney General again.

Mr. PASTORE. Does that decision say that the President of the United States cannot appoint the directors to the corporation and have their nominations submitted to the Senate for advice and consent?

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. Is that what the decision says?

Mr. GORE. Will the Senator yield?

Mr. PASTORE. I asked the Senator a question. If he will answer my question, then I will yield. Does it say that?

Mr. GORE. The Senator must yield in order that I may answer the question.

Mr. PASTORE. Go ahead and answer it.

Mr. GORE. The decision says quite plainly that an assumption that the Congress has "legislative powers affecting the Nation as a whole which belong to, although not expressed in, the grant of powers" in the Constitution "is in direct conflict with the doctrine that this is a government of enumerated powers." I should like to read further from the decision.

Mr. PASTORE. Does it not also——

Mr. GORE. May I read further?

Mr. PASTORE. Yes.

Mr. GORE. I read further:

> The 10th amendment * * * disclosed the widespread fear that the National Government might, under the pressure of a supposed general welfare, attempt to exercise powers which had not been granted.

Mr. PASTORE. Very well. Is not my friend from Tennessee actually saying that he assumes that the proposed procedure would be unconstitutional? When he assumes that it would be unconstitutional, he relates it to the Court opinion from which he has been reading. But before the Senator can make the statement that he is making, he must first assume that the act of the President in sending the nominations to the Senate for confirmation, and the activity on the part of the Senate by way of advice and consent, are unconstitutional activities. Once he has said that, he can say that this is an assumption of unlawful power.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. Then he can read the decision. But he has to get over two big "ifs" before he gets to that conclusion.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. The Senator is incorrect in three respects.

Mr. PASTORE. What did the Senator say?

Mr. GORE. I said that once again the Senator is incorrect.

Mr. PASTORE. Does the Senator wish to leave it that way?

Mr. GORE. In three different respects.

Mr. PASTORE. That I am incorrect? Or that I disagree?

Mr. GORE. The Senator has made statements about the junior Senator from Tennessee; and with respect to those, I know he is incorrect.

Mr. PASTORE. I have never said the Senator was incorrect. I have not said he was in error.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I have never said that to any Senator on this floor.

Mr. GORE. There is nothing wrong in such a statement.

Mr. PASTORE. I have always said, "I disagree with you, and you may disagree with me." When a Senator stands on the floor of the Senate and says, "You are wrong and I am right," I think he is putting wings on himself.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. I am not sure I would know how to use them, or in which direction I might go if I had them.

Mr. PASTORE. The Senator should not let them flutter around. We are up in space as it is.

Mr. GORE. The Senator has said that I assumed the proposed act was unconstitutional. The Senator said that in order to make that assumption I would have to assume that the President of the United States had committed an unconstitutional act.

Mr. PASTORE. In sending the nominations to the Senate; that is correct.

Mr. GORE. In sending the nominations to the Senate and in selecting these nominees. That is not the question I raise at all. I raise no question about the act of the President. The President has appointed individuals to positions in private corporations before. The President has previously appointed directors of partially public and partially private corporations. I do not raise that question. That is not the question involved.

The junior Senator from Tennessee is raising the question with all respect. There is no odium about the word "incorrect." I am saying that my distinguished friend from Rhode Island, distinguished and able as he is, is incorrect when he says that I assume that, and that I must assume that, in order to come to the question of the constitutionality of the proposed action of the Senate.

That is an accurate statement. I raise only the question of the propriety, advisability, and constitutionality of the action of the Senate. This is unprecedented. This question has never previously been raised on the Senate floor in the history of the United States. A fundamental question is involved.

If I have in any way offended my distinguished friend by saying he is in error or that he is incorrect, I apologize to him. No odium was intended. If one had to be odious to say that another was in error, none of us would be pleasant with his associates. I meant nothing offensive.

Mr. PASTORE. I know that. The Senator from Rhode Island does not take any offense. But I say it is in poor taste for a Senator to say to another Senator, "You are wrong," or "You are incorrect." For one Senator to say to another Senator that he is wrong, he must assume that he knows better, and that the other Senator is wrong and he is right. That is not the way to debate issues on the floor.

I can give and take as well as any other Senator. I am not afraid of anyone. I do not care who he is. I will debate any subject with any Senator that it is my responsibility to debate on the floor. But I hope I never reach the point where, in disagreeing with any of my colleagues, I say he is wrong or give the implication that what I am saying is right and what he is saying is wrong. All I have the responsibility to do on the floor of the Senate is to state my position, not only for the benefit of my colleagues who are present, but also for the benefit of the RECORD, so that Senators who read it can decide how to vote when the time comes to vote.

Let me ask the Senator from Tennessee this question: If the law had been enacted without the provision requiring the advice and consent of the Senate, would these incorporators lawfully be incorporators of the corporation? What is the Senator from Tennessee really opposing? I cannot put my finger on it.

Mr. GORE. I shall be glad to enlighten the Senator from Rhode Island.

Mr. PASTORE. Did the Senator understand my question?

Mr. GORE. Yes. Confirmation by the Senate of such nominations is entirely unnecessary in the creation of the corporation. The corporation has already hired a president at $80,000. The corporation has already rented the most palatial estate in Washington or anywhere in this area. The corporation has also employed a man at $10,000 a month, though the corporation has no assets. The corporation has obtained a line of credit of $5 million, and has already received disbursements, according to my information and according to the record, of $500,000.

Is the corporation created? Is it in business? Why is it necessary for the Senate to confirm? I say to the Senator from Rhode Island that it is not necessary, except as provided by the statute.

Mr. PASTORE. Of course, that is a big "except," is it not?

Mr. GORE. Will the Senator yield further?

Mr. PASTORE. I yield.

Mr. GORE. What is the effect? I should like to give the Senator an illustration in answer to his question. I called Mr. Charyk, the president of the corporation, yesterday afternoon, and asked him upon what collateral the corporation had obtained a credit of $5 million. I will not undertake to quote his exact reply. I will, however, give the substance of his statement. He said it was an unusual loan, in that there was no collateral.

I asked him if there were any endorsements on the note. He said, "No." He repeated that it was an unusual loan. I remarked, in a pleasant way, that I had not been able to find that kind of banker. He said again, "This is an unusual situation."

I asked him upon what reasoning, in his opinion, the banks issued a credit of $5 million. The only answer he could give me was that the banks were convinced that the United States was promoting the satellite corporation.

This is the misunderstanding from which the mischief flows. Even the bankers are lending the corporation money, really upon the faith and credit of the U.S. Government. By this act the Senate is enmeshed, entrapped, embroiled, in the selection of the officers of the corporation, and ultimately in the operation of the corporation.

What will be the result when an unwary citizen buys stock, just as the banks have extended credit, upon the assumption that the United States is promoting this corporation, organized exclusively for the profit of stockholders?

I am glad to answer the Senator. That is the question. The question is whether the Senate should permit itself to be used in the selection of the directors of a private corporation organized entirely for profit; whether the U.S. Senate shall go beyond the bounds of the Constitution and lend its approval to this bizarre and unusual arrangement.

Mr. PASTORE. Is the Senator through?

Mr. GORE. I shall desist. I thank the Senator for his patience.

Mr. PASTORE. The Senator from Tennessee has made a very inspiring and stirring speech.

Mr. GORE. I thank the Senator.

Mr. PASTORE. If the Senator from Tennessee thinks for one minute that he is going to compel the senior Senator from Rhode Island, to rise on the floor of the Senate and begin to defend any of the salaries that have been decided upon by the directors of the corporation, he is in complete disagreement with his friend from Rhode Island. That is not my job. That is not my responsibility. The decision of these men as to salaries is something for which they are accountable to the President of the United States, to the stockholders, when they come into being, and even to the banks, which look for the repayment of this money. This money will not come out of the Treasury of the United States.

All I am saying is that these nominations are before the Senate for confirmation. If any of the points raised by the Senator from Tennessee go to the fitness of the incorporators, either in connection with the telephone call he made to the president of the corporation or the unsatisfactory answer he received, that is his business.

All I am saying is that the question before this body is the fitness of these nominees. If the Senator thinks there has been any misbehavior, any misfeasance or malfeasance, he is going to the gravamen of the question. He is going to the issue. All the Senator from Rhode Island did was say to his friend from Tennessee that he believes what the President has done, in furtherance of his mandate under this law, a law that was passed by the Congress of the United States, is constitutional, not only in the opinion of the Senator from Rhode Island, but also in the opinion of the Attorney General.

Any Senator has a perfect right to question the qualifications and the character of the incorporators. I, for one, feel that they are all honorable men. I believe they are all trying to serve the corporation and fulfill the responsibilities of their office.

If the President of the United States were to conduct a new search for 14 more persons, he could not find 14 more desirable men.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. I am grateful to the distinguished and able Senator from Rhode Island for his courtesy in yielding. I point out once again the statement which the distinguished Senator has made, which I do not believe comports with the law or the facts.

The Senator, in referring to the salaries of certain officials of the corporation, said that they must account to the President and to the stockholders in the matter of salaries. That is not according to the Communications Satellite Act. The directors are not responsible to the President of the United States.

Mr. PASTORE. Oh, yes, they are.

Mr. GORE. Does the Senator wish that statement to be in the RECORD?

Mr. PASTORE. Of course they are responsible to the President.

Mr. GORE. I should like to ask the distinguished Senator to show one provision in the act, in the articles of incorporation, or in the laws of the District of Columbia, under which the corporation has been chartered, which places the fiduciary trust of the directors of this corporation in anyone except the stockholders. I say that the statement which the distinguished Senator has made is not on all fours with the law. The Attorney General has held that the incorporators and directors are entirely private, that they have no public responsibility. There is nothing in the act which makes them responsible to the President.

Mr. PASTORE. I can answer that question in two aspects. First, the president and the chairman of the board were recommended to the President of the United States by the incorporators.

They submitted the names to the President. I was not present, but I hope the President analyzed their bcakground, their competence, and their ability to serve. I am told—I was not present—that at that time they discussed with the President what the salaries would be. I was not present. I do not know. That is what I have been told.

After the President was satisfied with the recommendations, both of Mr. Welch to be chairman of the board and Mr. Charyk to be president, he sent their names to the Senate as incorporators. That was done with the primary responsibility of determining at that time whether the men whose names he was submitting, including the chairman of the board and the president and the other incorporators, were qualified, so that he could ask for the advice and consent of the Senate.

That is the first phase.

The second phase is in the law. Section 404 reads:

> SEC. 404. (a) The President shall transmit to the Congress in January of each year a report which shall include a comprehensive description of the activities and accomplishments during the preceding calendar year under the national program referred to in section 201(a)(1), together with an evaluation of such activities and accomplishments in terms of the attainment of the objectives of this Act—

How does one decide what objectives are attained, unless those who operate the corporation are brought to an accounting as to whether or not the attainment has been made?—

and any recommendations for additional legislative or other action which the President may consider necessary or desirable for the attainment of such objectives—

We wrote that into the law.

(b) The corporation shall transmit to the President and the Congress, annually and at such other times as it deems desirable, a comprehensive and detailed report of its operations, activities, and accomplishments under this Act.

The President, under the law, is given the responsibility of gaging the attainments and accomplishments of the corporation, as a basis for a report to Congress. It is for that reason that I say that these men have a responsibility for the attainment of the objective and are responsible to the President who, in turn, is responsible for sending his report to Congress.

Mr. GORE. Mr. President, will the Senator yield one more time?

Mr. PASTORE. I yield.

Mr. GORE. I appreciate the patience of my distinguished friend. I hold him in warm esteem and regard, as he knows. To illustrate our disagreement on this particular point, I should like to read one sentence from the opinion of the Attorney General. If Senators wish to read the entire opinion, they can find it beginning at page 87 of the Commerce Committee hearings, serial 6. I will read this sentence, and then desist. I thank my friend from Rhode Island:

With these directives in the act, there would seem to be no doubt that the incorporators, as directors, would have the same status and responsibilities as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.

Mr. PASTORE. I agree with that. However, the same law contains section 404, which I have read to the Senator. What the Senator has read is the interpretation of the Attorney General, with which I find no fault. Section 404 deals with the attainment of objectives. How can we assume that these officers of the corporation are not responsible to the President, and that he will not ascertain whether they are carrying out their functions properly in attaining the objectives?

Mr. GORE. The fiduciary obligation of the directors of this corporation is exclusively to the stockholders of the corporation. There is no responsibility to the President of the United States.

Mr. PASTORE. I say there is.

I ask unanimous consent to have printed in the RECORD the memorandum of the Attorney General on the constitutionality of Senate confirmation of the nominations of persons appointed by the President as incorporators and directors of the Communications Satellite Corp.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM RE CONSTITUTIONALITY OF SENATE CONFIRMATION OF PERSONS NOMINATED BY THE PRESIDENT AS INCORPORATORS AND DIRECTORS OF THE COMMUNICATIONS SATELLITE CORP.

On Tuesday, March 19, 1963, a question was raised on the Senate floor about the constitutionality and propriety of confirmation by the Senate of persons appointed by President Kennedy as incorporators of the Communications Satellite Corp. Any constitutional question with respect to the procedure prescribed by statute for the appointment of these persons warrants the attention of the executive branch which must make such appointments.

It was indicated that the constitutional question went to confirmation "of officers and directors of a purely private corporation." It was added that section 2 of article II of the Constitution provides that the President shall appoint, by and with the advice and consent of the Senate, "officers of the United States" (CONGRESSIONAL RECORD, Mar. 19, 1963, p. 4554).

The Communications Satellite Act of 1962 (Public Law 87-624, approved Aug. 31, 1962, 76 Stat. 419) requires that the President "shall appoint incorporators, by and with the consent of the Senate, who shall serve as the initial board of directors until the first annual meeting of stockholders * * *" (sec. 302). The act further provides that, after such annual meeting, three of the 15 directors "shall be appointed by the President of the United States, by and with the advice and consent of the Senate * * * (sec. 303 (a)).

Article II, section 2, of the Constitution, referred to above, provides in pertinent part that the President "shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointment of such inferior Officers as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments."

It appears that the questioner was right in not regarding the incorporators and directors of the satellite corporation as "officers of the United States," but it does not follow that, on that account, they may not constitutionally be confirmed by the Senate.

It is clear that neither the incorporators of the Communications Satellite Corp. nor the three directors to be appointed by the President after the initial public stock offering are officers of the United States. The act, in providing for the creation of the corporation, expressly states in section 301 that it is a corporation "for profit which will not be an agency or establishment of the U.S. Government." Based on this and other considerations, the Attorney General on October 25, 1962, gave the President his opinion that neither the incorporators nor the three directors to be appointed by the President with the consent of the Senate under the act are officers of the United States by virtue of such appointment.

In reaching the conclusion that the incorporators were not "officers of the United States," the foregoing opinion considered the fact that the act requires Senate confirmation for their appointment. While recognizing that under article II, section 2, officers of the United States, with certain exceptions not relevant here, must be confirmed by the Senate, the opinion goes on to point out that "article II, section 2, clause 2, does not state, and it does not follow therefrom, or from anything else in the Constitution, that every appointment authorized by law which is preceded by nomination and confirmation necessarily renders the appointee an officer of the United States regardless of his functions and the provisions of the law pursuant to which he was appointed." In support of this, the opinion cites 2 Story, *Commentaries on the Constitution* (5th ed. 1891), page 362; the views of Representative Moody set forth in House Report No. 2205, 55th Congress, 3d session, page 11; and Corwin, *The President: Office and Powers* (1957 ed.), page 671. The latter authority refers to the appointment, with Senate confirmation, of Members of Congress as negotiating commissioners and points out that if these appointments were to "offices" they might violate article I, section 6, clause 2, of the Constitution, prohibiting simultaneous incumbency as a Member of Congress and in "any office under the United States * * *." In these cases, therefore, the Senate confirmed appointments to positions which were not "offices." In other words, while article II, section 2, of the Constitution may require Senate confirmation to fill certain "offices," the procedure of appointment with Senate confirmation is not a constitutionally prohibited procedure for all positions which are not "offices."

Congress clearly had authority to provide for the creation of the Communications Satellite Corp. as a private corporation, under the broad powers of Congress under article I, section 8, of the Constitution to regulate and thus to promote foreign commerce and to make laws necessary and proper to accomplish these ends. The Supreme Court has long recognized that Congress, acting under its express powers and the broad discretion conferred by the necessary and proper clause, may create private as well as governmental corporations, and that such private corporations may be for profit. See *Legal Tender Case*, 110 U.S. 421 at 445 (1884), referring to the power of Congress to incorporate national banks for profit as well settled. The Supreme Court, moreover, has upheld the constitutionality of an act of Congress which not only created a private corporation for profit as an exercise of the commerce power but which even identified by name several of the incorporators in the statute. *Luxton* v. *North River Bridge Co.*, 153 U.S. 525 (1894). There is nothing in article II, section 2, or elsewhere in the Constitution which prohibits Congress from specifying a procedure like that set forth in article II, section 2, for manning the corporate positions which Congress has validly created.

Even if the act had not expressly provided for confirmation by the Senate of these incorporators and directors, there would be nothing improper in the President's soliciting the advice and consent of the Senate in making these appointments, and in the Senate's according to the President its advice and consent. According to a memorandum transmitted to Senator MCCLELLAN on March 17, 1949, by Peyton Ford, Assistant to the Attorney General, "the President in carrying out his executive functions may consult with whom he pleases. The President frequently consults with congressional leaders * * * even on matters which may be considered solely within the purview of the Executive * * *" Senate Report No. 232, 81st Congress, 1st session, page 20. Obviously the Senate as a whole has as much power to respond to requests for consultation as do individuals.

The provision for Senate confirmation here does not infringe on the powers of the President. The President has raised no issue on this score. Moreover, in providing for the creation of a private corporation, Congress might have accorded the President no functions at all in the appointment of the incorporators or the directors, so long as the President's powers were not otherwise impaired, just as the States have done in providing for the creation of private corporations under general corporation laws, and as Congress itself has done in enacting the business corporation laws of the District of Columbia.

The exercise of power involved in Senate confirmation here is a modest one in the light of traditional legislative power over corporations. Under Anglo-American law, the sovereign may provide for the creation of corporations for a broad variety of purposes, and may provide for the identifying of the individuals who will own or constitute such a corporation in a variety of ways. Thus the act of July 1, 1862, as amended (13 Stat. 356), provided that the President name 5 of the 15 directors of the Union Pacific Railroad Co. Moreover, Congress has created many nonprofit corporations, as set forth in title 36 of the United States Code, which like the one under discussion are private in the sense of being nongovernmental, and in doing so Congress has frequently prescribed by statute the actual names of the individuals who constitute such corporations. Such legislative naming of individuals would seem a much greater assertion of legislative power to participate in the appointment of corporate officials than the Senate confirmation of incorporators and directors nominated by the President under the Communications Satellite Act of 1962.

Comment is also in order on the description, quoted above, of the Communications Satellite Corp. as "purely private" and therefore presumably not warranting senatorial attention to the nominations in question. The corporation cannot be placed outside the proper reach of Federal attention by the label "purely private." While the corporation is certainly private in the sense of not being a part of the Government, it is by no means identical to the ordinary, average American business firm in the degree to which it warrants immunity from governmental attention.

Merely as a public utility and a common carrier in foreign commerce, the corporation is affected with a public interest requiring Government regulation, which the act of course provides. While the usual pattern for utility enterprises is private ownership with Government regulation, it would have been quite constitutional to provide for Government ownership, as indeed was urged by some Senators in the last Congress. If there was no constitutional objection to total Government ownership and control, there would seem little force in the position that the Senate lacks the more limited power of confirming these nominations as provided in the act.

Over and above the public utility, common carrier status of the Satellite Corp., it is a proper subject for senatorial concern in confirming these nominations because of its unique and important national role in our overall foreign relations and space effort. Viewed in this light, the corporation is not "purely private," because it performs key functions in major areas of public policy. At a time when the United States is vitally interested in the economic health and development of all the free world, in leadership in the peaceful uses of space, and in demonstrating to the world the progress attainable through the free enterprise system, the Communications Satellite Corp., although private, is an eminently proper subject of public and governmental attention, including the Senate confirmations in question.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield. But first I should like to state that the subcommittee of the Committee on Appropriations marking up the supplemental appropriaion bill has called a meeting for 1:30 this afternoon. I will remain in the Chamber as long as I am needed here. However, the Senator in charge of the nominations is the distinguished Senator from New Mexico [Mr. ANDERSON], and he will be present after I leave. However, if Senators have any further questions, I shall be glad to remain in the Chamber as long as I am needed in order to answer them.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. LAUSCHE. Am I correct in the recollection that in the act authorizing the establishment of the corporation there is section 302, which provides:

> The President of the United States shall appoint incorporators, by and with the advice and consent of the Senate, who shall serve as the initial board of directors until the first annual meeting of stockholders—

And so forth.

Mr. PASTORE. Yes.

Mr. LAUSCHE. It is upon the basis of this language that the nominations have been made and the advice and consent of the Senate asked. Is that correct?

Mr. PASTORE. That is correct. The Senator from Tennessee takes the position that under the Constitution the Senate had no business to insert the provision requiring the Senate to confirm, because that is in violation of the Constitution.

Mr. LAUSCHE. My answer is that Congress, having created this organization, had the power to include in the act such conditions as it deemed advisable.

Mr. PASTORE. Provided such conditions were not in contravention of the Constitution; and I say that the act is not in contravention of the Constitution.

Mr. MORSE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. MORSE. I merely wish to comment with respect to the time element which the Senator from Rhode Island raised, because I wish to accommodate the Senate. I intend to present a legal argument which is directly opposite to the position of the Senator from Rhode Island.

Mr. PASTORE. I realize that.

Mr. MORSE. I shall require 2 hours or more to present it.

Mr. PASTORE. Mr. President, I wish it to be clearly understood that the distinguished Senator from New Mexico [Mr. ANDERSON] is in charge of the nominations. Last year the Committee on Commerce considered the bill last, and I was in charge of the bill then. This year, the Committee on Aeronautical and Space Sciences considered it last. The nominations are in very capable hands. If the Senator from New Mexico needs me for anything, I shall be available. I expect to return to the Chamber shortly.

Mr. ANDERSON. Mr. President, some legal issues may be involved in the discussion this afternoon. Therefore, I ask unanimous consent that Mr. Sol Lindenbaum, attorney adviser for the Department of Justice, may be present on the floor of the Senate to assist me during the debate on the confirmation of the nominations of the incorporators under the Communications Satellite Act.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New Mexico? The Chair hears none, and it is so ordered.

Mr. ANDERSON. Mr. President, I am not an attorney. I never studied law a day in my life. Therefore, I feel the need of some legal advice.

It is difficult for a person who is not an attorney to take part in the debate this afternoon. This probably adds to my general confusion, because I have been wondering, as these discussions have been taking place, where the line should be drawn between the appointment of incorporators and the appointment of ambassadors. I have been wondering, for example, how Winston Churchill became an honorary citizen of the United States. I read the Constitution to try to ascertain whether there was a specific provision for honorary citizenship. I have reached the conclusion that Congress does what it deems to be expedient; and until the Supreme Court sets such action aside, it remains the law of the land.

Mr. GORE. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. GORE. The action of Congress with respect to the eminent statesman Winston Churchill was a ceremonial act. One might regard the confirmation of the nominations of incorporators of the Satellite Corp. as a ceremonial procedure. However, the mischiefs that could flow from this color of approval are many, whereas I see no mischief that could flow from the ceremonial act honoring a distinguished leader with honorary citizenship.

Mr. ANDERSON. That only goes to illustrate the difficulties of not understanding law. I do not understand the difference between a ceremonial law and a law.

At one time there was a lengthy discussion concerning the competence of individuals who were to be in attendance at a meeting. There were experts and technical experts. We spent considerable time in trying to determine the difference between experts and technical experts.

I had hoped that this afternoon I might discuss the competence of the nominees to be directors. That question seems not to be involved. I appreciate the action of the Senator from Tennessee in more or less removing that question from the field of discussion.

When the hearing was held on the nominations of these incorporators, I tried hard to ascertain how competent they were. Some of them were new to me. Some were persons I had known for a long time. One of the individuals on the list was a man with whom I had had many transactions in his legislative capacity 15 years earlier. Another was Mr. George L. Killion, with whom I served in official capacities when I was a member of President Truman's Cabinet. Another, Sidney J. Weinberg, I knew had been called upon by the President many times for financial advice and assistance. Therefore, I was interested in trying to ascertain whether the caliber of the other nominees measured up to that of the individuals whom I had known. I am happy to report to the Senate that, so far as I am concerned, the question of the competency of the nominees was well established by hearings which the committee conducted.

The President of the United States approved the articles of incorporation.

That is provided for by the law. There are those who might not have liked every provision in the law. I myself would have enjoyed having an opportunity to work on the articles of incorporation. We are all sure that we can write provisions better than someone else. I would have included in the articles of incorporation provisions which perhaps would have been somewhat different from what were included. In the hearings and in the subsequent discussion certain facts were developed which might have warranted a change had we operated in a different fashion from what we did.

By law, the responsibility was upon the President of the United States, not upon the Committee on Aeronautical and Space Sciences, to approve the articles of incorporation. Therefore, the President discharged his obligation and transacted his business. The same thing applies to the directors whose nominations are now before the Senate. Congress wrote into the law language which provides that the nominations shall be submitted to the Senate.

As I remember, the bill as it was originally submitted by the administration to the Committee on Aeronautical and Space Sciences, and turned over to me following a discussion with the late Senator Kerr, did not provide for confirmation. I hope I am making a correct statement, because I am speaking from memory, not having seen the language for some time. Nevertheless, in the exercise of its power, the Senate decided that it wanted the opportunity to see who the incorporators would be. So the Senate wrote into the bill the provision that the nominations should be submitted to the Senate, so that it might know the type of men who would take on this great responsibility which, to be sure, involves commercial enterprise on the one hand, but may, before the activity is finished, involve matters relating to the defense of the country.

I do not know to what height communications satellites will go. I have no idea of the planned use of them. I only know that not long ago the committee looked at the budget which will be submitted by NASA to the Space Committee. It contains over $50 million for communication satellites research. Therefore, I assume that that means they will be used for the benefit of the people of the United States, and of the Satellite Corp.

Of course, we would all like to have these things done differently. I have just said that I wished I might have had an opportunity to rewrite the act. Nevertheless, we must deal with the law as it is. As the law now stands, it provides that the Senate must confirm the nominations of incorporators submitted by the President.

Mr. GORE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. GORE. Is there not one other course available, namely, the amendment of the act?

Mr. ANDERSON. Yes. From the very first day that Congress convened at this session, there was an opportunity to introduce a bill which would have provided for the amendment of the act. It was some time before Senators were assigned to committees, but I am sure that the able Senator from Washington [Mr. MAGNUSON] would have called a meeting of his committee to consider any proposed change in the act to repeal this section. I know that when I became chairman of the Space Committee, I would have been extremely happy to have held a hearing on that particular subject. But there is no such measure before the Senate. Therefore, I assume that the Senate is satisfied with the language in the act, because, so far as I know, no Senator or Representative has introduced proposed legislation to amend the act, with the exception of a bill introduced by the able Senator from Alabama [Mr. SPARKMAN], dealing with small business. The point I was trying to make was that, so far as I know, there has been no proposal introduced in either the Senate or the House to change the provision requiring confirmation by the Senate of the nominations of directors.

Therefore, the Senate must deal with the question before it. Consequently, I believe the Senate should approve the nominations of the directors, and then get on with its other work.

I have been very much interested in many of the reports which have been presented. I have tried as best a layman can to read the legal opinions and conclude what is involved.

In the 80th Congress, 1st session, a report issued on February 19, 1947, by the Senate Judiciary Committee includes an appendix entitled "Corporations Chartered by Special Act of Congress." The appendix cites 288 such charter statutes, beginning with the statute chartering the First Bank of the United States, an act of February 25, 1791, and ending with the act chartering the City of Clinton Bridge Commission—an act dated December 21, 1944. Many of these statutes, particularly those enacted in recent years, authorize the incorporation of patriotic organizations, veterans organizations, scientific organizations, or charitable organizations.

A number of years ago a group of people became interested in the establishment of the Cowboy Hall of Fame. If I am not incorrect in my recollection, the present occupant of the chair, the Senator from Wyoming [Mr. SIMPSON], who then was Governor of Wyoming, himself participated in promoting the establishment of the Cowboy Hall of Fame. I was instrumental in the introduction of the bill which provided for its establishment; and the bill was enacted. Perhaps that action was hardly consistent with our other duties. Nonetheless, no damage was done; and a fine institution has been established in Oklahoma City. I could have selected a better location—one a few hundred miles to the West, or perhaps a few hundred miles to the Northwest. Nevertheless, the institution has been established in Oklahoma City, in line with the desires and ambitions of certain persons at certain times.

Mr. GORE. Mr. President, will the Senator from New Mexico yield?

The PRESIDING OFFICER (Mr. SIMPSON in the chair). Does the Senator from New Mexico yield to the Senator from Tennessee?

Mr. ANDERSON. I yield.

Mr. GORE. I am sure the Senator from New Mexico does not wish to draw serious analogy between organizations, such as the Boy Scouts, the American Legion, and the Cowboy Hall of Fame, and a private corporation organized entirely for profit. These are entirely different matters.

The Senator from New Mexico has referred to the Bank of the United States. I suggest that if we study our history, we find that was a rather unfortunate episode; but even in that case the Government of the United States owned part of the corporation's stock. However, I submit that I have not been able to find—and neither has the Congressional Library—any instance in the history of our country in which the U.S. Senate gave its advice and consent to the appointment of directors of an entirely privately owned corporation.

Mr. ANDERSON. I only wish to say that that reminds me of the biblical expression:

> Whom therefore ye ignorantly worship, him declare I unto you.

So I say that although what the Senator has said may be pertinent, I am not sure that it is, because as a layman, not as a lawyer, I may have missed the point.

As I was saying, Mr. President, many of these statutes, particularly those enacted in recent years, established or authorized incorporation of patriotic, veterans, educational, scientific, and charitable organizations. Others, however, were the corporate charters of strictly private corporations or private corporations affected with a public interest. Of the 70 entries prior to 1860, the majority were for banking, insurance, turnpike and canal companies in the District of Columbia area. During and after the Civil War, acts of Congress provided for incorporation of the Union Pacific Railroad, act of July 1, 1862; the Northern Pacific, act of July 2, 1864; the Atlantic & Pacific, act of July 27, 1866; and the Texas Pacific, act of March 3, 1871; as well as local District of Columbia corporations, Continental and Capitol Hotels, acts of March 3, 1865; and private corporations without any apparent Federal or District of Columbia characteristic, for example, Loomis Aerial Telegraph Co., act of January 21, 1873.

Many of the congressional charters have included a list of individuals designated as incorporators. In effect, this has been a means by which not only the Senate but also the House advised and consented to nominations of incorporators and directors submitted by the President. In other cases, the President or a subordinate Government official has been authorized to name incorporators. No case has been found in which the President's appointment of incorporators was made subject to the advice and consent of the Senate. However, there is at least one major statutory precedent for Senate confirmation of the President's appointment of members of the board of directors of a private corporation for profit which, like the Communications Satellite Corp., was affected with a public interest and subject to special limitations in light of the public interest. This is the statute establishing the second Bank of the United States.

The earliest congressional charter for a corporation was the act of February 25, 1791, providing for the first Bank of the United States—1 Stat. 191. In this legislation, the President was authorized to appoint three persons to superintend the opening of subscriptions to the capital stock. Such appointments were not subject to the advice and consent of the Senate. The charter provided for a 25-member board of directors to be elected by the stockholders. Although the United States was authorized to subscribe 20 percent of the authorized capital of $10 million, there was no special provision for appointment or election of directors representing the Government.

The legislation establishing the second Bank of the United States—act of April 10, 1816, 3 Stat. 266—followed a somewhat different pattern. As in the 1791 act, the President was given authority, not subject to the advice and consent of the Senate, to appoint commissioners to superintend the subscription procedure. The number of directors was fixed at 25. Of this number five—who had to be stockholders—were to be appointed annually by the President of the United States "by and with the advice and consent of the Senate," 3 Stat. 269. The proportion of presidentially appointed directors corresponded to the precentage of the total capital stock—$35 million—which the United States was required to subscribe. But the provision for such directors was not contingent on retention by the Government of such stock or any minimum percentage.

The second Bank of the United States was similar in certain fundamental respects to the Communications Satellite Corp. It was a private corporation in the sense that its stock could be purchased—and 80 percent of the original offering was reserved for purchase—by private investors—"individuals, companies, or corporations." The stockholders other than the United States could elect 20 of the 25 directors. The five Presidentially appointed directors did not thereby become officers of the Government. The Supreme Court so stated in Osborn v. *Bank of the United States*, 9 Wheat. 738 at 866–7 (1824). The directors were authorized to appoint officers and employees, and to manage the corporation. The corporation was given the powers customary for a private corporation. Specific authority was given to declare semiannual dividends of the profits.

On the other hand, as in the case of the Communications Satellite Corp., the function of the Bank of the United States was inherently quasi-public. It had, in effect, a monopoly position as banking agent for the U.S. Treasury and for the deposit of Federal funds.

The enabling legislation, consequently, subjected the corporation to special limitations reflecting the public interest, just as the Communications Satellite Act of 1962 surrounds the Communications Satellite Corp., with Government controls. In addition to the Presidential authority to appoint 5 of the 25 directors of the bank—by and with the advice and consent of the Senate—ceilings were set on the total amount of debt that could be incurred by the bank and on the amount of particular loans in particular categories. The Secretary of the Treasury was given special authority to require reports and to inspect the general accounts of the bank. The bank was required to give, without charge, "the necessary facilities for transferring the public funds from place to place."

As was said during the course of debate in the House of Representatives, the policy in the creation of the second Bank of the United States was "to give it a double character—to combine in it the elements of public and private interest"—29 Annals of Congress, column 1144.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield, but I do so with the faintest degree of trepidation, because my dear friend from Oregon is a skillful lawyer. I hope that he will try to protect my rights.

Mr. MORSE. I did not rise to discuss a legal point at all. I ask my friend from New Mexico whether he is familiar with the record of the bank and what happened to the bank.

Mr. ANDERSON. I assume that it did not do very well. I assume that there will be days when the Communications Satellite Corp. will not do very well. But when I worry about the Communications Satellite Corp., I am reassured by reading the long debate on the subject that was held on the floor of the Senate last year. While I lay ill in New Mexico I read the debate. I read that anticipated profits from the operations of the corporation would roll in in such enormous amounts that Senators desired to protect the public.

Therefore I assume that we may have the same experience with that corporation as we had with the second Bank of the United States. It might not be such a melon after all.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. MORSE. I do not believe that any such result will flow from the satellite corporation. I think it will be pretty much a losing venture. But because of procedures established in the act, American taxpayers will be called upon time and time again to pay up in order to keep the corporation afloat. That is one reason why we have a very clever design in the bill to give the American people the impression that the members of the board of the corporation in some way and some how represent the public interest instead of a private interest.

Mr. ANDERSON. I will not argue with my long-time friend on that question. I have been one of those who have said that all types of businesses have their dangers. I have occasionally invested a little risk capital in some project that looked extremely good, and I have had it turn out very badly. Occasionally I have invested in an enterprise that I thought would be horrible, and it has brought me the finest dividends. Therefore, I have concluded that I know nothing about the investment business, because things that I have counted upon have turned out badly, and things that I have rarely counted upon have returned dividends.

I cannot tell the able Senator from Oregon what might happen with relation to the Communications Satellite Corp. I can only say that a corporation in which hundreds of millions of dollars are invested involves the same chance of failure as of success. Therefore, we ought to name as members of the board of directors those who have the smartest business brains that we can find.

In my time I have organized a few small corporations. I organized an insurance company, which I believe is still solvent and occasionally contributes to my financial well-being. But I had named to the board of directors of that company the wisest and smartest friends whom I could find. The Communications Satellite Corp. must seek out men whose business background and experience will permit them to look at the problems that this great organization will have and try to manage it in fine fashion. That is why I was interested in the type of men who appeared before us. I was not interested so much in a recital of what their political affiliations might be.

I say to the present distinguished occupant of the chair, the Senator from Wyoming [Mr. SIMPSON], who is from an opposite political party from my own—and a stanch member of it, too—that I did not ask the political qualifications of a single incorporator. To the present hour I do not know the political qualifications of the individual who will be chairman of the board at $125,000 a year or the man who will be president at $80,000 a year.

I could not answer a question of their political affiliation. At least one of them was brought here in the Eisenhower administration, and did such a good job that he remained on in the Kennedy administration. What his politics may be I do not care. However, I believe he is competent to head the organization.

During the debate in the House of Representatives on the bill creating the second Bank of the United States—29 Annals of Congress, columns 1060–1219—practical, financial, economic, political, legal, and constitutional issues of all kinds were raised and argued. But we have found no recorded expression of doubt as to the constitutionality of the provision for Senate advice and consent to the President's appointments to the board of directors, even during debate on proposed amendments to strike out this provision—id., at columns 1137–1148, 1209–1210.

It is strange that in all the many days of discussion on the communications satellite bill, so far as I could find—and I could easily be proved to be in error—no amendment was offered to strike the provision for Senate confirmation of the nominees or directors.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. KEFAUVER. I am sure the Senator has examined the record very closely. If he will look at the debate that occurred on August 17 and the following day, he will notice that by that time cloture had been voted and not much attention was being paid to proposed amendments. I pointed out fully—and I will say something about the subject in my speech—that under the laws of the District of Columbia the incorporators were not responsible to anyone except the stockholders of the corporation. Amendments were offered to require them to have some responsibility to the President. We sought to require them to have some responsibility to the Government, and to file reports with the President, which might put them in a different category. But those amendments were all rejected without very much consideration.

Mr. ANDERSON. I do not question what my friend from Tennessee has said. I read almost all the words he said about the bill.

Mr. KEFAUVER. The Senator must have read long, and far into the night.

Mr. ANDERSON. I was ill. I had no great pressure on my time. I enjoyed reading the debate. The Senator discussed the points. A short time back I raised several other questions and then found that the Senator from Tennessee covered them all in his discussion. I found that the Senator from Tennessee had already discussed questions which I subsequently raised.

My statement was that I do not know of an amendment being offered to strike the provision for Senate confirmation of the directors.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. ANDERSON. I am happy to yield.

Mr. MORSE. I say most respectfully that the argument is completely irrelevant to the discussion, in view of the history of the bill. As the Senator from Tennessee has pointed out, we offered amendment after amendment. We had the guillotine hanging over our necks at all times. Each amendment was met with a motion to lay on the table. At one time the Senate laid 26 of my amendments on the table in one fell swoop.

So I do not believe it makes a very good case to argue about what happened in that debate, under cloture, with regard to amendments.

But even if there had been no cloture, it does not follow that because no one in opposition to the bill offered an amendment to strike that particular section of the bill, we are, therefore, now subject to some doctrine of estoppel in regard to it.

I point out to the Senator what some of our amendments were. The senior Senator from Oregon was so completely opposed to the bill from beginning to end that he offered a complete substitute for it. I assure the Senator from New Mexico that the substitute bill did not contain what I consider to be an unconstitutional provision calling for the advice and consent of the Senate to the confirmation of private businessmen appointed to the board of directors of a private corporation.

In defense of my colleagues who opposed the bill, I desire to say only that I would not want the RECORD to stand in such condition that, even indirectly, we could be charged with some form of laches, because we did not seek to strike that provision from the administration's bill. We tried to strike down the administration's bill including this provision. It is most unfortunate that the Kennedy administration ever proposed such a horrendous measure. In my judgment it will rise to plague the administration as long as it is in office, and it will rise to plague the history of the Kennedy administration for all time.

Mr. ANDERSON. Again I say that I accept at face value what the Senator from Oregon has said. I am sure that if he presented a bill, he did omit the question of Senate confirmation of the members of the board of directors. I only pointed out that when the Second National Bank of the United States was discussed, even though there was criticism of the bank, no effort was made to strike out the provision requiring the advice and consent of the Senate with respect to presidential nominees. I was struck, as a matter of curiosity, with the question as to why, if the provision was bad, no effort had been made on the floor of the Senate to strike out that provision.

During the debate in the Senate—29 Annals of Congress, columns 235–281—amendments to delete the provision for Presidentially appointed directors and to provide for reduction in their number if the United States sold its stock were offered and defeated—the same, at columns 255–258. The constitutionality of the provision was questioned, not on the ground that senatorial advice and consent were unconstitutional but on the ground that the influence thus given to the Government in the banking corporation was of such magnitude as to transcend the boundaries of what is necessary and proper under article I, section 8, clause 18 of the Constitution—the same, at columns 263–266.

The constitutionality of the act of April 10, 1816 providing for the second Bank of the United States was upheld in *M'Culloch* v. *The State of Maryland*, 4 Wheat. (17 U.S.) 316, 400–437, 4 L.Ed. 579, 600–608 (1819).

It was held in that case that the creation of a corporation as a means for carrying into execution the powers vested in the Federal Government, such as the powers to lay and collect taxes, to borrow money, to regulate commerce, and to declare and conduct war, was within the broad power of making "all laws which shall be necessary and proper for carrying into execution the foregoing powers." See also, *Osborn* v. *Bank of the United States*, 9 Wheat. (22 U.S.) 738, 817, 859–867, 6 L. Ed, 204, 223, 233–235 (1824). There is no suggestion, in the summaries of the arguments or in the opinions, of any doubt as to the constitutionality of the provision for Senate confirmation of the President's appointments of directors of the Bank, even though, in the *Osborn* case (9 Wheat. at pp. 866–867), the court specifically said that the directors were not "officers of government."

The original act incorporating the Union Pacific Railroad, act of July 1, 1862, 12 Stat. 489, named scores of individuals from various States, who, together with five persons to be appointed by the Secretary of the Interior, were to be commissioners to receive subscriptions for shares. When a specified number of shares had been subscribed, the subscribers were directed to meet to elect 13 directors who, together with 2 directors to be appointed by the President, were to take over management of the corporation.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. GRUENING. Were these subject also to having nominations confirmed by the Senate?

Mr. ANDERSON. No; I think they were not.

Mr. GRUENING. I believe that is one of the essential points at issue.

Mr. ANDERSON. I do, also. I point out there was a case in which the nominations were subject to the advice and consent of the Senate.

The statute was amended by the act of July 2, 1864 (13 Stat. 356) to provide for a board of 20 directors of whom the President was to name 5 and the stockholders to elect the remaining 15. So far as we can determine, no consideration was given to providing that the Presidential appointees should be subject to the advice and consent of the Senate, nor any suggestion that such a provision would be unconstitutional.

In view of the Senate confirmation of some of the directors of the second Bank of the United States, and the many acts of Congress in which the incorporators of nongovernmental corporations have been named, there is ample precedent available as rebuttal to any constitutional objection to the provision for Senate confirmation of the President's appointment of incorporators and directors of the Communications Satellite Corp.

Mr. President, I express the hope that speedily, if we might, but leisurely, if we must, the Senate will proceed to the confirmation of the nominations of these incorporators.

Mrs. SMITH. Mr. President, the question before the Senate is whether it will advise and consent to the appointment of the 14 initial incorporators of the Communications Satellite Corp. In connection with this question, I think it is appropriate at this time to spell out what I, for one, am not consenting to.

Approval of these nominees does not mean that I believe the Communications Satellite Corp. will become an immediate success, nor that returns, if any, from an investment in the corporation will meet a speculator's dream. The opposite may be true in fact. Though the law requires congressional confirmation of these initial incorporators, I hope the public will not interpret our action as giving this private corporation any congressional sanction of omnipotence. Further it should not in any way suggest that the Congress will be obligated to underwrite the corporation if it flounders. While it is true that this corporation is unique in its concept and its objectives, nevertheless it is from this point on dependent for its success not on the Congress, but rather on its corporate management.

In saying this, Mr. President, I hope that my remarks will not be construed as a lack of confidence in this corporation. I am, as are many others, hopeful that the corporation will meet the goals which it has set, but at the same time I am enough of a realist to know that there will be a number of years and many heartaches before this undertaking becomes operational.

Mr. JAVITS. Mr. President, on the issue pending before the Senate I wish to speak only briefly, to express my support of these nominees, and to express the hope that the Senate will confirm the nominations.

I always felt, in connection with the debate on the satellite communications bill, that we were engaged in an extremely important and interesting experiment in a mixed Government-private corporation. I recognize it is not purely mixed, in the sense of an admixture of investment, et cetera, but it will have Government directors and will work very closely in connection with governmental powers as they are exercised by governmental agencies.

Mr. GORE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. GORE. Did the junior Senator from Tennessee correctly understand the distinguished senior Senator from New York to say that the corporation would have Government directors?

Mr. JAVITS. As I understand, it would have three directors appointed by the President.

Mr. GORE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. GORE. The Senator is well aware, I am sure, that appointment by the President would not make of the directors Government directors. In fact, the Attorney General has rendered an opinion that all of the directors and incorporators would have identical responsibility; that their fiduciary trust would be to the stockholders and to the stockholders only; that they would hold private, not public, status. Therefore, under no provision of the law could it be said that directors appointed by the President would be Government directors.

Mr. JAVITS. If the Senator will allow me, I was using that term in its colloquial sense and not in any sense of trying to qualify them as a matter of law as Government directors. I was expressing only my view that, being appointed by the President, as I see it, once the corporation gets going and is publicly financed, they will have a unique position; and this will be such a unique quality of appointment as to make the corporation in terms of those serving as directors different from normal, publicly financed corporations. That is precisely what I had in mind. Only in that sense did I use the term.

Mr. GORE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. GORE. The junior Senator from Tennessee is not aware of any colloquial meaning with respect to the words "Government directors." Is the able Senator from New York aware of the fact that the Attorney General of the United States has rendered an opinion in which he has held that these men in fact will not be Government directors, that they will have the same powers and responsibilities as directors and officers of any other ordinary business corporation?

Mr. JAVITS. It seems to me that the Senator has himself used the words "Government directors" in the negative colloquially now, by asking me whether I was aware of the fact that the Attorney General had given an opinion that they were not in fact Government directors, because they had responsibility to the stockholders.

I say to the Senator that I was using the term "Government directors" in a colloquial sense, as I understood it, to express my view of a unique character of appointment; and therefore of a unique character which, in my view—I am not asking the Senator to espouse my view—this corporation would have. That was all I intended.

I have not read the opinion of the Attorney General. I shall read it with great interest. I hope very much, before I vote upon the question of the confirmation of the nominations, to read the hearings and also to read carefully the debate to which I cannot listen—if it turns out that I cannot—with respect to what is said on the floor by the proponents of the position that the nominations of the incorporators should not be confirmed, and also, as I understand, their legal position that no confirmation is required under the circumstances.

Mr. GORE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. GORE. The junior Senator from Tennessee is aware that a great many people have had the impression that the corporation is partly public and partly private, something in between public and private. The junior Senator from Tennessee has undertaken for a long time to call attention to the express provisions of the statute which provides that it is entirely a private corporation, organized for profit.

It will operate in a unique field. The act bestows upon the corporation unusual privileges and powers; but it does not place upon the corporation any public responsibility. I read from the Attorney General's opinion:

> With these directives in the act, there would seem to be no doubt that the incorporators, as directors, will have the same status and responsibility as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.

Mr. JAVITS. It is a fact that a number of the directors will be appointed in a way different from the way they are appointed or elected in a privately owned corporation. That is all I had in mind. That is a unique aspect of the corporation. When I made the statement I did, I made it clear that this question did not involve Government money or private money, but that it involved only a special way of designating directors. That is all I assert.

Mr. GORE. The Senator does not assert, then, that the officers of this corporation have any governmental or official public position.

Mr. JAVITS. I do not want to say yes or no and prejudice the legal conception. I made the statement, as a lawyer, that, the law, having been enacted, the nominations should be confirmed, and that the Senate should confirm them. I believe they are excellent directors. So far as I can see, unless there is something in the case which I do not see as yet, I shall vote to confirm the nominations. I hope to examine the subject more thoroughly later. But I say what I said before, that it is, in my judgment, in the nature of a mixed corporation, something which is not the normal, publicly financed corporation, but which does have some special aspect in that a certain number of directors will be specially appointed, rather than elected in the usual way, by stockholders.

Despite the fact that the Attorney General says that the directors, even if so designated, have precisely the same responsibility as stockholders and ordinary directors elected in the usual way, which I have no doubt is so, in terms of public policy, the appointment of these directors by the President gives an important aspect to this corporation which other corporations, publicly financed, do not have. That was my point.

Mr. GORE. Will the Senator yield further?

Mr. JAVITS. I yield.

Mr. GORE. I hope the Senator will examine this question and give the Senate his considered opinion. I realize that the Senator has not read the Attorney General's opinion and has not, as he said, examined this question fully, but hopes to do so later. In view of the statement the Senator has just made, I hope he will do so with the greatest of care, and give to the Senate his interpretation.

It is disturbing to the junior Senator from Tennessee that any Member of the U.S. Senate, particularly one of its ablest lawyers, should at this late date still assert his belief that, somehow, this activity is an admixture of private and public functions and responsibilities. If the distinguished senior Senator from New York still holds that view, what about the millions of our people who may very well conclude that the U.S. Government has in fact endorsed and approved and is, in fact, supporting and promoting the success and the profitability of this corporation? Much mischief can flow from this misapprehension on the part of the American people; and I hope the senior Senator from New York will give the question careful consideration and address the Senate on it.

Mr. JAVITS. The Senator from New York is not aware of being under any misapprehension. That is the word of the Senator from Tennessee. Incidentally, the Senator from New York had no intention of taking any important part in this debate, or of speaking on it more than briefly at this time. But if the Senator from Tennessee insists—and sometimes these things do not work out the way that those who are espousing the view of the Senator from Tennessee think they will work out—on my looking into the subject carefully and giving my considered judgment, I shall be happy to do so, but the result may not be satisfactory to the Senator from Tennessee.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. MORSE. In the opinion of the Senator from Oregon, the Senator from New York, as a former attorney general of New York, now has the duty to do just that; and the Senator from Oregon would welcome the performance of that duty by the Senator from New York. The Senator from Oregon will await with bated breath the analysis of the Senator from New York.

Mr. JAVITS. The Senator is making me do some work I did not plan to do, but that is the penalty for standing up and saying anything on this subject. But I shall be glad to do it promptly, for I hope this discussion will not be too protracted.

PRO-CIVIL-RIGHTS POSTAL EMPLOYEE SLAIN IN ALABAMA

Mr. JAVITS. Mr. President, the whole country must look with considerable sadness upon a tragedy which has just occurred, which saddened me very deeply, and which should sadden us all. A young man, 35 years old, William L. Moore, a native of Binghamton, N.Y., was found sprawled on a desolate stretch of U.S. 11 in Alabama in front of a roadside park. He had been shot once in the forehead and once in the neck and was dead when he was found.

He was walking to Jackson, Miss., to deliver to Gov. Ross Barnett a personal letter on civil rights. He was wearing placards which indicated his very strong desire for equal opportunity, especially as respects race and color. He was a post office employee born in Binghamton, N.Y. As it happens, he had written me about some matters with respect to the post office, and told me about the walk he intended to take. I had written him and told him I would be glad to see him any time he wanted to come to Washington, and wishing him good luck on his walk. He was a well-intentioned American who felt he was making a big contribution to a public cause in this way.

Perhaps one could credit this sad and tragic occurrence to any one of a number of reasons. But it is an interesting fact that the coroner of Etowah County, where the slaying occurred, termed it a "civil rights case." That is not from a prejudiced source. It seems to me it was, as we lawyers say, part of the res gestae, a statement that was made shortly after the occurrence took place, when people generally say what is on their minds.

Gov. George Wallace, of Alabama, has offered a reward for information leading to the conviction of those who committed the terrible crime. I am grateful for that fact.

Apparently Mr. Moore made no secret of his mission as he went on his way, and a number of news gatherers knew of his mission, which was to hand Gov. Ross Barnett, of Mississippi, a personal letter urging him to accord Negroes their rights. The letter is set forth in news articles. I ask unanimous consent that an article from the Washington Daily News and one from the Washington Evening Star of today be printed at this point in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Washington Daily News, Apr. 24, 1963]

Baltimore Prorights Postman Slain in Alabama

Gadsden, Ala., April 24.—Authorities said today that a vacationing Baltimore postman hiking to Mississippi to plead for racial moderation apparently was ambushed and shot to death from a parked car.

The body of William L. Moore, 35, was found sprawled on a desolate stretch of U.S. 11 in front of a roadside park. He had been shot once in the forehead and once in the neck with a .22 caliber weapon.

On the body of Mr. Moore, who was walking to Jackson, Miss., to deliver a personal letter on civil rights to Gov. Ross Barnett, were placards reading, "Eat at Joe's, Both Black and White" and "Equal Rights for All (Mississippi or Bust)."

The white postman had passed through this northeast Alabama city around dusk yesterday and told a radio newsman that he was not afraid of violence on his antisegregation trek. "I don't believe the people in the South are that way," he said.

BODY FOUND

About 2 hours later, a motorist discovered Mr. Moore's body 10 miles from here near the crossroads community of Keener. The body was brought here for autopsy.

Etowah County Coroner Noble Yokum termed the slaying a civil rights case and said he thought racial demonstrations in Birmingham were involved in the act. "I personally don't think this was a local matter," he said.

Mr. Yokum said it appeared the killers were waiting for Mr. Moore at the roadside park and shot him as he walked by. "From the angle of the bullet and the size of the hole, I'd say it was fired from a car at close range," he said.

Gov. George Wallace offered a $1,000 reward for information leading to the conviction of the killers and sent a number of State investigators and troopers here to work with local authorities on the case.

LETTERS ON BODY

Letters to President Kennedy, Attorney General Robert F. Kennedy and Governor Barnett were found on the body of Mr. Moore, who said friends warned him to expect trouble in Birmingham and to fear for his life in Mississippi.

Mr. Moore, who lived at 433 East 25th Street, Baltimore, and had saved his vacation time to make the trip south, walked the 35 miles from Baltimore to Washington last Saturday in an unsuccessful attempt to deliver a personal letter to the President. He was stopped by a White House guard who told him to drop the letter in the mail box.

Mr. Moore's letter to the President said he expected southern hospitality to manifest itself in "less desirable forms" on his trek. He said he was "not making this walk to demonstrate either Federal rights or States rights, but individual rights."

The letter to Governor Barnett asked the Mississippi Governor to "be gracious and give more than is immediately demanded of you. Make certain that when the Negro gets his rights and his vote that he does not treat the white man with the contempt and disdain that, unfortunately, some of us now treat him."

Pushing a small shopping cart containing clothing, a second pair of shoes and literature, he passed through Gadsden yesterday afternoon. There he told newsman Charles Hicks of radio station WGAD that "his feet were pretty badly blistered but he planned to walk right up to the Governor's mansion in Mississippi."

[From the Washington Star, Apr. 24, 1963]

Racial Hiker Slain in Alabama—Motorist Finds Body of White Integrationist—Baltimore Man Was en Route to Mississippi

Attalla, Ala., April 24.—A white integrationist from Maryland was shot to death beside a highway near this northeast Alabama town last night. A full-scale search for the killer is underway.

Gov. George Wallace, a staunch segregationist, called the slaying of William L. Moore, 35, of Baltimore, a "dastardly act" and offered a $1,000 reward for the arrest and conviction of the killer.

Mr. Moore, hiking across Alabama and bound for Mississippi on a personal antisegregation mission, was carrying prointegration signs.

SHOT AT CLOSE RANGE

Coroner Noble Yocum said Mr. Moore apparently was shot at close range with a small caliber weapon. He said what appeared to be a .22 slug was found near the scene. One bullet went through Mr. Moore's head and another apparently lodged in the head, Coroner Yocum said.

Mr. Moore reportedly was walking from Chattanooga, Tenn., to Jackson, Miss., to tell Mississippi Gov. Ross Barnett of his racial views.

Mr. Moore had told a newsman a little earlier last night that he had left a letter for President Kennedy at the White House, taken a bus from Baltimore to Chattanooga and begun this trek.

LETTER TO PRESIDENT

Mr. Moore's letter to the President outlined plans for the walk and said in part:

"I will be engaged in interstate travel and theoretically under the protection of the 14th amendment to the Constitution guaranteeing equal rights and privileges to all citizens.

"I am not making this walk to demonstrate either Federal rights or States rights, but individual rights. I am doing it * * * for the South and hopefully to illustrate that * * * peaceful protest is not altogether extinguished down there.

"I hope that I will not have to eat these words."

PLEDGES AID IN SEARCH

Alabama's public safety director, Al Lingo, pledged his office's support in the search and urged the cooperation of all law-enforcement agencies to find the killer or killers.

A passing motorist found the body. Mr. Moore was still wearing signs reading "Eat at Joe's—both black and white" and "Equal rights for all. Mississippi or bust."

State Investigator Ray McDowell said he had talked with Mr. Moore earlier and said Mr. Moore told him he was a mail carrier in Baltimore and had been a postal worker in Binghamton, N.Y.

Mr. McDowell said part of the sign reading "black" had been torn off. He said Mr. Moore told him a Negro in Chattanooga had torn the sign, saying that the word "colored" should have been used.

WAS ON VACATION

Mr. Yocum said he had talked with Mr. Moore's wife, Mary, in Binghamton. He said she told him Mr. Moore was on a 2-week vacation and that his route would take him from Chattanooga to Birmingham, and then to Jackson via Meridian, Miss.

Attalla is just outside Gadsden, about 60 miles northeast of Birmingham.

Mrs. Moore told Mr. Yocum that relatives in both Birmingham and Meridian had advised against Mr. Moore's coming to either area because of the tense racial situation.

She was quoted as saying that Mr. Moore was a member of the American Civil Liberties Union and pacifist groups.

Mr. Yocum said Mr. Moore had a large amount of money with him and had a small, two-wheeled cart in which he carried personal effects and copies of a mimeographed letter that he had sent to radio stations and newspapers along his route. It also contained copies of the letter to the President, Mr. Yocum said.

Newsman Charlie Hicks of Radio Station WGAD in Gadsden said he talked to Mr. Moore only an hour before the body was found.

He said Mr. Moore was barefoot, but put on his shoes before entering a small country store to buy canned goods for supper. The walker had a small dog, which he gave to a boy at the store, Mr. Hicks said.

Mr. Hicks said, "I would have taken him to the State line in my car to keep him out of trouble. I told him something might happen to him, but he was determined to go on alone.

"We got an anonymous phone call at the station that this guy was walking along the highway and that there might be a news story of consequence.

"He was a nice, friendly, intelligent guy. Boy, this thing shakes me up. I just talked to him, and now he's dead."

The body was found in a rural area about a mile from the store. The nearest house was 100 yards away.

Mr. Moore was a Marine Corps veteran and fought on Guam during World War II. He has lived in a second floor apartment in downtown Baltimore since last fall.

Mr. Moore was the author of a book entitled "The Mind in Chains" or "Autobiography of a Schizophrenic" published in 1955 by the Exposition Press of New York.

He had studied in Europe and at Johns Hopkins University in Baltimore. According to his book, he had once lived in Mississippi and had been employed as a welfare department caseworker in Binghamton, N.Y.

During the recent session of the Maryland Legislature, Mr. Moore hiked from Baltimore to Annapolis, about 30 miles, to deliver a letter to Gov. J. Millard Tawes protesting Maryland segregation.

Last winter he was active in demonstrations aimed at desegregating a Baltimore theater near the campus of Morgan College, a predominantly Negro college.

Mr. JAVITS. Mr. President, the reason I bring this matter up in the Senate is that the civil rights problem is serious business. We must constantly be reminded of the fact that it is serious business. We are inclined to forget it is serious business, involving not only the freedoms and future and dignity of people, but also their lives. I have stood up time and time again and joined my colleagues in saying that unless we give tongue and meaning to what those who struggle for civil rights say and unless we give Negroes an outlet for things which are deeply and tempestuously bothering them, there is bound to be violence.

It is the very antithesis of what those who oppose all these measures believe. I believe that the very suppression which they preach is what is most likely to produce violence and difficulty of the gravest kind for our country.

This illustrates that this is grim, serious, deadly business. The fact that Congress persists in keeping its hands off will not help, but, instead, will hurt.

The Executive cannot carry out the law himself, even with the best will in the world. That is where I believe the President has been wrong in not adequately pressing for legislation. It is cases like this tragedy, a deep one for this poor fellow who had nothing but good will for his fellow men in his heart, that impress us with how serious this business is and how urgently it requires the attention of Congress. It is not getting that attention.

THE NEED FOR COMPREHENSIVE REVIEW OF THE ANTITRUST LAWS

Mr. JAVITS. Mr. President, on April 2 I introduced, along with Senators COOPER and HARTKE, S. 1255, which would establish a Commission To Revise the Antitrust Laws, along the lines of the Temporary National Economic Commission of the 1940's.

In my introductory remarks, I mentioned a number of instances in which the need for comprehensive review of the antitrust laws, in my judgment, has been most clearly demonstrated. Since introducing the bill, I have received a number of favorable comments from constituents who have provided additional evidence of how much this body of law needs to be reevaluated in the light of our Nation's rapidly changing economic environment.

A clear case of the inadequacy of the antitrust laws as now defined and administered was presented by the advisory opinion of the Federal Trade Commission on April 5, 1963, to the effect that it would be a violation of the antitrust laws for independent druggists to advertise cooperatively if prices were mentioned in the advertisement.

This cooperative advertising is generally carried through to give small retailers some ratability of treatment with large retailers under the Robinson-Patman Act, so that they can pool their advertising allowances, which would be tiny if individual, but adequate if pooled. The Federal Trade Commission, in its advisory opinion, says, "You must not mention price." Of course, as anyone who has read drug ads knows, these ads are meaningless unless prices are mentioned.

While the Commissioners clearly recognized that the practice of cooperative advertising of prices is of vital importance to small businessmen and that the antitrust laws were designed to protect and encourage small business competition, yet the majority of the Commission felt constrained to advise that the antitrust laws were simply inadequate for this purpose and would be contravened by the practice.

This advisory opinion also demonstrates, apart from the uncertainty and inadequacy of the existing substantive law, how inadequate the existing procedural remedies are in this field. Although they were empowered to give an advisory opinion, the Commissioners could not bind themselves, the Department of Justice, or the courts by their opinion, and therefore the businessman could not rely on the opinion as he could, for example, on a tax ruling by the Internal Revenue Service in acting upon the facts he has stated in his request for a ruling. As a result the substantive law itself is distorted as can be seen in two of the Commissioners' statements: They state that they advise that the proposed cooperative advertising would be in violation of the antitrust laws because they want to avoid misleading businessmen to their detriment in a situation of uncertainty under the law. In this way the law becomes certain, but it does so in a way which does not reflect the Commissioners' view of the merits of the case and in a way which is of only negative use to the businessman. Under present circumstances it makes sense to request an advisory opinion only where the businessman is sure of a favorable ruling, because where the law is uncertain, which is the most appropriate occasion for an advisory opinion in advance of action, the Commission will feel constrained to give the most conservative ruling in order to protect the businessman from future enforcement activity against him; and in the process of doing so the Commission then makes the law certain—and negative. In my view this is no fault of the Commission's but of the law, in this case both substantively and procedurely. I note that today the Justice Department in reply to a senatorial inquiry stated a view contrary to that of the majority of the FTC—which only emphasizes the confusion and uncertainty under the law.

I ask unanimous consent that there be printed at this point in my remarks the three statements and one dissenting statement of the Federal Trade Commissioners in this case.

There being no objection, the opinions were ordered to be printed in the RECORD, as follows:

STATEMENT OF COMMISSIONER ANDERSON

It goes without saying that the many small members of an industry should be able to compete on equal footing with its larger competitors. Unfortunately, there seem to be instances where that is not possible. I wish that I could dissent from what appears to be the majority in this case. I fear that for the individual industry members to join in an advertisement which would set out a single price to be charged by all those who participate in the advertisement would be looked upon with some suspicion. I call attention to the fact that the special counsel for the National Association of Retail Druggists has heretofore indicated his reluctance in the matter by stating to the annual meeting of the National Drug Trade Conference at New York, N.Y., on January 22, 1963, as follows:

"I venture the prediction that the antitrust enforcement agencies may frown upon a straightforward advertisement which lists a single price for a product that will be charged by all stores participating in the advertisement."

It offends my sense of justice to find that the small industry members are unable to avail themselves of the same benefits as do their big brothers and so, for that reason, I would very much like to join Commissioner Elman in his dissent hereto, but I believe that the law and the decisions as they now stand preclude such "junction." It is, therefore, with reluctance that I am compelled to subscribe to the view that the program of cooperative advertising as contemplated by the inquirants would probably be in violation of law.

Dissenting Statement of Commissioner Elman

As everyone knows, it is becoming more and more difficult for small retailers, particularly in the drug and food industries, to withstand the overwhelming competition of chainstores and supermarkets. The chains have all the advantages of mass buying power, large capital resources, and choice locations in busy shopping centers. In addition, and this is most pertinent here, a large food and drug chain can take a single ad in a newspaper to advertise products sold at the same price in all of its stores. Under cooperative advertising arrangements, the cost of these advertisements is largely borne by manufacturers of the advertised products.

Congress has recognized the need for giving small independent neighborhood retailers the opportunity to meet this kind of competition from the large chains. Under section 2(d) of the Robinson-Patman Act, a manufacturer who grants cooperative advertising allowances to some of his customers is obligated to make them available on proportionally equal terms to all of his customers. As a practical matter, however, a small neighborhood retailer cannot afford, by himself, to take a large ad in the local newspaper. The only realistic way for him to take advantage of the benefits of section 2(d) is to join with other small retailers, pool the advertising allowances to which each is legally entitled, and publish joint advertisements containing prices of the products which they sell. Obviously, a joint advertisement by small retailers which does not quote selling prices would be a waste of money. The owner of a corner grocery store is not interested in institutional advertising. That kind of advertising would hardly attract business away from his larger rivals, whose ads invariably feature weekend specials and the like.

What is proposed here, as I understand it, is not an agreement among competing retailers to fix prices, which of course is a per se violation of the antitrust laws, but an agreement among independent retailers in different neighborhoods, and who therefore do not compete with each other in any practical sense, to combine their advertising allowances, to which they are legally entitled under the Robinson-Patman Act, for the purpose of advertising cooperatively. In its advisory opinion here, the Commission flashes a red light on such cooperative advertising by small businessmen. I think the Commission is making a great mistake. Preservation of small independent businessmen is a central objective of every statute that Congress has directed this Commission to enforce; and unlike my colleagues, I find nothing manifestly illegal per se in the proposals submitted.

Per se violations of the antitrust laws comprise those restraints of trade which inherently have no function other than the stifling of competition. As the Supreme Court stated in *Northern Pacific Railroad Co.* v. *U.S.*, 356 U.S. 1, 5, per se violations are "agreements or practices which because of their pernicious effect on competition and lack of any redeeming virtue are conclusively presumed to be unreasonable and therefore illegal without elaborate inquiry as to the precise harm they have caused or the business excuse for their use."

Although an agreement to fix or maintain prices is unquestionably illegal per se, this does not mean that every agreement or arrangement which has incidental effects on prices can similarly be condemned by a per se test. *Appalachian Coals, Inc.* v. *U.S.*, 288 U.S. 344; *Chicago Board of Trade* v. *U.S.*, 246 U.S. 231, 238. In his opinion for the Court in the latter case, Mr. Justice Brandeis stated:

"The true test of legality is whether the restraint imposed is such as merely regulates and perhaps thereby promotes competition, or whether it is such as may suppress or even destroy competition. To determine that question the court must ordinarily consider the facts peculiar to the business to which the restraint is applied; its condition before and after the restraint was imposed; the nature of the restraint, and its effect, actual, or probable. The history of the restraint, the evil believed to exist, the reason for adopting the particular remedy, the purpose or end sought to be attained, are all relevant facts."

As the Supreme Court held in *Brown Shoe Co.* v. *U.S.*, 370 U.S. 294, 330, and *White Motor Co.* v. *U.S.*, decided March 4, 1963, slip opinion pp. 9–10, a restraint of trade cannot be condemned as a per se violation if "[w]e do not know enough of the economic and business stuff out of which these arrangements emerge to be certain. They may be too dangerous to sanction or they may be allowable protections against aggressive competitors or the only practicable means a small company has for breaking into or staying in business * * * and within the rule of reason."

It begs the question, the answer to which necessarily depends on the particular facts, to hold that the appearance in a joint advertisement of any "prices, terms, or conditions of sale of any of the items" establishes, without more, the per se illegality of the advertising plan. Plans for joint advertising by retailers are not necessarily, and in all circumstances, the equivalent of price-fixing conspiracies. Where, as is represented here, a plan has neither the purpose nor the effect of restraining competition, and involves no agreement by participating retailers to adhere to advertised prices, a per se test is inapplicable. Such a simple yardstick may be used only—as the Supreme Court pointed out in the Northern Pacific Railroad case—in dealing with practices whose "pernicious effect on competition and lack of any redeeming virtue" have been conclusively shown. Here, however, the Commission cannot escape the necessity for determining the legality of a joint advertising plan by examining it in the light of all the relevant factors stated by Mr. Justice Brandeis in the Chicago Board of Trade case and reiterated the other day by the Supreme Court in White Motor.

It seems to me that the Commission, charged as it is with the duty to promote rather than discourage competition and to strengthen rather than impair the ability of small businessmen to survive, should take a more positive and encouraging attitude toward programs for joint advertising by retailers. As has recently been pointed out, "Prosecuting a practice of this kind would injure rather than preserve competition, and encourage instead of preventing monopoly" (Henry Bison, Jr., general counsel, National Association of Retail Grocers, Nargus Bulletin, February 1963, p. 92). The notion that small businessmen should be sent to jail for engaging in such a practice seems to me too fantastic to be taken seriously.

Statement of Commissioner MacIntyre

The Commission's advisory opinion in this important matter correctly advises the representatives of small business organizations regarding the application of Federal antimonopoly laws to their proposed plans. It is the duty of the Commission to so advise the representatives of these small business firms. We would do them a disservice if we should advise them otherwise. Of what benefit would we be to small business firms if we should advise them that the course of action they propose to take is approved and then they should find themselves in the toils of the law for having followed that course of action? Our duty is to assist business firms in avoiding any such result.

The Supreme Court of the United States in recent cases brought by the U.S. Department of Justice against firms for engaging in price fixing in violation of the Sherman Act have made it clear that such course of action constitutes per se violation of the Sherman Act (see *U.S.* v. *Socony Vacuum Oil Co., et al.* 310 U.S. 150, decided in May 1940). In more recent cases in which small business firms were charged with violating the Sherman Act, the Department of Justice has insisted that prison sentences be given to those found guilty. As a result, some small businessmen in Ohio in recent years were ordered to serve prison terms for violation of the Sherman Act. We should do all possible to assist small businessmen in avoiding such a predicament.

Statement of Commissioner Higginbotham

This request today evokes a moment of truth for this Commission. With unquestioned sincerity, the able and distinguished dissenting Commissioner beseeches us to cast aside years of precedent in price-fixing cases. It was in 1940, and thus after its decision in *Appalachian Coals, Inc., et al.* vs. *United States*, 288 U.S. 344 (1933), that the Supreme Court stated:

"Thus for over 40 years this Court has consistently and without deviation adhered to the principle that price fixing agreements are unlawful per se under the Sherman Act and that no showing of so-called competitive abuses or evils which those agreements were designed to eliminate or alleviate may be interposed as a defense." *United States* vs. *Socony Vacuum Oil Co., Inc.* 310 U.S. 150, 218 (1940).

The holding of this case remains undisturbed.

We are not unaware of the legal maxim "Cessante ratione legis, cessat et ipsa lex," nor of the cases which rest on such reasoning. But the function of an advisory opinion is to declare the applicability of the present state of the law to novel and sometimes disturbing facts. To chart the future course of the law is not its task. Neither the thin subtleties of semantics nor the sharp but barren thrust of logic will much warm a businessman subject to the wintry blast of possible criminal prosecution.

Commissioner Elman does not dispute that price fixing is a per se offense. Rather he says that the plan involved herein does not factually amount to price fixing. We are constrained to note our exception.

1. The fact that the businessmen involved may have unhampered discretion to depart from the scheme involved does not mitigate the offense:

"The fact that no penalties are imposed for deviation from the price schedule is not material." *United States* v. *National Association of Real Estate Boards*, 399 U.S. 435, 489 (1950).

2. The agreements, even if only incidentally affecting price may still be offensive under the antitrust laws. In Socony Vacuum, supra, the court asserted that:

"Prices are fixed * * * if the range within which purchases or sales will be made is agreed upon, if the prices paid or charged are to be at a certain level or on ascending or descending scales, if they are to be uniform, or if by various formulas they are related to the market prices." *United States* v. *Socony Vacuum*, supra, at 222.

3. There is no doubt that retail drugstores operating in the same city may be held to be in competition. In *Brown Shoe Co., Inc.* v. *United States*, 370 U.S. 294, 338 (1962), the Court held:

"We believe, however, that the record fully supports the district court's findings that shoe stores in the outskirts of cities compete effectively with stores in central downtown areas."

See also, *United States* v. *Cunningham Drugstores* (complaint filed June 30, 1960, Civil Act No. 20266, D.C., E.D. of Mich., Southern Division), complaint charging violation of section 7 of the Clayton Act by Cunningham's acquisition of other retail drugstores, both being located in Detroit.

4. No one could quarrel with the dissent's assertion that particular cases pivot on particular facts. And once allowed to frame the question in terms of the facts as it sees them the dissent's answer is inescapable. Thus, Commissioner Elman declares that the proposed plan has "neither the purpose nor effect of restraining competition and involves no agreement by participating retailers to adhere to advertised prices." Obviously if all these assertions were inescapably true, or were the only permissible inference from the facts, a different result might be reached. But that is the very issue—whether in fact the purpose and effect of the plan could be construed to restrain competition.

In sum, if one assumes price fixing, one need not examine "all the relevant factors." Conversely, if one assumes no price fixing, one may examine "all the relevant factors." To employ such reasoning is to become encased in conundrums. Moreover, it is clear from the differing opinions within the Commission itself that the plan at best is on the periphery of violative behavior, and that reasonable men differ concerning its impact. And as Mr. Justice Holmes asserted in *Nash* v. *U.S.*, 229 U.S. 373, 376, 377 (1913):

> "The statute contains in its definition an element of degree as to which estimates may differ, with the result that a man might find himself in prison because his honest judgment did not anticipate that of a jury of less competent men. * * *
>
> "But * * * the law is full of instances where a man's fate depends on his estimating rightly, that is, as the jury subsequently estimates it, some matter of degree."

In view of the uncertainties and the substantial risk inherent in civil or criminal prosecution, no administrative agency should give this plan the "green light."

The function of this Commission—as I see it—is not to resolve a lover's quarrel over who loves the small businessman more. Hopefully, it is evenhanded justice we dispense—not bouquets for or vendettas against one class or group.

COMMUNICATIONS SATELLITE CORP.

The Senate resumed the consideration of the nominations of incorporators of the Communications Satellite Corp.

DWINDLE, DWINDLE LITTLE TELSTAR, HOW I WONDER WHAT YOU ARE—PUBLIC OR PRIVATE?

Mr. GRUENING. Mr. President, I rise to urge the Senate to take no action at all on the request from the President to advise and consent to the nominations submitted for appointment as incorporators and members of the board of directors of the Communications Satellite Corp.

I assure my colleagues that I derive no measure of satisfaction from what I have to say today.

I wish it clearly understood that what I say has no bearing whatever on the competence, the integrity, the ability, and the qualifications of the proposed incorporators, upon whose nominations extensive hearings were held by the Aeronautical and Space Sciences Committee.

When I see how the Senate and the other body have maneuvered themselves into a situation which greatly diminishes their stature in the eyes of the American public, casting a shadow on their ability to enact sound constructive legislation, I obtain no solace from the fact that I can point to the record made on the floor of the Senate last year and say, "There were a few of us who tried to make you listen last year—who tried then to point out that this was bad legislation which would come back to haunt the Senate." There were 16 of us to be exact—Senators BARTLETT, BURDICK, CARROLL, CHURCH, CLARK, DOUGLAS, GORE, GRUENING, KEFAUVER, LONG of Louisiana, MCNAMARA, MORSE, MOSS, NEUBERGER, PROXMIRE, and YARBOROUGH.

We offered many amendments to delete or correct many glaring imperfections in the bill before us. All were summarily tabled with totally inadequate time or opportunity to debate the serious issues involved in the measure then before us.

I do not recall these incidents, Mr. President, in any attempt to open old wounds, or to make a "we told you so" statement. I do so only because the fact that this legislation has defects should not now come as a surprise to anyone who was in this Chamber last year. I do so also in order to point up the need for all of us together to work this year to undo thoughtfully and deliberately the errors committed by the Senate last year in haste and confusion.

You will recall, Mr. President, that one of the amendments to the satellite bill which I offered and which was summarily tabled would have established the satellite corporation along the lines of TVA. If my amendment had been adopted, the questions we face today would not have arisen.

What is the question we now face?

We are today being called upon to advise and consent to the appointment by the President of 14 men to be incorporators of the Communications Satellite Corp.—a private corporation for profit organized under the business corporation laws of the District of Columbia.

Is this the usual situation in which the Senate advises and consents in fulfillment of its responsibilities under the Constitution? The Constitution provides:

> Article II, section 2, clause 2: "The President * * * shall nominate, and by and with the advice and consent of the Senate, shall appoint * * * all other officers of the United States whose appointments are not herein otherwise provided for."

Now the men on whose nominations we are being asked to advise and consent will not be—when and if appointed—"officers of the United States." If that is not clear from a reading of the law providing for the creation of the Communications Satellite Corp., then the Attorney General has made it abundantly clear.

Section 301 of Public Law 87-624—the Communications Satellite Act of 1962—provides:

> There is hereby authorized to be created a communications satellite corporation for profit which will not be an agency or establishment of the United States Government.

The Attorney General in his opinion has stated:

> With these directives in the act, there would seem to be no doubt that the incorporators, as directors, will have the same status and responsibilities as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.

I know of no precedent under which the Senate has ever in the past advised and consented to the nomination of members of the board of directors of a private, profitmaking corporation. The mere fact—astonishing as it may be—that NASA has now before the Congress a request for the appropriation to it of some $51 million in public funds so that it can carry on research, the benefits of which would inure solely to the benefit of the private stockholders of the corporation and not to the United States, does not make this corporation an instrumentality of the United States. I shall deal with this extraordinary attempted raid upon the Treasury of the United States when that issue is before us.

Today, I merely wish to protest strongly against this perversion of the "advise and consent" clause of the Constitution.

The course of action we are asked to follow today will itself constitute a dangerous precedent in the years to come.

I wish to make clear that, not being a constitutional lawyer, or any kind of lawyer, I am not raising the issue as to whether constitutionally the Congress can by legislation, not in the form of a constitutional amendment, amend the Constitution to extend the "advise and consent" provision to officials of private corporations. I am saying that even if the Congress has this power—and I doubt it—it should not exercise it.

Consider, Mr. President, what a Pandora's box we would be opening if we took this course of action.

In the first place, how would these men be commissioned by the President if they were appointed? The usual form of a commission is as follows:

> JOHN F. KENNEDY, PRESIDENT OF THE UNITED STATES OF AMERICA
>
> *To All to Whom These Presents Shall Come, Greeting:*
>
> Know ye, that, reposing special trust and confidence in the integrity, diligence, and discretion of John Doe, of ———, I have nominated and by and with the advice and consent of the Senate do appoint him ——————— and do authorize and empower him to execute and fulfill the duties of that office according to law, and to have and to hold the said office, with all the rights and emoluments thereunto legally appertaining, during the term of — years from the ——— unless this commission be sooner revoked by the President of the United States for the time being.
>
> In testimony whereof, I have caused these letters to be made patent and the seal of the United States of America to be hereunto affixed.
>
> Done at the city of Washington this — day of ——— in the year of our Lord one thousand nine hundred and ——— and of the independence of the United States of America the one hundred and ———.
>
> JOHN F. KENNEDY.
>
> By the President:
>
> DEAN RUSK,
> *Secretary of State.*

These words are hardly appropriate in the case of persons appointed to be members of the board of directors of a private, profitmaking corporation. Should the President commission these men with a commission reading more appropriately:

JOHN F. KENNEDY, PRESIDENT OF THE UNITED STATES OF AMERICA

To All to Whom These Presents Shall Come, Greeting:

Know ye, that, reposing special trust and confidence in the integrity, diligence, and discretion of John Doe, of ———, I have nominated and by and with the advice and consent of the Senate do appoint him a member of the board of directors of the Communications Satellite Corp., Inc., a private, profit-making corporation organized under the laws of the District of Columbia, and do authorize and empower him to execute and fulfill the duties of that office according to law and for the best interests of the stockholders of that corporation, and to have and to hold the said office, with all the rights and emoluments thereunto appertaining, during the term of 3 years from the date hereof.

In testimony whereof, I have caused these letters to be made patent and the seal of the United States of America to be hereunto affixed.

Done at the city of Washington this — day of ——— in the year of our Lord one thousand nine hundred and ——— and of the independence of the United States of America the one hundred and ———.

JOHN F. KENNEDY.

By the President:

DEAN RUSK,
Secretary of State.

Such a commission would more properly meet the factual situation.

It would be interesting to see, if these nominations are confirmed by the Senate—although I hope they will not be, because I feel the Senate should not be voting on these nominations at all—whether the board of directors will follow a course of action which will put the interests of the people of the United States above the profit-making interests of the stockholders of this private corporation. This would involve a new and unprecedented conflict of interest.

However, there is a matter of greater importance at stake than the form of the commissions to be issued to the members of the Communications Satellite Corp. by the President.

That is the question of their removal.

At this point I wish to interject the thought that nothing I say here today is intended in any way to reflect upon the character and integrity of the nominees involved. I do not know them and my examples are without regard to them personally and only by way of illustrating a certain important point.

These men, nominated by the President to be members of the board of directors of the Communications Satellite Corp., will serve as the initial board of directors until the first annual meeting of the stockholders or until their successors are elected and qualified. Thereafter, according to Public Law 87-624, three members of the board will be appointed by the President by and with the advice and consent of the Senate, six will be elected annually by the stockholders who are communications common carriers; and six will be elected annually by the other stockholders. Except for the initial Presidentially appointed members of the board who will serve staggered terms of 1, 2, and 3 years, the later Presidentially appointed members of the board of directors may be removed by the stockholders.

But what about the removal of the Presidentially appointed members of the board of directors?

They cannot be removed by impeachment. The Constitution, article II, section 4, provides: The President, Vice President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

Since the Presidentially appointed members of the board of directors of this private, profitmaking corporation are private citizens and not "civil officers of the United States" they canot be removed by impeachment.

How can they be removed for malfeasance in office—if they can be removed at all?

Can they be removed by the other members of the board of directors? By the stockholders? For what reason? If we say they can be removed by the other members of the board of directors or the stockholders, are we not then making a nullity of the Presidential appointive powers by placing in the other members of the board of directors or the stockholders a veto over persons nominated by the President and appointed by the President with the advice and consent of the Senate?

Could the Presidentially appointed members of the board of directors be removed, for example, because they voted consistently in behalf of a course of action which put the interests of the people of the United States above the profitmaking interests of the stockholders of this private corporation? Such a result would make a hollow mockery out of the venerated process of the Senate's Constitutional obligation of advising and consenting to certain Presidential nominations.

But there is a more serious and dangerous possibility, and that is that these men to whose nominations we are now being asked to advise and consent are not amenable to restraint at all—cannot be removed for any cause. They cannot be impeached, for they are private persons; they are not "civil officers of the United States." If then, they cannot be removed by the remainder of the board of directors or by the stockholders, they will be able to serve with impunity and engage in any activities—inimicable as they may be to the best interests of the corporation or of the citizens of the United States—as they may see fit and as may not be prohibited by any other provision of law.

I have taken an oath to preserve, protect, and defend the Constitution of the United States. I cannot stand idly by while an important provision of that Constitution is used to throw a cloak of national respectability over the activities of a private corporation whose basic concern is—as it must legally be—to make the biggest profits legitimately possible for its stockholders.

I cannot stand idly by while the Senate creates the precedent of reaching into private enterprises and asserting the right to advise and consent to Presidential appointments of members of their board of directors. Where will this lead?

It should be borne in mind that at the hearings on these nominations, the nominees brought out the fact that they did not feel that the corporation was confined in its business ventures to operating the communications satellite system. They felt they could undertake any other type of business the directors and stockholders thought would be profitable. Perhaps we shall soon see, stretching from Maine to California and from Oregon to Florida, a string of roadside hotdog stands, owned and operated by the Communications Satellite Corp., proudly displaying the sign:

> Three members of the board of directors of this corporation were nominated by the President of the United States and appointed by the President of the United States with the advice and consent of the Senate of the United States.

We would have no authority to forbid the corporation from entering the hotdog stand business.

The President of the United States would have no such authority.

To what greater extent could the dignity of the Presidency of the United States and of the Senate of the United States be debased?

If we assert the right to nominate one-fifth of the members of the board of directors of this private corporation, would we not then have a precedent for asserting a similar right with respect to all private, profitmaking corporations operating in the District of Columbia or in interstate commerce?

If so, why do we stop at only one-fifth of the members of the board? Why not appoint all the members of the board?

It should be noted that delay in acting on these nominations will not adversely affect the operations of the corporation. It is already a functioning corporation with a charter from the District of Columbia.

We are being asked, today, to take the first, long step along a road which leads I know not where.

Let us not debase the power of the Senate to advise and consent to Presidential nominations. Let us rather hold up on action on these nominations and wait until we can enact the necessary amendments to the Communications Satellite Act of 1962 either making this corporation the complete private, profitmaking corporation which it is, doing away with anomalies such as the one now before us, or making it a true instrumentality of the United States, like TVA or NASA.

Let us prevent this corporation from roaming the country, seeking to make profits for its stockholders, while wearing the cloak of Presidential sponsorship and Senate concurrence.

The American people have the right to be protected by us against any such deceit.

Last year, after the fight on the communications satellite bill was over, Mr. James A. Wechsler wrote in the October issue of the Progressive an excellent article about that fight and about some of the unanswered questions which arose concerning it. He stated in part:

> The congressional battle over the administration's communications satellite bill ended in late summer with a crushing defeat for the small band of men who had dared to oppose it. Their lost cause is probably already largely forgotten by most Americans, if, indeed, it was ever seriously noticed by many. Yet one ventures the prediction that we have not heard the last of this affair. It might be described as one of the great untold stories of the early space age—and, conceivably, the first momentous scandal of this new era. In a free society such episodes have a way of haunting the participants long after the deals have ostensibly been completed.

Mr. President, I ask unanimous consent that Mr. Wechsler's article appear in full at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SATELLITE, INC.

(By James A. Wechsler)

The congressional battle over the administration's communications satellite bill ended in late summer with a crushing defeat for the small band of men who had dared to oppose it. Their lost cause is probably already largely forgotten by most Americans, if, indeed, it was ever seriously noticed by many. Yet one ventures the prediction that we have not heard the last of this affair. It might be described as one of the great untold stories of the early space age—and, conceivably, the first momentous scandal of this new era. In a free society such episodes have a way of haunting the participants long after the deals have ostensibly been completed.

This does not purport to be the definitive history of that battle. There are many aspects of it that still defy explanation and elude inquiry. In large measure what is set forth here is based primarily on a reading—sometimes between the lines—of a 456-page volume called Hearings Before the Committee on Foreign Relations, U.S. Senate, on H.R. 11040, an act for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes. The story is supplemented by conversations with some actors in the drama who could move behind the scenes.

There will be little recorded here that was not accessible to the press; but it will also be apparent that much of it was never clearly or dramatically defined in most news organs. There were a few reporters who early sensed the dimensions of the story, but they were only a handful.

While we gaped and blinked in wonderment over the dawn of Telstar, the American Telephone & Telegraph Co. staged the first and perhaps decisive commercial coup of the space epoch. That it had the official blessing of the Kennedy administration (and the natural sympathy of the Republican leadership) in this endeavor merely underlines the magnitude of the feat. Ultimately we must ask: Why? But first let us turn to the record, where the heart of the story can be found.

In December 1961 Adlai Stevenson, U.S. Ambassador to the United Nations, speaking before the Political Committee of the U.N. General Assembly, revealed that in his view the communications satellite represents a "fundamental breakthrough in communications [which] could affect the lives of people everywhere. It could forge new bonds of mutual knowledge and understanding between the nations. * * * The United States wishes to see this facility made available to all states on a global and nondiscriminatory basis. * * * We would like to see U.N. members not only use this service, but also participate in its ownership and operation."

As Ernest Gross, former U.S. representative to the United Nations, testified before the Senate group, Mr. Stevenson's large view of the new day, originally the official administration view, was in dramatic contrast with remarks which Senator ROBERT KERR, chairman of the Senate Committee on Aeronautical and Space Sciences, had addressed, in February to Under Secretary of State George McGhee on the same subject. "It occurs to me," the Senator said, "that you do not understand that the only new things about this hoped-for satellite communications system is that it is just an improved method of doing what is now being done."

Obviously Mr. Stevenson and Senator KERR were talking about two different worlds. Yet in the end it was essentially the perspective of the Oklahoma tycoon that shaped the legislative outcome. In the measure as finally enacted there was not a single reference to Mr. Stevenson's vision of the United Nations role in the expanding satellite universe. In the final phase of debate, a letter was extracted from Mr. Stevenson and read on the Senate floor by Senator HUBERT HUMPHREY expressing approval of the pending bill. How Mr. Stevenson reconciled his earlier words with the legislative deed is one of the unanswered mysteries of this story. But it is perhaps relevant that he succeeded in avoiding a personal appearance before the Foreign Relations Committee despite persistent demands from Senator WAYNE MORSE that he submit himself to interrogation.

One begins with the Stevenson contradiction, even though he took almost no direct part in the controversy, because it points up so many of the paradoxes and puzzles of this strange proceeding.

What was fundamentally at stake in the legislative dispute was whether the Government should control the nascent system of satellite communications for primarily public ends, or whether it should cede dominance of the enterprise to A.T. & T. for primarily profitable purposes. There was much byplay over the totality of A.T. & T.'s grip under the prospective bill, but even the staunchest supporters of the measure offered weak and contradictory testimony on that point; indeed, they seemed divided between the pretense that A.T. & T.'s role would be limited, and the insistence that the Republic was fortunate to have A.T. & T. volunteer to take over.

Obviously, if one accepted, Senator Kerr's view that the whole project involved more of what had already been done, no great debate was at hand. But if one accepted Mr. Stevenson's portrait of a fateful turning point in men's lives, the abdication of government was inexplicable. Yet this is basically what has occurred, under the direction of an administration rhetorically committed to the earlier Stevenson position.

Whodunit? How?

The case for the bill was won by a compound of confusion and inertia. It is surely not my contention that all those who voted for the bill were tools of corporate power. I would argue, however, on the basis of the printed record, that those who were to be damned as the "filibusterers"—a charge worthy of fuller inquiry—were generally those who paid the closest attention to the argument. Some of the stakes at issue were first set forth on March 6, 1962, when Senator ESTES KEFAUVER, leader of the small band, appeared before the Senate Space Committee. The issues were intensively explored a few weeks later at hearings before his subcommittee, but almost none of the press bothered to attend, even though these hearings contained some of the few direct confrontations between the proponents and opponents of the bill prior to the floor debate in June. And rarely have I read as brilliant and diligent an exercise in congressional cross-examination as that conducted by Senator WAYNE MORSE in the hearing held before the Senate Foreign Relations Committee. Yet in most of the cryptic newspaper accounts of the whole episode MORSE emerged as a curmudgeon laboring an obscure point.

How, then, does one dramatize what really happened? How does one translate the devastating impact of the hundreds of pages of hearings that so few Americans have read and that were so inadequately reported in most places? One can try by writing some of the headlines that the testimony might have received, and by suggesting to the reader how different the outcome might have been if these headlines had been widely used. Imagine what echoes may have been stirred if there had been large headlines saying: "Stevenson Reverses Stand on Satellite Bill, but Spurns Demand That He Testify."

The biggest headlines might have been won by Edward R. Murrow, Director of the U.S. Information Agency; they would have said that he had resigned in protest over the administration's support of a measure which exposed his Agency to the dubious mercy of A.T. & T. He did not do so; instead he engaged in the difficult exercise of trying to deprecate the bill without betraying "the team." Yet, even within those limitations, his testimony might have rocked the country if its significance had been accurately appraised and heralded. For what he said was that the fees required by A.T. & T. might be so high as to bar USIA programs from the satellite system. Murrow testified that, unless the Government received preferential rates (nowhere provided for in the bill), it would cost USIA $900 million annually at commercial rates to utilize the satellite network for 90 minutes a day in underdeveloped areas. Now consider this testimony:

"Senator MORSE. Would it be desirable, Mr. Murrow, if we set up a satellite communications system, to have the facilities of that system made available to our Government for the transmitting of the type of freedom programs that you and I have had in mind as we have been discussing the problem?

"Mr. MURROW. It seems to me that this would be desirable, sir.

"Senator MORSE. Is there anything in this bill that guarantees to the U.S. Government a reduction in commercial rates for the transmission of U.S. programs of freedom to the areas of the world where the Communists are a 24-hour-night-and-day threat to freedom?

"Mr. MURROW. No, sir."

In Murrow's view, the United States might find itself at a severe disadvantage in competition with Communist programs around the world unless "we could secure a reduced rate or increased appropriations."

As the hearings progressed, Senator STUART SYMINGTON, a chief advocate of the leave-it-to-A.T. & T. bloc at these seminars, questioned Murrow's figures on prospective cost. He accused the USIA Chief of vastly overstating them. Murrow held his ground, conceding only that in the great uncharted areas we are about to enter any estimate is necessarily hazardous. Perhaps the sharpest commentary on the proceedings is that no conclusive effort was made to resolve the gap between them before the vote sealed the choice.

A reader can only assume that the Senate chose to ignore Mr. Murrow's warning. But then, so did he. For when the climatic question came, he announced that, if he were a member of the Senate, he would vote for the bill. As in the case of Mr. Stevenson, the team spirit was apparently irresistible—or compulsory.

Now let us suppose that in many cities in the land citizens picked up their newspapers and saw this headline: "Mystery Move Curbs U.S. Rights in Satellite Plan, Probe Hears."

As initially drafted, the satellite bill contained this clear clause, based directly on the President's words of July 24, 1961:

"The corporation shall not enter into negotiations with any international agency, foreign government or entity without a prior notification to the Department of State, which will conduct or supervise such negotiations. All agreements and arrangements with any such agency, government, or entity shall be subject to the approval of the Department of State."

At first the State Department and other administration spokesmen argued vehemently for this provision, despite questioning by Senator Kerr which was considered by many to be as acid and blistering as any ever heard on Capitol Hill. Apparently this assertion of government influence in the business of the emerging monopoly was unsatisfactory to the men who were taking over the show. And so this language was substituted:

"Whenever the corporation shall enter into business negotiations with respect to facilities, corporations or services authorized by this act with any international or foreign entity, it shall notify the Department of State of the negotiations. The Department of State shall advise the corporation of relevant foreign policy considerations. Throughout such negotiations the corporation shall keep the Department of State informed with respect to such consideration. The corporation may request the Department of State to assist in the negotiations, and that Department shall render such assistance as may be appropriate."

The State Department, in effect, abdicated any controlling rule over the conduct of negotiations; in return the corporation pledged only to let the Department know what it was doing. As someone remarked, the whole thing might have been simplified by admitting A.T. & T. to the United Nations.

Who dictated the change? Was not this single episode, embodying a complete reversal on the part of the administration, sufficient to cast doubt and discredit on the whole operation? Yet I would guess that not one in a million Americans knows that such a remarkable alteration was engineered, and that Secretary of State Dean Rusk eventually found himself defending it.

This was not a minor matter of rhetoric, concerning only the handling of business arrangements. The real point was underlined by Benjamin V. Cohen, that wise old New Dealer who came forward to challenge the bill. In response to a question concerning the possibility of separating business matters from foreign policy in negotiations involving the satellite communications system, Cohen responded, "I think it is utterly impossible at this stage * * * almost all problems are mixed problems, and the State Department should not be embarrassed by having to negotiate through an instrument of this character. * * * It becomes embarrassing, even in the case of companies on whose boards the Government has appointed no directors, to say these [business matters] are private negotiations that do not bind the Government. It is much more difficult to escape responsibility for a corporation, three directors of which are appointed by the President with the advice and consent of the Senate."

But the mystery of why the bill was rewritten on this crucial point was neither aired in any serious form in most public places, nor ever satisfactorily resolved.

Much of the argument for swift enactment of the bill rested on the popular cry that we could not afford any delay in the great space competition. The note of urgency dominated many headlines. Now, let us dream that many of the stories on August 8 had been headlined this way: "Witness Asks Senate Probers: Will A.T. & T. Strike Against Government Rule of Satellite Plan?"

This was the thrust of Joseph Rauh's testimony in opposition to the measure. One of a handful of citizens who testified against the bill, he argued—as did Cohen, and as had the dissident Senate bloc—that there was no desperate need for passage of any such final legislation at this time; that the National Aeronautical and Space Administration could proceed, in cooperation with private industry technicians, in promoting the satellite program, just as it had managed the Telstar achievement. Meanwhile, the country could continue to weigh its ultimate course; it should not be stampeded into surrendering to A.T. & T.'s demands.

There could be only one plausible reason for haste, Rauh observed: "If we lose any time through not passing this bill, it would be because of a sitdown strike by A.T. & T. * * * If they are not prepared to cooperate without this bill, then I think there ought to be an investigation of A.T. & T., and that fact ought to be known to the American public; that they are putting their dollars ahead of the fight against communism."

Nowhere have I found any effective answer to this contention; nowhere have I read or heard any compelling explanation as to why time was so desperately of the essence in this proceeding unless A.T. & T. had whispered the word that it would strike unless its terms were met. As far as I know, A.T. & T. never felt obliged to proclaim that its services were at the Government's disposal regardless of the outcome of the legislative argument.

There were many days on which testimony offered the committee would have justified such headline language as: "Profits Come First in Satellite Bill, Senate Probers Told."

Defenders as well as critics of the bill were obliged to acknowledge the point, for the wording of the statute is unmistakable. There were, of course, some Government witnesses who engaged in the painfully innocent exercise of suggesting that there could be no serious conflict between corporate profit and national interest.

Thus, Federal Communications Commission Chairman Newton Minow, a bright and able young man who will, I predict, some day read his testimony with some degree of anguish, valiantly voiced his confidence that the directors of the satellite corporation would be Americans first.

Former U.N. Ambassador Gross, addressing himself to the same question, quietly recited the facts of life that should hardly have eluded Mr. Minow. Discussing the duality of interest that might confront the directors of the satellite corporation, he said, in response to a question from Senator Albert Gore, that the aims and goals of a corporation director were quite different from those of a Government official. "It seems to me," said Gross, "that the perspective has to be different. The director of a corporation for profit is bound, in the interests of the stockholders, to do the profitable thing. I think it would not be a matter of lack of patriotism or wisdom at all."

What he was saying, of course, was nothing more than that what is good for A. T. & T. is not necessarily good for the country.

Enterprising journalists might have found some further headline material if they had pursued the gap between the administration's ultimate position and the stand taken by Assistant Attorney General Lee Loevinger, chief of the anti-trust division of the Department of Justice, in earlier testimony before the Senate Antitrust and Monopoly Subcommittee. Discussing the prospect of A. T. & T. control of the satellite program, Loevinger suggested how the present vested interests of the corporation might cast a shadow over its operations in the great new venture: "There would be a natural reluctance on the part of companies with large investments in existing facilities to take speedy action which would make these facilities obsolete. A company controlled by A. T. & T. could scarcely avoid considering the effect of satellite facilities on existing investments in cable facilities."

It was this point which Senators Kefauver and Long tried to stress, citing instances where A. T. & T. had held back on new developments. Again no one was listening.

Despite Mr. Loevinger's warning, Attorney General Robert F. Kennedy warmly saluted the satellite bill and Loevinger ceased and desisted from any further public statements along these lines. The Attorney General based his stand on the assumption that the Federal Communications Commission would keep A.T. & T. in line. He conceded that nothing in the past justified this assumption but added wistfully that he hoped the FCC would "start to meet its responsibilities."

Yet even this pious hope did not confront the central problem. For the act explicitly declares that "there is hereby authorized to be created a communications satellite corporation for profit." This is language that A.T. & T. understands.

And an International Telephone and Telegraph vice president testified that he thought the satellite corporation should get a special subsidy if the Government wanted it to conduct initially unprofitable operations in poor territory.

So it would seem that the Government—meaning the people—loses on both ends. It is denied any real assurance that A.T. & T. will carry the satellite program into those impoverished areas where it may be most urgently needed but where the returns may be least lucrative. Nor does it obtain any pledge of preferential rates for direct government programs.

In a way the most unheralded story of all, which got almost no attention except in those subscribing newspapers which chose to print Drew Pearson's column on that day, involved the press itself.

On August 3, during Newton Minow's interrogation by the Foreign Relations Committee, Senator Russell B. Long had commented on the extensive volume of tax-deductible advertising published by A.T. & T. to hail its own role in Telstar. Then he observed that "any daily newspaper in the country which might undertake to attack editorially the bill that we have before us is subject to the complete right of this corporation either to advertise or not advertise in that paper. Also the corporation has the right to deduct this advertising expense but they don't have to place that advertising with any newspaper."

To which Minow responded: "I can't believe that the press would be influenced in taking editorial judgment on the basis of that."

One hopes that Minow's expression of innocence is not a true reflection of his worldliness in dealing with corporate pressures.

There are cynical men who say that it does not really matter whether A.T. & T. assumes corporate command of the satellite program or whether the Government retains nominal control while "leasing" the venture. They may not be entirely wrong. It may well be that opponents of the measure should have fought for full-fledged Government ownership and operation of the program, despite the counsels of caution from those who asserted that such a course was "politically impossible."

It is said that "public opinion" would have rebelled against any "radical" approach. But those who profess to speak for public opinion usually bear little resemblance to the man in the street. The only poll I have seen, conducted by an agency called "What America Thinks," reported in mid-August rather startling answers to the question: "Do you think the future network of American communication satellites—like Telstar—should be owned and developed by the Government or by private industry?" The replies: 44.1 per cent favored Government ownership, 39.3 percent voted for private industry, 16.6 percent were uncertain or had no opinion. This arithmetic is hardly consistent with the overwhelming pro-industry vote in a Congress that treated opponents of the bill as if they were village idiots or dangerous subversives.

Inevitably one comes to the question of the "filibuster." It was, in fact, only when the embattled opponents of the bill began their last ditch fight that the issue became page-1 news; then it was largely featured as a parody on the behavior of those liberals who were allegedly employing the device they professed to abhor, and they were generally pictured as cranky men reciting old Populist slogans.

There was a surface "touché" in this portrait. But once again the indolence and indifference of the press—mingled with a certain chronic disdain for the liberal set—sustained a false image. For one thing, the "filibusterers" repeatedly explained that they were not attempting to bury the bill; they were fighting for time. On numerous occasions they made it plain that they would be ready to vote immediately after the fall elections; have Southern filibusterers against civil rights ever similarly offered a deadline for decision?

Wayne Morse pointed out, at the time Senate Leader Mike Mansfield was piously saying "today we begin the 15th day of debate on this bill," that the measure had actually been before the Senate on 13 days for a total of 33 hours and 15 minutes. In 1957, during the debate on the civil rights bill, Strom Thurmond made a speech lasting 24 hours and 18 minutes.

Thus the cry of filibuster was in many respects a fraud. The summit of hypocrisy was reached when cloture was finally voted by those who, in the memorable words of Senator Long, would do for A.T. & T. what they would never do for the NAACP—and who thereby told the world that property rights held a large priority over human rights in the U.S. Senate.

In the end the big story is the mystery story: Whodunit?

It was a bill that for the first time in our history placed the U.S. Government in the role of promoter of a private profit-making monopoly venture, with the President himself designating three directors as his agents. As Benjamin Cohen pointed out, "It will be difficult to convince those who buy the stock that the President has not recommended its purchase." There is no precedent for this use of the Presidency for the sponsorship of a business enterprise.

Why did a New Frontier administration become the architect of this strange deal? Why was there such frantic pressure for quick action? Why were the voices of dissent within the administration forced to fall into line, creating such odd and embarrassing spectacles as the conflicts between Mr. Stevenson's wise words to the United Nations and his desultory letter of capitulation to Senator Humphrey? Why was Mr. Murrow obliged to say that he would vote for a bill that is implicitly damned by his own testimony? And why did Senator Humphrey, who had earlier counseled against deciding on organization until the system became operational, join those who clamored for haste?

President Kennedy has lamented the pervasiveness of mythology in our economic thought. Yet rarely has a measure been camouflaged in so much myth—most basically the myth that there can be no conflict of interest between corporate profit and national needs. Perhaps most wondrous of all were the testimonials to the glories of the free enterprise system recited by the Senators who were in the process of creating a vast new monopoly, paving the way for its dominance by the patriarch of monopolies, A.T. & T., and resisting an alternative leasing setup that would have guaranteed a maximum of free competition.

One is compelled to assume that the clamor for immediate action, the manifest distaste for debate, the derision heaped on the lonely men who challenged the bill, reflected a fear that the truth would out if the controversy were prolonged. Perhaps this is why they refused to consider any amendments proposed but tabled every single one offered by opponents of the bill without even trying to debate them on their merits.

In the aftermath of the New Deal and the Fair Deal, and in the time of the New Frontier, we may be too prone to dismiss as fantasy evidence of the survival of established corporate power over economic and political institutions. There were, of course, many men who voted for the bill who did so out of loyalty to the President. There were others who no doubt did so absentmindedly. There were probably some whose faith in Mr. Minow (which I share in many areas) persuaded them that the present FCC would somehow impose those restraints on A.T. & T. which its predecessors were never able to achieve, even though this Commission has shown no greater interest or ability in this area and has permitted A.T. & T. to earn a higher rate of profit than was permitted by the Eisenhower FCC.

Thus, many elements contributed to the final dismal result. But one cannot escape the sense as one reviews the record that this was also a high-pressure coup staged by a corporate body that recognized the enormous stakes in Satellite, Inc.

That the Government was divided within itself is beyond dispute; there is little overt evidence that even President Kennedy passionately favored the course finally chosen. In the Senate, Mr. Kerr's dedication to the care and feeding of corporate interests is a celebrated and not entirely impersonal fact; once the bill had been drafted (and spuriously proclaimed as a compromise between private domination and public ownership), Senate Leader Mansfield apparently concluded that it was a matter of honor that he finally prevail in some large legislative test. One can only hope that he will some day exhibit comparable ardor in dealing with the Republican-Dixiecrat obstructionists as he did in crushing the liberal dissenters.

Many informed men in Washington believe Vice President Lyndon Johnson played a decisive hand in shaping the outcome. Mr. Johnson is chairman of the President's Space Council and thus officially the President's man on space; it is said that when the State Department and some forces within the Justice Department resisted the evolving pattern, Mr. Kennedy in effect let it be know that he would defer to the Vice President's judgment. It is a matter of fact that Tom Corcoran's law firm, with which Johnson has continuous and intimate relations, displayed an active interest in A.T. & T.'s cause.

But whoever called the legislative tune, the President's responsibility is in no way diminished. There are those who believe his own attitude in the final phases of the battle was influenced by his desire to assure the business community that he harbored no doctrinaire enmity toward it. If so, the country may be paying a heavy price to underwrite this form of therapy.

In a way, what stands out as sharply as the power of the battalions mobilized in behalf of the bill was the frailty of the opposition. Once again we are reminded that, on great issues involving giveaway to special interests, there is usually no major public lobby operating to contest the deal. Traditionally this was the function of the labor movement, but labor's leaders have increasingly abdicated that role in return for the nourishment of their own special interests. In the satellite battle no labor witness took the stand. There was a telegram from Walter Reuther suggesting that "there is no more reason for turning space development over to A.T. & T. than there is for turning the Pentagon over to General Motors." The AFL–CIO executive council belatedly adopted a resolution reflecting those sentiments. The impact of even those gestures was largely outweighed by the support which the Communication Workers Union threw to the bill, presumably in return for some hints of future dispensations at the collective bargaining tables of Satellite, Inc., or of A.T. & T. itself.

The result might have been different if the press had covered the story with greater zeal and fidelity, and if the editorial pages had been less unanimous in hailing the handiwork of the legislative drafters. But the combination of labor listlessness and press hostility, joined with the lobbying legions of A.T. & T., rendered the struggle of Senators Kefauver, Morse, and company a hopeless one. Nevertheless, they have made the record, and it stands, and Americans may have many reasons to turn back to it as the saga of space unfolds.

Mr. McGOVERN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. Burdick in the chair). Without objection, it is so ordered.

Mr. GORE. Mr. President, the nominations of the incorporators of the Communications Satellite Corp., a private corporation, are now before the Senate for its advice and consent. I do not rise to question either the qualifications or the fitness of these individuals. I rise to protect the integrity of the procedure by which the U.S. Senate exercises its responsibility of advice and consent with respect to Presidential nominations or appointments pursuant to section 2, article II of the Constitution. I question the propriety, the advisability, and the constitutionality of the act of confirmation by the U.S. Senate of the directors of a private corporation organized and chartered for profit under the laws of the District of Columbia.

The action now proposed in the Senate is outside the scope of the confirmation process, as that function is expressly authorized in the Constitution, and as it has been exercised over the years since the founding of the Republic. The proposal that the Senate now participate, through confirmation, in the election of the management of a corporation which is wholly private in nature and is organized for profit is unprecedented. If the Senate proceeds on this course, we shall be abusing the constitutional process of confirmation, and shall be embarking on a course which can but enmesh and ensnarl the Senate in the operation or management of a private corporation, a task for which the Senate is unsuited, and which is beyond the bounds of its traditional function.

I repeat, Mr. President, that I am not here questioning the qualifications or the competency of the individuals whose names are before us. My objection is that this matter ought not be the business of the Senate.

The authority for the Senate to confirm persons nominated for positions by the President is found in section 2 of article II of the Constitution. It provides that the President "shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law: but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments."

This provision was not included in the Constitution as a mere formality, nor has the exercise of it been so regarded by the Senate. On the contrary, the specific language used was adopted after extended debate. As was the case with so many provisions, the approved language found in section 2 of article II was a compromise.

Under the confirmation clause, the power of selection of officers of the United States is clearly vested in the President, as is the actual power of appointment. The role of the Senate is to approve or reject.

This role of the Senate is not merely procedural. It is substantive both in form and purpose. It vests in the Senate the power and the responsibility of passing upon the qualifications of those who will occupy positions in government which will enable them to formulate policy in the executive branch and render judicial decisions. It is part and parcel of the system of checks and balances which was so carefully woven into the entire fabric of the Constitution.

This brief historical reference to the origin of the confirmation clause demonstrates that its purpose is for the resolution of matters public and governmental rather than private and mercantile. The categories of persons to whom the process would be applied were expressly set forth.

Specifically named as requiring confirmation by the Senate as a part of the appointive process are Ambassadors, ministers, and consuls, and judges of the Supreme Court. Others whose nominations to office are subject to confirmation by the Senate are described as "officers of the United States."

Since section 2 of article II also provides that Congress can vest authority for appointment of "inferior" officers "in the President alone," in department heads or in the courts, it follows that Senate confirmation of nominations (for other than Ambassadors, ministers, and consuls and judges of the Supreme Court) was intended to be limited to "officers of the United States" who are not deemed to be "inferior" officers.

It is unnecessary here to try to distinguish whether the individuals whose names are before the Senate are inferior officers or superior officers. An examination of the Satellite Communications Act of 1962 makes it clear that the officers and directors of the corporation which is authorized by that act are not officers of the United States in any respect.

Section 301 of the act provides as follows:

> There is hereby authorized to be created a communications satellite corporation for profit which will not be an agency or establishment of the U.S. Government.

Mr. President, that language is explicit. The corporation is specifically described as being a corporation for profit.

As a supporter of the private enterprise system, I surely have no quarrel with the concept of profits or the profit motive. That is the purpose of private corporations under our economic system. If the satellite corporation were not based on the profit motive, and if its management did not seek to make profits for its stockholders, it simply would not be a private corporation. This point is raised not in criticism, but solely to illustrate that the mission of the corporation, as set forth in the law authorizing its creation, is commercial rather than governmental in character.

Moreover, the section of the law quoted specifically provides that the corporation "will not be an agency or establishment of the U.S. Government."

If the corporation is not to be an agency of the U.S. Government, then its directors cannot be public officials unless, under the law and the corporation's charter, they have some responsibility to, or perform some duty for, the Government. Here again, an examination of the law and the articles of incorporation of the corporation reveals that no duties or obligations are imposed upon any of the directors which would make them any different than the directors of any other private corporation organized under the laws of the District of Columbia.

I find that my conclusion that neither the incorporators nor the directors who will later be appointed by the President will be "officers of the United States" is shared by the U.S. Attorney General. On page 87 of the record of the Commerce Committee hearings appears an opinion of the Attorney General on this point.

This opinion of the Attorney General that the incorporators are not officers of the United States is cited in the hearings in support of the contention that the incorporators are not subject to the conflict of interest laws that apply to Federal officials. The Attorney General's letter contains a review of the legal questions involved, and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., October 25, 1962.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: I have the honor to reply to your request for my opinion on a question arising out of the Communications Satellite Act of 1962 (hereinafter referred to as the "act").[1] The question is whether incorporators appointed by the President, with the concurrence of the Senate, to effect the establishment of the communications satellite corporation authorized by the act are officers of the United States by virtue of such appointment.[2]

A similar inquiry will no doubt arise, after the incorporators have completed their work, with regard to those members of the new corporation's board of directors whom the President is authorized to appoint, again with the concurrence of the Senate. I am therefore taking the liberty of advising you with regard to the Presidentially appointed directors, as well as the incorporators.

Section 302 of the act provides for the incorporators as follows:

"The President of the United States shall appoint incorporators, by and with the advice and consent of the Senate, who shall serve as the initial board of directors until the first annual meeting of stockholders or until their successors are elected and qualified. Such incorporators shall arrange for an initial stock offering and take whatever other actions are necessary to establish the corporation, including the filing of articles of incorporation, as approved by the President."

Section 303(a), providing for the new corporation's regular board of directors, reads in pertinent part as follows:

For the reasons discussed below, I am of the opinion that neither the incorporators nor the Presidentially appointed directors are to be classified as officers of the United States.

The method of appointment directed by sections 302 and 303(a) is of course derived from the following portion of article II, section 2, clause 2, of the Constitution:

"[The President] shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments."

This language has the effect of prescribing that an individual can become an officer of the Government in the constitutional sense in only two ways—i.e., by appointment by the President with the concurrence of the Senate or by appointment by the President alone, the courts or heads of departments.[3] We are interested here, of course, in the first method.

"The corporation shall have a board of directors consisting of individuals who are citizens of the United States, of whom one shall be elected annually by the board to serve as chairman. Three members of the board shall be appointed by the President of the United States, by and with the advice and consent of the Senate, effective the date on which the other members are elected, and for terms of 3 years or until their successors have been appointed and qualified, except that the first three members of the board so appointed shall continue in office for terms of 1, 2, and 3 years, respectively, and any member so appointed to fill a vacancy shall be appointed only for the unexpired term of the director whom he succeeds. Six members of the board shall be elected annually by those stockholders who are communications common carriers and six shall be elected annually by the other stockholders of the corporation."

---

[1] Public Law 87-624, 76 Stat. 419, approved Aug. 31, 1962.

[2] Although the incorporators whom you recently named are serving under recess appointments, they, of course, have neither more nor less of the character of officers of the United States by reason of their temporary lack of Senate confirmation.

[3] *United States* v. *Germaine,* 99 U.S. 508 (1878): *Burnap* v. *United States,* 252 U.S. 512, 515-516 (1920): Corwin "U.S. Constitution, Annotated" (1952 ed.), p. 452. These authorities also point out that, except for the President and Vice President, the portion of the Federal civil service comprised of persons other than officers in the constitutional sense consists of those individuals generally termed employees of the United States, who are appointed by officials not specifically given appointing power by the art. II, sec. 2. The directors and incorporators of the instant corporation are obviously not in this category of appointees.

It will be seen that the first part of the quotation from article II, section 2, clause 2, provides for nomination by the President and confirmation by the Senate of certain specified officers and, with exceptions not relevant here, "all other officers of the United States, whose appointments * * * shall be established by law." This language means, when read with that which immediately follows it, that every appointment of an officer of the United States which is authorized by law, other than of an "inferior" officer, must be preceded by nomination and confirmation. However, article II, section 2, clause 2, does not state, and it does not follow therefrom, or from anything else in the Constitution, that every appointment authorized by law which is preceded by nomination and confirmation necessarily renders the appointee an officer of the United States regardless of his functions and the provisions of the law pursuant to which he was appointed. Nor, so far as I am aware, are there any precedents which reach that conclusion.[4] Indeed, there is a longstanding practice which points away from it. Article I, section 6, clause 2, prohibits an appointment of a Member of Congress "to any civil office under the authority of the United States, which shall have been created" during the term for which he was elected and prohibits a "person holding any office under the United States" from membership in Congress during his continuance in office. Nevertheless, Presidents have on many occasions appointed Members of Congress, with or without the advice and consent of the Senate, as commissioners to negotiate treaties and other international agreements or to represent the United States at meetings of international organizations.[5] These appointments can be reconciled with the prohibitions of article I, section 6, clause 2, only on the theory that, although made in accordance with the methods prescribed by article II, section 2, clause 2, for the appointments of "officers of the United States," they nevertheless do not place Members of Congress within that classification.[6]

In short, I find no constitutional requirement or precedent that the incorporators and Presidentially appointed directors of the Communications Satellite Corp. be treated as officers of the Government merely because of the method of their appointment, and I find the precedent involving article I, section 6, clause 2, to be persuasive of the view that such method of appointment is not determinative. It is therefore necessary to look to other factors.

The classical definition pertaining to an officer is written in terms of the position he holds, as follows: [7]

"An officer is a public station, or employment, conferred by the appointment of government. The term embraces the idea of tenure, duration, emolument, and duties."

Examining the position of the incorporators first, I believe it can reasonably be held that since they have been given merely a temporary and special task, the position does not meet the tests of office set forth in the second sentence of this definition.[8] However, I believe that a more fundamental issue is whether the incorporators are the occupants of a private, rather than a public, station.

Section 302 of the act in general requires that the incorporators discharge two successive responsibilities. First, they are to bring the Communications Satellite Corp. into being. Thereafter they are to serve as its initial board of directors until the qualification of a regular board. The nature of their role in carrying out the latter function is fixed by section 301 of the act, which states that the new enterprise is to be a "corporation for profit which will not be an agency or establishment of the U.S. Government" and, subject to the provisions of the act, is to be governed by the District of Columbia Business Corporation Act. With these directives in the act, there would seem to be no doubt that the incorporators, as directors, will have the same status and responsibilities as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.[9]

I find nothing in the act or in its history to justify a different view as to the position of the incorporators during the period prior to the formation of the corporation. Their mission during that time places on them the same obligation for the furtherance of private interests as their later duties as the initial board of directors and in essence is therefore a private mission. I recognize that the provision in section 302 requiring the President's approval of the articles of incorporation filed by the incorporators conceivably may lend support to an argument that in preparing and filing them, its incorporators are acting as officers subordinate to the President whose work is subject to his review. However, it is probably more accurate to argue that the provision was included simply because the incorporators are not his subordinate officers and he would not otherwise have the right to pass on the articles. In any event, I am certain that Congress did not have in mind creating anything as contrived as a public office to endure only for the presumably short period prior to incorporation, with a conversion to a private office at that moment. In my opinion, the incorporators will at no time be occupying a public station and consequently will at no time be officers of the United States.

Turning now to the three directors whom the President will appoint to the regular board, I need do little more than refer again to the fact that section 301 makes the Communications Satellite Corp. an enterprise for profit which will not be an agency of the Government. The other 12 members of the board who are to be elected by the stockholders, will obviously have the same private status as individuals serving on the board of an ordinary business corporation. The act makes no distinction, except in the method of selection, between the directors appointed by the President and the elected directors. Therefore, unless there is something in the history of the act to the contrary, it seems plain that the former will also hold a private office.

The legislative history concerning the position of the directors is almost as meager as in the case of the incorporators. However, two points were developed in Senate Commerce Committee hearings which are of significance here. First, it appears that the appointment of a portion of the membership of the board by the President was conceived of as a means of protecting the interests of the public at large, as distinguished from the Government.[10] Second, the members of the executive branch of the Government who participated in the drafting of the act rejected a proposal that there be only one presidentially designated director for fear that he would be considered as the representative of the President and spokesman for the Government. They suggested three in order to avoid that implication.[11] Thus, there appears to have been no intention on the part of the originators of the legislation to create directors who would be officers of the

---

[4] Cf., the following colloquy between two Congressmen in the course of a committee hearing on the question whether one of them, who had been appointed to a temporary commission by the Speaker of the House of Representatives, thereby became an officer of the United States:

"Mr. SMITH. Do you mean that to be officers of the United States they must be appointed by the President and confirmed by the Senate or be appointed by courts of law or by the heads of some one of the Departments?

"Mr. MOODY. Yes.

"Mr. SMITH. The point I would like to have you answer is whether it is necessary, to constitute a person an officer under authority of the United States, that he shall have been appointed in that way?

"Mr. MOODY. That is my opinion. I would not, however, adopt the converse proposition, that everybody appointed in this manner was necessarily an officer of the United States." (H. Rept. 2205, 55th Cong., 3d sess., p. 11.)

See also, for a similar view in a somewhat different context, 2 Story, "Commentaries on the Constitution" (5th ed. 1891), p. 362: "In many cases of appointments, Congress has required the concurrence of the Senate, where, perhaps, it might not be easy to say that it was required by the Constitution."

[5] Corwin, "The President, Office and Powers" (1957 ed.), p. 71. For a statute expressly recognizing the Presidential practice of appointing a Member of Congress as a representative of the United States at an international meeting, see sec. 2 of the act of July 30, 1946, 60 Stat. 712, 22 U.S.C. 287n, which is concerned with UNESCO.

[6] Corwin, "The President, Office, and Powers" (1957 ed.), p. 71. For conflicting views on this point see H. Rept. 2205, 55th Cong., 2d sess., and S. Rept. 563, 67th Cong., 2d sess.; cf., act of July 30, 1946, footnote 5, supra.

[7] *United States* v. *Hartwell*, 73 U.S. 385, 393 (1867).

[8] *Matter of Hathaway*, 71 N.Y. 238, 243 (1877); *McArthur* v. *Nelson*, 81 Ky. 67, 71 (1883); see also Corwin, U.S. Constitution, Annotated (1952 ed.), pp. 447–449.

[9] This conclusion is supported by the only part of the legislative history of the act which touched upon the role of the incorporators in this context. Senator KEFAUVER, who opposed the legislation, placed a statement in the CONGRESSIONAL RECORD in which he remarked, among other things, that the fiduciary obligations of the incorporators, as directors, "will not be to the President * * * [or] the public at large * * * [or] the Federal Government" but "will be obligations to the corporation itself" (CONGRESSIONAL RECORD, vol. 108, pt. 12 p. 16872). Senator KEFAUVER'S comment would seem to be in accord with the provisions of sec. 301 of the act stipulating the creation of a private corporation, as well as with the general law pertaining to corporate directors. See *Villiainen* v. *American Finnish Workers Soc.*, 236 Minn. 412, 417, 53 N.W. 2d 112, 116 (1952).

[10] Testimony of James A. Dingman, executive vice president, American Telephone & Telegraph Co., hearings before the Senate Commerce Committee, 87th Cong., 2d sess., entitled "Communications Satellite Legislation," pp. 185–187.

[11] Testimony of Deputy Attorney General Nicholas deB. Katzenbach, hearings before the Senate Commerce Committee, supra, p. 349.

Government but rather an intention to dissociate the Government from the directors.

Senator KEFAUVER made a comment on the Senate floor, similar to his statement with regard to the incorporators,[12] that the three appointed directors will owe a fiduciary obligation to the corporation but not to the Government.[13] In reply, Senator PASTORE, the floor manager of the pending legislation, agreed that they would be fiduciaries of the corporation but stated there was no intention to prevent the President from using them to keep himself informed and to communicate his views to the board of directors as a whole.[14] Whether Senator PASTORE's suggestion as to the relationship between the President and the three directors will prove accurate cannot be foreseen, but in my opinion neither that relationship nor their concern for the public interest beyond that ordinarily expected of the directors of a private corporation would put the mark of a public station on the board memberships of those three directors.[15]

In all, the legislative history regarding the directors to be named by the President supports the view that they, like the others, will occupy private posts and not be officers of the United States.

Finally, it might be noted that to consider the incorporators and appointed directors as public officers would be to deem them within the scope of article II, section 4, of the Constitution which makes "all civil officers of the United States" subject to impeachment. I believe it most unlikely that in authorizing the establishment of the unique Communications Satellite Corp., Congress, without affirmatively labeling these incorporators and directors as Government officials, intended that they be subject to impeachment. In other words, I believe that the congressional silence as to their status, when considered together with the provisions of article II, section 4, lends support to my view that neither the incorporators nor the three directors are, by virtue of their appointments to these posts, officers of the United States.

Respectfully,

ROBERT F. KENNEDY,
Attorney General.

Mr. GORE. Mr. President, the Attorney General of the United States has concluded that the function of the incorporators and the presidentially appointed directors of the Communications Satellite Corp. is wholly private in nature and that they are not public officials. This, as I have stated, has long been and is now my own view.

There is nothing in the act or in the proposed bylaws of the corporation which confers upon these incorporators and directors any attribute of a public official. They will receive no pay from the Federal Government, they are not required to perform any duty for the Government, and they will owe their fiduciary trust solely to the stockholders who have invested private funds in the corporation.

Upon what basis, then, constitutional or otherwise, is it contended that participation in their appointment is a proper matter for consideration by the Senate?

Mr. KEFAUVER. Mr. President, will my colleague yield for a question?

Mr. GORE. I yield.

Mr. KEFAUVER. My able colleague is making a most important speech. I hope that it will be considered carefully by Senators in their consideration of the issue. As I understand the argument of my colleague, when the Constitution specifically enumerates the appointees of the President who are to be appointed with the advice and consent of the Senate, the provision necessarily excludes others. Is that not correct?

Mr. GORE. In answer to my distinguished colleague, I should like to read from a decision of the U.S. Supreme Court in a case entitled Kansas against Colorado:

> The proposition that there are legislative powers affecting the Nation as a whole which belong to, although not expressed in, the grant of powers is in direct conflict with the doctrine that this is a Government of enumerated powers. * * * The 10th amendment * * * disclosed the widespread fear that the National Government might, under the pressure of a supposed general welfare, attempt to exercise powers which had not been granted.

I know that my distinguished senior colleague, able lawyer that he is, is familiar with the 10th amendment.

Mr. KEFAUVER. Yes.

Mr. GORE. It is my view that for one to infer that the Senate has authority to do anything and everything which is not expressly prohibited by the Constitution is tantamount, in fact, to dispensing with a written constitution.

Mr. KEFAUVER. The point is that if it was intended that the Senate could confirm any nomination it wished to confirm—stockholders of a rapid transit company of the District of Columbia or Knoxville, Tenn., or Chicago, Ill.; or the directors of a railroad—there would not have been specific provisions in article II, section 2, clause 2, which is the advice and consent clause, as to those Presidential appointees who would have to have the advice and consent of the Senate. Is that not correct?

Mr. GORE. I agree with the Senator.

Mr. KEFAUVER. Since the Constitution enumerates specifically those with respect to whom the Senate must advise and consent function, insofar as the stitutional law would agree that that would eliminate those not within the list described and specifically enumerated in the constitutional section.

Mr. GORE. I will read it, so that we may see how explicit it is:

> The President shall nominate and by and with the advice and consent of the Senate, shall appoint Ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for—

That is the end of the confirmation provision. That is the end of the advice and consent function, in so far as the Constitution specifically refers to it. Section 2, article II, goes further and makes other provisions for the appointment of other inferior officers whose nominations need not be confirmed. I read that provision:

> But the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of Departments.

The Senator will notice that in the case of the "inferior officers" there is a provision that the Congress can vest authority for their appointment "in the President alone."

When these words are read in consonance with the previous provision, in which the categories officers of the United States whose appointments are subject to confirmation are explicitly named, it seems to me that the view which the distinguished senior Senator from Tennessee has expressed must be considered a valid one.

Mr. KEFAUVER. There was sound logic and judgment on the part of the Constitution makers in the enumeration of persons who should be appointed with the advice and consent of the Senate. We know that if it is possible to give to a private corporation some color of a public sanctity it will be very much easier for it to sell stock, and very much easier for it to obtain favors from the Government.

I am sure the constitutional founders must have realized there would be great pressure on the Senate, from time to time, to confirm nominations of people the Senate had no business confirming, as is the situation before us now. Therefore, they enumerated specifically who should be appointed with the advice and consent of the Senate.

If they had said, "Anybody the Senate wants to vote on it can vote on," we would be doing quite often what we are called on to do today, which is to vote on directors or officers of a purely private corporation who have no connection with the Government.

Mr. GORE. I concur in the Senator's view. I wish to invite his attention to the fact that in the debate earlier today an attempt was made to relate the exercise of the responsibility of advice and consent by the Senate with the appointive power of the President.

The provisions of the Constitution are not the same. The President's power of appointment of inferior officers can be provided for by law; but in section 2, article II, we find the bounds explicitly stated by which the Senate is authorized to exercise its function of advice and consent.

Mr. KEFAUVER. Is it not true that there is a binding obligation on the part of Members of the Senate to uphold the Constitution?

Mr. GORE. We say we will protect and defend the Constitution.

Mr. KEFAUVER. We will defend the Constitution, and try to prevent the Senate from taking an action which it has no constitutional authority to take.

---

[12] See footnote 9, supra.

[13] CONGRESSIONAL RECORD, volume 108, part 12, page 16241.

[14] CONGRESSIONAL RECORD, volume 108, part 12, page 16872.

[15] It is interesting to contrast sec. 303(a) of the act with similar legislation of a century ago which seems clearly to have created a public office—i.e., sec. 13 of the act of July 2, 1864, 13 Stat. 356, amending the act of July 1, 1862, 12 Stat. 489. The 1864 legislation authorized the President to appoint 5 of the 15 directors of the Union Pacific Railroad Co. and termed them "Government directors." The statute specifically required that at least one of them be on each committee of the company and that they report to the Secretary of the Interior concerning the company's operations.

Mr. GORE. I do not recall the exact oath to which Senators subscribe. I ask unanimous consent to have printed at this point in the RECORD the oath administered to Senators, so that all Senators may read anew the oath which they have taken.

There being no objection, the oath was ordered to be printed in the RECORD, as follows:

OATHS REQUIRED BY THE CONSTITUTION AND BY LAW TO BE TAKEN BY SENATORS UNDER RULE II

I, A B, do solemnly swear (or affirm) that I will support the Constitution of the United States. (1 Stat. 23, June 1, 1789.)

I, A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter: So help me God. (15 Stat. 85, July 11, 1868.)

Mr. KEFAUVER. I thank my colleague.

Mr. GORE. Mr. President, in my study of this question, I sought the assistance of the Library of Congress to ascertain whether there was a precedent for application of the constitutional authority of the Senate to confirm persons nominated to public office to the confirmation of a director of a wholly privately owned corporation organized for profit. I am advised that there is no such precedent.

Some have suggested that a precedent for the course of action contemplated in the Communications Satellite Act is to be found in the act chartering the Union Pacific Railroad—12 Statutes 489. This act, providing for the chartering of the corporation and various subsidies from the Federal Government, also provided for the appointment by the President of the United States of 2 of 15 directors of the corporation. Later the act was amended to provide for the appointment by the President of 5 of a total of 20 directors. But the Union Pacific Act did not provide for confirmation by the Senate. I note with interest that the Attorney General, in a footnote to his opinion, expresses the view that the "Government directors" in the Union Pacific Act were actually to function as Government officials, in contrast with the private character of the duties of the directors of the Communications Satellite Corp.

It is conceded that the Union Pacific case constitutes a precedent for the appointment by the Government of directors in a private corporation. For reasons set forth below, I think it a most ill-advised precedent. But even that act did not undertake to involve the Senate in the appointing process.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. MORSE. The Senator from Tennessee has just said, as appears on page 697 of his manuscript:

> Some have suggested that a precedent for the course of action contemplated in the Communications Satellite Act is to be found in the act chartering the Union Pacific Railroad (12 Stat. 489). This act, providing for the chartering of the corporation and various subsidies from the Federal Government, also provided for the appointment by the President of the United States of 2 of 15 directors of the corporation. Later the act was amended to provide for the appointment by the President of 5 of a total of 20 directors. But the Union Pacific Act did not provide for confirmation by the Senate. I note with interest that the Attorney General, in a footnote to his opinion, expresses the view that the "Government Directors" in the Union Pacific Act were actually to function as Government officials, in contrast with the private character of the duties of the directors of the Communications Satellite Corp.
>
> It is conceded that the Union Pacific case constitutes a precedent for the appointment by the Government of directors in a private corporation. For reasons set forth below, I think it a most ill-advised precedent. But even that act did not undertake to involve the Senate in the appointing process.

I shall discuss that case in my constitutional argument later, but I desire to pinpoint an observation by way of argument at this point in the speech of the Senator from Tennessee, which is a brilliant speech, a speech which, in my judgment, will prove to be of great importance in the future in connection with the legislative history of the case.

Mr. GORE. I thank the Senator.

Mr. MORSE. In my judgment, this issue will eventually find its way to the Supreme Court of the United States. It will not be settled by the Congress of the United States. It will not be settled by the President of the United States or the Attorney General.

It will be settled by the court. In my judgment, when it is settled, it will be settled against the President and the Attorney General and the Congress. I am shocked that there should be any question on the part of the Department of Justice and the President of the United States as to the differences between this case and the precedents the Department of Justice has been citing as its rationalization for approving the alleged constitutionality of this section of the bill.

I am of the opinion that when the case reaches the court, they will be knocked down, and that the Supreme Court will throw out this section of the bill. The act is separable and the court can throw out this section and let the rest stand. However, when we consider the Union Pacific case, as the Senator from Tennessee has pointed out—and I emphasize that this is a very important distinction—there was no question that the members of the board of directors under the Union Pacific Act were Government directors.

As the Senator says at the top of page 7 of his manuscript, they were Government directors. There is no question about the fact that although this was a so-called private corporation, it was mixed in the sense that the Federal Government took a governmental interest in it to a degree. Congress, in setting up the organic act that created the corporation, recognized the Government interest in it, and made provision for it. Is that not correct?

Mr. GORE. That is correct. It made great concessions, which later proved to be of great value to the railroad.

Mr. MORSE. The Government was of great financial assistance. A private corporation was created, but it took on the coloring of a Government corporation to a degree, as well, and there was an investment of public property in the operation of the corporation, so the taxpayers of the country had an interest in having Government directors appointed on this corporation. They were appointed by the President and they were responsible to him.

Here we have the Kennedy administration, in the present situation, not coming out and saying, "We are going to make this a mixed corporation, mixed between a private and a public corporation."

It has not said to the American people, "We are going to undertake legal obligations as a government in respect to this corporation."

No. We get what I think is pretty shoddy indirection in connection with the conduct of this administration in respect to this corporation. The President appoints directors, in my judgment to create the basis for misleading investors. By the thousands they will form the idea that when they are investing in this corporation, the Government stands behind it, because the President has nominated directors and the Senate will confirm their nominations.

The Kennedy administration ought to make up its mind whether or not it is going to come square with the American people and tell them whether this is or is not a private corporation. It ought to say that the nomination of these nominees by the President carries with it no governmental sanction whatever, and gives the corporation no assurance, direct or indirect, that a single dollar of American taxpayers' money is to be invested in it.

We must look behind the veil of the corporation. I would like to see my President and my administration get away from the position they have taken, and offer some amendments to the Satellite Act. If they want a corporation that will carry on some governmental responsibilities, they should say so.

I say to the President of the United States that I do not believe in setting up a legal body that will lead to the danger of misleading American investors. The corporation, in its present form, involves the danger of misleading American investors. The President of the United States, Mr. John F. Kennedy, ought to clear up this question immediately, before we proceed to confirm the nominations of directors of the corporation.

The President ought to send a message to Congress recommending some amendments to the Satellite Act. Whether or not he knows it, this issue will be put on the doorstep of his administration for the future of American history. In my judgment it will not be a pleasant recording of history.

Mr. GORE. Mr. President, the distinguished and able senior Senator from

Oregon has raised several provocative points.

With respect to the proper course of action, in my view the proper course of action for the Senate under the present circumstances is to decline to take action on this matter by sustaining the point of order which the senior Senator from Oregon and the junior Senator from Wisconsin [Mr. NELSON], will soon interpose.

If that point of order is not sustained, in my view, before the Senate should take this unprecedented action it should refer the nominations to the Committee on the Judiciary, to have the benefit of the advice of that group of able lawyers as to whether or not confirmation by the Senate of nominations of directors of an entirely private corporation, organized for profit, is in fact beyond, contrary to, and an abuse of the constitutional provision providing for advice and consent.

As to the action of the Kennedy administration in making it clear that this is a private corporation, I submit that the record was not too plain before passage of the act. However, the opinion of the Attorney General of the United States which was rendered soon after enactment, but only printed, so far as I know, in the committee hearings, does make it plain that this is an entirely private corporation and that the incorporators and directors will have private posts, not public posts.

The able Senator from Oregon referred to the fact that such participation by the Government through appointment by the President and confirmation by the Senate would serve to give clear governmental approval but require substantially no public responsibility.

There is a distinction, it seems to me, between the powers of the President and the powers of the Senate. It may be—and I do not question it—that the President has powers which the Senate does not have. Indeed, I assert it. It may be that Congress by statute can authorize the President to make appointments of directors of private corporations, as was the case with the Union Pacific Railroad. That was an unhappy precedent, but it may be that this can be done.

I am not raising that point. I do not understand that the point of order which the able Senator is about to present will raise the question of presidential powers. Instead, I raise, and his point of order will raise, the question of constitutionality of proposed action by the Senate, which has explicit powers and only explicit powers with respect to giving advice and consent.

I should like to advert to one other point which the Senator raised; then I shall yield to the distinguished junior Senator from Louisiana [Mr. LONG], who is on his feet.

The Senator from Oregon said that the people of the country may be misled; that they may think this is partly a private and partly a Government enterprise. If the Senator will read the hearings before the committees on the confirmation of the nominations now before the Senate, he will find that Members of the Senate demonstrated during those hearings that they thought it was a mixed private and public corporation. On the floor of the Senate this afternoon, one of the ablest lawyers in this body expressed a similar view.

This is alarming to the junior Senator from Tennessee, because the law is explicit that it is an entirely private organization, organized for profit. The act itself provides that the corporation shall not be an agency of the Government. The act itself, the articles of incorporation, and the opinion of the Attorney General, now printed, make it clear beyond possibility of mistake that this is an entirely private corporation, organized for profit. Yet the Senate is asked to participate in the selection of its officers and officials, thus giving Senate approval, and thus giving the impression to the country that Congress and the President are behind the corporation.

What about the widow who invests her mite? Considering the salaries that the corporation is starting to pay and the lush manner of its conduct, that widow's mite may vanish very quickly, unless the Senate comes through with some subsidy year after year. This ensnarls and entraps the Senate, not only in the organization of the corporation, but in the selection of the officers and the ultimate management of the corporation. I say it is improper, ill advised, and, in my opinion, beyond the scope of the constitutional provisions with respect to advice and consent.

Insofar as I can determine, the courts have never passed upon the question of the authority of the Senate to confirm individuals who are not public officials. In fact, I have been unable to locate a reported decision of the Supreme Court in which the constitutional scope of the confirmation authority was directly at issue. There are some cases in which the issue was raised collaterally, but most of these involve the right of the President to appoint "inferior" officers of the Government without confirmation by the Senate or the extent of the authority of the Congress to insist upon confirmation of various categories of public officials.

The absence of reported court decisions directly in point is not surprising in view of the lack of precedents. Perhaps the clarity of language of section 2 of article II is eloquent reason why the issue has not arisen. What is difficult to understand is the justification for the present effort to expand and enlarge this traditional process to provide, for the first time, for the confirmation of the directors of a private corporation.

Such an action, it seems to me, is surely beyond the letter and contrary to the spirit of section 2 of article II.

It may be, Mr. President, that the Senate can, if it wishes to do so, take an action which, under the Constitution, is a nullity. True, the Constitution contains no precise prohibition of such conduct or procedure. But to infer authority to take any and every action not expressly prohibited by the Constitution is, in effect, largely to dispense with a written Constitution.

Though a constitutional nullity, great mischief could flow from the action that is now proposed.

It would give the color of Senate approval, endorsement, and sponsorship, but impose no actual public responsibility.

Aside from the question of constitutionality in its legal sense, the course of action on which the Senate is now embarking is wholly inadvisable. If the Senate is to become enmeshed in the selection of corporate management for a private corporation, it is difficult to predict where the line will be drawn.

This whole procedure should be a matter of deep concern to all who support private enterprise and so frequently condemn what is often characterized as Government interference in private business. The principle at stake is a far reaching one.

What about General Motors? This giant corporation has many Government contracts. Is the interest of the Government such that we ought to provide for Presidential appointment—with or without Senate confirmation—of some of the directors of that company? I daresay, Mr. President, that many of those who supported enactment of the Communications Satellite Act of 1962 would never agree that this sort of thing has any place in our American economy.

What about the General Dynamics Corp.? It has been built and has thrived upon Government contracts. Today we find that General Dynamics has been awarded what is to be expected the largest Government contract in the history of this country, the so-called TFX contract.

Would it be in the public interest for the Government to own a part of the stock of General Dynamics, or to have governmentally appointed directors of that corporation, with or without Senate approval?

Where do we stop? A goodly number of people have suggested that one way to deal with the ever-increasing concentration of economic power in a few corporate monopolies is in fact to have part Government ownership and have Government directors. I have never endorsed this proposal.

I suggest that if the precedent here proposed is consummated, it offers some interesting possibilities.

I must point out, however, that there is no governmental ownership in the Communications Satellite Corp., as was the case with the United States Bank.

Many of these questions were raised last summer when the satellite bill was before the Senate, but I do not think they were seriously considered because, unfortunately, the Senate got itself into a situation which precluded actual consideration of the issues involved. I earnestly hope they will be considered now, before it is too late.

Mr. LONG of Louisiana. Mr. President, will the Senator from Tennessee yield for a question?

Mr. GORE. I yield.

Mr. LONG of Louisiana. Can the Senator tell us how much the directors are to be paid? What will their salaries be?

Mr. GORE. Of course, this is a matter that can be changed; but as I recall the hearings before the Space and Commerce Committees, the directors are to be paid $200 per meeting. Frankly, I do not believe that is an excessive amount. I do not understand how it could be concluded that Sidney Weinberg should be paid $200 a meeting, and that another incorporator should be paid $10,000 a month to give his advice. But I do not really raise that question. The question I raise involves the competency, the constitutional propriety, and the advisability of the Senate proceeding as is proposed.

Mr. LONG of Louisiana. If the Senate were to put its stamp of approval on these directors, would it not make equal sense that the Senate should say who should be the directors of an important corporation like General Motors or United States Steel, which are bellwethers of American industry? Why should we select this particular corporation and presume to say who the directors of it should be, without referring to all the other corporations whose stock is listed on the big board, the New York Stock Exchange?

Mr. GORE. It might be that the Senate would be starting a trend in that direction, although I think it would be an unfortunate trend. To answer the Senator's question, it seems to me that the public interest is as much involved in the operation of General Dynamics Corp. as it is in the operation of the Communications Satellite Corp. Would the Senator agree with that statement?

Mr. LONG of Louisiana. That would seem to me to be the case. I could name a number of other corporations, such as Aero-Jet General, which have achieved almost their entire net worth from Government contracts, producing items for the Government through various agencies such as the Department of Defense and the National Aeronautics and Space Administration. I simply do not understand why this particular corporation should be the one as to which Congress should undertake to approve the directors. I do not understand why the President should appoint some of the directors of this completely private corporation.

I just do not understand why the Government should appoint these directors at all.

Mr. GORE. Perhaps all things must have a beginning. I do not believe that that would be a good beginning. But those who so regard it should take notice that this precedent will not go unnoticed. Not long ago, on March 25 of this year, I read in the Washington Post and Times Herald an article to the effect that the Federal Aviation Agency was considering sponsoring a public-private corporation to develop a supersonic commercial jet liner. The article went on to state:

> FAA consultants are investigating the use of the Communications Satellite Corp. as a development model.

According to this article, the aircraft people are not so certain of profit as are the communications people, and it is strongly suggested that the Government be cut in for full participation—so far as expenditures are concerned, but not profits—on this new proposal.

The Senator from Louisiana has raised a pertinent question. Where will we stop if we proceed along this road? What will be the relationship of this company to companies already existing in industry? Where will the competition in free enterprise come from? Shall we proceed to organize a Government-sponsored corporation in the transportation industry, in the railroad industry, in the supersonic aircraft industry, and in the telephone, radio, and television industries?

The Senator from Louisiana has referred to automobiles. He also referred to United States Steel. Neither the Senate nor the executive branch of the Government has been able to determine what it costs to produce a ton of steel. It just might be that someone would suggest—far be it from me to suggest it—that one way to ascertain the cost of producing steel would be to have the President appoint, and the Senate confirm the nomination of Mr. Roger Blough, or perhaps make him a Government director and thereby make him responsible to the President of the United States.

That is not what is proposed in this instance. Here it is proposed to enmesh, to ensnarl, to entrap the Senate into the endorsement and support of a corporation which will sell stock to the American people. Would there not be some moral obligation on the part of the Senate, then, to make the operation profitable? I say that great mischief can flow from such action.

Mr. LONG of Louisiana. Is it not correct to say that already recommendations have been made, since the act was passed, to have the Government provide additional money to develop a satellite communications system? Is it not correct to say that recommendations will be before the Senate in the form of an appropriation bill to appropriate money to continue to put communications satellite devices in orbit at Government expense, even though the corporation has been created on the theory that it would save the Government the expense of doing that?

Mr. GORE. I believe a request has been made for an appropriation of $51 million for research and development in satellite communications.

The Senator will recall that during the hearings on the Communications Satellite Act, Dr. Dryden said the enactment of that measure would be construed as meaning that the Government had selected a chosen instrument and that the benefits of the Government's research and development would be made available to this corporation only.

Lest I do any violence to the exact statement made by Dr. Dryden, I ask unanimous consent to have his testimony printed at this point in the RECORD.

There being no objection, the excerpt from the hearing was ordered to be printed in the RECORD, as follows:

NASA HAS NOT CONFINED RESEARCH AND DEVELOPMENT TO ONE CORPORATION

Senator GORE. Under present law as I understand your testimony, Dr. Dryden, the space agency has not undertaken to confine the research and development in this field to one particular company or group?

Dr. DRYDEN. That is correct. We have financed at Government expense a development by the Radio Corp. of America and another by the Hughes Aircraft Co.

Senator GORE. Then you would supply to any other company having the requisite technical capabilities, the services which you supplied to A.T. & T.?

Dr. DRYDEN. That is correct, sir.

Senator GORE. If this bill passes, would you expect other concerns to enter the field?

Dr. DRYDEN. If the bill passes and the corporation is set up, I think we would interpret this desire to contribute to the early realization of an operational system to mean that we would cooperate—in accordance with the provisions in the bill before you—with the corporation, and that this would——

Senator GORE. Exclusively?

Dr. DRYDEN. So far as this offer that I just spoke of, of launching satellites for private interests, so to speak.

Senator GORE. In other words, if this bill passes, then it will be the position of the Space Administration that you would not enter into negotiations with any other American citizen or American concern for the launching of communication satellites? Did you not put it that way in your statement?

Dr. DRYDEN. Yes.

Senator GORE. All right.

Dr. DRYDEN. I still stand by it. I say that our judgments would be made in the national interest.

Senator GORE. I just want to know if that is what you mean.

Dr. DRYDEN. I think this is a fair statement.

NATIONAL INTEREST TO BE GUIDELINE FOR NASA'S NEGOTIATIONS

Senator GORE. Now, do you wish to add anything further?

Dr. DRYDEN. I say that the primary concern is that of the national interest.

If a situation should develop, as I do not foresee, the Government having set up officially a corporation to establish a communications system around the world, if in spite of this somehow there was a development which indicated that the national interest was to be served by doing something different, I think we would consider it. But I believe unless the Congress established another provision for another operating communications system, there would be nothing to be gained by NASA offering its services to other——

NASA'S EXCLUSIVE COOPERATION WITH CORPORATION ESTABLISHED UNDER BILL

Senator GORE. Please understand, Dr. Dryden, that I am not being critical of you, nor am I attempting to be critical of you. I have no desire to do so. I think you have clearly established the fact in your testimony that under present law, research and development will continue, and that the opportunity for research and development, for further enterprise in this field, is open. Moreover, that the services of your agency are open for cooperation with any company or citizens having the requisite technical capabilities.

You have also established that if Congress passes this bill, you will interpret it as the will and intent of the Congress with regard to the law. Therefore you would confine your cooperation and your launchings to this particular corporation.

Dr. Dryden. May I take an example from the past?

Senator Gore. Is that a correct summation?

Dr. Dryden. That is correct.

If Congress says that this is the agency that is going to develop the operational system for the United States, then I think it follows that we should cooperate with that agency.

Senator Gore. Yet some people, Doctor, want to protest when those of us who questioned the advisability of such an action say that this is intended to create a monopoly. My time is up.

Mr. GORE. So, Mr. President, we see that here we have a monopoly.

Mr. LONG of Louisiana. A Government-created monopoly, by the way.

Mr. GORE. Yes; and it is in a field which one expert witness testified was only 10 percent communications, a field which requires great expenditures for research and development; and the satellites can be lofted only by the Government of the United States itself.

Moreover, according to a statement by Dr. Charyk, the president of the Communications Satellite Corp., and published on yesterday in the Washington Post, this matter involves "negotiations with every country in the world." In the article it is stated that the State Department is already exploring the possibilities of this corporation's reaching such agreements.

So this corporation is to have the benefit of a monopoly, one staked out for the benefit of this corporation alone, and involving the negotiation of international agreements on behalf of the United States, but for the sole benefit and profit of this corporation—one which, according to the opinion of the Attorney General, is entirely private. Yet the Senate is asked to confirm the nominations of its incorporators and directors, even though, in the opinion of the Attorney General, they have a private status, not a public status.

Mr. LONG of Louisiana. Mr. President, if the Senator from Tennessee will yield further, let me ask whether it is fair to state that the situation appears to be that this corporation has been given a monopoly by the Government, in a field in which the Government has spent many billions of dollars to develop a communications system? We are asked to confirm the nominations of these directors; but when the point of conflict of interest is raised, we are told there cannot be any such conflict because these people owe no obligation to the 180 million American people who have paid for all the research and development work. So the directors will be free to make all the profit they wish to make, no matter how much that private interest may conflict with the interest of the 180 million American people.

Mr. GORE. Yes. If these officials owed any obligation to the Congress or to the Government, there would be questions involving conflict of interest. But the directors are now absolved from that, according to the opinion of the Attorney General. If there is no conflict of interest, they must be either officers of the United States or officers of a private corporation. Which are they? Under the law, under the articles of incorporation, and under the opinion of the Attorney General, it is plain that they are entirely private in status.

Mr. LONG of Louisiana. That is what confuses me. Why should we confirm their nominations? They have no obligation to the Government of the United States, other than the obligation which any citizen has. They have no responsibility to protect the Public Treasury. Of course we predict they will be requesting more money from Congress, in the event their mission fails or if they lose money. But why should the Senate confirm their nominations? They are interested in making a private profit.

Can the Senator from Tennessee understand why the Senate should involve itself further in this matter, after it has turned over to this group the Government's large investment in space research and programs?

Mr. GORE. I think it would be entirely inadvisable, improper, and, in my opinion, beyond the bounds of the Constitution if the Senate were to give its approval to the selection of these incorporators.

Mr. LONG of Louisiana. I should like to say that I know some of these men personally, and I regard them as very fine gentlemen, and I should like to be in business with them. But I see no reason under the sun why the U.S. Senate should involve itself further, once it has voted to turn over to this corporation, for its private profit, the investment the Government has made. I see no reason why the Senate should involve itself further with them, unless the purpose is merely to guarantee that Congress will pick up the tab for the losses. Does the Senator from Tennessee have any illusion that somewhere the Government of the United States might gain even a nickel of the profits, rather than merely pay the cost?

Mr. GORE. I think it quite unusual for that to be done by such a corporation, with such great assets—although I think each of the incorporators purchased one share of stock, at $100, but with the provision that the company could pay them back and could recover the stock. With those assets, the corporation employs a president at $80,000 a year, and a chairman of the board of directors at $120,000 a year, and rents Tregaron. Moreover—more incredible than "Aesop's Fables"—the corporation received a line of credit of $5 million, according to Mr. Charyk, without any collateral, without any security, without any endorsement of the notes. What does the Senator from Louisiana think of such a situation?

Mr. LONG of Louisiana. Where did the $5 million come from? What is supporting the $5 million line of credit which the directors of the corporation are supposed to have?

Mr. GORE. It came from 10 banks. I should like to know which banks they are. I have never been able to find a bank which would give me such treatment—a line of credit of $5 million, without collateral, without security, without endorsement.

Mr. MORSE. Mr. President, will the Senator from Tennessee yield?

The PRESIDING OFFICER (Mr. McGovern in the chair). Does the Senator from Tennessee yield to the Senator from Oregon?

Mr. GORE. I yield.

Mr. MORSE. Did the Senator from Tennessee say he was going to try to learn the names of the banks?

Mr. GORE. Yes. I do not wish to criticize them; I merely wish to find out which ones they are.

Mr. MORSE. I want the Senator from Tennessee to find out which ones they are, because I say their stockholders are entitled to know about this matter.

Mr. GORE. It would be interesting to know how these officials would square their action with their own stockholders.

The point is that the bankers apparently believe that the U.S. Government including the Senate, is underwriting the corporation's operations. The State Department is working for it. The Senate is now asked to confirm the nominations of its directors. Even today Senators have expressed the view that the corporation is some kind of mixture of private and public enterprise. There is no basis whatsoever for such a conclusion. All the records show the reverse. But many people in our country still think that the corporation is some strange admixture of public and private enterprise.

Apparently, as I read the testimony of the Attorney General and others who testified last year, the genesis of this notion for Government appointment of directors was an idea that such action would somehow protect the public interest. In fact, however, this provision gives to the proposed corporation a color of public responsibility but no substance of public responsibility. And therein lies the danger of a great deal of mischief.

As I pointed out earlier, these governmentally appointed directors have no unique powers or responsibilities. Once appointed they will be just like any other directors of any other private corporation.

Yet the existence of three directors appointed by the President "by and with the advice and consent of the Senate" will tend to create confusion in the minds of the investing public. It may appear to some citizens, or be made to appear, that in someway the Government has endorsed this corporation and is supporting its profitability. I do not wish to endorse it. Does the Senator from Louisiana wish to endorse or place his approval on the corporation, as is requested? I daresay no. I must concede that, as a practical matter, as many of us predicted last year, this corporation is slated to become, as the Senator from Louisiana has said, the beneficiary of a great deal of Government subsidy.

This Government largesse, however, does not arise as a result of the presence on the proposed board of directors of three directors appointed by the President or confirmed by the Senate.

From time to time it happens that private American corporations engaged in business overseas act in a manner not wholly consistent with the best interests of U.S. foreign policy. But as long as they are private corporations—and that fact is known—the Government is not bound by their actions. Yet if the President shall appoint and the Senate confirm three of the directors of this corporation, efforts by the Government to escape identification with the actions of the satellite corporation will be less credible.

All this is true despite the fact that the Government will not exercise any control over the actions of the directors appointed by the President, and will have no voice in the management of the corporation. As I said earlier, the Washington Post of yesterday printed a very interesting news story with respect to the views of Mr. Joseph V. Charyk, president of the Communications Satellite Corp., in which Mr. Charyk is quoted as saying that negotiations for the establishment of a global system of satellite communications will "involve all the countries of the world." This illustrates the worldwide implications of the corporation's activity.

Mr. President, all the authorities I have examined conclude that a member of the board of directors of a private corporation owes his fiduciary responsibility to the stockholders. The Communications Satellite Act contains no language which would alter this legal responsibility on the part of any of the directors, including those to be appointed by the Government. Section 8.04 of the articles of incorporation filed by the incorporators should remove any doubt on this point. It provides:

> Each director regardless of the method of his appointment or election, shall have the same fiduciary duty to the corporation and its stockholders.

So in case the act did not make it clear, the articles of incorporation undertake to make it clear that all the directors, regardless of the manner of their selection, have the same obligations. What are those obligations? Fiduciary trust to the stockholders who have invested their money in the corporation and to the stockholders alone.

My distinguished colleague, the senior Senator from Tennessee, made an extensive survey of the legal obligations of a corporate director under the District of Columbia law during the course of the debate last summer. The results of this effort were incorporated into remarks he intended to deliver on the floor of the Senate in person. The limitation imposed on debate foreclosed his opportunity to deliver the speech, but he had obtained the consent of the Senate to have it printed in the CONGRESSIONAL RECORD, volume 108, part 13, page 17479. I commend it to my colleagues.

I have already adverted to the fact that the directors to be appointed by the Government will receive no pay from the Government and that the act imposes upon them no obligation to perform duties for the Government. There remains the question of their possible removal from "office."

In using the term "office", I do not thereby intend to call it a public office. It is a private office—the office of director of the Communications Satellite Corp. On this point of removal the act is silent. It merely provides that directors appointed by the President with the advice and consent of the Senate shall serve for a term of 3 years "or until their successors have been appointed and qualified."

I confess I have difficulty in conceiving of the Senate properly discharging the role it was designed to play under our form of government by considering the impeachment of a director of a private monopoly corporation created for the purpose of making a profit for its stockholders. Such a performance would be no more bizarre, however, than would be the original process of Senate confirmation of their appointment in the first place.

Does the Senator from Louisiana see any essential difference between the confirmation of the nomination of a director of a private corporation and impeachment procedure to remove such a director from the position to which the Senate had confirmed him?

Mr. LONG of Louisiana. The difficulty occurs when we consider the fact that if the Senate were to remove the director, logically our interest in doing so would be to protect the public interest, not because of its failure to protect the profit motive of the corporation. We have no legal responsibility in what the corporation might gain or lose; ordinarily that question would not be the concern of the Senate. I fail to see why the Senate should have any interest in whether a person who owes no obligation to the Government of the United States should be appointed or removed. I ask the Senator from Tennessee if it would not be correct to say that ordinarily our interest in removing a person would be to protect the public interest? But we know very well that the directors would owe no direct obligation to the public. Their obligation would be entirely to their stockholders.

Mr. GORE. I agree that it would be an improper role for the Senate to undertake to impeach the directors of a private corporation. But I submit it would be no more bizarre than what we are now asked to do, which is to confirm nominations of directors of a private corporation.

Why should the Senate involve itself in expressing either approval or disapproval of private businessmen? Where are the people who cry out against government interference with business?

Mr. LONG of Louisiana. Are we to understand that the stockholders of this corporation would be powerless to remove a corrupt director without the consent of the Senate?

Mr. GORE. There is no provision in the law for removal of these directors by anybody.

Mr. LONG of Louisiana. Should there not be some arrangement for removing a dishonest, corrupt, or unfaithful director from this corporation? Or are we to presume that those who are selected and whose nominations are confirmed by the Senate would be, like Ceasar's wife, above any suspicion of misconduct?

Mr. GORE. It seems to me, if I may give a quick answer, that the selection of directors of a private corporation and the responsibilities of directors of a private corporation should be the concern of the stockholders who have invested their money in the profit-seeking venture. That is traditional in the pattern of the American economy. The bizarre procedure we are asked to follow would be an innovation.

Perhaps, Mr. President, it may be contended that my conclusions and those of the Attorney General are erroneous. Perhaps it was intended by the authors of the Communications Satellite Act that the directors who are to be appointed by the President and whose nominations are to be confirmed by the Senate are actually to represent the Government rather than the stockholders after they are appointed.

I do not believe the terms of the law justify such a conclusion, but I can see that some of the arguments advanced during the debate last summer to the effect that this unusual corporate structure represented the middle ground between a Government-owned activity and a privately owned activity tend to create that impression.

Indeed, the records of hearings before the Space and Commerce Committees reveal that there are some who still consider that this is to be a semipublic corporation. Many people outside Government reached similar conclusions. If such an interpretation were correct—although such would be contrary to the Attorney General's opinion and my own opinion—then the so-called Government directors might appropriately be called officers of the United States and they would function as public officials. Let us examine the results that would flow from such an interpretation.

To place Government officials on the boards of private corporations would constitute a significant departure from the traditional concept of private enterprise in the United States. This would surely be an anomalous situation, and if that is what was or is now intended, it ought to be made clear to the American public.

Government officials sitting on the boards of private corporations would give rise to many questions. What would happen in the event a decision were made by the board which would be in the apparent interests of the Government but which would tend to result in reduced benefits to the stockholders? It is possible that the stockholders might go to court to contest the validity of such action.

Then, too, the Communications Satellite Corp. is supposed to be subject to regulatory action by Government agencies. We heard a great deal about that. It would be somewhat unusual, to say the least, if the Government were sitting on both sides of the table at the adversary hearings by the Federal Communications Commission which are provided for in section 201 of the Communications Satellite Act.

What would be the legal status of the Presidentially appointed directors if they are, in fact, to be considered as representatives of the Government? Questions of conflict of interest would almost certainly arise, as the distinguished junior Senator from Louisiana pointed out only a few moments ago.

Frankly, I do not see how an individual could undertake to serve both masters—both the interests of the Government and the interests of the stockholders at the same time—unless he adopts the "what is good for General Motors" philosophy of the relationship between public interests and private interests.

Let us consider for a moment the future role of the Senate in this proposed procedure.

Mr. President, it is the Senate action about which I raise a question. I raise no question about the power of the President or the action of the President. I raise no question about the qualifications of the nominees whose nominations are before the Senate. I question whether it is properly and constitutionally the business of the Senate to confirm nominations of incorporators and directors of a purely private corporation organized for the profit of its stockholders.

Should the Senate unwisely proceed upon the proposed course, much mischief might flow. Whenever the confirmation of a nomination to the board of directors of the Satellite Corp. comes before the Senate—and let me remind my colleagues that the bill provides for at least one each year—some Member or group in the Senate may feel the necessity of inquiring into all facets of the operation of the corporation. It may be necessary to open the books, to examine the minutes, and to question the nominee about his philosophy and his judgment with respect to past actions and future plans of the corporation.

Some Senator or group of Senators might want to know the difference in the cost of a message via satellite between New York and St. Louis on the one hand, and between New York and Tokyo on the other. Some Senator or group of Senators might want to know what bearing this would have on the distance concept of toll charges for long distance telephone calls.

Many questions might arise.

I say to my distinguished friend from Louisiana that I am perplexed by the willingness of the big business community of this country—those who preach the values and virtues of free enterprise so frequently and loudly, and who complain so often against Government intervention—to advocate this kind of action on the part of the Senate.

If this procedure is to be followed year after year it may be necessary to open the books and examine all the records. How else could the Senate legitimately inquire into the fitness of a nominee to the job he had been nominated to fill?

The distinguished senior Senator from Rhode Island said earlier today that the only question before the Senate concerned the fitness and qualifications of the appointees. He and I had a disagreement as to what the question before the Senate was.

But if that be the question, then how can the Senate reach a judgment upon the fitness of a nominee, unless it opens up all the books and examines the nominee's actions, his attitude, and his judgment with respect to past decisions and his attitude with respect to future decisions? I say many questions would arise. This is not only an improper procedure, but also an unwise action, the Senate is asked to take. The Senate is peculiarly unfitted to participate in the management of a private corporation, and I believe it would be a sad day if the Senate should undertake to do so.

Or is it in the scheme of things for the Senate to confirm without consideration of fitness? Is this, indeed, to be but a pro forma procedure, thus giving the color, but not the substance, of Senate approval? What an unworthy action that would be.

Once the Senate has embarked on such an unwise course, it may be difficult to turn back, though we may wish we had not taken such a course. It may by some be deemed equally desirable for the Government to have representation on the boards of corporations in other economic areas, as the Senator from Louisiana has suggested. But where will we stop?

Mr. President, the proper time to stop and consider the consequences of this action is now. Section 301 of the Satellite Communications Act expressly reserves the right to "repeal, alter, or amend" the act "at any time."

I say now is the time, before we take this action, which some of us regard as beyond the scope of the Constitution, and which many of us regard as entirely improper and inadvisable.

Presently before the Senate is the question of confirmation of the incorporators who are to arrange for the sale of stock. Notwithstanding the express reservation of the right to repeal or amend "at any time" it would seem desirable for the Congress to consider the matter further before stock has been purchased and legal rights vested.

In conclusion, Mr. President, I ask by what authority, by what standard of propriety, upon what rational basis should the U.S. Senate give its advice and consent with respect to the officers of a completely private corporation? Such an action, in my opinion, is beyond the express provisions of the Constitution and contrary to the very genius of our system.

Mr. NELSON. Mr. President, I had intended at this time to raise a point of order, but I find that the distinguished senior Senator from Oregon [Mr. MORSE] is raising essentially the same point of order that I intended to raise, and I should like to join with the Senator from Oregon on that point of order at the time he rises to make it. But I do wish to say something briefly on the issue before the Senate. First, I desire to preface my remarks by saying that none of the comments I have to make on this subject should in any way be considered as a reflection upon the appointees. I think the President of the United States has appointed a group of distinguished American citizens.

In the point being raised here, and I am sure this is true of the rest of the Senators who object to Senate consideration of these appointees, we do not object to the quality of the men with whose confirmation we are concerned in the Senate. It goes only to the process of the Senate in making confirmation of these appointees.

Mr. President, I was not a Member of the U.S. Senate when it passed the Communications Satellite Act, so I shall not attempt to discuss the merits of that decision at this time. The facts are that Congress has chosen to establish a purely private business entity to carry out this important mission and that the Senate is now being asked to advise and consent to the appointment of incorporators who will comprise the initial board of directors of this space corporation.

I may say for the record that if I had been here I would have not voted for this type of corporation. I would have thought it better in the interest of this country to have some type of TVA Act enacted for the purpose of conducting the management of the space satellite business.

It is my understanding that the nominees before us today have already held some 11 meetings as a board of directors of this private business corporation.

The issue we must consider here today is whether the U.S. Senate should give these private businessmen the cloak of senatorial confirmation, which will declare to the world that they are somehow responsible to and representative of the public interest.

This is a most exceptional situation. In fact, it is unique.

What would the reaction be if the U.S. Senate took it upon itself to confirm Roger Blough as chairman of the board of United States Steel—or Ralph Cordiner as chief executive officer of General Electric—or George Romney as president of American Motors?

Or, if one wishes to compare this corporation with a public utility, if we took it upon ourselves to confirm the president of American Telephone & Telegraph Co.? There is not any question that it is in the nature of a public utility, but it is a purely private corporation.

The companies I have just mentioned are thoroughly imbued with a national interest; yet I can imagine the shock if we were to advise and consent to the appointment of their directors.

IMPLICATIONS OF CONFIRMATION

Senatorial confirmation of private individuals to positions in private business corporations carries with it many serious implications. I know there are a number of Senators who wish to speak on this point, so I shall deal with it briefly.

When the Senate confirms an individual, no matter who he is, the Senate says, in effect, that it is satisfied that this individual will be responsible to the interests of the public; that he will represent the interests of the American people in the office to which he has been appointed.

The Senate does not give carte blanche to every man it confirms. It imposes some restraints—to safeguard the public interest—and the Constitution sets up machinery to be used in the event the Senate is proved wrong in its evaluation of a man.

A man confirmed by the Senate must not have conflicts of interest. He must not have any allegiance which might divert him from the loyalty and fidelity he owes to the American people. He is, therefore, subjected to rigorous laws on conflicts of interest.

Should he prove himself unworthy of the public trust and confidence placed in him by the Senate, he is subject to impeachment and removal from his post. Stern sanctions are imposed on persons who do not faithfully carry out the trust which senatorial confirmation imposes.

All that I have said follows as the direct result of one simple fact. The U.S. Senate confirms public officers—officers of the United States. It confirms only public officers. It does not confirm private citizens.

A private citizen is not in a fiduciary relationship with the American people. He has no obligation to the American people except the responsibilities of citizenship which are shared by all.

He is not subject to the will of the voters. His personal interests may often conflict with the public interest. Indeed, in a democracy, such a conflict often is expected and approved.

Now, however, we are asked to place the stamp of approval of senatorial confirmation on private businessmen who are necessarily motivated—and properly so—by a desire for financial gain and profit for their private company.

There appears to be no question whatsoever about the status of these incorporators. They are completely and entirely private businessmen. The Communications Satellite Corp., by the very words of the act, is not an agency or establishment of the U.S. Government. It is a corporation organized, like any other business venture, for profit. Like any other corporation, it is incorporated under the business statutes of a State—in this case, the Business Corporation Act of the District of Columbia.

Mr. KEFAUVER. Mr. President, will the Senator yield for a question?

Mr. NELSON. I yield.

Mr. KEFAUVER. First, I compliment the distinguished Senator on a very excellent presentation, which is unquestionably sound, in my opinion. The Senator has just pointed out that the incorporators or directors owe no responsibility to the U.S. Government or to anyone else except the corporation for which they act as directors. Under the District of Columbia Corporation Act, is that not necessarily so? Are they not required under that act to act for the corporation, the Communications Satellite Corp.? If they should undertake to operate for or have some responsibility to the President, or to the Government, or to someone else, which is in conflict with the interest of the corporation of which they are directors, would they not be subject to removal in a stockholder's suit for damages? Are they not bound to act for the corporation, and for no one else?

Mr. NELSON. I believe that is correct. As I read the law, they are answerable solely to the investors in the corporation, subject, of course, to regulation by the FCC and other agencies under our statutes which regulate private industries in this country. Their responsibility is to the investors. I do not believe that they have the authority to assume another responsibility. If they do, in any event the stockholders have the power to direct or remove their board of directors as they see fit, since they control the corporation.

Mr. KEFAUVER. I thank the Senator.

Mr. NELSON. Senator PASTORE pointed out in the Commerce Committee hearings on our space communications program held in February:

> We were led to believe when we formed this corporation practically all of this work [research and development] would be undertaken by this private corporation, because we said America has grown on private industry, so let private industry do it.

I believe that is a correct interpretation of the law.

The status of the incorporators was clearly spelled out by the Attorney General in a letter to the President, reprinted at page 87 of the Commerce Committee hearings. The Attorney General wrote:

> With [the directives of sections 301 and 302] * * * in the act, there would seem to be no doubt that the incorporators, as directors, will have the same status and responsibilities as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.

And the Attorney General continued:

> I find nothing in the act or in its history to justify a different view as to the position of the incorporators during the period prior to the formation of the corporation.
>
> Their mission during that time places on them the same obligation for the furtherance of private interests as their later duties as the initial board of directors and in essence is therefore a private mission.

It would seem clear that the question of the private versus public status of these incorporators is settled. My point of order does nothing more than insist that the Senate face up to the fact of the incorporators' purely private responsibilities so that there can be no question.

The Senate appears to face a dilemma—in deciding whether to confirm these incorporators. Actually, the incorporators themselves face a much greater dilemma.

The Senate has a way out of its dilemma. It can refuse to either confirm or not confirm. It can make clear in the legislative record that it does not mean to say that these men are in any way inadequate for the posts for which they have been selected. I do not believe they are, and I have not heard from anyone else who thinks they are. The Senate has an opportunity to say, "We have no business as the elected representatives of the American people confirming the officials of a private business enterprise."

But how are the incorporators to escape their quandary?

What will they do when—as surely will happen—the best interests of the profit-seeking corporation which they represent conflict with the interests of the American Government?

Senator HART put his finger on the incorporators' dilemma when he said at the Space Committee hearings:

> Congress really has built in a conflict of interest here that we ought to face up to. If we were one of these nominees, we could have love and affection for the taxpayers, but we are being paid by the investors [of the corporation]. Unless we change basic corporate law in this act, all of us know what the obligation is. I think we just ought to say so. * * * We ought not try to kid ourselves that their role is anything other than what I have suggested it is.

If, by the act of advising and consenting, we place upon the incorporators and directors some cloak of the public interest, the directors will be subject to shareholders' suits for doing the very thing the Senate has ordered them to do.

For example, suppose that it is in the public interest to provide space satellite communications to Chile. To provide such services, however, will require the corporation to operate at a loss. By serving the public interest in such a case, the directors would subject themselves to legal action for dissipating the corporate purse.

Parenthetically, let me point out that the shareholders of this corporation will be able to remove their directors at any time that they do not like the actions of the board of directors. The President and the Senate, however, will not. There is no power of impeachment over private citizens who are not officials of the United States.

The sanctions imposed in section 403(a) of the act add nothing because the duties of the directors and incorporators, under the act, are to run the corporation as a private enterprise for profit.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

Mr. NELSON. I yield.

Mr. LONG of Louisiana. If I recall correctly, during the space satellite debate last year the President's message indicated that it was to be one of the objectives of this Nation to provide space satellite communications with underdeveloped nations like the newly emerging nations of Africa. I believe the point the Senator is making is well taken.

Providing communications with any of these nations would be an unprofitable venture for many years, particularly because of the costs that would be involved in the early stages of satellite communications. I ask the Senator if that objective might not be completely in conflict with the interest of the shareholders of the corporation.

Mr. NELSON. If I were a member of the board of directors or if I were a shareholder in the corporation I would wish the corporation to expend my money in pursuit of making a profit for the corporation. Much as I might like to see some education in the underdeveloped nations of the world, I believe I would assume the position, as a stockholder, that I am not personally desirous of financing it with my family's invested money.

I believe that this question poses a serious problem. It was raised at the time of the debate, last year. I have read the debate since then. It is a serious problem from the standpoint of the interest of the United States and our country and our people in providing some educational opportunity for underdeveloped nations of the world. This is a responsibility of our country as a whole, and not of a private corporation. This is one of the serious questions that have been raised. I believe it will not be possible for the corporation, as it is now constituted, to discharge such responsibility effectively.

Mr. LONG of Louisiana. Are we to understand that the duty of the directors will be to the shareholders and not to the public interest of the United States?

Mr. NELSON. That is correct.

Mr. PASTORE. Mr. President, will the Senator from Wisconsin yield for a question?

Mr. NELSON. I yield.

Mr. PASTORE. I have been attentive to the arguments made by the distinguished Senator. When the recommendation of this legislation was originally made by the President of the United States, it was never intended at that time to submit the names of the incorporators to the Senate for advice and consent. The Senate itself added that provision to the law, because it was thought that the Senate should be given an opportunity to pass upon the qualifications of the incorporators, not because the President could not be trusted in making the choices, but because we believed there should be an element of partnership between the executive branch and the legislative branch, to make certain that the men selected would stand the test of both branches.

If I follow the Senator well, he is saying in essence that this procedure is unconstitutional because we are conferring upon private citizens by the process of confirmation a so-called cloak of public trust which is inimical to the very spirit of the law which was intended to create a private organization. Do I state the Senator's proposition correctly?

Mr. NELSON. No. Perhaps I did not phrase it as artistically as it should have been phrased. My real point is that the act of confirmation appears to confer a cloak of public trust or responsibility. I do not believe the Senate has the power to confer that cloak of responsibility upon the nominees. Nevertheless, I think the public interpretation of our action will be that, in fact, is what we have done. The public will not understand the intricacies of the law or the Constitution.

Mr. PASTORE. But is not the Senator from Wisconsin saying, in fact, that what is unconstitutional is that the Senate is acting on the confirmation of nominations made by the President when the Senate has no business to confirm in this area? Is not that the argument that is being developed?

Mr. NELSON. No; I have not intended to raise a constitutional question. The real essence of my statement is that since the nominees are purely private citizens, it should not be the business of the Senate to confirm their nominations. I have every confidence in the quality of the selections made by the President. But, I think the law ought to be amended. The Senate should divest itself of the unconstitutional authority under the statute to vote confirmation and leave the appointments exclusively to the President.

Mr. PASTORE. That is the point I wish to make, because I believe that is where we create some confusion or somewhat of a dilemma. If we are so sensitive that the public reaction might be that we are cloaking individuals with a sense of public trust only because their nominations are to be confirmed by the Senate, which is a part of only one of the three branches of the U.S. Government, why cannot the public reach the same conclusion when the President makes the appointments? Why should the President have the power to make appointments of purely private citizens? Why should not such action create the same impression as is created by the process of confirmation?

I am not quarreling with the Senator; I am trying to gage the situation in its proper perspective. Is there anything more noble in creating this impression by an act of the Senate than by an act of the President, which, in my opinion, is just as noble, or perhaps nobler?

Mr. NELSON. I have a difficult enough time speaking for myself and my responsibility as a Senator without presuming to speak for the executive branch of the Government.

As to my responsibility, I shall not vote for the confirmation of the nomination of a private official to be an officer of a private corporation, because that is what my constituents would interpret it to be if I should cast such a vote.

If someone in Wisconsin were to inquire why the corporation did not pay dividends for at least 10 or 15 years, I would not want him to ask, "Did not the Government participate in this program?" If he did, I should have to say, "No, the Government did not participate. This is a private corporation." He might then ask, "Then why did the Senate confirm the nominations?"

The understanding of my constituents will be that the Senate only votes to confirm the nominations of public officials who have public responsibilities. I think it is my responsibility to make it clear that that is not what the officials of this corporation are.

I think Congress should not have enacted this statute. If it were desired to have the Senate's advice, I think it ought to have been in the informal manner which prevails all the time between the executive and legislative branches.

Mr. PASTORE. I do not mean to be personal in any way in my comments. I do not mean to impinge upon the freedom of choice which the Senator from Wisconsin will have to make shortly on this important question. However, I should like to propound a question to him. Will he not agree with me that whether or not it was a wise move on the part of the previous Congress to enact this proviso, whether or not it should have been done in the first place, the fact is that the proviso as it now stands is the law of the land?

Mr. NELSON. As it now stands?

Mr. PASTORE. As it now stands.

Mr. NELSON. It is the law of the land.

Mr. PASTORE. It being the supreme law of the land, is not the only way in which it can be declared unconstitutional by a decision of the Supreme Court of the United States?

Mr. NELSON. That is the only way in which the act could be declared unconstitutional; but I assume Congress still has the legislative power to amend the act.

Mr. PASTORE. That is correct. That is the point I make. If the Senate had said at any time that it desired to have this provision repealed, if at any time the motion had been made to remove this proviso, I would be the first to go along with that proposal.

Of course, the argument will be made that perhaps some such amendment was included among the 350 amendments which were tabled at the time of cloture but it will be recalled it was difficult to debate each of them individually to any considerable extent. As a consequence the amendments were tabled. The Senate is in this predicament only because it inflicted it upon itself. Congress enacted the law. The President of the United States could do nothing but submit the names to the Senate for confirmation, because he must abide by the law as it is written.

The distinguished Senator from Wisconsin argues that this procedure is wrong because he believes that it was unwise to enact the law in the first place, and that he cannot now vote to confirm the nominations. He has a perfect right to vote against the confirmation of the nominations, but vote he must. He can be called upon by this body and compelled to vote one way or the other, under the rules of the Senate.

Mr. NELSON. Let me assure the Senator that I will vote.

Mr. PASTORE. I know. Please do not misunderstand me. I am not trying to lecture the Senate. I am trying to make an argument. The point I am trying to make is that if this section is unconstitutional, or is deemed to be unconstitutional at this very moment, there are only two choices: Either to repeal the proviso or to accept it as the law until the Supreme Court declares it to be unconstitutional. Beyond that, I think all of us have a sworn duty to our office to abide by the law so long as it is the law of the land. That is the only argument I make.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield, in order that I may address a comment to the Senator from Rhode Island?

Mr. NELSON. Will the Senator from Pennsylvania withhold his request, so that I may yield to the majority leader?

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Wisconsin may yield to me for a special purpose, without his losing the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

VISIT TO THE SENATE BY OFFICIALS OF THE GOVERNMENT OF THE FEDERATION OF MALAYA

Mr. MANSFIELD. Mr. President, it is my pleasure to introduce to the Senate three members of a parliamentary body in the region of southeast Asia.

The first is His Excellency Tun Abdul Razak, Deputy Prime Minister of the Federation of Malaya, Minister of Defense, and Minister of Rural Development.

Next, His Excellency Ong Yoke Lin, Ambassador of Malaya, and also a Member of the Parliament of Malaya.

The third distinguished visitor is Dato Teoh Chze Chong, Member of Parliament, representing the State of Johore, Malaya.

Mr. President, on behalf of the Senate, let me welcome these distinguished guests to this Chamber, and assure them that we are delighted to have them with us, and that we are honored that His Excellency, the Deputy Prime Minister, and his colleagues could meet with some of the Members of the Senate in the Foreign Relations Committee room, for coffee.

We have had most interesting discussions with them. As a result, we are better educated in regard to the problems of their country and their area; and we are distinctly privileged and delighted that they were able to spare the time, from their busy schedules, to meet with us today.

We extend to them every good wish.

[Applause, Senators rising.]

COMMUNICATIONS SATELLITE CORP.

The Senate resumed the consideration of the nominations of incorporators of the Communications Satellite Corp.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield to me?

The PRESIDING OFFICER (Mr. KENNEDY in the chair). Does the Senator from Wisconsin yield to the Senator from Pennsylvania?

Mr. NELSON. I yield.

Mr. CLARK. I came into the Chamber during the colloquy between the Senator from Rhode Island and the Senator from Wisconsin. I know that last year the Senator from Rhode Island very ably defended the bill; and I know how ably he is defending it today, in connection with his responsibility in regard to the developments in the space world.

I do not wish to argue with him; I merely wish to state that it seems to me this provision is clearly unconstitutional.

I have read the remarks of the Senator from Tennessee and those of the Senator from Wisconsin; and I believe this provision should not have been included in the act, in that it is unconstitutional. Therefore, I make the point that it is not the supreme law of the land, but is a nullity, and that it could not be a valid provision until the Supreme Court declared it to be constitutional.

Any citizen of the United States has a right to regard any provision of law as unconstitutional and to take the consequences—which are that if he is mistaken, he may have to go to jail; or, if he is a public official, he may be impeached for failure properly to carry out his duty.

But I believe it is for each Senator to determine for himself whether this provision is constitutional. I do not think we must wait until the Supreme Court speaks on this matter.

During my service in the Senate I have heard, time after time, the argument that a certain provision of law is unconstitutional. Each Senator determines for himself what he believes as to that; Senators do not wait until they find what the Supreme Court says about it. I admit that often Senators give the benefit of doubt in favor of the constitutionality of a statute. However, our duty is to make that determination for ourselves.

If this provision is unconstitutional, I believe we have the duty to sustain a point of order that it is unconstitutional, rather than vote for confirmation of these nominations.

My final point is that we should not have passed the act in the first place. I voted against it, and I do not feel bound to support any portion of it which in my judgment is unconstitutional.

Mr. PASTORE. Mr. President, will the Senator from Wisconsin yield, so that I may reply?

Mr. NELSON. I yield.

Mr. PASTORE. First, I realize full well that Senators who were opposed to this act last year were very sincere. As a matter of fact, most of them are among my best friends; and usually I find them surrounding me in connection with many of the crusades which are conducted on the floor of the Senate.

Mr. CLARK. The Senator from Rhode Island may remember that I voted for cloture.

Mr. PASTORE. The Senator from Pennsylvania said I defended this act last year and that I am defending it now. However, that is not a correct statement. I advocated the act then; and I do not think there is anything about it to defend.

The Senator from Pennsylvania said any Senator has a right to challenge the constitutionality of any measure. Certainly that is a right which Senators have. But I am sure he will admit that until a measure is declared unconstitutional, it is the law of the land.

For example, if a criminal law is placed on the statute books, and if a Senator does not consider it constitutional, he has a perfect right to violate that law and to subject himself to the penalty in connection with his challenge of its constitutionality; but in the meantime he will be prosecuted according to the law, until the Supreme Court says, "Release this man, because the law had no validity in the first place." But until that declaration is made by the Supreme Court, that measure is, indeed, the law of the land.

So I hope none of my friends, including the former dean of the University of Oregon Law School [Mr. MORSE], who now is nodding his head in the negative, will take the position that whenever any American citizen decides that, in his opinion, a particular law is unconstitutional, he can proceed to violate it with impunity, and can say, "I am not subject to it, because it is unconstitutional." That is ridiculous.

Mr. MORSE. Mr. President, if the Senator from Wisconsin will yield——

Mr. NELSON. I yield.

Mr. MORSE. I do not see why the Senator from Rhode Island says "with impunity." I only point out that if the law involved is unconstitutional, one who violates it is innocent, and has not committed a crime.

Mr. PASTORE. But that cannot be determined until the Supreme Court rules the law to be unconstitutional.

Mr. MORSE. But while that citizen is waiting for that determination, he still is innocent.

Mr. PASTORE. Yes, but in the meantime he is incarcerated; and he remains incarcerated until the Court declares the law to be unconstitutional. The fact is that he could be held in jail until the Supreme Court declares the law to be unconstitutional.

Mr. MORSE. But in that event, he is held illegally; and when the Supreme Court states that the law is unconstitutional, that establishes his innocence.

The impression the Senator from Rhode Island is trying to create is that he is guilty until his innocence is established.

Mr. PASTORE. Oh, no.

Mr. MORSE. That is the only conclusion which can be drawn from the argument the Senator from Rhode Island has been making.

Mr. PASTORE. No; I merely said that he must submit to the law until it is declared unconstitutional.

Mr. MORSE. But no guilt is attached to his action, once the law is declared unconstitutional.

Mr. PASTORE. That is correct.

However, only the Supreme Court can rule on the question of constitutionality. That cannot be done by the Senator from Oregon [Mr. MORSE], the Senator from Pennsylvania [Mr. CLARK], or any other Senator.

Mr. MORSE. None of us is arguing that it can be done by anyone but the Supreme Court.

Mr. PASTORE. But that is what Senators are arguing today.

Mr. MORSE. Not at all.

Mr. CLARK. Mr. President, if the Senator from Wisconsin will yield further to me——

Mr. NELSON. I yield.

Mr. CLARK. I think there is a very real difference between the obligation of a U.S. Senator in regard to taking on the floor of the Senate, as a public official, action which he considers unconstitutional, and the position of a citizen who undertakes to violate a law which he believes to be unconstitutional. The difference is as follows: Senators swear, as a condition to their membership in this body, to support and defend the Constitution of the United States; and it is their duty to do so. If Senators vote on the question of confirmation of these nominations, I say they could well be charged with violating their oath of office, because in that event they will not be supporting and defending the Constitution of the United States. Instead, they will be knowingly violating it. I think such action would not only be illegal, but also would raise some rather grave ethical questions.

Mr. PASTORE. Mr. President, will the Senator from Wisconsin yield to me, to permit me to make a concluding observation?

Mr. NELSON. I yield.

Mr. PASTORE. Mr. President, the President of the United States recognizes this act to be the law of the land. It was passed by a majority of the Senate, to the tune of 66 to 11. It was passed by the House of Representatives by almost a unanimous vote. It was signed by the President of the United States. As a matter of fact, a group of us were invited to collect the pens with which the President signed it. It became inscribed in the statute books of the United States as part of the law of the land. It now has a number as a certain public law.

In compliance with that law, the President of the United States has made the appointments, and has sent the nominations to the Senate, for confirmation. Why? Because the law requires that it be done.

Now several Senators say, "I do not think it is a constitutional law; and I do not like it, and I will not vote in favor of these nominations."

Senators have a perfect right to take that position; but I do not think they have a right to maintain that the 66 Senators out of the 77 were not cognizant of the constitutional question, and that the 11 Senators are the masters of the Constitution and the authorized interpreters of the Constitution, and that only they know it well and know what law is constitutional, legal, and correct. [Laughter.]

Mr. CLARK. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. CLARK. I think the debate on that point should be brought to a close. I point out to my able friend from Rhode Island that, in my opinion, the President of the United States has given no consideration to the serious nature of the constitutional question involved. I suspect that if he asked his own Attorney General, his own Attorney General would tell him that the provision in the act is unconstitutional and he should never have appointed those particular individuals, or if he did appoint them, he should have appointed them without the advice and consent of the Senate, because they are not public officers of the United States. Therefore, the Senate has no right, under the Constitution, to confirm the nominations.

Mr. PASTORE. Mr. President, will the Senator yield to me so that I may make one more comment?

Mr. NELSON. I yield.

Mr. PASTORE. I do not desire to say that my friend is in error, because I do not like that kind of expression. I merely say that I disagree with my friend from Pennsylvania. The Attorney General rendered an opinion, and said that in his opinion the act is constitutional. It is in the RECORD, because I asked to have it printed in the RECORD earlier today. I have a copy of the opinion, if the Senator from Pennsylvania wishes to see it. I have an interpretation by the Attorney General of the United States, who disagrees with those who say that the act is unconstitutional. He has interpreted it as being constitutional.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. CLARK. Then I say to my friend from Rhode Island that that is pretty nearly the neatest legal trick of the week, in view of the earlier opinion of the Attorney General.

Mr. PASTORE. There we go again. Everyone who disagrees with the Senator is out of step.

Mr. MORSE. Mr. President, will the Senator yield for a comment?

Mr. NELSON. I yield.

Mr. MORSE. I should like to comment on the basis of the Senator's argument. The Attorney General is not the Supreme Court of the United States. We must wait until the Supreme Court passes judgment on the constitutionality of this provision. But we must make the legislative history tonight in regard to the pros and cons of the two points of view in regard to the constitutionality of the act, because sooner or later the issue will go to the Supreme Court of the United States, and we shall abide by the decision of the Supreme Court. But before that, the Senate must consider the constitutionality of confirming these nominations.

Mr. PASTORE. Yes. I shall remain in the Chamber and listen to the case being made. It is very illuminating. Perhaps I shall not agree with all of it, but Senators who are enunciating the constitutional problems today are learned men for whom I have a great deal of respect. Moreover, they are men for whom I have love and admiration.

Mr. MORSE. I hope the Senator from Rhode Island knows that all of us who oppose him on the question share the same opinion of the Senator from Rhode Island as he has expressed so kindly about his opposition.

Mr. PASTORE. The only reason I made the observation was so that the Senator would have an opportunity to compliment me, too.

Mr. GORE. Mr. President, will the Senator from Wisconsin yield?

Mr. NELSON. I yield.

Mr. GORE. On the constitutional question, our distinguished friend the able Senator from Rhode Island seems to attach some importance to the vote of 66 to 11. The Senate performs most of its business by unanimous consent. But whether the action is by unanimous consent, by a large majority, or a narrow majority, the fundamental question remains: A statute is not the supreme law of the land. The Constitution of the United States is the supreme law of the land today, tomorrow, and as long as we remain a constitutional republic.

Senators will not have the luxury of waiting until some distant time when the Supreme Court of the United States may render a decision as to the constitutionality of the proposed procedure of the Senate. The Senate itself—each individual Senator—will have an opportunity to reach his own judgment on that question. The Presiding Officer will be called upon to decide whether he will make a ruling or submit the constitutional question to the Senate. Then the question will arise as to whether the ruling of the Presiding Officer will be appealed. Today or tomorrow—I hope tomorrow—the Senate will be required to determine the question in accordance with the individual oath which each Senator has taken. I have placed that oath in the RECORD.

Mr. NELSON. Mr. President, I would not desire any Senator to think that I either affirm or disagree with all the propositions that have been advanced merely because I yielded time to either side.

Mr. GORE. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. GORE. The Senator from Wisconsin, who has been in the Senate a short time, has already shown his astuteness.

Mr. NELSON. In response to a point made by the Senator from Rhode Island, the act is now the law of the land. The constitutionality of the act will not be determined one way or the other until, if, and when, the issue comes before the U.S. Supreme Court.

How did the Senate get into this dilemma?

That is a difficult question for me to answer, of course.

It is, however, clear that the drafters of the Communications Satellite Act sought to give the Senate some role in the selection of the key leaders of the corporation. Not surprisingly, the familiar language of "advice and consent" suggested itself.

This was not a happy choice of wording, however, and I am afraid that insufficient thought was given to the correctness of employing constitutional language with a clear and long established meaning which is simply not compatible with the act's purpose.

The records of the debate and hearings on the bill do not reveal any discussion of the problem we are talking about.

Last fall, however, it became a matter of concern.

On October 25, the Attorney General replied to a request from the President for an advisory opinion as to whether or not the incorporators and directors were officers of the United States.

As we all know, the Attorney General determined that, without question, they are not officers of the United States but rather, enjoyed exactly the same status as individuals serving on the board of an ordinary business corporation.

However, the problem troubling the President at that time apparently was whether the conflict-of-interest laws applied to the incorporators and directors. There was no indication of an awareness of the problem of the Senate's power to confirm a private business executive.

This is not surprising, because this problem is the Senate's problem, not the President's.

In any case, Mr. President, it seems to me that we must conclude that sections 302 and 303(a) are the result of nothing more than the ill-considered use of language in drafting the act.

Nevertheless, the act has been passed. It is a fact of life. We must live with it, at least for the time being. How then can we escape the dilemma in which we find ourselves? How may we save the incorporators and directors from a more serious dilemma which will be the direct result of our proceeding to confirmation today?

First, let us consider what the Congress intended when it passed the act last summer.

There is no doubt that Congress intended that the incorporators and directors would not be officers of the United States. This is the plain meaning of the words of the act itself. It is revealed in the debates. For example, Senator KEFAUVER observed during the debate on the floor:

> Section 302 apparently fails to recognize the fact that the incorporators selected by the President will become directors of the corporation. As such, their fiduciary obligations under law will not be to the President and will not be to the public at large and will not be to the Federal Government. The fiduciary obligations which will be imposed upon these directors will be obligations to the corporation itself.

Second, it is clear that Congress did not intend to place itself in the dilemma we now encounter. Without doubt, Congress had in mind that the Senate should aid the President in selecting incorporators and directors. But equally without doubt, Congress did not intend to apply the same principles and procedures to private businessmen that are reserved by the Constitution for treaties with foreign governments and the appointment of Supreme Court Justices, ambassadors, and other Government officers.

It appears that Congress wanted the Senate to have a hand in the selection of the incorporators and, apparently, be counseled about the appointments.

But surely Congress did not intend that the Senate express its opinion in such a way that the public would be led to believe—and believe correctly—that the incorporators are officers of the United States and certified by the Senate to be responsible to the public's interest.

Perhaps Congress had in mind that an ad hoc committee be appointed to cooperate with the President in its selection.

Perhaps it intended that the Senate resolve itself into a Committee of the Whole to discuss the President's selections.

But one thing must certainly be clear: Congress could not have intended to give the stamp of public interest to these private businessmen by constitutionally advising and consenting to their nomination.

This is the principle which I believe we must assert here today.

In so doing, we are not opposing the incorporators as individuals, who undoubtedly are fine men.

We are simply asserting, without equivocation, that it is the intent of Congress that the Communications Sattellite Corp. be a private corporation, and that it is the intent of Congress that the directors and incorporators of the corporation shall be private businessmen and and not agents of the Federal Government.

I believe, Mr. President, that this is now—and clearly was last summer—the intent of Congress. It would seem, therefore that we have a duty to reaffirm it now.

The Senator from Rhode Island asked, "What else is there to do at this stage?"

The nominations can be referred to committee for further consideration of the issues raised, today. We can vote properly, without violating the Constitution, not to confirm. We can amend the statute.

The statute should be amended. If any value comes from the discussion, it ought to be that we, as Senators, should study the possible consequences.

I shall not discuss the constitutional question. The able Senator from Oregon will discuss that in a much more able fashion than I could. I have not intended to raise the question, although it is implied all the way through my statement. Without discussing that point, I conclude by saying that I direct my remarks primarily to the proposition that regardless of what the legal consequences or the legal capacity of the Senate is to confirm the appointments, the public interpretation will be—and that is the point that concerns me—that somehow or other these presidentially appointed nominees have a color of public responsibility. It will be thought that the nominees are clothed with some responsibility to the public interest, as contrasted with the interest of the investors in the corporation.

I believe that is unfortunate. I know it is not true. I as a Senator do not desire to go back to my State and say that I voted for confirmation of the nominations, and that confirmation confers some color or cloak of public responsibility, because it does not. I believe the action will be interpreted in that manner.

There exists almost a unique circumstance in the Senate. I do not think there is a really comparable case in the precedents of the Senate. I wonder if we should not seriously reconsider the whole question before we create a precedent with which we on a subsequent date will not wish to live. That is the main essence and burden of all I have to say on the entire issue.

Mr. KEFAUVER. Mr. President, I wish to speak in support of the point of order which will be raised, I understand, tomorrow by the distinguished Senator from Oregon [Mr. MORSE] and the distinguished Senator from Wisconsin [Mr. NELSON] that the incorporators are not officers of the United States, and therefore the Senate has no constitutional right to vote on confirmation of their nominations.

In my view, the Senate has gotten itself into a terrible bind on this point, Mr. President. I point out that this was a problem about which I warned the Senate, last summer.

First, let me say that my remarks are not directed toward the persons involved. I know most of the men who have been nominated. The ones I know personally and well are outstanding men. I am sure the others are, also. This is not a question of personalities in any respect.

I know also that these men felt they were doing a public service by accepting appointment, and they have nothing but the best of motives in mind.

Mr. President, I want to read from the statement I made in the CONGRESSIONAL RECORD of August 17, 1962. Incidentally, I point out that this statement of mine is cited by the Attorney General in his letter of October 25, 1962, advising the President that the incorporators and directors of the corporation are purely private businessmen and not public officers. I will have more to say about that letter, in a minute.

Here is what I said to the Senate, last summer:

> Section 302 states that the President shall appoint incorporators by and with the advice and consent of the Senate. * * * Certainly one of the most important functions which the incorporators of this corporation will perform is arranging for the initial stock offering of the corporation. * * * That initial offering will be arranged by the incorporators and there is nothing in the act as it is proposed which would insure that the public is represented among the incorporators, or that the incorporators are to follow any particular standard in deciding how to arrange the initial offering or the amount of such offering.
>
> THE FOX GUARDING THE HENHOUSE
>
> I should like to quote from the report which accompanied this bill as it relates to section 302. I am quoting from page 20 of that report: "Your committee is hopeful, that in making his choices, the President will seek fair representation from the major political parties and a good cross section of the professions and industries which will be expected to take part in the U.S. commercial communications effort. For example, it is hoped that there will be incorporators drawn from both large and small communications carriers, from persons wise in the problems of finance, from industries supplying rockets, electronic gear, tracking mechanisms, and the like. It is also hoped that there will be incorporators knowledgeable in the area of Federal Communications Commission regulations."
>
> Is that not a dandy group from which to choose the incorporators for a corporation which is supposed to protect the public interest? The committee doesn't suggest by any remote stretch of the imagination that the incorporators be selected in such a way that they represent the American public who are expected to participate as shareholders. There is no suggestion that the incorporators who will arrange the initial offering of stock by this corporation, select its officers and serve as its board of directors be representative of the American public.
>
> The group suggested for nomination by the President is a group which would one and all have a built-in conflict of interest

> with planning, organizing, developing, and operating the corporation consistently with the public interest and with the interest of the individuals who may eventually become stockholders in such a private corporation.
>
> Under normal corporate procedure, the incorporators of any corporation are ones who have a financial interest in the successful establishment and organization of the corporation. It is this interest which they are expected to protect and in this way we depend upon having a corporation created which will be consistent with the profit motives involved. Section 302 apparently fails to recognize the fact that the incorporators selected by the President will become directors of the corporation. As such, their fiduciary obligations under law will not be to the Federal Government.
>
> The fiduciary obligations which will be imposed upon these directors will be obligations to the corporation itself.
>
> There is certainly a crying need for a standard to be built into this act to insure that these incorporators in their capacity as such, and in their subsequent capacity as directors, will act consistently with the public interest in mind.
>
> There is a great deal more involved in the success and in the operation of the satellite corporation than a normal profit motivation in the typical private corporation.
>
> Section 303 provides that three members of the board of directors shall be appointed by the President of the United States by and with the advice and consent of the Senate. I believe I am correct, Mr. President, in stating that the single sentence referring to these directors and their appointment by the President appearing in section 303 is the only reference to the presidentially appointed directors contained in the bill.
>
> There is nothing which indicates that the nature or extent of their obligations in serving as directors is any different from the obligations of directors selected by either of the groups of shareholders who may elect the remaining 12 directors. There is no standard established in the bill which would provide a yardstick for judging the performance of these three presidentially appointed directors. The bill contains no indication that their appointment is particularly intended to protect the public interest. The committee report of the Senate Commerce Committee does not give any indication that the members of the board who are appointed by the President have any responsibilities to the President or to the public which are different from the remaining members of the board.
>
> If we refer back to the language of section 301 which makes the District of Columbia Business Corporation Act applicable to the satellite corporation, we see an indication that the Presidential directors would normally be anticipated to act as fiduciaries of the corporation itself and that their responsibilities are to the corporation rather than to the public. I think there is a real possibility that we might place the men appointed by the President in an undesirable position. Certainly the public has a right to expect that the President would appoint individuals who would protect the public interest. Yet, as a matter of law, these individuals have a primary responsibility which is different. In this respect, the bill gives a false sense of security for, even though the directors are appointed by the President, they will serve for 3-year terms and will be responsible to the corporation and would be subject to the same type of shareholder derivative suits for breach of fiduciary obligations as the directors who are elected either by the carrier shareholders or by the noncarrier shareholders.

That is what I said, last August, Mr. President. And those words are every bit as appropriate, today, as they were 9 months ago. Indeed, they may be more important, now than ever.

There is very little time left to attempt to straighten out exactly what it was we were trying to accomplish when we passed the Communications Satellite Act.

Mr. President, I am very proud of the fact that I was one of those who spoke against the bill and voted against it.

The horse is out of the barn and we are about to lock the door. We had better think carefully, Mr. President, because this is a wild, unique type of horse. It is going to be around for a long, long time and the U.S. Senate and the American people are going to have to live with it.

Let me, therefore, briefly reiterate my position with respect to the status of these nominees. I will attempt to make clear why the point of order that will be before us tomorrow must be upheld, and why these incorporators are purely private businessmen and not public officers. My opinion is based on four points: First, the Communications Satellite Corp. is wholly a private corporation for profit, and is not an agency of the U.S. Government; second, these incorporators, and later the directors appointed by the President, will not be officers of the United States but, like the other directors and like the directors of any ordinary corporation, will owe their total loyalty and fiduciary duty to the private pecuniary interests of the corporation and its stockholders; third, therefore, on this occasion, use of this procedure, which traditionally and constitutionally is used for the confirmation of nominations of ambassadors, judges, and officers of the United States pursuant to article II, section 2, clause 2 of the Constitution, is improper and unconstitutional; and fourth, the implications of the confirmation of the appointment of these incorporators by this traditional procedure are wholly false and undesirable.

A little while ago there was a colloquy between the Senator from Rhode Island and the Senator from Wisconsin as to the duty of an individual Senator at this point in the procedure—as to whether he should wait until the Supreme Court acts; and as to whether there is an obligation to vote for an act which he, in his heart and in his judgment, feels to be improper and unconstitutional and beyond the authority granted by the Constitution.

Regardless of what has been passed or how it was passed—whether by a unanimous vote or by a divided vote—as my colleague from Tennessee [Mr. GORE] said, the Constitution is the supreme law of the land. A Senator, under his oath of office, must apply the advice-and-consent section as he thinks it can be applied constitutionally. It can be applied constitutionally only to an officer of the Government of the United States or to a treaty.

The Attorney General has said—and nobody has said otherwise—that these men are not to be officers of the United States.

Before I discuss these points, however, again I want to make it clear that nothing I have said or will say is intended to reflect adversely on the incorporators as persons. I number several of these able men among my personal friends.

So let there be no question in any Senator's mind that I view any of these incorporators, as individuals, with disfavor. Quite the contrary, I have great respect and admiration for their abilities.

All of my remarks are directed at their duties as incorporators and directors of the corporation, not at their qualifications as individuals.

I. THE COMMUNICATIONS SATELLITE CORPORATION IS WHOLLY A PRIVATE CORPORATION FOR PROFIT, AND IS NOT AN AGENCY OF THE U.S. GOVERNMENT

If there is anything on which the Communications Satellite Act of 1962 is clear, it is that the Communications Satellite Corp. is wholly private and nongovernmental in character. Section 301 of the act provides:

> There is hereby authorized to be created a Communications Satellite Corp. for profit which will not be an agency or establishment of the U.S. Government.

If some Senators are now confused on this issue, the incorporators, themselves, are not. Mr. Bruce G. Sundlun, who happens to be a personal friend of mine, during his testimony, explicitly disagreed with the opinion of the Senator from Nevada [Mr. CANNON] that the corporation is not "an entirely private corporation, but rather a semipublic one." Mr. Sundlun said:

> No, sir. I think that this corporation is definitely a private corporation * * *. We are conscious that there is a strong public interest factor in this corporation. But I submit, sir, that it is really and actually a private corporation.
>
> Senator SYMINGTON. You mean more so that a public utility?
>
> Mr. SUNDLUN. I think we are a regulated public utility.
>
> Senator SYMINGTON. So you would say that it was a private corporation comparable to a private utility?
>
> Mr. SUNDLUN. Yes, sir.

Mr. Sundlun also suggested that the corporation, like other private corporations for profit, might go into other lines of business.

Again, I would like to quote from his testimony. He said:

> If this corporation should at any time become competent in any technical fields collateral or consistent with our own purpose, we would assume that as a private company we would be eligible to compete with other private companies for contract business.

Senator SYMINGTON asked:

> Like what?
>
> Mr. SUNDLUN. Conceivably technical research.
>
> Senator SYMINGTON. You mean like the Rand Corp.?
>
> Mr. SUNDLUN. A.T. & T., I.T. & T., RCA.

As has so often been pointed out, one of the big evils involved is the impression that the public will have. Here will be a corporation getting into other kinds of business, competing with A.T. & T.—which needs some competition, I will concede—I.T. & T., and RCA, in trying to get business. The public will have the impression, as a result of what the Senate is doing, that the corporation has some unusual sanctity because its officers have been given the sanction of the U.S. Senate.

In all sincerity, I put this question to my colleagues: Did you realize, when you voted for the Communications Satellite Act, that you were creating a purely private business venture that can sell anything it wants—that can offer to the public products and services other than space satellite communication services? And, had you known this, would you have voted to create such a corporation, without limiting the areas of commerce into which its congressionally granted monopoly extends?

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

Mr. KEFAUVER. I yield.

Mr. LONG of Louisiana. Although it may not have been so understood by those who drafted the bill, would it be legally possible for the directors to sell the corporation, with all the public investment that has been made in this area, to the Soviet Union?

Mr. KEFAUVER. There would be no limitation under the act. There is nothing in the act to prevent such a sale. Only the laws which apply to all private business corporations would affect such a sale.

Mr. LONG of Louisiana. And there would be no conflict of interest if that were done?

Mr. KEFAUVER. There would be no conflict of interest.

Mr. LONG of Louisiana. The prime consideration would be to get all the money they could get out of it?

Mr. KEFAUVER. That is correct. They could sell it to the Soviet Union, and they would not be subject to the conflict of interest laws. They could buy A.T. & T. and sell it to the Soviet Union, if they had the money to do it.

I think the Senator from Louisiana has raised a very interesting question. I only wish more Senators were present to hear it.

I am sure Members of the Senate thought they were placing some kind of public responsibility around these directors. Now it turns out, as was stated at that time, that there was no restriction then, and there is none now. The directors of the corporation can get into some business other than space satellite communications.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. MORSE. As a great defender of the President of the United States, I yield to no one in this body in my defense of him. I am satisfied that the President was not aware of the implications of the questions of the Senator from Louisiana when he recommended this bill to the Congress. I said earlier this afternoon that I thought action on this matter should be held up until the President of the United States can be rebriefed, or debriefed, in regard to the satellite law. My confidence in the President of the United States is such that I believe—and I want to continue to believe—that if he had all the information, all the argument, all the data that have gone into this debate this afternoon, he would agree that what we ought to do first is to amend the Satellite Act so that we stop the dangerous deception of the American public and potential purchasers of stock in regard to the legal nature of the entity established by the Congress of the United States, by the exercise of its very unfortunate, mistaken judgment last year, in making it the law of the land, until at least the Supreme Court declares this section of the act unconstitutional.

Mr. KEFAUVER. I thoroughly agree with the distinguished Senator from Oregon. He is a great constitutional lawyer. In any action we may take we should consider very gravely the question the Senator from Louisiana has raised.

What if an offer were made by the Soviet Union and the price were so attractive that the directors could not possibly deny such an advantage to the stockholders? They might get themselves in trouble if they did not act favorably on such an offer of the Soviet Union, or Poland, or some other nation.

I wonder if the Senator from Louisiana has thought about that.

Mr. LONG of Louisiana. The Senator knows that 50 percent of the stock is reserved for communications common carriers, but the other half of it is available for sale to the general public. I had not explored the question, but the thought occurred to me that, in view of the fact that the whole operation is for private profit, and since there would be no conflict of interest, it is clear there is no obligation owed to the people of the United States to protect their interest, even though those in the Corporation have complete control of our space communications.

The Senator has made an important point in stating that in the act passed last year the Senate divested itself of power we might have had to protect this Nation's position in space communications. We lost it completely to the profit incentive of those who would be officers, directors, and stockholders of that corporation.

As the Senator has so well pointed out, we would be making a fool's play by confirming the nominations of persons who may have no responsibility to the Government.

Mr. KEFAUVER. More and more people are beginning to realize that fact. They have exactly the same responsibility to us that the directors of General Motors have toward us—no more and no less.

That fact is very regrettable; and it will do the history or the tradition of the Senate no good for the Senate to take any action on something we have no business doing anything about.

Mr. LONG of Louisiana. The Senator knows that a great public interest is involved. However, as pointed out in the Attorney General's letter, when it is stated that there can be no conflict of interest problem, it is meant that there is no obligation owed to the United States, other than the obligation that any citizen owes to his country.

Mr. KEFAUVER. The Senator is correct; and if the directors act badly—and I hope none of these directors will do so—we have no right to impeach them. We have none of the rights we usually have with respect to any officer of the United States.

Despite some hopeful language in the preface to the Communications Satellite Act of 1962, and despite the common, loose characterization of the Communications Satellite Corp. as "quasi-public," it is wholly illusory and completely incorrect to say that the corporation has any public character whatever.

The language of the act is exactly contrary. All of the corporation's stock will be privately owned. The corporation is an enterprise for profit and, presumably, as much profit as it can garner within the public utility regulation to which it is subject. Any public benefit from the corporation will be indirect and incidental, as is the case with any private corporation. The corporation's objective is the advancement of the pecuniary interests of its stockholders, and the corporation is bound to do nothing inconsistent with that objective.

II. THE INCORPORATORS ARE NOT OFFICERS OF THE UNITED STATES

There can be no doubt that the incorporators, and the presidentially appointed directors who follow, will not be officers of the United States in any sense. Rather, they will occupy a completely private station with a wholly private mission. Their entire loyalty and their sole duty will be to the pecuniary interests of the corporation and its stockholders.

An opinion of the Attorney General, dated October 25, 1962, is addressed precisely to this question, and I will quote a few of its more pertinent passages:

> With these directives in the act there would seem to be no doubt that the incorporators, as directors, will have the same status and responsibilities as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.
>
> I find nothing in the act or its history to justify a different view as to the position of the incorporators during the period prior to the formation of the corporation. Their mission during that time places on them the same obligation for the furtherance of private interests as their later duties as the intitial board of directors, and in essence is therefore a private mission. Turning now to the three directors whom the President will appoint to the regular board, I need do little more than refer again to the fact that section 301 makes the Communications Satellite Corp. an enterprise for profit which will not be an agency of the Government. The other 12 members of the board, who are to be elected by the stockholders, will obviously have the same private status as individuals serving on the board of an ordinary business corporation. The act makes no distinction, except in the method of selection, between the directors appointed by the President and the elected directors.
>
> Thus, there appears to have been no intention on the part of the originators of the legislation to create directors who would be officers of the Government, but rather an intention to dissociate the Government from the directors.
>
> In my opinion neither that relationship (that the President may use his directors to keep himself informed) nor their concern for the public interest beyond that ordinarily expected of the directors of a private corporation would put the mark of a public station on the board memberships of those three directors.

In all, the legislative history regarding the directors to be named by the President supports the view that they, like the others, will occupy private posts and not be officers of the United States.

The Attorney General concludes his opinion with the statement that if these incorporators and the presidentially appointed directors were officers of the United States, they would be subject to impeachment, and that is unlikely to have been Congress' intention.

If there is no objection, Mr. President, I ask to have printed in the RECORD, at this point in my remarks, the opinion of the Attorney General in its entirety.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., October 25, 1962.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: I have the honor to reply to your request for my opinion on a question arising out of the Communications Satellite Act of 1962 (hereinafter referred to as the "act").[1] That question is whether incorporators appointed by the President, with the concurrence of the Senate, to effect the establishment of the communications satellite corporation authorized by the act are officers of the United States by virtue of such appointment.[2]

A similar inquiry will no doubt arise, after the incorporators have completed their work, with regard to those members of the new corporation's board of directors whom the President is authorized to appoint, again with the concurrence of the Senate. I am therefore taking the liberty of advising you with regard to the presidentially appointed directors, as well as the incorporators.

Section 302 of the act provides for the incorporators as follows:

"The President of the United States shall appoint incorporators, by and with the advice and consent of the Senate, who shall serve as the initial board of directors until the first annual meeting of stockholders or until their successors are elected and qualified. Such incorporators shall arrange for an initial stock offering and take whatever other actions are necessary to establish the corporation, including the filing of articles of incorporation, as approved by the President."

Section 303(a), providing for the new corporation's regular board of directors, reads in pertinent part as follows:

"The corporation shall have a board of directors consisting of individuals who are citizens of the United States, of whom one shall be elected annually by the board to serve as chairman. Three members of the board shall be appointed by the President of the United States, by and with the advice and consent of the Senate, effective the date on which the other members are elected, and for terms of 3 years or until their successors have been appointed and qualified, except that the first three members of the board so appointed shall continue in office for terms of 1, 2, and 3 years, respectively, and any member so appointed to fill a vacancy shall be appointed only for the unexpired term of the director whom he succeeds. Six members of the board shall be elected annually by those stockholders who are communications common carriers and six shall be elected annually by the other stockholders of the corporation. * * *."

For the reasons discussed below, I am of the opinion that neither the incorporators nor the presidentially appointed directors are to be classified as officers of the United States.

The method of appointment directed by sections 302 and 303(a) is of course derived from the following portion of article II, section 2, clause 2, of the Constitution:

"The President shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments."

This language has the effect of prescribing that an individual can become an officer of the Government in the constitutional sense in only two ways—i.e., by appointment by the President with the concurrence of the Senate, or by appointment by the President alone, the courts or heads of departments.[3] We are interested here, of course, in the first method.

It will be seen that the first part of the quotation from article II, section 2, clause 2, provides for nomination by the President and confirmation by the Senate of certain specified officers and, with exceptions not relevant here, "all other officers of the United States, whose appointments * * * shall be established by law." This language means, when read with that which immediately follows it, that every appointment of an officer of the United States which is authorized by law, other than of an "inferior" officer, must be preceded by nomination and confirmation. However, article II, section 2, clause 2, does not state, and it does not follow therefrom, or from anything else in the Constitution, that every appointment authorized by law which is preceded by nomination and confirmation necessarily renders the appointee an officer of the United States regardless of his functions and the provisions of the law pursuant to which he was appointed. Nor, so far as I am aware, are there any precedents which reach that conclusion.[4] Indeed, there is a longstanding practice which points away from it. Article I, section 6, clause 2, prohibits an appointment of a Member of Congress "to any civil office under the authority of the United States, which shall have been created" during the term for which he was elected and prohibits a "person holding any office under the United States" from membership in Congress during his continuance in office. Nevertheless, Presidents have on many occasions appointed Members of Congress, with or without the advice and consent of the Senate, as commissioners to negotiate treaties and other international agreements or to represent the United States at meetings of international organizations.[5] These appointments can be reconciled with the prohibitions of article I, section 6, clause 2, only on the theory that, although made in accordance with the methods prescribed by article II, section 2, clause 2, for the appointments of "officers of the United States," they nevertheless do not place Members of Congress within that classification.[6]

In short, I find no constitutional requirement or precedent that the incorporators and presidentially appointed directors of the Communications Satellite Corp. be treated as officers of the Government merely because of the method of their appointment, and I find the precedent involving article I, section 6, clause 2, to be persuasive of the view that such method of appointment is not determinative. It is therefore necessary to look to other factors.

The classical definition pertaining to an officer is written in terms of the position he holds, as follows:[7]

"An office is a public station, or employment, conferred by the appointment of government. The term embraces the idea of tenure, duration, emolument, and duties."

Examining the position of the incorporators first, I believe it can reasonably be held that since they have been given merely a temporary and special task, the position does not meet the tests of office set forth in the second sentence of this definition.[8] However, I believe that a more fundamental issue is whether the incorporators are the occupants of a private, rather than a public, station.

Section 302 of the act in general requires that the incorporators discharge two successive responsibilities. First, they are to bring the Communications Satellite Corp. into being. Thereafter they are to serve as its initial board of directors until the qualification of a regular board. The nature of their role in carrying out the latter function is fixed by section 301 of the act, which states that the new enterprise is to be a "corporation for profit which will not be an agency or establishment of the U.S. Government" and, subject to the provisions of the act, is to be governed by the District of Columbia Business Corporation Act. With these directives in the act, there would seem to be no doubt that the incorporators, as directors, will have the same status and responsibilities as individuals serving on the board of an ordinary business corporation and will be holding private, not public, posts.[9]

---

[1] Public Law 87-624, 76 Stat. 419, approved Aug. 31, 1962.

[2] Although the incorporators whom you recently named are serving under recess appointments, they of course have neither more nor less of the character of officers of the United States by reason of their temporary lack of Senate confirmation.

[3] *United States* v. *Germaine*, 99 U.S. 508 (1878); *Burnap* v. *United States*, 252 U.S. 512, 515-516 (1920); Corwin, "U.S. Constitution, Annotated" (1952 ed.), p. 452. These authorities also point out that, except for the President and Vice President, the portion of the Federal civil service comprised of persons other than officers in the constitutional sense consists of those individuals, generally termed employees of the United States, who are appointed by officials not specifically given appointing power by the article II, section 2. The directors and incorporators of the instant corporation are obviously not in this category of appointees.

[4] Cf. the following colloquy between two Congressmen in the course of a committee hearing on the question whether one of them, who had been appointed to a temporary commission by the Speaker of the House of Representatives, thereby became an officer of the United States:

"Mr. SMITH. Do you mean that to be officers of the United States they must be appointed by the President and confirmed by the Senate or be appointed by courts of law or by the heads of some one of the departments?

"Mr. MOODY. Yes.

"Mr. SMITH. The point I would like to have you answer is whether it is necessary, to constitute a person an officer under authority of the United States, that he shall have been appointed in that way?

"Mr. MOODY. That is my opinion. I would not, however, adopt the converse proposition, that everybody appointed in this manner was necessarily an officer of the United States." H. Rept. 2205, 55th Cong., 3d sess. p. 11.

See also, for a similar view in a somewhat different context, 2 Story, "Commentaries on the Constitution" (5th ed., 1891), p. 362: "In many cases of appointments, Congress have required the concurrence of the Senate, where, perhaps, it might not be easy to say that it was required by the Constitution."

[5] Corwin, "The President, Office and Powers" (1957 ed.), p. 71. For a statute expressly recognizing the Presidential practice of appointing a Member of Congress as a representative of the United States at an international meeting, see section 2 of the act of July 30, 1946, 60 Stat. 712, 22 U.S.C. 287n, which is concerned with UNESCO.

[6] Corwin, "The President, Office and Powers" (1957 ed.), p. 71. For conflicting views on this point see H. Rept. 2205, 55th Cong., 3d sess., and S. Rept. 563, 67th Cong., 2d sess.; cf., act of July 30, 1946, footnote 5, supra.

[7] *United States* v. *Hartwell*, 73 U.S. 385, 393 (1867).

[8] *Matter of Hathaway*, 71 N.Y. 238, 243 (1877); *McArthur* v. *Nelson*, 81 Ky. 67, 71 (1883); see also Corwin, "U.S. Constitution, Annotated" (1952 ed.), pp. 447-449.

I find nothing in the act or in its history to justify a different view as to the position of the incorporators during the period prior to the formation of the corporation. Their mission during that time places on them the same obligation for the furtherance of private interests as their later duties as the initial board of directors and in essence is therefore a private mission. I recognize that the provision in section 302 requiring the President's approval of the articles of incorporation filed by the incorporators conceivably may lend support to an argument that in preparing and filing them, the incorporators are acting as officers subordinate to the President whose work is subject to his review. However, it is probably more accurate to argue that the provision was included simply because the incorporators are not his subordinate officers and he would not otherwise have the right to pass on the articles. In any event, I am certain that Congress did not have in mind creating anything as contrived as a public office to endure only for the presumably short period prior to incorporation, with a conversion to a private office at that moment. In my opinion, the incorporators will at no time be occupying a public station and consequently will at no time be officers of the United States.

Turning now to the three directors whom the President will appoint to the regular board, I need do little more than refer again to the fact that section 301 makes the Communications Satellite Corp. an enterprise for profit which will not be an agency of the Government. The other 12 members of the board, who are to be elected by the stockholders, will obviously have the same private status as individuals serving on the board of an ordinary business corporation. The act makes no distinction, except in the method of selection, between the directors appointed by the President and the elected directors. Therefore, unless there is something in the history of the act to the contrary, it seems plain that the former will also hold a private office.

The legislative history concerning the position of the directors is almost as meager as in the case of the incorporators. However, two points were developed in Senate Commerce Committee hearings which are of significance here. First, it appears that the appointment of a portion of the membership of the board by the President was conceived of as a means of protecting the interests of the public at large, as distinguished from the Government.[10] Second, the members of the executive branch of the Government who participated in the drafting of the act rejected a proposal that there be only one presidentially designated director for fear that he would be considered as the representative of the President and spokesman for the Government. They suggested three in order to avoid that implication.[11] Thus, there appears to have been no intention on the part of the originators of the legislation to create directors who would be officers of the Government but rather an intention to dissociate the Government from the directors.

Senator KEFAUVER made a comment on the Senate floor, similar to his statement with regard to the incorporators,[12] that the three appointed directors will owe a fiduciary obligation to the corporation but not to the Government.[13] In reply, Senator PASTORE, the floor manager of the pending legislation, agreed that they would be fiduciaries of the corporation but stated there was no intention to prevent the President from using them to keep himself informed and to communicate his views to the board of directors as a whole.[14] Whether Senator PASTORE's suggestion as to the relationship between the President and the three directors will prove accurate cannot be foreseen, but in my opinion neither that relationship nor their concern for the public interest beyond that ordinarily expected of the directors of a private corporation would put the mark of a public station on the board memberships of those three directors.[15]

In all, the legislative history regarding the directors to be named by the President supports the view that they, like the others, will occupy private posts and not be officers of the United States.

Finally, it might be noted that to consider the incorporators and appointed directors as public officers would be to deem them within scope of article II, section 4 of the Constitution which makes "all civil officers of the United States" subject to impeachment. I believe it most unlikely that in authorizing the establishment of the unique Communications Satellite Corp., Congress, without affirmatively labeling these incorporators and directors as Government officials, intended that they be subject to impeachment. In other words, I believe that the congressional silence as to their status, when considered together with the provisions of article II, section 4, lends support to my view that neither the incorporators nor the three directors are, by virtue of their appointments to these posts, officers of the United States.

Respectfully,

ROBERT F. KENNEDY,
Attorney General.

FIDUCIARY DUTY OF INCORPORATORS AND DIRECTORS

Mr. KEFAUVER. Mr. President, it is elementary that all directors and incorporators owe a fiduciary duty to the pecuniary interest of the corporation and the shareholders. However lofty the motives of these men may be, as between the public and corporate profit, all directors, however appointed, are obliged by well-established law to favor corporate profit. Nothing in the Satellite Communications Act or its legislative history speaks contrary to this basic corporation law doctrine. The rule is made very clear by Professor Ballantine in that most standard text, "Ballantine on Corporations," 1946 edition, section 85. I quote:

> A business corporation is regarded as being carried on primarily for the profit of shareholders. The discretion of the directors does not, in general, extend to humanitarian purposes or to purely philanthropic donations for the benefit of mankind, or even its employees, at the expense of the shareholders. In other words it is not for trustees to be generous with other people's money.

The matter has been tried. When Henry Ford thought the the stockholders of the Ford Motor Co. had been amply rewarded for their investments, he announced that it would be the policy of the company in the future not to pay any special dividends but to put back into the business all of the company's earnings other than the regular dividend of 5 percent per month. He said:

> My ambition is to employ still more men; to spread the benefits of this industrial system to the greatest possible number, to help them to build up their lives and their homes. To do this, we are putting the greatest share of our efforts back into the business.

Mr. Ford also thought that company had a duty to give to the American public a low-priced car and he announced an $80 price cut of the Ford car to $360.

Minority stockholders disagreed and sued. The Supreme Court of Michigan unanimously ruled for the plaintiffs, and ordered the Ford Motor Co. to pay a special dividend of $19 million to the minority stockholders. The court said:

> "There should be no confusion of the duties which Mr. Ford conceives that he and the stockholders owe to the general public, and the duties which in law he and his codirectors owe to protesting, minority stockholders. A business corporation is organized and carried on primarily for the profit of the stockholders. The powers of the directors are to be employed for that end. The discretion of directors is to be exercised in the choice of means to attain the end, and does not extend to a change in the end itself, to the reduction of profits, or to the nondistribution of profits among stockholders in order to devote them to other purposes." (*Dodge* v. *Ford Motor Co.*, 204 Mich. 459, 170 N.W. 668.)

---

[9] This conclusion is supported by the only part of the legislative history of the act which touched upon the role of the incorporators in this context. Senator KEFAUVER, who opposed the legislation, placed a statement in the CONGRESSIONAL RECORD in which he remarked, among other things, that the fiduciary obligations of the incorporators, as directors, "will not be to the President * * * [or] the public at large * * * [or] the Federal Government" but "will be obligations to the corporation itself" (CONGRESSIONAL RECORD, vol. 108, pt. 12, p. 16905). Senator KEFAUVER's comment would seem to be in accord with the provisions of sec. 301 of the act stipulating the creation of a private corporation, as well as with the general law pertaining to corporate directors. See *Villiainen* v. *American Finnish Workers Soc.*, 236 Minn. 412, 417, 53 N.W. 2d 112, 116 (1952).

[14] CONGRESSIONAL RECORD, vol. 108, pt. 12, p. 16872.

[15] It is interesting to contrast sec. 303(a) of the act with similar legislation of a century ago which seems clearly to have created a public office—i.e., sec. 13 of the act of July 2, 1864, 13 Stat. 356, amending the act of July 1, 1862, 12 Stat. 489. The 1864 legislation authorized the President to appoint 5 of the 15 directors of the Union Pacific Railroad Co. and termed them "Government directors." The statute specifically required that at least one of them be on each committee of the company and that they report to the Secretary of the Interior concerning the company's operations.

The case of Mr. Ford is foursquare with the problem before us. Suppose, for example, that the public would be greatly benefited by the reduction of satellite communication rates. Or, suppose that international understanding and cooperation would be fostered by making international communications less expensive. Or, suppose that the commerce of an underdeveloped nation could be improved by providing its industry with less expensive communications to foreign markets.

But, suppose too, that all these desirable goals would necessitate the reduction of satellite communication rates and the concomitant reduction of the corporation's profits. What would be the position of the Presidentially appointed directors?

The answer is clear. The Presidentially appointed directors, as well as the privately elected directors, would be prohibited by law from reducing rates so as to improve international relations or aid underdeveloped countries. Their single duty is to make the corporation as profitable as possible. Indeed, they would be subject to suit by the shareholders if they sought to protect and advance the public interest at the expense of corporate profitability.

Only once before, 100 years ago, was the device of Government directors tried. The charter of the Union Pacific Railway Co. provided that 5 of the 15 directors be appointed by the President. There was no provision for advice and consent of the Senate. Since, as in the present situation, Congress did not vest in the Government directors any peculiar powers, the Supreme Court held that they had the same powers as other directors, and no more. It held that Congress did not look to any action of the directors for the protection of the public interest, and that the provision for Government directors in no way changed the general rule that the stockholders are the proper parties to take final action in the management of the corporate affairs—*Union Pacific Railway Company* v. *Chicago, Rock Island and Pacific Railway Company*, 163, U.S. 564, 599, 600 (1896).

In short, Mr. President, the incorporators and the Presidential directors must be expected to act as fiduciaries of the corporation itself, and their responsibilities are to the corporation rather than to the public. As the junior Senator from Michigan told the Space Committee:

> The point I sought to make on the record almost the opening day of business was to suggest that Congress really had built in a conflict of interest here that we ought to face up to. If we were one of these nominees, we could have love and affection for the taxpayers but we are being paid by the investors. Unless we change basic corporate law in this act, all of us know what the obligation is. I think we just ought to say so * * * We ought not to try to kid ourselves that their role is anything other than what I have suggested it is.

III. CONFIRMATION PROCEDURE IS IMPROPER

Mr. President, this procedure, which traditionally and constitutionally is used for the confirmation of ambassadors, judges, and officers of the United States pursuant to article II, section 2, clause 2 of the Constitution, is inappropriate on this occasion and, I think, unconstitutional.

It is clear from the notes of the debates in the Constitutional Convention, as well as from common understanding of the checks and balances system, that the Senate's power of confirmation and the Congress' power of impeachment are designed to provide the legislative branch some measure of control over the selection and the acts of the people who administer the Government of the United States, and who represent it. These powers have no other purpose.

Yet, the nominees who are now before us for confirmation will neither administer any part of the Government of the United States nor will they represent the United States. Indeed, as I have stated, they are absolutely obligated to prefer the pecuniary interest of the corporation and its shareholders to the interest of the United States whenever the two may conflict. I suggest that we are here engaged in a completely meaningless act, and that we are thoughtlessly following the form of article 2, section 2, clause 2, without regard to its purpose or its substance. There is no more sense to confirming these incorporators or, later, the Presidential directors, than there would be to confirming the election of the directors of the United States Steel Corp., or some public utility president like Mr. Kappel of A.T. & T.

This matter has always been understood before. No senatorial confirmation was called for in the Union Pacific charter, even though there were Presidentially appointed directors. The American Red Cross and the Boy Scouts of America are chartered by Congress, but they are private organizations and the Senate does not confirm the appointment of their directors. In this, as in other sections of the Communications Satellite Act passed last year, there was less than sufficient thought.

I would ask the Senate to consider seriously whether this proposed act of confirmation is consistent with the U.S. Constitution. Every Member of this body has an oath and a responsibility to the Constitution. I think the responsibility is the more weighty in a case such as this, where the matter probably never will be presented to any court. Ours is a Government of limited powers, and there is no authorization in the Constitution for senatorial confirmation of any but ambassadors, judges, and officers of the United States. By confirming the officers of a private corporation, we are expanding the authority of the Senate beyond the limits prescribed by the Constitution, itself.

It seems to me that the Senate's act of confirmation today would be not only unconstitutional, but also irrelevant and meaningless. The only meaning that it might have is that these incorporators will be officials of the United States and somehow responsible to the Congress and that they will be engaged in serving the public interest. Nothing could be further from the truth.

IV. THE IMPLICATIONS OF THIS CONFIRMATION PROCEDURE ARE WHOLLY UNDESIRABLE

The implication of this confirmation procedure to the public, to foreign nations, and perhaps to the nominees themselves is that these are Government officers with their primary duty to the public, and that the Communications Satellite Corp. is a quasi-public enterprise. This is wholly untrue. I think it is a most serious objection that the Senate should not imply by its actions something which is not the truth.

The security-buying public will unavoidably be misled. As in the case of federally insured deposits in savings banks and savings and loan associations, this Federal coloring appears to guarantee safety. Of course, in fact, there is no guarantee of safety with respect to the Communications Satellite Corp. as is provided by FDIC and other Government insurance programs.

Public scrutiny and criticism of the actions of the corporation, its services and rates, will be dulled and distorted by the fase belief that in this quasi-public enterprise with Government incorporators and Government directors on the board, the public interest is well cared for. Again, there is no truth in it.

As with the postal service, foreign nations may expect service beyond that which revenues justify. They will be misled and our country will be embarrassed.

Although confirming these nominees may seem to implying the opposite, the truth is this: When our foreign policy requires 24-hour service with African nations, and the revenues of that service will not support it, the Presidentially appointed directors must vote against it. When it is proposed that the corporation should give the Government or the USIA a preferential rate because their business is the public's business, the Presidentially appointed directors must vote against it. When it is proposed that there be a major cut in rates because service will thereby be provided to very many more people and businesses, but yet the cut would lower the net revenues of the corporation, the Presidentially appointed directors, no differently than all the other directors, must vote against it.

We are placing the men appointed by the President in an undesirable position. The public will expect them to give their primary loyalty to the public interest but the law obliges them to serve the corporate purse. Let us not abet this delusion, and abase our constitutional procedure, by confirming the appointments as though we were appointing public men.

Mr. MORSE. Mr. President, the first thing I wish to do is to extend my sincere congratulations to the Senator from Tennessee [Mr. KEFAUVER] for the exceptionally able and cogent, and, in my judgment, unanswerable speech he has just made to the Senate. What he has said to the American people and what we will have to tell the American people for some time to come is that the Congress should not be asked to perform an empty and meaningless gesture so far as any legal substance is concerned. In my judgment the confirmaton of the nominations of members of the board of directors has no legal significance whatever, except that it meets the form of a law passed by Congress that never should have been passed in the first place, a law which is against the public interest, and a law, as far as this particular section relative to Presidential appointment of members of the board of directors is concerned, I consider to be unconstitutional.

I am perfectly willing, after we have made the legislative record in this debate today and tomorrow, to abide the decision of the Supreme Court of the United States, if, as, and when we can get the issue before the Court. Here, too, as in connection with so many other constitutional issues, the problem is a procedural one of being able to get the issue before the Supreme Court for determination. However, I am satisfied that that can be done, and I think it important that it be done, because I believe the precedent which is being started by the Kennedy administration with respect to this matter must be stopped for the good of the country. If the President of the United States is not willing to propose amendments to the Satellite Act which was passed last year, after he has had ample time to study the act and consider the legal problems we are raising, then the people of the country must make it very clear to the administration that the act must be amended in the public interest.

In my opinion—and I speak as a Democrat—the Democratic Party cannot justify, from the standpoint of the public interest, the unfortunate precedent which is being established in this instance. The Democratic Party, under the leadership of President John F. Kennedy, has the obligation to correct a mistake—for this administration made a mistake last year in urging the passage of the bill in the form in which it was passed, with the procedure embodied in the bill to have the Senate confirm Presidential appointments to a board of directors of a private corporation, when we cannot do a single thing with respect to the exercise of the powers of the board of directors by its members. In my judgment, this is a misuse of Senate procedure, and I think it ought to stop.

Mr. KEFAUVER. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. KEFAUVER. I thank the Senator for his comments about my speech. I agree with him that a mistake was made and that the Senate played a substantial part in the making of that mistake. Anyone who examines the RECORD can see that many amendments were offered which would have changed the situation. But at that time the Senate was proceeding under cloture, and no consideration was given to the amendments. I believe that as time goes on there will be much regret that some of the amendments were not discussed. I believe that some of the amendments which were proposed, which were unquestionably in the public interest and would have improved the bill, will one day be recommended for amending the Communications Satellite Act.

Mr. MORSE. If the Senate last year had adopted any one of a number of major amendments offered by the senior Senator from Tennessee [Mr. KEFAUVER], it would not have made the mistake which was made when a majority of the Senate incorporated in the bill the section the unconstitutionality of which I shall shortly discuss.

I wish to commend not only the senior Senator from Tennessee for the able and cogent argument he has made in the speech just delivered; I also wish to commend the junior Senator from Tennessee [Mr. GORE] for the equally able, and, I believe, unanswerable argument which he presented in opposition to the policy of confirming these nominations to the board of directors.

Likewise, it is my pleasure to be associated with the junior Senator from Wisconsin [Mr. NELSON], who in his major maiden speech in the Senate stamped himself clearly as one who can be counted upon to devote himself to the dedicated interests of the American people.

To the senior Senator from Pennsylvania [Mr. CLARK], the junior Senator from Alaska [Mr. GRUENING], the junior Senator from Louisiana [Mr. LONG], and the other Senators who spoke on this side of the issue in the debate this afternoon, I extend my compliments and congratulations and my very sincere thanks.

Mr. KEFAUVER. Mr. President, I thank the Senator from Oregon. I shall listen to his speech with much interest.

Mr. MORSE. Mr. President, I believe there is due from me an explanation as to why this rather lengthy legal argument will be made at this late hour. I am not doing it by personal choice; I am carrying out what I consider to be my obligation of cooperation with the Senate. It is felt that this argument ought to be in the CONGRESSIONAL RECORD as a part of the arguments which have been presented on the floor of the Senate this afternoon, so that, at least, it can be in printed form for reference by Senators prior to the vote tomorrow.

Furthermore, it was felt, in fairness to the press, that the press ought to have this argument made available to it, so that if it is desired to have the background material on which the point of order will be raised, the reasons will be available to the press for a better understanding of the legal basis of the point of order.

Mr. President, at an appropriate time tomorrow I shall make the point of order that since the Senate is without constitutional authority to advise and consent to the nominations of private incorporators of a private business enterprise, and since the nominees before the Senate are private incorporators of a private business enterprise, the nominations are not properly or constitutionally before the Senate at this time, and will not be at any other time.

At the time that the point of order is made, I shall, depending upon the ruling of the Chair, follow whatever other parliamentary course of action permitted under the rules to lead to a yea-and-nay vote, if it becomes necessary to have the question settled by a yea-and-nay vote.

Mr. KEFAUVER. Mr. President, do I correctly understand that the Senator from Oregon will not make his point of order tonight, but will make it tomorrow?

Mr. MORSE. I have just served notice that the point of order will be raised tomorrow, and have stated what the point of order will be when raised. I shall not make the point of order tonight. I shall now make my argument in support of the point of order.

There is another reason why this speech is being delivered tonight. I do not know why such a rumor should ever have developed, but several members of our group came to me and said they had been asked by the press whether our group was going to attempt to filibuster against the confirmation of the nominations. We never had any such intention. Nothing could have been further from our thoughts. We do feel that an adequate record should be made, setting forth our point of view and our argument against the procedure we are being asked to follow. We feel that my speech tonight, which will complete our case in chief and will remove any possible conjecture on the part of any person as to any charge that we are undertaking to filibuster in the Senate.

When I conclude my speech tonight, so far as I know the case in chief will be made by those of us who are opposed to the President's request that the Senate act on the question of confirmation of the nominations, under article II, section 2 of the Constitution. We do not believe that section applicable. We do not believe the Senate can make an unconstitutional act constituational by including a provision calling for confirmation by the Senate of Presidential nominations of members of the board of directors of the private corporation.

I. THE COMMUNICATIONS SATELLITE CORPORATION IS A PRIVATE BUSINESS ENTERPRISE, AND ITS INCORPORATORS AND DIRECTORS ARE NOT OFFICIALS OF THE U.S. GOVERNMENT WITHIN THE MEANING OF ARTICLE II, SECTION 2 OF THE CONSTITUTION

Mr. President, my first major point is that the Communications Satellite Corporation is a private business enterprise, and its incorporators and directors are not officials of the U.S. Government within the meaning of article II, section 2, of the Constitution.

My argument with respect to the unconstitutionality of Senate confirmation of the nominations of incorporators of the Communications Satellite Corporation is premised on the fact that in their new positions these men will not be officers of the United States. It is the conviction of many of us that these men will be purely private businessmen.

The act itself makes clear that the incorporators and directors will be purely private businessmen. In light of the vote of the Senate and the actual wording of the act, if there can be any doubt left, I point out that the Attorney General has also gone on the record as follows:

> There would seem to be no doubt that the incorporators, as directors, will have the same status and responsibilities as individuals

> serving on the board of an ordinary business corporation and will hold private, not public, posts. (Letter to the President, dated Oct. 25, 1962, reprinted in hearings, nomination of incorporators, Senate Committee on Aeronautical and Space Sciences, 107, 109 (Mar. 19, 1963).)

I shall not argue this point any further. I believe it is finally and conclusively laid to rest by the letter from the Attorney General to the President of the United States.

Mr. President, before I proceed to discuss the question of constitutionality in connection with the perplexing situation which now confronts the Senate, I should like to pose a question relating to the "privateness" of this corporation. This question was brought to my attention by, among other things, the hearings on the corporation incorporators, held by the Senate Space Committee.

The corporation has arranged to borrow, from a syndicate of 10 banks, $5 million with which to finance its first year of operations. Yet, this corporation has no assets to put up as security.

My question is this: What moneys are being used to secure this $5 million loan? Are they public funds? I believe the American people have a right to know whether public funds are being used to secure a private loan to a private, profit-seeking business.

During the debate today, it was said several times that there are no funds, public or otherwise, by way of security to back up the loan; but this is being done by the 10 banks, on their own, without any security. If I were a depositor, I would not want any of my money placed in any of those banks, if that is the way they are operating; and if I were a stockholder in any of them, I would certainly initiate a movement to remove the board of directors. For I would not wish to be a stockholder of a bank whose board of directors would run the kind of risk which these banks apparently are brazenly and blatantly admitting they are running. Those of us who know anything about the problems which lie ahead for this corporation know that for some time it will be on a rather rocky financial road.

Of course, Mr. President, the fear of some of us who opposed the bill, and the fear of some of us who are opposed to the procedure the Senate is asked to follow now, is that part of the reason for requiring Presidential appointment of three members of the board of directors is that later on it will be possible to plead, "Well, after all, did not the Government give a color of governmental interest in the operations of the corporation; and now that it is in financial difficulty, should not the Government bail it out?"

Mr. President, it is elementary that when any procedure or policy is easily susceptible of abuse, a change in it should be made. All law-school students learn that after they are admitted to the bar, as officers of the court and as private practitioners of the law, they always have a public duty to scan very carefully the legal procedures, in order to determine whether they are subject to abuse. If they are found to be subject to abuse, then, as officers of the courts, the members of the bar should advocate the amendment, modification, or elimination of the features which could be used in a manner which would abuse the public interest.

That is why I have said several times today that I believe this administration should take a new look at this law. It has been passed, but it is not inviable. It is subject to repeal and to modification. I believe the administration should take the leadership, right now, in recommending some modifications and amendments of this law. The Senate should be considering changes in the law, rather than debating the confirmation of directors under the law.

In my opinion, Senators as public officials have the solemn obligation to see to it that members of the public are not misled. Let no one tell me that caveat emptor applies to such a situation. Let no one tell me that the purchasers of the stock of the corporation should proceed on the basis of "let the buyer beware." American citizens, either investors or noninvestors—but we are now concerned with potential investors—have a right to rely on their Government and to place their trust and confidence in it. In this case the Government is guilty of coloration in a bill giving the impression that these Presidential appointees are, after all, to carry out some kind of governmental trust in connection with the operation of the corporation, whereas we know they will not be carrying out any such trust at all, and when we know that their legal obligation is a singular one, a fiduciary one, an obligation to the stockholders to try to make profits for the owners of the corporation, and that they have no obligation of trust at all to the Government. Therefore, I believe it most unfortunate that the President is asked to appoint any members of the board of directors of the corporation. Under the circumstances, he has to make the nominations; he has to carry out his obligation under the law as it stands, insofar as making the nominations is concerned. But the President can recommend that Congress make a change in the law.

I hope that one of the results of this debate will be to cause the President to weigh and review the merits of the position of those of us in opposition to the course of action now proposed, to the end that he may give instructions for the drafting of some amendments that will remove the potential abuses growing out of the procedure encased in the bill.

II. THE SENATE DOES NOT HAVE THE AUTHORITY UNDER THE CONSTITUTION TO CONFIRM THE APPOINTMENT, ELECTION, HIRING OR OTHER SELECTION OF INCORPORATORS OR DIRECTORS OF A PRIVATE BUSINESS ENTERPRISE

In discussing this second point, I want to take up jointly the first two subpoints contained in the brief summary of my speech which Senators will find on their desks tomorrow.

A. Only those powers enumerated in the Constitution are conferred on the Legislature.

B. For the Senate to advise and consent to the nomination of an incorporator of a private business is not necessary and proper within the meaning of the Constitution.

From the earliest days of our Nation's constitutional history, Mr. President, the doctrine of enumerated powers has been a bedrock principle of our limited form of Federal Government. This great doctrine was first stated in the case of McCulloch against Maryland, in 1819, by Chief Justice John Marshall.

That case is so well known, and there are so many extremely distinguished lawyers in the Senate, that I am almost embarrassed to recall it to Senators' attention. Perhaps, however, it will not be presumptuous of me to read the few lines from McCulloch against Maryland which spell out the doctrine of enumerated powers.

> This Government is acknowledged by all to be one of enumerated powers. The principle, that it can exercise only the powers granted to it, would seem too apparent to have required to be enforced by all those arguments which its enlightened friends, while it was depending before the people, found it necessary to urge. The principle is now universally admitted (4 Wheat. 316).

The doctrine of enumerated powers governs the question in point. The powers of Congress are limited. That is the very essence of the form of constitutional democracy which is inherent to government by and for the American people.

Now, the 144-year-old doctrine of enumerated powers does not mean that each and every action which Congress or the Senate may take must be spelled out with specificity in the Constitution. Broad powers are ascribed to the Congress through the commerce clause, for example, and implemented through the necessary and proper clause.

Indeed, this fact was at the heart of McCulloch against Maryland and there found fruition in that great holding of Chief Justice Marshall:

> But we think the sound construction of the Constitution must allow to the National Legislature that discretion, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it, in the manner most beneficial to the people. Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the Constitution, are constitutional.

Congress has unlimited powers to regulate interstate commerce, even where such regulation vitally affects intrastate commerce. And Congress may, without question, adopt all measures necessary to implement this power properly.

Indeed, I do not question for present purposes that Congress is within its constitutional authority in creating the Communications Satellite Corp. if, in its wisdom, it deems it in the best interests of our Nation and our people.

The Communications Satellite Corp. is, after all, no more a monopoly than A.T. & T., and no less regulated than any interstate, privately owned, public utility.

No, that is not my argument. Rather, my point is limited to the constitutionality of sections 302 and 303 of the Communications Satellite Act insofar as they require the advice and consent of the Senate on the nomination of private businessmen.

Here, the Constitution could not be more clear. It specifically limits, in article II, section 2, clause 2, the authority of the Senate to advise and consent to treaties and officers of the United States.

Let me read that portion of the Constitution to the Senate:

> The President * * * shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two-thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for * * *.

There is no constitutional justification for Congress' unilateral expansion of these enumerated powers. There is nothing "necessary" about our confirming the incorporators of the Communications Satellite Corp. No other private business entity in America today finds the Senate's advice and consent a necessary ingredient for operating at a profit.

Similarly, the commerce clause cannot be read in such a way as to negate the clear meaning and limits of the powers enumerated in article II, section 2, without twisting those powers' accepted meaning beyond all recognition.

I have heard it said that the old *Legal Tender* case, 110 U.S. 421, proves that I am wrong in this contention. It has been pointed out to me that that case referred to the power of Congress to incorporate national banks for profit as well settled.

I want to discuss that case and the national banks with the Senate at some length, because in my view, they constitute one of the most persuasive arguments with respect to the utter folly in the Senate becoming embroiled in the affairs of private, profit-seeking business ventures.

First, let me review the Legal Tender case, itself.

In that case, Mr. Greenman, of Connecticut, had purchased from Mr. Julliard, of New York, 100 bales of cotton. Mr. Greenman paid Mr. Julliard with two U.S. Treasury notes totaling $5,000 in face value. Mr. Julliard, apparently suspecting that these notes were not worth the paper they were printed on, objected that such notes, issued during the Civil War under acts of Congress of 1862 and 1863, redeemed in gold after the war, and then reissued under the act of 1878, were not legal tender and did not, therefore, satisfy the debt owed him by Mr. Greenman.

Unhappily for Mr. Julliard, the Court found that these pieces of paper were legal tender, holding that—

> Congress has the power to issue the obligations of the United States in such form, and to impress upon them such qualities as currency for the purchase of merchandise and the payment of debts, as accord with the usage of sovereign governments (Id. at 447).

In reaching this decision, the Court paused to mention a number of acts of Government which had affected the financial life of the Nation, thereby emphasizing the fundamental responsibility of the Government to provide for the existence and smooth functioning of the basic financial tools of commerce. One of the acts which was mentioned was the creation by the Congress of national banks. In an obiter dictum, the Court referred to the well-settled power of the Government to create a national bank for profit.

There were two national banks, the first chartered in 1791 and the second in 1816. Under the charter of 1816, 5 of the 25 directors of the bank were to be nominated by the President, by and with the advice and consent of Congress. To my knowledge, this is the only instance in the entire history of our Nation where the officials of a private, profit-seeking corporation were ever confirmed by the Senate.

Mr. President, it is axiomatic that two wrongs never make a right. In my judgment, in 1963 the Senate of the United States does not stand in a very sound position in trying to justify what I consider to be an unconstitutional course of action on the basis of the old national bank precedent, particularly in view of the fact that the whole national bank system was ultimately repudiated.

I realize that all the circumstances surrounding the national bank case happened a very long time ago. But, since the charter of 1816, creating the second Bank of the United States, is the only precedent for the Senate's advising and consenting to the nomination of private businessmen, we are obliged to carefully analyze the national bank and its Presidentially appointed directors. We must answer the question: Is this a good precedent which the Senate should—in the public interest and under the Constitution—follow?

After all, it is of little importance that something has been done in the past, if that thing which was done was undesirable and unconstitutional.

I approach this question with some humility, because there are a great number of Senators possessed of far greater erudition in the history of our Nation's financial institutions than I.

At the risk of disclosing my modest scholarship in this area of history, however, let me recall for Senators a few facts about the second Bank of the United States.

This bank was, first of all, a bank for profit, and a very profitable one at that. It was possessed of a number of unique and helpful ties with the Federal Government which greatly contributed to its profitability. One-fifth of its capital was subscribed by the Government.

This is a salient operative fact which I would have the Members of this body constantly keep in mind when they are tempted to compare the old National Bank Act with the Satellite Communications Act. In the Satellite Communications Act, there is no recognized investment by the Federal Government in the corporation. This is a great difference in salient operative facts between the act of 1816 and the act of 1962, for, as has been brought out in the debate time and time again, there is no Federal financial participation in the financing of the Satellite Communications Corp.

I repeat the salient fact again in respect to the money subscribed to the Bank Act. It was the repository of the public funds and was free to use these moneys for its own purposes and profit, without paying any interest to the Government. Its ability to issue bank notes was unregulated and unlimited.

In short, it was the most powerful financial institution in the United States during the two decades of its existence—from 1816 to 1836. Its president, Nicholas Biddle, was a man of tremendous power and influence, both economic and political.

I believe it can be fairly said that this tower of financial strength was one of the most vilified and most hated institutions ever created by the National Government. Its opponents included the debtor interests of the West and local banking interests in the East, as well as the working people and supporters of the basic tenets of Jeffersonian liberalism. Local bankers were repressed by the national bank's awesome financial power. Debtors smarted under the tight money policies which the bank enforced.

The political plight of this institution is well known. The U.S. Senate, during the 1820's and 1830's, divided itself into probank and antibank camps, which split party loyalties and State traditions. Not surprisingly, the probank forces, supported by Biddle, were the northern Senators from industrial areas and, as such, outnumbered the bank's opponents.

When, therefore, the charter of the bank was brought up for renewal in 1832, its success in the Senate was certain.

But, as every student of American history knows, the renewal bill was vetoed by President Jackson. The veto message delivered by President Jackson on July 10, 1832, is a great and familiar historical document. In it, Jackson said:

> It is to be regretted that the rich and powerful too often bend the acts of government to their selfish purposes. Distinctions in society will always exist under every just government. Equality of talents, of education, or of wealth cannot be produced by human institutions. In the full enjoyment of the gifts of Heaven and the fruits of superior industry, economy, and virtue, every man is equally entitled to protection by law; but when the laws undertake to add to these natural and just advantages artificial distinctions, to grant * * * exclusive privileges, to make the rich richer and the potent more powerful, the humble members of society—the farmers, mechanics, and laborers—who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their Government.
>
> There are no necessary evils in government. Its evils exist only in its abuses.* * * Many of our rich men have not been content with equal protection and equal benefits, but have besought us to make them richer by act of Congress. By attempting to gratify their desires we have in the results of our legislation arrayed section against section, interest against interest, and man

against man, in a fearful commotion which threatens to shake the foundations of our Union. * * * If we cannot at once, in justice to interests vested under improvident legislation, make our Government what it ought to be, we can at least take a stand against all new grants of monopolies and exclusive privileges, against any prostitution of our Government to the advancement of the few at the expense of the many, and in favor of compromise and gradual reform in our code of laws and system of political economy. (2 Richardson, "Messages and Papers of the President," 590–591 (1896).)

Mr. President, in my judgment that was one of the most historic documents ever penned by Jackson. I say, most respectfully, it is applicable today. It is applicable to the communications satellite law, for in my judgment the communications satellite law in its present form is subject to the same evils and abuses which caused President Jackson to veto the renewal of the bank charter.

I wish to stress Jackson's language on the obligation of the Government to check abuses when procedures which permit abuses are found. That is why, as a loyal supporter, dedicated to the administration, my voice was raised in a critical plea to the President of the United States this afternoon, and here again in this argument tonight, to study this situation as he has never studied it before, for, with his brilliant mind, such a study would lead to the conclusion that the satellite law needs amendment, and quickly.

The satellite law needs the eradication therefrom of any action that can mislead the American people into believing that it is a corporation with a governmental interest. It is important that the satellite law be amended to make perfectly clear to all that it is a 100-percent private business venture, in which the Federal Government has no financial interest, in which the Federal Government is involved in no participation, save and except the duty of the Federal Government, the corporation being a public utility, to see to it that it is regulated in the public interest, as all other public utilities are and should be.

Mr. President, I find it difficult to see how anyone can read Jackson's great veto message, and the sound principles he laid down in that veto message and not be thrilled and moved by it. If one reaches the conclusion, as I think most of us in this day will reach, that Jackson was right, one must likewise reach the conclusion that the request to confirm these nominations is equally wrong.

With these ringing words of Jackson, the era of the Banks of the United States was brought to an end. The Senate was unable, despite the frantic efforts of Biddle to regroup his forces, to find the votes either to overcome or circumvent the veto.

The bank's charter expired in 1836. Thereafter, it continued to operate under charter of the State of Pennsylvania until 6 years later, in 1842, as the result of its overextended loans, mismanagement, and the withdrawal of Federal favors, it collapsed.

It must be remembered, in considering this brief historical sketch and in considering the constitutionality of this private bank for profit, that the purpose Congress sought to achieve in creating the national banks was a fundamentally governmental one—that is, the providing of currency.

This fact, alone, distinguishes the national banks from the corporation whose officials we are now considering. The Communications Satellite Corp., as Incorporator Bruce Sundlun testified before the Senate Space Committee, is a regulated public utility—hearings at 85. Its purpose is an essentially private one, exactly analogous to a telephone company, or power company, or any other public utility.

Yet even if the case of the national banks was not distinguishable from the action we propose to take today, I would still urge that we disregard it.

The national banks were, at the very least, a great mistake. Though constitutional, they were unquestionably an inapposite tool for performing governmental responsibilities. They were never revived after 1836. They are a bad precedent.

I say respectfully to the Attorney General that, in my judgment, the Department of Justice does not cover itself with legal distinction by using them as a precedent in the case pending before the Senate.

I do not believe that merely because the Congress long ago made a mistake in creating a national bank, that we should compound the felony by advising and consenting in the case before us now.

Even more important, however, is the helpful perspective which the history of the national banks gives us with respect to the nomination and confirmation of private, profit-seeking businessmen.

It will be recalled that I pointed out that the Charter of 1816, like the Communications Satellite Act of 1962, provided for the presidential nomination of 20 percent of the directors of a private business, with the advice and consent of the Senate.

But, though the Charter of 1816 did not require it, the fact of the matter was that the Presidentially appointed directors owed their primary allegiance to the President, not to the corporation.

That is another great difference between the two cases. It is admitted on both sides of this argument today that the members of the board of directors in the Satellite Communications Corp. owe their obligations to the stockholders of the corporation. They do not owe any obligation to the President. They do not owe any obligation to the Government of the United States. But that was not true of the National Bank Act. In that case the directors owed an obligation to the President, and not to the corporation, because of the Government's interest in the operation of the bank.

In 1833, the four incumbent directors nominated by President Jackson were directed by the President to prepare a report on the practices and policies of the National Bank. They did so, and in the report which they submitted criticized the practices of the bank and advised that the Government deposits be withdrawn.

I do not know how I can give the Senate a clearer proof of the difference between the Communications Satellite Corp. and the National Bank Corp. It is a difference that is operative in its consequences. It is a difference which, in my judgment, destroys the National Bank Act as a precedent in the case before us. The members of the board of directors appointed by the President under the Bank Act had the obligation to protect the governmental interest in the national bank. There was nothing comparable in that act to the Satellite Communications Act of 1962.

The result of this action is well known. The Senate refused to advise and consent to their nomination. The reason for this refusal, according to Senator Benton, was not that these men were in any way unfit, but rather that they had shown their loyalty to be to the President and not to the bank.

This is an important distinction. Unlike the Presidentially appointed directors of the national bank, the loyalty of the Presidentially appointed directors of the Communications Satellite Corp. will be to the corporation and not to the President.

That has been admitted here today on all sides in the debate.

But even if this was not the case, there is a lesson to be learned from the demise of these bank directors. Suppose that the Presidential appointees to the board of directors of the Communications Satellite Corp. were to reveal, by their acts, that their loyalties were to the President and the American people rather than to the profitability and interests of the corporation. Would the Senate then refuse to confirm their nominations, as it did in the case of the bank directors, 130 years ago?

To me, it is unthinkable that it would.

Further, the implicit conflict which must arise between public and private interests of Presidentially selected and senatorially confirmed directors of a private, profit-seeking business is documented in the case of the national bank.

In 1824, the president of the Washington branch of the Bank of the United States wrote to Nicholas Biddle. In his letter, he alluded to "interests to be attended to other than those of the bank, especially that of the Government," and went on to say that he "deemed it proper to see and consult with the President of the United States."

To this letter, Biddle replied:

> If * * * you think that there are other interests to be attended to besides those with which you are charged by the administration of the bank, we deem it right to correct what is a total misapprehension. * * * The moment this appointment [of the five government directors] takes place the executive has completely fulfilled its functions. The entire responsibility is thenceforward in the directors, and no officer of the Government, from the President downward, has the least right, the least authority, the least pretense, for interference in the concerns of the bank. * * * This invocation of the Government, therefore, * * * is totally inconsistent with the temper and

> spirit which belong to the officers of the bank and the instructions of those who govern it, and who should be at all times prepared to execute the orders of the board, in direct opposition, if need be, to the personal interests and wishes of the President and every officer of the Government. [Letter from Biddle to Thomas Swann, Mar. 17, 1824, Senate document, 23d Cong., 2d sess. No. 17 (Tyler Rep.), 297–98, quoted in Schlesinger, the Age of Jackson, 76 (1946).]

How timely to the situation now before us are these words of Mr. Biddle—written more than a century ago. And how right Mr. Biddle was.

What will happen, Mr. President, when the time comes—as it surely will—that the public interest demands that communications satellite service be provided to areas of the world which will be uneconomical from the point of view of the corporation? Will Mr. Welch write to the U.S. Senate and the President and the American people, and say—as Mr. Biddle said:

> If * * * you think that there are other interests to be attended to besides those [of the Communications Satellite Corp.], we deem it right to correct what is a total misapprehension. The moment the appointment [of the three directors] takes place, the Executive has completely fulfilled its functions. The entire responsibility is thenceforward in the directors, and no officer of the Government, from the President downward, has the least right, the least authority, the least pretense, for interference in the concerns of the [corporation].

If such a letter is writen, it will be a dark day for the American people, and I hope I never see it. Yet I cannot help but be alarmed by the statement which Mr. Sundlun made before the Senate Space Committee, which I will read in a moment.

That is why this law is so unfair to the President of the United States. The Office of the Presidency has been taken advantage of by Congress. When we passed the bill last year, we committed a great wrong against the Office of the Presidency. Instead of passing upon these nominations, we should be proceeding with full speed ahead to amend the communications satellite law. With the present temper and tempo of the Senate, I may be engaged in naught but a parliamentary and legislative gesture by offering such amendments. However, at the appropriate time they will be offered by the senior Senator from Oregon.

I am going to do what I can to take out of the communications satellite law this section that deals with Presidential appointment of directors and with Senate confirmation of those directors.

It is just as true today as it was in history gone by that the Biddle point of view is likely to prevail.

The President of the United States, in my judgment, is being misused in the satellite law. The Chief Executive of this country, elected by the American people, ought not to be subjected to a law that requires him to commit an act of form that has no substance to it.

When we require the President to appoint these directors and the Senate to advise and consent to their confirmation, we are guilty of misleading the American public. The American people are not going to take the time to study the legalities involved and the legal consequences and procedures set forth in a law such as we in the Senate can in the progress of the debate. Therefore I believe that we ought to act, and act speedily on the amendment of the satellite corporation law that will strike from the law this whole section that deals with the matter of Presidential appointment of three members of the board of directors and the advice and consent of the Senate.

I have given instructions to my staff to present to legislative counsel my request for the drafting of an amendment that will carry out the intent that was just expressed on the floor of the Senate.

Returning to the troubling statement of Mr. Sundlun, Senator CANNON had said that he viewed the corporation as being not an entirely private corporation, but rather semipublic in nature. Senator SYMINGTON asked Mr. Sundlun if he agreed with that view and Sundlun replied:

> No sir. I think that this corporation is definitely a private corporation, but in view of its legislative history it is certainly imbued with what the incorporators have time and time again referred to and are cognizant of. We are conscious that there is a strong public interest factor in this corporation. But, I submit, sir, that it is really and actually a private corporation. [Op. cit. at 85.]

Shades of Biddle. Sundlun spoke as a Biddle in connection with the National Bank Act and the corporation that was created thereby. So I say, the straw is in the wind, Mr. President. Let the Senate take notice and beware.

To summarize my remarks on the precedential value of the Legal Tender case and the national banks, let me repeat that these are not precedents which justify our plunging recklessly forward to place the stamp of approval of the U.S. Senate on a purely private business. If the lesson of history is well learned, we will use these precedents to dissuade ourselves from recommitting folly, rather than as justification for an unconstitutional act.

Let there be no mistake about it. When the Senate confirms the officials of a private, profit-seeking business, it puts its stamp of approval on that business and says to the American people: "You can deal with this corporation as though you were dealing with your Government."

In a very real sense, our confirmation will say to the American people: "This corporation is like an agency of the U.S. Government." I realize full well, Mr. President, that the act specifically says that this is not true—that the corporation is not beholden to the Government and the people, but rather to its own profitability.

This was also true, however, of the national banks. Yet, the people not unreasonably believed that the national bank in fact represented the Government. As a result, the Nation was, in the words of President Jackson, drawn to the brink of a "fearful commotion" which threatened "to shake the foundations of our Union."

I do not suggest that the United States cannot weather the mistake the Senate will make if it confirms these nominees. We weathered the national bank crisis and this, too, shall pass.

But, I do urge my colleague to reflect on the inescapable fact that our confirmation of these nominees is not a meaningless, pro forma act. It is one with great significance to the American people. What that significance will be can be seen by reflecting on the turbulent, nearly disastrous history of the national banks.

I will have more to say on this subject later.

Though the charter of 1816 included the words "advice and consent," the question of the constitutionality of using that procedure was not raised in any of the national bank cases. Rather, those cases turned on the constitutionality of extending under the necessary and proper clause, the powers of Congress conferred by article I of the Constitution.

I wish to discuss that paragraph, because I have heard it said in conversations in this body today that the action of the Court on the charter of 1816 is a precedent in respect to the advice and consent clause of the Constitution. That is not a legal fact. The Court did not pass on the advice and consent clause. The Court's constitutional decision in the Bank Act dealt with the "necessary and proper" clause, not the "advice and consent" clause.

One great difficulty of lawyers, from the time they are in law school and throughout their practice, is to see differences in precedents and to understand the limitation of a court decision as it presents itself to a pleader in a legal argument. There is always a temptation for a lawyer to overuse a precedent and to read into a court decision an application of the decision to some legal principle or rule or constitutional provision when such application is not valid.

That is what is happening in the precincts of the Senate, today. There are those who are laboring under the completely mistaken viewpoint of the decision of the Supreme Court in the Bank Charter case of 1816, that the Court ruled on the constitutionality of the law involved in relation to the advice-and-consent clause. The Court did no such thing. The decision of the Supreme Court in the Bank case, in respect to the point of constitutionality, dealt with an entirely different clause in the Constitution—the "necessary and proper" clause. I am not sure that the Department of Justice has caught that distinction in the National Bank case.

Naturally, it cannot be implied that because the issue was not raised by the Court, the application of article II, section 2, to the confirmation of the nominations of private businessmen is thereby deemed constitutional.

This is another elementary point in interpreting and applying the Court decision. There are lawyers who become so overanxious in the use of a case as a precedent that they fall into the fallacious argument that because the Court in a decision did not raise an issue in regard to the constitutionality or unconstitutionality of one section of the Constitution, therefore the case is to be interpreted as an affirmation by the Supreme Court that the application of that section under the operative facts of the case is constitutional. That does not follow at all. It is basic in the interpretation of a legal opinion that the interpreter limit himself to what the Court said, and not seek to use the decision for his side of the case because the Court did not cover some other point. Silence of the Court on a point does not justify interpreting and applying the case as a precedent in support of counsel's position in his brief.

Another case which discussed the extension of congressional powers conferred by article I, was *Luxton* v. *North River Bridge Co.* (153 U.S. 525). In that case, Congress had created a private company to erect a bridge across the Hudson River. Its authority to do so was challenged by the owner of the land on the New Jersey side of the river where the bridge would connect.

The Court upheld the constitutionality of the act which created the bridge company, saying that Congress had the authority to create private companies to build bridges, roads, and railroads under the commerce clause and the "necessary and proper" clause. Since, however, the act did not require Senate advice and consent and did not require the confirmation of any of the company's officers, the issue which now confronts the Senate was not reached by the Court.

Indeed, the question of the constitutionality under article II, section 2, of the Senate's advising and consenting to the nomination of private businessmen has never been considered by the Court. This is not surprising in light of the unprecedented nature of the Communications Satellite Act of 1962.

In conversations about the precincts of the Senate today, I have heard Senators say, "Oh, but that question was settled in *Luxton* v. *North River Bridge Company* (153 U.S. 525)." It was not. That case is not in point. In the Bridge Company case, the act in question did not require the advice and consent of the Senate. There was no application of article II, section 2, so I am at a loss to understand why lawyers, particularly those in this body, are heard to say that this case is in any way a precedent. Again, I am far from convinced that the Department of Justice fully understands the distinction I have just made; but it is elementary in the use of precedents.

In my judgment, no reputable lawyer would get very far in a courtroom if, on the limited point that I am raising in my argument as to the constitutionality of that section of the Satellite Act which requires Senate confirmation of Presidential appointments of directors to a private business corporation were ever put before the court, he were to cite the Luxton case. I can hear the court say to counsel, "On what basis do you argue that Luxton against North River Bridge Company is a precedent to be considered by the court in passing judgment on whether Article II, section 2, of the Constitution has been violated by the Communications Satellite Act?" I am sure that with that question, the lawyer's jaw would drop, because he would be caught without a rebuttal.

That case has no application here.

I wish to repeat that the question of constitutionality, under article II, section 2, of the Senate's advising and consenting to the nomination of private businessmen has never been considered by the U.S. Supreme Court. That is not surprising, in light of the unprecedented situation under the Satellite Act of 1962.

I do not believe that it will be argued that the Federal Government does not have authority to regulate bridges and roads under the commerce clause, or that anyone will argue that the Federal Government lacks authority to build and operate bridges and roads, if that is in the public interest.

Indeed, it is absolutely clear to me that the Federal Government has the authority to build and operate a space satellite communications system, if it so desires. Senators will recall, I am sure, that I argued rather extensively last session that the Federal Government not only has this authority but, indeed, has the responsibility and should build the satellite communications system and then enter into contracts or leases with private companies for the operation.

But, it is quite another thing to give the Senate's stamp of approval to the incorporators and directors of a private, profit-seeking corporation, through the use of the procedure of advice and consent, spelled out in article II, section 2.

It may be said that there is nothing in article II, section 2, or elsewhere in the Constitution which prohibits Congress from specifying a procedure like that set forth in article II, section 2 for manning the corporate positions which Congress has validly created. But I urge Senators to recall the most basic proposition of constitutional law:

> Congress has authority to do only those things which the Constitution gives it authority to do. The mere fact that the Constitution fails to prohibit Congress from exercising authority does not mean that Congress has such authority. Quite the contrary. Powers not vested in the Federal Government are specifically withheld from the Federal Government, and are reserved for the States.

I said this before, but let me repeat it: If the Senate's advice and consent were necessary to the proper regulation of interstate communications commerce in the space satellite field, it would be proper for the Senate to give it. But there is simply no justification for saying that a private, profit-seeking corporation, irrespective of whether it is created by an act of Congress, requires Senate advice and consent in order for its officials to operate effectively and profitably.

It is not the burden of those of us who oppose confirmation to show that the Constitution does not prohibit it. It is the burden of those who support confirmation to prove that it is necessary to ignore the meaning of article II, section 2, of the Constitution.

Let there be no mistake on this point, Mr. President. We are not dealing with an article I, section 8, problem. No question about the powers conferred on Congress by the commerce clause of the Constitution is confronting us now. No one denies that Congress has the power to create, own, and operate a satellite communications system.

The single question before us is the constitutionality of the Senate's advising and consenting to the nominations of private businessmen. This is a problem which arises under article II, section 2, which is the section of the Constitution in which the procedure of advice and consent is spelled out—and nowhere else in the Constitution.

It follows that we are not required to determine whether the Senate has authority to insert new words in any other section of the Constitution. Obviously, it does not.

But, I repeat, that is not the question. The words "advice and consent" are already in the Constitution. They are reserved to treaties and officials of the United States. We are agreed that the nominees before us are not officials of the United States. Clearly, they are not treaties. Therefore, the only question which demands our decision is whether there is any constitutional justification for the Senate to unilaterally extend its authority beyond the clear limits imposed on it by the Constitution.

Despite this seemingly straightforward proposition which the Senate is called upon to decide, I have heard it argued that the Senate's advice and consent is a very modest exercise of power, in light of the Anglo-American history of creation of monopolies by the sovereign.

Support for this argument is said to be found in the Union Pacific Railroad Company Act of 1862, 12 Stat. 489, as amended in 13 Stat. 356. Again, this alleged precedent does not involve article II, section 2, confirmation. Nonetheless, I wish to discuss it, because I believe that there is guidance for us in the approach adopted by Congress in that 100-year-old statute.

Under the Union Pacific Railroad Act, as amended, the President was authorized to appoint, not three, but five directors of a corporation. But the act specifically directed that the directors appointed by the President should "be denominated directors on the part of the Government"—12 Stat. 489, 491.

There is no such language in the Communications Satellite Act of 1962; no such authority is vested in the directors; and there was not intent to do so—as was made very clear by the debates last summer.

From the beginning, the intention of the advocates of the Communications Satellite Act was to vest the corporation with complete power as a private corporation, subject to regulation as a public utility, and to divest the Federal Government of any governmental interest in the corporation. But, mistakenly and unfortunately, Congress went through the form of including a provision that the President appoint three members of the board of directors. In doing so, Congress abused and wronged the Office of the President of the United States. I do not believe Congress can ever justify taking such advantage of the Office of the President of the United States by asking the President to go through what amounts, in fact, to an empty legal gesture. Congress did not do so in connection with the Union Pacific Railway Act of 1862, for in that case, in which five directors were to be appointed, Congress specifically provided that those directors were specifically to be denominated directors on the part of the Government.

Thus, Mr. President, it was made clear in the Union Pacific Railroad Co. Act that the Presidentially appointed directors were beholden to the President, the people, and the public interest, not to the private, profit motives of the railroad company. Moreover, that act required no advice and consent by the Senate.

So I do not know why it is being cited in this debate as a precedent, inasmuch as the five directors appointed by the President under the Union Pacific Railway Act did not have to be confirmed by the Senate.

In 1864, after 2 years of experience with the Union Pacific Railway Act, an amendment was passed by the Congress which increased the responsibilities to the people of the Government directors. It increased the number of presidentially appointed directors to 25 percent of the total board membership. Further, it provided:

> At least one of said Government directors shall be placed on each of the standing committees of said company, and at least one on every special committee that may be appointed. The Government directors shall, from time to time, report to the Secretary of the Interior, in answer to any inquiries he may make of them, touching the condition, management, and progress of the work, and shall communicate to the Secretary of the Interior, at any time, such information as should be in the possession of the Department. They shall, as often as may be necessary to a full knowledge of the condition and management of the line, visit all portions of the line of road, whether built or surveyed; and while absent from home, attending to their duties as directors, shall be paid their actual traveling expenses, and be allowed and paid such reasonable compensation for their time actually employed as the board of directors may decide (13 Stat. 361–62).

These men were real Government directors. They were responsible to the people and to the Government. I would have had no hesitation to have advised and consented to their nominations—although, as I have said, that was not required under the Union Pacific Railroad Act.

By requiring that these Government directors report to the Secretary of Interior, Congress eliminated any question of a built-in conflict of interest and insured that the crisis of the Jackson administration would not be repeated.

Mr. President, that Railroad Act is no precedent in the present case. Yet today I have heard Senators in conversations argue that it is. I again express great doubt as to whether the Department of Justice fully appreciates the fact that it is not a precedent in the case which we are discussing.

What is there in common between the two cases? The two types of corporations are entirely different. One is a Satellite Corp., a 100-percent private business corporation. The Union Pacific Railroad Corp. was a mixed corporation with Government responsibilities, rights, and interests. Five members of the board of directors were directly responsible to the Secretary of the Interior and to the President of the United States. The two cases wash out immediately when we look at the difference in operative facts so far as the precedential question is concerned.

The next great difference in connection with the presence or absence of the advice and consent requirement of the law is that in the Union Pacific Corp. case there was no requirement of advice and consent; in the Satellite Act of 1962 there is such a requirement. The debate relates to the application of that requirement under article II, section 2. Again I say most respectfully that I do not intend to permit my opponents in the debate to vary from the limitation of the debate, for the debate is limited to a consideration of whether the section of the satellite law of 1962 that requires confirmation of the President's appointment of businessmen to a private business corporation is constitutional.

If the Communications Satellite Act required that the Presidentially appointed incorporators and directors act "on the part of the Government," I would be inclined to believe that they might then be considered officers of the United States within the meaning of article II, section 2. But, the fact of the matter is that the Communications Satellite Act's clear purport is to require exactly the opposite; that is, that the Presidentially appointed incorporators and directors be beholden to the private profit interests of the corporation.

(At this point Mr. JAVITS took the chair as Presiding Officer of the Senate.)

Mr. MORSE. Mr. President, I digress from my manuscript for a moment to note that I could not be paid a greater honor than to have the former attorney general of the State of New York presiding over the Senate while I make my constitutional argument. I greatly appreciate his presence. I want him to know that, along with my appreciation, goes a very sincere apology. I, too, regret that it is necessary under the circumstances, as I explained at the beginning of my speech, to make my argument at this late hour so that it may be in the RECORD and on the desks of the Senators prior to a possible vote tomorrow.

I hope that my good friend from New York will know that that apology is a very sincere one. Yet I also quickly add that, in my judgment, there is a clear duty on the part of those of us on this side of the issue to make our case tonight, for we are making a case, as far as our intention and motivation is concerned, that we hope will be the legislative basis for a consideration by the Supreme Court in due course of time of the constitutional issue that we are raising in the debate.

I am seriously considering introducing, at the proper time, an amendment to the Communications Satellite Act which will adopt the language of the Union Pacific Railroad Co. act and require that the Presidentially nominated directors "be denominated directors on the part of the Government." Under such an amendment, the three Presidential nominees will be transformed from servants of private profit motives into servants of the public interest and the Government.

But in considering the possibility of introducing that amendment I have already made clear to the staff that we cannot stop with that, for if we make that approach to an amendment of the Communications Satellite Act of 1962, we shall have to revamp it also in a good many of its other sections. If we would place Government responsibilities upon the three directors nominated by the President, I believe it should become clear to all that we shall have to revamp the act also in regard to the role of the Government in the development of a communications satellite system. I still think that the soundest way to do it is to have the Government develop the satellites through NASA or some other Government agency and then to have the Government lease the satellites for operation to private industry.

With passage of a little more time, I am sure we shall all be surprised in regard to the number of Members of Congress who will want to take a second vote on this question, for I am satisfied they are hearing from the people. Wherever I go in this country not only do I find that questions are being raised about the satellite communications law of 1962, but also I am becoming increasingly convinced that the people are ahead of the Congress on this issue, and that American public opinion does not approve of what the Congress and the President did last year. With further discussion of this subject in the next 2 or 3 years we shall find a public demand for rewriting of the communications satellite system law which will protest the public interest, which the present law, in my judgment, does not do.

Now that the Senate has had time to reflect on this bill, I believe there will be support for such amendments, particularly in light of the fact that we will shortly be called upon to appropriate $51 million for NASA research in space satellite communications, most of which will redound to the benefit of the private corporation.

I said in the debate last year that one of the great weaknesses of the law is that it gives an implied assurance to a private corporation that the Government will subsidize it, at least indirectly. As I said earlier this afternoon, I have no doubt that if the corporation gets into financial difficulty the argument will be made, "With the President appointing three directors, of course we have an obligation to come to the financial assistance of the private corporation and bail it out."

The American people are entitled to have the law amended so that if there is to be a pouring of American money into the system the Public Treasury will be protected.

I do not know of any reason why we should appropriate $51 million for NASA research in space satellite communications when the profits from such research are to be collected by a private corporation created by the Congress of the United States and approved by the President of the United States.

I know that there is growing concern about the Federal handout aspects of this corporation among many of my colleagues who supported the Communications Satellite Act, last year.

Doctor Dryden testified before the Commerce Committee:

> I think the Government will have to carry a large part of the experimental development for a while because it is necessary to study a number of alternatives.
>
> I make this remark not in any derogation of Telstar, but we have had many experiences where we have launched one successful satellite, only to be greeted later by the other difficulties. (Hearings, Satellite Communications 57 (1963).)

During the course of those hearings, the Senator from Rhode Island [Mr. PASTORE] made the following observations:

> Now if ultimately all of this is going to fall within the control and province of this private corporation, that will be in business for profit, then my question is why shouldn't all of the research and development be sustained by the stockholders, who ultimately will get the benefit of this investment?
>
> I am not saying that research is not in the public interest. All I am discussing is who is going to pay for it. It strikes me that the administration—and I was the man who had to introduce the bill on the floor—the administration made a very important decision, when it decided this would be a private corporation, and they should be in the field of operating this commercial venture.
>
> Now the big question is, having made this decision, which is a decision that was made in order to afford private enterprise the opportunity to come into this field, under a monopolistic venture, to do this in the public interest, under Government supervision, why shouldn't all of the research and development that will lead ultimately to this operable system, be done by the private corporation. Why is it necessary to use taxpayers' dollars in order to do it, and then make a contribution to this private corporation?
>
> I am not discouraging this at all, but I am wondering here what the line of demarcation is going to be, who is going to pay for it. And we were led to believe when we formed this corporation, practically all of this work—that is research and development—would be undertaken by this private corporation, because we said America has grown on private industry, so let private industry do it.
>
> Now we are being confronted here today, that in all likelihood a lot of taxpayers' money is going to be spent anyway.
>
> This lends credence to the argument made by some people who opposed this legislation, who said this is premature. They said we ought to wait and see what we find out and then see what we are giving away. I hope we don't get into that debate again. (Id. at 58–9, 63–4.)

On the same point, the Senator from New Mexico [Mr. ANDERSON] said, at the Aeronautical and Space Sciences Committee hearings:

> Somebody has got to make an answer as to whether this touches or does not touch the questions constantly raised in the debates and discussions as to whether we are going to continue to spend hundreds of millions of dollars in order to make this a profitable venture for those people who do not have to invest any of their own money—that is, the communications carriers. (Hearings, Nominations of Incorporators 73 (1963).)

Corporation Incorporator Sam Harris testified before the Commerce Committee that the corporation has not decided whether or not it feels obligated to reimburse NASA for the research NASA has done and will do—hearings, Communications Satellite Incorporators 68 (1963).

I do not know why anyone thinks it would decide to do it if it does not have to do it. I am perfectly willing to take judicial notice that most private businesses will take what they can get. They will not say to Uncle Sam, "Oh, please do not give it to us." They will not say to Uncle Sam voluntarily, "We want to reimburse you."

That is not the way American corporations work. This is not said sarcastically or critically, for the boards of directors of American corporations have the primary obligation of advancing the profit interests of their stockholders. If they can get Uncle Sam to pay the research bill, why should they not do so? If the Congress of the United States is as shortsighted as I think it was in passing a satellite law without protecting the American public, it is the Congress and not the corporation which should take the criticism. I say to the American people, "You ought to heap it on the Congress with tremendous force, because Congress has not written into the law the necessary protection of the American taxpayer in connection with expenditures by NASA and the research on satellite development."

The act is silent on reimbursals, except with regard to research done by NASA at the request of the corporation.

Dr. Dryden also told the Commerce Committee that the corporation should not be required to pay for all the research and development which goes into creating a profitmaking satellite system:

> Dr. DRYDEN. I think a real problem is the public interest in early obtaining of such a satellite system. I think that without the Government's participation, such a system would be delayed for very many years.
>
> Senator MONRONEY. This is just the reverse of why I voted for the Telstar bill. I felt private industry would have more flexibility, greater speed, more initiative, greater risk taking than the Government would. Now you tell us that this is going to sit back and be a paper corporation while the Government does all of the shots. (Hearings, Satellite Communications 60 (1963).)

In view of these expressions of grave concern by such distinguished proponents of the act as Senators PASTORE, ANDERSON, and MONRONEY, I am hopeful that it is not too late to make at least minimum improvements in this act. I share the concern of my colleagues. I know that we will all have more to say on this subject when the NASA appropriation comes up for debate. After all, $51 million in a single year is a lot of the taxpayers' money to give away.

At the very least, designating three of the corporation's directors as "Government directors," as was done in the Union Pacific Railroad Company Act of 1862, will insure a minimum responsibility to the people on the part of the corporation.

Let there be no misunderstanding, Mr. President. So long as the corporation exists in its present form, it will always have its hand out for doles from the Government grab bag. The corporation has no assets. It probably will have none for years. It cannot pay its own way.

There will always be a hidden subsidy, so long as we keep the corporation in its present form—and I am against it. If, however, we must endure this unhappy form of corporation—which is neither fish nor fowl—let us at least return to the precedent of the Union Pacific Railroad Company Act so that this grab-bag style of private business will not be possible.

I have heard other arguments advanced to support the constitutionality of the Senate's confirming nominations of private businessmen. I have heard it said, for example, that the President in carrying out his executive functions may consult with whomever he pleases.

The source of this rather obvious and not very helpful platitude is, apparently, a memorandum prepared by Peyton Ford, assistant to the Attorney General in 1949—Senate Report No. 232, 81st Congress, 1st session, page 20. That memorandum was prepared in response to a request by the present distinguished senior Senator from Arkansas with respect to an entirely unrelated question, to wit: Can Congress constitutionally effect its disapproval of a plan to reorganize the executive branch of the Government by a simple resolution of either House, or by a concurrent resolution of both Houses?

No one for a minute suggests—perish the thought—that the President should be prohibited from talking to anyone he wants. Heaven knows, Mr. Ford was correct when he observed:

> The President frequently consults with congressional leaders * * * even on matters which may be considered solely within the purview of the Executive.

Indeed, it is reassuring to know that Congress is still being consulted by the President, from time to time, just as it was in 1949.

I must say, however, that I find these rather oblique pearls of wisdom not very helpful in determining the constitutionality of the Senate's unilateral extension of article II, section 2, beyond the clear meaning of that article and its legislative purpose.

I am gratified to note that the President has raised no objection to our confirming these individuals. Indeed, in light of the fact that members of the executive branch actively participated in the Communication Satellite Act's drafting and actively solicited its passage; and in light of the fact that the President, himself, selected these nominees; I would be greatly surprised if he did object.

Further, I am fully aware that the Congress, had it so desired, might have accorded the President no voice whatsoever in the appointment of these incorporators. Indeed, if the corporation is to be purely private, this is exactly what should have been done in order to dispel the strong suggestion created by Presidential nomination that the President's appointees somehow will guarantee that the corporation will seek to serve the public interest rather than its own pecuniary interests.

But I cannot imagine that any of my colleagues would care to argue that the fact that the President has not objected, or the fact he might have been excluded altogether, enhances the constitutionality of an unconstitutional statute one whit.

I am aware, Mr. President, that there are a few nonprofit corporations created under title 36, some of which prescribe the names of individuals who shall constitute such corporations. To give a few typical examples: the Future Farmers of America, the Military Chaplains Association, and the National Conference on Citizenship.

I am not aware, however, of any of these corporations requiring for their incorporators and directors the advice and consent of the Senate. Nor am I as much concerned about the Senate's role in the creation of nonprofit corporations as I am with its role in the creation of private, profit-seeking corporations which have, by their very nature, a built-in conflict of interest with the common weal.

Indeed, I am aware of no precedent in the entire history of our country—with the exception of the national banks—for the requiring of the advice and consent of the Senate to the hiring of private businessmen. Even if such precedents existed, however, I would still argue that the fact that the Senate has in the past done an unconstitutional act is no justification for us, today, to repeat that transgression.

As I said earlier, it is still no answer to the old maxim that two wrongs never make a right.

In the situation before us, as in so many, many others, the clear meaning of the Constitution and the dictates of public policy and commonsense are coordinate. For us to confirm these private businessmen would create the false impression that they and the corporation will quest after the common good, and not personal profit and advancement. Article II, section 2, prevents this false impression from being created.

Another point, brought out by the Attorney General in the aforequoted letter to the President, and one which I have heard discussed by some of my most distinguished colleagues in the Senate, is the fact that Senators are nominated by the President to act as Ambassadors to the United Nations, as negotiating commissioners, and to other public offices while they are still Members of the Senate, somehow sheds light on the situation before us. The problem raised by such situations relates to article I, section 6, of the Constitution which prohibits simultaneous incumbency as a Member of Congress and in "any office under the United States."

It is true that that section of the Constitution has been construed to permit what might seem at first glance to be a simultaneous incumbency. But the basis of such construction is that a United Nations ambassadorship and other comparable positions are not "offices" within the meaning of the Constitution. Moreover, these are positions of public trust and responsibility, not private, profit-seeking ventures.

Further, with respect to positions such as U.N. ambassadors, Senators participate in the capacity of observers for the Congress. We are carrying out, if it is a Senate appointment, a senatorial duty; if a Representative is appointed, he carries out the duty of a Member of the House of Representatives. We are observers for the Congress. Such Members of Congress appointed to represent the Congress in the United Nations are obliged to report back to the Congress on the activities of the United Nations as they relate to pending and passed legislation.

Actually, therefore, the position of an ambassador to the U.N. is a post of observation, and not a separate position, unrelated to senatorial duties. Needless to say, Senators receive no compensation for filling such posts of observation.

Someone might challenge that statement by pointing out that Members of the Senate and of the House of Representatives, when they are sent to the United Nations, receive per diem allowances to cover their expenses, to the extent that the per diem allowance covers expenses. That is not a salary. It is an expense allowance that the Senate itself provides Senators when they travel outside the precincts of Washington, D.C., in carrying out congressional duties. If a Senator attends a congressional hearing in Chicago, or is sent to any other part of the country or the world, on congressional business, he receives a per diem allowance to cover his expenses. He does not get a second salary. So my statement that Senators receive no compensation for filling such posts of observation is an accurate statement.

There is no question about what is and is not an office with respect to the nominees now being considered. These incorporators and directors are nominees for a private office, not a public office.

Nor is there any question about the profit-seeking—as opposed to public interest—nature of the position to which they aspire. The act itself makes clear that the Communications Satellite Corp. is a profit-seeking corporation and not an agency or establishment of the United States.

With all deference, therefore, I suggest that the Attorney General's argument is not in point and, particularly, that his citation to the work by Professor Corwin, "The President: Office and Powers," fine as we all know it to be, is completely irrelevant to the question of our constitutional authority to confirm private, profit-seeking, businessmen. I have no doubt that Professor Corwin would be the first to admit that his argument is here irrelevant.

It has no value in a discussion of this issue. I am sorry that the Department of Justice should cite it in connection with this case. I shall await with some interest the offering by the Department of Justice of such citations before the U.S. Supreme Court if, as, and when this issue gets before the Court. I believe I can hear some of the questions that will be asked of the Solicitor General or the Attorney General from the bench—little penetrating questions like, "Mr. Counsel, what has that citation to do with the issue before the Court?" There is nothing more deflating to a lawyer when he is caught citing a case that has no relevancy to the issue before the court.

That is why I express such disappointment in the memorandum by the Department of Justice submitted to the President in this matter.

I hope the President will give some very serious consideration to the friendly and intended-to-be helpful suggestions that those of us in opposition to the application of article II, section 2 to these nominations are making to him today. We have complete confidence that if the President will put his brilliant mind to work on the legal problems involved and the very important public policy problems involved he will be urging drastic revisions of the Communications Satellite Act of 1962.

Parenthetically, let me mention that I note in the Attorney General's letter to the President a quoted exchange between two Congressmen which took place some 65 years ago. Let me read that exchange to you:

> Mr. SMITH. Do you mean that to be officers of the United States they must be appointed by the President and confirmed by the Senate or be appointed by courts of law or by the heads of some one of the departments?
>
> Mr. MOODY. Yes.
>
> Mr. SMITH. The point I would like to have you answer is whether it is necessary, to constitute a person an officer under authority of the United States, that he shall have been appointed in that way?
>
> Mr. MOODY. That is my opinion. I would not, however, adopt the converse proposition, that everybody appointed in this manner was necessarily an officer of the United States (H. Rept. 2205, 55th Cong., 3d sess., p. 11).

The point which the Attorney General is attempting to make is that the mere act of advising and consenting does not render a nominee a public official. Obviously this is correct.

Equally obviously, however, it is completely irrelevant in the issue before us. No one is contending that, by advising and consenting, the Senate is somehow able to transform a group of private businessmen into public servants.

Moreover, I am a bit surprised that the offhand remarks of Mr. Moody should be given any weight whatsoever by the Attorney General.

In 1899, when that exchange took place, a question had been raised as to the constitutionality of various Senators and Congressmen simultaneously occupying their seats in the Legislature and positions on Presidentially appointed commissions such as the Hawaiian Commission, the Canadian Commission and the Industrial Commission. Further, certain Congressmen had, while in office, enlisted in the Army which had only recently concluded the Spanish-American War.

Thus, the question presented was strictly an article I, section 6 problem and had no relationship to the question of public versus private offices, which was the subject of the Attorney General's letter.

I do not know why he cited that in his letter as a precedent or why it should have any precedential value for consideration in connection with the case before the Senate. It is completely irrelevant and would be thrown out by any court, including justices of the peace who do not even have to be learned in the law. It is a matter of commonsense.

In reading through the old hearings on dual incumbency, I was taken with a letter sent to the chairman of the House Judiciary Committee by one of the Congressmen who had joined the Army. He wrote:

> DEAR SIR: In reply to your very kind invitation to appear before your committee, and either orally or in writing submit authorities bearing on House Resolution 354 (which raised the question of whether acceptance of an Army post vacated the seat of the Member accepting it), I will say that my duties here with my regiment make it impossible for me to appear in person, and as my library at this place is very limited, being confined to the Army regulations, infantry drill book, firing regulations, guard manual, and a few works on the art of war, it is impossible for me to refer you to such authorities as might enable you and the other members of the committee in arriving at a correct conclusion. Besides this, I feel somewhat indifferent as to taking any action personally in the matter, as I am sure the committee has no feeling against me and that any conclusion that you might arrive at will be from a high sense of duty as Representatives and not in any way personal to me.
>
> In conclusion I might say that I have a fine regiment of over 1,200 men, all from my congressional district, and we have a beautiful camp overlooking the gulf, surrounded with magnificent plantations, which makes it a delightful winter resort.
>
> We have but little sickness, and all are in good spirits and contented.
>
> If any of your committee should visit Cuba after the adjournment of Congress, I will be greatly pleased to offer you the hospitality of our camp.
>
> Yours, very respectfully,
>
> JAMES R. CAMPBELL,
> *Colonel, 9th Illinois Volunteers.*

While I am indebted to the Attorney General for bringing this entertaining page of history to our attention, I seriously question whether it sheds any light on the problem which now confronts us.

Therefore I am at a loss as to why the reference was made.

In sum, Mr. President, I find it hard to believe, that any student of the Constitution can fail to appreciate that the Constitution means exactly what it says. The Senate shall advise and consent on treaties and on the nominations for Supreme Court Justices, Ambassadors, public ministers, and consuls, and all other officers of the United States.

The Constitution means no less than this, and it means no more.

Our opponents in the debate cannot read a meaning into the Constitution. It is either there or it is nonexistent.

Surely, no one will argue that we may constitutionally expand our constitutionally granted authority of advising and consenting to include incorporators and directors of private businesses. The Attorney General says that there is no question that the incorporators and directors before us, today, occupy exactly the same position as persons serving on the board of an ordinary business corporation and that they will hold private, not public, posts.

Which was to be demonstrated.

To be sure, this argument conforms to commonsense, as well as to the learned legal opinion of the Attorney General, the clear meaning of the act, and the sense of the Senate.

What possible justification or necessity can there be for the Senate to butt into the private selection and hiring of officers of a private, profit-seeking corporation? Indeed, for the Senate to engage in such a monstrous practice of intervention into the private sector would deprecate free enterprise.

It is the great and sustaining genius of the Constitution that it does conform to commonsense.

Yet, in my mind's ear, I can hear a colleague of mine saying to himself: "Yes, I see your point. Congress cannot constitutionally intrude itself into the selection of officers of a private business corporation. But the Communications Satellite Corp. is different. It is created by an act of Congress. Therefore, your analogy is inapposite."

Ah, but it is not inapposite. The mere fact that a private, profit-seeking corporation has a governmental charter makes it no less private and no less profit seeking. In England, for example, governmentally chartered monopolies have, from time to time, been quite the rule and not the exception.

No, my colleague's confusion springs from the unconscious assumption that the Communications Satellite Corp. is somehow a quasi-public corporation, imbued with an obligation to the public welfare that exceeds that of companies such as General Motors, General Electric, or A.T. & T.

But I say to the American people that that is simply not the case.

The repetition of this misstatement of fact over and over again can never make it true. The act says this is a purely private corporation. The Attorney General says this is a purely private corporation. The Senate says that this is a purely private corporation. The incorporators say it is a purely private corporation. And finally commonsense points to the fact that this is a purely private corporation.

Will any of my learned colleagues argue that, for example, the public interest in the Communications Satellite Corp. exceeds the public interest in A.T. & T., or General Motors, or United States Steel, or Boeing Aircraft, or any of literally hundreds of other purely private corporations? Quite the contrary, I would say.

For after all the mere stating in a piece of legislation that something is touched with the public interest does not make it so. Public interest is a fact, not a mere assertion.

To say that the Communications Satellite Corp. is not purely private because it performs key functions which affect major areas of public policy is to say that companies like Boeing, General Motors, United States Steel, and A.T. & T., are also not purely private. They, too, perform functions intimately related to the public interest. Yet, is any Senator willing to state that they and similar companies are not private in every sense of the legal word?

No, Mr. President, I cannot accept this argument. The corporation is, without question, private. These incorporators and directors are, without question, private. It follows that the Senate is without constitutional power to advise and consent to their nomination.

C. UNDER ESTABLISHED PRINCIPLES OF STATUTORY CONSTRUCTION, THE CONSTITUTION IS PRESUMED TO HAVE BEEN INTENDED TO EXCLUDE THAT WHICH IT DOES NOT INCLUDE

Also in my mind's ear, I hear my doubting colleague making another objection to my argument. He says: "But this Communications Satellite Corp. is an entirely new idea. You cannot expect the drafters of the Constitution to have foreseen it 175 years ago. The genius of the living Constitution is that it grows with the times."

Yes, I reply, but by growing, we do not mean that it is completely mutable and without substance. Were there some necessity for our confirming these incorporators, perhaps a way could be found to do it which would effectuate constitutional intent.

The doctrine of statutory construction, expressio unius est exclusio alterius, is well established. Where the situations in which the Senate may advise and consent are affirmatively designated in the Constitution, it must be inferred that all omissions were intentional and not oversights or lack of foresight on the part of the drafters.

Perhaps this Latin maxim sounds strange to those Senators who are not lawyers. But I can assure them that it is entirely familiar to all of us who are. And, indeed, it makes great good sense. New powers should not be read into the Constitution unless there is a clear necessity for them and they are consistent with the intent revealed by the words of the Constitution, itself. Were we somehow to imply an authority for the Senate to act whenever it seemed convenient to us, constitutional democracy would in no time become a travesty, and our Nation would become a dictatorship by and of the Senate.

D. CONSTITUTIONAL HISTORY MAKES CLEAR THE CONSTITUTION'S INTENT TO LIMIT ADVISING AND CONSENTING BY THE SENATE TO TREATIES AND NOMINATIONS OF OFFICERS OF THE UNITED STATES

Needless to say, the intention of the drafters is of key importance in construing the words of the Constitution, itself. Where the words of the Constitution are uncertain, lawyers always turn for guidance to those records which will reveal this intent.

With respect to the present question, it is not actually necessary to review this intent, since the meaning of the words of the Constitution themselves is plain and readily apparent.

However, for the sake of thoroughness, I have perused the journals of the constitutional debates and other contemporary writings. From this review of history, I am convinced that there is not one shred of evidence to indicate that the drafters ever gave one moment's thought to the possibility that the Senate should ever see fit to advise and consent on the hiring of a private businessman by a private business.

Such a procedure is entirely alien to the purpose of article II, section 2.

The purpose for requiring the Senate's advice and consent to nominations for public office were stated by Alexander Hamilton in the "Federalist Paper No. 76" as follows:

> It has been observed in a former paper, that "the true test of a good government is its aptitude and tendency to produce a good administration." If the justness of his observation be admitted, the mode of appointing the officers of the United States contained in the foregoing clauses (that is, art. II, sec. 2) must, when examined, be allowed to be entitled to particular commendation. It is not easy to conceive a plan better calculated than this is to promote a judicious choice of men for filling the offices of the Union; and it will not need proof, that on this point must essentially depend the character of its administration.

Note that it did not enter Hamilton's mind that article II, section 2, has any application other than to the selection "of men for filling the offices of the Union."

Hamilton goes on to explain the reason why this particular procedure was adopted over the many other suggested methods for assuring a sound, responsible Federal administration:

> It will readily be comprehended, that a man who had himself the sole disposition of offices, would be governed much more by his private inclinations and interests, than when he was bound to submit the propriety of his choice to the discussion and determination of a different and independent body, and that body an entire branch of the legislature. The possibility of rejection would be a strong motive to care in proposing. The danger to his own reputation, and, in the case of an elective magistrate, to his political existence, from betraying a spirit or favoritism, or an unbecoming pursuit of popularity, to the observation of a body whose opinion would have great weight in forming that of the public, could not fail to operate as a barrier to the one and to the other. He would be both ashamed and afraid to bring forward, for the most distinguished or lucrative stations, candidates who had no other merit than that of coming from the same State to which he particularly belonged, or of being in some way or other personally allied to him, or of possessing the necessary insignificance and pliancy to render them the obsequious instruments of his pleasure.

Mr. President, how well I recall, in an advanced course on constitutional law, at the University of Oregon Law School, the reaction of the law students when first they came face to face with that great statement by Hamilton, in which he set forth so clearly the intention of the constitutional fathers when they wrote article II, section 2, into the Constitution. In that famous paper, Hamilton spelled out what the constitutional fathers had in mind when they wrote into the Constitution article II, section 2, which is the subject of debate as to its applicability to the case now before the Senate.

I do not know whether one needs add to what Hamilton said, for one cannot possibly read the Hamilton paper and reach any conclusion other than that the constitutional fathers were talking about the confirmation process of the Senate as being limited to officials of the Union; not as applicable to officials of a communications satellite corporation.

History rises to plague our opposition in this debate. History completely rebuts them. The history of the birth and formation of the Constitution, as written by the constitutional fathers, is a complete answer to the highly fallacious argument that there is some justification for reading into article II, section 2, of the Constitution such a twisted and distorted meaning as the one our opposition seek to read into it in their attempted justification of this very unfortunate section of the Communications Satellite Act of 1962.

Mr. President, I do not know why they do not recognize the error of their ways, and come forward with some amendments to that act. I am at a loss to understand why they wish to pervert article II, section 2, of the Constitution in such a way that it would bear no resemblance to what Hamilton was talking about in the Hamiltonian argument I have just now presented to the Senate from Hamilton's own paper.

Mr. President, why is the method of appointing the officers of the United States of such great concern that it warranted the writing by Hamilton of two Federalist papers on the single clause of the Constitution? Hamilton answers that question in Federalist Paper No. 77. It is, simply, to avoid "a monopoly of all the principal employments of the government in a few families" which lead directly "to an aristocracy or an oligarchy." But, Mr. President, note that Hamilton was speaking of "employments of the government", not employments of the Communications Satellite Corp., a private concern, which in this respect bears no relationship to the Government.

Mr. President, let me emphasize, parenthetically and facetiously, that I most certainly do not have in mind any specific current situation when I discuss the wisdom of Mr. Hamilton's position when he wrote about seeking to avoid "a monopoly of all the principal employments of the government in a few families" which lead directly "to an aristocracy or an oligarchy."

Thus, I take it to be plain and clear, beyond question, that article II, section 2, was intended to limit the power of the Senate to advise and consent to the selection "of men for filling the offices of the Union."

After all, article II, section 2, is concerned with the intragovernmental power of the President, vis-a-vis the Senate. The procedure of advising and consenting is designed as a senatorial check on the President's selection of public officials. Small wonder, then, that this procedure was not intended by the Founding Fathers to be imposed upon the private sector of our economy.

In his letter of opinion to the President, the Attorney General cites the definitive commentaries on the Constitution of Justice Story to support the proposition that confirmation by the Senate of a nomination does not, in itself, render a nominee an officer of the United States. As I have already explained, this point is completely irrelevant to the issue now before us.

However, inasmuch as the great scholarly work of Justice Story has been invoked as an appropriate authority, let me read to the Senate the words of Justice Story supporting the propriety of the procedure adopted by the Constitution drafters in article II, section 2, and defended by Hamilton. Justice Story wrote:

> It should never be forgotten, that in a republican government offices are established and are to be filled, not to gratify private interests and private attachments; not as a means of corrupt influence of individual profit; not for cringing favorites or court sycophants; but for purposes of the highest public good, to give dignity, strength, purity, and energy to the administration of the laws. It would not, therefore, be a wise course to omit any precaution, which at the time that it should give to the President a power over the appointments of those who are in conjunction with himself to execute the laws, should also interpose a salutary check upon its abuse, acting by way of preventive as well as of remedy (Story, "Commentaries on the Constitution," 354 (3d ed. 1891)).

In Justice Story's words, the procedure of advising and consenting is not to be used where it gratifies "private interests and private attachments"; it is not to be used where it involves "private profit"; and its purpose is "to give dignity, strength, purity, and energy to the administration of the laws" of the United States.

Does this purpose which the Constitution was designed to serve, Mr. President, have any proper relationship to the selection of private officers of a private profit-seeking business venture?

While we are discussing the great wisdom and erudition of Mr. Justice Story, Mr. President, I should like to call attention to another section of his commentaries. Justice Story points out that the question of removal naturally arises when the process of Presidential nomination and senatorial confirmation is being considered. The power to nominate and confirm, he says, necessarily implies the power to remove. Who then, he asks, has the power to remove officers who are thus nominated and confirmed? Is it the President alone? Or must the President have the advice and consent of the Senate to remove, as well as to appoint?

Though the Constitution is silent on this question, Justice Story finds the answer in "Federalist Paper No. 77":

> The consent of * * * [the Senate] would be necessary to displace as well as to appoint.
>
> No man—

Adds Justice Story—

> can fail to perceive the entire safety of the power of removal, if it must thus be exercised in conjunction with the Senate [op. cit. at 366].

Now, I want to ask my colleagues in the Senate a most serious question: "Have you given thought to the possibility of having to remove any of these incorporators and directors? What will the grounds be if such a situation arises: That the incorporator or director is not devoting himself solely to the public interest? That he has a conflict of interest with the public interest? That he is seeking personal profit in his capacity as a nominee of the President and a confirmee of the Senate?"

The distinguished senior Senator from Tennessee [Mr. KEFAUVER], the distinguished junior Senator from Tennessee [Mr. GORE], the distinguished Senator from Louisiana [Mr. LONG], and the distinguished Senator from Wisconsin [Mr. NELSON] discussed the subject of removal this afternoon. I desire to add the following few points.

We know the answer to these questions. We cannot remove for such causes. The act itself creates the conflict of interest. The act itself dictates that these men shall serve their own profit interests.

I suggest, Mr. President, that we have here a situation where the Senate will confirm, but cannot remove. What an ironic, unexplicable dilemma we have created for ourselves.

It has a bearing on the question of whether or not we are being asked to commit an unconstitutional act. I do not believe we can escape the findings of the Federalist papers. The constitutional fathers intended that the power to confirm carried with it the power to remove. Under the communications satellite law of 1962 there is no power to remove.

III. IT FOLLOWS THAT THE CONFIRMATION BY THE SENATE OF THE INCORPORATORS AND DIRECTORS OF THE COMMUNICATIONS SATELLITE CORP. IS EITHER AN UNCONSTITUTIONAL ENLARGEMENT OF THE CONSTITUTIONALLY PRESCRIBED POWERS OF THE SENATE OR A SUPERFLUOUS ACT WHICH DOES NOT IN ANY WAY AFFECT THE RIGHT OF THE INCORPORATORS OR DIRECTORS TO TAKE OFFICE

Now, it may be argued that the Constitution notwithstanding, the Senate may advise and consent to the nomination or hiring of anyone it pleases. If, for example, the Senate cares to advise and consent to the nomination of Roger Blough to be chairman of the board of the United States Steel Corp., that is quite all right.

True, it may be argued, the refusal of the Senate to vote its confirmation will not in any way affect Mr. Blough's right to take office. But, if it somehow satisfies the Senate to express or refuse its stamp of approval to Mr. Blough, that is the Senate's business and, since it does not have any effect one way or the other, how can it be said to be unconstitutional?

If the situation confronting us today were simply that one Member of the Senate had suggested, without any act having been passed, that we give our approval to the incorporators of the Communications Satellite Corp. in the form of advising and consenting to their appointments, it is conceivable that it would not be unconstitutional, although I have serious doubts even on that score. It would certainly, however, be frivolous and undignified.

But that is not the situation we confront. Here, we are dealing with an act of law, passed by the Congress and approved by the President, which directs us to advise and consent.

Can we, then, in light of this fact, view the act's requirement of our advise and consent simply as an unofficial stamp of approval by the Senate? Can we say that, while we realize that were our confirmation to be determinative of this nominee's right to private office it would be unconstitutional, our confirmation is not determinative; it is nothing more than an indication of our views; it is without actual effect and, therefore, it is not unconstitutional?

IV. BY WELL-ESTABLISHED RULES OF STATUTORY CONSTRUCTION, AN ACT OF CONGRESS WILL NOT BE CONSTRUED TO BE WITHOUT EFFECT

The answer to the question I have posed is that we cannot. The definitive work on the construction of statutes, as every lawyer knows, is Sutherland's vastly learned treatise on "Statutory Construction."

According to this monumental work:

> A statute should be construed * * * so that no part will be inoperative or superfluous, void or insignificant (sec. 4705, 3d ed. 1943).

Further, Sutherland points out:

> The presumption is that the lawmaker has a definite purpose in every enactment and formulated the subsidiary provisions in harmony with that purpose; that these are needful to accomplish it; and that, if that is the intended effect, they will, at least, conduce to effectuate it (sec. 4704).

V. CONCLUSION

It follows that the confirmation by the Senate is not without effect; that under the Communications Satellite Act the incorporators cannot take office without the advice and consent of the Senate; and, therefore, the Communications Satellite Act extends the authority of the Senate beyond its constitutionally enumerated limits and is unconstitutional.

The conclusion, therefore, is inescapable. Those portions of sections 302 and 303 of the Communications Satellite Act which direct the Senate to advise and consent are not superfluous and not without real effect. Their effect, intended and in fact, is that the incorporators and presidentially appointed directors cannot take office without senatorial confirmation.

This being their effect, the Communications Satellite Act is in violation of the Constitution.

Let me stress, however, that this does not mean that the entire act is unconstitutional. Only those portions to which I have referred suffer this infirmity.

The law is clear that if a portion of an act of Congress is unconstitutional, but severable from the totality of the act in such a way as substantially to preserve the remainder of the act, only those portions which are constitutionally infirm will be voided.

This is the situation here. This private, profit-seeking corporation can continue without our formal advice and consent. Moreover, I have no doubt that methods can be found by which the Senate can make its pleasure with respect to these nominees known to the President, without resorting to the unconstitutional procedure of advising and consenting.

Let me, therefore, carefully restate my point of order, so that its limits will be clear to the Senate:

It is unconstitutional for the Senate to advise and consent to the nomination or other hiring of a private officer of a private, profit-seeking corporation and, therefore, the nomination now before the Senate for advice and consent is improperly and unconstitutionally before us, now or at any other time.

My point of order means no more and no less than it says. I want to stress that it does not mean that the Senate cannot interest itself in the Communications Satellite Corp. or its officers.

All it says is that the form for expressing our approval of these nominations adopted by the act is unconstitutional and cannot constitutionally be followed by the Senate.

Even though the point of order I have raised is a technical one, based on constitutional law, we cannot allow ourselves to lose sight of the practical, factual problem which lies behind it.

The Attorney General argues that the mere use of the procedure of Presidential nomination and Senate confirmation does not in itself render an appointee an officer of the United States. This is, of course, technically true. No one argues with this legal opinion of the Attorney General.

Yet, while the Senate's advice and consent will not produce such a magical metamorphosis from a strict, technical, legal point of view, it will have precisely this effect, in practice, in that it will cloak these private profit-seeking businessmen with a mantle of public interest in the eyes of millions of Americans.

The average American citizen will say to himself: "The incorporators and some of the directors of this corporation have been approved by the U.S. Senate. They must be men who will look out for the public's interest. I can invest my savings in the Communications Satellite Corp. without fear of losing them."

Indeed, I believe that a substantial number of Americans will interpret our confirmation as a kind of guarantee or insurance of their money, similar to Federal insurance of savings bank deposits.

True, careful reading of the fine print in the prospectus the corporation will some day file with the SEC will disabuse them of such misguided notions. The common carriers will, no doubt, carefully read this fine print. But, I ask my colleagues, how many of the little investors—schoolteachers and working people who will put their life savings in this corporation—will scrutinize these technical, legal, and financial forms?

All Senators know the answer as well as I do.

The Attorney General is, therefore, inescapably correct when he says that, as a matter of legal niceties, the Senate's confirmation will not render these nominees public officers. The opposition does not contend that it will. But, the Attorney General is inescapably wrong if he believes that this is not precisely the impression that our advice and consent will convey to the average investing citizen.

So, as I close, I have a little bit of gratuitous advice to give to the Attorney General and to the President of the United States: It is not too late for you to advise the Senate to postpone further action on these nominations, by sending them to the Committee on the Judiciary for a hearing and for a consideration of the legal points which the opposition has raised in the debate in the Senate.

It is not too late to have the Judiciary Committee hold hearings, after calling in outstanding constitutional law authorities of this country to testify on the points the opposition has raised in making its arguments against the constitutionality of the procedure which the President, the Attorney General, and the proponents of these nominations are supporting.

Mr. President, there is a second thing I would have the Attorney General and the President of the United States do. I would have them take a new look at the satellite communications law. I would have them, on the basis of the criticism which has prevailed since the passage of that law by the Congress, consider if it is not true that that law needs to be written in large measure, and consider whether we may need to pass a law which will make crystal clear that the Government is in no way involved in the satellite communications law.

I also would suggest to the President and the Attorney General that they take a second look at the importance of giving better protection to private enterprise in this country than the satellite communications law gives.

I think the President and the Attorney General are dedicated to economic freedom. We cannot have economic freedom without the perpetuation of the corporate system in this country, under a private enterprise operation. I think they ought to look again at what they have done to private enterprise in this country by vesting monopolistic power in this corporation. I would have them reexamine again the arguments we presented in opposition when the satellite communications bill was before the Senate.

Every corporation in this country should have an equal opportunity to participate in the development of a satellite communication system. I know of no other way to do that, Mr. President, than for the President and the Attorney General to reconsider and put their stamp of approval on the substitute bill we tried to offer in the Senate of United States, which the administration, without an objection from the White House, permitted the Congress of the United States to bury under a cloture procedure. That made it impossible to discuss the substitute bill in the time necessary to clearly explain it to the Congress and the American people. Also, the administration did not raise its voice in objection to the motion to lay on the table not only that amendment, but also amendment after amendment offered by men sincerely dedicated to protecting the public interest.

This administration has a blot on its record that it should seek to cleanse. The way it can cleanse it is to follow the course of action suggested now, by giving support to the postponement of action on these nominations until the Committee on the Judiciary can hold hearings and let the constitutional authorities of this country come before the committee and testify.

I recognize that a satellite communications system is—like many other corporations—vested with the public interest, and it can be very well vested with a great security interest, vital to the survival of the American people.

I think my President, my Attorney General, and my administration ought to take a second look at a proposal that the Federal Government build the satellites.

We are going to do it, anyway, Mr. President, with the $51 million the President's budget proposes for space communications satellite research and development by NASA.

This administration should give serious thought to amending the law so that the Federal Government will build and operate the satellites; and private industry, without discrimination against any corporation in this country, will be able to lease their services.

GREAT LAKES FISHERIES: PROBLEMS AND PROGRAMS TO SOLVE THEM

Mr. HART. Mr. President, the fisheries of the Great Lakes are presently in acute distress. In many areas commerical fishing has all but disappeared and sport fishing becomes progressively less attractive. Unless more effective programs are instituted, and soon, this once valuable resource threatens to deteriorate rapidly into insignificance.

In my description of the plight of these fisheries and in my proposals for programs I shall not undertake the broad coverage given these matters by our former colleague from Massachusetts, Senator Benjamin A. Smith, in his talk of able discussion in this Chamber on May 24, 1962. It seems to me that Senator Smith's observations on U.S. fisheries as a whole apply very well to Great Lakes fisheries in particular. I agree also with his view that we have given our fisheries far too little consideration as a basic renewable resource of major national importance.

The Great Lakes are a geographical phenomenon unparalleled on this planet. The five huge bodies of fresh water lie in a connected chain that extends from Duluth, Minn., to Watertown in northcentral New York. Together they have an area of 95,000 square miles of which 61,000—just under two-thirds—lie within U.S. boundaries.

Before the first European arrived, the lakes were important arteries of commerce and traffic for the Indians. Later, they provided avenues of travel by which the earliest explorers penetrated to the heart of the continent. Then came the missionaries, the fur traders, and finally the growing flood of immigrants seeking new and permanent homes in an area rich in land and other natural resources. To all of them the lakes were a highway.

This stream of traffic has never ceased to grow. The annual tonnage of cargo transported over the lakes is now in the order of 300 million tons—a varied cargo of iron ore, coal, limestone, grain, oil, and manufactured products. The opening of the St. Lawrence Seaway which makes ocean ports of lake ports is bringing a surge of foreign traffic to add to the domestic growth.

The lakes not only were a "water highway" for early settlers but later a major factor in determining the distribution of the dense population of the modern midwest and of the industries so vital to the region's economy. As population and industry grew, the availability of adequate water supplies for domestic and industrial use assumed importance parallel to that of cheap transportation.

More recently the recreational uses of the lakes have been assuming greater and greater importance. Nine percent of all citizens of the United States live in counties bordering on the Great Lakes and many millions more live within a distance that can be covered by a few hours' drive. As urban congestion increases, the need for outdoor recreation becomes more urgent. The Great Lakes with their 9,600 miles of shoreline—more than half of it in the United States—offer unequaled opportunities for boating, swimming, fishing, camping, hiking, and general relaxation.

What role have the fisheries played in the growth and development of the Great Lakes Region and what is their role today?

Great Lakes fish were a prime source of food for local inhabitants centuries before the first European made his appearance. The distribution of the Indian population and explorations by anthropologists at sites known to date back to the 11th and 12th centuries demonstrate clearly the strong dependence of Indians on fish for food.

Fish was a mainstay in the diet of the explorers and missionaries. Accounts of early explorations in personal journals and published reports carry repeated and enthusiastic observations on the abundance and delectable flavor of Great Lakes fishes.

The early settlers and fur traders ate fish extensively, and both soon became aware of the possibilities for fishing as a commercial enterprise. By the middle of the 19th century fur companies had added salt fish as a marketable product. When the growth of settlements warranted, some men turned to commercial fishing as a full-time profession. Much of their product was salted or smoked—the only means they had for holding fish for holding fish for local consumption or shipment to other markets.

From these small beginnings developed a productive and prosperous Great Lakes commercial fishing industry. Many small communities, especially in more northerly localities, were primarily fishing villages. Considerable areas depended on commercial fishing as their principal source of income. Even in larger towns, income from fishing contributed materially to the local economy.

The output of the commercial fisheries of the Great Lakes reached its highest levels in the last decade of the past century, and the first two of the present when the annual landings by U.S. fishermen frequently exceeded $100 million pounds. Since then the catches have been smaller. Production has not been greater than 100 million pounds since 1918, and in most years it has fluctuated between 70 and 85 million pounds.

Notwithstanding the lower production level of the Great Lakes fisheries over the last 40-odd years, these fisheries continued to be an economically significant element in the Nation's fishing industry into the 1940's. Two circumstances have prevented wide or full appreciation of the true economic worth of the Great Lakes commercial fisheries.

First, the Great Lakes do not have major fishing ports comparable, for example, with Gloucester, Mass., on the east coast or San Pedro, Calif., on the west. One does not see vast tonnages of Great Lakes fish at any single place at any one time. Rather, the landings are scattered widely. The fish are brought ashore at many ports—scores, indeed hundreds—scattered along the thousands of miles of shoreline.

Second, the value of Great Lakes fish has lain traditionally in their quality, not in the bulk. The Great Lakes have been the principal or only domestic source of such highly prized species as whitefish, lake trout, walleye, blue pike, yellow perch, and ciscoes. Some of these fish you will recognize as gourmet items, featured in the best public dining rooms. Fish of this quality bring high prices to the producer.

Let me give just three examples of the significance of the landed value of Great Lakes fish as recently as 20 years ago, based on the statistics for 1943 and 1944.

First. Commercial fishery landings on the Great Lakes in those 2 years amounted to only 7½ percent of the take of the Pacific pilchard or sardine fishery, then near its peak of productivity, but the value of Great Lakes landings almost exactly equaled that of the pilchard.

Second. Great Lakes landings of all species taken commercially were only 17 percent of the landings of salmon in the Pacific Northwest and Alaska, but the value was equal to 60 percent.

Third. Moving now to the Atlantic, Great Lakes commercial production equaled only 22 percent of the combined landings at Boston and Gloucester, Mass., and Portland, Maine, but was valued at 54 percent of those landings.

Statistics on the commercial landings fail by a good margin to reflect the total worth of the Great Lakes fisheries.

Angling for recreation around the shores and islands of the Great Lakes is a sport of longstanding. By the thirties it had grown into an economically important venture. The many small ports allowed easy access for sportsmen's boats and motors, and the quality fish of the lakes were most attractive. Trolling for lake trout in Superior, catching bass in Michigan's coastal bays, taking rainbow trout in the St. Mary's River between Lakes Superior and Huron, and yellow or blue pike around the islands of western Lake Erie became the avocation of thousands of anglers.

Sport fishing provides extensive recreation both for the millions who live adjacent to the lakes and for the many thousands of tourists who are attracted to the region. While it is difficult to obtain dependable figures on the extent and value of sport fishing, the evidence is clear that participation is enormous and that the actual take of sport fishermen often constitutes a considerable percentage of the total catch, and that for some species in certain waters it may exceed commercial landings.

Certain information is available on sport fishing, and it is most suggestive. A 1958 survey by Ohio, for example, revealed that in 160 days anglers took almost 5½ million fish weighing well over 1 million pounds within an 180-square mile area of western Lake Erie. Wisconsin has estimated an annual 2 million angler days for a single county bordering on Lake Michigan. State officials of both Wisconsin and Michigan believe that sportsmen regularly take at least as many smelt as do commercial operators. From these and other bits of information it is clear that sport fishing in the Great Lakes is highly productive and has many devotees. Certainly, the returns to many communities from tourist expenditures for transportation, food, lodging, boat rental, bait, and the like loom important in the local economy.

A 1960 survey of the economic value of fishing in the north central States, including the Great Lakes, indicated that about 2,700,000 anglers in that area fished in natural lakes and streams. Expenditures of these fishermen averaged $95 each on items necessary for their fishing trips.

The aesthetic value of the recreation is not measurable but is immeasurably important. The health value of out-of-door recreation—the exercise and relief of tensions—in our pressure-packed society, can hardly be overestimated.

Beginning in the early 1940's the Great Lakes fish populations underwent a series of disastrous changes that have been a major factor in the present distressed state of the commercial fisheries and also have affected some sport fisheries.

I do not wish to imply that fish stocks had not changed before the 1940's. A progressive shift from the choicer high-priced fish had been in progress for decades, and in the mid-1920's the disappearance of the cisco, typically dominant in the landings, dealt a hard blow to Lake Erie fishermen. The expansion of the range of the introduced carp in the past century and of the introduced smelt in the 1930's caused loud outcry from fishermen, but actual damage was hard to prove and some productive fisheries have subsequently been based on the new species.

The changes that came about before the 1940's, adverse as some may have been, were almost trifling in comparison with the debacle that followed the penetration and spread of the sea lamprey through the three upper lakes—Huron, Michigan, and Superior.

The story of the sea lamprey in the Great Lakes has attracted nationwide attention. In the Senate we have reviewed annually the budgets for research and the development of methods for control, so I shall not go into great detail on the sea lamprey problem. I do want to reemphasize the seriousness of the damage it has caused the fishing industry.

The major injury to the fisheries was the total destruction of lake trout in Lakes Huron and Michigan and the reduction of the Lake Superior stocks to a small fraction of their former abundance. The resulting loss of production, worth nearly $8 million annually, was a grievous blow. In Lake Superior, for example, the lake trout normally has accounted for a full 70 percent of the annual cash income of the producers and has provided additional income from thousands of anglers who charter boats and equipment to troll for trout in deep waters.

The catastrophic loss of the lake trout fishery was so spectacular that other damages to the fisheries were given less attention than they deserved. In Lakes Huron and Michigan lamprey depredations are keeping whitefish so scarce that they cannot be commercially taken at a profit in many areas. The recent level of production for the two lakes combined has been mostly under 1 million pounds per year; under normal conditions the lakes should yield 6 million pounds. Thus we have an annual loss of 5 million pounds for a quality fish which brings a price per pound equal to or greater than that of lake trout.

Less spectacular but still significant are the estimated losses of more than 1 million pounds per year in the commercial take of walleye in Saginaw Bay, and of 2 million pounds per year of suckers in Lakes Huron and Michigan.

Lamprey depredations have reduced the fishery for chubs or deep-water ciscoes to a chaotic low in parts of Lake Huron and all of Lake Michigan. The larger species and individuals have become so scarce that production, using the traditional gill nets, is frequently marginal or at a loss. Small chubs are plentiful, but they can be produced effectively only in those waters where the States permit experimental trawling. Even this fishery is experiencing economic difficulties.

Losses from the sea lamprey are underestimated severely, if we concentrate on the $8 million worth of lake trout. The true annual loss of revenue to the commercial fisheries surely is much greater. A figure of between $12 and $15 million would be entirely reasonable—possibly, even, too low.

The commercial fishermen of Lakes Huron and Michigan are suffering additional miseries from the recent population explosion of alewives, a species that penetrated the upper lakes from Lake Ontario. No use of alewives for human food has been developed in the Great Lakes area and only under exceptional conditions can they be taken at the thinnest margin of profit for animal food. When alewives are plentiful on gill net grounds, fishermen have to suspend operations since their value does not equal the labor and maintenance costs of clearing and repairing the nets. When such conditions prevail, even decent catches of other species become unprofitable. The story does not end here. Evidence grows more convincing that the lake herring declines when the alewives appear. Thus another valuable native fish dwindles.

The sea lamprey has never created a significant problem in Lake Erie where environmental conditions have limited its natural reproducton. Lake Erie nevertheless has experienced sweeping changes, mostly in the 1950's, that have brought the fisheries to the brink of ruin. Two of the three principal money fish, whitefish and blue pike, each yielded less than 50,000 pounds in 1960, United States and Canadian catches combined. Catches of whitefish were consistently heavy in earlier years, reached an alltime record of 7 million pounds in 1949, and accounted for landings of 2¾ million pounds as recently as 1953. The take of blue pike was nearly 20 million pounds as recently as 1955. The catch of the third money fish, the walleye, dropped from 15½ million pounds in 1956 to 1¾ million pounds in 1960 and has declined further since.

The evidence is strong that Lake Erie's difficulties have arisen primarily from environmental changes. A major factor in these changes may well be the progressive and growing enrichment from sewage effluent from the populous metropolitan area of the Detroit River and the western and southern shores of the lake.

The overall effects of fish population changes in Lake Erie that I have reviewed are not seen in the production records. The U.S. commercial catch still hovers about the 70-million-pound level. But, the fish currently produced are the less desirable lower priced species and landed at progressively smaller profit margins. Many operators have been unable to survive the high-yield, low-price, slim-margin regimen and have stopped fishing altogether. In fact, many once-thriving fishing ports are now entirely closed down and formerly major ports may now have just a few fishing craft. Fish as fish are far from scarce in the lakes. The total quantities available well may be at a record high. Yet it is increasingly difficult to take and sell them at a reasonable profit.

To the problems arising from the fish population changes with their lower income-producing characteristics must be added the difficulties which are common to the commercial fishing industry as a whole and which have been laid before you in talks by various Members of the Senate. I need review them only briefly.

The technological backwardness, the lack of capital, and the encumbrance by tradition which plague most segments of the Nation's fisheries are probably more severe in the Great Lakes than in any other important fishery. The scattered distribution of the fisheries and the high price per pound received for many species furthered the establishment of small, independent operating firms. No truly large producing firms appeared. A high percentage of the producers had one-boat operations, owned by partners or, more commonly, entirely within a single family.

This kind of operation made sense when high-priced fish were plentiful. The fishermen made a decent living and were comfortingly independent. Personal incentive to develop better means of taking fish was low. In addition, experimentation was hampered and discouraged by the stringent regulations under which the fishermen operated.

The firms were too small to afford the sizable capital outlays necessary for extensive processing. They landed and sold their catches in the round. The firms lacked any substantial reserve capital and normally did not feel the need for it.

Fisheries with this background were poorly suited to survive the changed conditions of the last 10 to 20 years. It is in no way surprising that so many operators failed to survive and more will disappear unless the industry receives effective assistance.

The Great Lakes fishing industry suffers also from that common ailment of most food-producing enterprises—the growing disparity between price received by the producer and price paid by the consumer. Labor and material costs have increased enormously. Yet, fishermen today actually are receiving less per pound for some choice species than they did before World War II. Improved efficiencies and economics in all phases of catching, handling, and selling are needed, but the industry cannot do the job alone—it needs outside help.

Still other important handicaps to economic stability have been the widely fluctuating supply and the variation of quality that originates in highly seasonal production and a general lack of adequate quality control. The major production of many species is landed within a very short period of time. During the glut period fishermen must often dispose of their catches at ruinous prices simply to keep them from going to waste. Later, when fish are scarce, prices rise sharply. If the glut production could be processed and stored, the supply to market could be stabilized and the fishermen could receive a substantially greater return. Facilities for storing and processing are inadequate today and most firms lack the capital to set them up.

The traditional practice of landing and shipping to market in the round leaves many opportunities for deterioration of the quality of Great Lakes fish before they reach the consumer. Improvement of quality control at every stage from net to retail market can increase acceptability of the product and stimulate consumer demand. Here, again, expert advice and assistance are needed.

Before I undertake comments as to the type and scope of Federal research and developmental programs, I should like to indicate briefly the role the Federal Government should play in seeking the solution of Great Lakes fishery problems. The Great Lakes are unique in that despite their considerable area they contain no international or interstate waters. The boundary between Canada and the United States is as clearly defined as are the boundaries between our States. Thus the entire extent of the lakes is part of some State or the Province of Ontario. Each political jurisdiction has full authority over the fisheries within its boundary.

The argument could be advanced that since the States own the U.S. waters of the Great Lakes, research on and development of the fisheries should be strictly a State matter. This argument might gain validity if the fish remain discretely within the correct political boundaries, but they obviously do not. We may lack interstate or international waters but we do have interstate and international stocks of fish that move about as their biological needs require and are fished by citizens under various jurisdictions. The problems of the Great Lakes know no political boundaries and they are handled best by agencies that are free to operate without regard to State lines. Federal attention to fishing matters is as justifiable in the Great Lakes as it is in coastal and offshore fisheries. The Nation as well as individual States will benefit from sound fishery development.

The Federal Government acknowledged its responsibility early by including the Great Lakes in its first major survey of the Nation's fisheries in 1879-80. A second, more comprehensive survey of the Great Lakes fisheries was made in 1885 and lesser ones followed. The Federal Government further joined Canada in the establishment of commissions and boards to review fishery problems from an international standpoint. The first of them reported in 1897 and the most recent, the International Board of Inquiry for the Great Lakes Fisheries, reported in 1942.

Although the recognition of responsibility came early, the Federal Government actually contributed little more than occasional surveys and sporadic collection of statistical records until after the first quarter of the present century. The first continuing Federal fishery program on the lakes was the biological research started in 1927 shortly after the collapse of the Lake Erie cisco fishery. The urging and cooperation of the States were a major factor in this start.

The fiscal support of the present Bureau of Commercial Fisheries Biological Laboratory in Ann Arbor, Mich., was indeed meager over the first 22 years of its existence. The total annual appropriation, salaries and operating expenses combined, did not exceed $31,000, was as low as $11,000, and averaged less than $19,000. Especially trying to the biologists was their inability to undertake research on an effective scale through the 1940's when the sea lamprey was destroying stocks of lake trout in both Lake Huron and Lake Michigan.

What this small group of scientists accomplished with so little is a record of which the U.S. Fish and Wildlife Service well may be proud. Let me point out also that much of the Service's early research could not have been completed without the generous financial support of the States and the hearty cooperation of the industry. This tradition of Federal-State-industry cooperation has never been lost. I am confident that the record of joint effort toward attainment of a common goal to be found in the Great Lakes region is without parallel in the Nation. The States have requested repeatedly and supported unfailingly a broadening of Federal programs in the Great Lakes. For more than three decades they have relied strongly on Federal officials for advice and counsel in fishery problems.

Federal biological research on the lakes gained its first financial support of consequence in fiscal year 1950. This support continued on a varying and uncertain basis until fiscal year 1957. Beginning in that year, funds for sea lamprey research and experimental control were obtained under contract between the Bureau of Commercial Fisheries and the Great Lakes Fishery Commission, established as one part of a treaty with Canada in 1956. Funds for other research still are included in the Bureau's budget.

Federal assistance to the Great Lakes fisheries other than biological research materialized slowly. A small-scale program of marketing was started in 1955, but it was not until the regional office of the Bureau of Commercial Fisheries for the Great Lakes and Central Region was established in Ann Arbor, Mich., in 1958 that even a start could be made in technology, gear development, and economics. Scant support made the programs in these disciplines largely ineffective at the start. They are better supported now but still far from adequate to meet the pressing needs of the Great Lakes fisheries.

I believe firmly that the historical neglect of the Great Lakes fisheries must come to an end and that we should meet, not merely recognize, the responsibilities of the Federal Government. These extraordinary bodies of fresh water lie in the heart of a rich and densely populated region. They can sustain large populations of desirable fish for the support of industry and the enjoyment of anglers. It is unthinkable that we should let them lie sterile and unproductive.

I shall not lay before you at this time detailed proposals for a Federal fishery program on the Great Lakes. Rather, I shall suggest the broad lines of attack along which we must move immediately and in adequate strength if a once-thriving industry is to be spared and the public allowed the full use and enjoyment of a priceless resource.

Our first major goal must be the early restoration of the stocks of valuable species in the three upper lakes. Ten years, or even five years ago attainment of this goal would have seemed fanciful. The sea lamprey had destroyed or reduced to low levels the choice species of Lakes Huron and Michigan and was making rapid inroads on the lake trout of Lake Superior. In the face of this catastrophe we had no proven method of control.

The situation is changed. We now have a control method. Its effectiveness was demonstrated in 1962 when the numbers of sea lampreys in spawning runs were reduced to a mere 14 percent of the 1961 figure. Further experience and experimentation surely will increase this fine efficiency.

Much credit must go to biologists of what is now the Bureau of Commercial Fisheries for their years of patient research that culminated in this recent success. They are to be commended especially for the painstaking care and patience they exhibited as they ventured into the practically unknown field of selective toxicants. Untold thousands of tests finally uncovered chemical compounds which, used in proper concentrations, are lethal to lampreys but harmless to other fishes and to birds and mammals as well.

Laboratory tests were followed by field tests to learn better the action of the chemicals in the natural streams inhabited by larval lampreys and to develop proper field procedures. Finally came the grand experiment in which United States and Canadian biologists joined in the chemical treatment of all lamprey streams tributary to Superior, largest of the Great Lakes. The success of this experiment marked a monumental advance in the management of aquatic populations.

Lake Superior has been the scene also of experiments to learn the feasibility of restoring lake trout stocks. The United States and Canadian Federal Governments, the Province of Ontario, and the States cooperated in the rearing, planting, and subsequent research on trout survival. Federal fish hatcheries at Charlevoix and Pendills Creek, Mich., as well as State hatcheries at Marquette, Mich., and Bayfield, Wis., produced hundreds of thousands of high-quality lake trout yearlings annually for restocking purposes in Lake Superior. A new Federal hatchery at Jordan River, Mich., will help with the job in Lakes Michigan and Huron.

That lake trout stocks can be restored was demonstrated positively. Lake Superior is well along the road to recovery. A return to a good level of abundance of lake trout is anticipated within the next few years.

The experiments that succeeded so well in Lake Superior have provided the method for a similar restoration of stocks of valuable fish in Lakes Huron and Michigan. The question properly may be asked as to why we do not set out immediately to complete the work. The answer is simple. The present level of budgeting of the Great Lakes Fishery Commission is not sufficient to the task. I hold it a false economy—indeed inexcusable—that we should permit this situation to continue.

The changed fish population of Lake Erie offers a problem for which no easy solution is apparent. Additional well-conceived and designed research on the widely fluctuating stocks and their environment could uncover principles most useful in the betterment of populations and the management of the fisheries. The industry needs immediate aid in achieving more profitable use of the presently plentiful supplies of smelt and yellow perch.

Broader and more intensive research is needed also on fish stocks in the three upper lakes, particularly during the period of restoration. Unparalleled opportunities exist there for inquiry into the dynamics of aquatic populations.

Technological research and development offer substantial opportunities for the economic betterment of the commercial fisheries. Some lines of work give promise of early return.

Fishery technology can increase dollar returns to the producer's pocket and still give the consumer a better product. The resulting economic gain benefits his income without placing additional strain on the stocks. Let me take the Lake Superior lake herring or cisco as one example to illustrate the point.

The cisco or lake herring of Lake Superior is one of the tastiest food fish produced in the Great Lakes. The annual landings on the U.S. side typically are above 10 million pounds and have exceeded 17 million, but a relatively small percentage of the take reaches the tables of consumers. Formerly, quantities of lake herring were salted but this market had dwindled. Today the bulk of the catch is sold for mink food.

Three circumstances impede the profitable marketing of the Lake Superior lake herring. The take is highly seasonal; up to 90 percent or more of the annual catch is landed within a few weeks in late November and early December. The fish is so delicate that it cannot tolerate repeated handling, reasonable storage time, or shipment to distant points in the fresh state. No method of processing and freezing developed to date has been satisfactory. The flesh rapidly develops off colors and off-flavors.

The development of processing procedures and equipment that will give frozen Lake Superior lake herring a shelf life considered normal for fish could improve the economic status of the fishery enormously. Placed on the market in a suitable state, this fish could compete successfully with the choicest. Badly overloaded and underequipped technologists of the Bureau of Commercial Fisheries in Ann Arbor are making a start on this complex and difficult problem. They should receive sufficient support to assure the earliest possible completion of the work.

The yellow perch is another excellently flavored and plentiful Great Lakes fish that is not yielding proper economic returns to producers. The average landed price today is far below that of prewar years and frequently it is so low that fishermen must suspend operations. If yellow perch could be more efficiently caught, processed, and stored at or near the point of production a steady supply could be assured to receptive retail outlets. The price to the producer could be stabilized at a sound level. Processed and frozen yellow perch is an excellent product with a long shelf life. The industry lacks, however, the equipment and facilities to handle the fish. It needs technical advice and it may require direct aid in the form of loans and grants. In fact, assistance in finding capital may well prove to be the key to most technological advances in the Great Lakes fisheries.

What I have said about lake herring and yellow perch applies, of course, to a number of Great Lakes species.

Many other possibilities exist for increasing the income to producers through product development, including products for human consumption from such fish as the alewife and the smaller species of deepwater ciscoes now marketed as animal food.

Throughout the Great Lakes, fishermen need sound advice and practical demonstrations on the proper handling and refrigeration of the catch. Too frequently, poor quality is assured even before the fish are landed. Quality control must be stressed from the time of catch to the consumer's table. Broadening of voluntary Federal inspection of processing and packing plants should be encouraged.

The traditional gears of the Great Lakes are not satisfactory in many fisheries for production under the changed conditions of recent years. The development of new, more efficient, cheaper methods of taking fish are badly needed. When new methods and gears are developed, the fishermen must have sound advice in their use and on necessary modifications of vessels. Many will need assistance in obtaining capital for change in methods of fishing. Only a start has been made here; much remains to be done. The States are eager to have this work carried on and have exhibited readiness to modify regulations to permit more efficient fishing.

Exploratory fishing by Federal vessels, especially with new fishing gears, can provide fishermen with needed information on grounds and seasonal availability. Fishermen simply cannot afford to spend time in this searching.

Improvements in technology and in fishing methods and gear—especially those that contribute to a greater stability of supply and improvement of quality—can ease greatly the task of marketing specialists who assist and advise the fishing industry in the orderly and profitable movement of their products. The Branch of Marketing of the Bureau of Commercial Fisheries has done much worthwhile work in the Great Lakes region. Still, much remains to be done in the popularization of fish as a highly palatable and healthful food in homes, schools, restaurants, and institutions. Support to the Branch of Marketing in this work can pay high dividends.

Ignorance of the economics of the Great Lakes fisheries has been a great handicap in attempts to estimate costs and benefits from changes in the taking, handling, and processing of fish. Elementary but thorough cost studies are needed urgently for various fisheries and species from the time of catching to final purchase by the consumer.

Plans for the future should not overlook the orderly development of the recreational potential of the Great Lakes and their fisheries. Summer vacations on the shores and beaches can be attractive to growing numbers of people in warmer, southern climates and in the hot cities. Food and lodging, sales of automotive supplies and fishing equipment, rental of charter boats and sale of boats and motors, and many other sources of income based on the lakes and fishing are potentially or actually available. The small attractive ports and the firm, high quality gamefish species are assets that can be developed and wisely used for decades to come.

My comments on program needs in Federal research and assistance for the Great Lakes fisheries have been brief indeed. More details were not required since all segments of our Nation's fisheries have problems in common and the Senate has had them laid before it more than once.

I have confined myself to the Great Lakes fisheries because they are fascinatingly unique and have a regional and national worth far greater than is commonly appreciated. What I have said about Federal neglect of Great Lakes fisheries holds for all, but I am confident that among our fisheries those of the Great Lakes are most neglected, yet offer a tremendous potential in the commercial, sport, and recreational fields.

We can ill afford to stand by and watch a valuable industry crumble. We need not suffer the economic loss, the unemployment, the depressed communities. We need not purchase from others the products we can, with little effort, produce ourselves. The time for assumption of our Federal responsibility for our fisheries does not lie in the indefinite future. The time is at hand. Neglect must end now.

Mr. President, I ask unanimous consent that a series of tables, providing data to substantiate my remarks, be incorporated in the RECORD at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 1.—*Production of all species for the Great Lakes fisheries by total volume, value, and price per pound for all lakes, Lake Superior, and the State of Michigan, 1940–61*

[Pounds and dollar amounts in thousands]

OUR NATION OF IMMIGRANTS

Mr. HART. Mr. President, on April 19 the American Immigration and Citizenship Conference held its annual meeting in New York City. One of the highlights of the program was an address by the Senator from Maine [Mr. MUSKIE], in which he called for a revised immigration policy consistent with the historical principles of this Nation.

This was a particularly effective and moving address since the Senator himself is living proof of the enrichment given our national life by immigrants and the children of immigrants.

I ask unanimous consent that the speech of the Senator from Maine, together with President Kennedy's message to the American Citizenship and Immigrant Conference's annual meeting, be printed at this point in my remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

OUR NATION OF IMMIGRANTS

(Address by Senator EDMUND S. MUSKIE, of Maine, American Immigration and Citizenship Conference, Plaza Hotel, New York, April 19, 1963)

I am an American by birth. I am the son of an immigrant. I take it that most, if not all, of us in this room are immigrants, or descendants of people who came to these shores from other lands. In that respect, this group is representative of all America.

We are here to discuss whether, and to what extent, others shall be permitted to enjoy these opportunities which, but for the accident of time might today be denied to some of us.

Certainly, we are not the first to concern ourselves with this subject. It is not new. It is older than the Republic itself. It has its origin in that far distant day when the first settlers came here seeking wider and unobstructed horizons of freedom and opportunity. It was then that the picture of America, as a land where the hopes and aspirations of all mankind might be realized began to emerge. Since then, the brush strokes of changing public policy have alternately brightened and darkened that picture.

Volumes of material are available to those who would trace the history of our national immigration policy. They would begin with the early days when immigration was eagerly encouraged as a necessity if we were to develop our economic and cultural potential. They would trace it through the devious paths of prejudice and intolerance. They would note the pessimism of those who, from time to time expressed the view that America had reached the limit of her capacity to grow and to absorb more newcomers—only to be confounded by a new period of dynamic expansion. And, having completed their study to the present day, they would have found little justification in history for the illogical and inequitable restrictions of our present law.

Interesting and productive as such a study would be, I choose to turn from such historical detail to what I consider to be the basic questions involved:

1. Does our national immigration policy present a true picture of America to the world?

2. If not, would it be sound, in terms of our best interests, to change that picture by changing that policy?

You will forgive me, I trust, if I answer the first of these two questions by touching briefly upon my own background. My father's father was a farmer in Russian-occupied Poland prior to the turn of the century. He shared the intense patriotism and love of liberty which has preserved the identity of my ancestors as a people through centuries of oppression. He early determined that his youngest son, my father, should have an opportunity to build a better and freer life than appeared possible under the czarist tyranny.

And so it was that, in his early teens, my father was apprenticed to a tailor. At the age of 17 having learned his trade, he left his home, embarking upon a new life, preferring the bright prospect of the unknown and unfamiliar freedom to his oppression-darkened homeland.

What he found here forever justified his hopes and his father's faith. At his knee, I have heard him reminisce, for hours on end, out of the fullness of his heart, upon his boyhood life—the close family ties which bound him to loved ones he was never to see again, the warmth at his father's house, the joys and pleasures of his childhood. It could not have been easy for him to leave them behind. He talked to me of these things because he wanted to relive them. But he had a deeper purpose.

Increasingly, as the years passed by and my comprehension grew, he drove home his lesson. What he had lost had been more than offset by what he had gained—for himself, for his father, and for me. Here, if a man had ability, he could express it without fear of reprisal. Here, if a man disagreed with governmental policy, he could say so, and, more than that, he could do something about it by casting his ballot at the polls. Here, a man was completely free to reap the fruits of his own integrity, intellectual and physical capacity, his own work. There were no heights to which he could not strive. It mattered not what his national background, his religious or political beliefs, his economic status in life might be.

On the evening of my inauguration as Governor of the State of Maine, he turned to me and said, very simply, "Now I can die happy." A few months later the final chapter of his life was written. I am sure that, in the closing moments, he must have thought of the strange and wonderful destiny which had so astonishingly vindicated his beliefs which had uprooted his life.

If the national origins quota system is based on truth, then my father's life was built on lies. There is no way of reconciling the two.

The national origins quota system says to the world that we consider certain national and ethnic groups to be better and more desirable as Americans than others. It says to the world that there are superior and inferior peoples, depending upon race, national background, religion, color. It says to the world that creative ability, intellectual capacity, and high moral and spiritual principles have been allocated by the Creator to some peoples to a greater extent than to others. Logically, it implies more than that.

If the peoples of different countries vary in their capacity to contribute to what we are and hope to be, so that their entry into this country must be controlled accordingly, then those who are now citizens must also vary in the same way. This suggests that there should be classes of citizenship in this country. Some of us should be allowed to vote freely, others not. We should have classes of citizenship rigidly defined on the basis of economic status, racial and national origin, political beliefs, and creed. This is not a true picture of America. It is not the picture we should hold out to the world.

In 1789, Benjamin Franklin described America in essence when he wrote to David Hartley these words:

"God grant that not only the love of liberty but a thorough knowledge of the rights of man, may pervade all the nations of the earth, so that a philosopher may set his foot anywhere on its surface, and say 'This is my country'."

The second question I have posed is this. Would it be sound, in terms of our best interests, to change that picture by changing that policy?

May I again use a simple illustration to make my point.

In the 1860's the Maine Legislature concerned itself with the problem of inducing settlements in the unpeopled townships of the State. A commission was created to study the problem. As a result of its work, an agent was sent to Sweden, with instructions to make vigorous efforts to establish a Swedish colony in Maine. Within 10 weeks he had brought to Maine 22 men, 11 women, and 18 children—including a pastor, farmers, a civil engineer, a blacksmith, 2 carpenters, a basketmaker, a baker, a tailor, and a shoemaker. They carved a home out of the wilderness of northern Maine. New immigrants followed. Within 5 years the population had increased to 600 who had built a properous community of 130 houses, barns, 2 steam sawmills, 1 water power sawmill and the incidental business establishments. At the end of 5 years, 133 men applied for citizenship.

Mr. G. A. Hedlund wrote to the Governor of Maine, as follows:

"May the young colony of New Sweden grow and flourish, not only in material strength, but even in developing their moral and intellectual faculties. And may the new population thus add to your State and to your great Republic a good and healthy element of moral power from the old world, and, becoming imbued with the spirit of your free institutions, reflect that spirit on their native land.

"What we have lost at present in the old fatherland, will then not have been lost to humanity: On the contrary, the trees have only been transplanted on a fresher soil, where they will thrive better, and give richer and more abundant fruits. God bless the harvest. God bless your land."

We have, in this simple story, an illustration of two important points:

1. The fact that new blood, new energies, and the qualities of character and mind which these people bring to us are an immeasurable contribution to our greater growth. Our culture, our economy, and our defense have been strengthened by the contributions which they and their sons and daughters have made to our way of life.

2. The picture of America which was presented to the people of Sweden by Maine's agent, the warm and cordial reception given to the immigrants, created a storehouse of good will in the old country which could not be bought in any other way.

In this day when we are selling the product which is America in a market where there is fierce competition, we must preserve the purity and quality of what we offer. To insure that we do, we can and should welcome those from every land who, on the basis of their own merit, demonstrate their qualifications. There is always room for a good man in a dynamic, growing, fearless America. The total numbers admitted should be geared to our needs. There should be safeguards designed to exclude undesirables. But let the standards be consistent with the principles which were so unhesitatingly embraced by the Founding Fathers.

I have intentionally avoided the complexities and technical details of legislation in this field. We should first concern ourselves with what is right and what is wrong. Then, having established the principles which should govern our decisions, and holding unwaveringly to them, we can quite readily spell out the corrective legislation which is needed.

We should, most certainly, give attention to the following:

1. A unified, single quota divorced from all considerations of national origin.

2. The granting of asylum to those suffering from political, religious, and economic persecution.

3. The attracting of those whose skills, aptitudes, knowledge, and experience may be necessary or desirable for the national welfare.

4. The necessity for relieving population pressures which create tensions and unrest anywhere in the free world.

These are realistic standards. They are humane standards.

President Kennedy, long a vigorous exponent of more equitable immigration laws, has endorsed the principle of reform, as has former President Eisenhower. And there seems to be widespread support for reform in the House. Thus, the prospects at this time must be rated as favorable.

But the battle is far from over, and it would be the worst folly for us to relax our efforts now. Rather we must continue and even expand our efforts to achieve wider public understanding in an attempt to insure ultimate success; for that success will be largely dependent upon public understanding of this problem.

I do not believe that America has reached its peak, politically, economically, or culturally. I do not believe that our efforts should be directed only toward consolidating what we have. The world is expanding in every dimension and I believe the United States should be and will be in the forefront of that expansion.

Into American hands has been passed the burden of carrying, for all humanity, the torch of liberty in these perilous times. As long as men remain enslaved, as long as children remain hungry, America's destiny will remain unfulfilled.

PRESIDENT KENNEDY'S MESSAGE TO THE AMERICAN CITIZENSHIP AND IMMIGRATION CONFERENCE, PLAZA HOTEL, NEW YORK, APRIL 19, 1963

I am pleased to extend through Senator MUSKIE my best wishes for the success of this year's annual meeting of the American Immigration and Citizenship Conference. I also wish to take advantage of this opportunity to express my appreciation of the continuing role which the American voluntary agencies play in the relief of refugees and other distressed persons throughout the world. I am also aware of the part you play in bringing to the attention of the public the needs in the field of immigration and naturalization. We are now engaged in an intensive search for legislative formula designed to serve our national interests and our role as leader of the free world.

We welcome the cooperation of your member agencies in our efforts.

JOHN F. KENNEDY,
President of the United States.

INTERROGATION OF CABINET MEMBERS BY CONGRESS

Mr. KEFAUVER. Mr. President, last Sunday the Washington Post published an excellent editorial in which it approved the proposal to allow Cabinet members to report and be questioned on the floor of the Senate.

This proposal, which I introduced last month as Senate Resolution 120, would provide regular periods when Cabinet members and heads of agencies could report to the entire Senate, and, in turn, be questioned about their policies by us.

The editorial in the Washington Post gives many very good reasons why this procedure would be a valuable innovation in the Senate. I think there is another extremely important reason why we should adopt a procedure of this type.

Since members of the executive department communicate with the Senate by means of committee hearings, it now frequently happens that a Cabinet member is successful in getting his viewpoint across to members of one committee, but not the Senate as a whole. The opposite is also sometimes true—the Cabinet member does not know the feelings of the Senate as a whole, but only the members of the committee that he has faced.

The question period would open up a simple and direct new avenue of communication between the Senate and the executive branch of our Government. In the process, it would give the Senate a fresh new initiative in governmental affairs, and would demonstrate the flexibility of Congress as an institution to meet changing needs and conditions.

Mr. President, I ask that the text of the Washington Post editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

QUESTION TIME

Senator KEFAUVER has revived an old proposal in suggesting that Congress set aside at least a 2-hour period once a month for questioning Cabinet members and other administration officials. We thought this a sound and useful idea when Mr. KEFAUVER put it forward as a Member of the House 15 years ago. It is all the more relevant today when the procedures of Congress have become a major political issue.

In Great Britain, of course, the question period is an established custom. Cabinet members must regularly face the House of Commons and answer probing questions from the opposition back bench as well as from members of their own party. The device has been found invaluable as a means for giving the public an insight into government thinking—and in giving Cabinet officials an insight into legislative anxieties.

To be sure, Cabinet members sit in the British Parliament while in America the separation of powers imposes an entirely different relationship between Congress and the White House. It is precisely this difference that makes Mr. KEFAUVER's proposal all the more pertinent. Too often, there is a chasm on Pennsylvania Avenue that is only imperfectly bridged by administration testimony before individual committees. A question period involving the entire Congress could give the executive a systematic and consistent opportunity to disclose its thinking before a forum where maximum publicity would be assured.

One does not have to look for foreign precedents. During the First Congress, the record contains 14 references to executive officials appearing before the Senate. The framers of the Constitution clearly anticipated that same form of regular interchange would develop between legislative and executive. But due in part to President

Washington's painful personal experience in meeting with an equally nervous Senate, the custom withered. In a time when government is vastly more complex, an old institution could well be given a second chance.

REFORM OF ELECTORAL COLLEGE SYSTEM OF ELECTING THE PRESIDENT

Mr. KEFAUVER. Mr. President, the Washington Daily News ran an excellent editorial on Monday, April 8, 1963, regarding the continued efforts in the Senate to reform the electoral college system of electing the President.

The caption of the editorial was "Try, and Try Again," and it pointed out that, although various reform proposals have come before the Senate over a period of many years, the Subcommittee on Constitutional Amendments is still actively working to achieve electoral college reform.

Those of us who have been working to reform the present archaic system have been encouraged by recent developments that have emphasized the need for reform.

Last month the Supreme Court of the United States struck down a kind of little electoral college when it held that the Georgia unit vote system violated the one person one vote conception of political equality established by the 15th, 17th, and 19th amendments to the Constitution.

This prompted many citizens to ask themselves: "Doesn't the national electoral college system violate the same principle?"

I think it does, and I think there are many other undesirable features of the present system that should be changed.

The editorial in the Daily News gives an excellent summary of many of the reasons why we should eliminate the present horse-and-buggy electoral college, and should adopt a more equitable method of electing our Presidents.

Mr. President, I ask unanimous consent to have the full text of this editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRY, AND TRY AGAIN

Senator ESTES KEFAUVER, as chairman of the Senate Subcommittee on Constitutional Amendments, is going to make another attempt to persuade Congress that the system by which we elect Presidents has outlived its usefulness.

The subcommittee will begin hearings April 9 on a half-dozen varying proposals to amend the Constitution so that presidential elections are decided more nearly on the basis of the way the people actually vote.

Senator KEFAUVER's own proposal would split each State's electoral vote in direct proportion to the popular vote. Another plan would apportion electoral votes by congressional districts, etc.

As it is, and has been since the beginning, the people do not choose a President directly. They choose members of the horse-and-buggy electoral college who then decide who shall go to the White House.

The chief evil of this system is that all of any State's electoral votes go to one candidate, even if he managed to carry the State by as little as a single vote. It has happened, and it easily could happen again, that the candidate who was the popular choice did not win the election.

This is contrary to the whole theory of our Government. The President and Vice President are the only public officials in the country who are not elected by direct vote of the people. The members of the electoral college normally cast their ballots for the candidate who carried their State—but they are under no legal requirement to do so. They can, and occasionally one has, vote for anybody, including persons who were not even candidates.

The electoral college gives a disproportionate voice to minorities. It is cumbersome, unnecessary and risky. It serves no useful purpose and it could frustrate the will of the voters.

Under Supreme Court rulings, steps are underway to give the voters in the States fairer representation in their legislatures. The Court only recently threw out an electoral college-like system for electing State officials in Georgia. But the Court can't undo the electoral college system. It's in the Constitution.

We think if the people had the option, they speedily would abolish this system. The initiative for a constitutional amendment necessarily lies with Congress. We hope Senator KEFAUVER and others who agree with him can push the amendment through this session of Congress.

TRANSACTION OF ADDITIONAL ROUTINE BUSINESS

By unanimous consent, the following routine business was transacted:

RESOLUTION OF TEXAS HOUSE OF REPRESENTATIVES

Mr. TOWER. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, a resolution designated "H.S.R. 247," adopted by the House of Representatives of the State of Texas on April 9, 1963. The vote on this resolution was 124 yeas to 17 nays. The substance of this measure is a condemnation of the Arms Control and Disarmament Act which was enacted by the Congress on September 8, 1961.

This act by the house of representatives of my State reflects the attitude of Texans specifically and I believe also the consensus of American thinking in general. Our apparent frantic search for disarmament formulas gives the impression that we are weak and frightened.

Mr. President, several weeks ago I cosponsored a measure offered by the senior Senator from Nebraska [Mr. CURTIS] calling for modifications in Public Law 87-297 which created an agency known as the Arms Control and Disarmament Agency. This resolution calls for:

First. Complete on-the-spot inspection of all areas involved in arms control or disarmament agreements with Members of Congress included as members of the inspection team.

Second. Reporting of the President of the United States to appropriate committees of Congress, of any and all steps taken by him which would tend to alter existing ratios of weapons and the effectiveness between this Nation and its allies, and the Soviet bloc of nations.

Third. All preliminary and final arms control or disarmament agreements be embodied in treaties subject to the advice and consent of the Senate of the United States.

Mr. President, it would seem to me that this session of Congress could take no more important action than to act upon this resolution.

There being no objection, the resolution was referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

H.S.R. 247

Whereas the U.S. Arms Control and Disarmament Agency, created by act of Congress in September 1961, has supported and promoted the U.S. program for general and complete disarmament in a peaceful world, which could result in complete disarmament in the United States in less than 10 years; and

Whereas history has taught us that peace is only achieved when a free people stays militarily strong; and

Whereas Khrushchev has sworn he will bury us, but he intends to bury our freedom, take our children, and place us in slavery; and

Whereas personal freedoms and economic security can be enjoyed only by those who possess the power to protect their citizens against the invasions of other systems of government; and

Whereas an understanding of the disarmament policy of our administration, Congress, and the State Department is the most crucial issue facing our citizens today: Now, therefore, be it

Resolved by the House of Representatives of the State of Texas, That the house of representatives of the 58th legislature wishes to go on record in opposition to the disarmament policy of the U.S. Arms Control and Disarmament Agency; provided that the Congress of the United States is notified that, irrespective of Federal action, the sovereign State of Texas will never release her State military forces to any international organization, but will forever retain her right under the Constitution of this Republic and State to keep a militia for the protection of her citizens; and be it further

Resolved, That copies of this resolution be prepared and sent to members of the Texas delegation in the National Congress and to Vice President LYNDON B. JOHNSON as an indication of the views of this house concerning our present disarmament policy as proposed by the U.S. Arms Control and Disarmament Agency.

BYRON TUNNELL,
Speaker of the House.
DOROTHY HALLMAN,
Chief Clerk of the House.

AMENDMENT OF RULE XXXIII—ADDITIONAL COSPONSOR OF RESOLUTION

Mr. KEFAUVER. Mr. President, I ask unanimous consent that the name of the senior Senator from Minnesota [Mr. HUMPHREY] may be added as a cosponsor of Senate Resolution 120, to amend rule XXXIII to provide for a report and question period which was submitted by me on April 8, 1963.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARINGS ON SENATE JOINT RESOLUTION 45 PERTAINING TO EQUAL RIGHTS FOR MEN AND WOMEN

Mr. KEFAUVER. Mr. President, as chairman of the Subcommittee on Constitutional Amendments, I wish to announce that hearings will be held on May 13 and 14 on Senate Joint Resolution 45, a joint resolution which would amend the Constitution of the United States to provide that equality of rights under the law shall not be denied or abridged by the United States or any State on account of sex.

The hearings will begin at 2 p.m., on May 13 in room 457 of the Old Senate Office Building. On May 14 the hearings will commence at 10:30 a.m.

Any person who wishes to appear and testify on Senate Joint Resolution 45 is requested to notify the subcommittee by contacting Mr. Fred Graham, chief counsel, room 141, Old Senate Office Building, telephone Capitol 4-3121, extension 5581.

RECESS

Mr. MORSE. Mr. President, I move that the Senate take a recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 8 o'clock and 29 minutes p.m.) the Senate took a recess until tomorrow, Thursday, April 25, 1963, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate April 24, 1963:

DIPLOMATIC AND FOREIGN SERVICE

Adm. Jerauld Wright, U.S. Navy, retired, of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to China.

IN THE COAST GUARD

The following-named persons to be ensigns in the U.S. Coast Guard:

Anthony Reid Adams
John David Adams
Leo David Allen
Nicholas Heath Allen
David Lewis Andrews
Kent McFarlane Ballantyne
Robert Grandal Bates
William Marshall Baxley
William Douglas Bechtel
Roger LeRoy Beving
Denis Jack Bluett
James Dennis Boyce
Dennis James Brady
David Charles Brostrom
George Herbert Brown III
George Jack Buffleben, Jr.
Robert William Burchell
Michael Burdian
Peter Conrad Busick
Raymond Harold Canada, Jr.
William Albert Caster
Kevin Timothy Clancy
David Joseph Connolly
Ernst Michael Cummings
Edward Earl DeMuzzio
Richard Lee Da Vries
James Fonda Dewey
Robert Peter Dickenson
Andrew Franklin Durkee, Jr.
Kurt Louis Elste
Robert Emmett Fenton
Thomas Daniel Fisher
James Wilson Fry, Jr.
Forrest Fred Furaus, Jr.
Howard Bernard Gehring
Gill Reves Goodman
John William Greason
Michael Edward Greene
Charles Everett Haas
James Campbell Haldeman
Jeffrey Dean Hartman
Roger William Hassard
Ray Albert Heller
Richard James Heym
Wayne Kenneth Hodsden
Joseph Henry Hughes III
Michael Joseph Jacobs
Arthur Elliot Katz
Nelson Herbert Keeler, Jr.
Virgil Francis Keith, Jr.
Nelson Wayne Koscheski, Jr.
Robert LeRoy Kuhnle
James John Lantry
Robert Edward Leggett
John Edward Lindak
Ronald Otis MacFee
David Terrence Machamer
Robert Allen Major
James Francis McCahill, Jr.
Karl Warren Mirmak
Carl Richard Mockler
William Albert Monson
Charles Bernard Mosher
Jerome Pierce Mullins
James Aloysius Murray, Jr.
Dan Allen Nauman
Harry Donald Nelson
Philip Randall North
Harvey Francis Orr
Rudy Kahl Peschel
Paul David Pierce
Robert Matthew Pochman
Stephen Joseph Ratey, Jr.
Karl Lawrence Reichelt
Billy Wayne Richardson
Arthur Bishop Shepard
Daniel Kane Shorey
Jan Forrest Smith
Warren Dean Snider
John Joseph Soltys
Dana Wellman Starkweather
Michael Peter Studley
Harry Toshiyuki Suzuki
Barham Foster Thomson III
Murray John Towle
Stephen Terry Ulmer
Robert Lawrence Vence, Jr.
William Burns Waff
Richard Andrew Walsh
James LeRoy Webster
Gerald Francis Woolever
John Richard Yetke, Jr.
David Allen Young
David Reynolds Zwick

CONFIRMATIONS

Executive nominations confirmed by the Senate April 24, 1963:

DEPARTMENT OF JUSTICE

Frank Udoff, of Maryland, to be U.S. marshal for the district of Maryland for a term of 4 years.

Paul G. April, of New Hampshire, to be U.S. marshal for the district of New Hampshire for the term of 4 years.

Louis M. Janelle, of New Hampshire, to be U.S. attorney for the district of New Hampshire for the term of 4 years.

DEPARTMENT OF STATE

Roger Hilsman, Jr., of Maryland, to be an Assistant Secretary of State.

DIPLOMATIC AND FOREIGN SERVICE

George C. McGhee, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Federal Republic of Germany.

Brewster H. Morris, of Pennsylvania, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Chad.

UNITED NATIONS

Edwin M. Martin, of Ohio, Assistant Secretary of State for Inter-American Affairs, to be the representative of the United States of America to the 10th session of the Economic Commission for Latin America of the Economic and Social Council of the United Nations.

Walter M. Kotschnig, of Maryland, to be the representative of the United States of America to the 18th plenary session of the Economic Commission for Europe of the Economic and Social Council of the United Nations.

INTER-AMERICAN DEVELOPMENT BANK

David Elliott Bell, of Massachusetts, to be Alternate Governor of the Inter-American Development Bank for a term of 5 years and until his successor has been appointed.

EXTENSIONS OF REMARKS

Fair Trade

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1963

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement before the Commerce and Finance Subcommittee of the House Committee on Interstate and Foreign Commerce, Tuesday, April 23, 1963, in opposition to H.R. 3669 and companion bills. My statement follows:

STATEMENT BY REPRESENTATIVE EMANUEL CELLER IN OPPOSITION TO H.R. 3669 AND COMPANION BILLS (QUALITY STABILIZATION) APRIL 23, 1963

H.R. 3669 is the latest version of that hardy perennial, a national fair trade bill, to permit, indeed encourage, retail price fixing.

Concealed as usual behind a fog of euphemisms, this consumer price increase bill is presented to you in this session, as in the last session, dressed up in the seductive sheep's clothing of a quality stabilization bill. Last year's "quality stabilization" price-fixing bills contained a large economy size preamble of unfair trade practices the bills purportedly would have prevented. At that time I suggested that the length of the preamble gave rise to the inference that a black and white animal resided in the bill.

This year there is no such covert attempt to conceal the price-fixing purpose of this obnoxious legislation. Nevertheless a small dose of Chanel No. 5 has been applied to this black and white animal by euphemistically dubbing it a Quality Stabilization Act.

When a cat would eat her kittens, she calls them mice.

H.R. 3669 is as drastic a fair trade price-fixing bill as has ever been proposed.

Before pointing out its particular features, which are the bases of this assertion, I propose to deal with the main thrust of the bill.

I. IN THEORY AND PRACTICE THESE BILLS ARE AGAINST THE PUBLIC INTEREST

I have long been an opponent of the system of price fixing that is permitted by the so-called fair trade laws. Such price fixing flies in the face of our antitrust laws and the free competitive system which the antitrust laws are designed to protect. This bill would gouge out a large hole in our antitrust laws.

Fair trade was spawned by wholesale and retail merchant associations, primarily the National Association of Retail Druggists, to permit vertical price fixing in the depression days, when the Federal Government was sanctioning horizontal price fixing by manufacturers through NRA. A powerful lobby was able to pressure 45 States into accepting the NARD's draft of a fair trade bill. Although manufacturers were comparatively inactive in this early effort, the rallying slogan then as now was "protection of the manufacturers' trade name or trademark." Somehow all trade names and trademarks were elevated to Cadillac significance, subject to being sullied by association with anything but an artificially high price.

A. Detriment to the consumer

The history of the last two decades has demonstrated that fair trade laws work to the detriment of both the consumer and the small businessmen purportedly protected by them. Most impartial commentators have condemned them. In some 24 States the courts have invalidated fair trade acts, or at least their nonsigner provisions. In an appendix to this statement I have attached excerpts from the opinions of a number of such courts. Some of the sponsors of these quality stabilization bills, I note, come from States where fair trade laws have been invalidated in whole or in part. These bills would impose a Federal fair trade law even on those States where fair trade has been rejected.

The principal evil that results from fair trade—the maintenance of artificially high consumer prices—has been exposed in State after State. After the Supreme Court of Ohio ruled the nonsigner clause unconstitutional, for example, prices on automatic coffeemakers quickly dropper from the $39.95 fair trade price to a $29.97 competitive price. Electric frying pans, which had a list price of $19.95 were reduced to $13.87. After an initial flurry of reduced price sales, in Ohio as in the case of other States that outlawed fair trade, the market soon became stable. The dire consequences that had been predicted by the fair traders—widespread business failures, increased concentration, and predatory excesses by monopolists—did not occur. The only result was that the consuming public received the benefit of having prices settle in the competitive market at about 20 percent lower than the former fair trade prices.

The Department of Justice in the past has presented to Congress several surveys which have demonstrated how much more the consumer must pay in fair trade States than in nonfair trade States.

In 1952, when the McGuire Act was being considered, I conducted a survey and brought into the House of Representatives three baskets. I had purchased 11 identical articles in 3 different Peoples Drug Stores. I purchased one basket in the District of Columbia, where there was no fair trade. I purchased the same articles in Bethesda, Md., where there was fair trade. I purchased another basketful in Arlington, Va., where there was fair trade, and compared the prices that I paid for these identical articles. On no item did I pay less than 10 percent more in a fair trade State than in the District and on some items I paid as much as 53 percent more. My statement to the House appears in the CONGRESSIONAL RECORD, volume 98, part 4, pages 4909 and 4910, as follows:

"I purchased 10 cubic centimeters of u. 40 protamine zinc Lilly insulin, used by diabetics. The price in the District of Columbia was 98 cents. The price in Maryland was $1.29. The Maryland price was 32 percent above the District price. In Virginia—in Richmond, for example—the same article, Lilly's insulin, was sold at $1.48. If you can tell me that the public is protected by fair trade, I would like to know why those differences in prices.

"I purchased a BD Yale 26-gage 1-inch hypo needle, used to inject insulin into a sick person's body. In the District of Columbia the price was 15 cents. In Virginia the price was 20 cents—33 percent higher in Virginia. In Maryland the price was 23 cents—53 percent more in Maryland.

"I purchased 100 Bayer aspirin tablets in Virginia, Maryland, and the District of Columbia. In the District of Columbia the price is 46 cents. What was the price in Virginia? The price was 59 cents. I paid 28 percent more for the same article in Virginia. What was the price in Maryland? Fifty-nine cents. Again I paid 28 percent more for the same article in Maryland.

"I purchased some 12-ounce bottles of Phillips milk of magnesia. Here are the bottles. In the District of Columbia the price was 34 cents. In Virginia it was 14 percent higher, or 39 cents. Similarly, in Maryland it was 14 percent higher, or 39 cents.

"I purchased some large tubes of Ipana toothpaste. See the difference in these purchases. I paid 27 percent more for the Ipana toothpaste in Virginia than I did in the District of Columbia. In the District of Columbia the price was 37 cents. In Virginia the price was 47 cents; and, likewise, in Maryland, it was 47 cents.

"I purchased packages of 20 Gillette blue blades. In the District of Columbia the price was 87 cents, whereas in Virginia I paid 11 percent more, or 98 cents, and also 11 percent more in Maryland, namely, 98 cents."

There were other articles that I purchased and for which, under fair trade, I had to pay 20, 25, and 30 percent more for the identical articles.

I am told, moreover, that in 1960 there were striking differences between fair trade and nonfair trade prices as follows, in the following nonfair trade States:

In Columbia, S.C., a sick person could buy Achromycin V capsules and Declomycin for $7.20 instead of $7.65; Serpasil for $6.50 instead of $7.50; Orinase for $6.25 instead of $6.75; Coricidin for 75 cents instead of $1.08, and Neo-Synephrine for 65 cents instead of 90 cents.

In Houston, Tex., for example, an invalid could obtain Achromycin V capsules for $6.96 instead of $7.65; and similarly as to Declomycin. Premarin could be bought for $6.73 instead of $8.25; Orinase for $5.25 instead of $6.75; Unicaps for $2.69 instead of $3.11; Theragran for $8.19 instead of $9.45. At the hearings on H.R. 6245 before the Antitrust Subcommittee last year, Senator Kefauver noted that Merck charged the retail druggist $170 for 1,000 Prednisone tablets whereas the fair trade minimum retail price is $255. Senator Kefauver added that Ciba sells 1,000 Serpasil tablets to the druggist for $39.50, while the fair trade minimum is $65.83.[1] The hearings of the Senate Antitrust and Monopoly Subcommittee on the drug industry, and of the House Antitrust Subcommittee on H.R. 6245 last year, abound with instances of the astronomical profits of drug manufacturers.[2]

As noted below, these very drug manufacturers would be empowered by this bill to soak the invalid by enforcing artificially inflated retail prices over and above the extortionate prices charged to the retail druggist.

In an appendix to this statement I have listed similar examples in other cities and States, including Miami, Fla.; Indianapolis, Ind.; Lousiville, Ky.; St. Louis, Mo.; Seattle, Wash.; Spokane, Wash.; Huntington, W. Va.; Minneapolis, Minn.; and Cleveland, Ohio. Congressman DINGELL, in his minority report on a similar bill in 1959, adduced many more instances of lower prices where fair trade did not prevail.

In September of last year I engaged in another shopping excursion. What did I find? For 51 cents I was able to buy Coricidin (25's) in the nonfair trade District of Columbia, but I had to pay $1.08 in Maryland (fair trade). I paid $1.77 in the District for 100 Unicaps and $3.11 for the same amount in Maryland. Bayer Aspirin cost me 99 cents in Washington, D.C., and $1.48 in Maryland. I paid 54 cents for Phillips Milk of Magnesia in the District of Columbia and 63 cents in Maryland. The economy size Ipana Toothpaste cost me 60 cents in the District, 69 cents in Maryland; 10 cc u. 40 Protamine Zinc Lilly Insulin cost me 99 cents in the District and $1.48 in Maryland.

Finally, I bought something dear to the heart and gullet of many of us. I purchased a pint of Old Crow (only 86 proof, I may add). In the District it cost me $2.30 (including 7 cents tax); in Maryland, $3.07 (including 9 cents tax).

Thus, the same items which could be bought in the nonfair trade District for $7.20, cost $10.89 in the "fair" trade State of Maryland. This means that if during the year I had paid $70 for these items in the District, in Maryland the cost would have been over $30 more for the same items.

Last year, at hearings on H.R. 6245 before the House Antitrust Subcommittee, there was a great deal of testimony to the adverse effect on ill and elderly persons of the high price of drugs. I think that each of us in Congress should hesitate to add to the burdens of these people by enacting legislation which must have the necessary effect of increasing the price of drugs they buy. How can you justify this legislation to them, if it is passed?

We are told that the consumer need not worry since it is effective only when he can buy goods usable for the same general purpose as the price-fixed item. But this is small comfort indeed when, as most often happens, both items are price fixed. And the Lord only knows to what extent even this vague limitation applies where a price is fixed on several items sold as a package.

These bills will increase prices to the consumer.

B. Detriment to the merchant

And what have these fair trade laws done for the small businessman? They promoted the use by big retailers of their own private brand goods which could be sold for less than the smaller retailers' trade-name goods, purchased from the manufacturers. They favored the inefficient retailer over the efficient retailer. They facilitated the rise of the discount house. They deprived the retailer who wanted to use price as a means to compete with his larger competitors of the right to do so. They made less service and less price an infraction of the law and insured that less service would not be accompanied by less price. They took away any incentive for retailers to urge manufacturers to lower high prices. And now the proponents of these bills, in the name of free enterprise, would impose upon businessmen and the public alike, socialism in the form of federally-supported and enforced price fixing.

---

[1] On Apr. 9, 1963, Senator KEFAUVER, on the floor of the Senate, noted that Ciba, the producer of Serpasil, had a markup of almost 1,500 percent.

[2] While H.R. 3669 would exempt sales of prescription drugs, it would be wholly unrealistic to expect this exemption to survive in view of the sponsorship of this legislation by the NARD. The Senate bill, S. 774, significantly has no such exemption.

Make no mistake, this bill is not only a consumer price increase bill, it is an anti-free enterprise bill. The retailer cannot set a price on what he sells based upon his own efficiency, the cost savings that may be available to him because of self-help, long hours, use of cost savings devices, selling for cash, or what have you. He is instead to become a slave of the manufacturer, and of his competitors, who wish to keep him at their level.

Recently, in the *Federal Trade Commission* v. *Sun Oil Co.*, 371 U.S. 505, the defendant argued (p. 524) that the retailer "is but a 'conduit' for the supplier"—in that case, the Sun Oil Co. The Supreme Court replied (p. 529): "Having consciously chosen not to effect direct distribution through wholly owned and operated stations, Sun cannot now claim for itself the benefits of such a system * * *."

This bill, by giving the big manufacturer carte blanche to engage in vertical price fixing, would indeed confer on the big manufacturer "the benefits of such a system," leaving the burdens to the small retailer who would become a mere "conduit" or "outlet" for his supplier's goods at prices dictated by the supplier. If the retailer should insist on setting his own competitive price, this bill would permit the large supplier to summon the Federal courts to his aid in subjugating the retailer into economic serfdom. I should think small businessmen would be appalled at this prospect.

The Supreme Court of Pennsylvania only last month pointed out how "fair" trade laws shackle, if indeed they do not strangle, small businessmen. In *Mead Johnson & Co.* v. *Breggar*, CCH 1963 Trade Cases, pars 70, 721, the Pennsylvania Supreme Court said:

"Price fixing is at its best a drastic curtailment of competitive free enterprise, one of the main pillars of support of the entire American economic structure. At its worst, it can become a straitjacket on initiative in business, resulting in monopoly manacling progress so as to serve a possible conspiratorial status quo.

* * * * *

"The very idea that a commercial entity may hold in one fettering price-fixing grasp all businessmen engaged in vending a certain product, just as a herdsman holds lassoed cattle on the plains, offends against the most elementary concept of a free and independent society. The Fair Trade Act is not only in derogation of the common law, it is in defiance of principles which the Federal Government has on countless occasions enunciated in its antitrust legislation and litigation."

Since references are often made to discount houses at these hearings, a few words on that subject may be in order.

As Mr. Bicks, former head of the Antitrust Division, explained to this committee in 1959, "initially, fair trade gave discounters an unimpeachable nationally advertised price to cut. The buyer could clearly see the savings involved. Beyond that and more important, by attempting to stifle price competition, the fair trade laws created an economic vacuum into which the discount houses rushed." Business writers have also pointed out that:

"Through the fair trade laws * * * and other devices, our legislators and courts have sought, in effect, to bottle up price competition, especially at the retail level. The discount house may be viewed as a manifestation of the explosive pressures which are likely to be generated as a result of an attempt to eliminate price competition in a competitive economy. * * *"[3]

Whatever may be said of discount houses as such, they have curbed inflationary prices and afforded the forgotten man, the consumer, the opportunity of purchasing his needs at lower prices. They have also helped relieve manufacturers of surplus stocks. To those who look askance at discount houses as price cutters, I would point out that price cutting is simply good, old-fashioned free enterprise, so long as it is not predatory. Since when, may I ask, has price competition become "unethical"? Most new types of retailing, including the department store, the mail order firm, and the supermarket, have started as price cutters. Therein lies their appeal to the public. The widespread popularity of discount houses, supermarkets, and department stores today shows that the public—your constituents and mine—is vitally interested in the savings to be achieved through price competition.

Last year, the National Appliance & Radio-TV Dealer's Association went on record as favoring this legislation. It is interesting to observe, therefore, a statement made by the president of that association in 1956:

"The discount houses * * * came into being as a counterbalance to distorted retail margins. These margins weren't distorted until we came into volume retailing. The discount house was a natural development, and when you hear a dealer talking about his 'rights' he's on his way out—because he hasn't any rights."

And how did the small businessman accept this "fair" trade "bonanza"? Well, many fought it and are continuing to fight it. Thus Mead Johnson & Co., in a 3-month period in 1961, brought over 100 fair trade suits. These small businessmen wanted, presumably they still want, to sell at a price which leaves them with a profit and also leaves the consumer with more money to make additional purchases. Parke, Davis not long ago sent out more than 200 warning letters in the New York area and started 123 suits. Yet in a recent case it was shown that in at least 100 instances 89 retailers had refused to be bound by Parke, Davis' "fair" trade prices.

Out of this natural desire to compete has spouted a veritable torrent of litigation. One has to go back to prohibition days for a comparable number of lawsuits brought to enforce legislation so justly unpopular. To greatly augmented legal staffs of the large manufacturers engaged in policing their resale prices, there have been added commercial spies euphemistically called "professional shoppers."[4] And the cost of all this is borne, as always, by the consumer. Thus, in 1955, one company is reported to have announced it would spend $750,000 to enforce fair trade in just one of its departments. Sunbeam is reputed to have spent $1 million a year for such purpose.

And who have been the primary instigators of fair trade lawsuits? They have been drug manufacturers recently shown in the hearings of the Senate Antitrust and Monopoly Subcommittee and of the House Antitrust Subcommittee to have garnered extortionate profits in many instances. As Senator KEFAUVER pointed out the other day, "In the ethical drug industry, the rate of return on investment, after taxes, is higher than that of any other industry. Since 1957 it has averaged around 20 percent as compared with 10 percent for all manufacturing. The net profit on sales has also averaged about double that for all manufacturing."[5]

Nevertheless, we find Parke, Davis & Co., suing a drugstore in New York City because a professional shopper purchased MYADEC vitamin capsules for $5.75 whereas the fair trade price was $9.67, and ABDEC vitamin preparation drops for $2.65 whereas the fair trade price was $3.51. Parke, Davis & Co. in 1958 had a 16-percent net profit on drug sales.[6] This case illustrates the consumer loss by fair trade, the harassment of small business under fair trade, and the unconscionable profiteering which fair trade protects.

The fair trade cases in which an opinion is published are collated in the annual volumes of the Trade Cases series of the Commerce Clearing House. I had my staff review the fair trade cases in the bound volumes of that series covering 1960 through 1962. In most such cases the fair trade violator, by any test, would be considered a small businessman. To mention some of them:

California, John F. Walker, a liquor dealer.

Illinois, Topps of Niles, Inc. and Darby Sales Co.

Minnesota, Playtime Sporting Goods, Inc.

New Hampshire, Max Dichter Company, Inc., operating a retail store in Manchester, N.H. and Man-Bur Sales Inc., operating the hardware department in the store.

Louisiana, Robinson Wholesale Co., a partnership composed of Robinson, his wife and brother-in-law. Among those alleged to have sold Bulova watches at less than fair trade prices were Daniels Jewelry Store, Davidsons Furniture Store, and Sales Jewelry Store.

Ohio, Norwood Vitamin & Cosmetic Distributors. Inc.

New York, Janel Sales Corp., Berner's Pharmacy Corp., Mr. Less, Mr. Falleta, the Courtesy Drug Store in Hicksville, N.Y.

Pennsylvania, Wright Motor Sales Co., a gasoline dealer and Mr. Kostak, another gasoline dealer.

Proponents of the bill assert that the retailer who wants to set his own prices is free to do so by turning to the products of a nonprice fixer. But the very purpose of this bill is to promote price fixing on the part of national advertisers, and the realities of business practice make it impossible for a retailer to shift readily from a nationally advertised fair trade product to a nonnationally advertised nonfair trade product. Moreover, this bill will prevent price competition by grocers, hardware store owners, or druggists who must, as a practical matter, carry a wide selection of similar goods of different manufacture.

Proponents of this kind of legislation shift from arguing that it is necessary to protect the brand name of the manufacturer to urging that it is necessary to keep the retailer in business. The short answer to the first claim is that many brand names continue to be held in high repute despite the absence of any attempt to use resale price maintenance for such purposes. The shorter answer to the second is that the retailer in fair trade States has not been shown to have fared any better than the retailer in the nonfair trade States.

[3] Alexander and Hill, "What To Do About Discount Houses," Harvard Business Review, 1955.

[4] Compare Wall Street Journal, March 21, 1963, p. 2: "'We have shoppers shopping all our dealers to see if they are selling below the agreed limit,' says one distributor." See also *Mead Johnson & Co.* v. *G-E-X Inc.* of Albany (N.Y. Sup. Ct., Albany County) 1963 Trade Cases, Para. 70,688: "The evidence clearly shows frequent inspection by representatives of plaintiff of the stores of retailers to ascertain if its minimum prices are maintained; if a violation is found it is promptly reported to higher authority of plaintiff, which sends letters to the offenders, to cease and desist; if such letters do not produce compliance, the matter is referred to local counsel, who employ a private detective agency to shop the offending retailer's store, and if the violation is found to be continuing, actions for injunctions are promptly instituted."

[5] 109 CONGRESSIONAL RECORD 5614 (Apr. 9, 1963).

[6] Last year this company announced it was no longer going to limit its sales to those observing its suggested prices. The president of Parke, Davis & Co. stated that the company's products would be placed on sale where people were buying them.

There has been a great deal of loose talk about how the loss of fair trade protection would cause the failure of countless businessmen.

Let us examine the failure rate per 10,000 concerns in States without fair trade acts:

	Failures [1]			Merchants' bankruptcies [2]	
	1957	1958	1959	1961	1962
Missouri	18.6	26.9	23.6	87	69
Texas	32.2	29.8	28.5	119	115
Vermont	19.0	23.0	20.1	11	16
District of Columbia	41.8	32.6	30.2	13	16

[1] Final report of House Select Committee on Small Business, 86th Cong., 2d sess., p. 17.

[2] Administrative Office of the U.S. Courts, Tables of Bankruptcy Statistics, June 30, 1961, table F-3, and June 30, 1962, able F-3.

Now, let us take some comparable "fair trade" States:

	Failures [1]			Merchants' bankruptcies [2]	
	1957	1958	1959	1961	1962
Illinois	37.3	42.6	45.6	120	306
Maryland	44.6	56.7	41.0	18	18
New Jersey	59.9	81.9	67.5	179	169
New Hampshire	27.6	27.2	23.6	12	7
Wisconsin	37.3	55.0	51.9	139	159
California	123.9	118.9	112.5	286	219
Massachusetts	34.9	42.9	41.5	57	60
New York	111.4	129.3	127.8	424	451
Pennsylvania	43.5	48.1	43.4	307	262

[1] Final report of House Select Committee on Small Business, 86th Cong., 2d sess., p. 17.

[2] Administrative Office of the U.S. Courts, Tables of Bankruptcy Statistics, June 30, 1961, table F-3, and June 30, 1962, table F-3.

Now, let us see the situation in some of the States which had the whole, or the nonsigner provision, of their "fair trade" law invalidated, 1956-58:

	Failures [1]			Merchants' bankruptcies [2]	
	1957	1958	1959	1961	1962
Colorado (1956)	45.6	20.7	32.8	142	145
Indiana (1957)	20.0	27.0	22.6	42	38
Kansas (1958)	28.2	26.8	20.6	39	41
Kentucky (1958)	13.4	19.9	14.8	54	46
New Mexico (1957)	14.6	8.4	5.1	15	17
Oregon (1956)	198.0	201.5	175.3	51	91
South Carolina (1957)	40.0	44.3	47.4	14	11
West Virginia (1958)	26.5	26.3	35.7	20	23

[1] Final report of House Select Committee on Small Business, 86th Cong., 2d sess., p. 17.

[2] Administrative Office of the U.S. Courts, Tables of Bankruptcy Statistics, June 30, 1961, table F-3, and June 30, 1962, table F-3.

These figures demonstrate, I believe, that there is no visible relation between the survival of small business and fair trade resale price fixing.

Many retail associations, I am sure, will register in support of this bill. They have been pressured to do so repeatedly by the powerful, untiring National Association of Retail Druggists whose representatives are also much in evidence on Capitol Hill. In almost every instance, I believe, these retail associations have been subjected to a one-sided argument in favor of such bills. I think it highly significant, therefore, that a poll by the National Federation of Independent Business last year, in which arguments both pro and con were summarized, showed a slight majority opposed to those bills.

I am encouraged to note, moreover, that not only have consumer organizations opposed the counterpart of this bill at hearings last year, but also retailers, retail associations, and wholesale associations.

It has been contended by some of the supporters of this bill that it would not really restrict the retailer because he is free to take off the trademark and sell the unmarked goods at such prices as he pleases. This is a fallacious argument. What does the retailer have left when he tears off the covering on a tin can? If the trade name is imbedded in metal or glass is he supposed to use a blowtorch? If the price he pays includes the goodwill of a trade name, must he throw away that value?

I would point out to retailers subjected to the propaganda barrage of the proponents of these bills that if legislation of this sort is enacted, they will have given to the manufacturer the right to fix their profit margins, and the greater the demand for a fair traded product, the more likely that the margin will be narrow. To quote from the testimony of a representative of the National Oil Jobbers Council, in reply to a question by Chairman MONRONEY of the Special Subcommittee on Quality Stabilization of the Senate Committee on Commerce last year:

"Do you know what happened to us in Pennsylvania when they tried fair trading up there? They cut the jobber's margin, gross margin, in a normal market, one-half cent per gallon. One-half cent doesn't sound much to you gentlemen, but one-half cent a gallon is the difference between a profit and going out of business. That is a specific instance."

C. *What the farmer thinks*

Last year I received a letter from the American Farm Bureau Federation commenting upon H.R. 6245, a bill before the House Antitrust Subcommittee. Pertinent to this hearing are the following passages from that letter:

"Since 1947-49 wholesale prices of drugs and pharmaceuticals as reported by the Bureau of Labor Statistics, have declined 8 percent. This has occurred during a period in which most wholesale prices increased and in which wages in manufacturing industries increased 80 percent. On the other hand, the retail price of prescriptions and drugs, as reported by the Bureau of Labor Statistics, increased 21.5 percent during this same period * * *.

"The divergence of these price trends strongly suggests that primary attention should be directed to the margins between wholesale and retail prices.

"The drug industry has been the major proponent of retail price fixing under the authority of so-called fair trade laws, and the major employer of 'fair trade' pricing programs. We believe that retail price-fixing by manufacturers should be regarded as a harmful restraint of trade, contrary to the public interest.

"We recommend that Federal laws designed to protect State fair trade laws from antitrust attack be repealed. * * *"

D. *High price does not ensure high quality*

This bill assumes that high quality is the handmaiden of high price. On this assumption, low prices are the opium of the people. Under this theory, when the price of gasoline goes down, the quality of gasoline goes down and our cars rebel; when the price of gasoline goes up, the quality of gasoline goes up and our cars rejoice.

In the dream world of "fair" trade many such a canard passes for reality. To expose this canard—that the highest in price is the best in quality—I have had my staff spot-check Consumers Reports, the publication of Consumers Union, a nationally known testing organization. In one striking instance after another the highest priced product was not the highest in quality.

Testifying last year before the House Antitrust Subcommittee on H.R. 6245, Dr. Martin Cherkasky, director of Montefiore Hospital in New York City, stated: "A series of tests recently conducted by Drug and Therapeutic Information of New York and published in their Medical Letter confirms the unfortunate fact that price and quality often are in no way related."

There is no necessary correlation between quality and price. Indeed, if high quality and high prices were synonymous the magicians of Madison Avenue would be out of work. It has been said:

"In the light of the function of advertising as a creator of value increments of enchantment, it is not surprising to discover, as we have in the consumer testing field, that there is slight if any correlation between the price and quality of many of the branded goods now offered on the market."[7]

E. *This bill is opposed to our current national policy*

Proposed increases in the price of steel products last year and actual price increases in the steel industry this year have been a matter of concern to the Nation and to our Government. Yet the inflationary threat represented by a price increase in one industry, important as the steel industry is, is in no way comparable to the inflationary threat represented by this price-fixing bill which would promote and sanction price fixing—and consequently price increases—throughout all sectors of our economy.

---

[7] Warne, "Advertising and Consumer Behavior," 10 Cartel 82, 85 (July 1960).

At a time when the administration, with widespread support from all over the country, is seeking tax reductions in order to promote an expansion of our economy and to prevent a recession, it would be anomalous, at the same time, to enact legislation which would have the inevitable effect of insuring that the consumer taxpayer would be able to buy less and less with whatever additional funds a tax cut may provide him. The efforts of the administration to stimulate our economy through the natural interplay of a free market would be thwarted by legislation designed to turn our free economy and our free market into a controlled economy and an artificially controlled market.

II. ANALYSIS OF H.R. 3669

A. Elimination of States rights provision

Last year the price-fixing "quality stabilization" bills, as they came out of this committee, contained the following provision:

"Paragraphs (7) to (12) hereof shall apply to all acts and transactions in or affecting commerce which Congress may lawfully regulate except that nothing in such paragraphs shall be construed to permit, directly or indirectly, resale price maintenance in any State where the constitution or laws thereof prohibit such price maintenance."

Traditionally, resale price maintenance has been a matter for each State to decide for itself. One State's meat has been another State's poison. By this amendment this committee recognized two things. One was the fact that many States have rejected resale price maintenance. They want none of it. Second, the amendment recognized that such State policy should be respected.

H.R. 3669, however, contains no such exception. It represents an effort to use Federal supremacy to ram resale price fixing down the throats of the residents of all States whether or not there is a contrary State policy. One could hardly imagine a more ignoble death for States rights than to be buried under Federal price-fixing legislation.

Rejected, in whole or in part, by the courts of some 24 States, and turned down by the legislatures of at least five States—Missouri, Texas, Vermont, Alaska, and the District of Columbia—fair trade is sought through H.R. 3669 to be imposed, nationwide, on unwilling as well as on willing States. Those 29 unwilling States—more than half the States of the Union—which have rejected the sort of fair trade here proposed, would have it willy-nilly.

Worse, our basic national policy of free competition would be subverted into a policy of price fixing. The antitrust laws would be gutted throughout.

B. Price fixing on a grand scale

This bill proposes to override the decisions of the courts which have held that the price fixer may not avail himself of State fair trade laws if he competes on the same level of distribution as the retailer against whom he brings suit. This provision would make it easy to effect large-scale horizontal price-fixing agreements.

This bill would promote the very types of horizontal and vertical price fixing 73 years of antitrust legislation by Congress was designed to prevent. The businessmen who could not agree to fix prices or agree to have one of them fix prices for all, may do so under this bill simply by arranging for the trademark owner to send them a convenient price-fixing notice.

It is no coincidence, I believe, that some of the most ardent supporters of fair trade have been involved in price-fixing violations under the antitrust laws. I might add that in a number of antitrust cases, the courts have found that fair trade has been used as a means for carrying on a price-fixing conspiracy.

In many of our basic industries "administered pricing" and "price leadership" have largely eliminated price competition. This legislation bids fair to abolish price competition altogether by authorizing, indeed encouraging, horizontal and vertical price fixing. Even in those areas where price competition still persists, this bill would countenance its abolishment. What lipservice then could the proponents of this bill pay at their annual conventions to our vaunted free enterprise system which has served this great Republic so well since its foundation? I would suggest that the proponents of this bill should practice what they so piously preach. Let them compete in a free market rather than destroy it.

If the Congress is now to abolish price competition by Federal fiat, let it at least be candid about it, without resorting to hypocritical phrases about "quality stabilization."

As the Supreme Court of Oregon has noted:

"In substance, what is the real purpose of the Fair Trade Act? Regardless of how its true nature may be camouflaged by high sounding terms such as 'free and open competition,' 'unfair competition,' 'protection of good will,' etc., it is a matter of common knowledge that it is a price-fixing statute designed principally to destroy competition at the retail level. Protection of the 'goodwill' of the trademark owner is simply an excuse and not a reason for the law. * * *"

The sure losers in any such precipitate flight from free enterprise will be the consumers, the sick, the poor who cannot afford the extortionate prices which fair trade fosters. The working man, too, will be hard hit, he at least may enjoy a measure of protection because so many collective bargaining agreements today are geared to the cost of living. Yet, this in turn, would beget new dangers to the public interest. The creeping inflation which successive administrations, both Republican and Democratic, have been trying to rein in since World War II, would break into a gallop if this pernicious bill should become law.

C. Vendor's power after sale

This bill's reservation of property rights, even after a resale, would replace modern principles of law by the precepts of the middle ages. No principle and policy of the common law has been more widely and uniformly accepted and approved by courts and legislatures, by commentators and by the people than the rule against restraints on the alienation of property. This is true of goods as well as of real estate. More than 50 years ago the Supreme Court in the celebrated Dr. Miles case held that the seller of a trade name product could not fix its resale price. The product in question, I might note, was a drug. Concern for the trader and for the consumer, under our competitive free enterprise system, has denied any such reserved "right" to the patent and copyright holder. Is a "trade name" now to be deemed of such greater significance as to override this traditional concern, or is the next step to propose price-fixing powers for patentees and copyrightees?

Mr. Lowell Mason, a former member of the Federal Trade Commission, testifying in support of a similar bill pending in the Senate last year, made the frank admission that the aim is to reverse a number of Supreme Court decisions and restore the old Colgate doctrine in all its vigor, namely, to deprive the retailer of supplies if he uses his own judgment in determining the price to sell to the consumer. To me it is quite strange to find Mr. Mason, on the one hand, supporting these bills in the name of private property rights, and on the other hand, arguing that a person who has paid for an article should have something much less than private property rights.

This bill gives the owner of a brand name the right to compel a reseller to sell at a price or within a price range determined by the brand name owner. Apparently there is no limitation upon the power of the owner to make as many price changes as he desires. The reseller is a puppet subject to the pull of a remote string puller.

The reseller who sells at a price he thinks is fair is subject to having his right to resell the product revoked, no matter how much good will he has developed regarding the product by his own efforts. If he persists in selling at a fair price he is subject to a suit for damages, injunctive relief, attorneys' fees, and the costs of suit.

The deterrent imposed under the antitrust laws against the collusive price fixer is now to be imposed against the independent retailer who may mistakenly believe in free enterprise.

This bill also grants a right of revocation where misrepresentation has been used in the resale of goods.

The Federal Trade Commission has been attacking deceptive merchandising practices, with ever increasing vigor. Furthermore, there can be few States indeed which do not have their own laws dealing with deceptive practices.

H.R. 3669 would utterly confuse adequate, existing Federal and State laws dealing with unfair trade practices by superimposing upon them a loosely worded, probably preemptive, Federal law.

The bill provides that "Each such currently established resale price and resale price range shall be uniform at each level of distribution within each marketing area determined by the owner of the brand, name, or trademark." (Par. 14.)

The above quoted provision appears to give the brand owner the right to determine what is the "marketing area" for the purpose of having uniform prices. Apparently, at his will, it may be small or large. It is not clear whether the trademark owner is limited to including in such marketing area only an area in the United States.

D. Bait merchandising

Section "(8)" of the bill gives the trade name owner the right to prevent a retailer from selling the trade named article, if it is used "in furtherance of bait merchandising." This might give the trade name owner the power, even without a price-fixing provision, to prevent the retailer from having a "special" on an item in order to draw people to his store in the hope they might buy something else as well. This would be so even if the "special" price was one on which the retailer made a profit.

The bill does not define bait merchandising practices, and thus invites litigation as to the meaning of this term. It might include any unusual advertising device.

Those States which have seen fit to prohibit or limit "bait advertising,"—like my own State of New York—have devised appropriate remedies. Other States have not chosen to do so. Both those States which have acted in their own ways, and those which have not, would now have this amorphous, probably preemptive, provision thrust upon them.

E. Enforcement

The proposed statute would be applicable to "all acts and transactions in or affecting commerce which Congress may lawfully regulate." The rights given under the bill are also available to owners of a brand, name, or trademark, competing at any level of distribution, with the reseller.

The bill expressly provides that such suits may be brought in a Federal district court, without regard to the amount in controversy.

As Chairman of the Committee on the Judiciary, I am sorely troubled by this provision which would engulf our already congested Federal courts in a torrent of penny ante price-fixing enforcement cases. I understand the American Bar Association is also dismayed at this prospect.

Furthermore, H.R. 3669 provides that "no action pursuant hereto shall preclude remedial action otherwise available for wrongful use of a brand, name, or trademark" (par. "(12)").

Thus, this bill, aside from the fault of its basic premise that from price fixing all blessings flow, creates a Mycenaean maze for businessmen, lawyers, and judges.

While creating a compulsory national fair trade law, it also seeks to preserve State fair trade laws. The merchant who sells below the price fixed by the manufacturer may find himself sued in a Federal court on one ground and in a State court on another ground. The courts may be widely separated, even in different States. What may be legal under State law may be illegal under this proposed Federal law and vice versa.

The bill gives a right of action to the consumer against the price fixer for any misrepresentation by the latter as to "size, capacity, quality, condition, model or age." This right of action in the Federal courts exists only if the price fixer is not subject to process "in the courts of the State in which such purchaser acquired such goods." This could readily give rise to extensive small claims litigation in the Federal courts. It also raises troublesome conflicts of law questions since the test seems to be the law where the article is purchased and not the law of the domicile of the purchaser.

F. Exemptions

The bill exempts sales to governments or government agencies. This means that there is to be one standard of business conduct in dealing with Government agencies and another in dealing with the public. Price fixing at the expense of the public is to be permitted—in fact, promoted—but price fixing at the expense of the Government is not sanctioned, and if the cost of a high price to most of us is a lower price to the Government, we may console ourselves by reflecting that such indirect form of taxation has not come about without representation, since it would be embodied in an act of Congress. There are other exceptions which have no logic except that of expediency; namely, avoiding the opposition of organizations capable of strong, organized opposition, while leaving the many unorganized to the not-so-tender mercies of the price fixers.

G. Other provisions

The bill does not say whether knowledge of the required selling price has to be actual or may be constructive. It permits those holding a monopolistic position to price fix resale items, since unlike prior fair trade acts, it protects the price fixer "if there are goods usable for the same general purpose." What that phrase means is anyone's guess but it would seem to be broader than goods of the same general class—the language generally used in State fair trade laws.

As to the right to return of goods by a nonconformer, as provided in this bill, the manufacturer may well find himself astride a Trojan horse, since he can never be sure that he has made a final sale. It is said that in 1954 the Sheaffer Co. spent $400,000 in buying back stocks of its own pens from price-cutting retailers.

III. THIS BILL IS AN ATTACK ON OUR CAPITALISTIC, FREE ENTERPRISE SYSTEM

I think it cannot be gainsaid that a free market is essential to our capitalistic, free enterprise system. And most certainly a free market does not exist when the seller is free but the buyer is not, when the seller determines not only the price which the buyer must pay him but also the price at which the buyer may sell what he has purchased.

The concept of a free market also envisages a market where the consumer is not confronted with a network of price-fixing agreements sanctioned by law.

Increasingly State courts have found fair trade price-fixing laws an affront to those constitutional provisions of their respective States which condemn market control.

Legal rulings, moreover, have not been the primary causes that have led to the abandonment of "fair" trade in many areas. Consumer resistance to high prices, warehouses stocked with unsold merchandise and the relentless pressure of substitute merchandise from competitive distribution channels have been just as important. Fair trade simply doesn't work. The enormous costs involved in comparison shopping, legal fees, and policing fair trade enforcement, alone, have been major causes for its abandonment by many manufacturers.

The background of this bill makes it clear that it is intended to overturn two Supreme Court decisions, one decided in 1911,[8] the other in 1956;[9] two court of appeals decisions,[10] and one New Jersey Supreme Court decision.[11] In addition, as noted last year by the head of the Antitrust Division of the Department of Justice in reference to a similar bill, such a bill might also overrule the Supreme Court's decision in the Parke, Davis case.[12] I suggest that this alone should give this committee pause before recommending legislation of this sort.

Small wonder that similar bills have been disapproved by the Department of Justice, the Federal Trade Commission, and the Department of Commerce. The Attorney General's National Committee To Study the Antitrust Laws was opposed to fair trade legislation. Five States have refused to adopt fair trade legislation. In 24 States the courts have outlawed those consumer price increase acts. In August of last year the American Bar Association condemned a similar bill.

I could not hope to put the case against the policy of this bill as eloquently as Congress has already done in the preamble to the Small Business Act, when it said:

"The essence of the American economic system of private enterprise is free competition. Only through full and free competition can free markets, free entry into business, and opportunities for the expression and growth of personal initiative and individual judgment be assured. The preservation and expansion of such competition is basic not only to the economic well-being but to the security of this Nation. Such security and well-being cannot be realized unless the actual and potential capacity of small business is encouraged and developed."

There can be no greater erosion of States' rights than this bill; there can be no more all-enveloping attempt to sanction nationwide price-fixing; there could hardly be a more vaguely worded or more unnecessary bill. If you want to have Federal price control, vote for this bill. I earnestly urge that it be rejected.

This bill is a consumer price increase bill. This bill is an antifree enterprise bill. This bill is a bad bill. It should be defeated.

APPENDIX A

Statements from several State court opinions declaring State resale maintenance laws unconstitutional:

1. The Supreme Court of Florida declared:

"As we have stated before, the real effect of the nonsigner clause is anticompetitive price fixing; not the protecting of the goodwill of trade marked products as other courts have held. Goodwill, it has been said, should be determined by the price which the goods can command in a competitive market, and not by the ability of the manufacturer to sell at a pegged retail price which he himself selects. Corey, "Fair Trade Pricing: A Reappraisal," 30 Harv. Bus. Rev. 47, 60. Except in times of economic emergency such inflexible price arrangements which the act sanctions are not in line with our traditional concepts of free competition, which have traditionally been the 'yardstick' for protection of the consuming public. The real vice of the nonsigner clause is the absence of that standard, and the decisions of this court stated herein so hold. * * *" *Miles Laboratories Inc.* v. *Eckerd*, 73 So. 2d 680, 682 (Fla. Sup. Ct. 1954).

2. The Supreme Court of Colorado:

"The general assembly may validate resale price maintenance contracts between contracting parties within constitutional limits but when the effect of the act * * * is to make such price schedule binding upon noncontracting parties, the act is nothing more or less than price fixing by legislative mandate. An unwilling citizen cannot be thus bound.

"Any act of the general assembly which arbitrarily destroys or impairs the right of the individual to the free use and enjoyment of his property, lawfully acquired, and permits the fixing of prices for the benefit of a special group, is opposed to the constitutional concept of a free people and should not be allowed to stand. Legislation of this kind evidences the ability of organized minorities to induce legislation for their special benefit at the expense of the unorganized purchasing masses * * *. We have not yet arrived at the place in America where the many must yield to the few, so that the latter may make ever-increasing profits at the expense of those who still believe in the principle of free and competitive trade and commerce, untrammeled by legislative fiats." *Olin Mathieson Chemical Corp.* v. *Francis*, 134 Colo. 160, 186, 301 P. 2d 139, 152 (Colo. Sup. Ct. 1956).

3. The Court of Appeals in Kentucky (highest State court) held: "This statute, we think, is a legislative invasion of the broad constitutional liberty of the people to acquire and protect their property and engage in free trade.

* * * * *

"What is wrong with a man selling his own property for what he pleases? We think the statute is the antithesis of 'fair trade.' It forces price fixing.

* * * * *

"On balance, the overwhelming public interest and welfare is the right of free people to engage freely in competitive trade in commodities that may not be injurious to the general safety and welfare, such as are within special regulation under a proper exercise of the police power. We agree * * * that the overriding purpose of that statute is to sanction price fixing and that the protection of a brand name or symbol of the producer seems to have been incidental." *General Electric Co.* v. *American Buyers Cooperative* (Ky. Ct. of App. 1958), 316 S.W. 2d 354, 361.

4. The Supreme Court in Minnesota:

"The Unfair Practices Act (sec. 325.04) is designed to protect the public from predatory or below-cost trade practices. On the other hand, under the apparent purpose of protecting the goodwill of the manufacturer of the brand commodity, the nonsigner provision (sec. 325.12), in reality, eliminates competition in price honestly based on differences in selling costs as between merchants whose costs of business may differ as a result of normal and natural competitive practices.

[12] *United States* v. *Parke, Davis & Co.*, 362 U.S. 29.

* * * * *

"In examining the grant of authority to the trademark owner it must be conceded that he is given the privilege to place the law in effect and to amend or alter it at his will. He may do this without regard to the interest or welfare of nonsigners or the consumer who represents the public. The law does not provide for any standard or condition as to the necessity for the act. It gives to the trademark owner carte blanche authority to make that determination alone. He is not required to consult with anyone. There is no one to review his act.

"In considering the justification for reposing this authority in the trademark owner, the real character and purpose of the Fair Trade Act should be examined. Its obstensible justification is to compel adherence to fixed prices so as to protect against debasement the goodwill of tradename commodities. Although this property right may be constitutionally protected, as witness the old Dearborn decision, an examination of the great number of authorities and the vast literature by way of reviews and reports dealing with the subject compels the conclusion that the real impact of the law is in the area of price fixing. The protection of the property right in trademarks and goodwill attendant to them is of interest to a limited number of persons and constitutes legislation for their exclusive benefit.

* * * * *

"* * * The record in this case contains the testimony of a respected economist to the effect that resale price maintenance under the so-called Fair Trade Act is detrimental both to the consumer and to the economy. He was of the view that the producer of the commodity who invokes the act is usually a member of a monopoly or oligopoly, because if there were numerous producers of a competing commodity few would abide by the pricing practices of one or two. His opinion that the policy of the act makes possible a price monopoly inimical to the public welfare is clearly borne out by the record. There is in force a fair trade contract in respect to Remington shells produced by plaintiff. The major competing shells are manufactured by Olin Mathieson Chemical Corp. under the name of 'Winchester.' Olin Mathieson's shells are also fair traded. These two manufacturers control 87 to 90 percent of the production of shells in the United States. It appears from the record that for almost all types of shells produced by each of these manufacturers, in fact for every type which is common to the production of both of them, the price is identical to the penny. This is significant considering that the elaborate price lists of both manufacturers were printed and published 3 days apart. It is apparent the record here establishes that the act, rather than regulating and controlling monopoly power, creates a climate where monopolies may flourish. These views are in accord with the thought of authorities who have written and reported on the subject of retail price maintenance in the past few years." *Remington Arms Co., Inc.* v. *G.E.M. of St. Louis, Inc.* (Minn. Sup. Ct., 1960) Trade Cases 69, 673.

5. The Supreme Court of Arkansas stated:

"It is a generalization, but not an overstatement, to say that the effort to 'fix prices' is made by groups who desire to sell something for more than the sponsoring group believes that the purchasing public would pay for that 'something' without an enforced fixed price. It would seem apparent that the principal objective of minimum price maintenance is the protection of profit margins for retailers and distributors unable or unwilling to meet the pressure of competition." Quoted with approval in *Remington Arms Co., Inc.* v. *Skaggs* (Wash. Sup. Ct., 1959) Trade Cases 69, 520.

APPENDIX B

COMPARISON OF FAIR TRADE AND NONFAIR TRADE PRICES

In Miami, Fla., a sick person could buy Achromycin V Capsules for $6.40 instead of $7.65; Orinase for $5.25 instead of $6.75; Declomycin for $6.40 instead of $7.65; Unicaps for $1.79 instead of $3.11; Coricidin for 97 cents instead of $1.08; J. & J. Baby Powder for 54 cents instead of 59 cents; J. & J. Cotton for 33 cents instead of 39 cents.

In Indianapolis, Ind., the sick could buy Orinase for $6.25 instead of $6.75; Serpasil for $6.50 instead of $7.50; Diuril for $7.65 instead of $9; Unicaps for $2.83 instead of $3.11; Ben-Gay for 79 cents instead of 89 cents; Anacin for 99 cents instead of $1.19. The parent could also obtain J. & J. Baby Oil for 89 cents instead of 98 cents.

In Louisville, Ky., a person could buy Unicaps for $2.39 instead of $3.11, and One-A-Day Multiple for $2.36 instead of $2.94; Coricidin for 79 cents instead of $1.08; Dristan for 63 cents instead of 98 cents; and Orinase for $6.25 instead of $6.75. Colgate Dental Cream could be obtained for 53 cents instead of 69 cents, and J. & J. Baby Powder for 47 cents instead of 59 cents.

Additional examples are found in St. Louis, Mo., where one could buy Serpasil for $6.50 instead of a fair trade price of $7.50; Orinase for $6.50 instead of $6.75; Madribon for $4.35 instead of $4.90; Unicaps for $2.19 instead of $3.11; Poly-vi-sol for $2.49 instead of $3.59; Similac for 89 cents instead of 99 cents; Bayer Aspirin for 49 cents instead of 69 cents; Colgate Dental Cream for 55 cents instead of 69 cents.

In Seattle, Wash., a sick person could buy Declomycin for $7.20 instead of $7.65; Ilosone for $10.60 instead of $11.43; Madribon for $4.79 instead of $4.90; Bufferin for 99 cents rather than $1.23. He could also buy Colgate Dental Cream for 49 cents instead of 69 cents.

In Spokane, Wash., he could buy Unicaps for $10.60 instead of $11.43; Madribon for $7.99 instead of $9.45.

In Huntington, W. Va., the hard hit diabetic miner could buy Orinase for $6.25 instead of $6.75. A sick person could buy Serpasil for $6.75 instead of $7.50; Madribon for $4.50 instead of $4.90.

In Minneapolis, Minn., a sick person could buy Achromycin V capsules and Declomycin for $7.20 instead of $7.65; Orinase for $6.25 instead of $6.75; Chlor-Trimeton Maleate for $4.50 instead of $5.58; Coricidin for 76 cents instead of $1.08 and Absorbine, Jr. for $1.25 instead of $1.45. He could also pay 54 cents for Colgate's Dental Cream instead of 69 cents.

In Cleveland, Ohio, the sick could have the benefit of a price of $5.88 for both Achromycin V capsules and Declomycin instead of a $7.65 price. He could purchase Orinase for $4.99 instead of $6.75. Gantrisin for $3.97 instead of $4.90; Kynex for $2.70 instead of $3.55; Unicaps for $2.51 instead of $3.11; Dristan for 72 cents instead of 98 cents and Ben-Gay for 70 cents instead of 89 cents.

APPENDIX C

PRICE QUALITY COMPARISONS

Frozen shrimp ("raw" breaded): Two brands rated "very good" were less expensive than at least one brand rated as "good," four rated as "fair," and three rated as "poor." Of eight brands of frozen raw peeled shrimp only the cheapest brand received a very good rating.

Upright freezers: The three top-rated brands were comparable in price to most of those tested. Of the four highest priced, none was top rated, one was in the third quality bracket, and one was rated "not acceptable." There was also a considerable price range on identical models.

Kitchen scales: The two best rated were the highest priced.

23-inch TV consoles: Two makes were top rated. One was priced at $350, the other at $279.95. There were at least four other lower rated brands selling for $279.95 or higher.

Steam irons: The six top-rated models ranged from $10.88 to $19.95. The highest priced model, $27.95, was "acceptable" but not top rated.

Seat belts: The price range of seven top-rated models was $10.95 to $14.95. Two models, one at $6.95, the other at $9.95, survived the highest-speed crash test but showed incipient failure. Seven $12.95 and one $14.95 models failed the highest-speed crash test. A number of $12.95 and $10.95 models failed all crash tests.

Tank vacuum cleaners: Of the four rated "very good," three were priced at $89.95 and the fourth at $99.75. Of those rated "good," two were the highest priced, $119.95 and $139.

Portable TV, 19 inch: The highest rated were priced at $199.95 and $209.95. A number of others not so rated were also priced at $199.95.

Transistorized electronic flash units: Of 10 brands tested the only unacceptable one was the highest priced (along with one which was acceptable).

Dehumidifiers: A number of the higher priced brands were not among the top rated.

Suntan preparations: The two top-rated brands were among the lowest priced. Three of the highest priced were among the lowest rated.

Built-in electric ranges: The three top rated were priced $89.95 to $114.95. Many lower rated were higher priced.

Black and white film: The two brands rated "very good" and three rated "good" were identically priced.

Representative Blatnik Urges Restoration of Construction Grant Funds for Sewage Treatment Plants

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. THOMPSON of New Jersey. Mr. Speaker, under leave to extend my remarks, I include the following statement by our distinguished colleague, the gentleman from Minnesota [Mr. BLATNIK], the author of the Water Pollution Control Act of 1956 and the Water Pollution Control Act amendments of 1961:

STATEMENT BY REPRESENTATIVE JOHN A. BLATNIK, OF MINNESOTA

I was deeply disturbed to learn that the Appropriations Committee cut the President's request for $100 million for the water pollution control program to only $90 million. I believe that this action was not only a serious blow to the program but raises problems which go far beyond the actual dollar amount involved.

If the House of Representatives reduces the level of expenditures authorized in 1961 for construction of waste treatment facilities by the $10 million as recommended in H.R. 5888 by the Appropriations Committee, it will in effect:

1. Fail to meet the objectives set by the Water Pollution Control Act of 1961 to underwrite a maximum Federal effort to solve the water pollution problem;
2. Deny the economy some $60 million worth of badly needed construction activity; and
3. Reduce also by some $60 million the practical effectiveness of the public works acceleration program for which the House overwhelmingly approved $450 million within the last 2 weeks.

If the Congress acquiesces to the Appropriations Committee recommendation to deny the additional $10 million in construction funds authorized by the Water Pollution Control Act of 1961 it will be breaking the pledge it made in that year to support a maximum Federal effort to clean up the Nation's growing water pollution problem.

The effect of denying additional $10 million authorized by the Congress in 1961 is that an additional $60 million worth of badly needed sewerage construction activity will not take place, and the very substantial amount of employment activity that this expenditure would involve this year will be lost. This is true in that the ratio of local to Federal dollars invested in this program has been about 5 to 1.

The House less than 2 weeks ago approved an additional $450 million for accelerated public works activities. This program was overwhelmingly approved because the Members recognized its tremendous importance as a stimulant to employment in those areas of the Nation where economic activity has lagged. The House, if it sustains the denial of these funds for the construction of waste treatment plants, will, in effect, be reducing the $450 million APW appropriation something in excess of $30 million. Those Members who support the accelerated public works program will remember that the funds authorized under that program were to be used, not as a substitute for local money or Federal money already authorized, but were to be in addition to programs planned for and funded by the governments involved.

Indeed, the whole objective of the program is to stimulate State and local governments to raise new funds over and above what they had planned to spend by providing Federal matching grants so as to stimulate employment and to provide badly needed public facilities at the State and local level.

If the House approves this reduction in the authorization for grants for waste treatment plant construction, the principle of the public works program will have been violated and precedence set to cut back on other Federal programs involving construction activities. Such cuts can only result in the complete loss of the stimulatory effect of the public works acceleration program on employment.

Through the Water Pollution Control Act of 1961 we finally succeeded in getting Congress to approve of construction activity which we needed 10 years ago and which we will finally achieve this year if we can move the program in accordance with the request of the President. For the House to acquiesce to the reduction proposed by the Appropriations Committee would be a serious setback to the program and will mean that many of the Nation's communities will be forced to curtail and delay actions long overdue to clean up serious pollution problems.

The applications already on hand number 1,594 and call for Federal grants of $177 million. This represents approximately $2 billion in total construction costs. Following is a list of these pending applications for the States of Alabama, Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, District of Columbia, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, and Iowa:

Pending applications for municipal waste treatment works construction grants (in process or preparation)

List of Pending Applications for Municipal Waste Treatment Works Construction Grants

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. THOMPSON of New Jersey. Mr. Speaker, the applications for construction grants for waste treatment works already on hand number 1,594 and call for Federal grants of $177 million. This represents approximately $2 billion in total construction costs. Under unanimous consent, I am inserting in the RECORD a list of these pending applications for the States of Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, and New York:

Pending applications for municipal waste treatment works construction grants (in process or preparation)

KANSAS

Municipality:	*Grant request*
Milford	$12, 000
Wakeeny	45, 000
Shawnee	60, 000
Longford	8, 000
Projects not identified (14)	425, 300

List of Pending Applications for Municipal Waste Treatment Works Construction Grants

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. THOMPSON of New Jersey. Mr. Speaker, the applications for construction grants for waste treatment works already on hand number 1,594 and call for Federal grants of $177 million. This represents approximately $2 billion in total construction costs. I am inserting in the RECORD a list of these pending applications for the States of Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, Wyoming, and Puerto Rico:

Pending applications for municipal waste treatment works construction grants (in process or preparation)

A New Hampshire State Lottery

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. FINO. Mr. Speaker, while we in Congress continue to practice hypocrisy and still persist in our sanctimonious attitude about gambling, the great State of New Hampshire decided to recognize and accept the obvious and capitalize on this universal human urge by establishing a State lottery.

The citizens of New Hampshire are to be congratulated for their wisdom in electing to the legislature fearless representatives who not only successfully resisted the strenuous objections from the bluenoses and hypocrites but responded to the wishes of the people.

In recognizing the indisputable fact that the inclination to gamble is an instinctive part of human nature, the State of New Hampshire will pump into its treasury millions of dollars a year in additional revenue.

Mr. Speaker, why can we not display the same kind of wisdom and courage by creating a national lottery?

Why can we not regulate and control this gambling thirst for our own people's benefit?

Mr. Speaker, it is about time we became sensible and realistic about this gambling problem. A national lottery could easily, painlessly, and voluntarily produce over $10 billion a year in new income which would help relieve our heavy tax burdens. Let us be—not smarter—but just as smart as New Hampshire.

The Motion Picture "Gogo"

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. BECKER. Mr. Speaker, I rise to call attention of the House to what I consider a very serious matter, so serious, in fact, that I have asked the Secretary of Defense to provide a full and complete investigation and to identify and punish those responsible.

This matter concerns a review published in the newspaper of show business, Variety, on April 17, 1963, of a moving picture entitled "Gogo" made in Iceland.

Variety's reviewer, who signs himself "Denk" expresses great surprise and concern over the fact that two of the actors in the movie are officers of the U.S. military service; that one of them portrayed a "souse" and the other a "girl-corruptor."

So that the record may be complete, Mr. Speaker, I ask that the Variety review be made a part of my remarks at this point.

[From Variety, Apr. 17, 1963]

GOGO

(79 AV STODINNI)

(*Icelandic*)

Goteborg, April 1

Stivellproduction release of Edda production. With Kristbjorg Kjeld, Gunnar Ekjolfssen. Robert Arnfinnsson. Directed by Erik Balling. Screenplay, Godlaur Rosinkrentz from book by I. G. Thorsteneisson; camera, Jorgen Shov. At Aveny Goteborg, Sweden. Running time, 81 mins.

Gogo	Kristbjorg Kjeld
Ragnar	Gunnar Ekjolfssen
Gudmunder	Robert Arnfinnsson
Bob	John Teasy
US drunkard	Lawrence W. Schneph

This first picture ever produced on the tiny island of Iceland is a typical beginners work. There is an awful lot of pathetic acting, moralizing, car driving, boring landscapes and much too much cigarette smoking and whisky drinking as "business" performed by stage actors working before cameras.

It is simple "boy meets girl" plot from a local bestseller book. It is all about a beautiful widow-turned-prostitute who meets a local taxi driver and a romance starts, but there is no happy end. When the driver realizes that his prospective bride is a girl who entertains U.S. officers from a nearby base he gets mad also sad and performs a clumsy car-suicide.

In the second part of "Gogo" there are some short scenes of real dramatic value, but on the whole this is a picture of very slim export chances.

Almost unbelievable is the participation in this feature of actual U.S. military personnel stationed at the Keflavik Base but pictured as souses and girl-corrupters.

The unknown director of an insignificant picture managed to get two high officers from the local U.S. base Keflavik on Iceland to play roles of drunkards. One John Teasy, is believed a U.S. actor who is in charge of the U.S. Army TV network of the Keflavik Base. Another officer is Lawrence W. Schneph. Both are directed to act out the curse of America's "always present sun" on the nordic island and behave in a way the local population clearly despises.

The best thing said about Americans is a remark by a local taxi driver: "He is not like the other Americans."

The disclosure has already made front page news in Swedish press.

DENK.

And, now, Mr. Speaker, I ask that a copy of my letter to Hon. Robert S. McNamara, Secretary of Defense, be included at this point.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 23, 1963.

Hon. ROBERT S. MCNAMARA,
Secretary of Defense,
The Pentagon,
Washington, D.C.

DEAR MR. SECRETARY: This letter is addressed to you, the highest authority in our Military Establishment, for I believe it vitally necessary to do so, and enclose herewith a copy of an article which appeared in the newspaper Variety under date of April 17, 1963.

Mr. Secretary, if U.S. military personnel were permitted to participate in order to portray a "drunken, girl-corrupting image" of a U.S. serviceman, it is about time we fold up our tents and go home.

I therefore have no hesitation in requesting you make an immediate investigation—(1) To determine whether such a picture has been made for distribution in Europe (I have no doubt it has been been made); (2) To determine names and ranks of officers who participated; (3) And, to determine the names and ranks of officers, who must have had to give permission for their participation.

I am sure you must be shocked, as I am, and every other person who has seen this article. It is unbelievable. An immediate response from you, outlining the steps you are taking in order that this matter be cleared up and proper action taken against those who have participated, will be appreciated.

Sincerely yours,

FRANK J. BECKER,
Member of Congress.

Mr. Speaker, this kind of thing, as I have told Mr. McNamara, is unbelievable. We spend billions of dollars building the American image and then, because of the foolhardiness of some superior officers, whose permission certainly must have been necessary for these men to play such roles, we tear it down in a crude movie.

You will note that "Denk" includes as a part of his review that "the disclosure has already made front page news in Swedish press." I would think it would, Mr. Speaker, and certainly those forces who downgrade America at every turn, will lose no opportunity to tell the rest of the world that our military officers are portraying the roles of "souses" and "girl corrupters."

I hope every Member of this House will read these remarks carefully and study this case. I am sure that all will share the sorrow and indignation I did when this matter was called to my attention.

A Tax Policy for Economic Growth

EXTENSION OF REMARKS
OF

HON. THOMAS J. McINTYRE

OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 24, 1963

Mr. McINTYRE. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address entitled "A Tax Policy for Economic Growth," delivered by me before the New Hampshire Associated General Contractors, at Concord, N.H., on April 19, 1963.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TAX POLICY FOR ECONOMIC GROWTH

(An address by U.S. Senator TOM McINTYRE, New Hampshire Associated General Contractors, Concord, N.H., April 19, 1963)

The most striking characteristic of the American economy has been its capacity to lift material standards of living and spread the fruits of progress widely throughout our society. Last year our output of goods and services exceeded $550 billion. If Daniel Webster had calculated the gross national product back in 1850, he would have found that it was $10 to $12 billion. We have had in the last 11 decades a fiftyfold increase in real income and the output of goods and services. The national rate of growth since 1850 has been about 3½ percent per year, a figure that we would do well to bear in mind today. Had this Nation grown only at a rate of 3 percent per year, the gross national product in 1962 would have been $330 billion instead of $550 billion. A difference of one-half of a percent per year can be critical in deciding whether or not the potential of the United States is fulfilled in a time of serious challenge.

The single most disturbing development of recent years is the failure of our economy to approach the peak in using our productive capacity and the progress it enjoyed before 1957. In 1957 there were violent differences of opinion between the managers of the President's budget and the Secretary of the Treasury. The end result of the arguments was a reduction in Federal spending, dire predictions of recession, a cancellation of planned tax reductions, and tight money. The events of that year will be a subject of debate for some time to come. Blame may be fixed both upon an uncooperative Democratic Congress and a Republican administration that was dramatically divided over issues of economic policy. I say this not to discredit the past, but because we should be intelligent enough to learn from past experience.

Before 1957, business fixed investment averaged nearly 11 percent of total output. Since that time it has fallen steadily to roughly 9 percent today.

Before 1957 those out of work barely exceeded 4 percent of the labor force. Since then unemployment has remained about 5 percent.

Before 1957 our total output, measured in constant prices, had increased at the rate of nearly 4 percent per year. Since 1957 the rate of increase has been limited to 3 percent.

Today, lying idle and unused is productive capacity that could add some $40 billion a year of corporate income to America. Twenty billion dollars of that increase would be wages, whose payment would cut unemployment in half and add $10 billion per year to consumer demand. The economy has relaxed into sluggish cycles which have not plunged us into the depths of depression, but have not led us to the heights of confidence and expansion either.

The two critical elements in breaking out of the economic doldrums are consumer demand and industrial investment. By consumer demand we mean the money available for housing, or household goods, or services. If loans are available at low interest from banks, for example, then money is more freely available and consumer demand grows. From 1957 to 1962 consumer demand grew by 16 percent. A return to the 1957 rate of employment could add at least $10 billion to the money our families have to spend. Consumer demand is a way of referring to the size of the family market by indicating the amount of money available for purchases by families and individuals.

Fully one-quarter of American families have incomes so low that appliance, automobile, and housing expenditures are unattainable. Of course the overall Federal tax rate also has its effect upon all family income, drying up markets that would otherwise be available, and cutting into expenditures on food, clothing, automobiles, and housing.

There is another area of outstanding national need. This is the need to promote investment by business itself. While personal consumption increased 16 percent from 1957 to 1962, private investment on durable equipment and industrial construction actually decreased by 2 percent. In each year from 1958 to 1962 business investment has been smaller relative to overall national production than in any postwar year before 1958. This lack of industrial investment keeps us from employing our labor force at a satisfactory rate. There is no substitute for a high rate of private investment as a means for getting our economy moving.

From World War II to 1957, inflation was very favorable to industrial investment. Business had a high volume of liquid assets. Interest rates were low, and rising costs could be passed on in the form of rising prices. But after 1957 the situation was different. Profits declined, in part, because of rising labor costs and also because the level of economic activity was not high. While investment opportunities remained, the promise of profit was less. The cost of capital goods and construction rose relative to sale prices for consumers goods and this tended to depress the rate of return on investment. As the rate of inflation diminished, future profits from current investment were squeezed between steady prices and rising labor costs. Fewer and fewer business investment prospects could leap the hurdle of high tax rates. And so the rate of industrial investment declined. The profits squeeze in combination with the recession of 1957 explains the pattern of weakness in private investment over the last few years.

In both consumer demand and private investment, high tax rates have combined with other factors to slow down the economy. If all other conditions were sufficiently favorable, the obstacle of tax rates could be overcome, but that is not the case. Taxes are now the most powerful instrument that can be deliberately used to improve both the investment situation and consumer demand.

Under the circumstances I outlined before, the need for a tax cut is clear. We have a need for many things that could be produced by labor and capital and that would be bought with the incomes earned in their production. But we have erected a high wall between these resources and our needs, in the form of high rates of taxation that prevent resources from being used. We must bring down that wall and set free the resources of demand and investment.

A great deal of debate has been wasted in trying to say whether a tax cut should be centered on low income groups or upper income groups. While I think that meaningful reductions should be given in both the upper and lower brackets of personal income taxes, and also in corporate income taxes, the purpose of those cuts should be to spur consumer demand and industrial investment. Doing one without the other would be shortsighted. The overwhelming need, as I have made plain, is not to free money to the upper income brackets so that people will invest in business. What we need far more is a sufficiently large reduction in taxes paid by business so that funds will be available for investment by businesses themselves. This would mean new plants, new jobs, and new products in response to the larger consumer demand that would be created by cuts in personal incomes.

I also believe that the Federal budget must be made to yield a surplus by 1965. To go back to our critical date of 1957, let me point out that in the 11 years preceding 1957 there had been seven cash surpluses in the Federal budget for a net cash surplus of $20 billion. The six succeeding Government fiscal years produced one surplus and five deficits, including the greatest peacetime deficit of all in fiscal 1959 ($12 billion), for a net cash deficit of $30 billion. And the reason for these deficits has been that the whole economy has not risen to a sufficiently high level. If there was a full employment today and full use of our industrial capacity, the present tax structure would yield an additional $10 billion in corporate taxes and an additional $10 billion in personal income taxes. This would permit an annual reduction in the Federal debt by more than $10 billion per year. But because of the sluggishness of business investment and consumer demand, that extra $20 billion simply isn't there. It lies on the other side of that wall of high taxes.

As a result the people are faced with a choice in policy in balancing the budget. Either the economy must rise closer to its potential capacity, expanding the tax base for greater yield of revenue, or the expenditures of government must be decreased and brought in line with the revenue we already have.

Now let me say this about budget deficits. The budget deficits before 1957 were not serious, because they occurred only at a few low points during a period of economic progress. Succeeding years of high activity wiped out the deficits and yielded a surplus. The budget must be balanced, but it should be balanced over the period of the business cycle itself. Then Federal policy would respond easily to the natural cycles of the whole economy, instead of an artificial accounting period. To build a higher tax wall when demand is sluggish is to condemn our working force to unemployment and tighten the strangling profits squeeze that is the cause of trouble. If there were a $5 billion deficit one year, it could be carried forward until the business cycle started up. When a $5 billion surplus is generated, that surplus should not be used to increase Government expenditure, but ought to be applied to the $5 billion deficit that had been carried forward. Government, like business, should be permitted to incur debts when money is in short supply. But it is sound government as it is sound business to apply a surplus to those debts as soon as possible. In this way the Federal budget can be kept in balance over each 2- or 3-year cycle of recession and expansion.

But the deficits since 1957 are serious. They are not being wiped out by surplus. They are adding to the national debt year after year. The business cycle has flattened out so that a low point is not followed by a peak to yield a surplus that can be applied to the deficits. So the choice arises between drastic curtailment of Government expenditure, or a tax cut to improve demand and promote investment. The difficulty we face is that a simple reduction in Government expenditures will not do the job of spurring the economy. And with Government expenditures continued high, a tax cut cannot do the job alone either. I therefore call for a simultaneous reduction in Government expenditure and a tax cut, so that if the budget cannot be balanced in 1964 it could show a surplus by 1965.

So I do not advocate solving all of our economic problems by immediately reducing Federal expenditures until they equal revenue, although some very noisy critics say we should. This is not the year to do so. We would only repeat the experience of 1957, perhaps with the awesome consequences we should all have been able to glimpse during the stock market tumble of last May 25. Second, it would leave the tax wall in place. Third, it would reduce the Government sector of demand, not only for construction but for procurement in support of needed space and defense programs.

Now I differ with some of the wide-eyed optimists on the effect of tax reduction all by itself. Just to reduce taxes will not spread enough wealth for the economy to yield sufficient revenue to bring the Federal budget into balance. This is really pulling yourself up on your own bootstraps. A straight tax cut of $10 billion would work its way out into the economy, be spent and respent, and eventually return to the Federal Government at a rate of some $4 to $5 billion per year. To be sure, this would stimulate demand, but not all of those dollars would return to the Government and we would be faced with a net loss. We would be using a direct subsidy to increase the size of the gross national product, but at great public expense.

That, as I see it, is the dilemma. A direct tax cut would throw the Federal budget further out of balance. A cut in Federal expenditures alone would lead to greater unemployment, less demand, and a downward spiral similar to that which followed the similar Government policy in 1957. I think I have demonstrated that the panaceas of the far right end of the far left are not suited to the needs of today. A tax cut alone would not cure all our ills. But an outright reduction in Federal expenditures without a tax cut, even if designed to balance the budget this year, would be even worse.

We must not permit the forces of depression and unemployment to dictate to the people of the country. If you closed down your garages and sold your equipment the first month you didn't have orders, you would be bankrupt in short order. It is defeatist and unsound business to let the bottom of the cycle dictate your plans. You hold onto that equipment and work for more orders. It's sometimes awfully tough to meet a payroll, but you know that you won't be able to bid on any projects at all if you lose all your workers. Well, America has lost orders, and we have lost workers, so the revenues of the Government have fallen off. Are we to permit this fact to dictate bankruptcy? This is the course now advocated by the rightwing in this country and it is as wrong for the public's business as it would be for yours.

I advocate a gradual tax cut on the order of $10 billion, spread over a 3-year period. In this way confidence would grow and industrial investment would increase, putting private dollars to work before the falloff in tax revenue was completed. The industrial base would grow, employment would increase, and consumer demand would rise, encouraging even more investment. In this way, increased tax revenues would match the tax reductions for each year. We cannot expect the Government to finance industrial expansion and economic growth all by itself. Not only do I have a preference for the use of private capital and initiative for this purpose, but I think the history of our economy shows there is no other way. With a tax cut to be completed in 3 years' time, Congress would create a promise of industrial expansion. The fulfillment of that promise in capital outlays and jobs would yield the tax revenues that we need to balance the Federal budget.

That is only one essential ingredient of the policy I recommend. The other is a reduction in Federal Government expenditure, not down to the level of this year's tax receipts, which would call for a reduction of $8 billion in Federal spending, but a reduction that would be sufficient to promote confidence among private investors and show that Congress means business in relating all programs of spending to our central needs. I think a reduction of $3 to $4 billion in the Federal budget for the coming fiscal year would serve that purpose. It is for that reason that I voted against the President's proposal to aid mass transit companies, a vote that could have saved this country $100 million this year. I would like to see further reductions in foreign aid, noncritical defense expenditures, proposed cotton subsidies, and other programs whose impact on our economic growth is small, and which have an adverse effect on business decisions. If the Federal budget could be cut to a level of $95 to $96 billion in expenditures, with a tax cut of some $2½ billion in the first year, we could lay the foundation for a surplus by 1965. Only in this way could we unleash the forces of the American economy. But I have no use for rash and intemperate calls for budget cuts too soon and tax cuts too late.

The course I have outlined, involving a 3-year tax reduction and a $3 billion cut in Federal expenditures, is the one which I think meets public needs for Federal spending and private needs for investment and tax reduction. There is yet another argument against drastic reductions in Federal programs and it is political in nature. By drastic reductions I mean the sort of reductions that reach through fat and start tearing away muscle, and it is such cuts that some rightwing prophets are calling for.

It is now only 6 months since the direct encounter between Soviet and American military systems in the Caribbean. It was a chilling experience for all of us, in which the question was whether the Soviet Union had learned the lessons of responsibility that accompany the vastness of thermonuclear power. The confrontation could have led to a war that would have destroyed human civilization. It did not, but other occasions will continue to arise until we have pressed our advantage home. Right now the forces of the Chinese Communist Army are marshalled among the Himalayan frontier of India. Berlin, Laos, and Cuba are potentially as explosive as they ever were. The forces of freedom in the world may be called to a showdown at any time. I do not like to emphasize the peril of our situation, but I think it my duty to do so. Under conditions of imminent total destruction war, it is for us who would lead the world, to maintain our strength and press forward as swiftly as possible to lay the foundations of peace. It is by answering the age-old challenges of hunger and disease that we will turn the balance of world conflict against the Communist empire. Communism feeds on the frustration of human hopes. Freedom shall triumph through their fulfillment.

The strains of heavy armaments and space are far more telling upon the Soviet Government than they are upon ours. The rate of Soviet industrial growth has declined sharply. Their military and space programs force heavy demands upon their scarce manpower resources and produce even greater strains upon their ability to produce goods. Recently large groups of African students have been leaving the Soviet Union, and returning home to describe their disappointment. Last June Mr. Khrushchev announced drastic increases in the price of meat and butter, and in October the Soviet Government announced the cancellation of a scheduled income tax cut, part of a promise to eliminate income taxes by 1965. Drastic cutbacks in rural construction have been announced. A lack of adequate investment, particularly in the use of chemical fertilizers, has led to persistent failures to meet agricultural production goals. Our unremitting pressure in reaching toward space and increasing our military preparedness is having its effect. The Secretary of Defense, Mr. McNamara, attaches the greatest importance to our continued pressure on the Soviet economy. My friends, now is not the time to call off the race. Now is not the time to abandon our grim encounter with the Communist world.

Now is the time to increase our productivity, to attack the unemployment problem, and to put America back to work at the limit of her capacity. The burdens upon Federal Government revenues are large. I am sure you know that over two-thirds of the national debt has arisen from the expense of World War II and the Korean conflict. More than 70 percent of the Federal budget goes for defense, space, and interest upon the cost of past wars. These burdens, while heavy, are not overwhelming. They are a smaller percentage of our gross national product today than at any time since World War II began. I say we can bear these expenses until the Communist empire renounces its aim of world conquest.

If there is a political basis for this general economic program I have laid before you this evening, it is here. Who would dare advocate stagnation in America in such a time? Our economic offensive against the Communist world should lead them to forswear conquest. Shall their economic offensive against us cause us to abandon the struggle? Our country, my friends, is a slumbering giant. To succeed in this ultimate struggle, our productive powers need only be set free.

Constitution Day

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. BOW. Mr. Speaker, the Ohio House of Representatives has extended its congratulations to the Constitution Day Committee of Louisville, Ohio, and the committee's chairman, Mrs. Olga T. Weber, on the occasion of their receiving the Freedom Foundation's George Washington Honor Medal Award for their outstanding annual program celebrating Constitution Day.

The committee and the people of Louisville are to be congratulated for their untiring efforts to make Constitution Day an annual patriotic observance in Ohio.

School of Advanced Studies in Real Property Acquisition in New York Hears Views of Congressman Cramer on Need for Highway Reform Legislation

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. ROBISON. Mr. Speaker, on April 19, an address by our capable and highly respected colleague from Florida, Mr. Cramer, was delivered at the School of Advanced Studies in Real Property Acquisition, Special Seminar for New York Court of Claims, Saratoga Springs, N.Y.

Due to Mr. Cramer's pressing duties, he was unable to personally participate in the seminar and Mr. Clifton W. Enfield, minority counsel of the Committee on Public Works, delivered Mr. Cramer's address.

As the ranking minority member of the Special Subcommittee on the Federal-Aid Highway Program, Mr. Cramer's remarks concerning right-of-way acquisition and the illicit practices uncovered concerning this subject are particularly germane to the work of the subcommittee of which I am the ranking minority member, the Select Subcommittee on Real Property Acquisition; as well as to the work of the entire Congress as it determines legislation needed to correct these improprieties.

For these reasons, I am asking permission to insert the complete text of Mr. Cramer's address in the Record at this point:

Address of Hon. William C. Cramer, Member of Congress From Florida, Delivered by Mr. Clifton W. Enfield, Minority Counsel of the Committee on Public Works, House of Representatives, U.S. Congress, at the School of Advanced Studies in Real Property Acquisition, Special Seminar for New York Court of Claims, Gideon Putnam Hotel, Saratoga Springs, N.Y., April 19, 1963

Mr. McMorran, Mr. Mackie, Judge Young, and your colleagues from the bench of the New York Court of Claims, and distinguished persons all, Congressman Cramer asked me to express his profound regrets in not being able to attend and personally participate in this seminar, but other pressing matters in which he is engaged made it impossible. However, his absence has become my good fortune. I am honored by this opportunity to be with you, to see so many of my old friends and to make new ones, and to bring to you Congressman Cramer's views on some very important aspects of land acquisition for public purposes.

There are many things that we could discuss, such as the absolute necessity for sound and fully documented appraisals, the value of good severance damage studies, and the duty of public officials and appraisers to give recognition to special benefits that will accrue to an owner's remaining property from the construction of a public improvement. But time does not permit going into all of these subjects, and I assume they have been, or will be, included in other portions of the program of your school of advanced studies in real property acquisition. For the next 30 minutes, I would like to talk with you about two things of the greatest importance to every person engaged in right-of-way acquisition, integrity, and education.

The modern day right-of-way agent faces many complexities, and he must be proficient in many areas of endeavor. Some time ago I tried to list the qualities you have to have to be a first class right-of-way agent. I listed them something like this: 25 percent appraiser, 25 percent salesman, 25 percent engineer, 25 percent lawyer, 25 percent governmental administrator, 25 percent economist, 25 percent public relations expert, and 25 percent psychologist. You add that up and it is 200 percent—a double-sized man. It is a man who has the ability to unite the knowledge of many separate professions and to bring them to bear harmoniously upon a public undertaking in such a way that all affected parties are at least reasonably satisfied. This takes skill and patience.

Great rights-of-way agents are not born; they are products of education and training; they must be men of the highest integrity; and they must be dedicated to public service. Superintendent McMorran and the State department of public works are to be congratulated for conducting a school of advanced studies in real property acquisition, of which this special 2-day seminar is a part. Schools of this kind, which provide training at a professional level, ably presented by a highly qualified and respected person in the right-of-way field, can do much to fill the educational void left by our institutions of higher learning, very few of which offer a curriculum designed to graduate a trained right-of-way man. In right-of-way acquisition, as in every other profession, a continuing educational program is essential, both for public employees and private practitioners, to promote the growth and dissemination of a specialized body of knowledge and to spark new ideas for the development of better methods and techniques.

The need to secure the best possible information as to value and damages and the essentiality of competency to and integrity of those engaged in public land acquisition is readily apparent when we consider the vast sums of money being spent by all levels of government for all types of public works. Right-of-way for the interstate highway system alone is estimated to cost in excess of $6 billion, and when we add to that the costs of real property for all other highways and streets, dams and reservoirs, canals, public buildings, urban renewal, and all other governmental activities, the amount of money involved becomes astronomical. Unfortunately, public works programs of such magnitude, which involve such tremendous sums of money and the participation of so many thousands of people, are bound to attract some incompetent people and some dishonest, and unscrupulous persons who are looking for opportunities to profit at the expense of the public. To illustrate how this can occur, it is appropriate to look at some recent disclosures of incompetency and dishonesty in the highway program.

The State and Federal officials and employees charged with the responsibility of carrying out the Federal-aid highway program are, in the main, honest, competent, and dedicated public servants, who have fully justified the trust placed in them; however, there has been a disturbing frequency of incidents of incompetency, graft, and dishonesty.

Reports and rumors of fraud and thievery in the highway program quickly followed enactment of the Federal-Aid Highway Act of 1956. In Indiana, the chairman of the State highway commission and several others were indicted and convicted of fraudulent activities in the acquisition of highway right-of-way. In Arizona, the chief right-of-way agent for the State highway department was accused of allegedly causing a State warrant to be issued to a fictitious person, and of pocketing the proceeds. In Arkansas, a subcontractor and a highway department engineer were convicted by a Federal court on charges involving false certification of the quantity of materials delivered to a Federal-aid project.

Because of these incidents and other reports and rumors, in September of 1959, the House Committee on Public Works established the Special Subcommittee on Federal-Aid Highway Program to conduct continuing investigations and to act as a congressional watchdog to protect the public interest. So far the subcommittee has held public hearings with respect to highway practices in five States: Oklahoma, Florida, New Mexico, Massachusetts, and West Virginia. In all of these hearings, the disclosures were most disturbing.

The first of these hearings, in May of 1960, involved the construction of an interstate highway bypass around Tulsa, Okla. The hearings disclosed that there had been a deplorable failure to meet specifications. An alarming picture was presented of inadequate or no supervision by the State, failure to make proper tests and inspections, and falsification of test reports and preparation of bogus test samples by highway department employees. It was further disclosed that a member of the Oklahoma State Highway Commission was a concealed partner of a firm bidding on highway department sodding contracts. The report of the subcommittee made a general finding "* * * that conditions were so incredibly bad that they created a climate virtually inviting the perpetration of fraud."

In Florida it was shown that for many years highway contractors had made payments of cash, whisky, turkeys, and other things of value to highway department employees who were assigned to supervise and inspect their work. Testimony also disclosed that due to inadequate planning, insufficient lead time for the acquisition of rights-of-way and disposal of improvements, and plain incompetency, the State disposed of valuable improvements on rights-of-way in total disregard of the public interest by turning them over to contractors and allowed such contractors and speculators to reap windfall profits which should have accrued to the State and the Federal Government.

The hearings involving New Mexico disclosed events somewhat similar to that found in Oklahoma. Evidence was presented showing incompetent and nonexistent inspections and wholly inadequate supervision by highway department employees, failure of the contractor to comply with specifications, and failure of a highway project even before it was opened to traffic. There was also evidence that two members of the State highway commission were suppliers of automotive supplies and equipment to firms bidding on State highway department contracts.

I have merely touched upon the highlights of these hearings. Those of you who may be interested in more details will find the printed hearings and subcommittee reports interesting reading.

Reports have not yet been issued on the hearings involving right-of-way practices in Massachusetts and West Virginia; however, the printed hearings are available. The Massachusetts hearings disclosed unbelievable laxity, incompetency, and fraud in the acquisition of rights-of-way for Federal-aid highways. The department of public works became a spawning ground for a variety of conspiratorial patterns which grew and flourished. The evidence showed that incompetent appraisers were employed by the State and that there was no adequate review of appraisals. The hearings disclosed a revolting pattern of conspiracy between certain State officials and employees, appraisers, and attorneys, resulting in the payment of greatly inflated prices for property needed for highway rights-of-way. Mr. Oscar Beasley played an important role in this investigation and hearings. He was employed by the bureau of public roads to review the appraisals of right-of-way on certain sections of Federal-aid highways, many of which had been the basis for settlements, and he found scores of them to be completely inadequate and inconsistent with actual market value. Sixteen individuals and corporations have been indicted with respect to rights-of-way matters brought out at this hearing, 12 of which have been convicted, including an asociate commissioner of the department of public works, three rights-of-way employees of the department, four independent appraisers, a private attorney, a real estate broker, and two corporations that owned property acquired by the State. Indictments are still pending against a former right-of-way engineer of the department of public works and a private attorney who was later appointed as a judge of the State courts.

The time has come when members of the right-of-way profession, as well as all others associated with the highway program, must be brutally objective and honest in the evaluation of themselves and their associates. Those who are competent, honest, and dedicated are a credit to the profession and an asset to the highway program. I am sure that the great majority of persons engaged in right-of-way acquisition for the highway program fall into this category. However, there are others who are neither a credit nor an asset to anything.

First, we have the dishonest person, who is seeking to profit at public expense. Nothing we say here will eliminate him. We can do only two things to protect the public against such a person: be alert to his activities, and enact laws which will promote his prompt detection and punishment. I will say more about such laws in a few minutes.

Second, we have the person who is basically honest but who simply does not know how to do his job and hides the fact from his superiors. You might say that, by reason of this, he, too is dishonest. but such motivations as job retention and pride can becloud one's sense of moral and ethical values.

Hearings held by the special subcommittee on right-of-way acquisition practices in West Virginia disclosed deplorable examples of what can result from employment of this latter type of person.

It was shown in these hearings that certain responsible positions in the right-of-way division of the State highway department were staffed with people who had little or no background in right-of-way work; there was no inservice training of any real substance and no manual for the guidance and instruction of employees, many of whom changed with each new administration; bewildering and ambiguous formulas for fixing value were adopted that bore no relationship to accepted appraisal standards; the highly important function of appraisal review turned out to be, for the most part, nothing more than a perfunctory check for arithmetical errors; and unconscionable overpayments had been made for rights-of-way. It was further disclosed that State highway department employees were asked to make regular monthly contributions to a political party's sustaining fund. State employees were even furnished coupon books for their use in making monthly payments.

The West Virginia hearings were devoted principally to the acquisition of rights-of-way in the town of Beckley, W. Va. The testimony indicated that State right-of-way personnel were extremely anxious to avoid court proceedings for condemnation of real property, because they were convinced that court awards would be excessive, and the history of past court awards tended to substantiate this fear. I make this observation not to defend the practices of the right-of-way personnel, but simply as a matter of background and to give you food for thought. It is common knowledge that right-of-way settlements in many States have been made above appraised value because highway officials fear, on the basis of past experience, that court awards would be even higher. This demonstrates either a lack of confidence in court procedures or a lack of confidence in the attorneys handling cases for the State, which certainly does not contribute to the desirable practice of acquiring rights-of-way at prices which are fair and just, both to property owners and to the public, who pays the bills.

In any event, the West Virginia Highway Department right-of-way personnel sought to avoid court proceedings at all costs. Properties were appraised, and offers were made on the basis of such appraisals. If such an offer was not accepted, the property would be reappraised, and if necessary re-reappraised, with additional elements or amounts of value and damages being added each time until a figure was reached that was acceptable to the property owner. The testimony disclosed that in order to justify amounts acceptable to property owners, the State's appraisals included such things as allowances both for the full amounts of proximity damages and for the full costs of moving and reestablishing buildings away from the highway, an obvious duplication of payments.

The testimony also showed that the State right-of-way people wanted to be fair to all property owners. If one property owner held out for and received a settlement in excess of the appraised value of his property, the State frequently added substantial amounts to the settlements previously agreed to by owners of other similar properties to assure that all owners were paid on an equal, even if not a rational, basis.

Obviously, the result of such practices was exorbitant expenditures of public funds. Let me emphasize the fact that, generally speaking, the West Virginia hearings disclosed no evidence of fraud or personal profit on the part of State personnel. They were simply honest people sincerely trying to get the best "deal" for the State, without being quite sure of how to go about it, without full knowledge of the appraisal process and how to apply it, without benefit of proper supervision and review, and without confidence in court proceedings.

The solution to problems of this kind is competency through education, and continuing education. Schools such as that being conducted by the New York Department of Public Works, seminars like this one, and the continuing efforts of right-of-way and appraisal organizations, the bureau of public roads, and State highway departments can minimize, if not eliminate, such problems. Two things probably can never be completely eliminated: controversy as to particular acquisitions and the occasional thief. But if all right-of-way personnel are thoroughly trained for their jobs and if their work is properly supervised and reviewed, controversy can be withstood, and the occasional thief will be as unusual as the dishonest bank teller.

I am convinced that the vast majority of persons building our highways are honest, competent, and dedicated to serving the public interest; however, the disclosures of the special subcommittee have made it abundantly clear that fraud, graft, thievery, and incompetency are far more widespread, and involve far more people, than most of us would have suspected or believed before these hearings.

I have heard many of my friends in State highway departments express shock over the irregularities found in other States and then say that it cannot happen in their States. But it can and very possibly has happened there, to some degree.

It is difficult to be suspicious of a friend. It is hard to be suspicious of people that you have known, liked, and worked with for a long time. But the cases of dishonesty and incompetency revealed in congressional hearings occurred largely because honest and competent highway officials and employees assumed that everybody else was equally honest and competent, and therefore did not review the work of their subordinates or associates carefully or critically. They accepted everything at face value, and thus created the opportunity for fraud and incompetency.

I am not suggesting that we establish a spy system where nobody trusts anybody. I am saying that we should not take everything for granted. We should not blindly accept a statement or certification that a job has been done. We must make some inquiry or examination to assure that the work has actually been done, and done properly. This is the only way that we can minimize the opportunity for fraud and incompetency, and have some assurance that dishonesty will be promptly detected and punished.

It is to serve this end, and for the protection of the public interest and the reputation of the thousands of honest, competent highway officials and employees, that Congressman CRAMER, as ranking minority member on both the Roads Subcommittee and the Special Subcommittee on the Federal-Aid Highway Program of the House Committee on Public Works, has urged the Congress to provide Federal law enforcement agencies with tools that are adequate to root out and punish those responsible for dishonesty, graft, and incompetency, which could detroy public confidence in and support of the Federal-aid highway program. These tools are embodied in a bill introduced by Congressman CRAMER in September of 1961, and reintroduced, with some changes, in the present Congress on January 24 of this year.

The present bill, H.R. 2557, which would provide for an act known as the Federal-Aid Highway Reform Act of 1963, would revise and strengthen existing law by prohibiting officials, employees and other persons performing services in connection with a Federal-aid highway project from having any personal interest in any contract with respect to which they have any official authority or responsibility, and would prohibit such persons from having any interest in any real property acquired for such project without full and public disclosure of their interest. It would prohibit contractors on Federal-aid highway projects from giving money or other things of value to Federal, State, and local officials and employees who are supposed to be supervising their work, and would prohibit the solicitation of such payments. The bill would further make it a crime to knowingly perform work or furnish material or to permit the performance of work or furnishing of materials not in accordance with the plans and specifications. Further, with respect to rights-of-way, the bill would extend the provisions of existing law relating to false statements and representations concerning Federal-aid highway projects to the acquisition, administration, and disposition of real property. Finally, the bill would prohibit political contribution by anyone who is at the time negotiating for or performing a contract in connection with a Federal-aid highway project, including the sale of real property therefor. This would extend to Federal-aid contracts the provisions of existing law which apply to contracts with the United States.

The Department of Commerce also recognized the need for revising existing criminal statutes relating to Federal-aid highways and submitted proposed legislation to the last Congress in March of 1962. On the 4th of this month, the Attorney General of the United States submitted similar proposed legislation, which was developed in cooperation with the Department of Commerce, to the Congress. This proposed legislation has not yet been introduced, but it is substantially similar to Congressman CRAMER's bill, except that it does not contain a provision prohibiting political contributions, nor does it completely prohibit conflicts of interest, but simply requires full disclosure of situations which might lead to conflicts of interest.

It has often been said that you cannot legislate morals or judgment. Legislation such as that proposed should deter fraud and other wrongdoing, and it should make easier the prosecution of those who commit such acts, but it will not make moral those who are immoral, nor will it make competent those who are incompetent.

Morality and competency must spring from those in the highway industry, and no area is more sensitive to its lack than right-of-way acquisition. The spotlight of public scrutiny will continue to be upon right-of-way throughout the life of the Federal-aid highway program, and it is incumbent upon everyone engaged in real property acquisition to insist upon the highest standards of competency and integrity at all times, and to establish such checks and safeguards as may be necessary to assure that any departures therefrom will be quickly detected and corrected.

This challenge should be welcomed, for it affords an opportunity for right-of-way people to demonstrate their ability to perform professional services in a manner to merit public confidence, and I am satisfied that, with the leadership of such men as are assembled here, the right-of-way profession will meet this challenge.

Altoona Senior High School Band Praised for Washington Victory

EXTENSION OF REMARKS

OF

HON. J. IRVING WHALLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. WHALLEY. Mr. Speaker, recently the Altoona Senior High School Band, under the capable direction of Mr. John Monti, band director, had the distinct privilege of officially representing the great State of Pennsylvania in the annual Cherry Blossom Festival in Washington, D.C., and winning two first prizes.

For the first time in the 60 year history of the Cherry Blossom Festival, one school won the top honors in two categories—band competition and majorettes, in competition with school units from throughout the country.

I wish to commend the 210 musicians and majorettes of the Altoona Senior High School Band, their director Mr. John Monti, administrators, school faculty, and directors and citizens of Altoona for making possible the fine performance and trip to Washington, D.C., and especially to Mr. John Monti. Without his untiring efforts, aggressiveness, personality, and spirit, the victory would not have been possible in the presentation of outstanding music, splendid displays and precision drills.

We in Pennsylvania are very proud to say that this fine high school is located in our State and in the 12th Congressional District of Pennsylvania which I have the privilege to serve.

Before Tests Are Banned

EXTENSION OF REMARKS

OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. GOODELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Honorable CRAIG HOSMER, of California, to the "Letters to the Times" column in the April 19, 1963, edition of the New York Times:

BEFORE TESTS ARE BANNED: REPRESENTATIVE HOSMER SAYS A TREATY MUST BAR SOVIET CHEATING

TO THE EDITOR OF THE NEW YORK TIMES:

This refers to your March 25 editorial claiming U.S. test-ban treaty proposals would assure detection of clandestine Soviet underground testing; Dr. David R. Inglis's letter of April 5 associating those who dispute the claim with such words as "irresponsible," "ridiculous," and "sabotage," and James J. Wadsworth's April 8 letter charging the GOP conference committee on nuclear testing seized upon one bit of testimony to present what he describes as biased and misleading findings.

In his own way, each of the writers exemplifies a common and perilous obliviousness to facts which destroy the claim and which were placed on public record during Joint Committee on Atomic Energy hearings March 5 to March 12.

The editorial writer apparently accepted and reiterated the Disarmament Agency's self-assessment of its own handiwork.

Dr. Inglis refused to face facts in a manner characteristic of the highly emotional fringe of test-ban proponents whenever they are confronted with facts which establish the "big hole" for Soviet cheating in administration treaty proposals.

REDUCING SEISMIC SIGNALS

Mr. Wadsworth haplessly based his criticism on the Disarmament Agency's weird contortion of these facts which culminated in its erroneous assertion that the "big hole" in Soviet test cheating depends for its existence on carrying out clandestine activities in U.S.S.R. alluvial soil. Actually the "big hole" exists, as explained below, because of the size to which seismic signals from significant cheat tests can be reduced irrespective of geology, not (unfortunately for Mr. Wadsworth, who staked part of his prestige on it) upon testing in scarce Soviet alluvium.

The indisputable facts which establish the existence of the "big hole," brought to light during the Joint Committee's hearings, were:

Disarmament Agency witnesses testified that both current Anglo-U.S. proposals, and new ones soon to be announced, will rely on seismic observatories outside the Soviet Union to discover underground cheat testing inside its borders. Only a token number of unreliable delayed-reporting, tamper-prone unmanned and, as yet uninvented, "black box" devices will be demanded for placement in Russia.

The Defense Department's top seismologist, Dr. Carl Romney, testified that the capability of seismographs to record intelligible data is physically limited by natural earth background noise which occurs everywhere. Its effect on seismographs is similar to static on a shortwave radio: unless a seismic signal is larger and stronger than background noise, it is simply unintelligible.

Seismic signals double the background noise level are needed to "detect" seismic disturbances, whether they be created by man or by nature. Signals 10 to 20 times the background noise level must be recorded to be able to "distinguish" unnatural seismic events in the U.S.S.R. from earthquakes.

Recording signals big enough to make this distinction are the key to arousing the suspicion of monitors and of setting a treaty's on-site inspection machinery into motion. Here the "big hole" comes in.

SIMILARITY TO EARTHQUAKES

It exists because Soviet scientists can keep the seismic signals from secret test so small in size by the time they emerge from Soviet borders that even though they are detected, they cannot be distinguished from hundreds of similar sized small earthquakes occurring annually in the U.S.S.R. This can be done by holding yields down below three kilotons and testing in formations like alluvium which transmit seismic waves poorly; testing in underground cavities which decouple explosive shock from surrounding earth and drastically reduce the seismic signal, or a combination of the foregoing.

This eliminates the key to arousing suspicion and dispatching on-site inspectors. While the United States stopped all its testing, in effect it would simply be trusting a Soviet promise not to test by these undiscoverable means.

The Atomic Energy Commission Director of Military Applications, Maj. Gen. A. W. Betts, U.S. Army, testified that the entire spectrum of nuclear weapons of military interest, except very large yield super H-bombs which the Soviets already have anyway, can be perfected by tests carried out under these conditions of undiscoverability. General Betts revealed that even without a need for secrecy approximately one-half of U.S. underground tests in Nevada are carried on precisely at these very low, undiscoverable yields.

These are the facts not faced by the abovementioned writers. They must be faced if nuclear test-ban negotiations are to be carried on with the realism American citizens demand of their Government.

Even the most ardent test-ban proponent should join in vigorously demanding closure of the "big hole" by installation of manned seismic observatories inside the U.S.S.R. Only an effective treaty which inhibits nuclear progress to the same degree on both sides of the Iron Curtain has any chance of reducing the risks of today's nuclear war. A "big hole" treaty would stop our nuclear progress and create the new risk of surreptitious Soviet testing to gain the surprise military superiority needed to back up a surrender-or-die ultimatum.

Craig Hosmer,
Member of Congress.

Washington, *April 15, 1963.*

What's the Issue?

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1963

Mr. BOW. Mr. Speaker, the issues of the May 21 wheat referendum are of tremendous interest to millions of our citizens, and I believe that every possible fact should be developed before farmers go to vote. The U.S. Chamber of Commerce made a significant contribution to understanding of the issues when it presented the gentleman from Texas [Mr. Purcell], the gentleman from Ohio [Mr. Latta], and the gentleman from Kansas [Mr. Dole], members of the Wheat Subcommittee of the House Committee on Agriculture, in its weekly radio program, "What's the Issue?" April 21. Arch N. Booth, executive vice president of the chamber, served as moderator, and under unanimous consent, I include the text of discussion as a part of my remarks:

What's the Issue?

Mr. Booth. Today our subject is agriculture—more specifically, wheat, the staff of life. There is, of course, no wheat bill for Congress to consider this year. But there is a bill, so to speak, before an even higher tribunal—the farmers of America. Within a month—on May 21—the Nation's wheat producers will decide to accept or reject a new type of federally directed supply-management program for wheat. And wheat is grown in all 48 mainland States. Congress authorized this program in the Agricultural Act of 1962. If the wheat producers approve it will become effective with the 1964 crop.

All Americans have a stake in the outcome of the May 21 referendum—as consumers and taxpayers. So it is pretty important that not only the wheat producers, but all of us know the consequences of this decision: whether it's a "yes" vote, a "no" vote, or a failure to vote at all.

To discuss this issue, we are fortunate to have with us today three Members of the Congress of the United States. All three are members of the Wheat Subcommittee of the House Agriculture Committee. They are—

Congressman Graham Purcell, Democrat, from the 13th District of Texas, and chairman of the wheat subcommittee;

Congressman Delbert Latta, Republican, from the Fifth District of Ohio; and

Congressman Robert Dole, Republican, from the First District of Kansas.

Now, gentlemen, so that this program will be informative and helpful, let's keep two objectives in mind:

The first is to describe clearly how the new program would affect the production and marketing of wheat. The other objective is to bring into sharper focus some of the less tangible, but nevertheless important factors and issues which hang in the balance of this referendum. No doubt some of the views expressed here today will be controversial. But that's what's to be expected. That's what makes an issue, so let's proceed.

First of all, I'd like to ask each of you gentlemen why this particular referendum has attracted so much attention. In short, what is the fundamental issue the wheat farmers will be deciding when they vote next month? Congressman Purcell, as chairman of the wheat subcommittee, will you lead off?

Mr. Purcell. Thank you. I think the fundamental issue of the wheat referendum is the price of wheat for 1964. This will determine the income for farm families in the wheat area and the level of business activity in the rural towns all across the country in 1964. The direction of the wheat program is not actually involved, since the program in most respects is like the wheat program which has been in effect for over 25 years in our country.

Mr. Latta. I'd just like to add to what Mr. Purcell has said. This price situation is something to be concerned with in this program, but contrary to what we have read in the paper that if we don't adopt this program we will have dollar wheat. It's just not true because under existing law the price of wheat could not go below 50 percent of parity, and parity now is $2.49 a bushel. One-half of that would be $1.24½. When you add 5 percent to that you have 6 percent, or 6 cents makes it $1.30, plus carrying charges which would be about 5 cents a bushel. So it can't sink below $1.35 a bushel under existing law, that's been on the statute books for a good many years, if the voters turn this referendum down.

Mr. Booth. Congressman Dole, how does it look from a representative of the great wheat State of Kansas?

Mr. Dole. Well, coming from the State that has about 20 percent of wheat production, and from a district, I think the largest wheat-producing district in this country, I think there is a lot of interest, and I think perhaps the reason or reasons for it are many. First of all, this is the first time that I recall that any Secretary of Agriculture has gone all out to sell the program. I think before it's been a question of the farmers voting "yes" or "no" in a referendum. We find this time the USDA pulling all the stops in an effort to obtain a favorable vote. In the second place, we must recognize the facts that we do have a battle here between different farm organizations. And third, we have, of course, a battle of philosophy—whether we must accept Mr. Freeman's so-called supply-management program, or whether the wheat farmer shall be treated like other farmers and be entitled to a voluntary program. It seems to me that the issue is whether or not the wheat farmer is willing to accept a mandatory program in face of the administration's change of position lately in the feed grain bill and President Kennedy's statement which appears in the majority report on the Feed Grain Act of 1963, pointing out that it is a voluntary program. So if it's good for feed grains, the voluntary program would be good for the wheat producers.

Mr. Latta. Before we pass on here, I would like to just stress this point that Congressman Dole has made here, that this is the real test of the administration's supply-management approach to agriculture. It has been rejected by the Congress, and this bill just passed by a few votes on wheat. For other grains, and particularly, as he points out, in feed grains, this is the real test of supply-management. If this is approved by the farmers dealing with wheat on May 21, we probably will envision other types of supply-management programs in the future.

Mr. PURCELL. Mr. Chairman, if I might I would just like to point out at this point that the comparison has been made between the proposed wheat program and the existing feed grain program. Now, I think it only fair to mention at this point that the proposed wheat referendum, or the bill that calls for the wheat referendum, is quite similar to the legislation which has long been in effect in regard to other segments of our farm economy. Tobacco, rice, peanuts, and several of those crops are under now, and have been for a long time, a program very similar to the wheat referendum, or the wheat provision.

Mr. LATTA. Well, I think at that point, GRAHAM would admit that this is a major commodity we're dealing with here, as far as wheat is concerned. And this is the first time we've had such an approach to a major commodity. It's true as you pointed out, that for these less minor, minor commodities, tobacco, that you do have a tighter program, and have had it for years. But we do have some problems cropping up, even in cotton, that you're well aware of.

Mr. BOOTH. Let's move to another question that will carry this discussion right along. I'll ask each of you to comment on this one, please. The Secretary of Agriculture, Mr. Freeman, said that the program for 1964 is similar to the wheat programs we have had for the past 25 years. He pointed out that the changes which have been made are adjustments to meet new conditions which are very familiar to wheat farmers. Congressman PURCELL, will you lead off and let me ask you this question. If that statement is acceptable, then how can there be so much at stake in the referendum?

Mr. PURCELL. Well, to answer that question, I would have to pretty much repeat what I said in answer to the first question, which is saying, in effect, that this is an extension of the basic principles as far as the manner in which the farmer will function, that the wheat program has had all of the many years. Now, I would like to say at this point that if the wheat referendum fails, there have been statements made quite generally that then there would be new legislation. I want to express the feeling of all of those of us that come from agricultural areas and say that I know that all of us will do everything we can for the farmer, regardless of what referendum passes or fails.

Mr. LATTA. May I interrupt to congratulate the Congressman on that point. I think that's a proper approach, and we certainly will support him. Isn't that true, Mr. DOLE?

Mr. DOLE. Yes, and I think that Mr. PURCELL has pointed out the true theory of a referendum. In other words, you trot out something to the farmer, and if it's not satisfactory, he has the right to reject it. Then it's our obligation in Congress, I think, to come back with something else, and not to leave the wheat producer as a lone ranger on the horizon.

Mr. PURCELL. Let me continue and say that I know that all of us who come from the "breadbasket," if you want to call it that, or the farm areas of our country, are very sincere in our feeling. I think we learned last year that the chances of us getting a major program passed late in the summer this year will be most difficult, basing our judgment upon the activity of the Congressmen from the city areas of last year. Mr. Chairman, I may not have dealt directly with the question you were asking, but I think that this is a significant area for us to think about.

Mr. BOOTH. Do either of the other two men have any comment about why there is so much at stake in this referendum, if it is true that the adjustments to meet the new conditions are familiar to the wheat farmers?

Mr. LATTA. Well, I might say that I disagree with Secretary Freeman when he says that this is something we have had in the past. Sure we've had mandatory programs for wheat producers in the past after they go through a referendum. But I might say that this is a different approach where we have this tremendous variation between the prices of wheat. For example, out in Ohio most of our wheat producers in the past have been outside these programs. And if they continue to remain outside the program they'll not get the market price for their commodity, but they'll get $1.30. Now that's a tremendous drop from $2. From that score, I think it's quite different.

Mr. BOOTH. We'll get some additional light on this question, I believe, if we'll bring just a few more details in front of us. Congressman DOLE, would you tell us, what are the key provisions of the new wheat program for 1964?

Mr. DOLE. Well, I might say, Mr. Booth, this is another area we might be bogged down on differences of opinion. But I think basically we could point out the course. The Secretary shall set the national wheat quota, and then he shall determine the acreage needed to produce this quota. Then he shall issue marketing certificates representing the amount of wheat to be eligible for sale, in other words the domestic quantity of wheat. Then, of course, the balance of the wheat will be so-called feed wheat and shall receive a feed price. And on the 80 percent of production used for domestic purposes, of course the farmer will receive around $2. On the balance—the feed wheat—he will receive around $1.30. Now we get into many areas here where we can differ. I would point out though, that under the program after 1965 the Secretary still has the authority to require a farmer to divert acres but there is no authority for payment for these diverted acres. We get into the free diversion concept which I don't believe many of the farmers understand. But to avoid any technical arguing, I think it might be just as well to point out those few highlights.

Mr. BOOTH. Fine. I'll ask Mr. PURCELL, then, if he'll elaborate a little about the certificates feature. Who pays for the differential on each bushel of certified wheat the farmer sells?

Mr. PURCELL. Well, the marketing certificates would be paid for either by the miller or by the exporter. And wheat selling at the market at $1.30 per bushel plus the 70 cents marketing certificate, will bring the cost of wheat to a miller to $2 per bushel—about the same as it is at the present time. Now eventually the certificate would be redeemed by the Government, either in kind or in cash, I believe the provisions are.

Mr. BOOTH. Let me go to Mr. LATTA, now. What about the small-farm provisions of the program, Congressman LATTA? Your State of Ohio has many of the 15-acre wheat producers. Will they benefit by the new program?

Mr. LATTA. Well, I can't say that they will. Now out in Ohio, we have approximately 170,000 wheat producers and about 150,000 of them who have not participated in the programs in the past. Now I have pointed out the discrimination towards the small farmer in this program right from the start. I did it in the subcommittee, in the committee, and on the floor of the House, and have done it since. This program requests the small farmer, meaning the 15-acre farmer, to take a double cut. This year, 1963, for example, we are entitled to a 15-acre exemption out in Ohio. Under this bill, now this is what they are going to be voting on, on May 21, they will no longer have the 15-acre exemption, but they will be permitted to plant the highest of the last 3 years, the average of the last 3 years, excluding 1963. So if a farmer planted 15 acres for 2 years and 1 year in Ohio he did not plant any, where we rotate our crops, he has 30 acres. You divide that by 3 and you have 10 acres. So he drops from 15 acres down to 10 acres.. And when they go into this program, he must take another 10-percent cut. So he gets it twice. Whereas the larger producer only takes the 10-percent cut to go into the program. I think this is rank discrimination as far as the small farmer is concerned, and he just cannot live with this type of provision.

You take the farmer in Ohio who has been producing 15 acres of wheat. I'll just run a little tab here as to how much money he would lose. We all average about 40 bushels to the acre, so you end up with 600 bushels at $2 a bushel, which he got in 1963, and he has an income of $1,200. He goes into this program and he's planted 15 acres for 2 years and none for another year, and he ends up with 10 acres. Then he has a minus 10 percent which leaves him 9 acres. Nine acres times 40 bushels to the acre, he gets 360 bushels. Then he only gets paid, if he goes into the program, on 80 percent of that. So that leaves him 288 bushels at $2 a bushel, or $576. Then on the 72 bushels remaining, or the 20 percent, he gets $1.30, even though he goes into the program. This makes him $93.60. Then he gets a diversion payment out in Ohio of about $24 an acre. So you add those up—$576, $93.60, and $24—and you get $693.60, if he goes into the program, as opposed to what he would have in income on the same 15 acres at $1,200 in 1963. And I maintain our farmers can't live with that. So they'll have to make the choice as to whether they want to go into the program or whether they don't. And I think it's important to point out here that for the first time the 15-acre, or small-type farmer, will have an opportunity to vote in a referendum. We haven't had that in the past, and if there is any good feature about this program, I say it's giving these farmers the right to vote. But they have to sign up at least 7 days prior to May 21 in order to vote.

Mr. BOOTH. Now Congressman DOLE, let me come to you to get a little more of the economics of this question in front of us. If the $2 price objective is only 80 percent of the established parity price, I wonder if there are many farmers who would raise any wheat for the low support price of $1.30. I suppose if anyone can produce wheat at that price, the western Kansas farmers can do it. Is that correct?

Mr. DOLE. This is relatively correct, yes, but under this program of course, we can only produce so much at $1.30, which is another difference between this and what they originally talked about as the McNary-Haugen bill that's been around for about 40 years, and turned down by Hoover, Roosevelt, Truman, and Eisenhower, and of course vetoed originally by Mr. Coolidge. And I think we should point out, too, that 100 percent of parity is $2.49, and as you pointed out, $2 is around 80 percent of parity. Now I call this the 80–80 bill. You get 80 percent of parity for 80 percent of your production. And on the balance you get 52 percent of parity. I remember very well the promises of President Kennedy when he was campaigning, about 90 percent of parity for the basic commodities. And I don't know of any, in fact there aren't any basic commodities now receiving as much as 90 percent of parity. And this brings to me, I think, a very significant difference between the present bill, the one the farmers will vote on, and the one we've talked about in the past. In fact, one that Clifford Hope from my district, a member of the Agriculture Committee for 30 years and a well-respected Member of Congress, has long supported, which was called the domestic parity bill. Under this present 1964 program, we also have, in addition to bushel controls, acreage controls. So the farmer isn't free to plant all the wheat he wants. He can only plant so many acres. He must stay within his allotment, or he's subject to penalties and marketing quotas. I think, when we talk about the income to the farmer in the 1964 program, he just can't possibly maintain the income he had been receiving before. And from this standpoint, while the farmers of western Kansas would certainly raise all the wheat they could at $1.30, they can't do this under this program.

Mr. BOOTH. Congressman PURCELL, how much latitude does the Secretary of Agriculture have in changing the program in future years? It seems likely that the wheat producers will want to know the extent to which the program can be altered from year to year.

Mr. PURCELL. Well, the program for 1964 is not expected to change in any major respects from the program in 1963. The farm income under the program for 1965 can be as high, I think, as the 1964 program. The only major change for later years is the diversion payments are not authorized after 1965. However, it seems to me the income can still be maintained under the program because the Secretary of Agriculture is required to set price support at a level and quantities in a manner which will achieve the income objective of the farmer. And I would like to continue in this vein to say that the figures that have been quoted this morning I am sure are correct in saying that the price for wheat will be in the neighborhood of $1.30, assuming that the farmers stay within their allotments that have already been assigned. Now, if as many as 65 million acres of wheat are planted, like the Secretary and some of the figures in the Department have indicated they feel will be the case, then there will be so many farmers planting over and above and disregarding their allotment, and for that wheat there will be no price support, that then there could be dollar wheat for a large portion of our wheat. Now I'm not saying that to be argumentative. I think it is only fair to point out that if the allotments are disregarded, then there will be a lot of wheat, very likely, that is as low as $1 or in that neighborhood.

Mr. DOLE. I might state there, if I might, even if the referendum is turned down, then of course without Congress taking any action, those farmers who comply with their allotments are entitled to 50 percent of parity. And as Mr. LATTA has pointed out earlier, and as Mr. PURCELL has touched on, in addition to the $1.24½ which is 50 percent of parity, you add 5 percent above that plus carrying charges, which makes it about $1.35. This is the least that the Secretary can release surplus stocks on the market. And under section 407 of the 1949 act of course, he can strengthen the market if he wants to by raising this figure. So I don't think all is lost if the referendum fails.

Mr. LATTA. Let me point out something else here that will affect this price that we haven't talked about, and I think it's important that we talk about this. We're talking now about noncertificate wheat of $1.30. If this program doesn't go on the books, we've got $1.40 world price for wheat right now. So our farmers could sell their wheat on the world market, without benefit of any program at all. We're talking about the noncomplier, so to speak, and the compliers for 20 percent of their crop—$1.30, which is 10 cents a bushel less than the world price of $1.40 today.

Mr. BOOTH. Let's talk for just a moment about the farmer and the information he needs to help make up his mind about how to vote. Secretary Freeman has emphasized, and properly of course, that he would not presume to tell the farmers how to vote. That he would stick to the facts about the program alternatives. Now the Secretary has urged the farmers to visit the local county agricultural stabilization and conservation offices as the best place to go for information. But these men are employees of the Secretary and will of course sell the best points, emphasize the best points of the program. How can the farmer get both sides? There are two sides to this argument of course. One he can get all of, to some extent, from these offices. Where can he go to get the rest of the story?

Mr. PURCELL. I would like to respond, if I might, please. First, I don't mean to be defensive, but I would like to state that I think because the ASC county offices are employees of the Federal Government does not, per se, mean that they are not going to be fair about it. I think we should keep in mind that for 25 or 30 years this is the office where the farmers have come to get their information. I do not believe that the ASC offices have been putting out incorrect information. There are two sides to this question, and there might be other places that a farmer could go, but I would say he would get accurate information, if I may, by going to the ASC office.

Mr. DOLE. Let me state at this point that in Kansas, for example, since last March every county ASC office has been publishing a newsletter. I think this is good in some respects, but in the March 1963 newsletter that went out to every county, it said the big issue was $2 or question mark. Then it goes on in the next paragraph to say that it's between $2 and $1 wheat. This is the 1964 referendum. And these are the types of things I think have been unfair. It denies the farmer the freedom of choice that he's entitled to in the referendum. I certainly feel that my obligation, and I think the others would agree, is not to sell the program, not to try to defeat the referendum, but to give the farmer the facts. You'll find the farmers in Kansas, Texas, and Ohio can figure out which program is the best for them.

Mr. BOOTH. Our thanks to Congressman ROBERT DOLE, of Kansas; Congressman DELBERT LATTA, of Ohio; and to Congressman GRAHAM PURCELL, of Texas, for shedding some light on this important and somewhat complicated issue—the proposed supply-management program for wheat. The complete text of this broadcast will be available to anyone who will write to the Chamber of Commerce of the United States, Washington 6, D.C. If you would like to have a copy of the complete text of the remarks made by these three Congressmen today during this program, just write to What's the Issue?, Chamber of Commerce of the United States, Washington 6, D.C. It's yours for the asking. Next week, a special program on proposals for a new look at Federal income taxes. Each week this program brings you a discussion of the choices facing free Americans. This is Arch Booth, speaking for the chamber of commerce of the United States and inviting you to join us next week at this same time.

The Age of Excellence

EXTENSION OF REMARKS

OF

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. JENNINGS. Mr. Speaker, a few days ago Dr. T. Marshall Hahn was installed as the president of Virginia Polytechnic Institute, my alma mater. It was indeed a pleasure for me to attend and participate in these ceremonies on the campus at Blacksburg, Va.

Among the addresses delivered at the installation was that of Secretary of Commerce Luther H. Hodges. It is appropriate, I believe, that Secretary Hodges' remarks be brought to the attention of my colleagues in the House.

We are today concerned wtih the subject of assistance to education. We will undoubtedly have this subject under discussion many times in this session, and Secretary Hodges reviews some of the reasons for Federal aid to education. Therefore, Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include Secretary Hodges' speech.

The speech follows:

THE AGE OF EXCELLENCE

(Address by Secretary of Commerce Luther H. Hodges prepared for delivery at the Virginia Polytechnic Institute, Coliseum Auditorium, Blacksburg, Va., Thursday, April 4, 1963)

Dr. Hahn, it is indeed a pleasure to participate in your inauguration as our Nation's youngest president of a land-grant institution of higher learning.

I want to congratulate both you and the Virginia Polytechnic Institute on this timely joining of your destinies. Together you symbolize, especially to a member of the Kennedy administration, the challenging opportunities for achieving New Frontiers of excellence in the field of higher education.

By your very youth, you represent the future of our country.

As an educator and a scientist, you also represent the two forces which will have the greatest impact in determining what the future of the United States will be.

But most of all, by your willingness to accept such heavy responsibilities at an early age, you embody our hopes for a new generation of men and women who will be educated to the fullest extent of their capabilities to cope with the complexities and challenges of an age of revolutionary change.

This great educational institution is also symbolic, both of our past and of our future.

As a native of Virginia who grew up just across the State line in North Carolina, I know something of what VPI has meant to the economic progress of this State and of this whole region.

I have seen the great change in our Nation from a largely agricultural society to the greatest industrial society the world has ever known. I have seen our advance in agricultural productivity, largely as a result of the work of our land-grant universities and their agricultural extension services.

A century ago, the food produced by one farmworker would feed fewer than five persons. Today, 1 American farmworker produces enough food for more than 27 persons.

I cannot imagine Virginia's progress, or North Carolina's progress, or the rise of these United States to the great nation we are today, without the enormous contributions of our land-grant colleges and universities over the past century.

I think of this whenever I hear Federal aid to education denounced as a menace to our American system. I think of how much we owe to the Morrill Land-Grant Act which led to the establishment of these vital institutions all across our country.

Our primary educational obligation is, of course, a local obligation. It rests on the people of every American community in proportion to the resources of the community. It also rests on the States according to their resources.

But the logic of the Morrill Act is as valid today as it was 100 years ago. The Federal

Government has a proper interest in education, and it has an obligation to make national resources available to assure the broadest possible geographic distribution of quality educational opportunities for the American people.

It has that obligation even more urgently today, because quality education has never been more important or more costly to provide, from the kindergarten to the graduate programs that must produce our research scientists and engineers and our future leaders in every field.

We were the first nation to realize that our greatest resource lay in the minds of our people. We developed the world's most broadly based educational system to develop that great resource.

And we see the material and social benefits of this great investment all around us.

But we have only begun to put the emphasis on excellence that is required in this increasingly complex technological age.

Millions of inadequately educated Americans are finding that there is no place for them in our economy. Their jobs are disappearing as machines do more and more of the work that requires only muscle power and routine thinking. And many of them find that they lack the basic educational qualifications for rapid retraining for more skilled work.

And manual and unskilled workers are not the only ones who are being affected by technological change. Thousands of our older engineers are finding that they are ill equipped for modern engineering work. Their training in engineering fundamentals was not broad enough or deep enough, or they have failed to keep up with the technological advances of the last 10, 20, or 30 years.

We face a massive job of education, retraining, and upgrading throughout our labor force. And we face the equally important challenge of educating all of our young people so that they will be able to meet today's higher standards and be able to continue their development to meet even higher standards tomorrow.

Our need for better quality education at all levels is a matter of great national importance. But our need for better educational opportunities at the upper levels, especially in engineering, science, and mathematics, is becoming critical.

There are two very important aspects of this problem. On the one hand, the Soviet Union is educating scientists and engineers at a much faster rate than we are. More than half of their college students are enrolled in these areas, and they are turning out more than three times as many engineers each year as we are.

On the other hand, our domestic demand for scientists and engineers for our defense and space programs is taking up the bulk of our new talent, especially in the area of research and development. Our civilian economy is in danger of being starved for new talent to develop the new technology which is necessary to undergird both our military and nonmilitary efforts.

This year we expect to have about 30,000 new scientists and engineers available for research and development work. Our space programs alone will require 25,000 of these additional research specialists. Only a few thousand will be available to expand research and development work in all of our civilian industry. This is not enough.

More civilian research and development is absolutely essential if American industry is to increase its productivity, and provide better incomes—wages and profits—for the American people; if American industry is to provide an adequate technological base for our defense and space efforts, as well as for our civilian economy; if industry is to develop the new and improved products we must have for expanded domestic consumption and for increased sales abroad; and if we are to be able to compete in world markets in the future, both in terms of price and in the quality of American export goods.

For the time being, we are still well ahead of the Soviet Union in total number of scientists and engineers, and in the quality of our scientific and technical personnel. Keep in mind the astounding fact that 90 percent of all the scientists ever trained are still living. So our problem is in the future. If the Soviets continue to educate scientists in vast numbers, they eventually will have as many or more good scientists and engineers than we have.

Our emphasis must be, however, not only on numbers, but even more on expanding our supply of top quality scientists and engineers with advanced degrees.

We also face keen competition from other western industrial nations in this field of professional scientists and engineers.

Unlike the United States and the Soviet powers today, the countries of Western Europe and Japan are not required to devote the bulk of their scientific and technical manpower to defense and space exploration. They are putting their best talent into developing new industrial processes and new consumer products which strengthen their domestic economies and improve their ability to compete in world markets.

Of the nearly $17 billion a year we in the United States are spending on research and development, only about $4 billion is spent by American industry for nonmilitary, nonspace work. And of that $4 billion, only about $1.5 billion is aimed at increasing the productivity of our economy.

The countries of Western Europe are spending twice as large a proportion of their gross national product for civilian research and development. West Germany has more than twice as many scientists and engineers, per 1,000 workers in their labor force, working on new consumer products and new industrial processes, as do we in the United States.

Japan, which many people still think of as an imitator and copier of western scientific and technical developments, actually has as high a ratio of scientists and engineers working on its civilian technology as we have. And their textile industry, their civilian electronics industry, and other industries have been showing the results of this high quality work by Japanese scientists and engineers.

The Japanese have learned how to get twice as much production from some of their textile machines as we do. They have introduced the first transistorized television sets in our own market. They have developed automated ships which carry far more cargo with smaller crews than American ships.

American industry must be much more alive to the need for more research and development work in the civilian sector of our economy. There must be a wider diffusion of this work throughout industry, and there must be greater industry support for the training of people capable of doing this work.

Some 80 percent of all our industry sponsored research is done by 300 companies, and 73 percent in only 5 industries.

Two of these industries, aerospace and electronics, account for 25 percent of the industry sponsored research, but their products account for only 3½ percent of the total production of goods and services in this country.

Such large industries as building and construction, textiles and apparel, and food processing, on the other hand, account for 10 percent of our gross national product, but perform less than 4 percent of our privately supported research and development.

Such industries as building and textiles are composed largely of relatively small companies that lack the resources for significant research programs. They lack not only the scientists and engineers to do original research, but often they do not have the technical personnel to understand and adapt for their own plants the research and development work that is done in our universities.

To help meet the needs of such industries, the Department of Commerce has proposed a new program of contracts and grants to institutions organized for research, education, or the dissemination of technical information. These institutions can be industry research organizations or universities or other broadly based organizations.

The purpose of this program is to attack technical problems common to an entire industry, and to make the results of this research readily available to all of the companies in the particular industry.

We also are proposing a nationwide university and industry extension service, similar to the agricultural extension service which has stimulated such a miracle of productivity in our farm economy.

In looking at one of your bulletins on VPI, I was struck by the fact that five paragraphs were devoted to your agricultural experiment stations and their extension work, while only one paragraph noted your engineering experiment station and its extension services.

I hope this does not reflect the actual emphasis here, but by and large, throughout the country including my own State of North Carolina, we have failed to realize that our industrial economy is now vastly larger than our farm economy, indeed, we now have almost as many business enterprises in this country as we have individual farms.

In recent years, agricultural productivity has increased much more rapidly than the productivity of the industrial sector of our economy. And both of these far exceed productivity increases in the service sector which now employs more than half of our total labor force.

We must give much more attention to the lagging sectors of our economy if we expect to make the productivity gains that are necessary for a steadily rising standard of living for the American people.

We should begin by giving much greater attention to the vital industrial sector which affects the efficiency of our whole economy and especially our ability to compete in the sale of our manufactured goods in other countries.

The Commerce Department's proposed pilot program for more effective industrial extension services is a major step in this direction. Its future growth will depend largely upon the willingness of industry, our universities, and our State and local governments, to join in financing this effort to improve our civilian industrial technology.

This program will help us meet our national need for more scientists and engineers, especially in the civilian sector of our economy. It will help by promoting better use of existing technology while we expand our scientific and technical manpower. And it will help train additional manpower, especially the people we need who understand industrial research and development problems, by providing additional research programs in association with our universities. And this program offers VPI additional challenges and opportunities which I am sure it will accept.

The President's program for improving our educational system also includes vitally important provisions for increasing the number of potential researchers who go on to obtain advanced degrees in science and engineering.

We have a serious shortage of top quality people in all fields, but perhaps none is more serious than the shortage of engineers with doctor's degrees.

These are the engineers whose research capabilities are indispensable for the translation of our scientific discoveries into practical industrial technology. Their research and design capabilities are our best guarantee that American technology will be the envy of the world in the future as it has been in the past.

Our leadership in the world today does not depend upon our vast natural resources or upon the size of our population. We are the leader of the world because we are the leader in technology. We have the greatest resources of trained brainpower and we have done the best job of applying that brainpower to the work at hand.

But we can maintain our leadership in a world in which billions of people are discovering the possibilities of education only if we drive for quality and more quality in our educational efforts.

We are entering an age in which excellence will count as it never has before, because this excellence must be broadly shared, without in any way impairing the full development of our most outstanding individuals.

We must not fail to develop this excellence in every part of our country and every part of our population. This is a matter of national importance, but it is also important to the people of every State and every region of our country.

In recent years there has been a growing concentration of our scientific and technological resources in a few areas of the country, primarily in California around the California Institute of Technology and in Massachusetts around MIT.

Our military spending for research and development has promoted this concentration of scientific and engineering manpower and facilities—in the aircraft and missile companies of the Pacific coast States and in the electronics companies of the New England States.

But it was the scientific resources of such institutions as Cal Tech and MIT which attracted many of these companies and stimulated their growth in the forefront of scientific and technological development.

The universities that had the top scientists and engineers, the universities which were training scientists and engineers for the advanced degrees necessary for research and development, attracted the research contracts and the companies engaged in research and development work.

These companies, in turn, have won the big defense production contracts, and have devoted part of their expanding resources to improving the scientific capabilities of the universities in their areas. One feeds on the other.

This has not been an unmixed blessing for these areas, because military research and development is not automatically translatable into the civilian technology that is necessary for the healthy growth of consumer industries. And consumer industries are more stable in their production and employment than defense industries.

But the important lesson is clear: The industrial development of any area in this highly technical age is going to depend directly upon the scientific and technological capabilities of the universities and colleges of that area.

The development of this area is going to depend in large measure on this institution, on the quality of its instruction, on the adequacy of its facilities, and on the appropriateness of its programs to the needs of its State, its region, and the Nation.

Today, 20 universities graduate two-thirds of all our people with doctor's degrees. And these 20 universities are located in only 12 States.

The remaining 38 States, with half of the Nation's population, produce only one-quarter of our people with the most advanced degrees.

It is estimated that we need to develop at least 50 additional top quality graduate education centers throughout the Nation to meet our needs for highly trained personnel in all fields.

VPI should be one of those centers.

Your aim should be to develop an educational center second to none in the Nation. You should be able to give your students the opportunity for the fullest development of their capabilities. You should be able to give your State and your region, its industry and its agriculture, the best university facilities that this technological age may require.

This is the challenge the future imposes upon you, Dr. Hahn, upon your faculty, and upon the members of this great student body. You should be satisfied with nothing less than the best, and you should be constantly aware that the best today will not be good enough for tomorrow.

To the students here today, let me say that your challenges will be matched only by your opportunities for self-realization and for service to your fellow men in this new age of rapid technological and social change.

Make the most of your opportunities while you are here. Learn to work hard and effectively. Arm yourself with understanding as well as knowledge, with character as well as competence, and above all, with a lasting devotion to excellence in all that you do.

It will serve you well, and you will serve well in the future.

Thank you, and my very best wishes to you all.

The Warsaw Ghetto Uprising: A Commemoration

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. FARBSTEIN. Mr. Speaker, Hitler's invasion of Poland was the signal for a Second World War, it was the signal for treachery and deceit, it was the beginning of the collapse of the Balkan countries before Hitler's might; it was also the beginning of something far more. It was the beginning of the mass extermination of an entire race of people, for the Jews of Poland were to be erased by methods even now almost impossible to comprehend.

When the victorious Germans first marched into Warsaw in the fall of 1939, the wheels were already beginning to turn in the plan to take care of the Jewish problem, although very few realized what was in store. First there were the restrictions: Jews were forbidden to work for the government, to work in key industries, to bake bread, to earn more than a certain amount of money, to buy or sell from any outsider, to use public transportation, to possess gold or jewelry, and each had to wear a distinctive armband. How could any man be asked to do these things? If such were to happen to us we would fight back. But no, we have our homes, children, our past lives and all that we own and hold dear to think of. Maybe we must accept, because is it not more important to survive?

Next came the ghetto. All Jews had to move to a certain part of town, to be walled in so as not to contaminate others with their Jewishness. They could only leave their walled area by pass, to work in the factories supporting the German war effort. Surely now is the time to stop permitting ourselves to be so pushed around, but wait—we are still together, we are still a family, and we can move all of our possessions to the new area. Living may be more crowded, freedom even more restricted, but we are still alive.

Some found a chance to escape the ugly city life by going off on a work gang, into the countryside. The Germans needed men to help in the war plants. At least that is what they said when, first by asking for volunteers, then by force, they took whole families into their "work camps." They would suddenly arrive at a given section in the ghetto, call all inhabitants out of the buildings, and, if necessary, drag them off to the distribution center for shipment to the countryside. Families were broken up, children torn from mothers' arms, all property left behind was taken by the state to cover the Jewish debt. Yet still, in the ghetto, organized resistance to what was happening could not be started. Still the people clung to what they had left, hoping that quotas for the work gangs would soon be filled, that they would be left alone, even if isolated from the rest of the city. After all, there was a shortage of factory workers within the city, so those who were working for the Germans or their Polish supporters felt safe in their position.

Then rumors began to circulate. Those families that were sent off to the work camps in the countryside—nothing was ever heard from them again. Spies were sent out to follow the trains of misery, to learn what was happening, to confirm or deny some stories that were so incredible few dared repeat them. The spies went out, they saw, they returned. The work camps, they were death camps. The potential workers—their only work was to strip off their clothes and be marched into the huge communal showers, to be washed with poison gas, to be slaughtered by the tens of thousands, to have their bones cremated, to literally disappear without a trace. This was Hitler's answer to the Jewish problem.

Back in the Ghetto of Warsaw the stories began to circulate with more authority. As the awful truth dawned some were stunned into apathy, but others, many others, in the agony of their reality, broke down the resistance to concerted action—if death was all that awaited them, then they would not meet it voluntarily, they would fight.

The Nazi occupation authorities, and their henchmen, finally decided in reply to the insistent demands of Himmler and Eichmann in Berlin to get on with the job, that the remaining Jews in the ghetto were to be marched out to the distribution centers, to be prepared for shipment to the countryside, to annihilation. Word of this intent was received in the ghetto. Time had come to resist.

It was Passover. It was the time when Jews the world over remember the lot of their people in Egypt under the Pharaohs, when God sent down his plagues upon the Egyptians, when all the first born of the country suffered death, only the Jews remaining untouched. It was the time of year when one remembered Moses leading his people as the Red Sea parted, and they beheld before them freedom in the land of their ancestors. But this was the evening of April 18, 1943, the Jewish ghetto quarter of Warsaw. There was no Moses to lead these people to freedom, only their dedication and courage could give them honor. There was hope at least for a brief quiet time to celebrate the occasion with prayer and the breaking of unleavened bread. Not even this small hope was answered. The word spread quickly, the Germans were coming, they were marching to the walls. It was time to prepare a greeting for them.

And what a greeting it was. Hand grenades, gunfire, liquid fire, fists, and stones. The SS men were taken unawares, they fell back, leaving many dead in their wake. It was long in coming and they had suffered through unspeakable indignities, but the time had arrived—the people of the Ghetto were in revolt.

Nazi armies returned, and were driven back again. Ammunition of the ghetto fighters was running low, they were driven underground into bunkers, or hideouts in attics of buildings, yet the fight went on. During the day they hid out in cramped quarters without water and with little food. At night the streets were theirs, and they used the time to strengthen their positions.

Then disaster struck. The Germans set fire to the entire area, burning the fighters from their attic cover; all supplies were cut off, there was no water, no food, the women and children had to remain underground all the time. Some, men and women, with spirits broken, marched out to the Germans to surrender, the others held out. They held out against constant attack from the ground and air, against hunger and thirst, against fear of death yet fear of not dying before the Nazis got hold of them. On May 8 the Germans launched a concentrated attack on the central bunker containing the headquarters operation. All 200 defenders, including the core of the leadership, were killed or committed suicide to avoid capture. Still, some held out to the end of May, a small group of heroic men and women. They held out even longer than did Poland herself against the German invaders. Finally, after almost the entire ghetto area had been flattened, with only 8 buildings still standing, resistance was broken. Of the 40,000 Jews in the ghetto at the beginning of the fighting only a few hundred were left to filter out, some through the gas-filled sewers, to continue fighting in the forests.

The revolution had been broken, but the spirit and heroism of the participants, the faith which made them withstand such torture, these are not forgotten. The State of Israel today, and the fact of its existence, stands as a living and dynamic monument to the heroic Jews of the Warsaw ghetto, who laid down their lives for life—for future life in freedom from persecution of their people.

On this 20th anniversary of the heroic uprising of the Jews in the Warsaw ghetto against their Nazi persecutors, let us remember with awe their heroism, let us not forget what they were fighting against, let us honor with our prayers the memory of their deeds, and in doing this, rededicate ourselves to the preservation of all of the freedoms denied to them.

Science and Social Problems—Speech of the Honorable George P. Miller of California

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1963

Mr. COHELAN. Mr. Speaker, there can be no question that we are experiencing a period of exciting technological change. Through the advances of modern science, we live in a world which has greater wealth and greater potential than ever before.

But does this increased wealth, does this increased knowledge, and do these new horizons mean that we have achieved material security? Are they true indicators of our national strength?

This is the critical problem to which our distinguished colleague, the esteemed chairman of the Committee on Science and Astronautics addressed himself recently at the Dunsmuir House Conference on Space Science and Urban Life in Oakland, Calif. And, it is a problem, Mr. Speaker, with which we must all be concerned.

As the gentleman from California, Congressman Miller, so incisively pointed out in his talk:

> I think one of the most pressing needs of America is the application of its scientific research and development resources to the solution of the human problems that weigh the human balance scale opposite ourselves, that contain within them the possible threat of our destruction.

Mr. Speaker, I was privileged to participate in this Dunsmuir House Conference with the gentleman from California, Congressman Miller, and I believe that after reading his remarks, our colleagues will join me in congratulating him on his timely and thoughtful address.

The speech follows:

Remarks of the Honorable George P. Miller of California, Chairman, Committee on Science and Astronautics, House of Representatives, Before the Space Science and Urban Life Conference, Dunsmuir House, Oakland, Calif., March 28, 1963

I am honored indeed to be here with you today and to be in the company of such distinguished gentlemen as Dr. Newell, Mr. Wyatt and Mr. Lingle, three of NASA's outstanding officials.

I must admit that at first blanch, I was somewhat appalled by the possible ramifications of the subject I am to discuss this morning. It is hard to think of any areas of national interest and needs where scientific research and development do not somewhere play an integral part except in Congress.

Incidentally, I have often wished that the uncertainties, the unknowns of politics and of legislative government could be explored and solved by research tools that are as precise as those scientists have to work with. What a boon it would be if tariff and tax problems could be solved neatly and conclusively by mathematical formula.

How wonderful it would be if the conflicting interests of Maryland and Virginia in the equitable distribution of shell fish in the Chesapeake Bay could be resolved by computers. I assure you that if such things were possible, the serenity of my daily life in Congress would be greatly enhanced.

It would be entirely pretentious for me to identify and describe in specific detail research problems that are of vital importance to our country. But I think it is certainly quite possible to identify, in terms of human needs, some pressing problems that deserve much more attention from the scientific community than they are presently receiving.

I hope you will agree that the eventual satisfaction of human needs, both philosophical and material, is the only ultimate end of all science, research, and technology. I include technology here solely to emphasize the fact that it is through technology that scientific knowledge most often can be translated into goods or power.

Now, I want to concentrate for a moment on the word "need." No doubt there are as many different interpretations of that word as there are points of view. Every facet of our society that depends more or less upon science and engineering for its continued existence contributes to the overall demand for new research products.

Hence, the research needs of this country can be best understood or analyzed in terms of the effect, the stimulus to respond thereby injected into our scientific community.

The National Academy of Sciences has estimated recently that a total of $17.8 billion was spent by the Federal Government and private industry for research and development during 1962. It is quite apparent to me that regardless of whether or not private or public money was spent, the expenditure of $17.8 billion was hardly done at random.

It is obvious that funding of such scope had to be directed toward acquiring specific knowledge to satisfying specific needs, or for exploration to determine what our research products will be in the foreseeable future.

No one will question that this era, these unprecedented times of truly global conflicts and convulsive expressions of surging nationalism will be known as the age of science and technology. This will be the label of the historian who has neatly divided the past into tidy divisions.

But we are not blessed with a historical view of the present; our full course has not yet been run. We can only look at the wealth we hold in our hands, the riches that surround us and then decide whether or not science and technology has up to now fulfilled all our needs.

We are housed better, fed better with more variety, clothed better, and entertained more than any other people in the history of mankind.

We have unprecedented means of communications. We have at our command industrial power and energy that exceeds any other nation on earth.

Our society has been made far more antiseptic through medical research than any other, and hence prolonged our productive lives. We have through applied research, achieved greater leisure than has ever been known before by so many.

Has science and technology satisfied our needs? If you limit them to food, clothing, shelter and security, then of course, far beyond any expectation.

I am tempted to say that science, engineering, technology actually is and has been preoccupied as much with our desires as with our needs.

I admit to a certain uneasiness, however, to a sense of unsureness, when I contemplate all that we have. Have we really achieved material security? Are all our symbols of wealth and well-being true indicators of our national strength?

Will our future vigor, security, and advancement as a people be assured by the use we are now making of our science and technology? Or have we built for ourselves through research and its applications a lotus land where we have become so preoccupied with enhancing our own material well-being, our national ego, that the human ills of the rest of the world tend to become remote and unreal?

The people of this world have always been generally divided between the "haves" and the "have nots." All conflicts between peoples are directly or indirectly rooted in this division. It lies at the original foundation of the causes for the ideological clash of today, of State control versus private enterprise, communism versus free society.

In all ages, including our own, the "have nots" have far outnumbered the "haves." The advancement of technology of other eras, as primitive as it may seem now, made possible the isolated development of culture and civilization out of a sea of barbarism.

It seems tragically paradoxical that the results of that very same technological advancement seems often to have led to gross national self-indulgence, to have insulated eventually a relatively few people from the harsh and unequivocal facts of life and death that confronted daily the rest of mankind.

And it has been the hungry, the homeless, and the harried who have been the witnesses, often the agents of the downfall and the destruction of empires.

Thus, the fact today of more than a billion illiterate people must have some meaning for us. The fact that more than half the peoples of the world exist on diets significantly below minimum standards for good health must have some import to our future.

The fact that insurance statistics assign to us an average longevity of 65 or more as opposed to less than 30 for substantial portions of the world population cannot be dismissed as none of our concern.

We dare not ignore historical precedent, not if we look beyond the period immediately ahead of us to the next 25 years or beyond.

Just consider the nature of the world we live in today. One part is divided into two hostile armed camps, the other composed of impotent but watchful bystanders who expect to become eventually the beneficiaries of the East-West conflict, no matter the outcome.

The Soviet Union and Communist China, both of which came into being out of the desperation of millions of hopeless, destitute people, are on the march. There is no doubt about the singlemindedness of their objective to acquire in any way expedient as much as possible of the world's goods and power.

Their assault upon the West will continue to receive a major impetus from the clamor of their people for a better life. And there are many, many sympathetic ears elsewhere in the world who are not unmoved or indifferent to what they hear.

The point is this; I think one of the most pressing needs of America is the application of its scientific research and development resources to the solution of the human problems that weigh the human balance scale opposite ourselves, that contain within them the possible threat of our destruction.

As you no doubt know, the United States has for many years poured out tremendous resources to build and strengthen the economies of nations all over the world in order to eliminate breeding grounds of communism and to create political stability. Since 1946, we have sent abroad more than $100 billion in the form of all types of assistance. This is in addition to the beneficial impact of expenditures for such joint efforts as UNESCO, NATO, SEATO and our own military establishments.

Our dollars and resources have been the major factor in the rebuilding of Europe and Japan. We have helped nation after nation, new and old, in every part of the world to survive the economic, political and natural disasters that have occurred since 1945 with food, technical assistance, and credit.

American people have, and are right now, risking their lives and sometimes losing them in Asia in order to prevent chaos, and alleviate human misery. We have many such people as Dr. Tom Dooley working unsung and unknown to bring hope and relief to millions of people in Asia, Africa and South America.

Surely, we have sent out technical advisers of all kinds to teach people how to cope with their own unique problems of food, clothing, shelter and health. We have operating now the Peace Corps, a bright but relatively small effort, that has achieved from all reports promising results.

But as great and as noble as these efforts are, and as vitally important as they are in countering the subversion of the Communist bloc, they are primarily corrective, not preventive measures. We have sent out our foods, machines, and some talents. But have we really sent them the knowledge to attack the basic causes for their misery?

Suppose, for instance, we mounted a major effort to find a means by which malaria could be as effectively eliminated from Asia and South America and Africa as we have eliminated smallpox or typhoid fever from America. Think of the human resources, the economic force that would be released for effective and constructive work in those politically unstable areas.

Suppose that we mobilized our scientific resources to produce insecticides to wipe out permanently the locust plagues that annually threaten millions of people with famine. Would that not make them less susceptible to the blandishments of communism?

Suppose we effectively attacked the problem of illiteracy by the adaption through research of communication technologies in which we already lead the world. Would not the effectiveness of our program to broadcast the messages of freedom, the dignity of man, government by law, not men eventually be magnified many times over?

You might say, "We are doing these things now." Yes, we are. But in what fashion? Relatively in dribs and drabs. We have not as yet on a national basis decided, not only for political reasons, not only for economic reasons, but for practical, pressing human reasons to mobilize our research to attack these ills.

It is entirely consistent with the history of our country that the scientific community should be assigned such a critical and vital role. And I firmly believe that the Biblical promise of the hundredfold return for bread cast upon the waters applies equally to nations as well as individuals.

It has long been acknowledged that our technological leadership of the free world is based on an unmatched ability to translate into practical terms the results of research. There is no doubt that this is our special forte. It has been a unique force in the hands of our people. It has been the imprimatur of progress and dynamic energy. It has supplied a momentum to our society that has carried this Nation through vicissitudes that have perverted or destroyed nations of our times and the past.

Our problem, then is to maintain that momentum, to preserve that strength of that unique force, through those who will come after us. It is our task to make sure that our scientific research will continue to serve the needs of the world.

This Nation is faced with the never-ending problem of developing scientific and technical people of greater and greater competence, to meet the challenges such as those I have just outlined.

It is true, as you well know, that the current programs we have undertaken, best illustrated by our space program, are demanding numbers of well-trained scientists and engineers that threaten to strain our resources of competent people.

Our urgent need for well-trained scientists, technicians, and engineers has already been reflected in educational institutions throughout the country from the primary grades through the graduate degree level. Great progress has been made by educators to establish rigorous and demanding curricula in our universities and secondary schools. We have clearly understood the threat of the Soviet Union to achieve parity, both economic and military, by increasing manyfold the numbers of scientists, engineers, and technicians available to the Soviet economy. It is a well-known fact that following World War II, the Soviet educational effort received such concentrated emphasis that today, Russia is producing two to three times as many scientists and technicians as we are. And there is no question that the Soviet Union fully intends to accelerate further its educational programs.

But what kind of scientists or engineers are the Russian institutions producing? Do these people match our image, our conception of what professionally trained people should be: Well developed professionally, intellectually, and culturally?

I think you will agree that we see in the average Soviet product of today a very well-trained individual who has been neglected in the development of those human qualities that would permit him the intellectual freedom to seek out and recognize absolute truth. And it is truth, and the ability to relate that truth to human progress that is the credo of science.

We, in buttressing our defenses against the onslaught of Soviet technology must not go the same route as have the Russians. We must not through our competitive instincts, and because of the urgencies of our days, limit or ignore the need for the philosophical development of our students.

President Barnaby C. Keeney of Brown University expressed his thoughts quite eloquently on this. He said:

"There is no question but that advancements in science and technology have a greater immediate utility in the international and national situation in which we exist today. On the other hand, the whole shape of our lives in the future, and our whole attitude toward life will be strongly formed by our achievements or lack thereof in the arts and humanities."

Former Commissioner of Education, Dr. Sterling M. McMurrin concurs with President Keeney by saying:

"The need for superior attainment in the sciences to guarantee our national security in the face of grave international crises has long been recognized by most Americans.

There is an equal need for superior attainment on a very broad scale in the arts and humanities if Americans generally are to gain a full understanding of their rich cultural heritage and a genuine commitment to their ideals of individual freedom and human dignity. Only with such understanding and such commitment on the part of all of its citizens will this Nation have the resources in personal and public creativeness and courage to meet successfully the continuing international struggle between freedom and tyranny."

We must continue to produce people who have been well-grounded, who have been trained how to think, how to use their minds, and how to apply their talents.

Here we are free from Government limitations of career choices and our graduates from higher institutions find their own niche in our economy. Here individual talents whether in the sciences, humanities or the arts, have the equal opportunity to become fully developed and refined.

Their usefulness has been limited only to the extent to which our economy can utilize them. Thus it is extremely heartening to me to realize that in our national community, characterized by dignified freedom of choice, we have achieved the highest levels of scientific and technological accomplishment in history. And it has been our educational institutions that have made a major contribution to that achievement.

I believe we must continue to foster and encourage in every way possible the breadth and depth we try to maintain in our approach to education. We need and must continue to produce greater numbers of people of higher scholastic achievement. And they must come from all the disciplines, not just from science and engineering.

Scientific research is neither good nor evil by itself. It is the use that men make of it that dictates the nature of its effect. And it is seldom the scientist who decides what use will be made of his handiwork.

This is in the hands of others who will dictate whether scientific achievement is to be a blessing or a curse. It is the systems under which people work and live that will enable or pervert technology.

The use men make of science is not governed by science. It is governed by men's philosophical and moral judgments. It is repugnant for me to contemplate a society in which scientists are cultural paupers. I am repelled by the thought of responsible men not thoroughly aware of the power science gives them. The thought of a system in which science and technology has been glorified to the point where it becomes the end objective rather than the means to a greater and nobler end, the advancement of human progress, is an anathema to me.

The basic integrity of our scientific community is an indespensable characteristic of this Nation. It is here that the scientific leaders of our generation have been able to find the intellectual climate in which to do their best work. Need I cite Einstein, Fermi, Seaborg, Von Karman, Lawrence and Teller, to name only a very few?

Thus, I say our research needs are centered by circumstance, by logic, and by historical precedent in the elimination of those human ills that infect more than half the world's population. In all practicality and in all conscience, we cannot ignore that task if we are not to violate the moral basis upon which this Nation was founded. And we owe to our children, to the generations to come the opportunity to assume responsibility, such as that we now shoulder, by which future challenges to the rights of man can be courageously and willingly accepted.

Scientific progress in the United States, whether in Government or in industry, will be the direct reflection of the men and women who will lead or support it. It will be you and I, however, who will be responsible in great measure whether our memory will be blessed or damned.
